1885.

ORDNANCE GAZETTEER

OF

SCOTLAND.

MAM-RATAGAIN, a mountain-pass (1072 feet) on the mutual border of Inverness and Ross shires, leading from Glenshiel to Glenelg, $3\frac{1}{2}$ miles WNW of Shiel Inn. A zigzag road, formed in 1815 over the pass, commands from the highest point a very grand view.—*Ord. Sur.*, sh. 72, 1880.

Maam-Suil or **Mam-Sodhail**, a mountain on the mutual border of Kintail parish, Ross-shire, and Kilmorack parish, Inverness-shire, $2\frac{3}{4}$ miles NNW of the head of Loch Affric. It rises to an altitude of 3862 feet above sea-level; has remarkably numerous species of plants; is believed to retain more perennial snow than any other mountain in Great Britain; and commands an extensive and very impressive view.—*Ord. Sur.*, sh. 72, 1880.

Maar or **Park Burn**, a rivulet of Durisdeer parish, Dumfriesshire, running $5\frac{1}{2}$ miles southward and east-south-eastward—for the last 2 miles along the Penpont boundary—till it falls into the river Nith at a point 2 miles NNW of Thornhill. It traverses the beautiful grounds of Drumlanrig Castle; and the diversion of its course, at the time that the castle was built, forms the theme of an old-world rhyme.—*Ord. Sur.*, shs. 15, 9, 1864-63.

Maberry, Loch, a lake on the mutual border of Colmonell parish, Ayrshire, and Penninghame and Kirkcowan parishes, Wigtownshire, $5\frac{1}{2}$ miles SSE of Barrhill station. Lying 405 feet above sea-level, it extends $1\frac{1}{2}$ mile south-south-eastward; has a maximum width of 3 furlongs; is gemmed by eight little islets, one of them with vestiges of a castle; contains large pike and trout; and sends off the **BLADENOCH** to Wigtown Bay.—*Ord. Sur.*, sh. 8, 1863.

Mabie, an estate, with a mansion, in Troqueer parish, Kirkcudbrightshire, $4\frac{1}{2}$ miles SSW of Dumfries. Its owner, Robert Kirkpatrick Howat, Esq., holds 2566 acres in the shire, valued at £2140 per annum.—*Ord. Sur.*, sh. 9, 1863.

Macallan. See **KNOCKANDO**.

Macarthur's Head, a headland on the E coast of Islay island, Argyllshire, flanking the W side of the S end or entrance of the Sound of Islay. A lighthouse on it shows a fixed white light up the Sound of Islay to about N half E, a fixed red light from N half E to about E, and a fixed white light to the S of E as far as the land allows, visible at a distance of 17 nautical miles.

Macbeth's Castle. See **CAIRNEEDDIE, DUNSNANE**, and **MANOR**.

Macbie Hill, an old but modernised mansion, with a well-wooded park and a small lake, in Newlands parish, Peebleshire, 3 miles E by S of West Linton, and 9 furlongs S of Macbie Hill station on the Dolphin branch of the North British, this being $21\frac{3}{4}$ miles S by W of Edinburgh. Its owner, the Very Rev. John Mannsell-Massy-Beresford (b. 1823; suc. 1871), holds 3875 acres in the shire, valued at £3079 per annum.—*Ord. Sur.*, sh. 24, 1864.

Macduff, a seaport town and a *quoad sacra* parish in the *quoad civilia* parish of **GAMRIE**, Banffshire, $1\frac{1}{2}$ mile E of Banff. It is the terminus of the Turriff and Macduff branch of the GREAT NORTH OF SCOTLAND RAILWAY system, the station being $49\frac{1}{2}$ miles NNW of Aberdeen and $29\frac{3}{4}$ N by W of Inveramsay Junction, where the branch leaves the main line. The town, which consists of a number of well planned streets with good houses, and has one of the best harbours along the Moray Firth, is situated on an irregular rising-ground sloping northward and north-westward towards the sea-shore. Previous to 1732 it was but a small fishing hamlet, and owes its great progress since to the fostering care of successive Earls of Fife, and to its situation. The hamlet was known as Down or Doune, but in 1733 James, second Earl of Fife, changed it to Macduff (the family name being Duff) and obtained for the place a charter of *de novo demus* from George III., by which it was erected into a 'free and independent burgh-of-barony.' The lower harbour rates and the better position of the harbour diverted a considerable amount of traffic from Banff, and the growth of trade has been still more rapid and important since the opening of railway communication in 1860. The station was then at the SW side of the town, and was also intended for the partial accommodation of Banff, but in 1872 a prolongation of $\frac{3}{4}$ mile took place, bringing the station into a central position, while accommodation is still provided for Banff, from this side, by the Banff Bridge station. The climate is good, and as the beach affords excellent bathing ground, the place is frequented during the summer months by visitors. There were great rejoicings on the occasion of the arrival of the Prince of Wales on a visit to the Earl of Fife on 13 Nov. 1883, when the town was gaily decorated; the trades, fishermen, and various public bodies walked in procession to Duff House; and an address was presented to His Royal Highness. The harbour was constructed by, and belongs to, the Earl of Fife, and the formation of an outer harbour was attempted so long ago as 1821-22, but the works then constructed were almost at once shattered by storms. It was greatly enlarged and improved in 1877. The trade consists chiefly of exports of grain and cured herrings and other fish, and the imports are coal, and bone and other manures. Over a hundred fishing boats, of which about three-fourths are first-class boats (*i.e.*, with keels of 30 feet or upwards), belong to the port, but many of them prosecute the fishing at other stations, and during 1883 only 83 fished from Macduff, these having a total catch of 9754 crans. The Established church, a large building on an eminence at one end of the town, was erected at the expense of the third Earl of Fife. The Free church was built soon after the Disruption. A new Congregational church was erected in 1881 at a cost of £1250; and a Salvation Army Hall, with 700 sittings, in 1883. Murray's Institution was founded in 1849 by Mr Murray of London, a canvas manufacturer, and a native of the burgh, for the education of poor children,

and has accommodation for 100, whilst the public school accommodates 700. By the Reform Bill, Macduff was, for parliamentary purposes, included within the boundaries of the burgh of Banff, but its municipality remained distinct, and municipal matters are managed by a provost, 2 bailies, a dean of guild, a treasurer, and 4 councillors; while police matters are attended to by a board of six commissioners of police. The weekly market is on Tuesday. Water was introduced in 1883. There is a post office, with money order, savings' bank, and telegraph departments, branches of the Union and North of Scotland Banks, a branch of the National Security Savings' Bank, and agencies of 11 insurance companies. There are also a town-house, meal and saw mills, baths, a hall, a gas company, a masonic lodge (St James, No. 653), a lodge of Oddfellows, a club, two ladies' schools, and a number of the usual charitable, etc. institutions. The bridge across the Deveron to the W, on the road to Banff, was designed by Smeaton. The *quoad sacra* parish, which extends beyond the town, is in the presbytery of Turriff and synod of Aberdeen. Pop. of parish (1871) 3912, (1881) 4104; of burgh (1831) 1819, (1861) 3067, (1871) 3410, (1881) 3650, of whom 1992 were females. Houses (1881) 723 inhabited, 25 vacant, 4 building.—*Ord. Sur.*, sh. 96, 1876.

Machany Water, a troutful stream of Muthill and Blackford parishes, Perthshire, flowing 13½ miles eastward till it falls into the Earn at a point 2½ miles NNW of Auchterarder.—*Ord. Sur.*, sh. 47, 1869.

Machar, New, a parish of SE Aberdeenshire, to the N containing Summerhill village, which stands, 310 feet above sea-level, 5 furlongs SSW of New Machar station on the Formartine and Buchan section of the Great North of Scotland railway, this being 5½ miles N of Dyce Junction and 11½ NNW of Aberdeen. Summerhill has a post office under Aberdeen, with money order and savings' bank departments; and close to the station is New Machar Inn, where cattle and horse fairs are held on the third Thursday of January, March, May, and November, and the second Thursday of July.

Containing also Parkhill station, 4 miles S of that of New Machar, the parish is bounded NW and NE by Udney, E by Belhelvie, SE and S by Old Machar, SW by Dyce, and W by Fintray. Till 1621 it formed part of Old Machar parish, and, after being disjoined, was known successively as the Upper Parochine of St Machar, Upper Machar, and, finally, New Machar. Its utmost length, from N by W to S by E, is 5½ miles; its utmost breadth, from E to W, is 3½ miles; and its area is 9047 acres, of which 45 are water, and 2088½ belong to the Straloch or north-western detached portion (2¾ × 1½ mile), separated from the main body by a strip of Udney, 300 yards wide at the narrowest, and also bounded by Kinkell and Fintray. This Straloch portion belongs politically to Banffshire (detached), but ecclesiastically ranks as part of New Machar, and for rating and other purposes is treated as part of Aberdeenshire. The Don flows 1½ mile south-south-eastward along all the Dyce border; and Erick Burn, rising in the Straloch section, runs 7½ miles south-south-eastward, partly along the Fintray border, but mainly through the interior, till it falls into the Don at a point 2¾ furlongs SW of Parkhill station. Corby Loch (2¾ × 2 furl.; 251 feet) lies mostly beyond the south-eastern boundary, near which are Lily Loch (1 × ¾ furl.) and Bishop's Loch (2 × ¾ furl.). At the Bridge of Dyce the surface declines to 128 feet above sea-level; and thence it rises gently to 299 feet at Highlands, 400 at Rosemount, 500 at Upper Rannieshill, 620 at Changehill, and 543 at the Hill of Clyne. Granite abounds in the southern district, and limestone is found on the estate of North Kinnundy. The soil of the southern district, near the Don, is a gravelly loam; of the middle district, is a good loam; and of the northern district, is very various, and much of it poor. About two-thirds of the entire area are in tillage; nearly one-tenth is under wood; and the rest is either pastoral or waste. Antiquities, other than those noticed under BISHOP'S LOCH, are

remains of three pre-Reformation chapels—St Colm's at Monykbebock, St Mary's at Clubsgoval, and St Mary's at Straloch—the first of which is mentioned as early as 1256, and still is represented by a fine old burying-ground. At Parkhill, in 1864, was found a silver chain of double rings, 17½ inches in length and 44 oz. in weight, with a penannular terminal ring, engraved with one of the symbols of the sculptured stones. It is now in the Edinburgh Antiquarian Museum. A moor within the parish was the scene, in 1647, of a defeat of the Royalists by the Covenanters. Robert Gordon of Straloch (1580-1661), the distinguished geographer and antiquary, was born at Kinnundy; and Dr Thomas Reid (1710-96), the eminent moral philosopher, was minister from 1737 till 1752. Mansions, noticed separately, are ELRICK, PARKHILL, and STRALOCH; and 6 proprietors hold each an annual value of £500 and upwards, 2 of between £100 and £500, and 3 of from £20 to £50. New Machar is in the presbytery and synod of Aberdeen; the living is worth £335. The parish church at Summerhill was built in 1791, and contains 650 sittings. There is also a Free church; and three public schools—Parkhill girls', Summerhill boys', and Whitersashes—with respective accommodation for 95, 205, and 90 children, had (1883) an average attendance of 51, 146, and 76, and grants of £47, 5s. 6d., £115, 10s., and £71, 13s. Valuation (1860) £6963, (1884) £10,752, of which £1928 was for the Straloch portion, and £1227 for the railway. Pop. (1801) 925, (1831) 1246, (1861) 1511, (1871) 1483, (1881) 1505, of whom 238 were in the Straloch or Banffshire section.—*Ord. Sur.*, sh. 77, 1873.

Machar, Old, a parish of SE Aberdeenshire, containing great part of ABERDEEN city, with all Old Aberdeen, Woodside, and other suburbs. Down to the 17th century it comprehended the present parishes of New Machar and Newhills; and now it is bounded NW by New Machar, N by Belhelvie, E by the German Ocean, S by St Nicholas and Nigg, SW by Banchory-Devenick, and W by Newhills and Dyce. Its utmost length, from N by W to S by E, is 7½ miles; its utmost breadth is 4½ miles; and its area is 12,595½ acres, of which 285 are foreshore and 167½ water, whilst 5283½ fall within the parliamentary burgh of Aberdeen. The Don, after flowing 3½ miles south-south-eastward along the Dyce and Newhills boundary, winds 3½ miles eastward across the interior to the sea; and the DEE, in a run of 1½ mile, traces the southern boundary. The district between the two rivers, comprising two-fifths of the entire area, is described in our article on ABERDEEN; and, as to the district N of the Don, it need only be said that the surface rises gradually from the shore to a summit altitude of 313 feet at Perwinnes Hill, ½ mile N of which, at the New Machar boundary, is Corby Loch (2¾ × 2 furl.; 251 feet). The predominant rock is granite; and the soil ranges from fertile loam to barren peat-earth. In the presbytery and synod of Aberdeen, this parish is divided ecclesiastically into Old Machar, Ferry Hill, Gilcomston, Holburn, Rosemount, Rubislaw, and Woodside, with part of John Knox. Old Machar itself is a collegiate charge, the stipend of the first minister being £386, of the second £340. Eight schools, all public but one, with total accommodation for 2220 children, had (1883) an average attendance of 2224, and grants amounting to £2002, 19s. 2d. Landward valuation (1873) £12,099, Os. 6d., (1884) £14,352, 2s. Pop. of entire parish (1801) 9911, (1831) 25,107, (1861) 33,236, (1871) 42,477, (1881) 56,002, of whom 8388 were in the ecclesiastical parish of Old Machar, and 1451 in the landward portion of the parish.—*Ord. Sur.*, sh. 77, 1873.

Machars (Celt. *machair*, 'a plain'), one of the three districts of Wigtonshire, being the broad-based, triangular peninsula between Wigton and Luce Bays. It has ill-defined boundaries, but it may be viewed either as comprehending the parishes of Whithorn, Glasserton, Sorbie, Kirkinner, and most of Mochrum, amounting to 100 square miles, or as comprehending also the rest of Mochrum and parts of Old Luce, Kirkecowan, and Penninghame, amounting, with these additions, to nearly

150 square miles. Its surface, as implied in its name, is prevalingly low and flat, yet has considerable diversities, and will be noticed in our article on WIGTOWN-SHIRE.

Machermore Castle, an old square tower in Minnigaff parish, W Kirkcudbrightshire, near the left bank of the Cree, 1½ mile SE of Newton-Stewart. Its owner, Robert Lennox Nugent-Dunbar, Esq. (b. 1864; snc. 1866), holds 1013 acres in the shire, valued at £1353 per annum.—*Ord. Sur.*, sh. 4, 1857.

Machline. See MAUCHLINE.

Machrihanish Bay, a bay on the W coast of Kintyre, Argyllshire. It is flanked on the N by Glenacadroch Point, 5 miles SSE of Cara island, on the S by Earadale Point, 6½ miles N of the Mull of Kintyre; and the distance between these points is 13½ miles. It nowhere, however, penetrates the land to an extent of more than 2½ miles from the entrance line, and that at the mouth of Machrihanish Water, 4½ miles W of Campbelltown; so that it lies all open to the W, and has an unindented and unsheltered coast. 'The long crescent of Machrihanish,' to quote from the *Life of Norman Macleod* (1876), 'girdled by sands wind-tossed into fantastic hillocks, receives the full weight of the Atlantic. Woe to the luckless vessel caught within those relentless jaws,' etc.—*Ord. Sur.*, shs. 20, 12, 1876-72.

Machry. See MAUCHRY.

Mackinnon's Cave, a cavern on the W coast of Mull island, Argyllshire, in Gribon promontory, 8 miles NE of Iona. Opening from the shore, and obstructed by fragments of rock, it penetrates to an unknown extent—the common people say quite across the island. It got its name, or is said to have got it, from the disappearance within its depths of a gentleman called Mackinnon, who went in to explore it, and never was heard of more. Its accessible parts, which were long a retreat of the clansmen, at once for safety and for strategy, are for some way inward invaded by the tide and encumbered with stones; but it opens afterwards into an arched chamber 45 feet wide and 30 high, where is a square stone called Fingal's Table, on which the clansmen frequenting it are said to have taken their meals. On 19 Oct. 1773 it was explored, to the extent of about 480 feet, by Dr Johnson and Boswell, the former of whom pronounced it 'the greatest natural curiosity he had ever seen.' Once it competed with Staffa for attracting tourists; but, except for its vastness and its associations, it possesses little real interest.

Mackinnon's Cave. See STAFFA.

Mackiston. See MAXTON.

Maclellan's Castle. See KIRKCUDBRIGHT.

Macleod's Castle, an ancient fortress in Stornoway parish, Lewis, Outer Hebrides, Ross-shire, at the entrance of Stornoway Bay. Built by the ancient proprietors of Lewis to protect the bay, and dismantled by the troops of Oliver Cromwell, it is now represented by only a fragment of wall 12 feet high and 4 thick.

Macleod's Maidens, three insulated basaltic pillars of Duirinish parish, Isle of Skye, Inverness-shire, a few hundred yards W of Idrigill Point. Rising vertically from the sea, one of them to a height of 200, and the other two to a height of 100, feet, they are called, by the country people, 'the mother and her two daughters,' and by Sir Walter Scott were compared to the Norwegian riders of the storm. Indeed, from a distance they are not unlike gigantic women clad in cloaks and hoods; and they have been described as 'three spires of rock rising sheer out of the sea, shaped like women, around whose feet the foaming wreaths are continually forming, floating, and disappearing.' A fourth pillar once stood adjacent to them, but was overwhelmed by the storms and waves. See DUNVEGAN.

Macleod's Tables. See DUINISHE.

Macmerry, a village, with a post office and iron-works (now stopped), in Gladsmuir parish, Haddingtonshire, at the terminus of a branch line of the North British, 2 miles E by S of Tranent. Pop. (1871) 330, (1881) 352.—*Ord. Sur.*, sh. 33, 1863.

Madderty, a parish in Strathearn district, Perthshire,

with a station on the Perth, Methven, and Crieff section of the Caledonian railway, 11½ miles W by S of Perth and 6½ E by N of Crieff, under which it has a post and telegraph office. Containing also ABERCAIRNEY station, St DAVID's village, and the hamlet of Belycloan, it is bounded N by Fowlis-Wester, NE by Methven, SE by Gask, S by Trinity Gask, SW by Monzie (detached), and NW by Crieff. Its utmost length, from ENE to WSW, is 5½ miles; its utmost breadth is 2½ miles; and its area is 4863½ acres, of which 2½ are water. The surface is all a portion of the low flat lands of the valley of the Earn, sinking little below 200 and little exceeding 300 feet above sea-level. All the northern and north-western boundary is traced by sluggish Pow Water, which traverses an artificial cut 6 feet deep and 4 feet wide, and which formerly flooded the adjacent lands, but is now restrained by embankments; and all the south-eastern boundary is traced by Cowgask Burn, another tributary of the river Earn. The prevailing rock is Old Red sandstone; and the soil is partly alluvial, partly loamy. About one-eighth of the entire area is under plantation, and nearly all the remainder is in tillage. James Burgh (1714-75), a voluminous but forgotten writer, was a native. INCHAFFRAY Abbey is noticed separately, as likewise are the mansions of WOODEND and DOLLERIE. The landed property is divided among 8. Madderty is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £317. The parish church, 5 furlongs SW of Madderty station, is modern and amply commodious. There is also a Free church; and a public school, with accommodation for 70 children, had (1883) an average attendance of 58, and a grant of £57, 10s. Valuation (1860) £5754, (1884) £6421, 17s. 11d. Pop. (1801) 560, (1831) 713, (1861) 536, (1871) 523, (1881) 527.—*Ord. Sur.*, sh. 47, 1869.

Maddiston, a village in Muiravonslet parish, Stirlingshire, 1½ mile SE of Polmont Junction. It has a post office under Linlithgow.

Maddy. See LOCHMADDY and DOLLAR.

Maeshowe or Maiden's Mound, a tumulus in Stenness parish, Orkney, near the head of the Loch of Harray, 9 miles WNW of Kirkwall and 5½ NE of Stromness. Conical in shape, it rises to the height of 36 feet above the level of the circumjacent plain, and is engirt at a distance of 80 feet from its base by a moat of considerable breadth. On the W side it is entered by a narrow passage, 62 feet long and from 2½ to 4½ feet high, the whole being mostly constructed of huge blocks of stone. It was first opened in 1861, and was then found to contain a central chamber, 15 feet square, converging to a vaulted roof originally 20 feet high. Three little chambers branch off from the one in the middle; and on the stones are a series of Runic inscriptions, supposed to date from the middle of the 12th century, and thus affording no clue to the origin of the tumulus itself. See James Fergusson's *Rude Stone Monuments* (1872); and vol. i., pp. 101-104, of Dr Hill Burton's *History of Scotland* (ed. 1876).

Maghiehill. See MACBIE HILL.

Magus Muir, a tract, reclaimed and cultivated now, but formerly bleak and wild, in St Andrews parish, Fife, 3½ miles WSW of the city. A spot on it, marked now by the Bishop's Wood, was the scene, on the night of 3 May, of the murder of Archbishop Sharp (1618-79) by twelve Fife Cameronians. He was travelling from Edinburgh with his daughter, and, after a halt at Ceres to smoke a pipe with the parson, was driving on again, when a horseman, spurring towards them, fired right into the carriage. Others rode up, and shot after shot was fired, but never one took effect, and 'Judas, come forth!' was their cry. So they dragged the old man out of the lumbering coach, and hacked him to death on the heath. 'Upon the opening of his tobacco-box, a living humming-bee flew out. This either Hackston of Rathillet or Balfour of Barley called his "familiar;" and, some in the company not understanding the term, they explained it to be "a devil."' Gnilan, a weaver lad, one of the murderers, was, four years later, hung in

chains on the spot, as also were five of the prisoners from the battle of BOTHWELL Brig. The broken headstone to Guillian's memory bore inscription :

' A faithfull martyr here doth lye,
A witness against perjurie,
Who cruelly was put to death
To gratify proud prelate's wrath;
They cut his hands ere he was dead,
And after that struck off his head;
To Magus Muir then did him bring,
His body on a pole did hing;
His blood under the altar cries
For vengeance on Christ's enemies.'

See vol. vii., pp. 207-221, of Dr Hill Burton's *History of Scotland* (ed. 1876).—*Ord. Sur.*, sh. 49, 1865.

Mahaich or Maghaig, Loch. See KILMADOCK.

Maich Water, a rivulet of Lochwinnoch parish, Renfrewshire, rising on Misty Law Muir at an altitude of 1250 feet, and running $\frac{5}{8}$ miles south-south-eastward—for the last 4 miles along the boundary with Kilbirnie parish, Ayrshire—till, after a total descent of 1145 feet, it falls into the N end of Kilbirnie Loch. It is mostly a moorland stream, traversing a deep channel, but occasionally fringed with copeswood.—*Ord. Sur.*, shs. 30, 22, 1866-65.

Maidenkirk. See KIRKMAIDEN.

Maiden-Paps. See CAVERS.

Maidens, a village in Kirkoswald parish, Ayrshire, $\frac{6}{8}$ miles WSW of Maybole.

Maiden's Leap. See HUNTINGTOWER.

Maines, a mansion of 1835 in Chirnside parish, Berwickshire, 1 mile E by N of the village.

Mainhill, a solitary, low, white-washed cottage in Hoddam parish, Dumfriesshire, 3 miles NW of Ecclefechan. From 1814 to 1826 it was the home of Thomas Carlyle (1795-1881). Here he 'first learned German, studied *Faust* in a dry ditch, and completed his translation of *Wilhelm Meister*. . . . The situation is high, utterly bleak, and swept by all the winds. Not a tree shelters the premises. . . . The view alone redeems the dreariness.'—*Ord. Sur.*, sh. 10, 1864. See chap. iii. of *Froude's Life of Carlyle* (1882).

Mainhouse, an estate, with a mansion, in Eckford parish, Roxburghshire, 4 miles SSE of Kelso.

Mainland. See POMONA and SHETLAND.

Mains and Strathmartine, a parish of S Forfarshire. The two ancient parishes of which it consists were united in 1799, but still are separate registration districts. Mains, the eastern portion, is said to be so called from the Mains of Fintry, now belonging to the proprietor of Linlathen. The largest village is DOWNFIELD, 2 miles N by W of the post-town, Dundee; and large populations are also concentrated at Dundee Bleachworks (Parkhead), Claverhouse, Trotlich, Baldovan, Strathmartine, Rosemill, and Fallows. There are two stations on the Dundee and Newtyle railway within the parish—Baldovan (at Downfield) and Baldragon. The parish is bounded N by Tealing, NE by Murroes, E, SE, and S by Dundee, SW by Liff and Benvie, and W by Auchterhouse. Its greatest length, from WNW to ESE, is $5\frac{1}{2}$ miles; its breadth varies between $\frac{1}{2}$ mile and $3\frac{1}{4}$ miles; and its area is 6321 acres, of which 20 are water. FITHIE Water, for a distance of 3 miles, traces the northern boundary; and DICHTY WATER, running east-south-eastward, goes from end to end of the interior. In the SE the surface sinks to 120 feet above sea-level; and thence it rises to 536 near Hilltown of Balmuir, 526 near Strathmartine Castle, and 533 at Clatto Moor. A beautiful strath extends along the course of the Dichty, on the sides of which extensive woods pleasantly alternate with cultivated fields. The bogs and marshes, which formerly occupied some hollows, have all been drained. A very copious spring of excellent water, called Sinavey, rises perennially from a crevice in a perpendicular rock at Fintry Castle. Trap and Old Red sandstone are the prevailing rocks; and the latter has been largely quarried. The soil in some parts adjacent to the Dichty is alluvial, and on numerous ridges near the stream is gravel or sand; almost everywhere else it is a black loam, incumbent on clay, gravel,

or rock. Nearly 400 acres are under wood; about 130 are moorland or rocky hillock; and all the rest of the land is in tillage. Baldovan Imbecile Asylum and Orphanage was founded by Sir John Ogilvy, Bart., in 1854; and the Baldovan Institution, or Boys' Industrial School of Dundee, was opened in 1878. Two obelisks and some vestiges of a Roman camp are the only extant antiquities. FINTRY CASTLE and CLAVERHOUSE are noticed separately, as also is the present mansion of BALDOVAN. Eight proprietors hold each an annual value of £500 and upwards, 7 of between £100 and £500, 3 of from £50 to £100, and 3 of from £20 to £50. Mains and Strathmartine is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £325. The parish church was built in 1800, and contains 800 sittings. There is also a Free church; and three public schools—Downfield, Mains, and Strathmartine—with respective accommodation for 148, 109, and 150 children, had (1883) an average attendance of 107, 87, and 93, and grants of £89, 16s. 6d., £72, 18s. 6d., and £74, 3s. Valuation (1857) £13,982, (1884) £25,730, 9s., plus £1787 for railway. Pop. (1801) 1442, (1831) 2011, (1861) 2181, (1871) 2749, (1881) 3490.—*Ord. Sur.*, shs. 48, 49, 1868-65.

Mains Castle. See KILBRIDE, EAST.

Mains House, a mansion in New Kilpatrick parish, Dumbartonshire, $\frac{1}{4}$ mile WNW of Milngavie. Its owner, Archibald Campbell Douglas, Esq. (b. 1841; suc. 1857), holds 1581 acres in Dumbarton and Stirling shires, valued at £2226 per annum, his ancestors having possessed the estate since 1873.—*Ord. Sur.*, sh. 30, 1867.

Mainsriddle, a village on the mutual border of Kirkbean and Colvend parishes, Kirkcubrightshire, 10 miles ESE of Dalbeattie. It has a U.P. church.

Main Water of Luca. See LUCE.

Makerstoun, a rural parish on the N border of Roxburghshire, whose church stands 5 miles S by W of Kelso, under which there is a post office. It is bounded N by Smailholm, E by Kelso, S by Roxburgh and Maxton, and W by Mertoun. Its utmost length, from ENE to WSW, is 3 miles; its utmost breadth is 2 miles; and its area is 2913 acres, of which 48 are water, and 80 are under wood. The TWEED flows $3\frac{3}{8}$ miles east-north-eastward along all the southern boundary; and, where it quits the parish, the surface declines to 185 feet above sea-level, thence rising gently to 459 feet at a point $3\frac{3}{8}$ furlongs W by N of the church. The soil is, generally speaking, rich and well-cultivated, and the prevailing rock is Old Red sandstone. The chief natural feature in the parish are the Trow Crags. These are a series of projecting rocks, rising from the bed of the Tweed 'like the sides of a man's hands.' At one time, they were so close together, that, when the river was low, it was possible to pass by means of them from one bank to the other. An accident, however, occurred, and in consequence, the middle rock was blown up to prevent the recurrence of a like mishap. When the river comes down in flood, its waters break over the rocks with very fine effect. It is said that the best salmon-fishing in all the Tweed is to be had in this reach of the river. The two proprietors are the Duke of Roxburgh, who possesses one large farm, and Miss Scott-Makdougall of Makerstoun, to whom the rest of the parish belongs. Her residence, Makerstoun House, is a square three-storied building, situated on the N bank of the Tweed, and standing in grounds that are extensive and well-wooded. The park contains about 100 acres. An observatory, erected by General Sir Thomas Brisbane (1773-1860) in the park at Makerstoun, was demolished after his death. He was the husband of the eldest daughter of Sir Henry Hay Makdougall, so that the estate came to him through his wife. The interesting ruin of what was first a Roman Catholic chapel and then a Protestant church is still used by the Makdougall family as a place of interment, and stands a little way from the house, entirely shut in by trees. The estate of Makerstoun will eventually pass to the Scotts of Gala. This parish is in the presbytery of Kelso and the synod of Merse and Teviotdale; the

living is worth £372. The parish church is a plain building, erected in 1807, and having accommodation for 150 people. A Free church, with 250 sittings, was built by the late Miss Elizabeth Makdougall, who also left £1500 towards its endowment, and built, at her own expense, an excellent manse. The public school, with accommodation for 103 children, had (1833) an average attendance of 76, and a grant of £48, 11s. Valuation (1864) £5001, 1s., (1884) £6809, 9s. Pop. (1801) 248, (1831) 326, (1861) 380, (1871) 361, (1881) 381.—*Ord. Sur.*, sh. 25, 1865.

Malleny, an estate, with a mansion, in Currie parish, Edinburghshire, close to Balerno village and station. The house is old and ivy-mantled, with Dutch gardens, and fine old yews and plane-trees. The estate from the middle of the 17th century was held by a branch of the Scotts of Murrleston, one of whose members was General Thomas Scott (1745-1841). By his grand-nephew, Col. Francis Cunningham Scott, C.B., it was sold in 1882 for £125,000 to the Earl of Rosebery. With a rental of £4351 it comprises 2972 acres, of which 2127 are arable, 630 hill-pasture, and 190 woodland and plantations.—*Ord. Sur.*, sh. 32, 1857. See DALMENY, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Maltan Walls. See ANCRUM.

Mam-Ratagain. See MAAM-RATAGAIN.

Mam-Suil. See MAAM-SUIL.

Manar, a commodious mansion, with finely-wooded grounds, in Inverurie parish, Aberdeenshire, near the left bank of the Don, 3½ miles WSW of Inverurie town. Its owner, Henry Gordon, Esq. (b. 1848; suc. 1874), holds 2260 acres in the shire, valued at £2115 per annum.—*Ord. Sur.*, sh. 76, 1874.

Manderston, a fine modern mansion in Duns parish, Berwickshire, 1½ mile E by N of Duns town. Its owner, Sir William Miller, Bart. (b. 1809; cre. 1874), was Liberal M.P. for Leith 1859-68, and for Berwickshire 1873-74. He holds 961 acres in Berwick and 172 in Haddington shires, valued at £2970 and £923 per annum.—*Ord. Sur.*, sh. 34, 1864.

Manner. See MANOR.

Mannofield, a village at the boundary between Old Machar and Banchory-Devenick parishes, Aberdeenshire, 2 miles SW of Aberdeen, under which it has a post office. Its Established church was raised to *quoad sacra* status in 1882.

Manor, Aberdeenshire. See MANAR.

Manor (in 1186 *Maineure*; Cymric *maenawr*, 'a manor or district enclosed in a stone boundary'; 'maen, 'stone'), a parish of Peebleshire, whose church stands on the left bank of Manor Water, 3 miles SW of the post-town, Peebles. It is bounded NW by Stobo, N and E by Peebles, SE by Yarrow in Selkirkshire, S by the Megget section of Lyne, and W by Drummelzier and Stobo. Its utmost length, from N to S, is 11 miles; its utmost breadth is 4½ miles; and its area is 16,671½ acres, of which nearly 50 are water. Manor Water, rising in the extreme S at an altitude of 2000 feet above sea-level, runs 10½ miles north-by-eastward—for the last 5½ furlongs along the Peebles boundary—till, after a total descent of 1400 feet, it falls into the Tweed at a point 1½ mile WSW of Peebles, and 1 furlong below one-arch Manorfoot Bridge (1702). It is joined by GLENRATH BURN and nearly a dozen more little affluents, most of which, like itself, afford capital trout-fishing. The TWEED curves 2½ miles east-by-northward along all the north-western and northern boundary, and just above Manorfoot is spanned by a handsome five-arch stone bridge, 260 feet long, erected in 1881-83 at a cost of £3000. At the influx of Manor Water to the Tweed the surface declines to 600 feet above sea-level; and chief elevations to the W of the Manor, as one goes up the vale, are Whitelaw Hill (1521 feet), the 'Scrape' (2347), Posso Craigs (1817), *Pykestone Hill (2414), *DOLLAR LAW (2650), and *Norman Law (2408); to the E, Canada Hill (1716), *Hundleshope Heights (2249), Glenrath Hill (2049), *BLACKHOUSE HEIGHTS (2213), *Black Law (2285), and *Shielhope Head (2110), where

asterisks mark those summits that culminate on the confines of the parish. The great green hills, their summits clothed with heather, have mostly a rapid ascent; beyond Posso they closely approach, and grow wild and towering. The rocks are Lower Silurian, and the soil is generally light. At an early period cultivation was carried far up the vale, perhaps to its very head; but later tillage was abandoned, especially in the upper reaches, which may account for the old rhyme—

'There stand three mills on Manor Water,
A fourth at Posso Cleugh;
Gin heather-bells were corn and bere,
They wad get grist enough.'

In the lower half of the parish the cultivation of cereals and green crops, always more or less followed, is now the principal industry. The parish is rich in antiquities and objects of interest, comprising hill-forts, of which there are several well defined; peel-towers, that of Castlehill being the most prominent, and that of BARNs (1498) the best preserved; the site of 'Macbeth's Castle'; the site of St Gordian's Kirk, far up the vale, in Kirkhope, marked by a granite ruinic cross, with the old font stone at its base; the Ship Stone, under Posso Craigs; a tumulus known as the 'Giant's Grave,' in Glenrath Hope; a cup-marked fallen monolith, near Bellaridge (an old woman, 'tis said, whom the devil turned into stone); and traces of the old 'Thief's Road,' or freebooters' mountain bridle-way. One and all are surpassed in interest by the lovely cottage (1802) of the 'Black Dwarf,' 'Bowed Davie' Ritchie (1740-1811), near Woodhouse farm, 1 mile SW of the Kirkton. Here in 1797 he received a visit from Sir Walter Scott, who was staying at Hallyards with Professor Ferguson. His chair, scarce as high as a hassock, is still kept at Woodhouse; and a tombstone in the churchyard, erected by Messrs Chambers in 1845, marks the spot where they laid him to rest. A rest soon broken, for his legs no longer than a two-year child's, and his ape-like arms, so marvellously strong, proved too strong a temptation to resurrections, as one learns from Dr John Brown's *Horæ Subscivæ*. Mansions, are BARNs, Glenternie, and HALLYARDS; and 5 proprietors hold each an annual value of more, 2 of less, than £500. Manor is in the presbytery of Peebles and the synod of Lothian and Tweeddale; the living is worth £309. The parish church is a handsome Gothic edifice of 1873-74, with 188 sittings and two memorial windows. Within the vestry is a table made of oak that had been used for church building purposes not later than the 13th century; and a bell in the belfry bears the Latin inscription, 'In honore Sancti Gordiani, MCCCCLXXVIII.' The public school, with accommodation for 59 children, had (1883) an average attendance of 46, and a grant of £60, 11s. Valuation (1860) £4201, (1884) £6105, 1s. 9d. Pop. (1801) 308, (1831) 254, (1861) 247, (1871) 271, (1881) 277.—*Ord. Sur.*, shs. 24, 16, 1864.

Mansfield House, a mansion in New Cumnock parish, Ayrshire, 1½ mile E by N of New Cumnock village. It is the seat of Sir James Stuart-Menteth, third Bart. since 1838 (b. 1841; suc. 1870), who holds 2846 acres in the shire, valued at £1898 per annum, and whose grandfather, Sir Charles G. Stuart-Menteth, Bart. of Closeburn (1760-1847), a distinguished agricultural improver, acquired the estate by purchase. It is rich in coal and limestone; and, after coming into Sir Charles's possession, it underwent vast improvement at once in agriculture, in mining operations, and in the opening up of railway transit.—*Ord. Sur.*, sh. 15, 1864.

Manuel House, a mansion in Muiravonside parish, Stirlingshire, near the left bank of the Avon, 2½ miles WSW of Linlithgow. Manuel Junction, on the North British railway, at the intersection of the Edinburgh and Glasgow with the Slamannan and Bo'ness lines, is 2 miles W of Linlithgow. Manuel or Emmanuel Priory, near the mansion, was founded for Cistercian nuns in 1156 by Malcolm IV., and received considerable endowments and donations, at different periods, from various

distinguished persons. It was dedicated to the Virgin Mary, and seems to have been in the First Pointed style. The chapel was fairly entire in 1739; but in 1788 a spate of the Avon swept away part of the walls; and now it is represented by only the western gable, thickly clothed with ivy. Edward I. was here in 1301.—*Ord. Sur.*, sh. 31, 1867.

Mar, an ancient district of SW Aberdeenshire, subdivided into Braemar, Midmar, and Cromar. A Mormaer of Mar was present at the battle of Clontariff (1014); and Ruadri or Rothri, Mormaer of Mar, figures in the foundation charter of Scone priory (1115) as 'comes' or earl. The male line of the Celtic Earls of Mar expired in 1377 with Thomas, thirteenth Earl, whose sister, Margaret, married William, first Earl of Douglas; and their daughter, Isabel, in 1404 married Alexander Stewart, the 'Wolfe of Badenoch,' who, after her death in 1419, was designated Earl of Mar. The earldom by rights should have gone to Janet Keith, great-granddaughter of the eleventh Celtic Earl, and wife to Sir Thomas Erskine; but it was not till 1565 that it was restored, *per modum justitie*, to their sixth descendant, John, fifth Lord Erskine. Into the present vexed question of this peerage, it is not possible here to enter; enough, that there are now two bearers of the title—Walter Henry Erskine, Earl of Mar and Kellie, whose seat is ALLOA Park; and Francis Erskine Goodere-Erskine, whose seat is Wilton Hall, in Herefordshire. The former is Earl *de facto*, according to judgment of the House of Lords (1875); but the latter is Earl *de jure*, according to the late Earl of Crawford's *Euclidon of Mar in Sunshine and Shade during Five Hundred Years* (2 vols., Edinb. 1832).

Mar. See MAR LODGE.

March, Berwickshire. See MERSE.

Marchfield. See CRAMOND.

Marchmont House, a mansion in Polwarth parish, Berwickshire, $\frac{3}{4}$ mile SW of Marchmont station on the Berwickshire loop-line of the North British, this being $3\frac{3}{4}$ miles NE of Greenlaw and $3\frac{3}{4}$ miles SW of the post-town Duns. It is the seat of Sir Hugh Hume-Campbell, seventh Bart. since 1665 (b. 1812; suc. 1833), who holds 20,180 acres in the shire, valued at £17,977 per annum. His father, Sir William Purves, inherited the property from his great-uncle, the third and last Earl of Marchmont (1708-94), whose ancestors, the Humes, possessed the lands of Polwarth for three centuries. The most famous of them, Sir Patrick Hume (1641-1724), distinguished as a patriot and statesman, was created Lord Polwarth in 1690 and Earl of Marchmont in 1697. (See HARDEN.) The mansion was built about 1754 by the last Earl to supersede Bedbraes Castle, situated 200 yards to the E. A semi-Palladian edifice, from designs by the celebrated Robert Adam, it stands in a large and finely-wooded park, whose trees, however, suffered great damage from the gale of 14 Oct. 1881, when the majestic beech avenue, nearly 1 mile long and 100 yards broad, was wrecked.—*Ord. Sur.*, sh. 25, 1865.

Maree, Loch, a magnificent fresh-water lake of Gairloch parish, W Ross-shire. Commencing at a point $11\frac{1}{2}$ miles WNW of Anchnasheen station, and lying 32 feet above sea-level, it extends $12\frac{3}{4}$ miles north-westward, with a varying breadth of from 3 furlongs to 2 $\frac{1}{2}$ miles, a general depth of 360 feet, and an area of 11 square miles or 7090 $\frac{1}{2}$ acres. On all sides it is overlooked by mountains of great height and beautiful contour, so that its shores present an inexhaustible variety of the most romantic and interesting scenery. The loftiest are BEN SLEOCH (3217 feet) to the NE, and BEN EAY or Eighie (3309) to the SW. From the former of these the Lewis, with the town and bay of Stornoway, can be distinctly seen. The effect of this superb mountain, seen at once from its base to its summit, is, perhaps, more striking than that of any other mountain in the Highlands. At the western extremity, BEN LAIR (2817 feet) is a principal feature in the landscape—graceful, solid, broad; and where its skirts descend steep into the water, the scenes are

peculiarly original and grand. The northern margin of Loch Maree presents a great variety of scenery, consisting of rocky and wooded bays, and creeks rising into noble overhanging cliffs and mountains; here also are displayed some of the finest general views of the lake. But there is one portion of the margin of the lake so peculiar as to deserve the most minute description, and that of Dr McCulloch is so vivid and so true, that we cannot refrain from extracting it: 'In one place in particular, the remains of a fir forest, in a situation almost incredible, produce a style of landscape that might be expected in the Alps, but not among the more confined scope and tamer arrangements of Scottish mountains. Immediately from the water's edge, a lofty range of gray cliffs rise to a great height, so steep as almost to seem perpendicular, but varied by fissures and by projections covered with grass and wild plants. Wherever it is possible for a tree to take root, there firs of ancient and noble growth, and of the most wild and beautiful forms, are seen rising above each other, so that the top of one often covers the root of the succeeding, or else is thrown out horizontally in various fantastic and picturesque modes. Now and then some one more wild and strange than the others, or some shivered trunk or fallen tree, serves to vary the aspect of this strange forest, marking also the lapse of ages, and the force of the winter storms which they have so long braved.'

The bosom of Loch Maree is gemmed with islands of varied size and appearance. They are 27 in number, and lie chiefly in a cluster on the middle of the lake, where it is broadest. The chief of these, all noticed separately, are ELLAN-SUBHAINN, ELLAN-MAREE, and ELLAN-ROYMORE or Ruairidh-Mor. The lake is supposed at one time to have had a much lower level than it now has, and to have been raised to its present level by the accumulation of sand and gravel at the lower end, by which the water was dammed in. Indeed there is reason to think, that Lochs Maree and Ewe originally formed one lake, under the name of Loch Ewe, as the village near the head of Loch Maree is named Kinlochewe or 'head of Loch Ewe.' Loch Maree contains salmon, sea-trout, yellow trout, and char, though the first are very seldom caught; and the river Ewe, flowing from it, is almost the best angling water on the W coast of Scotland, abounding with salmon of princely size and quality. A steamer was launched on the lake in 1833. The Talladale or Lochmaree Hotel, on the SW shore of the lake, opposite the group of islands, and 9 miles NW of Kinlochewe, is an excellent establishment, erected in 1872, and honoured from the 12th to the 18th of September 1877 by a visit from Queen Victoria and the Princess Beatrice. A rock of pale red granite bears a Gaelic inscription recording this visit, which is fully described in *More Leaves from the Journal of a Life in the Highlands* (1884). There is a post and telegraph office of Lochmaree under Dingwall.—*Ord. Sur.*, shs. 92, 91, 1881-82.

Margaretfield, a village in Ruthwell parish, Dumfriesshire, 8 miles W by N of Annan.

Markinch (*mark-inch*, 'the forest island'), a small town and a parish in the Kirkcaldy district of Fife. The town has a station (the junction for Leslie) of the Edinburgh, Perth, and Dundee section of the North British, $22\frac{1}{2}$ miles N by E of Edinburgh, $11\frac{1}{2}$ SSW of Cupar, $7\frac{1}{2}$ N by E of Kirkcaldy, and $4\frac{1}{2}$ E of Leslie. It is built on the top and sides of a low ridge, which, according to tradition, was once an island in a lake. This is supposed to explain the derivation of the name Markinch. The height of this ridge is greater at its northern and southern extremities than at the centre. The northern was at one time occupied by a Culdee cell; and the southern, known as Markinch Hill, has six terraces, each 20 feet broad, and rising one above the other, cut out from it. By some, these terraces have been ascribed to the Romans, while others have thought it probable that they were intended for an amphitheatre, from which games, etc., engaged in below, might easily be viewed.

It is now hardly possible to make out the terraces, owing to the ridge being overgrown with trees, planted by the late General Balfour. When the parish church was built is unknown; it was, however, enlarged and repaired in 1806, and has now 1050 sittings. The Free church was renovated, and two stained-glass windows were inserted, in 1883; and there is also a U.P. church. Markinch has a post office, with money order, savings' bank, and telegraph departments, a branch of the Commercial Bank of Scotland, agencies of 10 insurance companies, a town-hall (1857), a subscription library, 2 hotels, a gas company, a water company, bowling and curling clubs, and a cottage gardeners' society. Fairs are held on the second Tuesday of February, on the last Tuesday of March, on the second Tuesday of May, on the second Friday of October, and on the third Tuesday of December. The town contains a number of good shops, which draw their custom from the surrounding district, in which are situated the mills and bleachfields which give employment to the inhabitants (see under the parish). Population of Markinch town (1861) 1230, (1871) 1237, (1881) 1273, of whom 686 were females. Houses (1881) 300 inhabited, 13 vacant, 2 building.

Markinch parish is bounded NW by Falkland, N by Kettle, E by Kennoway and Scoonie, SE by Wemyss, SW by Dysart, and W by Kinglassie and Leslie. With a very irregular outline, it has an utmost length from N to S of $5\frac{1}{2}$ miles, a varying width from E to W of $\frac{1}{4}$ mile and $5\frac{1}{4}$ miles, and an area of 9876 $\frac{3}{4}$ acres, of which 48 $\frac{3}{4}$ are foreshore and 7 $\frac{1}{2}$ water. The parish consists of two separate parts, the larger of which approaches near Cameron to within 7 furlongs of the Firth of Forth; while the smaller, with a land area of only 67 $\frac{1}{2}$ acres, lies along the Firth and the right bank of the river Leven, between Wemyss and Scoonie. 'The general aspect of the parish,' says one writer, 'is varied and picturesque. From the Lomond Hills as a background on the N, it slopes gently towards the S and E. The parish is intersected by four fertile valleys, watered by as many streams, which unite towards the eastern extremity. The valleys are separated by corresponding low ridges, each rising gradually above the other in the direction of the summit level—516 feet at Kirkforthar, close to the northern boundary. The chief streams in the parish are the river Leven, Lochty Burn, and the Ore. The first divides the inland section into two pretty equal parts. LOCHTY Burn runs 7 $\frac{1}{2}$ furlongs eastward to the ORE, which itself flows 4 $\frac{1}{2}$ miles north-eastward to the Leven, partly along the Dysart boundary, but mainly through the south-eastern interior; and the LEVEN goes 6 $\frac{1}{2}$ miles eastward, partly along the Leslie and Wemyss boundaries, but chiefly across the middle of the parish. The rocks are mainly of the Carboniferous formation, and mining has been long carried on on a large scale. Ironstone is also found in abundance. At first it was smelted on the spot, but was afterwards exported to the Tyne to be smelted there. In the northern part of the parish the soil is either clay, loam, or gravel; in the district between the Lochty and the Ore, it is clay, loam, or sand of a wet character; and in the southern part it is wet clay, loam, or sand. A considerable portion is under wood, and there are about 100 acres of bog-land. The parish is traversed by a section of the Edinburgh, Perth, and Dundee railway, which has a junction station at Thornton, where the Leven and East of Fife, and the Buckhaven lines break off, and at Markinch where the Leslie branch separates from the main line.

Besides the small town of Markinch, the parish contains the following villages and hamlets, Milton of Balgonie, Coaltown, Windygates, Woodside, Inverleven, Balcourrie, Haughmill, Burnis, Rothes, Auchmuty, Balbirnie, Gateside, Kirkforthar, Scythrum, Cameron-Bridge. In these, and in the country round about them, are conducted the various mills, bleachfields, etc., which form the industries of the parish. At Cameron-Bridge there is a very large distillery; and at Rothes, Balbirnie, and Auchmuty there are paper-mills. The parish also

contains 4 bleachfields at Rothes, Lochty, Balgonie, and Haugh, 3 collieries, and 2 flaxspinning mills. The chief resident landowners, with their estates, are:—Balfour of Balbirnie, Admiral Bethune, C.B., of Balfour, Landale of Woodbank, Lawson of Corriston, Simpson of Brunton, Greig of Balcourrie, Mrs Grant of Durie Vale, Inglis of Ballinkirk. The following are non-resident:—The Countess of Rothes, Balfour of Balgonie, Wemyss of Wemyss, Ramsay of Balcourrie, Christie of Durie. The United College of St Andrews also holds property in the parish. Markinch contains several objects of antiquarian interest. The House of Orr (Balfour House) may be noticed, because in it was born Cardinal Beaton (or Bethune), who played so large a part in Scottish history of the 16th century. The old House of Orr was situated at the junction of the Orr with the Leven, but the present house is near the Milton of Balgonie. An interesting portrait of the cardinal may be seen in the gallery of Balfour House, which also contains a portrait of James Bethune, Archbishop of Glasgow (b. 1517), a nephew of the cardinal, and another of Mary Beaton (b. 1566), well known as one of the 'Queen's Maries,' and mentioned in the old song, supposed to be sung by the hapless Mary on the eve of her execution:—

Yestreen the Queen had four Maries,
The night she'll hae but three;
There was Mary Beaton and Mary Seaton,
And Mary Carmichael and me.'

Balgonie Castle, $1\frac{1}{2}$ mile ESE of Markinch, stands on the summit of a bank, which rises from the Leven. 'The Old Red sandstone keep of Balgonie was both a palace and a prison.' It is about 80 feet high, with a battlement at the top, and is 45 feet in length and 36 in breadth over the walls. The walls of the two lower stories, which are arched with stone, are 8 feet thick. Balgonie belonged originally to the Sibbalds, a well-known Fifeshire family, from whom it passed to the Lumlins. The famous Scottish general, Sir Alexander Leslie—'Crook-back' Leslie, as he was called—acquired it from them about 1640. There he spent the closing years of his life, and there he died in 1661, as Lamont relates:—'Old General Leslie in Fyfe, the Earle of Leven, deparited out of this life at his own house in Balgonie, and was interred at Markinsh church in his own iyle, the 19 of Apr(il), in the evening.' Another account says that his remains were borne to the vault at midnight, by torch-light.

The ruined tower of Bandon, in the western part of the parish, was one of Beaton's many possessions. Other antiquities are the ruined church of Kirkforthar, the tower of Markinch parish church, and an old cross, 7 feet high, erected to the N of Markinch, near the garden entrance to Balbirnie. What remains of it is now merely a broad slab, either quite plain at first, or so weather-beaten in the course of years, as to have lost all traces of carving upon it. Stone coffins and other remains of an antiquarian nature have also been found in the parish.

Men of note, who have been connected with Markinch, are:—Dr Drew, who became Principal of St Leonard's College, St Andrews, in 1708, after having been minister of Markinch parish church; Mr Tullidolph, minister of Markinch, who was appointed Professor of Divinity in St Mary's College, St Andrews, in 1734; Dr Siewerwright, who was first minister of the parish church, and afterwards of the Free church of Markinch. When he left the Established Church, most of his 'people' 'came out' with him. He was Moderator of the Free Church General Assembly in 1846, and died in 1852.

This parish is in the presbytery of Kirkcaldy and the synod of Fife. The stipend is 20 chalders, and the living is worth from £300 to £400. Besides the parish church there are also *quoad sacra* parish churches at Milton of Balgonie and Thornton. The former has accommodation for 650 and the latter for 400 persons. There is a Free church at Markinch, and 2 U.P. churches, one at Markinch and the other at Inverleven. No special

interest, of an ecclesiastical nature, is attached to the church of Marlinkin. In the 10th century it was conveyed by Maldrumus, Bishop of St Andrews, to the Culdees of Lochleven. The men of Marlinkin, it has been shown from the Kirk Session Records, were warmly attached to the Covenanting cause, in defence of which they spent 'lives, land, and gear.' Seven public schools, with total accommodation for 1061 children, had (1883) an average attendance of 856, and grants amounting to £736, 3s. 7d. Valuation (1860) £23,047, (1884) £30,206, 5s. 6d. Pop. (1801) 3130, (1831) 4967, (1861) 5375, (1871) 5413, (1881) 5863.—*Ord. Sur.*, sh. 40, 1867.

Marlee Loch. See DRUMELLIE.

Marlefield. See ECKFORD.

Mar Lodge, a deer-stalking lodge of the Earl of Fife, in Crathie and Braemar parish, SW Aberdeenshire, near the S bank of the Dee, 3 miles WSW of Castletown. It is picturesquely seated on the steep wooded side of the Eagle's Craig, 1250 feet above sea-level, and is the highest inhabited gentleman's seat in Great Britain. A rambling structure, between a Swiss chalet and an Indian bungalow, it once was simply a keeper's lodge, but has been added to from time to time, till now the series of buildings can hold above 100 visitors and retainers. In Sept. 1881 the princely hospitality of the Earl entertained that number to do honour to the Prince of Wales; and on 10 Sept. 1852 the Queen and Prince Albert were present here at an open-air torch-light ball. See DUFF HOUSE.—*Ord. Sur.*, sh. 65, 1870.

Marnoch, a parish of NE Banffshire, with a post office (Bridge of Marnoch), 8½ miles NNE of its post-town, Huntly, and 2 SSW of ABERCHIRDER. Containing also that thriving village, it is bounded N by Boyndie and Banff, NE by Alvah, E by Forglie, SE by Turriff in Aberdeenshire, S by Inverkeithny and Rothiemay, W by Rothiemay and Grange, and NW by Ordiquhill. Its utmost length, from E to W, is 6½ miles; its utmost breadth, from N to S, is 5½ miles; and its area is 14,954 acres. The DEVERON, here spanned by the two-arch Bridge of Marnoch (1806), winds 9½ miles eastward along all the southern and south-eastern boundary, though the point where it first touches and that where it quits the parish are only 5½ miles distant; and Crombie, Auchintoul, and other burns rise in the N, and flow to it southward across the interior. Along the Deveron the surface declines to 190 feet above sea-level; and thence it rises to 600 feet at Clunie Hill, 851 at Catstone Hill, 767 at *Meikle Brown Hill, 890 at *Wether Hill, and 740 at Gallow Hill, where asterisks mark those summits that culminate on the western and north-western confines of the parish. Granite is the predominant rock, and has been largely quarried. Limestone also occurs, and was at one time worked. The soil is variously alluvium, rich loam, clay, moss, and humid moor. KINAIRDY and CROMBIE Castles have been noticed separately. Mansions are ARDMELLIE, AUCHINTOUL, Clunie, Culvie, and Netherdale; and 8 proprietors hold each an annual value of £500 and upwards, 7 of between £100 and £500. Giving off a portion to Ord *quoad sacra* parish, Marnoch is in the presbytery of Strathbogie and the synod of Moray; the living is worth £351. The parish church, on a rising-ground near the left bank of the Deveron, a little NW of the Bridge of Marnoch, was built in 1792, and is a plain barn-like edifice, containing 837 sittings. It stood in the midst of a Caledonian stone-circle, two large stones only of which remain; and in the churchyard are a portion of its ancient predecessor and the finely-sculptured monument of George Meldrum of Crombie (1616-92), Episcopal minister of Glass. The successive presentation of Mr J. Edwards in 1837 and of Mr D. Henry in 1838 gave rise to one of the stiffest Disruption contests under the Veto Act; and led to the erection at Aberchirder of New Marnoch Free church, which, costing over £2000, contains 1000 sittings. Other places of worship are noticed under ABERCHIRDER; and Aberchirder Episcopal and four public schools—Aberchirder, Blacklaw, Marnoch, and Netherdale—with respective accommodation for 75, 400, 73, 120, and 60 children,

had (1883) an average attendance of 75, 210, 73, 124, and 42, and grants of £59, 8s., £183, 15s., £67, 17s. 6d., £110, 19s., and £39, 19s. Valuation (1865) £10,101, (1882) £18,350. Pop. (1801) 1687, (1831) 2426, (1861) 3289, (1871) 3294, (1881) 3230, of whom 3141 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 86, 1876.

Marshadder, a village in the NW of the Isle of Skye, Inverness-shire. Its post-town is Kilmuir, under Portree.

Mar's Hill. See ALLOA.

Martin. See ISLE-MARTIN.

Martnaham, Loch, a lake on the mutual border of Coyton and Dalrymple parishes, Ayrshire, 4½ miles SE of Ayr. Lying 290 feet above sea-level, it has an utmost length and breadth of 1½ and ½ mile; contains a wooded islet, with ivy-clad ruins of an ancient manor-house; abounds in pike and perch, with a few trout; is frequented by wild geese, wild ducks, teals, and widgeons; receives two streamlets, one of them from Lochs Fergus and Snipe to the NW; and sends off a third 3 miles south-westward to the river Doon near Dalrymple church.—*Ord. Sur.*, sh. 14, 1863.

Marwick Head. See BIRSAT.

Maryburgh, a small village in Cleish parish, Kinross-shire, 4 miles S by E of Kinross.

Maryburgh, a village on the mutual border of Fodderty and Dingwall parishes, Ross-shire, on the left bank of the river Conon, where it opens into the Cromarty Firth, 1½ mile S by W of Dingwall town, and 1¼ N of Conon station. It is a modern place, inhabited chiefly by crofters and mechanics; and has a post office under Dingwall, a Free church, and a public school. Pop. (1841) 403, (1861) 503, (1881) 420, of whom 7 were in Dingwall parish.—*Ord. Sur.*, sh. 83, 1881.

Maryburgh. See WILLIAM, FORT.

Maryculter, a parish, with a hamlet of the same name, in the NW of Kincardineshire, bordering on the Dee. It is bounded E by Banchory-Devenick parish, S by Fetteresso parish, SW by Durris parish, and NW by Aberdeenshire. Except for ¾ mile upward from the mouth of the Crynoch Burn, where the parish of Peterculter crosses to the S bank of the river, and for ½ mile below the mouth of the burn, where Maryculter crosses to the N side—the line in both cases following an old channel—the boundary along the whole of the NW side is formed by the Dee, which has here a course, inclusive of these portions, of 6 miles. Elsewhere the line is artificial. The greatest length of the parish, from the Dee at Ardo House (Banchory-Devenick) on the extreme NE, to the SW corner, 5 furlongs beyond Muirskie, is 5½ miles; the average width about 2½ miles, and the area 7923-356 acres, of which 142-603 are water. The surface slopes upwards from the Dee, reaching a height of 545 feet near the SE corner, and 558 at Berry Top, near the centre of the S side. Some small haughs lie along the banks of the river, but the rest of the surface is uneven and rocky. The soil on the side of the river is naturally thin and sandy, but in the central districts it becomes deeper, and is in many cases a good black loam on a clay bottom. On the S and SE there is much damp pasture and moss lying on a subsoil of clay. The underlying rocks are granite and gneiss. Of the land area about half is under tillage, and some 900 acres are under wood, while the rest is pasture land or waste. The drainage of the parish is effected by three burns, in the E, centre, and W of the parish, all flowing to the Dee; the chief is Crynoch or Maryculter Burn, in the centre. The Dee did great damage during a flood in 1768, and again in the more famous one of 1829, when the river rose from 13 to 16 feet above its ordinary level. The parish takes its name from its having been a chapelry in the lands of Culter (Gael. *Cul-tir*, 'the hack-lying land') dedicated to St Mary, and dependent on the church of St Peter Culter, now Peterculter. The

old churchyard is near the mansion-house of Culter, near the river Dee. Of the old church almost nothing now remains but the foundations, which show that it was about 82 feet long, 28 wide, and had walls about 3 feet thick. It seems to date from about the sixteenth century, and contained a number of curious wood carvings, which were all dispersed, and most of them lost or destroyed, when the new church was built, a mile to the S, in 1782. Carved effigies of a knight and his lady are supposed to be those of Thomas Menzies of Maryculter and his wife Marion Reid, heiress of Pitfoddes, who lived in the first half of the 16th century. The Menzies family acquired the estate of Maryculter early in the 14th century; and the last of the family was Mr John Menzies, the founder of BLAIRS College. The family burial ground was at St Nicholas in Aberdeen, and these figures are supposed to have been brought here for safety when the West Kirk of Aberdeen was rebuilt in 1751-55. The late Mr Irvine-Boswell of Kingcausie (1785-1869), who did so much for the improvement of the agriculture of the parish, is also buried here. The Irvines of Kingcausie are a branch of the Irvines of Drum; and the line ended in an heiress who married the well-known Lord Balmuto. Their son was the Mr Irvine-Boswell just mentioned. The mansions, besides Maryculter House and Kingcausie House, are Altries House, Anchlunies House, and Heathcot, the last of which has been converted into a hydropathic establishment. The clock tower of Maryculter House is old, and is said to have been used by the Menzies family as an oratory, but the rest of the house is modern. Near the mansion-house is an oval hollow, measuring some 80 yards across, and about 30 feet deep, which bears the name of 'The Thunder Hole.' Within the last 50 years the depth has been considerably reduced. Traditionally it was formed by the fall of a thunderbolt, and the spot was reckoned not exactly 'canny.' The church and most of the lands of the parish were in the possession of the Knights Templars, and on their downfall passed under the control of the Knights of St John of Jerusalem, who held them in regality. In 1540 we find Sir Walter Lyndesay, the Preceptor of Torphichen, granting the lands of Essintully (now Ashentilly), 'jaacentis in baronia nostra de Mariculter,' to his beloved 'germano fratri Alexandro Lyndesay;' and in 1545 he leased to him also the Mains of Maryculter, part of the rent to be paid being 'thre barrel of salmon yeirke for the Weill Watter anentis Furl,' where salmon-fishing is still carried on. In 1547 Sir James Sandilands, Lord St John and Preceptor of Torphichen, leased the 'teynd schawis' of Easter Essintully and the Mains of Maryculter, 'lyand within the barony of the samyn,' to the same Alexander Lyndesay; and in 1548 the Lords of Council and Session found, in an action raised by the preceptor, that 'the hail landis and barony at Mariculter' belonged 'to his sayd preceptorie in fre regalite,' having been 'in tymes bypast replegit for the Schirif of Kincardin and his deputis to the fredome and privelege of the sayd regalite and baillies courtis thairof.'

The portion of the parish bordering the Dee is traversed by a fine road formed about 1836-37, and leading from ABERDEEN to BANCORY by the S side of the river. From this, near Maryculter House, a road passes southward to a bridle-path across the Grampians to near DRUMLITHIE, and so to the coast road. Railway communication is afforded by Milltimber and Culter stations, on the Deeside section of the Great North of Scotland railway system. These are, however, on the N bank of the Dee, outside the parish, and each about 1½ mile from its centre. The hamlet is beside the church, and is merely the Kirktown. It is by road 7 miles WSW of Aberdeen, under which it has a sub-post office. The parish of Maryculter is in the presbytery and synod of Aberdeen. The parish church, built in 1782, and repaired when an organ was introduced in 1881, contains 460 sittings. There is a Free church; and the Roman Catholic College and chapel at BLAIRS are separately noticed. Three public schools—the boys'

and the East and West girls'—and infants'—with respective accommodation for 75, 60, and 60 children, had (1883) an average attendance of 36, 30, and 42, and grants of £35, 1s., £28, 16s., and £34, 14s. The principal landowner is Mr Kinloch of Park. Valuation (1856) £4879, (1884) £7691, 6s. 7d. Pop. (1801) 710, (1831) 960, (1861) 1055, (1871) 1110, (1881) 1072.—*Ord. Sur.*, shs. 77, 67, 1873-71.

Marydale, a place in Kilmorack parish, Inverness-shire, on the left bank of the Glass, near Invercannich and the Glenaffric Hotel, 20 miles SW of Beauly. Its Roman Catholic church of Our Lady and St Beane was built in 1863, and contains 400 sittings.

Maryhill, a police burgh in Barony parish, NW Lanarkshire, on the left bank of the river Kelvin, 3½ miles NNW of the centre of Glasgow, with which it is connected by tramway and by the Glasgow and Helensburgh section of the North British railway. It occupies a brae descending to the picturesque and romantic dell of the Kelvin, which dell is spanned by the four-arch viaduct, 83 feet high and 400 long, of the FORTH AND CLYDE CANAL. Maryhill possesses in itself and in its environs such strong attractions of scenery as draw many visitors from Glasgow, and exhibits for the most part a well-built, pleasant appearance. It has a post office under Glasgow, with money order, savings' bank, and telegraph departments, branches of the Royal and Union Banks, an hotel, 3 Established churches, 2 Free churches, a U.P. church, a Roman Catholic church, 4 public and 2 Roman Catholic schools, iron, bleach, glass, and print works, etc. Under GLASGOW are noticed the Maryhill Barracks and the Dawsholm gasworks. The burgh is governed by a senior and 2 junior magistrates and 9 other police commissioners. Valuation (1875) £30,939, (1884) £65,637. Pop. of *quoad sacra* parish (1881) 39,980; of town (1841) 2552, (1861) 3717, (1871) 5842, (1881) 12,884, of whom 6525 were males. Houses in town (1881) 2240 inhabited, 691 vacant, 5 building.—*Ord. Sur.*, sh. 30, 1866.

Marykirk, a village and a parish of S Kincardineshire. The village, in the SE corner of the parish, is beautifully situated near the left bank of the river North Esk (here spanned by a four-arch bridge of 1813), 7 furlongs N by W of Craig station, 1¼ mile S of Marykirk station, and 6 miles NNW of Montrose, under which it has a post office.

The parish, containing also LUTHERMUR village, till at least 1721 was known as Aberluthnot (Gael. 'meeting of the waters where the stream is swift'). It is bounded N by Fordoun, NE by Laurencekirk, E by Garvock, SE by St Cyrus, S by Logie-Pert in Forfarshire, and W by Fettercairn. Its utmost length, from NNE to SSW, is 5½ miles; its breadth varies between 2½ and 4½ miles; and its area is 9912 acres, of which 72 are water. The North Esk flows 4 miles east-by-southward along all the Forfarshire boundary, and opposite the village is spanned by a thirteen-arch viaduct, of fine appearance and erected at great cost; LUTHER WATER runs 4½ miles south-south-westward through the middle of the interior to the North Esk; and Black and Dourie Burns, Luthnot and Balmaleddy Burns, drain the side districts into the larger streams. The surface, comprising much of the SW extremity of the Howe of Mearns, declines along the North Esk to 80 feet above sea-level, and W of the railway at no point exceeds 264 feet; but to the E it attains 555 at Kirktonhill Tower and 700 at the meeting-point with Garvock and St Cyrus. Eruptive rocks occur in the hills; but Old Red sandstone prevails throughout the low grounds, and is quarried; whilst limestone also is plentiful, and was formerly worked. The soil is much of it good sound fertile loam, incumbent on decomposed red sandstone. About 615 acres are in pasture; plantations, chiefly of Scotch fir, cover rather more than 1600 acres; and the rest of the land is in tillage. Mansions, noticed separately, are BALMAREWAN, HATTON (Viscount Arbutnot), INGLISMALDIE (Earl of Kintore), KIRKTONHILL, and THORNTON CASTLE; and 6 proprietors hold each an annual value of

£500 and upwards, 2 of from £50 to £500, and 4 of from £20 to £50. Marykirk, dedicated to the Virgin, is in the presbytery of Forlorn and the synod of Angus and Mearns; the living is worth £370. The parish church, at the village, was built in 1806, and contains 638 sittings. There are also a Free church of Marykirk and a U.P. church at Muirton (1824; 430 sittings). Two public schools, Luthermuir and Marykirk, with respective accommodation for 155 and 180 children, had (1883) an average attendance of 54 and 119, and grants of £56, 15s. and £111, 13s. 6d. Valuation (1856) £8577, (1884) £11,450, plus £2177 for railway. Pop. (1801) 1530, (1841) 2357, (1861) 2068, (1871) 1771, (1881) 1461.—*Ord. Sur.*, shs. 57, 66, 1868-71.

Marypark, a post office in Inveraven parish, Banffshire, 3 miles NE of Ballindalloch.

Mary's Loch or Loch Morie, a pretty, troutful lake in the upper part of Alness parish, Ross-shire, 9½ miles WNW of Alness village. Lying 622 feet above sea-level, it has an utmost length and breadth of 2 miles and 4¾ furlongs; is flanked to the SW by Meall Mor (2419 feet); took its name from an ancient chapel at its head, dedicated to the Virgin Mary; is very deep, and has never been known to freeze further than a few yards from its banks; receives at its head the Abhuinn nan Glas; and from its foot sends off the river Alness, 11½ miles east-south-eastward to the Cromarty Firth.—*Ord. Sur.*, sh. 93, 1881.

Maryton, a parish in Forfarshire, bounded on the N by the river South Esk, parish of Dun, and the Montrose Basin, E by Craig, S by the German Ocean and Lunan, and W by Farnell. It consists of three detached portions—Maryton proper, Dysart, which is separated by a part of Craig, and Grahamsfirth, which lies to the W of Farnell. Its extreme length, from N to S, including the intersecting part of Craig, is about 4 miles; and its breadth, exclusive of Grahamsfirth, about 2 miles; the area is 3687 acres, of which 41 are water and 84 foreshore. The soil partakes of all the varieties of strong clay, rich loam, and land of a lighter character. The rocks along the sea-coast are precipitous and picturesque; and intersecting the parish is a ridge of hills extending from E to W, the highest of which is Maryton Law (335 feet), believed to have been formerly a site for the administration of justice, from which there is a magnificent view of the district. The land is well adapted for all the usual crops, and, as a rule, a system of high farming prevails. This is especially the case on Old Montrose in the hands of Mr Charles Lyall, whose ancestors for many generations have been among the most distinguished agriculturists of Forfarshire, and who is himself one of the best known and most enterprising farmers in Scotland. The landed proprietors are the Earl of Southesk, who owns the whole of Maryton proper, and the Misses Carnegie of Craigo, who are in possession of the Dysart estate, excepting a small part held in feu by the joint proprietors of the neighbouring estate of Dunninall.

The ancient divisions of the parish were, about the 13th century, the lands of *Old Montrose*, which were erected into a barony in 1451, and into an earldom in 1505; the lands of *Bonniton* or *Bonnington*, erected into a barony in 1666; the lands of *Ananie*; the lands of *Fullerton*; the *Abthen* of St Mary's, consisting of the lands of Over and Nether Maryton; the lands of *Drum*, and of *Balnannon*. These lands formed the parish of Maryton proper. *Dyserth*, including *Over and Nether Dysart*, constituted a separate parish which was first annexed to Brechin and afterwards disjoined in 1649 and added to Maryton. A romantic account has been given of the annexation of *Grahamsfirth*, there being a legend that it was given as pin-money to the Hon. Magdalene Carnegie when espoused to the Earl (afterwards Marquis) of Montrose, but it is more likely to have come into the possession of the Grahams as their share in the division of Monrommon Muir, of which it forms a part. There is a tradition that Hospital Shiells, a farm in Marykirk, belonged to Maryton parish, having probably been gifted to St Mary's of

Old Montrose. The name of Ananie, unfortunately, is lost to the parish, though it lingered until the present century in the Den of Ananise, by which name the pretty Den of Fullerton was known. The lands to which the name applied had centuries before been added at different times to Bonniton, Fullerton, and Old Montrose.

The most distinguished of the families connected with the parish have been the Grahams of Old Montrose (1325-1668). The several titles of the family were derived from Old Montrose, and not from the town of Montrose, with which the estate had not the slightest connection, the identity of name (Alt Munross) being purely accidental. Sir David Graham, a devoted follower of Robert the Bruce, received from the King the lands of Old Montrose in exchange for those of Cardross. James, fifth Earl of Montrose, who is best known as the Great Marquis, was born at Old Montrose, and there remains a fragment of the house in which the birth took place. The next family in point of fame is that of the Melvilles of Dysart. The first whose name is found in connection with the parish is Sir Robert Melville of Dysert, who perished at Harlaw in 1411. The last mention of the family is also in the case of a Robert Melville, whose name appears in a retour of the dominical lands of the Mains of Meikle Dysart in the barony of Dysart. Their interest in the parish soon afterwards ceased. The Woods of Bonniton were a notable family, connected with the parish from 1493 to the beginning of the 18th century. There were several knights in the family, and its representative was created a baronet in 1666, for service rendered to Charles II. The famous Earl of Middleton succeeded the last Marquis of Montrose in possession of the estate, and it was forfeited along with the titles when the second Earl was outlawed in 1695. The first Fullerton of that ilk was Geoffrey, falconer to Robert Bruce, whose name appears in connection with the estate (Fowler-town) in 1327. It was held in the family for at least 120 years, after which they transferred themselves and their name to the lands in Meigle parish still called Fullerton. Other noted families having an interest in the parish were the Cranes and Schakloks of Ananie, Arrats of Balnannon, Inverpeffers and Tullochs of Bonniton, Cromwontons and Durhams of Fullerton (the latter being of the Durhams of Grange). Wisharts of Drum, Lyells, Guthries, and Mills of Dysart; Mills of Bonniton, and Hays (Dupplin); Stratons, Mills, and Stirling of Old Montrose. The Abthen seems to have continued mainly in the hands of the ecclesiastics. There is evidence, indeed, that the Fullertons more than once obtained some interest in it, but the right was held of 'tholance' of the bishop. After the Reformation, Bishop Alexander Campbell made over the whole lands of Maryton to his kinsman and chief, the Earl of Argyll. They were transferred eventually to the owner of Old Montrose, and have since continued to be a portion of that estate. By-and-by portions of Ananie and Fullerton were added, the remainder being annexed to what became the barony of Bonniton. Towards the end of the 18th century the two estates were purchased by Sir David Carnegie, and have been included since in the fertile domain of the lords of Kinnaird.

The ecclesiastical history of the parish is interesting. The church of Dysert, belonging to the priory of Roslin, is mentioned in early charters, but there is no trace of where it stood. Until 1649 the inhabitants communicated at the kirk of Brechin 'quilk was thair parochie kirk.' At their own request they were transferred by Act of Assembly to the kirk of Maryton.

The kirk of Marinton was a vicarage of the cathedral of Brechin, and it was gifted (1178-98) to the abbey of Arbroath. It was dedicated to the Virgin, and named St Mary's of Old Montrose. There is a St Mary's Well in the parish, but on the western border. The first Protestant minister was Richard Melville, who was also laird of Baldovie. His father, younger son of Melville of Dysart and laird of Baldovie, had fallen at Pinkie,

leaving a large family, of which Richard was the eldest, and Andrew Melville, the distinguished Reformer, was the youngest. James Melville was the younger son of Richard. In the 17th century two of his descendants by the elder son were successive lairds of Baldovie and ministers of Maryton, viz., Richard (1613-1639) and Andrew (1639-41). The brother of the latter, Patrick, was probably the last laird; he was served heir in 1642; and he was one of the followers who accompanied the Marquis of Montrose in his exile. The next parish minister was John Laumie (1642-1673), who was tutor and servitor of the Marquis of Montrose. When the house of Old Montrose was searched for 'wreitis' to serve as evidence, 'they took to Edinburgh with thame also the erllis secretar, callit Lamby (the minister), to try what he kend.' The bell of the church is dated 1642, and that is understood to be the date of the erection of the previous church. An aisle of the old church was the burying-place of the Wood family, and the church contained a monument, which has been transferred to the present one, to David Lindsay (1673-1706), minister of the parish. The present church, built in 1792, is a plain but neat structure, the walls covered with ivy, and a well-kept graveyard surrounding it. It has been renewed in the internal arrangements more than once, the last occasion being 1883, when the area was fitted with handsome and substantial pews. Stipend, £205; manse, £25; and glebe, £24. There is a Free church at Burnhead, a handsome building with a fine exposure, which serves for the parishes of Maryton, Dun, and Farnell. Stipend, £198; and manse, £25. The public school is a commodious building, with a handsome and convenient schoolmaster's house in immediate proximity. The average number of scholars on the roll is 75, and in actual attendance 60. For a series of years the average Government grant has amounted to £64. The valuation in 1857 was £5245; in 1881, £6079; and in 1884, £5800, plus £899 for railway. Pop. (1755) 633, (1801) 596, (1831) 419, (1861) 417, (1871) 396, (1881) 389. See *Maryton Records of the Past*, by Rev. William R. Fraser, M.A. (Montrose, 1877).

Marywell, a village in St Vigeans parish, Forfarshire, 2 miles N of Arbroath.

Mashie Water, a rivulet of Laggan parish, Invernesshire, rising at an altitude of 2650 feet, within 1 mile of the NW shore of Loch Ericht, and running 9½ miles north-by-eastward, till, after a total descent of 1825 feet, it falls into the Spey at a point 7½ furlongs above Laggan Bridge. On 28 Aug. 1847 the Queen and Prince Albert drove from Ardverikie to the small farm of Strathmashie, where Col. Macpherson was then living. —*Ord. Sur.*, sh. 63, 1873.

Masonhall, a village of NW Fife, 4 miles WSW of Strathmiglo.

Masterton, a village in Dunfermline parish, Fife, 2½ miles NNW of Inverkeithing. Standing high, it commands a fine view over the waters and screens of the Firth of Forth, and has a hospital for poor widows, founded and endowed in 1676 by Sir Henry Wardlaw of Pitreavie.

Mattocks, a village in Monifieth parish, Forfarshire, 6½ miles NE of Dundee.

Mauchline (anciently *Machlein*, *Machlene*, or *Magh-Uinc*, Gael. *magh-Uinne*, 'plain with the pool'), a town and a parish nearly in the centre of Kyle district, Ayrshire. The town stands, 460 feet above sea-level, on the Glasgow and Dumfries high-road, 1½ mile N of the river Ayr and ½ mile N of Mauchline Junction on the Glasgow and South-Western railway, this being 6½ miles NW of Cumnock, 11½ ENE of Ayr, 9½ SSE of Kilhar-nock, and 33½ S by W of Glasgow. Mauchline is built on a southward slope, in the midst of a highly cultivated country, which, abounding in springs, must at one time have presented the appearance indicated in its name. It has a neat and pleasant appearance, and looks busy and prosperous in proportion to the number of its inhabitants. There are no principal buildings in the usual sense of the term. The barn-like edifice which served as the church

in Burns's time was replaced in 1829 by the present building. This, occupying a site in the centre of the town, rises from the churchyard, round which crowd many old houses, and it is considered to be one of the handsomest churches in Ayrshire. Mainly Gothic in style, it is built of red sandstone, and has at its eastern end a tower, 90 feet high, surmounted with turrets. It has sittings for about 1100 persons; and an organ was introduced in 1882. Its predecessor, well known as the scene of Burns's *Holy Fair*, stood for six centuries on the same site. In May 1884 both the Free church and the United Presbyterian church were about to be rebuilt. The schools under the school board are noted in connection with the parish. The New Educational Institution, founded and endowed in 1847 by the late James Stewart, Esq., is not under the board. Of its scholars 50 are educated gratis, and the remainder pay fees. It is conducted by two masters, with salaries respectively of £40 and £20, and one female teacher with a salary of £20. A monument, placed in 1830 on the public green at the town-head of Mauchline, marks the spot where five Covenanters were executed and buried in 1685, during the reign of James VII. The following lines were transferred to it from the original tombstone which it replaced:—

'Bloody Dunbarton, Douglas, and Dundee,
Moved by the devil, and the Laird of Lee,
Dragged these five men to death with gun and sword,
Not suffering them to pray nor read God's word;
Owning the work of God was all their crime.
The Eighty-five was a saint-killing time.'

A fine new cemetery has recently been opened near the scene of the brush between Middleton's troopers and the Clydesdale yeomen in 1648. The town has a post office, with money order, savings' bank, and telegraph departments, a public library, an office of the Commercial Bank, agencies of 5 insurance companies, a gas-light company, 2 hotels, a temperance hall, and various other institutions and associations. It carries on extensive manufactures of wooden snuff-boxes, cigar-cases, card-cases, ornaments, and knick-knacks of various kinds in white varnished or tartan-painted wood. The trade began at Cumnock with the fine hinge of the snuff-box, but it was afterwards much extended and developed by the introduction of the painting, and it now occupies three firms at Mauchline, carrying on a large and far-reaching trade. This town has for a very long period been noted as a market for cattle and horses. Fairs formerly were held for cows, horses, and hiring, on the first Thursday after 4 Feb.; for general business and races, on the second Thursday of April; for cows and horses, on the first Wednesday after 18 May, the fourth Wednesday of June, the first Thursday after 4 Nov., and the fourth Wednesday of December; for cows, horses, and shearers, on the first Wednesday of August; and for cows, horses, ewes, and lambs, on 26 Sept. and the first Thursday thereafter. An omnibus plies to Catrine (2 miles) twice daily, except Sunday. A carrier goes to Glasgow and back on Tuesday and Friday; to Kilhar-nock and Catrine on the same days; and to Catrine and Ayr on Tuesday.

Mauchline was created a free burgh of barony by charter of James IV. in 1510, and so remained till after the Reformation. In 1606, along with other lands and lordships, it passed by Act of Parliament into the hands of Hugh, Lord of London, on which occasion Mauchline received another charter creating it a free burgh of barony, with a weekly market and two fairs yearly. This, however, was unfortunately lost in the conflagration of the Register Office at Edinburgh towards the beginning of the 18th century; and the village has not required power to elect its own magistrates. Its affairs are managed by justices of the peace. Pop. of the village (1831) 1364, (1861) 1414, (1871) 1574, (1881) 1616, of whom 751 were males. Houses (1881), occupied 372, vacant 16, building 5.

The civil history of Mauchline has been carried so far back as 681, when an invasion of Cruithne from Ireland

is said to have been repulsed at the town, or on its site. In 1544 the celebrated reformer and martyr, George Wishart, was invited to preach in the church of Mauchline; but on his arrival he found the place guarded by a party of soldiers, under the sheriff of Ayr. Wishart restrained his adherents from violence, and induced them to follow him to Mauchline Moor, where he preached to them for three hours. The parish was situated in the very heart of the Covenanting district of Ayrshire, and much of its history is interwoven with that of the western Covenanters. In 1661 Mauchline Moor was the halting-place of western Covenanters, previous to their march, which ended in the battle of the Pentlands. The more modern historical interest of Mauchline centres wholly in its connection with Robert Burns (1759-96) during one of the most prolific periods of his poetic genius. The farm of Mossiel, on which the poet lived from 1784 to 1788, and which he subleased from Mr Gavin Hamilton, a writer in Mauchline, lies $1\frac{1}{2}$ mile NW of the town. Mr Hamilton's residence, an old relic of the former priory, and known as Mauchline Castle, contains the room in which Burns wrote his parody-sermon called *The Calf*, and that in which he is said to have married his 'Bonny Jean.' The cottage or change-house of 'Poesie Nancy' or Agnes Gibson, the scene of the piece called *The Jolly Beggars*, stands nearly opposite the church-yard gate. 'It was,' says Allan Cunningham, 'the favourite resort of lame sailors, maimed soldiers, wandering tinkers, travelling ballad-singers, and all such loose companions as hang about the skirts of society;' but, though Burns had visited it, it was by no means one of his haunts. Separated from the gable of this house by an intervening lane, called the Cowgate, stood 'The Whiteford Arms,' a plain thatched building of two stories, a favourite resort of Burns, and kept by John Dow or Dove, upon whom the poet wrote the absurd epitaph, beginning, 'Here lies JOHNNIE PIGEON.' It was along the Cowgate that 'Common Sense' or the poet's correspondent, Dr Mackenzie, escaped, when a certain minister approached the tent in *The Holy Fair*. In the Cowgate also stood the house in which Jean Armour lived before she was married to Burns. It was separated from the Whiteford Arms by a narrow cross street, and is now replaced by a two-story building. Beside the churchyard was the house of Nance Tinnock. We have already adverted to the church as the scene of *The Holy Fair*. In the grave-yard are to be seen, besides the graves of two of Burns's children, those of the Rev. Mr Auld, Nance Tinnock, etc. 'Holy Willie,' renowned for the prayer which Burns puts into his mouth, was a member of Mauchline Kirk-Session. *The Belles of Mauchline* celebrates six young ladies of the town, with whom Burns was acquainted. There are numerous allusions to persons and events connected with Mauchline in Burns's other poems; and the scenes of some of his most exquisite lyrics are laid on the banks of the river Ayr.

The parish is bounded N by Riccarton (detached) and Galston, E by Sorn and Auchinleck, S by Auchinleck, SW by Ochiltree and Stair, and W by Tarbolton and Craigie. Its greatest length, from NNW to SSE, is $6\frac{1}{2}$ miles; its breadth varies between $\frac{1}{2}$ mile and $3\frac{3}{4}$ miles; and its area is 8907 acres, of which over 70 are water. The river Ayr winds $5\frac{1}{2}$ miles west-by-southward, mainly along the southern and south-western boundaries, but for $1\frac{1}{2}$ mile across the southern interior; LUGAR Water, its affluent, curves $2\frac{1}{2}$ miles north-north-westward along the Ochiltree and Stair boundaries; and CESSNOCK Water, a tributary of the Irvine, meanders $4\frac{1}{2}$ miles north-north-westward through the interior, then $2\frac{1}{2}$ miles west-north-westward along the northern boundary. The surface undulates gently, sinking along the Ayr to 190, along Cessnock Water to 220, feet above sea-level; and rising thence to 524 feet near Mossiel, 606 near Grassyards, 426 at Friendlesshead, and 580 near North Auchinbrain. A large tract of land, formerly called Mauchline Moor, exhibits now no trace of its ancient condition, but shows the generally well-cultivated, arable nature of by far the greater part of the parish. The soil near the town

is light and sandy; in a few places it is a rich loam; but in general it is clayey. Thin strata of coal, ironstone, and limestone are found, but not worked; but both white and red sandstone is quarried within the parish. The river Ayr flows between steep red sandstone cliffs, 40 or 50 feet high, and beautifully overhung with wood. A cave cut out of the rocks on the banks of the Lugar is called Peden's Cave, and is said to have been a hiding-place of the celebrated Alexander Peden during the persecutions. Barksimming Bridge, across the Ayr, with a span of 100 and a height of 90 feet, was built towards the close of last century by Sir Thomas Miller, Lord President of the Court of Session; a railway viaduct, near Howford Bridge, across the Ayr has a span of 175 and a height of 180 feet. The only lake in the parish was Loch Brown, called Duveloch in old charters, which formerly covered 60 acres; but this has been drained for many years, and its bed is occupied by cultivated fields, and traversed by the railway.

Besides the town of Mauchline, the parish contains the village of Hagh. It is traversed by the Glasgow and South-Western railway between Glasgow and Carlisle; by the high roads between Glasgow and Dumfries, and between Edinburgh and Ayr, which intersect at the town; and by other thoroughfares. The principal mansions are Netherplace, Ballochmyle, Rodinghead, Viewfield, and Beechgrove. Mossiel Farm deserves mention also. The chief proprietors are Alexander of Ballochmyle, the Duke of Portland, Boswell of Auchinleck, and Campbell of Netherplace.

Mauchline parish is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is £280, including manse and glebe. The public schools of Crossbands and Mauchline and the New Educational Institute, with respective accommodation for 83, 250, and 211 children, had (1883) an average attendance of 30, 174, and 179, and grants of £41, 17s., £209, 17s. 4d., and £215, 3s. 4d. Valuation (1860) £9717, (1884) £12,875, 11s. 11d., plus £4502 for railways. Pop. of both civil and ecclesiastical parish (1801) 1746, (1831) 2232, (1861) 2303, (1871) 2435, (1881) 2504, of whom 1186 were males and 3 Gaelic-speaking. Houses (1881) occupied 527, vacant 24, building 5.—*Ord. Surv.*, shs. 14, 22, 1863-65.

The parochial records go back only to 1670. The ancient parish of Mauchline comprehended also the territory now forming the parishes of Sorn and Muirkirk. Chalmers, in his *Caledonia*, says, that in 1165, during William's reign, Walter, son of Alan, granted to the monks of Melrose the lands of Mauchline, with certain privileges. The monks established a priory of their own order at Mauchline, which remained a cell of Melrose till the Reformation. An old tower, already mentioned, is the sole relic of this building. The power and property of the monks gradually expanded about the nucleus of Mauchline; and 'they contributed greatly to the settlement and cultivation of the district.' Their estates of Mauchline, Kylesmuir, and Barmure were afterwards formed into a regality, whose court met at Mauchline village, erected into a free burgh of barony in 1510 by James IV. After the Reformation the ecclesiastical lands, etc., about Mauchline were formed into a temporal lordship in favour of Hugh, Lord Loudoun, whose original grant was dated 1606. The town of Mauchline was at the same time made a burgh of barony. In 1631 what is now Muirkirk, and in 1636 what is now Sorn, were detached from Mauchline parish, which was 'thus reduced to less than a fifth of its former magnitude.' Before the Reformation there had been a chapel on each of these portions. One was on Greenock Water; the other on the Ayr, dedicated to St Cuthbert, stood E. of the present village of Catrine, on a field known as St Cuthbert's Holm.

Besides the relics of the priory in the town, the old tower of Kinganclugh may be mentioned among the antiquities. The Braes o' Ballochmyle, and indeed the

whole course of Ayr, is classic ground in Scottish poetry, from its connection with Burns.

Maud or New Maud, a village on the mutual border of New and Old Deer parishes, Aberdeenshire, with a junction on the Great North of Scotland railway (1861-65), 16 miles SSW of Fraserburgh, 13 W of Peterhead, and 31½ N by W of Aberdeen. Of recent erection, it has a post and telegraph office under Aberdeen, a branch of the North of Scotland Bank, an hotel, a Gothic Established chapel of ease (1876; 420 sittings), the Buchan Combination Poorhouse (with accommodation for 138 inmates), and cattle-markets on the last Monday of every month.—*Ord. Sur.*, sh. 87, 1876.

Maudiston. See MADDISTON.

Maudslie Castle, a mansion in Carluke parish, Lanarkshire, near the right bank of the Clyde, 3 miles W of Carluke town. Built for the fifth Earl of Hyndford in 1793, after designs by Adam, it is a large two-story edifice, with round flanking towers, and stands in an extensive, richly-wooded park. Its owner, William Wallace Hozier, Esq. (b. 1825; suc. 1878), holds 517 acres in the shire, valued at £1909 per annum. The barony of Maudslie, a royal forest once, was held by the Danyelstowns from the middle of the 14th century till 1402, by the Maxwells from 1402 till the first half of the 17th century, and from 1649 till 1817 by the Carmichaels, its two last holders being fifth and sixth Earls of HYNDFORD.—*Ord. Sur.*, sh. 23, 1863.

Maulesden, a mansion in Brechin parish, Forfarshire, near the South Esk's left bank, 2 miles W by S of the town. A Scottish Baronial mansion, built in 1853 for the Hon. W. Maule from designs by the late David Bryce, R.S.A., it is now the seat of Thomas Hunter Cox, Esq. (b. 1818), who holds 97 acres in the shire, valued at £461 per annum.—*Ord. Sur.*, sh. 57, 1868.

Maulsie, a mansion in Dalry parish, Ayrshire, 2 miles SSW of Beith.

Mauricewood, a mansion in Glencorse parish, Edinburghshire, 1½ mile N by W of Penicuik.

Mavis-Grove, a mansion in Troqueur parish, Kirkcudbrightshire, near the right bank of the Nith, 2¼ miles S of Dumfries.

Maw, a hamlet in Markinch parish, Fife, 1 mile SSW of Windygates.

Mawcarse, a station on the Fife and Kinross section of the North British railway, 3¼ miles NE by N of Kinross.

Maxton (anc. *Maccus-ton*), a village and a parish on the N border of Roxburghshire. The village, which consists of a short double line of houses, built on either side of the Kelso road, is situated in the W part of the parish within ½ mile of the S bank of the Tweed, 1½ ESE of Newtown St Boswells, and ¼ NW of Maxton station on the North British line from Newtown St Boswells to Kelso, this being 3 miles ESE of Newtown St Boswells, 8½ ESE of Kelso, 12¼ NNW of Jedburgh, and 43½ SE of Edinburgh. Although the village is at a little distance from the Tweed, the church, manse, and burying-ground are close beside the river. Maxton church was dedicated in the 12th century to St Cuthbert, and eventually became the property of the monks of Dryburgh, who held it until the Reformation, when it was placed under the charge of a minister, along with Mertoun, St Boswells, and Smalholm, and had a 'reader' attached to it with a stipend of £20 Scots. In 1792 the church was thatched; but in 1812 and 1866 it was restored and enlarged, and is now as neat and well-built a country church as any in the district. Beneath it is the burial-place of the Kers of Littledean. A memorial-tablet to Lieutenant-General Ker, interred there in 1833, was recently placed in the church by a descendant. The old shaft of the village cross still remains to point out the spot 'where 1000 men of the barony were wont to assemble for war.' It was restored in 1882 by Sir W. R. Fairfax at considerable expense.

Maxton parish is bounded N by Mertoun in Berwickshire, NE by Makerstown, E and SE by Roxburgh, SW by Ancrum, and W by St Boswells. Its utmost length,

from E by N to W by S, is 4½ miles; its breadth varies between 1 mile and 2½ miles; and its area is 4494½ acres, of which 72½ are water. Besides the village of Maxton, it contains the railway station of Rutherford, 2½ miles from Maxton. The TWEED curves 4½ miles east-north-eastward along all the northern boundary through very fine scenery. Beside it the surface sinks to close on 200 feet above sea-level; and thence it rises to 579 feet at Muirhouselaw and 563 at Lilliard's Edge, on the ANCRUM border. The ground is generally productive, especially near the Tweed, where it is a rich clay loam. A considerable part of the ground is under wood, a small portion is bog land, and the rest is almost entirely in tillage.

The most interesting ruin in the parish is Littledean Tower, which stands on a lofty crag overlooking the Tweed, 1½ mile NE of the village. From the remains of the circular tower, the extreme thickness of the walls that still remain, and the vestiges of other walls, it is plain that Littledean was an important stronghold, the 'Keep' of the noted family of Ker of Littledean. The parish is partly traversed by a Roman road, and there are vestiges of a Roman camp on Muirhouselaw. The chief landowners in Maxton parish are the Duke of Roxburgh, Lord Polwarth, Sir Edmund Antrobus of Rutherford, Sir William Ramsay Fairfax, and C. J. Cunningham, Esq. of Muirhouselaw. None of them are resident. Maxton is in the presbytery of Selkirk and the synod of Merse and Teviotdale; the living is worth £421. The public school, with accommodation for 92 children, had (1883) an average attendance of 67, and a grant of £48, 9s. 6d. Valuation (1864) £5431, 4s., (1884) £6560, 2s. Pop. (1801) 368, (1831) 462, (1861) 497, (1871) 481, (1881) 456.—*Ord. Sur.*, sh. 25, 1865.

Maxwell's Cross. See COLDSTREAM.

Maxwell Thorns. See DRYFE.

Maxwelltown, a burgh of barony in the parish of Troqueur, Kirkcudbrightshire. It stands on the right bank of the curving Nith, at the eastern verge of Kirkcudbrightshire, directly opposite Dumfries, and is included within the parliamentary boundaries of that burgh. Its site is a bank or low ridge circling along the margin of the river, and it is connected with Dumfries by three bridges. The older parts of the burgh are poorly built and badly aligned; but the new are pleasant, neat, and airy. A narrow street or alley, immediately on the Nith, N of the uppermost bridge, inhabited mainly by families of the working classes, leads out to the ruins of Lincluden, and bears the name of College Street. A street parallel to this brings down the Glasgow and Dumfries turnpike, is straight and spacious, has several good houses, and, near the middle, on its W side, exhibits a small court-house of neat exterior. A street at right angles with these, and on a line with the bridge, carries westward the Dumfries and Portpatrick road, is also straight and spacious, and at its W end passes off into the country in a series of villa-like houses. A wide brief street forking into two between the bridges, a street somewhat parallel to it on the W, and one or two other thoroughfares are in general of mixed or poor appearance, but slightly relieved of their plain, low, dingy aspect by a sprinkling or occasional series of tolerable houses. Corbely Hill, swelling up at the S end but a brief distance from the brink of the river, bears aloft the fine convent and church (1881-84) of the Immaculate Conception, whilst a little lower down is a picturesque building, which, originally a windmill, since 1838 has served the double purpose of an observatory and a museum. Along the face of this fine rising-ground, fronting Dumfries, stands a range of elegant houses. On the brink of the stream, with but a narrow belt of plain intervening from the base of the hill, stands a complete suite of large grain mills, each mill supplied with water-power in one of several parallel dams, extending from a strong high-water weir built diagonally across the whole breadth of the river. The entire town, exclusive of its burgh

roads, is about two-thirds of a mile in length, and nearly the same in breadth. Maxwelltown has a station on the line to Castle-Douglas, the large Troqueer tweed mills (1866-70), a dye work, 2 saw-mills, nursery-grounds, etc.; and it shares considerably in the trade and commerce of Dumfries. The Established church of Maxwelltown *quoad sacra* parish is a Gothic edifice, with a spire and 800 sittings, built at a cost of £2000 in lieu of a previous chapel of ease, which was burned on 28 Sept. 1842. A handsome Free church was built in 1866, and a public school in 1876, the latter costing £2200, and accommodating 359 children. The town originally bore the name of Bridgend, and was such a disorderly village, that, according to the byword, 'You might trace a rogue all over the kingdom, but were sure to lose him at the Bridgend of Dumfries.' But in 1810 it was erected into a free burgh of barony, under the name of Maxwelltown, in honour of Mr Maxwell of Nithsdale, its superior, and was placed under the government of a provost, 2 bailies, and 4 councillors; and it speedily underwent great improvement, as to at once its police, its trade, the condition of its houses, and the manners of its people. The general police act has also been adopted with good effect; and the management of this is reposed in 12 commissioners, 3 of whom are police magistrates. Sheriff circuit small debt courts are held on the second Tuesday of January and June, the third Tuesday of March, and the fourth Tuesday of September, and justice of peace small debt courts on the first Thursday of every month. Valuation (1884) £15,142. Pop. (1831) 3230, (1861) 3599, (1871) 4198, (1881) 4455, of whom 2425 were females, and 2070 were in the *quoad sacra* parish. Houses (1881) 965 inhabited, 64 vacant, 5 building.—*Ord. Sur.*, sh. 9, 1863. See also DUMFRIES and TROQUEER.

Maxwelton, a village in East Kilbride parish, Lanarkshire, $\frac{1}{2}$ mile E by N of East Kilbride town.

Maxwelton, a mansion in Glencain parish, Dumfriesshire, near the left bank of Cairn Water, $3\frac{1}{2}$ miles ESE of Moniaive. The estate—1810 acres, of £1531 annual value—has long been held by the Laurie family, one of whom was the 'Annie Laurie' of song.—*Ord. Sur.*, sh. 9, 1863.

Maybole, a town and a coast parish of Carrick, Ayrshire. The town, lying $3\frac{1}{2}$ miles inland, and 200 to 350 feet above sea-level, has a station on the Ayr and Girvan section (1857-60) of the Glasgow and South-Western railway, 9 miles S by W of Ayr, $49\frac{1}{2}$ SSW of Glasgow, 87 SW of Edinburgh, and $67\frac{1}{2}$ NNE of Portpatrick. It stands on the slope and partly along the skirts of a broad-based, flattened hill, with south-eastward exposure, the summit of the hill intervening between it and the Firth of the Clyde; but it commands a pleasant and somewhat extensive view over one-half of the points of the compass into the interior of Carrick. An old rhyme, using one of several obsolete variations of the town's ancient name, says—

'Minnibole's a dirty hole,
It sits aboon a mire.'

The notion conveyed by these words, of the town being situated on miry ground, is now, and probably was always, incorrect. A broad belt of deep green meadow, nearly as flat as a bowling-green, stretches along the base of the hill, and anciently seems to have been a marsh; but it could not have been a marsh of a miry kind, or otherwise than green and meadowy; nor does it, even at present, form the site of more than a very small and entirely modern part of the town. The ancient site is everywhere declivities, abounding with copious springs of pure water; and not improbably was clothed in its natural state with heath. Two sets of names, both very various in their orthography, but represented by the forms *Maiboll* and *Minnibole*, were anciently given to the town. They have greatly perplexed etymologists; but, according to Col. Robertson, are derived from the Gaelic *mogh-baile*, 'town of the plain or field.' The lower streets of the town, called Kirklands, Newyards, and Ballony, are not within the limits

of the burgh of barony, and consist almost wholly of artisans' houses and workshops, tidier and better than similar buildings in many other towns. The main street runs nearly due NE, and—with exception of a short thoroughfare striking off westward at right angles from its middle—occupies the highest ground within the burgh. A considerable space, sloping between it and the low-lying suburbs, is disposed to a small extent in the ancient burying-ground with the relics of the collegiate church; to a greater extent in four or five incompact and irregularly arranged streets; and to a yet greater extent in fields and gardens which give all the intersecting thoroughfares a straggling or detached appearance, and impart to the whole town a rural, airy, and healthful aspect.

The only parts of the town which draw the attention of strangers are Main Street and what is called Kirk Wynd. These are narrow and of varying width, quite destitute of every modern adornment, and guiltless of all the ordinary graces of a fine town; yet they possess many features of antique stateliness, decayed and venerable magnificence, which strongly image the aristocratic parts of Edinburgh during the feudal age. As capital of Carrick, the place anciently wielded more influence over its province than the modern metropolis does over Scotland, and contained the winter residences of a large proportion of the Carrick barons. As seat, too, of the courts of justice of Carrick baliary—the place where all cases of importance in a roistering and litigating age were tried—it derived not a little outward respectability from the numbers and wealth of the legal practitioners who made it their home. In connection, too, with its collegiate church and its near vicinity to Crossraguel Abbey, it borrowed great consequence from the presence of influential churchmen, who, in a dark age, possessed more resources of power and opulence than most of the nobility. No fewer than 28 baronial mansions, stately, turretted, and strong, are said to have stood within its limits. Out of several of these which still remain, two figure in association with such interesting history that they deserve to be specially noticed.

The chief is the ancient residence of the Ailsa or Cassillis family, the principal branch of the Kennedys. This, standing near the middle of the town, bears the name of the Castle *par excellence*, and is a lofty, well-built, imposing pile, one of the strongest and finest of its class. It is said to have been the place of confinement for life of the Countess of Cassillis, who eloped with the Gipsy chieftain, Johnny Faa. (See CASSILLIS.) The Earls of Cassillis, directly and through collateral branches of their family, wielded such power over the province that they were known as the 'Kings of Carrick;' and they used the castle of Maybole as the metropolitan palace of their 'kingdom,' whose limits were thus defined in an old-world rhyme:—

'Twixt Wigtown and the town o' Ayr,
Portpatrick and the Cruives o' Cree,
You shall not get a lodging there
Except ye court a Kennedy.'

Gilbert, fourth Earl, who lived in the unsettled period succeeding the commencement of the Reformation, pushed his power into Galloway, and in 1575 acquired the large possessions of the Abbey of GLENLUCE, just five years after his roasting of Allan Stewart, the commander of CROSSRAGUEL. A feud, arising from or aggravated by that crime, between the Earls of Cassillis and the Laids of Bargany, issued at last in very tragical events. In Dec. 1601 the Earl of Cassillis rode out from Maybole Castle at the head of 200 armed followers to waylay the Laird of Bargany as he rode from Ayr to his house on the Water of Girvan; and on the farm of West Enoch, near the town, he forced on the Laird a wholly unequal conflict. The Laird, mortally wounded, was carried from the scene of the onset to Maybole, that there, should he show any sign of recovery, he might be despatched by the Earl as 'Judge Ordinar' of the country; and thence he was removed to Ayr, where he died in a few hours. Flagrant though the deed was, it not only—through bribery and state

influence—passed unpunished, but was formally noted by an act of council as good service done to the King. The Laird of Auchendrane, son-in-law of the slain baron, was one of the few adherents who bravely but vainly attempted to parry the onslaught; and he received some severe wounds in the encounter. Thirsting for revenge, and learning that Sir Thomas Kennedy of Colzean intended to make a journey to Edinburgh, he so secretly instigated a party to waylay and kill him, that no witness existed of his connection with them except a poor student of the name of Dalrymple, who had been the bearer of the intelligence which suggested and guided the crime (1602). Dalrymple now became the object of his fears; and, after having been confined at Auchendrane and in the Isle of Arran, and expatriated for five or six years as a soldier, he returned home, and was doomed to destruction. Mure, the Laird, having got a vassal, called James Bannatyne, to entice him to his house, situated at Chapelodnan, a lonely place on the GRYVAN shore, murdered him there at midnight, and buried his body in the sand. The corpse, unearthed by the tide, was next by the murderers taken out to sea at a time when a strong wind blew from the shore, but was soon brought back by the waves, and cast up on the very scene of the murder. Mure and his son, who had aided him in this horrid transaction, fell under general suspicion, and now endeavoured to make away with Bannatyne, the witness and accomplice of their guilt; but he making full confession to the civil authorities, they were brought to the bar, pronounced guilty, and put to an ignominious death (1611). These dismal transactions form the ground-work of Sir Walter Scott's dramatic sketch, *Auchendrane, or the Ayrshire Tragedy*.

The house lately occupied as the Red Lion Inn was anciently the mansion of the provost, and is notable as the scene of a set debate between John Knox, the Reformer, and Quentin Kennedy, Abbot of Crossraguel, 28 Sept. 1561. An account of the controversy, written by Knox himself, was republished in 1812 by Sir Alexander Boswell, from a copy—the only one extant—in his library at Auchinleck. Occasioned by a challenge from the abbot in the church of Kirkoswald, the debate was conducted in a panelled apartment, in the presence of eighty persons, equally selected by the antagonists, and including several nobles and influential gentlemen. It lasted three days, and was then broken off through want of suitable accommodation for the persons and retinues of the auditors; but it did good service in arousing public attention to the doctrines of the Reformation. The members of a 'Knox Club,' instituted in 1824 to commemorate the event, and consisting of all classes of Protestants, used to hold a festival to demonstrate their warm sense of the religious and civil liberties which have accrued from the overthrow of the Papal domination.

Other noteworthy buildings are the ancient town-residences of the Kennedys of Knockdow, Colzean, and Ballimore; of the abbots of Crossraguel (called the Garden of Edeu), etc., and the Town Hall, a cumbrous old pile with a low, heavy tower, situated at the Cross. Though the town has not one modern public civil building, it abounds in commodious and comfortable dwelling-houses, greatly superior, for every domiciliary use, to even the best of its remaining baronial mansions. In 1371 Sir John Kennedy of Dunure, founding a chapel for one clerk and three chaplains, dedicated it to the Blessed Virgin, and endowed it with the five-mark lands of Parryeloch and Barrelach, the six-mark lands of Treuchan, and various other sources of revenue. This collegiate chapel seems to have been the earliest of its kind in Scotland; and afterwards, when similar ones arose, it was called a collegiate church, and its officials were styled the provost and prebendaries. The ground on which the town is built belonged to this church, which now is the burying-place of the Ailsa and other families, whose ancestors stayed its impending ruin. On 19 May 1563 Mass was last sung within its walls to 200 Kennedys, armed with jacks, spears, guns, and other weapons. The present parish church, at the

NE end of the town, is a plain edifice of 1808, with 1192 sittings. The West *quoad sacra* church, at the SW end, was built as a chapel of ease about 1840 at the cost of Sir C. D. Fergusson, Bart. The Free church dates from Disruption times; and a new Gothic U.P. church, with spire and large stained-glass window, was built in 1880, as successor to one of 1797. An Episcopal mission is worked in connection with Girvan; and the fine Roman Catholic church of Our Lady and St Cuthbert was erected in 1876-79 at a cost of £3000, which was mainly defrayed by D. Hunter-Blair, Esq. Second Pointed in style it is closely modelled on the ruined church of Crossraguel Abbey, and consists of a nave, with a semi-octagonal apse, stained-glass windows, richly sculptured bosses, etc. The public school, whose cost exceeded £5000, is a handsome two-story structure of recent erection; and a Roman Catholic school was built in 1882 at the cost of the Marquis of Bute and Mr Blair.

Maybole, besides, has a post office, with money order, savings' bank, insurance, and telegraph departments; branches of the Royal and Union Banks; offices or agencies of 15 insurance companies, 3 hotels, a mechanics' institution, a working men's club, a combination poor-house for six of the Carrick parishes, farmers' and horticultural societies, water and gas companies, etc. Thursday is market day; and fairs are held on the third Thursday of April and October. Handloom weaving has declined; and boot and shoe making and the manufacture of agricultural implements are now the staple industries. Five large shoe factories turn out 200,000 pairs per annum, representing a value of nearly £90,000. Immigrants from Ireland and their offspring have long been so numerous as almost to outnumber the native inhabitants, and to give law to the place. As a burgh of barony since 1516, the town is governed by a senior and a junior magistrate; whilst as a police burgh it is governed by a provost, 2 magistrates, and 9 commissioners. The police force is a detachment of the county police. The burgh court sits on the first Thursday, and a justice of peace court on the first Wednesday, of every month. Pop. (1851) 3862, (1861) 4115, (1871) 3797, (1881) 4494, of whom 2284 were females. Houses (1881) 602 inhabited, 26 vacant, 3 building.

The parish of Maybole, containing also the villages or hamlets of CULROX, DUNTURE, FISHERTON, and MINISHANT, comprises the ancient parishes of Maybole and Kirkbride, the former to the S, the latter to the N. It is bounded W and NW by the Firth of Clyde, NE by Ayr, E by Dalrymple and Kirkmichael, SE by Kirkmichael, and S and SW by Kirkoswald. Its utmost length, from N to S, is 8½ miles; its utmost breadth, from E to W, is 5½ miles; and its area is 35½ square miles or 22,720½ acres, of which 613½ are foreshore and 114½ water. The 'bonny Doon' winds 6½ miles north-north-westward to the firth along the Dalrymple and Ayr borders; the Water of GRYVAN flows 1½ mile south-south-westward along the south-eastern boundary; several rivulets rise in the interior, and run to one or other of these two streams; and half-a-dozen others go direct to the firth. Of four or five tiny lochets, the only noticeable one is Heart Loch, whose outline is exactly designated by its name, and whose appearance in a wooded hollow is softly beautiful. Perennial springs of excellent water are numerous, especially on the site and in the vicinity of the town; and one of them, called the Well-Trees' Spout, emits a stream powerful enough to drive a mill wheel, or between 160 and 170 imperial gallons per minute. Of various mineral springs, once of medicinal repute, but all neglected now, St Helen's Well, 2½ miles N of the town on the high road to Ayr, was anciently reputed to have the power on May Day of healing sick or delicate infants. The coast-line, 8½ miles in extent, towards the mouth of the Doon is low and flat, but elsewhere is mostly bold, though but little diversified with either headland or bay. At the HEAD of AYR it rises rapidly to 258 feet above sea-level. The eastern and south-eastern districts are an undulating plain, very diversified in surface, never subsiding long

into a level, nor ever rising into decided upland. The other districts are a sea of heights, partly arable and partly pastoral, so pleasingly diversified in superficial outline as to want nothing but inter-spersion of wood to render them delightful rambling-ground to a lover of fine scenery. Along the middle of the hill district, parallel with the firth, and $\frac{1}{2}$ mile distant from it, stretches a range of summits nearly 4 miles long, attaining a maximum altitude of 940 feet above sea-level, and bearing the name of BROWN CARRICK Hill. This range, though heathy in itself, and rising like a screen to intercept a view of the firth and its framework from the interior, commands one of the finest prospects in Scotland. On the SE and S the surgy surface of Carrick stretches away in alternations of green height and bold brown upland till it becomes lost among the blue peaks of the Southern Highlands; on the SW and W are the broad waters of the Firth of Clyde, with many a sail like a sea-bird skimming the surface, and Ailsa Craig riding like an ark on the wave, while behind are the serrated mountains of Arran veiled in mist or curtained with clouds of every form and hue; on the N, immediately under the eye, extends the deep sylvan furrow of the Doon, with the Burns' Monument glittering like a gem on its margin; and away thence stretches the great luxuriant plain of Kyle and Cunningham, pressed inward in a long sweeping segment by the firth, dotted with towns which look like cities in the distance, chequered also with a profusion of mansions and demesnes, and gliding dimly away in the perspective into the gentle heights of Renfrewshire, overlooked in the far horizon by the blue summit of Ben Lomond. The same prospect, in much of its extent and most of its elements, is seen from a thousand vantage-grounds of this land of beauty; but nowhere are its scope so unbroken, its groupings so superb, and its effect so striking. Should any one wonder that Burns grew up on the threshold of this home of romance, and for many years might daily have gazed upon its gorgeous visions, and yet has made no allusion to it in his writings, he must remember that the bard, though possessing a keen eye for the beauties of nature, was the painter rather of manners than of landscape—the type in poetry not of Salvator Rosa, but of Hogarth and the limners of Holland.

The geological structure of the coast presents an interesting correspondence in its strata with those of the confronting coast of Arran. The predominant rocks of the interior are Old Red sandstone and trap. The sandstone, in a quarry at St Murray's, often affords beautiful specimens of arborescence, from the presence of the black oxide of manganese, and is traversed by veins of lead ore. The soil of the arable lands is partly light, and partly of a strong, clayey character. Three-fourths of the entire area are in tillage; nearly 1000 acres are under plantation; and the rest is meadow, hill-pasture, or moorland. In feudal times there were within the parish at least fifteen towers or castles, the residences of brawling chiefs. Of these, DUNURE and GREENAN have been noticed separately. The castles of Newark and Kilhenzie have undergone renovation or repair; but all the others—Auchendrane, Smithstown, Beoch, Craigskean, Garryborne, Doonside, Dalduff, Glenayas, Sauchrie, and Brochlock—are much dilapidated, or have left but a few vestiges. Numerous camps occur, so small and of such rude construction, as evidently to have been thrown up by small invading bodies of those Irish who subdued the Romanised British tribes. Tumuli, the burying-places of a field of carnage, are frequent. Kirkbride church is still represented by ruins, $\frac{1}{2}$ mile E of Dunure; another pre-Reformation place of worship stood on the lands of Auchendrane; and traces of several others were extant towards the close of the 17th century. Twelve proprietors hold each an annual value of £500 and upwards, 11 of between £100 and £500, 14 of from £50 to £100, and 49 of from £20 to £50. In the presbytery of Ayr and synod of Glasgow and Ayr, the civil parish includes nearly half of Alloway *quoad sacra* parish, a small part of Crosshill, all Fisherton, all Mayhole proper, and nearly

all West Church *quoad sacra* parish; the livings of the two last being worth £435 and £224. Three public schools—Fisherton, Maybole, and Minishant—with respective accommodation for 100, 650, and 90 children, had (1883) an average attendance of 94, 640, and 84, and grants of £82, £600, 6s., and £58, 3s. 8d. Valuation (1860) £29,023, (1884) £35,470, 17s. 6d., plus £5848 for railway. Pop. (1801) 3162, (1841) 7627, (1861) 6713, (1871) 5900, (1881) 6628, of whom 2935 were in Maybole ecclesiastical parish, 2625 in West Church, 609 in Fisherton, 421 in Alloway, and 38 in Crosshill.—*Ord. Sur.*, sh. 14, 1863.

Mayen House, a mansion in Rothiemay parish, Banffshire, near the left bank of the winding Deveron, 5 miles ENE of Rothiemay station. Its owner, Adam Hay-Gordon, Esq. (b. 1846), holds 2171 acres in the shire, valued at £1529 per annum.—*Ord. Sur.*, sh. 86, 1876.

May, Isle of, an extra-parochial island of Fife, in the mouth of the Firth of Forth, $\frac{5}{8}$ miles SSE of Craik and $10\frac{3}{8}$ NE by N of North Berwick. Its utmost length, from NW to SE, is 1 mile; its utmost breadth is $2\frac{1}{2}$ furlongs; and its area is 146½ acres, of which $14\frac{1}{2}$ are foreshore. The prevailing rock is greenstone; and the shores are precipitous and rocky, the highest point in the island attaining 150 feet above sea-level. On the NW the coast presents some semi-columnar cliffs over 100 feet high; and at the SE it sinks into a low ridge or reef. There are a spring of excellent water and a small lake; and there is good pasturage for sheep. Several kinds of sea-fowl build on the island. The May contains the ruins of a 13th century chapel, nearly 32 feet long, which was cleared of rubbish and repointed in 1865. It was dedicated to St Adrian, who, with 6006 other Hungarians, is said to have been killed by the Danes about 870 and buried here. St Monan, one of his alleged followers, by Skene is identified with Moinean, Bishop of Clonfert in the 6th century, whose relics were probably brought from Ireland to Fife by a body of clerics and laymen expelled by the Danes (*Celtic Scotland*, ii. 311-317, 1877). St Adrian's shrine was formerly resorted to in cases of barrenness. David I. founded a monastery here before the middle of the 12th century, and granted it to the Benedictine abbey of Reading in Berks shire on condition that they should place and maintain twelve priests therein, to say mass for himself and his predecessors and successors. In 1318 all the rights to the Priory of May were transferred to the canons of St Andrews, when a priory at PITTENWEEM appears to have been substituted for that on the island. After the Reformation the island came into the possession of the Balfours of Montquhandie, and afterwards of Allan Lamond, who sold it to Cunningham of Barns. Alexander Cunningham obtained from Charles I. a charter of the island, with liberty to build a lighthouse, for which a tax was imposed on all ships passing up the Firth. In 1635 he erected a tower 40 feet high, on the top of which a fire of coals was constantly kept burning. With the estate of Barns, the Isle of May passed to Scot of Scotstarvet by purchase, and came to General Scott of Balcomie, by whose daughter, the Duchess of Portland, it was sold for £60,000 to the Commissioners of Northern Lights. In 1815-16 they rebuilt the tower. The present lighthouse, 240 feet high, shows two fixed lights, visible respectively at distances of 22 and 16 nautical miles; the leading light being 130 feet below the other. Formerly about 15 fishermen with their families lived on the island; and at the end of the fishing season the fishermen of the Fife shire coast used annually to hold a merry-making on the May. But the wreck and total loss of a boat full of women, on its passage to the island for this purpose, threw a cloud over this custom, and it has now become obsolete. There are three houses on the island; one used as a pilot station, the others connected with the lighthouse. Pop. (1861) 17, (1871) 17, (1881) 22, of whom 4 were females.—*Ord. Sur.*, sh. 41, 1857. See John Jack's *Key of the Forth* (1858); an article in *Good Words* (1864); Dr Jn. Stuart's *Records of the Priory of*

the Isle of May (1863); and an article in vol. vii. of *Proc. Soc. Ants. Scotl.* (1870).

Mayville, an estate, with a mansion, in Stevenston parish, Ayrshire, 5 furlongs NW of the town.

May, Water of, a small river of the Ochil and Strathern districts of Perthshire. Rising on John's Hill, at an altitude of 1250 feet, and near the meeting-point of Auchterarder, Dunning, Glendevon, and Fossoy parishes, it runs 11½ miles east-north-eastward and north-north-westward through or along the boundaries of Dunning, Forgandenny, and Forteviot parishes, till, after a total descent of 1217 feet, it falls into the Earn at a point 5 furlongs S by W of Forteviot church. It receives numerous small tributaries from among the Ochils; traverses a wooded glen, rich in picturesque close scenes; makes two beautiful falls called Muckersie Linn and the Humble Bumble; passes the 'Birks of Invermay,' celebrated in song; and is a first-rate trout-stream, but very strictly preserved.—*Ord. Sur.*, shs. 39, 40, 48, 1867-69.

Meadowbank House, a mansion in Kirknewton parish, Edinburghshire, 7 furlongs SE of Midcalder Junction. A plain edifice of the close of the 17th century, it has been thrice enlarged since 1795, and stands in a finely-wooded park of 200 acres. Possessed by his ancestors for nearly 200 years, the estate now is owned by Allan Alexander Maconochie Welwood, Esq. (b. 1806; suc. 1861), who holds 1583 acres in Edinburghshire and 724 in Fifeshire, valued at £1777 and £1688 per annum.—*Ord. Sur.*, sh. 32, 1857. See KIRKNEWTON, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Mealfourvounie (Gael. *Meall-fuar-mhonnaidh*, 'mountain of the cold moor'), a mountain in Urquhart parish, Inverness-shire, 11 miles NNE of Fort Augustus. Situated at the foot of Glen-Urquhart and Glen-Moriston, and forming a conspicuous feature on the NW flank of Loch Ness, it is broad-based and round-backed, and sends up from a stage at two-thirds of its whole elevation a dome-shaped peak, which attains an altitude of 2284 feet above sea-level. The great mass of the mountain, from the summit downward, consists of coarse conglomerate, whose abraded portions are gneiss, granite, quartz, mica-schist, and sandstone, cohering with extremely little cement; and its lower declivities, including seemingly the entire base, consist of a hard compact splintery rock, which has usually been described as primary red quartz, but which may be stratified sandstone completely indurated, and in great measure divested of its stratification by the subajacency of granite, and which is so hard and crystalline as to be quarried and regularly used for causewaying the streets of Inverness. The upper stage or peak of the mountain is very steep on the W, and almost mural on the N and S; and it is connected with the rest of the mountain, on the E, by a long tapering ridge. On the western side, at the bottom of the peak, is Loch nam Breac Dearga (6 × 1½ furl.; 1500 feet), whence a streamlet runs 4½ miles south-south-westward and eastward to Loch Ness, tumbling along a broken channel down the face of a frontlet of rock, overshadowed by trees in its lower course, and forming two beautiful waterfalls amidst foliage of the richest tints. On the W side of this rill, near its source, is a rocking-stone 20 feet in circumference, which is moveable by two persons. The view from the summit of Mealfourvounie is grand and extensive, and comprehends the whole of the Glenmore-nan-Albin, from Fort George on the NE to Fort William on the SW, a distance of more than 70 miles. On the N the eye wanders over various scenery away to the mountains of Ross and Caithness; and on the S it takes in the whole of Stratherrick and the country watered by the head-streams of the Spey. Right below is Loch Ness, like a narrow ditch, sunk deeply within steep banks; and at 3 miles' distance the Fall of Foyers glisters in its belt of shining spray between sheets of dark-brown mountain, like a glint of sky struggling through a vertical fissure in the cliffs. Mealfourvounie is noted for being the first landmark seen by mariners after they pass the Moray Firth round Kinnaird Head, or from the

S, and for guiding their navigation over most of that vast gulf.—*Ord. Sur.*, sh. 73, 1378.

Mealista or Eilean Mhealastadh, an uninhabited island of Uig parish, Outer Hebrides, Ross-shire, on the N side of the mouth of Loch Reasort, and ½ mile from the W coast of Lewis. With an utmost length and breadth of 7½ and 6 furlongs, it rises to a height of 200 feet above sea-level.—*Ord. Sur.*, sh. 98, 1858.

Meal Horn. See DURNESS.

Meal Meadhnach. See DURNESS.

Mearnaig. See CASTLE-MEARNAIG.

Mearns, a village and a parish of SE Renfrewshire. The village, called Newton-Mearns (a name as old at least as 1306), is pleasantly situated on a rising ground, 410 feet above sea-level, 3½ miles WSW of Busby and 7 SSW of Glasgow. A burgh of barony, with the right of holding a weekly market and two annual fairs, it chiefly consists of a single street on the Glasgow and Kilmarnock highroad, and has a post office under Glasgow, a branch of the Union Bank, gas-works, and an hotel. Pop. (1841) 629, (1861) 718, (1871) 776, (1881) 900.

The parish, containing also three-fourths of the town of BUSBY, is bounded N by Neilston, Eastwood, and Cathcart, E by East Kilbride and Cathcart in Lanarkshire, SE by Eaglesham, S by Fenwick and Stewarton in Ayrshire, and NW by Neilston. Its utmost length, from NE to SW, is 7½ miles; its utmost breadth is 3½ miles; and its area is 10,607 acres, of which 325½ are water. EARN Water runs 6 miles north-eastward along the south-eastern boundary to the White Carr, which itself flows 7½ furlongs along all the Lanarkshire border, and several more of whose little tributaries take a north-north-easterly course through the interior. On the Neilston boundary lie Long Loch, Harelaw Dam, Walton Dam, Glandersdon Dam, Balgray Reservoir, Ryat Linn Reservoir, and Waukmill Glen Reservoir; and in the interior are Black Loch, Little Loch, Brother Loch, and South Hillend Reservoir. The surface sinks at the northern boundary to 280 feet above sea-level, and rises thence south-westward to 783 feet at Barrance Hill, 895 at Dod Hill, and 928 at James Hill, moorland occupying a good deal of the south-western district. Trap rock, chiefly an early disintegrable greenstone, prevails throughout nearly all the area, but gives place to rocks of the Carboniferous formation about the boundary with Eastwood. The soil in patches of the lower district is stiffish, and lies on a clay bottom, but elsewhere is mostly light, dry, and sharp, incumbent on porous, fractured, rapidly decomposing trap. Mearns has always been distinguished for its fine pasture, and even in the present times of extended cultivation it is very largely devoted to sheep and dairy farming. The earliest name on record in connection with this parish is that of Roland of Mearns, who is mentioned as a witness to the donation which Eschina, wife of Walter the Steward, gave to the monastery of Paisley in the year 1177. Robert of Mearns appears in the same capacity in a grant made to that establishment in 1250. In the 13th century, the barony of Mearns came by marriage to the Maxwells of Caerlawroek, afterwards Lords Maxwell and Earls of Nithsdale. About the year 1648 it was sold by the Earl of Nithsdale to Sir George Maxwell of Nether Pollock, from whom it was soon afterwards acquired by Sir Archibald Stewart of Blackhall, with whose descendants it has since remained. (See ARDGOWAN.) The castle of Mearns is a large square tower situated on a rocky eminence, 1 mile E by S of the village of Newton-Mearns. It is surrounded by a strong wall, and seems to have been secured by a drawbridge. It has long been uninhabited. Caplery was anciently a seat of the Knights Templars. Professor John Wilson (1785-1854) received his early education in the manse of Mearns, and so often in his writings does he allude to these scenes of his boyhood that the 'dear parish of Mearns' is nearly as much associated with his great name as if it had been the place of his nativity. Thus opens one of his many apostrophes to Mearns: 'Art thou beautiful, as of old, O wild, moorland, sylvan, and pastoral Parish! the Paradise in which our spirit dwelt

beneath the glorious dawning of life—can it be, beloved world of boyhood, that thou art indeed beautiful as of old? Though round and round thy boundaries in half an hour could fly the flapping dove—though the martins, wheeling to and fro that ivied and wall-flowered ruin of a Castle, central in its own domain, seem in their more distant flight to glance their crescent wings over a vale rejoicing apart in another kirk-spire, yet low rich in streams, and rivulets, and rills, each with its own peculiar murmur—art thou with thy bold bleak exposure, sloping upwards in ever lustrous undulations to the portals of the East! How endless the interchange of woods and meadows, glens, dells, and broomy nooks, without number, among thy banks and braes! And then of human dwellings—bow rises the smoke, ever and anon, into the sky, all neighbouring on each other, so that the cock-crow is heard from homestead to homestead; while as you wander onwards, each roof still rises unexpectedly—and as solitary as if it had been far remote. Fairest of Scotland's thousand parishes—neither Highland, nor Lowland—but undulating—let us again use the descriptive word—like the sea in sunset after a day of storms—yes, Heaven's blessing be upon thee! Thou art indeed beautiful as of old!' POLLOCK CASTLE, noticed separately, is the principal mansion; and Sir Hew Crawfurd-Pollock, Bart., is the largest proprietor, 9 others holding each an annual value of £500 and upwards, 31 of between £100 and £500, 20 of from £50 to £100, and 24 of from £20 to £50. Mearns is in the presbytery of Paisley and the synod of Glasgow and Ayr; the living is worth £479. The parish church, $\frac{3}{4}$ mile SE of Newton-Mearns, is a very old building, altered and enlarged in 1813, with 730 sittings, clock-tower, and spire. A neat U.P. church, rebuilt about 1840, and containing 490 sittings, is at Newton-Mearns; and three other places of worship are noticed under BUSBY. Two public schools, Busby and Mearns, with respective accommodation for 540 and 288 children, had (1883) an average attendance of 240 and 215, and grants of £227, 7s. and £209, 2s. 6d. Valuation (1860) £18,665, (1884) £25,248, 17s. 6d. Pop. (1801) 1714, (1831) 2814, (1851) 3704, (1871) 3543, (1881) 3965, of whom 1535 were in Busby.—*Ord. Sur.*, sh. 22, 1865. See the Rev. Dr Ross's *Busby and its Neighbourhood* (Glasgow, 1883); and chap. i. of Mrs Gordon's *Memoir of Christopher North* (new ed. 1879).

Mearns, The. See KINCARDINESHIRE.

Meathie. See INVERARITY.

Medwin, a troutful rivulet of the Middle Ward of Lanarkshire, formed by the confluence of the North Medwin and the South Medwin at a point $\frac{1}{4}$ mile SSE of Carnwath village, and winding $\frac{1}{4}$ mile westward along the boundary between Carnwath and Libberton parishes to the Clyde. The North Medwin, formed by the confluence of Dry and Greenfield Burns, runs $6\frac{1}{2}$ miles south-south-westward, chiefly within Carnwath parish, but partly along the Dunsyre boundary. The South Medwin, rising at an altitude of 1230 feet, runs $13\frac{3}{4}$ miles south-by-eastward and west-south-westward, chiefly along the boundary between Dunsyre and Carnwath parishes on the right, and Linton, Dolphinton, Walston, and Libberton parishes on the left.—*Ord. Sur.*, shs. 24, 23, 1864-63.

Medwyn, an estate, with a mansion, in Linton parish, NW Peeblesshire, on the right bank of Lyne Water, 1 mile NW of West Linton. Purchased in three lots since 1812 for upwards of £25,000, it is the property of William Forbes, Esq. (b. 1803; suc. 1854), who holds 2600 acres in the shire, valued at £2022 per annum.—*Ord. Sur.*, sh. 24, 1864.

Meethill, a conical eminence (181 feet) in Peterhead parish, Aberdeenshire, $\frac{1}{4}$ mile SSW of the town. It seems to be partly artificial, and in feudal times was probably a seat of justice; but in digging the foundation of a tower, which was built upon it to celebrate the passing of the Reform Bill of 1832, a stone crypt was found on its summit, containing a funeral urn.—*Ord. Sur.*, sh. 87, 1876.

Meggernie Castle, a mansion in Fortingall parish,

Perthshire, on the left bank of the river Lyon, near the head of the inhabited part of Glenlyon, 22 miles W by S of Aberfeldy. Approached by a stately lime-tree avenue, the finest in Scotland, it comprises, with later additions, a lofty square baronial tower of the 15th century, with high-peaked roof, four corner bartizans, and walls 5 feet in thickness. The estate, with a rental of £4500, extends over 32,000 acres—all hill-grazing, with fine grouse moors, and 13,000 acres of it deer forest. In Sept. 1853 it was sold by W. G. Steuart-Menzies, Esq. of Culdares, for £103,000 to John Ballough, Esq. of Accerington.—*Ord. Sur.*, sh. 54, 1873. See a long article in *The Times* for 27 Sept. 1853.

Megget. See LYNE AND MEGGET.

Megget Water, a troutful rivulet of Westerkirk parish, NE Dumfriesshire, rising, close to the Roxburghshire boundary, at an altitude of 1200 feet, and running $7\frac{1}{2}$ miles south-by-westward, till, after a total descent of nearly 800 feet, it falls into the Esk at a point 7 miles NW of Langholm.—*Ord. Sur.*, shs. 16, 10, 1864.

Megginch Castle, a mansion in Errol parish, Perthshire, $6\frac{1}{2}$ furlongs WNW of Errol station, this being $11\frac{1}{2}$ miles E of Perth. Built by Peter Hay in 1575, it is the seat of John Murray Drummond, Esq. (b. 1803; suc. 1849), who holds 1000 acres in the shire, valued at £2041 per annum.—*Ord. Sur.*, sh. 48, 1868.

Meigle (Gael. *maigh-dhail*, 'field of the plain'), a village and a parish of E Perthshire. The village, lying within $\frac{3}{4}$ mile of the left bank of the Isla, has a station on the Alyth branch (1861) of the Caledonian railway, $\frac{1}{4}$ mile NNW of Alyth Junction, this being $20\frac{1}{2}$ miles NE of Perth and $17\frac{3}{4}$ NW of Dundee. A seat once of considerable trade, with a weekly market, it still has fairs on the second Wednesday of Jan., Feb., March, April, and Dec., the second Monday of May, and the last Wednesday of June and Oct., as also a post office, with money order, savings' bank, and telegraph departments, branches of the Commercial and Royal Banks, and an hotel. The parish church, gutted by fire in 1869, has since been well restored, and contains 600 sittings. A very remarkable group of sculptured stones—the largest of them 8 feet high, and $3\frac{1}{2}$ broad—was said to mark the sepulchre of Wander, Vanora, or Guinevere, King Arthur's unfaithful queen, who, according to tradition, was imprisoned on Barry Hill in Alyth parish. With the exception of two, which retain their original position in the churchyard, they were all removed in 1882 into the old parochial school, itself now included in the churchyard. They are fully described in Mr Anderson's *Scotland in Early Christian Times* (2d series, 1881). There are also a Free church and an Episcopal church, St Margaret's (1852).

The parish is bounded W by Coupar-Angus, NW by Alyth, and on all other sides by Forfarshire, viz., N by Airlie, E by Eassie, and SE by Eassie and Newtyle. Its utmost length, from NE to SW, is $5\frac{3}{4}$ miles; its breadth varies between $2\frac{1}{4}$ furlongs and $2\frac{3}{4}$ miles; and its area is $4013\frac{3}{4}$ acres, of which 83 are water. Sluggish DEAN WATER meanders $5\frac{1}{4}$ miles west-south-westward—only $3\frac{3}{4}$ miles in a direct line—along the Airlie border, till, at a point $\frac{3}{4}$ mile NNW of the village, it falls into the ISLA, which itself winds $2\frac{3}{4}$ miles west-south-westward along the Airlie boundary. The surface, all in the very heart of STRATHMORE, is almost a dead level, at no point sinking to 100, or much exceeding 200, feet above the sea. Old Red sandstone, suitable for building, has been worked in two quarries; and marl, covered with peat earth, was dug in great abundance at a place near the southern border. The soil, in some places sandy, in others clayey, is mostly a rich dark loam. Some 200 acres are under wood, 130 are in pasture, and the rest of the land is in tillage. A tumulus and a large boulder in Belmont Park are traditionally associated with the death of Macbeth, who really was slain at Lumphanan; and Meigle in pre-Reformation days was an occasional residence of the Bishops of Dunkeld. The late Sir George Kinloch of KINLOCH, Bart. (1800-51), bought the fine estate of Meigle from the Earl of Strathmore for £73,000. Other

estates, noticed separately, are BELMONT (whose mansion, Belmont Castle, was burned on 21 April 1884) and DRUMKILBO; and 4 proprietors hold each an annual value of £500 and upwards. Including ecclesiastically the Kinloch portion of Coupar-Angus parish, Meigle is the seat of a presbytery in the synod of Angus and Mearns; the living is worth £314. At Ardlar or Washington village, a handsome Established mission church was erected in 1883 by Peter Carmichael, Esq. of Arthurs-ton. Two public schools, Meigle and Washington, with respective accommodation for 200 and 110 children, had (1883) an average attendance of 164 and 69, and grants of £170, 7s. and £60, 7s. 6d. Valuation (1865) £7953, ss. 2d., (1884) £10,111, ss. 3d. Pop. of civil parish (1801) 946, (1831) 873, (1861) 895, (1871) 745, (1881) 696; of ecclesiastical parish (1871) 1003, (1881) 966.—*Ord. Sur.*, shs. 56, 48, 1870-68.

The presbytery of Meigle comprises the *quoad civilia* parishes of Airlie, Alyth, Bendochoy, Blairgowrie, Coupar-Angus, Eassie and Neyay, Glenisla, Kettins, Kingoldrum, Lintrathen, Meigle, Newtyle, and Ruthven, and the *quoad sacra* parishes of Kilry, Persie, and St Mary's (Blairgowrie). Pop. (1871) 18,564, (1881) 18,269, of whom 4821 were communicants of the Church of Scotland in 1878.—The Free Church also has a presbytery of Meigle, with 2 churches in Blairgowrie, and 8 in Airlie, Alyth, Coupar-Angus, Cray, Glenisla, Meigle, Newtyle, and Rattray, which 10 churches together had 2624 communicants in 1883.

Meigle Hill. See GALASHIELS.

Meikle Bin, a hill (1870 feet) in the SE of Fintry parish, Stirlingshire, adjacent to the meeting-point with Campsie and Kilsyth. A central summit of the Lennox Hills, it occupies such a position as to unite the Fintry, Campsie, and Kilsyth sections of these hills; is adjoined on the NE by Little Bin (1446 feet); sends off, from its SW side, a torrent called Bin Burn, running northward as a head-stream of the river Carron; is seen from a great distance in the direction of Lanark; and forms a conspicuous landmark from the Firth of Forth.—*Ord. Sur.*, sh. 31, 1867.

Meikle-Earnock. See EARNOCK, MEIKLE.

Meikle-Ferry. See DORNOCH, FIRTH OF.

Meiklefolia. See FYVIE.

Meikle Greinord. See GREINORD.

Meikle Law. See LONGFORMACUS.

Meikleour House, a mansion in Caputh parish, Perthshire, near the left bank of the river Tay, $\frac{3}{4}$ mile above the Isla's influx, 2 miles NNW of Cargill station, and 4 S by W of Blairgowrie. As greatly enlarged in 1869 from designs by the late David Bryce, R.S.A., it is a stately chateau-like building, with extensive vineries and finely wooded grounds, its great beech hedge (1746) being 80 feet high and $\frac{1}{2}$ mile long. It is the seat of the Dowager Marchioness of Lausdowne (b. 1819; suc. 1867), who in 1874, as sixth descendant of the first Lord Nairne (cre. 1681), was declared heir to the title of Baroness Nairne. She holds 9070 acres in the shire, valued at £8026 per annum. (See AUCHTERGAVERN.) Meikleour village, 5 furlongs N by E of the mansion, has a post office under Perth, an inn, a 'tron and jongs', a cross (1698), and fairs on the fourth Friday of June, the third Friday of August, and the fourth Friday of October.—*Ord. Sur.*, sh. 48, 1868. See chap. xxxi. of Thos. Hunter's *Woods and Estates of Perthshire* (Perth, 1883).

Meikle Roe, an island of Delting parish, Shetland, in St Magnus Bay, 27 miles NNW of Lerwick. Separated from the mainland by Roe Sound (200 yards wide at the narrowest), it has a somewhat circular outline, with a diameter of $3\frac{1}{2}$ miles. It contains eighteen little fresh-water lochs, and rises in South Ward at the centre to 557 feet above sea-level. Pop. (1851) 290, (1871) 216, (1881) 230.

Meikle Warthill or Wartle, a village in Rayne parish, Aberdeenshire, $3\frac{1}{2}$ furlongs N by W of Wartle station. Cattle and horse fairs are held here on the Thursdays before 26 May and 22 Nov.—*Ord. Sur.*, sh. 86, 1876.

Meiklewood House, a handsome modern mansion in

Gargunnoch parish, Stirlingshire, on the right bank of the winding Forth, $1\frac{1}{2}$ mile NE of Gargunnoch station.—*Ord. Sur.*, sh. 39, 1869.

Meiklie, Loch, a lake in Urquhart parish, Inverness-shire, 6 miles W of Drumnadrochit. An expansion of the river ENRICK, it lies at an altitude of 372 feet; has an utmost length and breadth of 9 and 3 furlongs; contains salmon, trout, and big pike; has, on its banks, the mansions and pleasure-grounds of Lochletter and Lakefield; and is so flanked with picturesque mountains as to form one of the most captivating scenes in the Highlands.—*Ord. Sur.*, sh. 73, 1878.

Mein Water, an impetuous rivulet of Annandale, Dumfriesshire, rising at an altitude of 780 feet on the northern border of Middlebie parish, and running 8 $\frac{1}{2}$ miles south-south-westward through that and Hoddam parish, past the town of Ecclefechan, till, after a total descent of 690 feet, it falls into the Annan at a point $1\frac{1}{2}$ mile SSW of Ecclefechan.—*Ord. Sur.*, sh. 10, 1864.

Melby, a mansion in Walls parish, Shetland, on the W coast, near Sandness, and 32 miles WNW of Lerwick.

Meldrum (Gael. *meall-droma*, 'hill of the ridge'), a village and a parish of Garioch district, central Aberdeenshire. The village of Old Meldrum stands, 378 feet above sea-level, near the southern boundary of the parish, at the terminus of a branch line (1856) of the Great North of Scotland railway, by rail being $5\frac{1}{2}$ miles NNE of Inverurie Junction and 22 (by road 19) NNW of Aberdeen. Erected into a burgh of barony in 1672, it offers a very irregular alignment, but contains some good houses, and has a post office, with money order, savings' bank, and telegraph departments, branches of the North of Scotland and the Aberdeen Town and County Banks, 9 insurance agencies, 4 hotels, a gas company, a water supply, a new public hall (1877), horticultural, Bible, and clothing societies, a young men's Christian association, a brewery, a distillery, and cattle markets on every third Tuesday throughout the year. The antique parish church of 1684 was enlarged in 1767, and, as reseat in 1810, contains 674 sittings. Other places of worship are a Free church, a U.P. church (1822; 312 sittings), and St Matthew's Episcopal church (1863), the last an Early Decorated edifice, with nave, chancel, organ chamber, vestry, and spire. Pop. (1841) 1102, (1861) 1553, (1871) 1535, (1881) 1494, of whom 817 were females. Houses (1881) 309 inhabited, 14 vacant, 2 building.

The parish, called Bethelnie till 1684, is bounded NE and E by Tarves, SE and S by Bourtie, W by Daviot and Fyvie, and N by Fyvie. Its utmost length, from NW to SE, is 6 $\frac{1}{2}$ miles; its breadth varies between 4 $\frac{1}{2}$ furlongs and 3 $\frac{1}{2}$ miles; and its area is 8111 $\frac{1}{2}$ acres, of which 9 are water. Streams there are none of any size, but the drainage is carried mainly to the Ury and partly to the Ythan. Along the southern boundary the surface sinks to 270 feet above sea-level; and thence it rises in easy gradient to 564 feet near Chapelhouse, 567 near Bethelnie, and 804 at Core Hill in the NW corner of the parish. The central district presents a diversity of rich well-cultivated table-land, sloping southward, eastward, and westward, and commanding from many standpoints extensive views, on the one hand over Forquahine and Buchan, on the other over Garioch to Benuochie. Hornblende rock of a quality that admits of its taking a polish like marble occurs in large detached masses; rock crystal is found on the Core Hill of Bethelnie; limestone occurs on the NE border, and was for some time worked; and eruptive rocks are predominant. The soil of the northern district is mossy, heathy, and nowhere deep or fertile; but elsewhere, especially on the south-westward and southward slopes, is a deep loam. Nearly three-fourths of the entire area are in tillage; more than 500 acres are under wood; and the rest is either pastoral or waste. A small so-called 'Roman camp' on Bethelnie farm has been erased by the plough; a graveyard, around the site of the ancient parish church, St Nathalin's, is at Bethelnie; and another graveyard, with foundations of a small pre-Reformation chapel, is at Chapelhouse, $\frac{1}{2}$ mile from

which some ancient sepulchral remains were exhumed in 1837. William Forsyth (1737-1804), the arboriculturist, was a native. Meldrum House, 1 mile N by E of the village, is a large modern Grecian mansion, with finely wooded policies. From the Setons the property passed by marriage in 1610 to the Urquharts; and its present owner, Beauchamp Colclough Urquhart, Esq. (b. 1830; suc. 1861), holds 5837 acres in the shire, valued at £6707 per annum. Another mansion is Tulloch Cottage; and, in all, 4 proprietors hold each an annual value of £500 and upwards, 5 of between £100 and £500, 8 of from £50 to £100, and 40 of from £20 to £50. Since 1875 giving off a portion to the *quoad sacra* parish of Barthol Chapel, Meldrum is in the presbytery of Garioch and the synod of Aberdeen; the living is worth £335. Three public schools—Commercial Road, Kirk Street infant, and Tulloch—with respective accommodation for 446, 126, and 70 children, had (1883) an average attendance of 234, 89, and 42, and grants of £212, 14s., £61, 16s., and £33, 16s. Valuation (1860) £8528, (1884) £11,710, 6s. 3d., plus £303 for railway. Pop. (1801) 1584, (1831) 1790, (1861) 2343, (1871) 2330, (1881) 2254, of whom 2136 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 76, 77, 86, 87, 1873-76.

Melfort, a sea-loch of Kilninver and Kilmelfort parish, Argyllshire, opening between Points Degnish and Ashnish, opposite the middle of Luing island. With a width of $\frac{1}{2}$ mile at the entrance, it penetrates the land $\frac{3}{4}$ miles east-north-eastward; is sprinkled with islets; and takes its name from Gaelic words signifying 'the lake of the strong eminence,' and alluding to the hills-ranges that flank its shores. It is fed by streams flowing from fresh-water lakes at distances of from 2 or 3 to 7 miles; has on its N side, at a secluded spot amid thick environments of wood, a cave, traditionally said to have been inhabited for a time by the first settlers in Lorn; is overlooked, at the head, by Melfort House; and gives the titles of Viscount and Earl in the peerage of Scotland, and that of Duke in the peerage of France, to the Earl of Perth.

Melgam Water, a rivulet of Lintrathen parish, W Forfarshire. Rising as the Back Water, at an altitude of 1970 feet, in the northern extremity of the parish, it winds 15 miles south-by-eastward—for the last 2 miles along the Kingoldrum and Airlie boundary—till, after a total descent of 1600 feet, it falls into the Isla opposite Airlie Castle. It abounds in trout; and salmon ascend it for 2 miles, as far as the Loups of Kenny.—*Ord. Sur.*, sh. 56, 1870.

Melgund, an ruined castle in Aberlemno parish, Forfarshire, $\frac{3}{4}$ miles N by E of Auldar station. Built according to tradition by Cardinal Beaton, it appears to have been a strong and superb edifice of great extent, with a magnificent banqueting hall. It is still represented by large and interesting remains; and it gives to the Earl of Minto the title of Viscount (cre. 1813), the first Earl's father, Sir Gilbert Elliot, having married Agnes Murray Kynynmond, heiress of Melgund.—*Ord. Sur.*, sh. 57, 1868.

Melista. See MEALISTA.

Mellerstain, a seat of the Earl of Haddington in the E of Earlston parish, Berwickshire, on a rising-ground near the right bank of the lake-like Eden, 7 miles NW of Kelso. It is a fine mansion, with beautifully wooded grounds. About 1719 Rachel, daughter and heiress of George Baillie of Jerviswood and Mellerstain, married Charles, Lord Binning, eldest son of the sixth Earl of Haddington. Their second son took the name of Baillie on inheriting the estates of his maternal grandfather; and his grandson in 1858 succeeded his cousin as tenth Earl of Haddington.—*Ord. Sur.*, sh. 25, 1865. See TYNINGHAME.

Melloncharles, a village in Gairloch parish, Ross-shire. Pop. (1871) 313.

Melmont or **Molmont**. See GALSTON.

Melness, a hamlet in Tongue parish, Sutherland. The hamlet lies on the W side of Tongue Bay, $\frac{3}{4}$ miles N by W of Lairg station. It has a Free church.—*Ord. Sur.*, sh. 114, 1880.

Melrose (Brit. *Mell-Rhos*, 'the projection of the meadow'), a parish, containing a post-town of the same name, at the extreme northern corner of Roxburghshire. It is bounded N and E by Berwickshire, SE corner by St Boswells parish, S by Bowden parish, at the SW corner by the part of Galashiels parish in Roxburghshire, on the rest of the SW side by Selkirkshire, and W by Edinburghshire. The boundary is largely natural. Starting at the point at the NW corner where the counties of Edinburgh, Berwick, and Roxburgh meet, it follows the watershed between Leader Water and Allan Water, until it reaches the upper part of Lauder Burn, whence it passes irregularly first NE and then SE, till it reaches the Leader near the Bluecain Burn. It passes up the latter to the road westward from Bluecain Farm, and follows this road to a small burn that flows past Kedsle, which it follows downward for about $\frac{1}{2}$ mile, and then strikes irregularly ESE to the Leader Water N of Leadervale House, and follows the course of that stream for $\frac{3}{4}$ miles to its junction with the Tweed, and thereafter the course of the Tweed downward for $\frac{3}{4}$ miles. Along the S side the line follows an irregular course westward over the top of the centre peak of the Eildons (1385 feet), along the S side of Cauldsiels Loch, till it joins the Tweed at Abbotsford Ferry station. It follows the course of the river downward $\frac{1}{4}$ mile to the junction of Gala Water, whence it follows, in the main, the course of the latter stream to the point where the counties of Selkirk, Edinburgh, and Roxburgh meet, and then strikes along the high ground E of Gala Water to the starting-point. The greatest length of the parish, from NW at the point where Edinburghshire, Berwickshire, and Roxburghshire meet, to the lowest point on the Tweed that the parish reaches, is 11 miles; the average breadth is about 5 miles; and the area is 26,058 $\frac{1}{2}$ acres, of which 264 $\frac{1}{2}$ are water. From the mouth of Gala Water to the mouth of Leader Water, the Tweed flows $\frac{4}{5}$ miles across the parish, dividing it into two very unequal portions, that to the S of the river being only about $\frac{1}{2}$ of the whole. In both portions the surface is hilly, and rises for the most part rapidly from the bed of the river Tweed, which is a little under 300 feet above sea-level. On the S the height rises, in the course of $\frac{1}{2}$ mile, to 508 feet near Huntlyburn House, 540 W of Viewbank, and 510 E of Oaken-dean House. From the first point the rise is continued south-westward to 876 feet above Cauldsiels Loch; and from the other two more rapidly southward to the summit of the EILDON HILLS, of the three tops of which the E (1327 feet) and the centre (1385) are in this parish. To the N of the Tweed the ground again rises rapidly to an elevation of over 700 feet, and then passes northwards in two ranges of heights, of which that to the E, between the valleys of the Leader and Allan, is 876 feet high near Avenel plantation, 929 between Housebyres and Mosshouses, 979 near Jeanfield, 829 near the border W of Blainslie, and 1057 farther to the W between Newhouses and Threepwood; that to the W, between the valleys of the Allan and Gala, is 1018 feet (S) and 1031 (N) at Langlee, 1064 at Buckholm Hill, 1315 at William Law, 1219 at Hawkshawhead, and 1126 at Allanshaws. The lower districts are cultivated, and the upper afford excellent pasture, while plantations and belting of trees are to be found all over the parish, and cover about 3000 acres. The soil in the southern district is chiefly a strong clay, well adapted for wheat. Along the valley of the Tweed—where there seems to have been at one time a great lake, and where, even within the last two centuries, the river course has evidently in places been changed; since a fine rich haugh, now on the S side of the river, is called Gattonside Haugh, and its feudal tenures show that it once actually formed a part of the Gattonside lands, which are on the N side of the river—it is a rich alluvial earth; while the northern district varies from light loam mixed with sand on a gravelly bottom, to strong wet clay full of springs, and moss which sometimes overlies marl. The underlying rocks are Lower Silurian, above which, in the S and SE, are sandstones of later age.

These are quarried for building purposes, but the rock is of inferior quality, and most of the building-stone used is brought from adjoining parishes. The drainage of the parish is effected on the W by the GALA and the burns flowing into it, of which the Halk Burn is the chief; in the centre by ALLAN Water, which, rising at the NW corner at Blinkbonnie, flows southward for 9 miles to the Tweed, a short distance above Pavilion, $1\frac{1}{2}$ mile above Melrose. It receives a number of smaller burns, of which the chief is Threepwood Burn. The lower part of its course is prettily wooded, and the valley is the prototype of the 'Gledderg' of Sir Walter Scott's *Monastery*. The drainage on the E is carried off by the LEADER and the various burns entering it, of which the Clackmae and Packmans Burns are the chief. In the portion of the parish to the S of the Tweed are Huntly Burn, entering the Tweed opposite GATTONSIDE; Malthouse or Dingle Burn, flowing past the town of Melrose; Bogle Burn, rising on the SE side of the Eildon Hills, and entering the Tweed at Old Melrose; a burn joining the Tweed near Langlands; and the lower part of the course of Bowden Burn. Huntly Burn is closely associated with Thomas the Rhymer (see EARLSTON), and one finely-wooded hollow on its course—a favourite resort of Sir Walter Scott—is known as The Rhymer's Glen. Bogle Burn also is said to take its name from the Boggles or Goblins with whom Thomas was so familiar. The parish is traversed by the main inland road from Edinburgh to Berwick, which winds along the N side of the Gala, crosses the Tweed by a good stone bridge W of Darmlce, passes through the town of Melrose, and then south-eastward by Newtown till it joins the road from Selkirk to Kelso, and thence to Berwick. From N to S, on the E border, along the valley of the Leader, is a main road, leaving the south coast-road at Musselburgh, traversing Lauderdale, crossing the Tweed close to the mouth of the Leader, and joining the first main road $\frac{3}{4}$ mile N of Newtown. The main section of the North British railway, worked in connection with the Midland railway, and known as the Waverley route, passes through the parish, keeping closely to the line of the first-mentioned main road; while 2 miles beyond Melrose station it is joined by the Berwick and Duns branch of the same system, which crosses the Tweed at Leaderfoot, and follows the line of the second road for $2\frac{3}{4}$ miles to the northward, till crossing the Leader it enters Berwickshire. Half-a-mile SE of the mouth of the Leader, and $2\frac{1}{2}$ miles E of the modern town of Melrose, is a promontory formed by a loop of the Tweed, and measuring 4 furlongs by 2, which is known as Old Melrose, and which is the 'projection' from which the name of the parish is said to come. The banks of the river all round are lofty, wooded, and rocky, and from them the ground rises in a smooth grassy ascent to a small plateau occupied by the modern mansion of Old Melrose. Old Melrose was the site of one of the earliest Columban establishments on the mainland of Scotland. It owed its foundation to St Aidan, who, with a number of brethren from Iona, had, about 635, on the invitation of Oswald, King of Northumbria, established a monastery at Lindisfarne for the purpose of instructing the Saxons in Christianity. Aidan seems to have chosen twelve Saxon youths to be trained and sent out to preach and teach, and one of these, Eata, became, about the middle of the 7th century, the first abbot of the Columban monastery of Melrose. The prior during part of the time, and subsequently his successor, was that St Boisil or Boswell who has given name to the adjoining parish, and he in turn was succeeded by his pupil St Cuthbert. In 839 the monastery was burned by Kenneth, King of Scots, but reappears again rebuilt, and the temporary resting-place of the body of St Cuthbert, which had been removed from Lindisfarne on account of the invasion of the Danes. It seems to have declined about the same time as the parent monastery in Iona, and to have become, in the latter part of the 11th century, ruined and deserted, for when between 1073 and 1075 Aldwin, Turgot—afterwards Bishop of St Andrews and confessor to St Margaret the

queen of Malcolm III.—and other monks came from 'Girwy to what was formerly the monastery of Mailros' they found it 'then a solitude,' and they, being persecuted on account of their opinions and threatened with excommunication if they remained, had also soon to withdraw. From this time onward the place was never again the site of a monastery, but there was a chapel dedicated to St Cuthbert, and, till between 1126 and 1136, when David I. exchanged it for the church at Berwick, dependent on the priory of Durham, as the former church had been dependent on the abbey of Lindisfarne. This chapel seems to have been held in great esteem, for when it was burned by the English in the reign of Robert Bruce, in 1321, Symon, Bishop of Galloway, describing the chapel as recently burned by the English, grants 'a relaxation of forty days' penance to all truly penitent and confessed who should, with consent of their diocesan, devoutly visit the chapel of Saint Cuthbert of Old Melros, where that saint lived a monastic life and was celebrated for his miracles; or should contribute of their goods'; while between 1417 and 1431 we find Pope Martin V., at the instance of John, dean of Caverton, one of the monks of Melrose, granting to all who should make pilgrimage to, or contribute to, the same chapel 'a remission of penance for seven years and seven Lents on all the festivals of St Cuthbert and on certain other holidays.' The place where the chapel stood continues to be called Chapelknowe, and adjacent portions of the Tweed still bear the names of Monk-ford and Haly-wheel—the holy whirlpool or eddy. Pilgrims from the north approached by a road known as the Girthgate, which led from SOUTHA hospice by Colmslie, near the centre of the northern portion of the parish and across the Tweed to the bend. It seems to have had the privilege of sanctuary. It crossed the river at Bridgend, about 1 mile W of Darmlce, where a bridge with stone piers and wooden beams seems afterwards to have been built. Considerable remains of the latter are mentioned by Pennant in 1772 as having been standing when he visited the place. The early monastery seems to have been protected by a wall running across the neck of the peninsula, traces of which remained in 1743, when Milne published his account of Melrose. There are traditions of an abbey called the Red Abbey having stood near the village of Newstead, midway between Old and modern Melrose. In the district N of the Tweed there were chapels at Chieldhelles, at Blainslie on the extreme NE, and, according to Milne, also at Colmslie on Allan Water—said to take its name from the patron, St Columba—and at Gattonside. The present name of the parish seems to have been assumed from the old Culdee settlement, by the monks, when the modern abbey was founded, and applied by them to the whole district occupied by their early possessions, the boundaries of which correspond pretty nearly with the present limits of the parish. At the Reformation, and for a considerable time afterwards, down to about 1584, Melrose, Bowden, Lilliesleaf, and Langnewtoun were under the charge of one minister, with a reader at Melrose. In the year just mentioned it is noticed as a separate charge, and that state of matters continued. The earliest minister was John Knox, whose tombstone still remains in the abbey churchyard, and who was a nephew and namesake of the great Reformer. He died in 1623, and, under the modified Episcopacy of the time, was succeeded by Thomas Forrester, a poet, who was bold enough to introduce into the litany the special prayer, 'From all the knock-down race of Knoxes, good Lord, deliver us.' Besides this he also declared that the Reformation had done incalculable harm to Christianity; that the liturgy was better than sermon; and that bringing corn in from the fields on the Sabbath was a work of necessity—the last of which propositions he practically exemplified. For these and other delinquencies he was deposed by the Glasgow Assembly of 1638.

The principal antiquities, besides those already mentioned and those noticed in the following article, and in the account of the EILDON HILLS, are remains of

camp between Kittyfield and Leaderfoot; N of Kaeside, near Abbotsford; and at Mars Lee Wood; and border peels at Buckholm on the Gala, in the valley of the Allan, and at Darnick. The principal mansions, most of which are separately noticed, are Abbotsford, Allery, Chiefswood—once the residence of Lockhart, Scott's son-in-law—Drygrange, Eildon Hall, Huntly-burn House—once the residence of Scott's friends, the Fergussons, and the name itself of Sir Walter's choosing—Gattonside House, Ladhope House, Langhangh, Lowood, Abbey Park, The Pavilion, The Priory, Prior Wood formerly Prior Bank—once the residence of the well-known Edinburgh publisher, Tait, the founder of *Tait's Magazine*, which was established to oppose *Blackwood's Magazine*—Ravenswood, Sunnyside, Threepwood, Whitelee, Wester Langlee, and Wooplaw. Besides the town of Melrose, which is noticed in the following article, the parish contains also the villages of BLAINSLIE (NE), DARNICK (S), GATTONSIDE (S), NEWSTEAD (SE), NEWTOWN (extreme SE), and part of the town of GALASHIELS—all of which are separately noticed—and the hamlet of Eildon. Except in Galashiels there are no industries, and the population of the parish are mostly engaged in agriculture. In suitable spots there are excellent orchards—legacies of the monks—some of which are very productive, those in the Gattonside district being said to produce more fruit than all the others in the vale of Tweed. About $\frac{3}{4}$ mile WSW of the town of Melrose, on Bowden Moor, is the district lunatic asylum for the counties of Roxburgh, Selkirk, and Berwick, which with its grounds covers a space of 25 acres. The buildings occupy three sides of a rectangle; the principal front to the SW being 377 feet long, and the wings each 148 feet. They are mostly two stories in height, and two towers are 100 feet high. The asylum was erected in 1870-72, after designs by Messrs Brown & Wardrop of Edinburgh, at a cost, inclusive of site, of £46,500, and there is accommodation for about 150 patients. To the N of Darnick, and about 1 mile W of the town of Melrose, is a rising-ground, called Skinners or Skirmish Hill, the name being taken from the last great battle among the borderers proper in 1526. In that year, James V., tired of the dominion of the Douglasses, sent word, privately, to Scott of Buccleuch to come to his rescue. This Scott did, but the forces of Angus, Home, and the Kerrs proved too strong for him, and his men fled. Pitcottie tells the story at length. The place is now the site of the Waverley Hydropathic Establishment. Erected in 1871, and enlarged in 1876, this is a fine edifice, with accommodation for 150 visitors. Its dining and drawing rooms each are 84 feet long; and there are also a news-room, library, two billiard rooms, etc., besides every variety of bath. The grounds, 40 acres in extent, are tastefully laid out; and the view around is of singular beauty.

In common with the whole district, the parish suffered severely from the ravages of the English during Hereford's invasions in 1544-45, and at a later date, Oliver Cromwell gets the credit of having pounded the ruins of the abbey from the heights above Gattonside. Besides the churches in the town, which are noticed in the following article, there are also Established and Free churches in Galashiels, on the Melrose side of the Gala (Ladhope), and there is a U.P. church at Newtown. The civil parish contains the *quoad sacra* parish of Ladhope, which includes part of Galashiels. Ecclesiastically the parish is in the presbytery of Selkirk and the synod of Merse and Teviotdale, and the living is worth £482 a year. In 1883 the following were the schools—all public but the last—under Melrose school-board, with their accommodation, average attendance, and Government grant:—Blainslie (110, 64, £50, 17s.), Gattonside (87, 46, £37, 19s.), Glendinning Terrace (300, 342, £316, 13s.), Langshaw (51, 35, £40), Melrose (300, 177, £165, 0s. 6d.), and Newstead Subscription (86, 68, £46, 6s). Valuation (1864) £42,344, 8s. 2d., (1882) £43,757, 16s. 8d., (1884) £39,900, 12s. 5d. Pop. (1801) 2654, (1831) 4339, (1861) 7654, (1871) 9432, (1881) 11,131, of

whom 4555 were in the ecclesiastical parish, and 6576 in Ladhope *quoad sacra* parish.—*Ord. Sur.*, sh. 25, 1865.

The U.P. Church has a presbytery of Melrose, which holds its meetings in the town, and includes 2 churches at Earlstoun, 3 at Galashiels, 3 at Hawick, 2 at Selkirk, and those at Innerleithen, Lauder, Lilliesleaf, Melrose, Newtown, and Stow.

Melrose, a post town and burgh of barony, in the southern section of the parish just described, between the Tweed and the northern base of the Eildon Hills. The station, on the Waverley section of the North British railway system, is $3\frac{1}{2}$ miles ESE of Galashiels, $15\frac{1}{2}$ N by E of Hawick, and $37\frac{1}{2}$ SE by S of Edinburgh. By road, the place is 7 miles NE by N of Selkirk, 11 NW of Jedburgh, and 35 SE by S of Edinburgh. The situation and surroundings are very beautiful. Looked at from about the town, the heights that border the Tweed seem to close in at either end, so that the place nestles in the long hill girt hollow known as the Vale of Melrose. The town, which dates from very ancient times, was originally a small village called Fordel, and the present name was transferred to it from Old Melrose at or shortly after the foundation of the abbey in 1136. It shared largely and constantly in the fortunes of the monks. During Hertford's invasion, in 1544-45, it was twice plundered and destroyed; and though, after the Reformation it struggled on for a time as the seat of a small trade, it ultimately fell into poverty and decay, a state of matters that lasted well into the present century. Then the revival of the taste for Gothic architecture brought the ruins of the abbey into prominence, and this, and the associations of the district with Sir Walter Scott, made it a tourist centre. The tourists were followed by people of independent means, who were led by the beauty and amenity of the neighbourhood to take up here their occasional or permanent residence, and all these causes combined have given Melrose a fresh start in prosperity. The town proper, which is the Kennaquhair of the *Abbot* and the *Monastery*, consists of 3 streets, branching off from the corners of an open triangular space, known as the market place, close to the station. The street leading northward to Gattonside, and that passing southward by Dingleton, are both narrow and old, but High Street, which leads north-westwards towards Galashiels, has been widened and improved as new buildings have replaced old. The suburbs are principally lines and groups of villas, extending about a mile westward from the end of High Street, by Weirhill and High Cross. Many of the older houses of the town show, amid the general plainness of their walls, stones whose carvings prove that they have come from the ruins of the abbey, at a time when its walls were deemed of so little importance as to be practically a quarry for whosoever chose. In the centre of the market place, supported by five courses of steps, stands the market cross, bearing the date of 1642, and surmounted by the unicorn of the Scottish arms with mallet and rose. It seems to have replaced an older cross of some sanctity, which was destroyed in 1604. A patch of land, called 'the Corse Rig,' in a field near the town, is held by the proprietor on the condition of his keeping the cross in repair. Another cross, which anciently stood on a spot about $\frac{1}{2}$ mile to the W, bore the name of the High Cross, which it has bequeathed to the modern suburb around its site. The so-called jail has long ceased to be used for that purpose, and the lower part is now a store for the victual feu-duties payable by the Duke of Buccleugh's vassals, while the upper is occasionally used as a public hall. It stands on the site of an older jail, on a stone of which, that is still preserved, there is sculptured one of those anagrams that were from two to three centuries ago somewhat common, viz. :—a mason's 'mell' and a 'rose,' representing the name of the place. In an old gabled house, bearing the date of 1635, which projected into the street opposite the King's Arms Hotel, but which is now demolished, General Leslie slept on the night before the battle of PHILIPHAUGH. A suspension bridge (1826) for foot-passengers crosses the

Tweed to the N of the town, behind and a little below the Weirhill, and connects Melrose with Gattouside. The parish church, a plain and indeed somewhat ugly building, with a spire and clock, was erected in 1810, and stands on a rising ground—the Weirhill proper, the Weir being behind it—in the Weirhill suburb. The Free church, which stands on the same eminence, is a handsome building in the Early English style, with a well proportioned spire, and containing 550 sittings. The U.P. and Congregational churches call for no special notice. The former, which was built at High Cross in 1872 to replace a small barn-like structure in the town, contains 500 sittings; the latter contains 250 sittings. Trinity Episcopal church, in the western part of Weirhill, was built in 1849 after designs by Sir George Gilbert Scott. It is a tasteful building in the Early English style, with a good eastern window and a stone pulpit. It contains 175 sittings. The cemetery is to the S of the Free church. The Corn Exchange, in the market place, was erected in 1862-63, after designs by Consin, at a cost of about £3000, and is a large handsome structure, serving not only for sales and similar purposes, but also for lectures, concerts, and public meetings. The hall has accommodation for 500 people. The public schools have been already noticed under the parish. The water-works belong to a joint-stock company (1838), and the water, which is very pure, is obtained from springs on the Eildon Hills. The reservoir has a capacity of about 35,000 gallons. Gas is also supplied by a joint-stock company (1836); and the drainage system, which is by no means complete, and does not include the whole of the town, was carried out by voluntary assessment. There are now no industries, but the place was long famous for the manufacture of a fabric called Melrose-land linen, for which there was a demand in London as well as in foreign countries. So early as 1668 the weavers were incorporated under a seal-of-cause from John, Earl of Haddington, the superior of the burgh, and for a considerable period preceding 1766 the quantity of linen stamped averaged annually between 23,000 and 24,000 yards, valued at upwards of £2500. Towards the end of last century, however, the manufacture rapidly declined, and long ago became quite extinct. Cotton-weaving for the manufacturers of Glasgow which followed had a short period of success, but soon also became extinct. A bleachfield for linen, which still gives name to a spot on the W slope of the Weir Hill, was also tried but failed, and even the woollen trade, so singularly prosperous in some of the other Border towns, though tried, proved also a failure.

Melrose, under the abbey, was a burgh of regality; but in 1609, when the Abbey and lands were crected into a temporal lordship, it was made a burgh of barony, which status it still retains. There is a baron-bailie appointed by the present superior, the Duke of Buccleuch, but there are no burgh courts and no burgh property, income, or expenditure. An ancient fair, held in spring, called Kier or Scarce-Thursdaiy fair, was long a famous carnival season; but afterwards became merely a business market, and then died out altogether. The weekly corn and general market is on Monday: fairs for hiring are held, for hinds on the first Monday of March, for young men and women on the first Monday of May and the first Monday of November, and for harvest hands on the first Monday of August; for cattle and horses on the first Wednesday of June and 22 Nov., unless that day fall on Saturday, Sunday, or Monday, and then on the Tuesday following; for lambs—the largest fair in the Border counties—on 12 Aug., unless that day be a Saturday, Sunday, or Monday, and then on the Tuesday following; and for ewes and other stock on the Saturday after the first Tuesday of October. These markets have now, however, almost disappeared, owing to the establishment of weekly cattle sales at Newtown St Boswells.

The town has a head post office, with money order, savings' bank, insurance, and telegraph departments; branches of the British Linen Company and Royal banks, agencies of 15 insurance companies, and 6 hotels.

A justice of peace court is held on the first Wednesday of every month, and sheriff small debt courts on the Saturdays after the second Monday of February and May, after the first Monday of September, and after the second Monday of December. Among the miscellaneous institutions are two boarding schools for young ladies, a masonic hall, a public library, bowling, curling, and cricket clubs, a company of rifle volunteers, a horticultural and floral society, a branch of the Bible Society, and a branch of the Society for the Prevention of Cruelty to Animals. The members of the masonic lodge (St John's—not, however, in connection with the Grand Lodge) have, every year, on St John's Eve, a torchlight procession round the abbey, and on Fastern's E'en a football match between the married and unmarried men of the town is kept up along the main street from early afternoon till evening. Pop. of town (1841) 893, (1861) 1141, (1871) 1405, (1881) 1550, of whom 913 were females. Houses (1881) 321 inhabited, 15 vacant, 7 building.

THE ABBEY OF MELROSE, which is the great centre of attraction in the town, stands on low level ground to the E, almost midway between the Eildons and the Tweed. Coming in succession to the Columban establishment already noticed, but moved to a better site, it was founded by David I. in 1136, the monks, who were of the Cistercian order, having been brought from Rievale in Yorkshire. To them, and 'to their successors, for a perpetual possession,' David granted 'the lands of Melros, and the whole land of Eldunne, and the whole land of Derawic . . . all the fruits, and pasture, and timber in my land, and in the forest of Selkirk and Traquhair, and between Gala and Leadir Water, besides both the fishery on the Tweed everywhere, on their side of the river as on mine, and . . . in addition, the whole land and pasture of Galtuneside.' The original buildings were not finished till 1146, in which year, on 28 July, the church was, with great solemnity, consecrated and dedicated to the Virgin Mary. Malcolm IV. confirmed the grants of his predecessor, and added fresh lands, as also did William the Lyon, in whose reign the monastic possessions increased greatly by gifts from the king, from Alan, his steward, and from the powerful family of De Moreville; and Laurence, Abbot of Melrose, was one of those who, along with the king, swore fealty to Henry II. at York in 1175. Standing near the border, the Abbey could hardly fail to figure in many of the historical transactions of this troublous time. It was in its chapter-house that the Yorkshire barons, united against King John, swore fealty to Alexander II. in 1215. In 1295 Edward I. gave formal protection to its monks, and in 1296, while resting at Berwick, after the apparent general submission of Scotland to his usurpation, he issued a writ ordering a restitution to them of all the property they had lost in the preceding struggle. In 1321 or 1322 the original structure was burned by the English under Edward II., and probably reduced to a state of entire ruin, while William de Peebles, the abbot, and a number of the monks were killed. This led to a grant from King Robert I., in 1326, of £2000, to be obtained from his wards, reliefs, marriages, escheats, fines, etc., in the sheriffdom of Roxburgh, and to be applied to the rebuilding of the church. The sum was a large one for that time, and the whole amount was not realised till long after. In 1329, a few months before his death, Robert wrote a letter to his son David, requesting that his heart should be buried at Melrose, and commending the monastery and the church to his successor's especial favour—favour which was certainly given, for so late as 1369 we find David renewing his father's gift. It is to this grant that we owe a considerable part of the present building. The community, too, enjoyed the favour of some of the English kings, no less than that of its own native monarchs, for in 1328 Edward III. ordered the restoration to the abbey of pensions and lands which it had held in England, and which had been seized by Edward II. In 1334 the same monarch granted a protection to Melrose in common with the other abbeys of

the Scottish border; in 1341 he came here from Newcastle to spend Christmas; and in 1348 he issued a writ, 'de terris liberandis abbati de Meaurose,' ordering the giving-up of certain lands to the abbot. In 1378, Richard II., following the example of Edward, again renewed the protection, but his fruitless expedition into Scotland in 1385 so exasperated him, that, in that year, after spending a night in the Abbey, he caused it to be burned. His conscience would, however, seem to have troubled him on the subject, for four years afterwards the monks were indemnified for the damage he did them by the grant of two shillings on each of 1000 sacks of wool exported by them from Berwick—a privilege revoked, however, in 1390, in consequence of an effort to export 200 sacks more than the fixed number. Notwithstanding these many disasters the place increased in wealth and architectural splendour, and it was not till the more severe damage and dilapidations that befel it during the reigns of Henry VIII., Edward VI., and Elizabeth, that ruin began finally to impend. In 1544 the English penetrated to Melrose, destroyed a great part of the Abbey, and defaced the tombs of the Douglases; and in 1545 they again, under the leadership of Lord Evers and Sir Brian Latoun, returned to the work of pillage, and on their retreat the Earl of Angus and Scott of Buccleuch avenged the ravaged country and the defaced tombs at the battle of ANCRUM MOOR. The Reformation was rapidly approaching, and though donations were given by various individuals for rebuilding, the Abbey never recovered the damage then suffered. In 1541 James V. obtained from the Pope the Abbeys of Melrose and Kelso to be held in commendam by his illegitimate son James, who died in 1558. In 1560 all the 'abbacie' was annexed to the Crown without power of alienation, but this was altered by subsequent Acts of Parliament, and in 1566 Queen Mary granted the lands to James, Earl of Bothwell. On his forfeiture in 1568 they again reverted to the Crown, and were, by James VI., at the instigation of the Earl of Morton, bestowed in commendam on James Douglas, second son of William Douglas of Loch Leven. Douglas took down part of the walls to build for himself the house which still stands to the N of the cloisters, and which bears the date 1590; but in 1606 the commendator resigned the monastery, with all its pertinents, into the hands of the king, to be erected into a temporal lordship, in favour of William, Earl of Morton. In 1608 the resignation was repeated, but without qualification, the property to be disposed of as 'his hienes sall think expedient,' and so, in 1609, the lands were, with some exceptions, erected into a lordship in favour of Sir John Ramsay, who had assisted King James at the time of the Gowrie conspiracy, and who had already, in 1606, been rewarded with the title of Viscount Haddington. He died, without issue, in 1625, and the estates reverted to the Crown. Sir Thomas Hamilton, a celebrated lawyer, familiarly known as Tam o' the Cowgate, who had, in 1619, been created Earl of Melrose, and who afterwards changed that title for that of Earl of Haddington, eventually obtained the Abbey and the greater part of its domains, and, in more recent times, he has been succeeded in the splendid heritage by the family of Buccleuch.

The monks of this abbey were the first Cistercians who obtained footing in Scotland, and they always held the foremost place among their order throughout the kingdom. In their earlier days they seem to have been frugal and industrious, careful of their rights in opposition to the neighbouring barons,* diligent in the cultivation of

* Many accounts have been preserved of their quarrels with their neighbours. So long and pertinacious was the contest between them and the people in the vale of Gala Water—then called Wedale—about pannage and pasture, that in 1314 a formal settlement, known as 'the Peace of Wedale,' was made by William the Lyon, assisted by his bishops and barons; and even this does not seem to have been finally successful, for in 1269 we again find that John of Edenhall, the abbot, and many of the brethren were excommunicated for violating the Peace of Wedale, attacking some houses of the Bishop of St Andrews, and slaying one ecclesiastic and wounding others.

their land, in their attention to the building of the church and monastery, and in the promotion of such arts as were known at the time. How they had fallen off before the period of the Reformation is seen in the efforts made for their reform during the 15th century by Innocent VIII., and in the 16th century by the general chapter at Cîteaux, even if we do not accept as necessarily true the declaration of the old words of *Galashiels*:—

'The monks of Melrose made gude kail,
On Fridays when they fasted;
They wanted neither beef nor ale
As long as their neighbours' lasted.'

The regard in which they were held by Bruce and his successors was probably due to the fact that, although exempted by charters and by custom from rendering military service to the Crown, yet they fought under James the Steward of Scotland during the war of the Succession, and again under Walter the Steward, in strenuous support of the infant prince David Bruce. Thus during the invasion of Edward II. in 1322, when Douglas and his band were in the neighbouring forest, watching for an opportunity to molest the English, he was, with a pickel body of men, admitted within the precinct of Melrose, where, according to Barbour,

'A rycht sturdy frer he sent
With out the yate thair come to se.'

And the friar, 'all stout, derff, and hardy,' set forth accordingly in somewhat warlike array, for although 'hys mekill had helyt haly' was all 'the armor that he on him had,' yet

'Apon a stalwart hors he rad,
And in his hand he bad a sper.'

When the scout gave the signal, Douglas rushing out beat back this English advanced guard, and Barbour makes the English return home again; but Fordoun says that it was in revenge for this that Edward burned the abbey in 1322, slew many of the monks, and profanely carried off the silver pix. Declarations were afterwards made by both Stewards, and subsequently confirmed by the Duke of Albany on the day of the Feast of James the Apostle in 1403, that the military service of the monks, having been rendered by the special grace of the abbot and convent, and not in terms of any duty they owed to the Crown, should not be regarded as any precedent for their future conduct.

The only part of the buildings that now remains is the ruin of the church, which, though it wants the dignity of Elgin Cathedral, is yet, from its richness and symmetry, one of the finest pieces of architecture in Scotland. 'In some buildings,' says Dr Hill Burton, writing in Billings' *Baronial and Ecclesiastical Antiquities of Scotland*, 'the plan is massive, and the decorations, as if in contrast to it, light and rich; in others a building comparatively meagre is enriched by the massiveness of the decorations, but here the art both of the designer and the decorator—whether the same person or different—has been employed to the utmost in divesting the material of its natural character of ponderosity, and rearing high overhead a fane such as aerial beings might be supposed to create with the most ductile and delicate material; and he goes on to compare some of the architectural features with those of the cathedrals at Strasbourg and Antwerp. The style is generally given as Perpendicular, but, as the same writer points out, after the war of Independence, Scottish art agrees with Continental and not with English types, and in no ecclesiastical building in Scotland will the depressed four centre arch, characteristic of the true Perpendicular, be found. The ogee canopy or hood, which is its counterpart, is to be found at Melrose, but the arch it surmounts is purely Pointed. How carefully and with what conscientious regard for the dignity and worth of labour the craftsmen toiled, is shown by the beauties only discoverable on close examination, and by finding details high up in air as well finished as if they were where they could be constantly looked at. The monastery buildings stood to the N and NW of the church, but they are

entirely gone, and nothing can now be ascertained as to their extent. A large portion of them must have been removed to provide materials for the house that Comendator Douglas erected in 1590, and subsequently the walls were, no doubt, used pretty much as a quarry for whosoever chose. The stones of the vaulted roof constructed over part of the nave in 1618 were obtained from the same source, as were also those of the old town jail, and materials for repairs at the mills and sluices—and indeed there is an old tradition that there is not a house in the village but has in it stones taken from the monastery. The author of the *Monastic Annals of Teviotdale* speaks of a lofty building of excellent masonry that was taken down in 1695, and says it was supposed to have been the bakehouse, as 'it contained several well-constructed ovens, one over another in the different stories.' He also mentions as having then been laid bare, 'a vaulted passage or drain, of such dimensions that two or three persons might easily walk in it abreast,' and passing underground from this place to several other parts of the convent. Milne, who was parish minister, and whose *Account of Melrose* was published in 1743, says that the whole buildings were enclosed by a high wall about a mile in circuit, and describes bases of pillars and other traces of a building to the NE of the church. This was probably the chapterhouse.

The present ruins of the church are evidently, in the main, those of the building erected in 1322, though there have been many subsequent alterations, and indeed the windows and upper walls to the E are probably subsequent to the English devastation in 1385, while portions may date even as late as 1505. We have already seen that the building suffered great damage during Hertford's invasions, and the Reformation happening very shortly thereafter, there was no opportunity for the monks to repair it before they had to quit altogether. Far from a centre of population, no actual harm seems to have been done to it, as to some of the other buildings of the Old Church, in the actual progress of the Reformation; but after its desertion by its inmates, and its partial destruction, wind and weather probably did still more injury. In 1618, when part of the nave came to be used as a parish church, the roof had to be closed up by the unsightly vault of modern masonry that extends from the crossing some 60 feet westward.* A great number of the stone images of saints which filled the numerous niches that adorn the walls, were left untouched till 1649, when they were almost all thrown down and destroyed, why or by whose order is not known.

The church is cruciform, and stands E and W, the total length in that direction being 258 feet while the breadth is 79 feet. The transepts measure 130 feet from N to S, and are 44 feet wide, while the one wall of the square central tower that is still standing is 84 feet high. The nave has had an aisle on each side, and to the S of the south aisle there are eight small chapels separated one from another by walls. The line of the pillars supporting the arches dividing the nave from the aisles has been continued by other two columns on each side, along the sides of the choir, to the chancel and lady chapel. Of these the two to the W, of which only the bases now remain, supported the E wall of the centre tower, and in a line with these a row of pillars has run along from N to S, separating the transepts from, E of the S transept, the chapel of St Bridget, and, E of the N transept, the chapel of St Stephen. Square projections from these, at the NE and SE angles of the choir, have also formed chapels. Except at the corner of that to the NE, the walls of the transepts, chancel, and chapels are still pretty entire, and several of the slender flying buttresses remain. Of the pillars between the aisle and nave only the four next the nave now remain, and along these the elaborate groining of the roof over the S aisle is intact. On the N side of the nave the bases of three

pillars farther W are visible, while the nave itself is covered over by the unsightly 17th century arching already noticed. A small doorway, opening off the N aisle, is the 'steel-clenched postern door' by which Scott in the *Lay of the Last Minstrel* makes the old monk introduce William of Deloraine to the church. It leads out into the space where the cloisters have been, where, on the walls, there are a number of false Gothic arches of great beauty. The carving of the ornaments of these is particularly well preserved and beautiful. 'There is one cloister in particular,' says Lockhart, 'along the whole length of which there runs a cornice of flowers and plants, entirely unrivalled, to my mind, by anything elsewhere extant. I do not say in Gothic architecture merely, but in any architecture whatever. Roses and lilies, and thistles, and ferns, and heaths, in all their varieties, and oak leaves and ash leaves, and a thousand beautiful shapes besides, are chiselled with such inimitable truth and such grace of nature, that the finest botanist in the world could not desire a better hortus siccus, so far as they go.' The roof is quite gone, but there are holes along the walls for the beams. The carving of the doorway itself that leads into the cloister is particularly worthy of notice for its exquisite undercutting. Over the chancel and lady chapel the beautiful groining remains, and in the wall, above the site of the high altar, are the remains of the tracery—still pretty entire—of the beautiful E window where Scott has described the moon as shining

'Through slender shafts of shapely stone,
By foliated tracery combined;
Thou would'st have thought some fairy's hand,
Twixt poplars straight, the osier wand,
In many a freakish knot, had twined;
Then framed a spell, when the work was done,
And changed the willow-wreaths to stone.'

This window, which is 36 feet high and 16 wide, has five mullions each 8 inches wide, with transoms, and interwoven towards the top with very light and elegant tracery. With this window is here associated the legend connected in most of the other old ecclesiastical buildings with some of the pillars (see ROSLIN). Immediately beneath the site of the high altar is the resting-place of the heart of Robert Bruce, and to the S of it is a dark-coloured slab of polished encaustic limestone, said to mark the grave of Alexander II., who was buried near the high altar in 1249. Other authorities, however, maintain that it marks the burial-place of St Waltheof† or Waldeve, who was the second abbot of the monastery founded by King David, and that it is the slab placed here by Ingram, Bishop of Glasgow (1164-74) who came to Melrose, according to the *Chronica de Mailros*, to open the grave after Waltheof had been buried for twelve years, and found the body in perfect preservation. Scott makes the old monk and William of Deloraine seat themselves on it while waiting till the exact moment for opening the tomb of Michael Scott should arrive.

† The description of Melrose by moonlight, with which the second canto of the *Lay of the Last Minstrel* commences, is now generally admitted to have been purely imaginary. Some of the details, if real, could only have been described by one who had been actually about the building at night, and this in Scott's case does not seem to have been so. Old John Bower who was so long the keeper of the abbey always stoutly maintained that Scott never got the key from him at night, and so could never possibly have been about the ruin by moonlight, and the 'great wizard' is said himself to have once appended to the lines the additional ones—some what apocryphal:—

'Then go and muse with deepest awe
On what the writer never saw,
Who would not wander 'neath the moon
To see what he could see at noon.'

Moore indeed maintained that Scott was much too practical a man to go poking about the ruins by moonlight. Bower himself is said in dark nights to have accommodated poetry-struck visitors by means of a lantern set on the end of a pole. Latterly he even preferred his double tallow-candle to the moon itself. 'It does not light up a' the Abbey at aince, to be sure,' he would say, 'but then you can shift it about, and show the auld ruin bit by bit, while the moon only shines on one side.'

† St Waltheof was a son of the wife of David I. by her first husband, Simon, Earl of Huntingdon, and so the grandson of Siward, Saxon Count of Northumberland.

* When the present parish church was built in 1810, it was intended that this vaulting should be removed, as well as the modern wall at the W end of it; but as this would have given increased play to wind, it was thought better, in the interests of the delicate tracery of the E and S windows, to allow it to remain.

The chancel was also the burial-place of the Douglasses, and tombs are pointed out said to be those of William Douglas, the Dark Knight of Liddesdale—whose murder of Sir Alexander Ramsay (see HERMITAGE) and subsequent death in Ettrick Forest at the hands of his own chief, William, Earl of Douglas, are well known—and of James, second Earl of Douglas, the hero of Otterburn. The Douglas tombs were all defaced by Sir Ralph, afterwards Lord, Evers in 1544, and after the battle of Ancrum, Evers himself was buried here, his tomb being pointed out in the corner chapel just outside the chancel. Here also is a slab covering the grave pointed out by John Bower the elder as the place that Scott had in mind when describing the burial-place of the 'wondrous Michael Scott.' It is doubtful, however, whether Scott had any particular grave in view, and it is of course unnecessary to point out that the tomb here can have no connection whatever with the real Sir Michael, whose introduction into the *Lay* at that date is merely a piece of poetical licence (see BALWEARIE). At the northern end of the N transept a small doorway leads into the sacristy in which is the tombstone of Johanna, Queen of Alexander II., with the inscription *Hic jacet Johanna d. Ross*. Higher up is a door which has been reached by a flight of steps, and which has probably led to the dormitory. The threshold of this doorway is formed by a part of a very old tombstone: the steps were removed in 1730. Higher up in the wall still is a small circular window, said to represent a crown of thorns. The arches here seem to be those from which the description in the *Lay* has been taken:—

'The darken'd roof rose high aloof
On pillars lofty, and light and small;
The key-stone that locked each fenibed aisle
Was a fleur-de-lys, or a quatre-terrible;
The corbells were carved grotesque and grim,
And the pillars, with cluster'd shafts so trim,
With base and capital flourish'd around,
Seem'd bundles of lances which garlands had bound.'

On the W side, in elevated niches, are statues representing St Peter with his book and keys, and St Paul with a sword. In the S transept part of the groined roof still remains. In the W wall is a small door giving access to the triforium passages. Over the centre is a shield bearing a pair of compasses and fleurs-de-lis in reference to the profession and native country of the designer. Beside it is the inscription in old English letter:—

'Sa gays ye compas evyn about
sa truth and laite do, but doute,
behalde to ye hende q Johne Morro.'

Higher up to the left is also the following in similar characters:—

'John Morow sum tym callit
was I and born in Parysse
certainly and had in keepyng
a mason werk of Santandrawys
ye hie kirk of Glasgw
Melros and Pslay of Nyddsdayll
and of Galway.
I pray to God and Mari bath
and sweet Sanct John keep this haly kirk
fra skaith.'

This is the division of lines as given on the stone. A slight alteration converts the inscription into the rude rhyme which no doubt it was meant to be. The upper part of the S wall is occupied by a very fine window, 24 feet high and 16 wide, with five lights and elaborate wheel tracery over; beneath the window is a doorway. On the outside the window is surmounted by nine niches, of which the centre one, which is highly wrought, is said to have contained an image of Christ. The eight others and four more on the side buttresses held figures of the Apostles. Over the doorway is a figure supposed to be that of John the Baptist, so placed that the eye is directed upwards as if to the figure of Christ above, and bearing a scroll with the inscription, *Eccc filius Dei*. Beneath this is a shield with the royal arms of Scotland. The pedestals and canopies of the niches on the buttresses are richly carved. One of the pedestals on the W is supported by a monk bearing a

scroll with the inscription, *En venit Jes. seq. cessabit umbra*, and one on the E by a monk having a scroll inscribed *Pussus e. q. ipse voluit*. Over the E window there are also niches, some of which contain broken statues. That over the centre of the window has two sitting figures with open crowns, said to represent David I. and his queen Matilda. There are many more of these niches on the S side, and in connection with a fine one, containing a statue of the Virgin holding the infant Jesus in her arms, Milne relates a tradition, how, when the person employed to destroy the statues in 1649 struck at this one his first blow knocked off the head of the infant, which, in its fall, struck his arm and permanently disabled him, so that neither he nor any one else cared to recommence the work of destruction.* Some of the gargoyles are curious, and one—a pig playing on the bagpipe, close to the niche just mentioned—has acquired some celebrity.

Of the eight chapels to the S of the south aisle the five farthest to the E are roofed; the others are now open. Each of them is lit by a finely traceried window, and in the wall of each is a piscina. In the one that the transept is a stone inscribed 'Orate pro anima frat. Petre arcarii.' In the third is a monument to David Fletcher, minister of Melrose, who, on the establishment of Episcopacy, was made Bishop of Argyll. The others have long been used as the burial-places of the Pringles of Whitebank and Galashiels. Another branch of the Pringle family had their burying-place, near the cloister door, marked by the simple inscription 'Heir lysis the race of the hous of Zair.' Few of the stones in the churchyard round the church call for particular notice. That of John Knox, minister of Melrose, has been already noticed. Sir David Brewster (1781-1868), who died at Allery, in the parish of Melrose, is buried under the fifth window counting from the W end of the nave. Near the SE corner of the churchyard is the stone erected by Scott—with an inscription written by himself—over the grave of Tom Purdie, long his forester, favourite, and general manager at Abbotsford. On a small red tombstone in the SE, without date but evidently more than 200 years old, is the inscription:—

'The earth goeth
on the earth
glistring like
gold:
The earth goes to
the earth sooner
then it wold:
The earth builds
on the earth castles
and towers:
The earth says to
the earth all shall
be ours.

This was, in 1853, published in *Notes and Queries* as an epigram by Sir Walter Scott, but this was soon contradicted. Inscriptions differing but little from it are found in several English churchyards, and the original lines probably date from the time of Edward III. (see Wheler's *History and Antiquities of Stratford-upon-Avon*).

The ruins were repaired in 1822 at the expense of the Duke of Buccleuch, and under the superintendence of Sir Walter Scott. Washington Irving has charged the latter with having carried off 'morsels from the ruins of Melrose Abbey' to be incorporated in Abbotsford; but in reality what Irving saw was probably a number of the plaster casts of various ornaments that were made at this time. The proprietor cares diligently for the ruins, and makes repairs whenever necessary. The abbey has been painted or drawn by almost every eminent British landscape painter from Turner downwards, and has been and is every year visited by a very large number of visitors. Burns, who came here

* This 'miracle' is said to have been talked of at Rome, with the additional marvel that the man—known as 'Stumpy Thomson'—was dragged ignominiously to his grave at a horse's heels. This last circumstance is so far true that, the individual in question having died during a severe snowstorm, his coffin was dragged to the churchyard on a horse sledge.

in 1787 during his Border tour, a little before his time in admiration of Gothic architecture as in so many other things, calls it 'that far-famed glorious ruin,' and yet he must have seen part of it when it was by no means at its best. 'On opening the door,' says Grose, or rather Mr Hutchinson for him, 'it is not to be expressed the disagreeable scene which presents itself; the place is filled with stalls, in the disposition of which irregularity alone seems to have been studied; some are raised on upright beams, as scaffolds, tier above tier; others supported against the walls and pillars; no two are alike in form, height, or magnitude; the same confusion of little and great, high and low, covers the floor with pews; the lights are so obstructed that the place is as dark as a vault; the floor is nothing but the damp earth; nastiness and irregularity possess the whole scene.' Dorothy Wordsworth, who visited Melrose with her brother during their Scottish tour of 1803, when they were guided over the ruins by Scott himself, makes similar reference to the want of neatness about the church, and indeed she seems to have thought the ruin overrated. It 'is of considerable extent, but unfortunately it is almost surrounded by insignificant houses, so that when you are close to it you see it entirely separated from many rural objects; and even when viewed from a distance the situation does not seem to be particularly happy, for the vale is broken and disturbed and the abbey at a distance from the river, so that you do not look upon them as companions to each other.' This is somewhat captious, but it is probably a vague expression of the disappointment felt by most on a first visit to the place. This disappointment is an undoubted fact, though why it should exist it is more difficult to say. Possibly it may partly arise from too great expectations, but probably more from the surroundings and the heavy and ungainly 17th century vaulting of the nave. It is only by closer study and familiarity with all the beautiful details—quite lost in a general first view—that the feeling is removed.

The Queen visited the Abbey in 1867, during her stay with the Duke of Roxburgh at Floors Castle. The visit is thus described in *More Leaves from the Journal of a Life in the Highlands*:—'We went by the side of the *Eildon Hills*, past an immense railway viaduct, and nothing could be prettier than the road. The position of Melrose is most picturesque, surrounded by woods and hills. The little village, or rather town, of *Newstead*, which we passed through just before coming to *Melrose*, is very narrow and steep. We drove straight up to the *Abbey* through the grounds of the Duke of Buccleuch's agent, and got out and walked about the ruins, which are indeed very fine, and some of the architecture and carving in beautiful preservation. David I., who is described as a "sair Saint," originally built it, but the *Abbey*, the ruins of which are now standing, was built in the fifteenth century. We saw where, under the high altar, Robert Bruce's heart is supposed to be buried; also the tomb of Alexander II., and of the celebrated wizard, Michael Scott. Reference is made to the former in some lines of Sir Walter Scott's, in the *Lay of the Last Minstrel*, which describes this Border country:—

"They sat them down on a marble stone;
A Scottish monarch slept below."

And then when Deloraine takes the book from the dead wizard's hand, it says—

"He thought, as he took it, the dead man frowned."

Most truly does Walter Scott say—

"If thou wouldst view fair Melrose aright,
Go visit it by the pale moonlight."

It looks very ghostlike, and reminds me a little of *Holyrood Chapel*. We walked in the churchyard to look at the exterior of the *Abbey*, and then re-entered our carriages.

ton's *Monastic Annals of Teviotdale* (1832); *Chronica de Melros* (Bannatyne Club, 1835); *Liber Sancte Marie de Melros* (Bannatyne Club, 1837); Scott's *Lay of the Last Minstrel*, *Monastery*, and *Abbot*; Washington Irving's *Abbotsford and Newstead Abbey*; Mrs H. B. Stowe's *Sunny Memories of Many Lands*; Billings' *Baronial and Ecclesiastical Antiquities of Scotland* (Edinb. 1852); J. D. Wade's *History of St Mary's Abbey, Melrose, etc.* (Edinb. 1861); and F. Pinches' *The Abbey Church of Melrose, Scotland* (Lond. 1879).

Melsetter, a mansion in Walls parish, Hoy island, Orkney, at the head of Longhope Bay, 18 miles SW of Kirkwall. Its owner, John George Moodie-Heddle, Esq. (b. 1844; suc. 1869), holds 50,410 acres, valued at £352 per annum.

Melvich, a scattered village in Reay parish, Sutherland, on the left side of the mouth of the Halladale, near the head of a small bay, 17 miles W by S of Thurso. It has a post and telegraph office under Thurso, a good inn, and a public school. Immediately NNW is the fishing-village of Portkerra. Pop. of the two villages (1871) 414, (1881) 626, of whom 259 were in Melvich.—*Ord. Sur.*, sh. 115, 1878.

Melville Castle, the seat of Viscount Melville, in Lasswade parish, Edinburghshire, on the North Esk's left bank, 1 mile NNE of Lasswade village and 1½ W by N of Eskbank station near Dalkeith. Built in 1786 from designs by John Playfair, it is a castellated three-story edifice of fair white stone, with round corner towers and two-story wings. The grounds are of great beauty. 'Melville's beechy grove' is celebrated in Sir Walter Scott's *Grey Brother*; and 11 of its beeches, 9 of its oaks, are described in *Trans. Highl. and Ag. Soc.* for 1881 as among the 'old and remarkable trees of Scotland.' Melville barony, originally called Male-ville, from Male, an Anglo-Norman baron, who was governor of Edinburgh Castle in the reign of Malcolm IV., remained in possession of his family till the time of Robert II., when it passed by marriage to Sir John Ross of HAWKHEAD. With his descendants, the Lords Ross, it continued till 1705; and, being afterwards purchased by David Rennie, it passed, by his daughter's marriage, to the eminent statesman Henry Dundas (1742-1811), who was created Viscount Melville in 1802. His grandson, Robert Dundas, fourth Viscount (b. 1803; suc. 1876), holds 1158 acres in Midlothian, valued at £3618 per annum.—*Ord. Sur.*, sh. 32, 1857. See *LISSWADE*, and *John Small's Castles and Mansions of the Lothians* (Edinb. 1883).

Melville House, a four-story mansion of 1692, with extensive and beautiful grounds, in Monimail parish, Fife, 3 miles N by W of Ladybank. It contains portraits of Gustavus Adolphus, King of Sweden, and Sir Alexander Leslie, General of the Covenanters, Field-Marshal of Sweden, and first Earl of Leven. Sir Robert Melville (1527-1621), a distinguished diplomatist in the reigns of Mary and James VI., in 1616 was raised to the peerage as Lord Melville of Monimail; and George, fourth Lord Melville, who played an active part in the Revolution times, in 1690 was created Earl of Melville—a title conjoined with that of LEVEN since 1713. At the death in 1860 of the eighth Earl of Leven, the estate—2157 acres, of £3090 annual value—went to his eldest daughter, Lady Elizabeth Jane Leslie-Melville, who in 1858 had married Thomas Cartwright, Esq. An ancient standing stone, ¼ mile SW of the house, rises upwards of 9 feet from the ground, and measures 6 feet in circumference.—*Ord. Sur.*, shs. 48, 40, 1868-67.

Memsie, an estate, with a 17th century mansion (a farmhouse now), in Rathen parish, NE Aberdeenshire, 4 miles SSW of Fraserburgh. The estate, which belonged for more than three centuries to the Fraser family, was sold in the early part of the present century to Lord Saltoun. Three cairns stood on Memsie Moor, to the N of the mansion. One of them, now removed, had a considerable extent of vitrified base; another, also removed, contained a peculiarly shaped funeral urn and a short iron-handled sword; whilst the third, still standing, rises to a height of 15 feet, and measures 60 feet in circumference at the base.—*Ord. Sur.*, sh. 97, 1876.

Memus, a place, with a Free church, in Tannadice parish, Forfarshire, $5\frac{1}{2}$ miles NE of Kirriemuir.

Menmuir, a hamlet and a parish of NE Forfarshire. The hamlet lies 5 miles WNW of Brechin, under which it has a post office.

The parish is bounded NW by Lethnot, NE by Stracathol, S by Brechin and Careston, and W by Fearn. Its utmost length, from E to W, is $6\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{3}{4}$ miles; and its area is 10,110 $\frac{1}{2}$ acres, of which 10 are water. Paphrie Burn, coming in from Fearn, first crosses a narrow wing of the interior, and then runs $2\frac{1}{2}$ miles east-north-eastward along the Lethnot boundary to WEST WATER, which itself goes 9 furlongs along the rest of the northern boundary; CRUICK WATER, coming in from the SW, winds $6\frac{1}{2}$ miles east-by-northward near to or along the southern boundary; and Menmuir Burn, rising $1\frac{1}{2}$ mile NW of Menmuir hamlet, runs $4\frac{1}{2}$ miles east-by-southward to Cruick Water. Along the last-named stream the surface declines to 200 feet above sea-level; and thence it rises to 978 feet at White CATERTHUN, 943 at Brown Caterthun, 880 at the Hill of Menmuir, 1009 at Mansworn Rig, and 1579 at Peat Hill. The district S of the hills, comprising about one-half of the entire area, and forming part of Strathmore, lay mostly, till a comparatively recent period, in a marshy condition; and, though retaining some patches of marshy ground, is now nearly all of it well-reclaimed arable plain. The predominant rocks are greywacke and Old Red sandstone. A neglected chalybeate spring on Balhall Farm was once in much repute. The soil of the lands adjacent to Cruick Water is sharp and gravelly, on the parts of the plain further N is loamy, and on the hill-slopes is deep sandy clay. The chief antiquities are described in our article on the White and Brown CATERTHUN. BALNAMOON, noticed separately, is the only mansion; but 4 proprietors hold each an annual value of more, 2 of less, than £500. Menmuir is in the presbytery of Brechin and the synod of Angus and Mearns; the living is worth £208. The parish church was erected in 1842. There is also a Free church; and a public school, with accommodation for 118 children, had (1883) an average attendance of 89, and a grant of £93, 0s. 6d. Valuation (1857) £5833, (1884) £7993, 18s. Pop. (1801) 949, (1831) 871, (1861) 796, (1871) 761, (1881) 755.—*Ord. Sur.*, sh. 57, 1868.

Menock Water. See MINNICK.

Menzie, a village in the Clackmannanshire portion of Logie parish, $2\frac{1}{2}$ miles W of Alva, 4 NW by N of Alloa, and $4\frac{1}{2}$ NE of Stirling. It stands, 75 feet above sea-level, on the left bank of Menzie Burn, at the southern base of the Ochils, with DUNMYAT (1375 feet) to the NW, and Myreton Hill (1240) to the NE. Power-looms, for weaving Scotch blankets and other woollen goods, were introduced early in the present century; and to the factory of Messrs Archibald the larger Elmbank Mill was added in 1864, which is worked by a steam-engine of 90 horse-power, and yearly consumes raw wool material to the value of £33,000. The Dolls or GLEN-OCHEIL Distillery (1760) stands 1 mile ESE; and Menzie besides has a post and telegraph office, a station on the Alva branch (1863) of the North British, gasworks, an Established chapel of ease (1880), and a handsome public school (1875). A quaint old house in the village is pointed out as the birthplace of the poet Sir William Alexander (1580-1640), first Earl of Stirling, and also of Sir Ralph Abercromby (1734-1801), the hero of Aboukir Bay. The beauty of the landscape is celebrated in the old-world rhyme, ascribed to a miller's wife, whom the fairies had sprited away—

'Oh! Alva woods are bonny,
Tillycultry hills are fair;
But when I think o' the bonny braes o' Menzie,
It maks my heart aye sair.'

Pop. (1841) 518, (1861) 455, (1871) 658, (1881) 918, of whom 462 were females. Houses (1881) 185 inhabited, 9 vacant, 1 building.—*Ord. Sur.*, sh. 39, 1869.

Menteith. See MONTTEITH.

Menzies. See CASTLE-MENZIES.

Menzion Burn, a rivulet of Tweedsmuir parish, SW Peebleshire, running 4 miles north-westward to the Tweed, at a point 7 furlongs SSW of Tweedsmuir church.

Merchiston. See EDINBURGH.

Merchiston Hall, a mansion in Falkirk parish, Stirlingshire, 1 mile WNW of the town. It was the birthplace of Admiral Sir Charles Napier (1786-1860), the hero of St Jean d'Acre.—*Ord. Sur.*, sh. 31, 1867.

Merchiston House, a mansion in Kilbarchan parish, Renfrewshire, $1\frac{1}{2}$ mile XNW of Johnstone.

Merkinch. See INVERNESS.

Merkland Cross, an old monument in Kirkpatrick-Fleming parish, SE Dumfriesshire, $2\frac{1}{2}$ miles WNW of Kirkpatrick village. It comprises a base or socket $2\frac{1}{2}$ feet high, and a slightly tapering octagonal pillar 9 feet high, and is supposed to commemorate a Master of Maxwell, Warden of the Marches, who, after a victorious skirmish with the Duke of Albany and the Earl of Douglas, was here assassinated in 1484.—*Ord. Sur.*, sh. 10, 1864.

Merkland, Loch, a lake on the mutual border of Ed-drachillis and Lairg parishes, Sutherland, $4\frac{1}{2}$ miles XNW of Overcaig Inn on Loch Shin, and $2\frac{1}{2}$ NW of Lairg station. Lying 367 feet above sea-level, it extends $2\frac{1}{2}$ miles south-south-eastward; has a maximum width of $2\frac{1}{2}$ furlongs; sends off its superfluous southward to Loch GRAM, and through that to the head of Loch Shin; and contains fine large red-fleshed trout.—*Ord. Sur.*, sh. 108, 1880.

Merrick, a mountain near the northern border of Minnigaff parish, NW Kirkcubrightshire, 18 miles N by W of Newton-Stewart. Rising to an altitude of 2764 feet above sea-level, it is the highest summit in southern Scotland, 'while in the grandeur and desolation of its scenery, in its crags and precipices and deeply-scored gullies, it almost approaches the mountains of the North.'—*Ord. Sur.*, sh. 8, 1863.

Merryston, West, a village in Old Monkland parish, Lanarkshire, close to Easterhouse station, and $3\frac{1}{2}$ miles W of Coatbridge. Pop. (1861) 627, (1871) 541, (1881) 534.

Merse, a district on the eastern part of the Scottish Border. In modern territorial arrangement it is the largest and most southerly of the three divisions of Berwickshire, and has been computed to comprise 129,600 acres; in loose popular phraseology it is the whole of Berwickshire, including both the Lammermuir and Landerdale districts; in proper topographical nomenclature, based on strict reference to geographical feature, it is all the low country between the Lammermuirs and the river Tweed, and includes all the Merse district of Berwickshire, with all the parts of Roxburghshire northward of the Tweed; and in ancient political designation it was the entire champaign country between the Lammermuirs and the Cheviots, included all the lowlands of Teviotdale, and was regarded as having Roxburgh town and castle for its capital. It forms, in any view, the eastern part of what were formerly termed 'the marches;' was anciently called March, as being the most important part of the marches; and gives the title of Earl of March to the Earl of Wemyss. The champaign portion of it, whether understood in the widest sense or restricted to Berwickshire, is the largest and richest tract of low country in Scotland; admits some comparison with the champaign of the Lothians, but claims superiority in consequence of that champaign being intersected by the Garleton, Edinburgh, and Pentland Hills; and, as seen from any of multitudes of high vantage grounds, looks to be a continuous expanse of parks and arable farms, yet is much diversified by gentle undulations and by a few considerable isolated heights.

The system of Merse and Teviotdale ranks as second in the General Assembly's list; comprehends the presbyteries of Duns, Chirnside, Kelso, Jedburgh, Earlston, and Selkirk; and holds its meetings at Kelso on the second Tuesday of October, and at Melrose on the second Tuesday of April.

Mertonhall, a fine old house, with a large and well-

wooded park, in Penninghame parish, Wigtownshire, 3 miles WSW of Newton-Stewart. Its owner, Campbell Boyd, Esq. (b. 1842; suc. 1882), holds 1524 acres in the shire, valued at £814 per annum. His uncle, Mark Boyd, Esq. (1805-79), was author of two amusing autobiographical works. An ancient military road traverses the estate; and a 'Roman' spear-head, 9 inches long, was exhumed on it in 1813.—*Ord. Sur.*, sh. 4, 1857.

Mertoun, a Tweedside parish in the extreme SW of Berwickshire, containing Clintnains hamlet, $1\frac{1}{2}$ mile E by N of St Boswells, under which it has a post office. It is bounded N by Earlston, and on all other sides by Roxburghshire, viz., NE by Smailholm, E by Makerstoun, S by Maxwell, SW by St Boswells, and W by Melrose. Its utmost length, from E to W, is $4\frac{1}{2}$ miles; its breadth varies between $10\frac{1}{2}$ furlongs and $4\frac{1}{2}$ miles; and its area is 6536 $\frac{1}{2}$ acres, of which 161 $\frac{3}{4}$ are water. The **TWEED**—from the influx of Leader Water to Dalcove Ferry—meanders $10\frac{1}{2}$ miles south-south-eastward and eastward along all the boundary with Melrose, St Boswells, and Maxton, though the point where it first touches and that where it quits the parish are only $5\frac{1}{2}$ miles distant as the crow flies. This part of its course is very winding, the river making several large sweeps, especially at Old Melrose, at Dryburgh, and between Mertoun Mill and the new Suspension Bridge (erected by Lord Polwarth in 1880). The Mertoun bank, which is generally high, steep, and well wooded, furnishes some fine bits of cliff scenery. Along the Tweed the surface declines to 190 feet above sea-level, and rises thence to 425 feet near Dalcove Mains, 542 near Clinthill, 588 near BEMERSYDE House, 747 near Gladwood, and 871 near Brotherstone. Bemersyde Loch, situated in the NW part of Mertoun, is almost dry in summer, but in winter it affords fair wild-fowl shooting. The soil is mainly a stiff, reddish clay, and, although difficult to work, is productive and highly cultivated. Red sandstone abounds along the Tweed, and was formerly quarried. Mertoun is a well-wooded parish, especially in the S part, which contains the Hexsides beech-wood and Mertoun woods. DRYBURGH ABBEY and BEMERSYDE have been noticed separately. Mertoun House, a seat of Lord Polwarth, stands close to the Tweed's left bank, 2 miles E of St Boswells. It was built in 1702 from designs by the celebrated architect, Sir William Bruce. (See HARDEN.) Gladwood, in the NW of the parish, 3 miles E of Melrose, is the seat of Miss Meiklam (suc. 1882), who holds 258 acres in the shire, valued at £426 per annum. The Queen stopped here on 22d August 1867 as she was driving from Melrose to Floors Castle. In all, there are five landowners. Mertoun is in the presbytery of Earlston and the synod of Merse and Teviotdale; the living is worth £377. Its church, built in 1665 and restored in 1820, stands in a wood near Mertoun House, $\frac{1}{2}$ mile SSE of Clintnains. It has accommodation for 200 people; and a pair of 'joughs' hang beside the main entrance. The public school, built in 1839, and enlarged in 1872, with accommodation for 121 children, had (1883) an average attendance of 64, and a grant of £69, 1s. Valuation (1860) £3768, 5s. 8d., (1884) £10,200, 8s. 6d. Pop. (1801) 535, (1831) 664, (1861) 729, (1871) 734, (1881) 682.—*Ord. Sur.*, sh. 25, 1865.

Meslie Water. See MASLIE.

Methil, a seaport village in Wemyss parish, Fife, on the Firth of Forth, 1 mile SW of Leven, and $1\frac{1}{2}$ NE of Buckhaven. Constituted a burgh of barony in 1662 by the Bishop of St Andrews, it has long possessed commercial importance, in consequence of its harbour being one of the best on the S coast of Fife. The E pier was greatly injured by a storm in 1803, with the effect of choking the entrance to the harbour, but was restored in 1838 at a cost of more than £6100; and a new wet dock, principally for facilitating the shipping of coals, was constructed in 1875. An Established church, built in 1837-38 at a cost of £1030, and containing upwards of 800 sittings, in 1875 was raised to *quoad sacra* status. Pop. of village (1836) 508, (1861) 522, (1871) 648, (1881) 754; of *q. s.* parish (1881) 2342, of whom 501 were in Markinch.—*Ord. Sur.*, sh. 40, 1867.

Methil Hill, a village in Wemyss parish, Fife, 1 mile WNW of Methil. Pop. (1871) 480, (1881) 466.

Methlick, a village and a parish of Aberdeenshire. The village stands, 87 feet above sea-level, on the right bank of the river Ythan, 5 miles W by N of Arnage station, 6 $\frac{1}{2}$ E by S of Fyvie, and $8\frac{1}{2}$ NW of Ellon. It has a post and telegraph office under Aberdeen, branches of the North of Scotland and the Aberdeen Town and County Banks, a Temperance Institute, with reading and recreation rooms, and fairs on the Thursday after 11 May and the Wednesday after 18 Nov.

The parish is bounded N and NE by New Deer, E and S by Tarves, and W by Fyvie and Monquhiter. Its utmost length, from N to S, is $7\frac{1}{4}$ miles; its utmost breadth, from E to W, is $4\frac{1}{2}$ miles; and its area is 14,912 $\frac{3}{4}$ acres, of which 70 $\frac{1}{2}$ are water, and 881 $\frac{1}{2}$ belong to a small triangular detached portion surrounded by Ellon and Tarves. In the main body of the parish the **YTHAN** flows $2\frac{3}{4}$ miles east-north-eastward along the Fyvie boundary, $3\frac{1}{2}$ miles south-eastward through the interior, and $1\frac{1}{2}$ mile south-eastward along the Tarves boundary; $1\frac{1}{2}$ furlong lower down it continues 2 miles south-eastward along all the south-western border of the detached portion, whose eastern boundary is traced by ERRIE Burn. At the Elrie's and Ythan's confluence the surface declines to 38 feet above sea-level, and thence it rises gently to 409 near Cairn in the south-western division of the main body, and in the north-eastern to 485 at Skillmanne Hill and 579 at Belnagoak. The tract along the Ythan is mostly clothed with wood; the south-eastern corner of the main body is occupied by the extensive and beautiful policies of Haddo House; other portions are low country finely diversified with undulations; but much of the north-eastern division is reclaimed moor. Gneiss and syenite are the predominant rocks, and limestone occurs in the detached portion, and was formerly worked. The soil on the lands within $1\frac{1}{2}$ mile of either bank of the Ythan is a yellow loam incumbent on gravel or rock; but further back becomes poorer, being chiefly a light black mould or moorband pan; and over a considerable aggregate area is peat moss. About 2500 acres, formerly waste, have been brought into cultivation since the commencement of the present century; and nearly as many acres have been planted with Scotch fir and larch. A pre-Reformation chapel stood at a place still known as Chapelton; and another at Andet, dedicated to St Ninian, has bequeathed the name of Chapel Park to a neighbouring farmhouse. Dr George Cheyne (1671-1742), author of a treatise on the *Philosophical Principles of Natural Religion*, and Dr Charles Maitland (1668-1748), the introducer of vaccine inoculation into Britain, were natives of Methlick. HADDO HOUSE, noticed separately, is the only mansion; and the Earl of Aberdeen is sole proprietor. In 1875 a small portion was given off to the *quoad sacra* parish of Barthol Chapel. Methlick is in the presbytery of Ellon and the synod of Aberdeen; the living is worth £342. The parish church at Methlick village was originally dedicated to St Devenick, and, as last rebuilt in 1866, is a handsome Gothic edifice, containing 894 sittings. There is also a Free church; and three public schools—Cairmorrie, Invererie, and Methlick—with respective accommodation for 129, 68, and 210 children, had (1883) an average attendance of 120, 65, and 157, and grants of £99, 7s., £53, 15s., and £144, 1s. 6d. Valuation (1860) £5518, (1884) £10,759, 7s. 4d. Pop. (1801) 1215, (1831) 1439, (1861) 2157, (1871) 2084, (1881) 2162, of whom 2127 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 57, 86, 1876.

Methven, a village and parish of Perthshire. The village, standing 300 feet above sea-level, has a station on the Almond Valley section (1858) of the Caledonian, $1\frac{1}{2}$ mile N by W of Methven Junction, this being $6\frac{1}{2}$ miles WNW of Perth and $11\frac{1}{2}$ ENE of Crieff. A pleasant, neatly built place, it consists of houses held partly on fens, partly on long leases from the lordship of Methven, and has a post office under Perth, with money order, savings' bank, and railway telegraph departments, a local savings' bank (1815), a gas company, a subscription

library (1790), curling and bowling clubs, and a jute and linen factory. In 1433 a collegiate church, for a provost and five prebendaries, was founded at Methven by Walter Stewart, Earl of Athole, who four years later was tortured to death at Edinburgh for the murder of his nephew, James I. An extant aisle, now the burying-place of the Smythes of Methven, is thought to have been added in the early part of the succeeding century, by Margaret, queen-dowager of James IV., as one of its stones is sculptured with the royal lion of Scotland, surmounted by a crown. The present parish church is a plain building of 1783, enlarged in 1825, and containing 1000 sittings. In the churchyard is the tomb of General Sir Thomas Graham, Lord LYNEDOCHE (1750-1843), the hero of Barossa, who was born at Balgowan. There are also Free and U.P. churches. Pop. of village (1861) 950, (1871) 867, (1881) 751.

The parish, containing also the villages of ALMONDBANK and SCROGGIEHILL, is bounded N by Monzie (detached), NE by Moneydie and Redgorton, SE by Tibbermore, S by Tibbermore, Gask, and Madderty, and W by Fowls-Wester. Its utmost length, from E by N to W by S, is $6\frac{1}{2}$ miles; its breadth varies between 1 mile and $2\frac{1}{2}$ miles; and its area is $12,983\frac{1}{2}$ acres, of which $7\frac{1}{2}$ are water, and $2823\frac{1}{2}$ belong to the Tully-beaches or detached section ($4\frac{1}{2} \times 1\frac{1}{2}$ miles), which, lying 6 miles N of Methven village and 3 W of Bankfoot, is bounded NW by Little Dunkeld, and on all other sides by Auchtergaven. The ALMOND winds $3\frac{1}{2}$ miles eastward along the northern boundary, next $1\frac{1}{2}$ mile east-south-eastward across a north-eastern wing (the Lynedoch property), and lastly $2\frac{1}{2}$ miles south-eastward along the Redgorton border. Its rapid course between bold, rocky banks, here bare, there wooded, offers many beautiful views. Pow Water rises in two head-streams which unite at the SW corner of the main body, and pass away towards the Earn; whilst another stream, rising near the sources of the Pow, meanders $4\frac{1}{2}$ miles eastward through the interior past Methven village, and then goes 3 miles east-north-eastward along the southern boundary to the Almond. Methven Loch ($1\frac{1}{2} \times \frac{1}{2}$ furl.) lies to the W of Almondbank village. The surface of the main body of the parish is agreeably diversified with hollows and wooded slopes, sinking in the extreme E to close on 100 feet above sea-level, and rising thence west-north-westward to 431 feet near Drumcairn, 483 near Wester Carsheill, and 653 near Monabue. The hilly detached district, which by Ordie and Garry Burns is drained to the river Tay, has likewise a west-north-westward ascent, from 290 feet above sea-level to 1263 at Craig Gibbon and 1399 at Creag Liath. Trap and Old Red sandstone are the predominant rocks. A greenstone variety of the trap, well suited for road metal, and a fine-grained pale grey variety of the sandstone, adapted for building, have both been quarried. The soil of the lower grounds, for the most part argillaceous, is elsewhere either loam or gravel; that on some of the high grounds of the main body, and on those of the detached district, is moorish. About four-fifths of the entire area are regularly or occasionally in tillage; nearly one-sixth is under wood; and the rest is either pastoral or waste. Of many fine old trees the 'Pepperwell Oak' in front of Methven Castle is the finest, its height being 82 feet, and its girth $23\frac{1}{2}$ at 1 foot from the ground. Prior to 1323, the lands of Methven belonged to the Mowbrays, whose ancestor, Roger Mowbray, a Norman, accompanied William the Conqueror to England. 'A branch of this family,' says the *Old Statistical Account*, 'afterwards established itself in Scotland, and became very flourishing. To Sir Roger Mowbray belonged the baronies of Kelly, Eckford, Dalmeny, and Methven, lying in the shires of Forfar, Roxburgh, Linlithgow, and Perth; but, for adhering to the Balaol and English interest, his lands were confiscated by Robert I., who bestowed Eckford, Kelly, and Methven on his son-in-law, Walter, the eighth hereditary lord-high-steward of Scotland, whose son succeeded to the crown in 1371, as Robert II., in right of his mother, Marjory Bruce, daughter of Robert I.' The lordship of Methven was granted by him to

Walter Stewart, Earl of Athole, his second son, by Euphemia Ross, his second wife; and after his forfeiture (1437), remained in the Crown a considerable time. It became part of the dowry lands usually appropriated for the maintenance of the queen-dowager of Scotland, together with the lordship and castle of Stirling, and the lands of Balquhiddy, etc., all of which were settled on Margaret, queen-dowager of James IV., who, in the year 1525, having divorced her second husband, Archibald, Earl of Angus, married Henry Stewart, second son of Andrew Lord Evandale, afterward Ochiltree, a descendant of Robert, Duke of Albany, son of King Robert II. Margaret was the eldest daughter of Henry VII. of England, in whose right James VI. of Scotland, her great-grandson, succeeded to that crown on the death of Queen Elizabeth. She procured for her third husband a peerage from her son, James V., under the title of Lord Methven, anno 1528; and, on this occasion, the barony of Methven was dissolved from the Crown, and erected into a lordship, in favour of Henry Stewart and his heirs male, on the Queen's resigning her jointure of the lordship of Stirling. By Lord Methven she had a daughter, who died in infancy, before herself. The queen died at the castle of Methven in 1540, and was buried at Perth, beside the body of James I. Lord Methven afterwards married Janet Stewart, daughter of the Earl of Athole, by whom he had a son, Henry, who married Jean, daughter of Patrick, Lord Ruthven, and was killed at Broughton by a cannon-ball from the castle of Edinburgh, in 1572, leaving a son, Henry, who died without issue, when the lands reverted to the Crown. This third Lord Methven is mentioned on the authority of Stewart's *Genealogical Account of the House of Stewart*. In 1584 the lordship of Methven and Balquhiddy was conferred on Ludowick, Duke of Lennox, in whose illustrious family it continued till it was purchased from the last Duke, in 1664, by Patrick Smythe of Braeo. His great-grandson, David (1746-1806), assumed the title of Lord Methven on his elevation to the bench; and his son, William (b. 1803; suc. 1847), holds 5128 acres in the shire, valued at £6470 per annum. His seat, Methven Castle, on a bold acclivity rising-ground, $1\frac{1}{2}$ mile E of Methven village, is a stately baronial pile of 1680, with extensive modern additions. Not far from the manse, on 19 June 1806, was fought the Battle of Methven, in which a small band, under Robert Bruce, was surprised and scattered by Pembroke, the English regent. BALGOWAN, LYNEDOCHE, and DNOXACH Ilough—the last with the grave of 'Bessie Bell and Mary Gray'—are noticed separately. Five proprietors hold each an annual value of £500 and upwards, 3 of between £100 and £500, 3 of from £50 to £100, and 15 of from £20 to £50. Giving off its detached section to Logiealmond *quoad sacra* parish, but taking in part of Monzie, this parish is in the presbytery of Perth, and the synod of Perth and Stirling; the living is worth £361. Almondbank public, Methven public, and Methven female industrial schools, with respective accommodation for 152, 134, and 119 children, had (1883) an average attendance of 72, 61, and 56, and grants of £69, 4s., £59, 16s., and £41, 16s. Valuation (1860) £12,165, 5s. 2d., (1884) £13,335, 2s. Pop. of civil parish (1801) 2073, (1831) 2714, (1861) 2347, (1871) 2115, (1881) 1910; of ecclesiastical parish (1881) 2041.—*Ord. Sur.*, shs. 48, 47, 1868-69.

Mey, a hamlet in Canisbay parish, Caithness, on the coast road from Thurso to Huma and Wick, 13 miles E by N of Thurso, and 23 NNW of Wick, under which it has a post office. Mey Head, a small promontory on the coast, terminating 2 miles SW of Stroma island, was the site of the ancient chapel of Mey; and, in consequence of that chapel having been dedicated to St John, is sometimes called St John's Point. The Men of Mey are jagged rocky islets, in a dangerous sweep of sea, immediately off Mey Head, and lie submerged at full and half tide. The shallow Loch of Mey ($4 \times 2\frac{1}{2}$ furl.; 43 feet) lies on the mutual border of Dunnet and Canisbay parishes.—*Ord. Sur.*, shs. 116, 117, 1878-84.

Meyrick. See MERRICK.

Mhorgay, a small island of North Uist parish, Outer Hebrides, Inverness-shire. Pop. (1871) 8, (1881) 6.

Miavaig, a hamlet in Harris parish, Outer Hebrides, Inverness-shire, on the N coast of West Loch Tarbert, 32 miles SW by S of Stornoway, under which it has a post office, with money order and savings' bank departments.

Midbrake, an estate, with a modern mansion, in the northern section of Yell island, Shetland, 2 miles from Cullivoe.

Midcalder. See CALDER, MID.

Mid Clyth, a hamlet in Latheron parish, Caithness, near the coast, 3½ miles NE of Lybster. It has a post office under Wick.

Middlebie, a parish of SE Dumfriesshire, at its southern boundary containing KIRTLÉ-BRIDGE village, with a station on the Caledonian railway, 5½ miles NNE of Annan, 16¾ NW of Carlisle, and 3¼ ESE of Ecclefechan, under which it has a post and telegraph office. Containing also EAGLESFIELD and Waterbeck villages, 7 furlongs and 3 miles NNE of Kirtle-Brigge station, and each with a post office under Ecclefechan, it comprises the ancient parishes of Middlebie, Pennersa, and Carruthers, united in 1609; was the seat of a presbytery from a period some time after the Reformation till 1743; and took its name, signifying the 'middle dwelling,' or 'middle station,' from a Roman camp, 5 furlongs SSE of the parish church, and midway between Netherbie in Cumberland and Overbie in Eskdalemuir, each about 10 miles distant. It is bounded NW by Tundergarth, E by Langholm and Canonbie, S by Half-Morton, Kirkpatrick-Fleming, and Annan, and W by Hoddam. Its utmost length, from E to W, is 7½ miles; its breadth, from N to S, varies between 7 furlongs and 5¾ miles; and its area is 17,592 acres, of which 46¾ are water. Formed by two head-streams at an altitude of 570 feet, KIRTLÉ WATER flows 2¼ miles southward through the interior, and then winds 5½ miles south-south-westward along the Kirkpatrick-Fleming boundary; whilst MEIN WATER, rising at an altitude of 780 feet, meanders 7 miles south-south-westward till it passes off into Hoddam on its way to join the Annan. Several burns, also rising on the northern border, run to either Kirtle or Mein Water; and Woodside or All-for-nought Burn, which traces the Half-Morton boundary, is one of the head-streams of the river SARK. Along Mein Water the surface declines to a little below 100, along Kirtle Water to a little below 200, feet above sea-level; and thence it rises, first gently, then more steeply, to 320 feet at the parish church, 809 at Howats Hill, 904 at Risp Hill, 1029 at Muckle Snab, and 1412 at Haggy Hill, whose summit, however, is 300 yards beyond the NE corner of Middlebie. The land thus, along the S and SW, is low and undulating; in the centre has considerable rising-grounds; and along the N and E is wild and hilly, terminating in lofty watersheds with Tundergarth and Langholm, and forming a transition tract between the agricultural valley of Lower Annandale and the pastoral heights of Upper Eskdale. The rocks include sandstone and great abundance of limestone, and were long supposed to include coal. The soil of the lower grounds is mostly clayey, but partly loamy or gravelly, and partly of many kinds in close proximity to one another; that of the higher grounds is chiefly of qualities best adapted for sheep pasture. Less than one-fourth of the entire area is in tillage; about 280 acres are under wood; and the rest of the land is either pastoral or waste. The Roman camp, which has given name to the parish, is at Birrens, 3 miles SE of the famous Roman station on BRUNSWAER Hill; and it has left distinct remains of its fosse, aggeres, and pretorium. In the Edinburgh Antiquarian Museum are five Roman altars, a sculptured figure of the goddess Brigantia, and three other Roman relics, found at Birrens; as well as three circular mediæval silver brooches, discovered in 1849 in the ruins of the old church of Middlebie. Several peel-houses stood within the parish; and one of them, Blacket House, still stands, in a ruinous condition, with the date 1404 and the initials W[illiam] B[ell] above its outer doorway. Families of the name of Bell long predominated

in the population of the parish, inasmuch that the 'Bells of Middlebie' was a current phrase throughout Dumfriesshire, and one of the Bells of Blacket House figured in the tragical story of 'Fair Helen of Kirkconnel Lee,' noticed in our article on Kirkconnel. Burns's biographer, James Currie, M.D. (1756-1805), of Liverpool, received the rudiments of education at the parish school of Middlebie. Seven proprietors hold each an annual value of £500 and upwards, 13 of between £100 and £500, 4 of from £50 to £100, and 7 of from £20 to £50. Middlebie is in the presbytery of Annan and the synod of Dumfries; the living is worth £283. The parish church, 1¼ mile NNW of Kirtle-Brigge station and 1¼ NE of Ecclefechan, was built in 1821, and contains 700 sittings. At Waterbeck is a U.P. church (1792; 490 sittings); and Hottisbridge public, Middlebie public, Waterbeck female public, and Eaglesfield General Assembly's schools, with respective accommodation for 64, 63, 71, and 155 children, had (1883) an average attendance of 50, 37, 26, and 88, and grants of £47, 18s., £44, 9s., £21, 14s., and £67, 7s. Valuation (1860) £10,947, (1884) £15,258, 19s. 7d. Pop. (1801) 1507, (1841) 2150, (1861) 2004, (1871) 2000, (1881) 1927.—*Ord. Sur.*, sh. 10, 1864.

Middle-Brigge, a small village in Blair Athole parish, Perthshire, 1½ mile N by E of Blair Athole village.

Middledean, a hamlet in Dunfermline parish, Fife, 1¼ mile N by W of Inverkeithing.

Middleton, a small village in Orwell parish, Kinross-shire, 1½ mile N by E of Milnathort.

Middleton, Kincairdineshire. See FETERCAIRN.

Middleton Hall, a mansion of 1707 in Uphall parish, Linlithgowshire, near the right bank of the Brox Burn, ¼ mile SSE of Uphall village.

Middleton House, a mansion in Borthwick parish, Edinburghshire, 3¼ miles SE by S of Gorebridge. Standing 770 feet above sea-level, in a well-wooded park of 100 acres, it comprises a square central block of 1710, with later projecting wings, and fine gardens. The estate, which was bought by his father in 1842, is held now by William Ritchie, Esq. (b. 1842; suc. 1856), owner of 2652 acres, of £3137 value per annum. Middleton Inn, a dwelling-house now, on the old road from Edinburgh to Galashiels, 1¼ mile E by S of Middleton House, was formerly a somewhat important coach-stage—the occasional meeting place of Scott and Lord Cockburn. Old Middleton village, 3 furlongs SW of Middleton House, was once a chief seat of the Tinklers or Gipsies.—*Ord. Sur.*, sh. 32, 1857.

Middleton House, a mansion in Kirkden parish, Forfarshire, 1¼ mile SSW of Frickoekheim. Its owner, Thomas Macpherson Bruce-Gardyne, Esq. (b. 1831; suc. 1846), holds 1395 acres in the shire, valued at £2131 per annum.—*Ord. Sur.*, sh. 57, 1868.

Midholm. See MIDDLEM.

Midhope Tower, a well-preserved ancient castle in Abercorn parish, Linlithgowshire, near the left bank of Midhope or Pardovan Burn, 4 miles W of South Queensferry. The residence of the Earls of Linlithgow, it consists of a square turreted tower, with an unsightly addition on its E side; and over the doorway is a coronet, with the initials J. [Livingstone].—*Ord. Sur.*, sh. 32, 1857.

Midlem or Midholm, a village in Bowden parish, Roxburghshire, 4½ miles E by S of Selkirk. It has an Original Secession church with 100 sittings, and a public school.

Midlock Water, a burn of Crawford parish, Lanarkshire, rising, at an altitude of 1480 feet, close to the Peebleshire boundary, and running 5½ miles west-north-westward, till, after a total descent of 600 feet, it falls into the Clyde, opposite Crawford village.—*Ord. Sur.*, shs. 16, 15, 1864.

Midlothian. See EDINBURGHSHIRE and LOTHIAN.

Midmar, a parish of S Aberdeenshire, whose church stands 615 feet above sea-level, 5 miles S by E of Monymusk station, 3 W by N of Echt, and 15 W of Aberdeen, under which there is a post office of Midmar. It is bounded N by Cluney, E and SE by Echt, S by Banchoory-Ternan, and W by Kincairdine O'Neil and Cluney (de-

tached). Its utmost length, from E to W, is $7\frac{1}{2}$ miles; its utmost breadth is $4\frac{1}{2}$ miles; and its area is 10,872 $\frac{1}{2}$ acres, of which $4\frac{1}{2}$ are water. Streams there are none of any size; but the drainage is carried partly to the Dee and partly to the Don. In the SE the surface declines to 303, in the N to 333, feet above sea-level; and thence it rises to 1607 at Green Hill on the Cluny boundary in the NW, to 773 a little way N of the church, and to 1832 at Craighour near the southern boundary, this last being one of the summits of the broad-based Hill of FARE, whose highest point (1545 feet) is just 3 furlongs beyond the SW corner of the parish. Granite and trap are the predominant rocks, the former of beautiful texture and capable of taking a fine polish. The soil on the slopes of the hills is sandy, loamy, or clayey, in much of the hollows is reclaimed peat-earth. Rather less than one-half of the entire area is in tillage; nearly one-twelfth is under plantation; and the rest is either pastoral or waste. On Sunhoney farm is a large stone circle, quite entire; and a smaller one stands close to the E of the church; whilst near the old church is the 'Coningar,' an entrenched artificial mound 30 feet high. Midmar Castle stands on the N side of the Hill of Fare, 1 mile SSE of the parish church; is said by tradition to have been founded by Sir William Wallace; and seems indeed to date from times comparatively remote. It was inhabited till the middle of the present century, and is the seat of the most extensive estate in the parish; and commands an extensive and very beautiful view to the N and the NE. Dalherrick Muir is said to have been the scene of a battle between Sir William Wallace and the Comyns; and Douglas Burn, which traverses the Muir, is said to have got its name in commemoration of a hero who fell in the battle. William Meston (1658-1745), the burlesque poet, was a native, the son of a Midmar blacksmith. The property is mostly divided between two. Midmar is in the presbytery of Kincardine O'Neil and the synod of Aberdeen; the living is worth £281. The parish church was built in 1787, and contains 428 sittings. Its ancient predecessor was dedicated to St Nidan, a dedication that must have proceeded from a Welsh source. A Free church stands close to the western, a U.P. church to the north-eastern, boundary; and Midmar public school, with accommodation for 173 children, had (1853) an average attendance of 103, and a grant of £96, 5s. 6d. Valuation (1860) £5716, (1884) £7063. Pop. (1801) 803, (1831) 1056, (1851) 1166, (1871) 1127, (1881) 1041.—*Ord. Sur.*, sh. 76, 1874.

Midsannox. See SANNOX.

Migdale Loch, a pretty lake in Creich parish, Sutherland, 1 mile E of Bonar-Bridge. Lying 115 feet above sea-level, it has an utmost length and breadth of $1\frac{1}{2}$ mile and $3\frac{1}{2}$ furlongs; and contains good trout, with great abundance of pike.—*Ord. Sur.*, sh. 102, 1881.

Migvie. See TAKLAND.

Milburn. See MILBURN.

Milesmark, a village on the mutual border of Dunfermline parish and Inverkeithing (detached), Fife, $1\frac{1}{2}$ mile WNW of Dunfermline town. It stands conjoint with Parknook or Blackburn village, and adjoins the Elgin Colliery. Pop. of the two villages (1861) 755, (1871) 668, (1881) 439, of whom 194 were in Inverkeithing.—*Ord. Sur.*, sh. 40, 1867.

Milfield. See MILFIELD.

Milbeugh. See MILLBEUGH.

Milhouse. See MILLHOUSE.

Milk Water of, a rivulet of Annandale, Dumfriesshire, rising in Westerkirk parish, at an altitude of 780 feet, and winding $17\frac{1}{2}$ miles south-south-westward, chiefly along the boundary between Tundergarth on the left, and Hutton, Dryfesdale, and St Mungo on the right, till, after a total descent of 640 feet, it falls into the Annan near Hoddam Castle, $3\frac{1}{2}$ miles WSW of Ecclefechan. It is fed by Corrie Water and a score of lesser burns; in its upper reaches traverses an upland vale, abounding in picturesque close scenes; and in its lower ones shares largely in the mild and gentle beauties of the Howe of Annandale.—*Ord. Sur.*, sh. 10, 1864.

Millarston. See MILLERSTON.

Mill Bay, a bay on the E side of Stronsay island, Orkney. Opening from the ENE, between Grice Ness and Odin Ness, it measures $1\frac{1}{2}$ mile across the entrance; penetrates the land $1\frac{1}{2}$ mile west-south-westward; is separated by an isthmus $\frac{1}{2}$ mile broad from St Catherine's Bay on the W side of the island; makes a demi-semi-circular sweep around its head; is belted with sandy beaches and benty links; and presents a beautiful appearance.

Millbrex, a post-office village in Fyvie parish, Aberdeenshire, $6\frac{1}{2}$ miles NE of Fyvie station. The *quoad sacra* parish of Millbrex is in the presbytery of Turriff and the synod of Aberdeen; the minister's stipend is £120. Its church was built in 1833 and enlarged in 1836, and contains 500 sittings. Pop. (1871) 1484, (1881) 1406, of whom 320 were in Monquhitter parish.—*Ord. Sur.*, sh. 86, 1876.

Milbuie. See ARDMEANACH.

Milburnbank, a hamlet in Colvend parish, Kirkcubrightshire, 8 miles ESE of Dalbeattie.

Milburn House, a mansion in Dalserv parish, Lanarkshire, immediately S of Dalserv village.

Milburn Tower, a mansion, with extensive wooded grounds, in Ratho parish, Edinburghshire, $\frac{1}{2}$ mile NNW of Gogar station and $5\frac{1}{2}$ miles WSW of Edinburgh. A castellated tower, with a long range of lower building attached, it was built by the Right Hon. Sir Robert Liston, G.C.B., who lived here from 1821 to 1836. His grandniece married Sir William Foulis, Bart. of Woodhall; and their son, Sir James Liston Foulis, ninth Bart. since 1634 (b. 1847; suc. 1858), holds 2804 acres in the shire, valued at £2164 per annum.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Millearne House, a handsome modern mansion, with fine grounds, in Trinity-Gask parish, Perthshire, near the left bank of the river Earn, $3\frac{1}{2}$ miles NNW of Auchterarder.—*Ord. Sur.*, sh. 47, 1869.

Millerhill. See NEWTON, Edinburghshire.

Millerston, a village at the mutual border of Shettleston and Springburn parishes, Lanarkshire, near the Caledonian railway, $3\frac{1}{2}$ miles ENE of Glasgow. It stands, conjoint with Hogganfield village, on the NW shore of Hogganfield Loch; and has a post office under Glasgow, a chapel of ease, and a Free church. Pop. of Millerston and Hogganfield (1861) 532, (1871) 633, (1881) 625, of whom 75 were in Springburn.—*Ord. Sur.*, sh. 31, 1867.

Milfield, a mansion in Polmont parish, Stirlingshire, $\frac{1}{2}$ mile SW of the village.

Milguy. See MILNGAVIE.

Milhead or Milnead, an estate, with a mansion, in Kirkmahoe parish, Dumfriesshire, 4 miles N of Dumfries.

Milbeugh, a mansion in Blantyre parish, Lanarkshire, on the left bank of the Rotten Calder, $\frac{1}{2}$ mile N by W of High Blantyre.

Milhouse, a hamlet in Kilfinan parish, Argyllshire, 3 miles SSW of Tighnabraich. It has a post office under Greenock.

Miliken, a mansion in Kilbarchan parish, Renfrewshire, $1\frac{1}{2}$ mile WNW of Johnstone. Built in 1829, it is a handsome edifice in the Grecian style, with extensive and beautiful grounds. The estate, which formed part of the ancient barony of Johnstone, belonging to a branch of the Houston family, was purchased in 1733 by James Milliken, Esq., whose daughter and heiress married Gen. William Napier, a lineal descendant of the inventor of logarithms; and their great-grandson, Sir Robert John Milliken-Napier, ninth Bart. since 1627 (b. 1818; suc. 1852), holds 1280 acres in the shire, valued at £4386 per annum.—*Ord. Sur.*, sh. 30, 1866.

Milikenpark, a village, with a railway station, at the mutual border of Kilbarchan and Abbey-Paisley parishes, Renfrewshire, on Black Cart Water and the Glasgow and South-Western railway, $1\frac{1}{2}$ mile WSW of Johnstone station, and $4\frac{1}{2}$ W by S of Paisley.

Mill Loch. See LOCHMAEEN.

Millnain, a village in Fodderty parish, SE Ross-shire, 3 miles W by N of Dingwall.

Mill-of-Conveth. See LAURENCEKILK.

Millport, a watering-place on the island of Big CUMBRAE, Buteshire. It stretches round a pleasantly sheltered crescent-shaped bay at the S end of the island, and partly overlooks the Little Cumbrae, partly commands the opening through Fairlie Roads to the Bay of Arr, on the E side of the Firth of Clyde. By water it is 2½ miles NW of the nearest point of the Ayrshire coast, 5½ SSW of Largs, 13 SE of Rothesay, and 24 SSW of Greenock. Built in a crescent following the curve of the bay, and ascending the low heights, the town consists chiefly of neat two-storied whitewashed houses, among which are numerous excellent shops, and some ornamental public buildings. Were the environs only a little less bare of trees, Millport would be one of the prettiest spots on the Clyde. As it is, it commands a lovely panorama over the Clyde and the adjacent shores of Buteshire, Ayrshire, and Argyllshire; while its sheltered bay and beach help to make it one of the favourite West Coast watering-places.

In the middle of the curve, fronting the shore, is the Garrison, the beautiful marine pavilion of the Earl of Glasgow, who owns two-thirds of the entire island, the remainder belonging to the Marquis of Bute. The parish church, a handsome building surmounted by a low square tower, is situated on the rising ground behind the town. Built in 1837, it has upwards of 750 sittings. There are Free, U.P., and Baptist churches, and a Scottish Episcopal church, St Andrew's (1848). But the finest and most conspicuous edifice in Millport is the Episcopal Cathedral and College, founded and endowed by the Earl of Glasgow. The cathedral, dedicated to the Holy Spirit, was built in 1849-51 from plans by Butterfield; and in 1876 it was declared the Cathedral of Argyll and the Isles. In the Gothic style of the 13th century, it consists of a nave and chancel, divided by an open stone screen, and has an organ, good stained glass, 150 sittings, a graceful spire, three bells, etc. Immediately adjoining, and built of the same light-coloured freestone of the island, are a chapter-house and college. The whole range of buildings is situated in beautifully laid-out grounds. According to *The Scottish Church and University Almanac* for 1884, 'The chief objects for which this church and college are founded are: to place at the bishop's disposal a certain number of clergy who shall minister in places where a resident pastor cannot be supported; to afford a retreat to a small number of aged and infirm clergymen; to afford education and maintenance to two or three students of divinity; and to assist in their studies a certain number of young men before and during their university course, and to such as desire to read in the college in preparation for holy orders.'

Millport has a post office, with money order, savings' bank, and telegraph departments, a branch of the Union Bank, 5 insurance agencies, a public hall (1872), a town-hall (1879), a public library, a reading-room, a gas company, a harbour company, 5 hotels, including 3 temperance hotels, public and Episcopalian schools, an academy, and various other institutions. The harbour is a creek under Greenock, and is of small capacity. The stone pier, built chiefly at the expense of the Marquis of Bute, stands in 6 feet water at ebb, and 14 feet water at flood, tide. It has been largely superseded by an iron pier, built in 1871-72 by the Earl of Glasgow, on piles driven 5 or 6 feet into the ground. This pier is 275 feet long by 18 broad, and has a T-shaped head 80 feet by 25. Close by is good anchorage, fully protected by two small rocky islets known as the Allans. Steamer communication is maintained regularly with Wemyss Bay and Largs all the year round, and with other places on the Clyde less regularly, and chiefly in summer. The prosperity of the town depends chiefly on the summer visitors, several thousand of whom visit it annually during the season. Some of the inhabitants carry on fishing and a few minor industries. Millport, ranking as a

police burgh since 1864, is governed by a senior and 2 junior magistrates and 6 police commissioners. Sheriff small debt courts are held in the town in March and September. The municipal constituency numbered 720 in 1884, when the annual value of real property was £14,616, whilst the revenue including assessments, amounts to £659. Pop. (1839) 932, (1861) 1104, (1871) 1523, (1881) 1749, of whom 758 were males. Houses (1881) occupied 344, vacant 67, building 5.—*Ord. Sur.*, sh. 21, 1870.

Millseat, a hamlet in King Edward parish, Aberdeenshire, 6 miles NE of Turriff. It has a Congregational chapel built in 1831, and containing 210 sittings.

Milltimber, a station in Peterculter parish, Aberdeenshire, on the Deeside railway, 6½ miles WSW of Aberdeen.

Milntown. See MILTON.

Milnathort, a little market town in Orwell parish, Kinross-shire, lying 400 feet above sea-level, near the left bank of North Queich Water, and within 1 mile of the NW corner of Loch Leven. Its station on the North British railway is 1½ mile N by E of Kinnross station, and 13½ miles WSW of Ladybank Junction. It stands amid a fine tract of country, screened by the Lomond Hills on the E, and by the Ochils on the N and W; and comprises fine well-built streets, which are lighted with gas from the Kinross and Milnathort gas-works (1835). There are a post office, with money order, savings' bank, and telegraph departments, a branch of the Clydesdale Bank, 3 hotels, a town-hall, 2 schools, a library (1797), etc. A handsome bridge across the Queich was built about 1850, in place of a crazy, shabby, old structure. Orwell parish church, on a neighbouring eminence, was built in 1729, and completely renovated a few years ago, being now all that can be desired as regards accommodation and comfort. It has two large and very handsome stained-glass windows. There are also a Free church and a U.P. church, the latter of which, erected in 1869 at a cost of £3000, is a fine Gothic building with 700 sittings and a spire 125 feet high. The poet Walter Chalmers Smith, D.D., LL.D., was Free Church minister from 1853 till 1858. Wednesday is market-day; and four old cattle fairs have been superseded by weekly and monthly live-stock sales, which are largely attended, as the only sale of the kind in the county. Cotton-weaving was long carried on, but went into decline; but the manufacture of tartan shawls and plaids, introduced in 1838, has always continued to prosper, and was extended about 1867 by the erection of a large factory. Pop. (1801) 959, (1831) 1772, (1861) 1476, (1871) 1312, (1881) 1269, of whom 733 were females. Houses (1881) 344 inhabited, 25 vacant, 2 building.—*Ord. Sur.*, sh. 40, 1867.

Milnearn. See MILLEARNE.

Milnefield. See MYLNEFIELD.

Milne-Graden, a modern mansion, with extensive grounds, in Coldstream parish, Berwickshire, on the left bank of the river Tweed, 3½ miles NNE of Coldstream town. Anciently held by the Gradens, and afterwards by the Kers, the estate now belongs to David Milne-Home, Esq., LL.D. (b. 1805; suc. 1845), who holds 843 acres in the shire, valued at £1716 per annum.—*Ord. Sur.*, sh. 26, 1864. See PAXTON.

Milngavie (popularly *Milngay*), a small town in the Stirlingshire section of New Kirkpatrick parish. It stands, 190 feet above sea-level, on Allander Water, at the terminus of the Glasgow and Milngavie branch (1863) of the North British railway, by road being 5¼ miles ENE of Dumtocher, 4¼ N by W of Maryhill, and 7 (9½ by rail) NNW of Glasgow. It presents an irregular and somewhat straggling, yet cheerful and prosperous aspect; consists chiefly of plain, two-story houses, many of them whitewashed; contains more respectable shops than are found in most towns of its size; carries on extensive and vigorous industry in a print-work, a paper-mill, two bleach-fields, etc.; and has a post office under Glasgow, with money order, savings' bank, and telegraph departments, an hotel, gas-works, a mechanics' institution, a public library, etc. A. B. Stirling (1811-81), the self-taught naturalist, was a native. An Established

church, built as a chapel of ease about 1840 at a cost of £1500, in 1873 was raised to *quoad sacra* status. There are also a U.P. church (1799; 517 sittings) and St Joseph's Roman Catholic church (1872; 300 sittings). A public and a Roman Catholic school, with respective accommodation for 400 and 102 children, had (1882) an average attendance of 319 and 65, and grants of £290, 7s. 6d. and £51, 18s. Milngavie is a police burgh under the General Police and Improvement Act (Scot.) of 1862. Its municipal constituency numbered 436 in 1884, when the annual value of real property was £6804, and the revenue (including assessments) amounted to £394. Pop. of town (1831) 1162, (1861) 1895, (1871) 2044, (1881) 2636, in 518 houses; of *quoad sacra* parish (1881) 2927, of whom 167 were in Dumbartonshire.—*Ord. Sur.*, sh. 30, 1866.

Milnhead. See MILLHEAD.

Milnholm Cross. See CASTLETON, Roxburghshire.

Milntown or Milton of New Tarbat, a village in Kilnair-Easter parish, NE Ross-shire, 3 furlongs SSE of Killyard or Parkhill station. It has fairs on the first Tuesday of January, the second Tuesday of March, the second Tuesday of May, and the last Tuesday of October, all old style.—*Ord. Sur.*, sh. 94, 1878.

Milrig, an estate, with a manor, in Riccarton parish, Ayrshire, 2½ miles S of Galston. Its owner, John Sprot Tait, Esq. (b. 1843; suc. 1881), holds 183 acres in the shire, valued at £266 per annum.—*Ord. Sur.*, sh. 22, 1865.

Milton, a village in Old Kilpatrick parish, Dumbartonshire, adjacent to the SE side of Duntocher. It has a large cotton-factory, built in 1821 on the site of the Dalnotter iron-works; and it shares generally in the business of Duntocher. Pop. (1861) 366, (1871) 420, (1881) 499.

Milton, a village, with print-works, in Old Kilpatrick parish, Dumbartonshire, at the E base of Dumbuck Hill, 2 miles E by S of Dumbarton.

Milton or Milton of Campsie, a village in Campsie parish, S Stirlingshire, on the banks of the Glazert, with a station on the Campsie and Blane Valley section of the North British railway, 1½ mile N of Kirkintilloch, 2 miles ESE of Lennoxton, and 9½ NNE of Glasgow. It is in the near vicinity of two print-works, Kincaid (1785) and Lillyburn (1831); shares in the industry of a populous and productive district; and has a post office under Glasgow, with money order, savings' bank, and telegraph departments. Pop. (1861) 562, (1871) 714, (1881) 555.—*Ord. Sur.*, sh. 31, 1867.

Milton, a fishing village in St Cyrus parish, Kincardineshire, 1½ mile SW of Johnshaven. It once was a place of some importance, but since about 1790 has suffered much injury from encroachment of the sea and other causes, and now is both small and ruinous. A strong chalybeate spring in its vicinity enjoyed, for some time, considerable medicinal repute.

Milton, a hamlet in Fowllis-Wester parish, Perthshire, 3 miles ENE of Crieff.

Milton, a village in Urr parish, Kirkcudbrightshire, 7 miles N by E of Dalbeattie. Milton Loch, 3 furlongs WNW, lies at an altitude of 420 feet; is ¾ mile long, and varies in breadth between 1½ and 3¼ furlongs; abounds with pike and perch; and sends off a streamlet southward into confluence with Kirkgunzeon or Dalbeattie Burn.—*Ord. Sur.*, sh. 9, 1863.

Milton, an estate, with a hamlet, in Carmyllie parish, Forfarshire, 6 miles W by N of Arbroath. It forms part of a district which was disjoined from St Vigeans in 1606.

Milton-Bridge, a hamlet in Glencorse parish, Edinburghshire, 2 miles NNE of Penicuik. It has a post office, with money order and savings' bank departments.

Milton-Bridge. See MILTON-LOCKHART.

Milton-Brodie, a quadrangular mansion, sheltered by tall trees, in Alves parish, NW Elginshire, 1½ mile NE of Kinloss station and 5½ miles SSW of Burchhead. Its owner, the Rev. John Brodie-Innes (b. 1816; suc. 1861), holds 1237 acres in the shire, valued at £1755 per annum.—*Ord. Sur.*, sh. 95, 1876.

Milton-Lockhart, a mansion in Carluke parish, Lan-

arkshire, near the right bank of the winding river Clyde, 3 miles WSW of Carluke town. A modern edifice, in the old Scottish Baronial style, after designs by W. Burn, it has grounds of singular beauty, backed by deep ravines and wooded hills. The estate, which belonged to the Whitefords in the 16th and 17th centuries, is held now by Major-Gen. David Blair Lockhart (b. 1829; suc. 1876), owner of 1059 acres in the shire, valued at £2582 per annum. Milton Bridge, over the Clyde, is a three-arch structure, on the model of the old bridge of Bothwell, and was erected early in the present century.—*Ord. Sur.*, sh. 23, 1865.

Milton, New, a hamlet in Glencorse parish, Edinburghshire, 1½ mile NNE of Auchendyning station.

Milton of Balgonie. See BALGONIE.

Milton of Dumpace. See DUMPACE.

Milton, Whins of, a village in St Ninians parish, Stirlingshire, 2 miles S of Stirling. Pop. (1871) 481, (1881) 487.

Minard Castle, a mansion, with picturesque grounds, in Kilmichael-Glassary parish, Argyllshire, on the W side of Loch Fyne, 8 miles NE of Lochgubhphead and 13½ SSW of Inveraray. There are a post office of Minard, with money order, savings' bank, and telegraph departments, a Free church, and a large and elegant public school, erected in 1871 by the late proprietor, John Pender, Esq., M.P. The estate—5285 acres, of £1475 annual value—now is owned by Thomas Lloyd, Esq. (b. 1835).—*Ord. Sur.*, sh. 37, 1876.

Minch or North Minch, the belt of sea between the mainland of Scotland and the northern portion of the Outer Hebrides. Extending in a north-north-easterly direction, and forming a continuation of the Little Minch outward to the North Sea, it connects at the SE corner with the channels between the mainland and Skye; has a width of from 23 to 45 miles; and is flanked, on all the E side, by the mainland parts of Ross-shire and Sutherland, on all the W side by Lewis island, inclusive of the northern part of Harris. Its name signifies 'the stormy sea;' its currents are regular and very rapid; its depths are mostly great, and generally so variable as to indicate a very rugged bottom; and its water is exceedingly salt.

Minch, Little, the belt of sea between Skye island and the middle portion of the Outer Hebrides. It opens from the expanse of the Atlantic between the mainland of Scotland and the southern portion of the Outer Hebrides; extends north-north-eastward into junction with the Minch; has a breadth of from 14 to 20 miles; and is flanked, on the W side, by Benbecula, North Uist, and the southern part of Harris.

Minchmoor, a broad-based, heather-clad mountain on the mutual border of Traquair parish, Peeblesshire, and Kirkhope parish, Selkirkshire, 2 miles SE of Traquair village. It rises to a height of 1856 feet above sea-level, and forms part of the watershed between the Tweed and the Yarrow. By the wild old road across it, from Selkirk to Peebles—long traversed by the mail—Montrose's cavaliers fled helter-skelter from Philiphaugh; and near the top, on the Tweed side, is the famous Cheese Well, where every passer-by of old was wont to drop in bits of his provisions as votive offerings to the fairies who made this their favourite haunt. The view from the top and its many associations form the theme of the late Dr John Brown's delightful *Minchmoor* (Edinb. 1864).—*Ord. Sur.*, sh. 24, 1864.

Mindork Castle. See KIRKOWAN.

Mingala, an island of Barra parish, Outer Hebrides, Invernesshire, ¾ mile NNW of Bernera, 1½ mile SSW of Pabba, and 9 miles SSW of the nearest point of Barra island. It extends 2½ miles north-north-eastward; measures 1½ mile in extreme breadth; rises, along the W side, in almost mural cliffs, the retreat of innumerable sea-fowl, to an altitude of 900 feet above sea-level; and is mostly pastoral, but contains some arable land. Pop. (1861) 139, (1871) 141, (1881) 150, of whom 146 were Gaelic-speaking.

Mingary Castle, an ancient fortalice in Ardnarnachan parish, Argyllshire, on the S shore of the Ardnachan

murchan peninsula, at the mouth of Loch Sunart, looking along the Sound of Mull, and confronting the north-western extremity of Mull Island, 6 miles N by W of Tobermory and 20 WSW of Salen. Crowning a scarp rock, which rises 24 feet murally from the sea, it measures more than 200 feet in circumference; and has an irregular hexagonal outline, adapted to the configuration of the ground, being broadest on the landward side, where it is defended by a dry ditch. Its high, strong, battlemented, outer wall is seemingly of ancient construction, little fitted to resist artillery; but a three-story house and some offices are said to have been erected so late as the beginning of last century. Anciently the seat of the MacIans, a clan of Macdonalds, descended from an early Lord of the Isles, it twice was occupied by James IV.—first in 1493, when he issued a charter hence; next in 1495, when he received the submission of the chieftains of the Isles. It was, partly at least, demolished, in 1517, by the Knight of Lochalsh; sustained a siege, in 1588, by the Macleans, but was relieved by a Government force; and was captured, in 1644, by Colkito, who made it the prison of a small body of Covenanters, including three ministers. Now, though strictly a ruin, it is still in a state of tolerable preservation.

Minginish. See BRACADALE.

Minishant, a hamlet in Maybole parish, Ayrshire, 3½ miles NNE of Maybole town, under which it has a post office.

Minnick Water, a rivulet of Sanquhar parish, Dumfriesshire, rising at an altitude of 1740 feet, on the north-western slope of Lowther Hill, close to the Lanarkshire boundary, and 9 furlongs SSE of Wanlockhead. Thence it runs 6½ miles west-south-westward, receiving in its progress three tributaries, each nearly equal to itself in volume, and falls into the Nith, just below Minnock-Bridge village, 2 miles SE of Sanquhar. Some wildly romantic spots, interesting both for their own scenery and for association with traditions of the Covenanters, are on its banks; and a road goes up all its vale to Wanlockhead, leading thence to Leadhills and Upper Strathclyde.—*Ordn. Sur.*, sh. 15, 1864.

Minnick, Water of. See MINNOCH.

Minnichieve. See MONAIVE.

Minnigaff (Gael. *monadh-dubh*, 'dark mountainous region'), a hamlet and a parish in the extreme W of Kirkcudbrightshire. The hamlet stands on a low piece of ground at the influx of Penkill Burn to the Cree, ¾ mile N of the post-town, Newton-Stewart. Before that town had come into existence this was a place of some importance, for Symson describes it in 1684 as having 'a very considerable market every Saturday, frequented by the moonmen of Carrick, Monnygaffe, and other moor places, who buy there great quantities of meal and malt.'

The parish, containing also BLACKCRAIG village and the CREEBRIDGE suburb of Newton-Stewart, is bounded NW and N by Barr in Ayrshire, NE by Carsphairn and Kells, SE by Girthon and Kirkmabreck, and SW by Penninghame in Wigtownshire. Its utmost length, from N to S, is 16½ miles; its utmost breadth, from E to W, is 13½ miles; and its area is 139½ square miles or 89,451½ acres, of which 1312 are water. Issuing from Loch Moan (6½ × 3 furl.; 675 feet), the CREE winds 30½ miles south-westward and south-south-eastward along the Ayrshire and Wigtownshire border to within 2½ miles of the head of Wigtown Bay. During this course it is joined by the Water of MINNOCH, entering from Ayrshire, and running 10¼ miles southward; Penkill Burn, rising at an altitude of 1970 feet, and running 8½ miles south-south-westward; and Palnure Burn, rising at an altitude of 612 feet, and running 11½ miles south-south-westward (for the last 1½ mile along the Kirkmabreck boundary). The Water of TROOL flows 1½ mile west-south-westward from wooded Loch Trool (1½ mile × 1½ furl.; 250 feet) to the Water of Minnoch; and the DEE, issuing from lone Loch Dee (7 × 4 furl.; 750 feet), runs first ¼ mile north-eastward through the interior, then 6½ miles east-south-eastward along the boundary with Kells. Lakes, other than

those already noticed, are Loch GRENSNOCH (2 miles × 3 furl.; 680 feet) at the Girthon boundary, Loch ENOCH (6½ × 4½ furl.; 1650 feet) at the Ayrshire boundary, the three Lochs of the DUNGEON, Loch Neldriecken, Loch Valley, etc.; and streams and lakes alike afford capital angling. The surface is everywhere hilly or mountainous, chief elevations from S to N being CAIRNSMORE OF FLEET (2331 feet), Larg Hill (2316), Lamachan Hill (2349), Benyellary (2360), MERRICK (2764), and Kirrieroch Hill (2562), of which Merrick is the loftiest summit S of the Grampians. The general landscape is described by Dr A. Geikie as 'one wild expanse of mountain and moorland, roughened with thousands of heaps of glacial detritus, and dotted with lakes enclosed among these rubbish mounds.' Indeed, with the exception of a warm nook of about 6 square miles in the extreme S, and of some narrow strips of carse-land along the principal streams in the W, the whole region is one vast sheep-walk, where 'heath and moss, rocks and stones without end, and jagged hills, with here and there bright verdant patches on their rugged sides, form the chief features of the scenery.' Large part of this wild district at one time formed part of the far-reaching Forest of Buchan—a name preserved in that of Buchan farm, the house of which stands on the N bank of Loch Trool, and which to the shepherds is known as the 'Four Nines,' from its erroneously estimated area of 9999 acres. The prevailing rocks are clay slate and greywacke, of Upper Silurian age, with intrusive masses and boulders of granite; and nowhere in the South of Scotland are the traces of glaciation to be witnessed on a grander scale than in the Merrick uplands. Veins of lead ore, from 2 to 5 feet thick, occur on the estates of Machernore and Kirthroughtree; and at East Blackcraig, on the former property, lead and zinc still are mined, though in much less quantity than formerly. The soil of the low grounds along the Cree and Palnure Burn is mostly a tenacious clay, interspersed with patches of moss; on the other low grounds is dry and gravelly, abounding with stones; and elsewhere is very various. Little more than one-fiftieth of the entire area is in tillage; some 600 acres are under wood; and the rest of the land is pastoral or waste. The chief antiquities are GARLIES Castle, three mote hills, several sepulchral tumuli, a standing stone, and some cairns. In 1306 Robert Bruce, with 300 followers, is said to have routed 1500 English under the Earl of Pembroke near the head of Loch Trool, at whose foot a small party of Covenanters were surprised and slain by a troop of dragoons on a winter Sabbath morning of 1685. Alexander Murray, D.D. (1775-1813), the self-taught Orientalist, was the son of a Minnigaff shepherd; Lieut.-Gen. the Hon. Sir William Stewart, who served in seventeen campaigns under Nelson and Wellington, and died in 1827, resided for several years at Cumloden, and is buried in the churchyard, along with John Mackie, Esq. of Bargaly, and James, his son, both Liberal M.P.'s for the county; and Lieut.-Col. Patrick Stewart, C.B. (1832-65), was born at Cairnsmore. Mansions, all noticed separately, are BARGALY, CAIRNSMORE, CUMLODEN, KIRTHROUGHTREE, and MACHERNORE; and the Earl of Galloway owns more than half of the parish, 4 other proprietors holding each an annual value of £500 and upwards, 2 of between £100 and £500, 3 of from £50 to £100, and 9 of from £20 to £50. Giving off a portion to Bargvennam *quoad sacra* parish, Minnigaff is in the presbytery of Wigtown and the synod of Galloway; the living is worth £351. The parish church, on a lovely spot overlooking Minnigaff hamlet, the town of Newton-Stewart, and the confluence of the Cree and the Water of Minnoch, is a good Gothic edifice of 1836, with tower, organ, three fine memorial stained-glass windows, and 850 sittings. Creebridge and Stronord public schools, with respective accommodation for 116 and 100 children, had (1883) an average attendance of 76 and 65, and grants of £72, 18s. and £69, 15s. 6d. Valuation (1860) £12,097, (1884) £18,174, 5s. 7d. Pop. (1801) 1609, (1831) 1855, (1861) 1804, (1871) 1529, (1881) 1587, of

whom 425 were in Creebridge, and 1384 in the ecclesiastical parish.—*Ord. Surv.*, shs. 4, 8, 1857-63.

Minnishant. See MINNISHANT.

Minnoch, Loch. See KELLS.

Minnoch, Water of, a troutful rivulet of Ayr and Kirkcudbright shires, rising, at an altitude of 1900 feet, on the western slope of Shalloch of Minnoch (2520 feet), and running 1½ miles south-by-westward through Barr and Minnigaff parishes, till, after a total descent of 1850 feet, it falls into the Cree at a point 7¼ miles NNW of Newton-Stewart. Its course, except near the end, lies through a moorish upland country.—*Ord. Surv.*, sh. 8, 1863.

Minnoch Water. See MINNICK.

Minnyhive. See MONIAIVE.

Minsh. See MISCH.

Mintlaw, a village near the western border of Longside parish, Aberdeenshire, ¾ mile E by S of Mintlaw station on the Peterhead branch of the Great North of Scotland railway, this being 9 miles W by N of Peterhead, 4 E by N of Maul Junction, and 3½ N by E of Aberdeen. Founded during the first quarter of the present century, it has a post office, with money order, savings' bank, and railway telegraph departments, a branch of the Aberdeen Town and County Bank, two hotels, two schools, and a market on the second Tuesday in every month. Pop. (1831) 222, (1861) 240, (1871) 413, (1881) 435.—*Ord. Surv.*, sh. 87, 1876.

Minto (Cym. *maen-tal*, 'the high stone'), a village and a parish of Roxburghshire. The village lies 1½ mile N by W of Denholm, the birthplace of the poet Leyden, and 1½ mile E of Hassendean station, on the 'Waverley route' of the North British, this being 4½ miles NNE of the post-town, Hawick. The parish church here, built in 1831 from designs by William Playfair, is a handsome Gothic building, with 360 sittings, a square tower, and an harmonium presented in 1880 by the late Countess of Minto. The manse, 1 mile SSW, was built at the same time as the church, from designs specially prepared to suit the taste of the then holder of the living—Dr Aitken. It is in the Italian or Tuscan villa style.

Minto parish is bounded N by Lilliesleaf, NE by Ancrum, SE by Cavers, and SW by Wilton. Its utmost length, from E to W, is 4½ miles; its utmost breadth is ¾ miles; and its area is 5620½ acres, of which 19½ are water. It embraces a considerable portion of the suppressed parish of Hassendean. The river Teviot flows 4½ miles north-eastward along or close to the Cavers boundary, and from Minto is joined by HASSENDEAN and Grindin Burns. Along the riverside extends a strip of haugh, from 1 to 1½ furlong in breadth, and less than 300 feet above sea-level. It is flanked by a steep bank, behind which the ground slowly rises to the northern boundary. Towards the western extremity of the parish is Hassendean Glen, near the foot of which is a fine petrifying spring. It also contains the spacious and recently enlarged mansion-house of Colonel Dickson of Hassendeanburn and Chatto. Towards the eastern part of the parish there is another dell—Minto Glen—of great and attractive beauty. It is intersected throughout its entire length by well-kept walks, and contains many larch trees of so great a size, that they are only rivalled by those in the Duke of Athole's plantations at Dunkeld. These larches were among the first imported into Scotland. At the head of Minto Glen, an artificial lake was formed in 1735, and upon a bank rising from its margin, Minto House is situated. Opposite the mansion-house stood the old parish church and churchyard; but when the present church was built, the burial-ground was converted into a flower-garden, which is yearly admired by visitors who come from all parts to view the beauties of Minto.

To the W of Minto House rise the Hills of Minto, 'as modest and shapely and smooth as Clytie's shoulders.' They are 905 and 836 feet high, and, owing to their position, are easily seen from almost every point. Minto Crags, which form the chief natural feature of the parish, lie E of the Minto Hills. They are a large mass of trap rock, rising from a fairly level piece of

ground, and attaining a height of 729 feet. The top is most irregular in outline, while the face, overgrown with ivy, grass, and wild-flowers, is formed of shelving projections, one above the other. Huge blocks, detached from the cliffs above, lie scattered along the bottom of the Crags. Clumps of trees grow, both at the top and foot of the cliff, as well as on the face, wherever they can obtain root-hold. 'The view from the Crags is highly diversified and beautiful. The windings of "the silver Teviot," through a pleasing vale, can be traced for many a mile, the prospect on one side being terminated by the fine outline of the Liddesdale hills, along with these on the confines of Dumfriesshire, and in the opposite direction by the smoother and more rounded forms of the Cheviots. Ruberslaw rises immediately in front, with Denholmdean on the right, and the narrow bed of the Kule on the left; while behind, to the N, are distinctly seen the Eildon Hills, the Black Hill, Cowdenknowes, Smailholm Tower, Hume Castle, and the Lammermuirs.' The summit of the Crags is crowned by a ruin, called Fatlips Castle, which is supposed to have been the stronghold of Turnbull of Barnhills, a well-known Border freebooter. A small platform, a little way below the top, is called Barnhill's Bed. It was used, in all probability, as a point of outlook. Sir Walter Scott alludes to it in the following lines from *The Lay of the Last Minstrel*:

'On Minto Crags the moonbeams glint
Where Barnhill hewed his bed of lint;
Who flung his outlawed limbs to rest
Where falcons hang their giddy nest
'Mid cliffs from whence his eagle eye
For many a league his prey could spy;
Cliffs, doubling, on their echoes borne
The terrors of the robber's horn.'

Nearly two-thirds of the parish are in tillage, the other one-third being pasture land. In the E part of Minto are many plantations, the property of the Earl of Minto. Near the Teviot the soil is light loam; towards the N it is clay. The Crags are formed of eruptive rocks, and in Hassendean Glen is coarse red sandstone conglomerate. The North British railway traverses the parish for 3½ miles, and has a station at Hassendean.

The chief landowners are the Earl of Minto, to whom belong two-thirds of the parish; the Duke of Buccleuch, Heron Maxwell of Teviotbank, and Colonel Dickson of Hassendeanburn. The principal residences are Minto House, Teviotbank, and Hassendeanburn. The first of these is the seat of Lord Minto, to whom this property gives the title of Baron and Earl in the peerage of the United Kingdom. Some time before his elevation to the bench as Lord Minto in 1705, Gilbert or 'Gibbie' Elliot (1651-1718), a grandson of Gilbert Elliot of Strons, purchased the Minto estate. He had been created a baronet in 1700. The second Sir Gilbert (1693-1766), lord justice-clerk, was an accomplished Italian scholar, and formed a large library at Minto House. The third Sir Gilbert (1722-77) sat as member of Parliament, first for Selkirkshire and then for Roxburghshire. He was a poet of some merit; and his sister, Jean Elliot (1727-1805), was author of that immortal lyric, *The Flowers of the Forest*. The fourth Sir Gilbert (1751-1814) held several political and diplomatic posts, and, on account of his services, was raised to the peerage as Baron Minto in 1797, and as Earl of Minto and Viscount Melgund in 1813. William-Hugh Elliot-Murray-Kynynmound, present and third Earl (b. 1814; suc. 1859), from 1857-59 acted as Chairman of the General Board of Lunacy for Scotland, and in 1870 was created a Knight of the Thistle. His countess, Emma-Eleanor-Elizabeth Hislop (1824-82), was author of *Memoirs of the Right Hon. Hugh Elliot*; *Life and Letters of Sir Gilbert Elliot, first Earl of Minto*; *Lord Minto in India*; *Border Sketches*, &c. The Earl owns 16,041 acres, valued at £15,857, 1s. per annum, viz., 8633 acres in Roxburghshire (£6884, 4s.), 1032 in Selkirkshire (£264, 6s.), 2930 in Fife (£5400, 10s.), and 3446 in Forfarshire (£3308, 2s.). See LOGGELLY and MELGUND.

Minto House, ½ mile NE of the village, is a handsome

four-storied building, erected in 1814 from designs by Archibald Elliot, Esq., architect. It contains a valuable library and an interesting museum. One of its chief attractions is the beauty of its site; another, the wide and magnificent view which it commands, especially from its upper windows.

The earliest notices of the barony of Minto occur in the 14th century, at which time it was in the possession of the ancient and powerful family of the Turnbulls. It passed from them to the Stewarts, and at length was sold to Sir Gilbert Elliot, the great ancestor of the present family of Minto. A curious circumstance regarding the church of Minto is, that in 1374 it belonged to the diocese of Lincoln. Minto is in the presbytery of Jedburgh and synod of Merse and Teviotdale; the living is worth £469. The public school, with accommodation for 69 children, had (1883) an average attendance of 29, and a grant of £17, 7s. Valuation (1864) £4667, 13s. 8d., (1884) £5716, 5s. 11d. Pop. (1801) 477, (1831) 481, (1861) 430, (1871) 431, (1881) 425.—*Ord. Sur.*, sh. 17, 1864.

Mistylaw Hills. See LOCHWINNOCH.

Mitlie, Loch, or Loch a' Mhuilinn, a small lake in Kilmoreak parish, Glenstrathfarrar, NW Inverness-shire, 15 miles WSW of Beauly. An expansion of the river FAIRRAE, it lies at an altitude of 416 feet, has an utmost length and breadth of 7 and 3 furlongs, affords good trout-fishing, and has near its foot a shooting-lodge of Lord Lovat. To an islet in it the old Lord Lovat is said to have retired after the Battle of Culloden, and from a neighbouring mountain to have surveyed the conflagration of his mansion and the houses of his clansmen.—*Ord. Sur.*, shs. 82, 83, 1882-81.

Moan, Loch, a lake on the mutual border of Barr parish, Ayrshire, and Minningaff parish, Kirkcudbrightshire, 7½ miles ENE of Barhill station. Lying 675 feet above sea-level, it has an utmost length and breadth of 6½ and 3 furlongs; is deeply indented in outline and studded with four islets; contains large pike; and sends off the river CREE to the head of Wigtown Bay.—*Ord. Sur.*, sh. 8, 1863.

Mochrum (Gael. *mogh-dhrum*, 'ridge of the plain'), a village and a coast parish in Machers district, SE Wigtownshire. The village, 2 miles NNE of Port-William and 8 SW of Wigtown, is a pleasant little place, with two inns, a post office, the manse and parish church, a good school, and a row of some twenty houses.

The parish, containing also PORT-WILLIAM and ELDRIG villages, is bounded NW by Old Luce, N by Kirkcovan, E by Kirkirner, SE by Glasserton, and SW by Luce Bay. Its utmost length, from NNW to SSE, is 11¼ miles; its utmost breadth is 5½ miles; and its area is 40 square miles or 25,601 acres, of which 863¼ are foreshore and 666¾ water. The coast-line, 9¾ miles long, over the first mile from the Glasserton boundary rises steeply to a height of 100 feet sheer out of the water, but elsewhere is fringed by an old sea-margin of flat smooth gravel, 50 yards broad, with high grassy braes beyond. A number of burns rising in the interior run south-south-westward to Luce Bay; but the drainage is partly carried eastward to the Bladenoch by head-streams of the Water of Malzie. Of eleven lakes and lakelets, mostly in the N and NW, the principal are White Loch (4¾ × 1¾ furl.), ELDRIG Loch (4 × 1 furl.), Mochrum Loch (1½ mile × 3 furl.), and Castle Loch (1½ × ½ mile). The two last, 6½ and 8 miles NNW of Port-William, contain a number of islets, with which, and its wooded headlands, Mochrum Loch has no common beauty. The surface is everywhere hilly, chief elevations from N to S being Craigeach Fell (426 feet), the Doon of May (457), Mochrum Fell (646), Bennan Hill (500), Eldrig Fell (432), Milton Fell (418), and East Bar (450)—heights that command a far-away view to the Isle of Man and the mountains of Ireland and Cumberland. Thus, with but small aggregate of level land, Mochrum comprises large tracts of rocky eminence and mossy swamp, bleak and barren in aspect, and thinly interspersed with patches of good dry arable land. The

predominant rocks are Silurian, and the soil along much of the seaboard is very fertile loam, either light or strong and deep; on the lands towards the centre is thin and stony; and on the higher grounds is moorish. Some 200 acres are under wood; and a large extent of moorland has been brought into cultivation. In 1832 a bone-crushing mill was opened at Eldrig village, and from that date the 'Old Mill of Mochrum' has been quite an institution in the county. The lands of Mochrum were given in 1368 to Thomas Dunbar, second son of Patriek, Earl of March. The Dunbars, his descendants, who took title from Mochrum, and had their seat at the Old Place of Mochrum, were a somewhat distinguished family. Cadets of the house founded the families of Dunbar of Clugston and Dunbar of Baldoon, the latter now represented by the Earl of Selkirk. Gavin Dunbar, son of Sir John Dunbar of Mochrum, became prior of Whithorn about the year 1504, was afterwards made preceptor to James V., and became in 1524 Archbishop of Glasgow, in 1528 Lord-Chancellor of Scotland, and in 1536 one of the Lords of Regency during the king's visit to France. The family was raised to the baronetcy in 1694, and is now represented by Sir William Dunbar, seventh Bart. (b. 1812; suc. 1841), Liberal M.P. for Wigtown 1857-65. Since the close, however, of the 17th century, the Old Place and the estate of Mochrum have been held by the Earls of DUMFRIES and Marquises of Bute. Engirt with ash-trees, and standing near the NE end of Mochrum Loch, the Old Place consists of two square four-story towers, and dates from the last quarter of the 15th century. Since 1873 it has been carefully restored by the present Marquis. On an islet in Castle Loch are remains of an older castle; and the ruins of Myrtoun Castle, the seat of the M'ullochs, crown a note-hill near the shore of the White Loch. Other antiquities are a large double-dyked fort on Barsalloch Brae, the Mote of Boghouse near Mochrum village, the Carlin Stone near Eldrig Loch, a vitrified fort on the Doon of May, remains of Chapel Finian (by the country people called 'Chipper-Finnan' or 'the Well of Finnan') on the shore 5½ miles NW of Port-William, Cairn Buy still further NW, etc. MONREITH, noticed separately, is the principal mansion; and Sir H. E. Maxwell, Bart., M.P., divides most of the parish with the Marquis of Bute, 2 lesser proprietors holding each an annual value of £500 and upwards, 5 of between £100 and £500, 1 of from £50 to £100, and 16 of from £20 to £50. Mochrum is in the presbytery of Wigtown and the synod of Galloway; the living is worth £216. The parish church is a plain edifice of 1794, and, as enlarged in 1832 and 1878, contains 800 sittings. Free and U.P. churches are at Port-William; and four public schools—Culshabbin, Eldrig, Mochrum, and Port-William—with respective accommodation for 60, 80, 119, and 220 children, had (1883) an average attendance of 31, 54, 56, and 122, and grants of £41, 15s., £39, 12s., £40, 12s., and £102, 16s. Valuation (1860) £12,250, (1884) £16,003, 19s. 4d. Pop. (1801) 1113, (1831) 2105, (1861) 2694, (1871) 2450, (1881) 2315.—*Ord. Sur.*, shs. 4, 2, 1857-56.

Mochrum Loch. See KIRKONWALD.

Moffat (Gaelic *moa-rat*, 'a long, deep, mountain hollow,' or Irish *maí-fad*, 'a long plain'), a town in the N of the Annadale district of Dumfriesshire, and a parish, partly in Dumfriesshire and partly in Lanarkshire. The town is situated at the southern base of the Gallow Hill (832 feet)* on the left bank of the river Annan, 2 miles NNW of the point at which Moffat and Evan Waters flow into that river. It is distant 51 miles by road, but 63¾ by rail, SSW of Edinburgh; 54 by road, but 66½ by rail, SE of Glasgow; 21 by road, but 30¾ by rail, NNE of Dumfries; 15½ by road N by W of Lockerbie, and 2 NNE of Beattock station on the main line (1848) of the Caledonian. A railway line, 1½ mile long,

* Prof. George Sinclair of Glasgow, who died in 1696, ascertained the height of this hill by means of the barometer—the earliest instance probably of its application in Great Britain to this purpose.

which was opened in April 1883, connects Moffat with Beattock. The company has a capital of £16,000 in £10 shares. The new line, which is worked by the Caledonian Railway Company, has proved a great boon to Moffat, as it has made it much easier of access than it was when the nearest station was at Beattock. Omnibuses run between the hotels and the mineral well, and a coach goes thrice a week in the season to the famous Grey Mare's Tail and St Mary's Loch.

The town is built upon a gentle slope, which rises slowly northward from 340 to 400 feet above sea-level. The High Street is the chief street, or rather 'place,' being 300 yards long and 50 broad. It is thus described in the *Beauties of Scotland* (1805): 'The street is wide and spacious, handsomely formed and gravelled, exceedingly smooth, clean, and dry in an hour after the heaviest rains, and is a most agreeable walk to the inhabitants, and to the company that comes for goats' whey or the mineral waters.' Since that time the High Street has been modernised by the erection of new, and the remodelling of old, buildings. It contains the principal public edifices, hotels, etc., and at one time, with the closes branching from it, composed the town of Moffat. Of late years, however, owing to the number of people visiting Moffat annually, the building of villas has been greatly encouraged, and several new streets have sprung up. Such are Well Road, Old Well Road, Beechgrove, Havelock Crescent, Academy Road, Hopetoun Place, Ballplay Road, etc. A number of villas have also been erected at the foot of the Gallow Hill.

There are in the town four places of worship belonging to the Established, Free, United Presbyterian, and Episcopal Churches. The parish church, situated in the S part of the town, was built in 1790, and contains 1000 sittings. It is surrounded by fine old trees, and has a handsome spire, surmounted by the 'Flying Spur,' the crest of the Johnstones of Annandale. The Free church, erected in 1843, is a large but unadorned edifice, not far from the parish church. A small spire, added later on, greatly improved its appearance. The U.P. church, in Old Well Road, was erected in 1863, and cost £3000. It is in the Decorated English or Second Pointed style, consists of nave and aisles, and has a lofty tower and spire. From its position it may be seen from almost every point of view. The Episcopal church, situated upon the Kiln Knowes, Millburnside, was built in 1872 at the expense of J. Toulmin Laurence, Esq. of Liverpool, who resided at that time in Craighburn House. It is an iron church, but, in spite of that, is not devoid of style. Its main attraction is a beautiful stained-glass E window, erected to the memory of the Rev. W. B. Mackenzie, who was wont frequently to conduct service in the chapel.

Moffat is well supplied with schools. The Academy arose out of the union (1834) of the parish school with the old grammar school, which was founded by Dr Robert Johnstone (1557-1639), George Heriot's brother-in-law. The building, which may lay claim to some beauty, is situated at the foot of the Gallow Hill. With accommodation for 286 children, it had (1883) an average attendance of 173, and a grant of £165, 18s. 6d. The Academy furnishes a good classical education. Morison's Endowed school, in Well Road, is a simple yet pleasing building. William Morison (1796-1837), a native of Moffat and afterwards a Calcutta merchant, left £2000 to be spent in building and endowing a school, in which, in return for a nominal fee, a substantial English education might be had. It has accommodation for 88 children, an average attendance of 52, and a grant of £26, 19s. Annan Water and Moffat Water public schools, with respective accommodation for 44 and 53 children, had (1883) an average attendance of 40 and 24, and grants of £44, 9s. and £32, 2s. There are also an industrial school and a private school.

For its size Moffat possesses a fair proportion of public buildings. The court-house, at the corner of High Street and Well Street, dates from 1772; but the bell in the turret has inscribed upon it the date 1660, along with

the Johnstone arms and an earl's coronet. Some time ago the ground-floor of the court-house was turned into shops, but the upper rooms are still used by the Town Commissioners for holding courts and discharging other business in. Moffat House, beside the baths, was erected by the second Earl of Hopetoun in 1751. As the third Earl died in 1817 without heirs male, the house passed into the possession of Lady Anne Johnstone, his eldest daughter, and great-grandmother of the present holder of the house and property—Mr Hope Johnstone. (See RAEBHILLS.) It was in Moffat House that Macpherson was residing (1759) when he entered on that literary forgery which made so great a stir in the latter half of the 18th century—the fabrication of the Ossianic epics. A fine public fountain, in the upper part of the High Street, was erected by Mr Colvin of Craighlands in 1875 at a cost of £500. The design is somewhat pastoral. Upon a pedestal of rough-hewn Corneockle red sandstone blocks, 16 feet in height, stands a ram in bronze, designed by the late William Brodie, R.S.A. Round the base are 4 basins of polished granite. Other buildings, which improve the appearance of the town, are the chief hotels and the banks. The baths, on the W side of High Street, beside the Annandale Arms Hotel, were erected in 1827. The front part of the building is taken up with assembly, reading, and billiard rooms, while the rear part contains the baths, which are of various descriptions—vapour, mineral, etc. The entrance to the baths is through a Doric portico. The Beechgrove grounds, laid out in 1870 at a cost of £600, comprise bowling, croquet, and lawn-tennis grounds, with an excellent pavilion. Perhaps the most striking building in Moffat is the Hydro-pathic Establishment, erected in the Renaissance style by Messrs Pilkington & Bell, of Edinburgh, in 1875-77, at a cost of fully £40,000. It is of immense size, comprising a centre and two wings, the former having turrets at either end. There are 5 floors, including the basement, and 300 bedrooms. The dining-hall can accommodate comfortably 300 guests, and the drawing-room, recreation-room, etc., are all on an equally large scale. The baths are of a very perfect description, embracing Turkish, vapour, etc., and the grounds, 25 acres in extent, are beautifully laid out. There are lawns for tennis and croquet, as well as a bowling-green.

Moffat has a head post office, with money order, savings' bank, insurance, and telegraph departments; branches of the Bank of Scotland, the Union Bank, and the British Linen Company's Bank, offices or agencies of 14 insurance companies, 3 chief hotels, numerous lodging-houses of all classes, a subscription library, with over 4000 volumes, and a Saturday newspaper—*The Moffat Times* (1857). During the season concerts, lectures, etc., are given in the Baths Assembly Hall, which is also used for public meetings and by the band of the Upper Annandale Rifle Volunteers. The building which served as the Episcopal chapel before the new chapel was built in 1872 is now used as an Oddfellows' Hall, and there is also a Mechanics' Hall in Well Street. A weekly market is held at Moffat every Friday; a lamb fair is held on the Friday of July after Langholm fair; a fair for sheep and cattle, held on the Friday of September after Falkirk Tryst, is known as the Twp Fair; and hiring fairs are held on the third Friday of March old style, and the Friday after 19 Oct. Shows of sheep, cattle, flowers, etc., are connected with the Twp Fair, and draw many to Moffat owing to the high class of the exhibits. The great annual sale of Cheviot rams, at the Beattock Bridge Hotel, on the day before the Moffat twp fair, may also be mentioned. The shops in Moffat are, as a rule, of a superior class, the shopkeepers being induced to deal in luxuries as well as necessaries to meet the wants of visitors. The wells in the neighbourhood of Moffat are three in number—Garpol Spa, 3 miles SW; Hartfell Spa, 5 miles NNE; and Moffat Well, 1½ mile NNE of the town of Moffat. The first two are separately described. According to the commonly received story, Moffat Well was found in 1633 by Miss Rachel Whiteford, only

daughter of Dr Whiteford, bishop of Brechin, who held a considerable amount of property in the parishes of Moffat and Kirkpatrick-Juxta. But, in a work entitled *Fons Moffatensis, seu Descriptio Topographico-Spagyrica Fontium Mineralium Moffatensium in Annandia*, published in 1659, the author, Matthew Mackale, asserts that the wells were first discovered in 1653 by a 'valedudinary rustic.' The mineral qualities of the well were also noted by Sir Robert Sibbald in 1683; by George Milligan and Andrew Plummer, M.D., professor of medicine, University of Edinburgh, in 1747; by Dr Garnett in 1800; by J. Erskine Gibson in 1827; by Dr Thomas Thomson, of Glasgow, in 1828; by Dr John Macadam, of Glasgow, in 1854; by Mr William Johnstone, of Edinburgh, in 1874; and by others.

The following analysis is that of Dr Murray Thomson, which is among the latest and most trustworthy:—

| | | |
|-------------|---------------------------------|---|
| LOWER WELL. | { | 1.37 cubic inches of sulphuretted hydrogen gas. |
| | | 4.46 " " carbonic acid gas. |
| | | 96.16 grains of solid residue on evaporation. |
| | 4.60 " " carbonate of lime. | |
| | 7.70 " " chloride of calcium. | |
| | 6.41 " " chloride of magnesium. | |
| | 69.90 " " chloride of sodium. | |
| | 2.55 " " silica. | |
| | 5.80 " " organic matter. | |
| | 96.06 | |

Traces also exist of carbonate of iron, alumina, chloride of magnesia, sulphuret of sodium.

| | | |
|-------------|---------------------------------|---|
| UPPER WELL. | { | 0.35 cubic inch of sulphuretted hydrogen gas, |

Traces also exist of oxide of iron and oxide of copper.

The temperature of the Moffat mineral water is very steady, as was proved by experiments made in 1852-53. From these it appeared that the temperature at all seasons of the year, and under all changes of the atmosphere, is 49^o Fahr. With regard to the smell, taste, and appearance of the water opinions vary. One writer describes the smell and taste as resembling 'bilge-water, or the scourgings of a foul gun . . . like sulphureous water of Harrowgate, but not quite so strong.' Another compares them to the smell and taste of a 'slightly putrescent egg.' The taste is almost invariably disagreeable at first, though, it is said, some grow to like it after a time. The appearance is described in one account as 'sparkling beautifully, especially when first taken from the spring;' in another as 'like champagne;' and a third says, 'the water is never decidedly sparkling. It does assume a certain degree of cloudiness from the uniform diffusion through it of very minute gaseous globules.' The Moffat water has been pronounced by doctors a powerful remedy in diseases of the skin, on account of the sulphur and salts held in solution in it. It is also valuable as a means of cure in affections of the lungs, in gravel, rheumatism, dyspepsia, biliousness, etc.

The Moffat Well has enjoyed a growing popularity as is shown by the number of people who visit the town annually 'to drink the waters.' The favourite time for doing so is between seven and nine o'clock in the morning, when the road between the town and the spa is covered with people on foot, in carriages, and omnibuses. It is almost the invariable custom to partake of the water at the well itself, since the gases, with which they are impregnated are of so volatile a nature that even the most careful corking is unable to retain them. The well is situated on the slope of one side of a small valley, down which flows the Well Burn, a small stream, so named from the well beside it. It consists of two springs, an upper and a lower, the latter of which, more strongly impregnated with sulphur and salts, is used for

drinking purposes, while the water of the former, conveyed to the town in pipes, is employed in the mineral baths, recommended in certain cases. The well is covered by a small stone building, near which are the cottage of the keeper, a building in which balls and public breakfasts used to be held, and a wooden erection with a verandah, built for the convenience of visitors. The appearance of the well is thus described by Turnbull in his *History of Moffat*:—'On reaching the well, many circumstances strongly indicate the sulphureous nature of the water. The water itself has the characteristic odour of such waters, while the metal stop-cock attached to the pipe, which delivers the supply, is coated with a black shining sulphuret. . . . The small openings in the rock, from which the water of the upper well issues, are alone visible; those of the lower being built over with a fixed pipe, communicator, and stop-cock, to draw off the water at pleasure. The upper apertures are encrusted with a yellowish-white substance, which, when ignited, yields a blue flame, and has the same smell as burning sulphur.' The water oozes out of a rock of greywacke, containing pyrites. It was thought at one time that the taste of sulphur was so far due to a bog in the neighbourhood, but the fact that the bog has disappeared and the sulphur taste still remains, is sufficient to discredit that theory. The presence of sulphur, in the form of iron pyrites, in the rocks that surrounded the well, as also in that form which the mineral spring flows, is enough to account for the way and the extent to which the water is impregnated.

Moffat became a burgh of barony and regality in 1635. There is still in existence a burgh charter, dated 1662, by which the barony and regality of Moffat, and of the burgh which stood within it, are transferred to James, Earl of Annandale. This charter was ratified by an Act of Parliament in 1669. When the rights of lords of regalities were done away with, some supposed that Moffat ceased to enjoy those rights which, as a burgh, it had possessed. This was a mistake, however, as was shown by the proprietors of the *Moffat Times* and others (1857), and, as a result, the boundaries of the burgh, as well as its common lands, were marked on the Ordnance Map. Moffat adopted the General Police and Improvement Act in 1864, and, under it, is governed by a senior magistrate, 2 junior magistrates, and 6 commissioners. The burgh court sits on the first Saturday of every month, and sheriff small debt courts are held on the first Friday of April, August, and December. Pop. (1841) 1413, (1861) 1463, (1871) 1730, (1881) 2161, of whom 1231 were females. Houses (1881) 471 inhabited, 32 vacant, 11 building.

When Moffat was founded is not known, but it must have been at a somewhat early date, as mention is made of the town in the 11th and 12th centuries. From one notice, it would appear that the present town was preceded by another, called Auldton, but this is doubtful. The town is named, however, in a charter granted by Robert I. (1206-29) to Aadae Barbitonsorie, and in another granted by David II. (1329-71) to Robert Lage. In Dec. 1332, the army of Edward Baliol, who had been crowned King of Scotland about two months before, encamped at Moffat. Baliol remained there for a time, attempting to win over the lords of that district of Annandale. From Moffat he passed with his army to Annan Moor, and was attacked by night, surprised, and defeated by Sir Archibald Douglas, who had gathered 1000 horsemen at Moffat, and had come suddenly down upon his encampment. Many Scottish knights and nobles were slain; Baliol's army was dispersed in all directions; and he himself was compelled to flee to England. The well-known 'Three Stan'in' Stanes' on the Beattock road, 1 mile S by W of Moffat, have been supposed to indicate either the place where the battle took place, or the spot where three officers fell. Both suppositions are improbable, and it is more likely that they are of Druidic origin. In 1448, while William, seventh Earl of Douglas, warden of the West Marches, was absent, the burgh of Dumfries was burned. As a consequence, he convened 'a meeting of the whole lords,

freeholders, and heads of Border families within the Wardency, in order that steps might be taken to prevent a surprise occurring again. One way, proposed and carried out, was that 'balehires' should be killed on suitable hills in Annandale and Nithsdale. The Gallow Hill at Moffat was chosen as one of these hills, as is recorded in the Acts of the Scottish Parliament, vol. i., 'Ane haill sall be brynt on Gallowhill in Moffat Parochin.' In this connection, the war-cry of the inhabitants of Moffat—'Aye ready, aye ready'—may be mentioned.

Moffat again appears in the history of Scotland in the time of the Covenanters. The district round about it is full of memories of that period and of those who lived in it. Claverhouse, afterwards Viscount Dundee, sent a report from Moffat, dated 28 Dec. 1678, to the Earl of Linlithgow, Commander-in-chief of His Majesty's Forces, in which he described that town as among 'the most convenient places for quartering dragoons. . . . whereby the whole country may be kept in awe.' In the mountains and valleys in the neighbourhood of Moffat the Covenanters were accustomed to lie hid, to hold conventicles, and to elude the pursuit of their enemies. In quieter times, and with the growing popularity of the Wells, Moffat made rapid advances. In 1704 it is spoken of as 'a small straggling town' to which people come to drink the waters. The writer, however, goes on to say—'But what sort of people they are, or where they get lodgings, I can't tell, for I did not like their lodgings well enough to go to bed, but got such as I could to refresh me, and so came away.' In 1745 it must have contained better accommodation, as it was then the favourite summer resort of two well-known Edinburgh physicians, who visited it in turn yearly, and, by their presence, attracted many of their patients to the town. The names of these doctors were Dr Sinclair and Dr John Clerk.

In the latter half of the 18th century, however, Moffat became more conspicuous. It was visited by men like John Home, author of the play of *Douglas*; David Hume, philosopher, historian, and agnostic; James Macpherson, the fabricator of Ossian's poems; Dr Alexander Carlyle, of Inveresk; James Boswell, the famous biographer; Joseph Black, the well-known professor of chemistry in Edinburgh University; Dr Blacklock, the blind poet; Hugh Blair, the divine; and many others, whose presence and whose name were sufficient to draw others to the place where they happened to be. An interesting event connected with the visit to Moffat of Home and Macpherson is narrated in the *Account of the Life and Writings of John Home*, by Henry Mackenzie (Edinb. 1822). Mackenzie's work contains a letter of Dr Adam Ferguson, which tells how that Home and Macpherson met at the bowling-green, and soon became intimate. The subject of traditional poetry in the Highlands was discussed, and Macpherson promised to translate some fragments which were in his possession. These, according to the letter, 'were afterwards printed in a pamphlet, and drew that public attention which gave rise to the further proceeding on the subject.' The name of Burns is also connected with the town. He visited it frequently, and in it he wrote the famous song—

'O, Willie brewed a peck o' malt
'And Rab and Allan cam' to see,
Three blither hearts that lee-lang night
Ye wadna find in Christendee.'

And here he composed, in addition to many other poems, &c., the epigram called *An Apology for Scripping Nature*.

Since the 19th century began, the progress of Moffat has been both rapid and continuous. New buildings have been erected: fine streets have been laid out; a water supply of 288,000 gallons per diem was brought in to the town at a cost of £5000 in 1867; a new system of sewerage was then also carried out; a cemetery, 3 acres in extent, and $\frac{3}{4}$ mile NW of the town, was beautifully laid out in 1872 at a cost of £700; and the town has been lighted with gas. These and other improvements

have tended to make Moffat very popular, and have given it almost a right to the names which have been applied to it of the Cheltenham or Baden of Scotland.* A proof of the healthiness of Moffat may be found in the fact that, when Asiatic cholera was raging at Dumfries (only 21 miles distant), Moffat was practically entirely spared.

Moffat has been the place of birth and of residence of some distinguished Scotchmen. Among those born there, the following may be mentioned:—Sir Archibald Johnstone, Lord Warriston (1610-63), is described by M'Crie as 'a profound and accomplished lawyer, an eloquent speaker, and a man of the most active habits,' who 'took a prominent share in the proceedings of the Covenanters, and was among the chief leaders in promoting the league between Scotland and England.' He was created Lord Advocate (1646), Lord Register (1649), and one of Cromwell's peers; at the Restoration took refuge in France; but was brought back to Edinburgh and executed. William Dickson, LL.D. (1749-1821), actively assisted Wilberforce in his attempt to do away with slavery. Dickson was the translator of Carnot's *Treatise on the Calculus* (1801), and the editor of a reprint of Garnett's *Observations on the Moffat Waters* (1820). He died in London, and left a collection of scientific works to the Moffat Library. David Welsh, D.D. (1793-1845), was Professor of Church History in Edinburgh University (1831). He wrote the *Life of Dr Thomas Brown* and *An Introduction to the Elements of Church History*. Walter Boyd (1760-1842) was the chief partner of the firm of Boyd, Benfield, & Co., bankers, London and Paris. He sat as M.P. for Shaftesbury in the first Imperial Parliament.

Among those connected with Moffat by residence we may note the following:—John Rogerson, M.D. (1741-1823), a famous physician, who acted as first medical adviser to the Empress and court of Russia, purchased in 1805 the estate of Dumerieff, and resided upon it from 1816 till his death. John London Macadam (1756-1836), the inventor of that process of road-making, known as 'macadamising,' resided at Dumerieff for some time, and after a life of hard work, died at Moffat, and was buried in its churchyard. John Finlay (1782-1810), author of *Wallace, or the Fate of Ellerslie, Historical and Romantic Ballads* (1808), etc., was a poet of great promise, whose life was cut short by a sudden illness at Moffat, where he lies buried. John Walker, D.D., known, owing to his eccentricities, as the 'mal' minister of Moffat,' was a churchman of some note in his day. He was presented to Moffat parish in 1762, was translated to Colinton parish in 1783, and died in 1803. Dr Walker wrote several books, his favourite subject being natural history.

The parish of Moffat is bounded N by Tweedsmuir in Peebleshire, NE by Lyne and Megget in Peebleshire and Ettrick in Selkirkshire, E by Ettrick and Eskdalemuir, SE by Wamphray, SW by Kirkpatrick-Juxta, and W and NW by Crawford in Lanarkshire. Its utmost length, from ENE to WSW, is $14\frac{1}{2}$ miles; its utmost breadth is $8\frac{1}{2}$ miles; and its area is 43,170 acres, of which 3119 are in Lanarkshire and 40,051 in Dumfriesshire, whilst 205 are water. The parish is traversed by three roads, leading respectively to Edinburgh, Glasgow, Selkirk, and by a section of the Caledonian railway, as well as by part of the Beattock and Moffat branch. Moffat is rich in features of natural beauty. River, loch, mountain, valley, combine to render it one of the most picturesque parishes in the South of Scotland.

* William Black, in his *Strange Adventures of a Phaeton* (1872), observes that, 'if Moffat is to be likened to Baden-Baden, it forms an exceedingly Scotch and respectable Baden-Baden. The building in which the mineral waters are drunk looks somewhat like an educational institution, with its prim white iron railings. Inside, instead of the splendid saloon of the *Conversationshaus*, we found a long and sober-looking reading-room. Moffat itself is a white, clean, wide-streeted place, and the hills around it are smooth and green; but it is very far removed from Baden-Baden. It is a good deal more proper, and a great deal more dull. Perhaps we did not visit it in the height of the season, if it has got a season; but we were at all events not very sorry to get away from it again, and out into the hilly country beyond.'

The ANNAN, rising at an altitude of 1270 feet on the northern border, near the meeting-point of Peebles, Lanark, and Dumfries shires, and not far from sources of the Tweed and Clyde, flows 8½ miles south-south-eastward—for 3½ miles through the north-western interior, and then along or close to the boundary with Kirkpatrick-Juxta. It is fed by several small streams—Birnock Water, Frenchland Burn, etc., and is joined, 2 miles below Moffat, by Moffat Water on the E and Evan Water on the W. Moffat Water, rising at an altitude of 1800 feet in the north-eastern corner of the parish, close to the Selkirkshire boundary, flows 12½ miles south-westward through the parish. It is fed by the following streams:—on the right bank, Tail Burn, flowing from Loch Skene, and Carrifran, Blackhope, and Craigie Burns; on the left bank, Bodesbeck, Sailfoot, Selcoth, Crofthead, and Cornal Burn. EVAN WATER, which rises in Lanarkshire, flows for 3¼ miles south-south-eastward through the western wing of Moffat, and then passes off into Kirkpatrick-Juxta. GARFOL WATER, too, flows 2½ miles eastward on the boundary with Kirkpatrick-Juxta. The only lake in the parish is 'dark Loch SKENE' (6 × 1½ furl., 1700 feet), 11¼ miles NNE of Moffat.

Moffat parish is very mountainous. The chief mountains are—on the Peebleshire boundary, Great Hill (1527 feet), Spout Craig (1842), Barry Grain Rig (2012), HARTFELL (2651), Hartfell Rig (2422), Raven Craig (2246), Lochcraig Head (2625); on the Selkirkshire boundary, Andrewhinney Hill (2220), Ben Craig (2046), Bodesbeck Law (2173), Capel Fell (2223), Wind Fell (2180); on the boundaries with Eskdalemuir, Wamphray, and Kirkpatrick-Juxta parishes, Loch Fell (2256), Crofthead (2085), Gateshaw Rig (1853); on the Lanarkshire boundary, Mosshope Fell (1567), Beld Knowe (1661), Campland Hill (1571), Black Fell (1528). The parish of Moffat is thus girdled with mountains of higher or lower elevation. The interior of the parish, especially in the N, is, however, almost as mountainous as are the parts bordering on other parishes. Carrifran (2452 feet), Saddle Yoke (2412), Arthur's Seat (2398), Swatte Fell (2388), and White Coomb (2695), may be cited as among the loftiest. The Southern Alps, as the mountains in Moffat parish and the surrounding district are sometimes called, differ from the Highland mountains in being, as a rule, covered with grass up to the very summit. This naturally gives them the appearance of being less rugged and bare than the ranges in the north of Scotland. The valleys through which the Annan and Moffat, and Evan Waters flow are very narrow, especially in their upper parts. In some places there is barely room for the roads to pass along the bottom of the valleys. As might be expected, they are extremely picturesque. To quote once more from the *Strange Adventures of a Phadon*, Mr William Black gives a fine description of the vale of the Annan above the town. 'That was a pretty drive up through Annandale. As you leave Moffat the road gradually ascends into the region of the hills; and down below you lies a great valley, with the river Annan running through it, and the town of Moffat itself getting smaller in the distance. You catch a glimmer of the blue peaks of Westmoreland lying far away in the south, half hid amid silver haze. The hills around you increase in size, and you would not recognise the bulk of the great round slopes but for those minute dots that you can make out to be sheep, and for an occasional wasp-like creature that you suppose to be a horse. The evening draws in. The yellow light on the slopes of green becomes warmer. You arrive at a great circular chasm which is called by the country-folks the Devil's or Marquis of ANNANDALE'S BEEF-TUB—a mighty hollow, the western sides of which are steeped in a soft purple shadow, while the eastern slopes burn yellow in the sunlight. There is no house, not even a farmhouse near; and all traces of Moffat and its neighbourhood have long been left out of sight. But what is the solitude of this place to the wild and loity region you enter, when you reach the summits of the hills?' etc.

In Moffat parish the soil in the valleys is mainly alluvial; on the lower slopes of the hills it is light, dry gravel. A considerable part of the land is in tillage; but the main part is pasture land. There are a few woods of some extent—the Craigeburn, Elleraig, and Dumerief woods may be mentioned. In the uplands the rocks are Silurian; greywacke, containing quartz, sandstone, and gypsum are found; but coal, copper, and limestone, though sought for, have not been discovered.

The parish contains several objects of antiquarian interest. There is an old British fort, 2½ miles from Moffat, on the top of Beattock Hill, and two other forts, not far distant from the town. Cornal Tower, the 'keep' of the Pocomal estate, is a small ruin. Blacklaw Tower is a good example of a border peel-house. Portions of the walls remain, and attest to the strength of the building. In addition to these, the parish also contains other border towers of a like character. Places, noted for their beauty or wildness, are the glen of Bell Craig, in which many rare ferns grow; the Basin of Blackshope, the Deil's Beef-tub, or, as it is sometimes called, the Marquis of Annandale's Beef-Stand; the famous waterfall, called the Grey Mare's Tail; Loch Skene, Erickstane, etc.

Mansions, noticed separately, are CRAIGIEBURN and DUMCREEFF; and Mr Hope Johnstone is chief proprietor. Moffat is in the presbytery of Lochmaben and synod of Dumfries; the living is worth £460. The ancient church of Moffat was transferred in 1174 by Robert de Bruce to the bishop of Glasgow, and was afterwards constituted one of the prebends of the see. A chapel once existed between the Annan and the Evan, at the place still called Chapel. Valuation (1860) £13,251, (1884) £30,071, 5s. 10d. Pop. (1801) 1610, (1831) 2221, (1861) 2232, (1871) 2543, (1881) 2930, of whom 21 were in Lanarkshire.—*Ord. Sur.*, sh. 16, 1864.

See W. R. Turnbull's *History of Moffat* (Edinb. 1871); *Black's Guide to Moffat* (4th ed. 1882); and Fairfoul's *Guide to Moffat* (Moffat, 1877).

Moll. See MOREBATTLE.

Mollance, an estate, with a mansion, in Crossnichael parish, Kirkcudbrightshire, 2½ miles NNE of Castle-Douglas.

Mollart. See NAVER.

Mollinburn, a village in the NE corner of Cadder parish, Lanarkshire, 6 miles NNW of Airdrie.

Molmont. See GALSTON.

Monach, a group of islets in North Uist parish, Outer Hebrides, Inverness-shire, 6 miles SSW of the western extremity of North Uist island, and 9½ WNW of the north-western extremity of Benbecula. A lighthouse on Shillay, the most western islet of the group, shows a white light, flashing every ten seconds, and visible all round the horizon at a distance of 18 nautical miles. Pop. (1871) 11, (1881) 13.

Monadhliath (Gael. 'grey hills'), a chain of mountains in Inverness-shire, extending north-eastward between Glenmore and Strathspey, and culminating in Carn Maig (3087 feet), 16¼ miles E by S of Fort Augustus. Heavy, rounded, and barren, its mountains exhibit no grandeur of form. They chiefly consist of granite and quartzite, and rest on an elevated base or plateau of desolate heathy moor. Great herds of black cattle feed amongst their glens, and large flocks of sheep are pastured on their slopes; but their irksome solitudes, their vast and dreary wastes, are abandoned to the grouse, the ptarmigan, the roe, and the red deer.—*Ord. Sur.*, shs. 73, 74, 1878-77.

Monaeburgh. See KILSYTH.

Monaltrie House, a commodious mansion in Glenmuick parish, Aberdeenshire, 1 mile N by E of Ballater. It was formerly called Ballater House, and belongs to Mr Farquharson of INVERCAULD.

Monar, Loch, an alpine lake on the mutual border of Inverness and Ross shires, 25 miles WSW of Beauly. Lying at an altitude of 663 feet above sea-level, it extends 4½ miles east-by-northward, has an utmost breadth of 3¼ furlongs, and from its foot sends off the river FAERRE. It occupies a wild hollow, overhung to

the S by peaked Sgurr na Lapaich (3773 feet); contains good trout and pike; and at its E end has Monar shooting-lodge.—*Ord. Sur.*, sh. 82, 1882.

Monboddio House, an old mansion, amid pleasant plantations, in Fordoun parish, Kincardineshire, 1½ mile E by S of Auchinblae, and 2½ miles NNW of Fordoun station. It was the birthplace of the judge, James Burnett, Lord Monboddio (1714-99), who anticipated Darwin in an evolution theory—of monkeys whose tails were off with constant sitting. His descendant, James Cumine Burnett, Esq., holds 3000 acres in the shire, valued at £2540 per annum.—*Ord. Sur.*, sh. 66, 1871.

Moncreiffe House, a mansion in Dunbarry parish, Perthshire, at the southern base of Moncreiffe Hill, on the left side of the river Earn, 1 mile NNE of Bridge-of-Earn, and 3¼ miles SSE of Perth. It is a fine old edifice, built in 1679 from designs by the celebrated architect, Sir William Bruce of Kinross; and its grounds are beautifully wooded, the older trees appearing to have been mostly planted about the time of the erection of the house. There is a grand beech avenue, more than 600 yards long, with a small stone-circle in the middle; and one horse-chestnut, girthing 20½ feet at 1 foot from the ground, is supposed to be the largest of its kind in Scotland, if not indeed in Britain. A roofless chapel (30 × 18 feet), with a N aisle and a small E belfry, stands 300 yards SE of the mansion, thickly embosomed in wood; and since 1357 or earlier has served as the burying-place of the Moncreiffe family. Moncreiffe or Moreduin Hill, at the meeting-point of Dunbarry, Rhynie, and East Perth parishes, 3 miles SSE of Perth city, occupies much of the peninsula between the Earn and the Tay, and forms the connecting link between the Ochils and the Siddaws, except as isolated from them by those two rivers. It chiefly consists of greenstone, displaying on the S side a steep, high precipice of columnar formation; and attains an altitude of 725 feet above sea-level. Its slopes are clothed with many-tinted trees, planted mostly during the last hundred years; and its summit and E shoulder command one of the noblest prospects in Britain—pronounced by Pennant 'the glory of Scotland.' The high-road from Edinburgh to Perth passes at a height of 182 feet over its W shoulder, which is pierced by the conjoint tunnel (990 yards long) of the Caledonian and North British railway systems. The Roman legionaries, when they gained the top, cried out 'Behold the Tiber, behold the Field of Mars!' and Queen Victoria, driving from Dufflin Castle to Perth on her first progress to the Highlands (6 Sept. 1842), made a halt to gaze on the sunset-illuminated scene. Not far from the flagstaff on the summit is a Pictish hill-fort, whose circular fosse, 16 yards in diameter, is still traceable. From 1248 and earlier the lands of Moncreiffe have been held by the Moncreiffe family; but in 1663 Sir John Moncreiff—represented by Lord Moncreiff of TULLIEBOLE—was forced to sell the estate to his cousin, Thomas Moncreiffe, who in 1685 was created a baronet. Sir Robert Drummond Moncreiffe, present and eighth Bart. (b. 1356; suc. 1879), owns 4673 acres in Perthshire, valued at £6753 per annum.—*Ord. Sur.*, sh. 48, 1868. See chap. x. of Thomas Hunter's *Woods and Estates of Perthshire* (Perth, 1833).

Moncur Castle, a ruined fortalice in Inchtute parish, Perthshire, embosomed in wood, within the grounds of Rosste Priory, 5 furlongs NNE of Inchtute village. It is said to have been destroyed by fire about the beginning of last century.

Mondynes (anc. *Monachedin*), a farm in Fordoun parish, Kincardineshire, 1½ mile SSW of Drumlithan station. A monolith here, 6 or 8 feet high, and called the Court-stane or King-stone, perhaps commemorates the murder of Duncan II. in 1094.

Monearn. See CAIRNMONAERN.

Moness Burn, a stream of detached portions of Dull and Portingall parishes, Perthshire, rising at an altitude of 1970 feet, and running 5½ miles north-by-eastward, till, after a total descent of nearly 1600 feet, it falls into the Tay at a point 3 furlongs N by W of Aberfeldy.

It traverses, in the lower part of its course, a deep, narrow, wooded ravine; and makes there two romantic waterfalls, which are celebrated in Burns's *Birks of Aberfeldy*; whilst Pennant characterised them as 'an epitome of everything that can be admired in waterfalls.' The upper cascade occurs 1½ mile above Aberfeldy, and consists of a sheer leap of 50 feet; the second, a short way lower down, consists of a series of leaps to the aggregate of at least 100 feet; and the third, at the influx of a tributary, is more picturesque than either of the others, and consists of brilliant rushing cataracts. A rustic bridge crosses the ravine; traces of a Roman redoubt are in its mouth; and Moness House adjoins it in the vicinity of Aberfeldy.—*Ord. Sur.*, sh. 55, 1869.

Moneydie, a parish of Perthshire, whose church stands on the right bank of Shochie Burn, 2 miles W of Lunarcy station and 6 NNW of the post-town, Perth. It is bounded NW by Auchtergaven, NE by Auchtergaven and Redgorton, SE and S by Redgorton, SW by Methven, and W by Monzie (detached). Its utmost length, from WNW to ESE, is 4½ miles; its utmost breadth is 3 miles; and its area is 4464 acres, of which 25 lie detached, and 25½ are water. Shochie Burn winds 5½ miles east-south-eastward and north-eastward, partly along the Monzie and Redgorton boundaries, but mainly through the interior, and passes off from the parish at a point ¾ mile from the Tay; whilst Ordie Burn, its affluent, runs 2½ miles south-eastward along or close to the north-eastern border. Sinking in the extreme E to close upon 170 feet above sea-level, the surface thence rises gently to 236 feet near Coldrochie, 237 near Tophead, 452 near Millhole, and 482 near Ardgait. A very fine grey freestone has been quarried. The soil of the low flat lands is partly a light loam, partly of gravelly character resting on dry, hard, deep gravel; of the lower slopes is a rich loam, incumbent on strong deep clay; and of the highest grounds is a cold wet till, naturally moorish, but now mostly drained and cultivated. A small portion of the entire area is pastoral; 400 acres or so are under wood; and the rest of the land is in tillage. Alexander Myln, who died in 1542, and wrote the lives of the Bishops of Dunkeld, was priest of Moneydie. The Duke of Athole and the Earl of Mansfield are chief proprietors, 3 others holding each an annual value of between £100 and £500. Moneydie is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £278. The parish church, built in 1813, is a handsome edifice, containing 460 sittings. The public school, with accommodation for 61 children, had (1883) an average attendance of 52, and a grant of £73, 2s. Valuation (1860) £4330, 16s., (1884) £4471, 0s. 6d. Pop. (1841) 315, (1861) 252, (1871) 244, (1881) 233.—*Ord. Sur.*, sh. 48, 1868.

Moneypool Burn. See KIRKMADECK.

Moniabugh. See KILSYTH.

Moniaive, a village in GLENCAIRN parish, W Dumfriesshire. A burgh of barony under charter of Charles I., it stands, 350 feet above sea-level, between confluent Dalwhat and Craigdarroch Waters, 7¼ miles WSW of Thornhill and 16½ NW of Dumfries. With pretty surroundings and a good many neat houses, it has a post office under Thornhill, with money order, savings' bank, and telegraph departments, a branch of the Union Bank, 2 hotels, gas-works, a library, a market-cross (1638), a bowling green, Free and U.P. churches, 2 public schools, and fairs on 25 June o. s. (if a Tuesday, if not, on the Tuesday after), on the Friday in August before Lockerbie (lambs), and on the Saturday in September before Lockerbie (lambs, cattle, hiring, etc.). Pop. (1841) 667, (1861) 817, (1871) 767, (1881) 699, of whom 389 were females. Houses (1881) 184 inhabited, 17 vacant, 3 building.—*Ord. Sur.*, sh. 9, 1863.

Monich. See MONACH.

Monifieth (Gael. *monadh-fidh*, 'hill of the deer'), a village and a coast parish of S Forfarshire. The village, built along a southward brae, within 300 yards of the Firth of Tay, has a station on the Dundee and Arbroath Joint line, 11 miles WSW of Arbroath, 2½ ENE of

Broughty Ferry, and 5½ ENE of Dundee, under which there is a post office, with money order, savings' bank, and telegraph departments. It is a thriving place, with a good many very fine villas, a large jute mill, two machine works, an inn, a cemetery, etc. The parish church, rebuilt in 1813, is a plain but conspicuous building, with 1100 sittings; and the graveyard around it contains some beautifully sculptured antique tombstones, more tasteful than are usually found in a country cemetery. One of two Free churches, standing 2½ miles NW of the village, was erected soon after the Disruption, and is a plain structure; the other, in the village, was founded with much ceremony in November 1871, owed much of its origin to the munificence of the eleventh Earl of Dalhousie, and is a neat edifice in the Gothic style, with 400 sittings. In the month of Feb. 1882 the congregation connected with the parish church commenced the erection of a Sunday school hall, built and fitted after the best models now in use in America. This building was finished and opened on Saturday, 23 Dec. 1882, and has since been used, not only for Sunday school instruction, but also for lectures, public meetings, and purposes of general utility. It is seated, when used as a lecture-room, for 600 persons, and has two class-rooms, one of which is used as a library; a keeper's house is also attached. This building is the first, or one of the first, of the kind which has been built in Scotland, and several other halls on the same plan have since been built, or are in the course of building. The idea of the hall was suggested by the Rev. Dr Young, minister of the parish, who had been for upwards of twenty years Convener of the General Assembly's Committee on Sabbath Schools, at a congregational meeting held on the occasion of the twenty-first anniversary of his ministry, and the idea was realised by the cordial and generous contributions of the congregation. The total cost was £2100. Pop. of the village (1861) 558, (1871) 919, (1881) 1564.

The parish, containing also the villages of DRUMSTURDY and BARNHILL, with four-fifths of the town of BROUGHTY FERRY, is bounded N and NE by Monikie, E by Monikie and Barry, SE and S by the Firth of Tay, and W by Dundee and Murroes. Its greatest length, from N by E to S by W, is 4½ miles; its breadth increases southward from 9 furlongs to 3½ miles; and its area is 6767½ acres, of which 780 are foreshore and 157½ water. DIGHTY WATER, coming in from the W, winds 2½ miles east-southward to the Firth at Milton; Murroes Burn runs 1½ mile south-by-westward along the western boundary to the Dichty; and BUDDON Burn first runs 2½ miles east-south-eastward along the northern interior and along the Murroes and Monikie boundaries, and then, after a divergence into Monikie, flows 3 furlongs along all the Barry boundary to the Firth of Tay. The coast, 3½ miles in extent, consists chiefly of low sandy ground, with considerable extent of light downs or links, and long has suffered gradual encroachment by the sea. An almost level plain extends behind the links in the section E of the Dichty; and an elongated swell or low ridge, bold on the S but gently sloping on the N, extends behind the links in the section W of the Dichty. The rest of the land has mostly a southward exposure, attaining 320 feet near Balmossie, 431 at Laws Hill, 357 near Mattocks, and 500 at the north-eastern boundary—eminences that command an extensive and charming view. The sedimentary rock, yielding what is known as 'Arbroath pavement,' has been quarried in the N; and eruptive rocks occur in the S. The soil on the seaboard is partly light and sandy, partly a rich black loam, and generally very fertile; of the central tracts is mostly an excellent black loam, highly cultivated, and bearing heavy crops; but towards the N is tilly and moorish. About 545 acres are under wood; 910 are pasture (chiefly links); and the rest of the land is in tillage. Antiquities other than those noticed under BROUGHTY FERRY and LAWS, are Cairn Greg, the Gallow Hill of Ethiebeaton, a stone circle known as 'St Bride's Ring,' and sites or vestiges of five pre-Reformation places of worship, at Monifieth

village, Chapel-Dockie, Eglismonichty, Kingennie, and Broughty Ferry. David Doig, LL.D. (1719-1800), a writer in the *Encyclopædia Britannica* and rector of Stirling grammar school, was a native. Estates, noticed separately, are GRANGE, LAWS, and LINLATHEN; and 10 proprietors hold each an annual value of £500 and upwards, 35 of between £100 and £500, 46 of from £50 to £100, and 137 of from £20 to £50. Giving off the whole of Broughty Ferry *quoad sacra* parish and part of that of St Stephen, Monifieth is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £382. Two public schools, Mattocks and Monifieth, with respective accommodation for 100 and 507 children, had (1883) an average attendance of 52 and 218, and grants of £45, 17s. and £202, 8s. Valuation (1857) £18,332, (1884) £52,423, 11s., plus £6160 for railways. Pop. (1801) 1407, (1831) 2635, (1861) 5052, (1871) 7252, (1881) 9521, of whom 3608 were in the ecclesiastical parish of Monifieth, 5559 in that of Broughty Ferry, and 354 in St Stephen's.—*Ord. Sur.*, sh. 49, 1865.

Monigaff. See MINNIGAFF.

Monikie, a hamlet and a parish of S Forfarshire. The hamlet stands near a station of its own name on the Dundee and Forfar Direct section of the Caledonian, 11½ miles NE of Dundee.

The parish, containing also the villages of CRAIGTON (with a post office under Carnoustie), GUILDY, and NEWBIGGING (with a post office under Dundee), is bounded N by the Kirkbuddo section of Guthrie, NE by Carmyllie, E by Panbride, SE by Barry, SW by Monifieth, W by Murroes, and NW by Inverarity. Its utmost length, from NNW to SSE, is 6½ miles; its utmost breadth is 5 miles; and its area is 9027½ acres, of which 106 are water. By Buddon, Pitairlie, Monikie, and other burns the drainage is carried south-south-eastward or east-south-eastward to the Firth of Tay or the German Ocean; and the surface has a general north-north-westly ascent, attaining 118 feet at Mains, 204 near Templehall, 500 at Cambustane, 800 at the Inverarity boundary, and 693 at Gallow Hill. Two ranges of hills, which cross the parish from E to W, divide it into three districts of three different characters. The southern, containing in the extreme S a small tract of sandy downs, approaches within 3 furlongs of the Firth of Tay, and rising thence to the first range, called Downie or Cur Hills, presents a warm and pleasant appearance. The middle district, which forms a valley between the two ranges, at an elevation of about 300 feet above sea-level, produces inferior crops in everything but oats, and during great part of the year has a cold and damp climate. The northern district is chiefly swampy and moorish, and, though partially reclaimed, continues to be better for pasture than tillage. A fine trap rock, admirably suited both for building and for road metal, forms the greater part of the Downie Hills, at whose western extremity is an excellent sandstone, well suited for masonry; whilst the rock yielding what is known as 'Arbroath pavement,' abounds in the N; and all three have been quarried. Beautiful specimens of agate, jasper, and spar are found in the trap of the Downie Hills. The soil of the southern district is rich, sharp, and productive; of the middle district is chiefly a thin black loam, incumbent on cold wet till; and of the northern district is either reclaimed or unreclaimed moss. Denfild, a deep and winding ravine, bisecting the Downie Hills, is traversed by Pitairlie Burn, and spanned by a massive one-arched bridge. To the N are reservoirs of the Dundee waterworks, forming artificial lakes of considerable extent and beauty. Rather more than half of the entire area is in regular cultivation, and some 500 acres are under wood. CABBUSTANE, with the 'Live and Let Live Testimonial,' and AFLECK Castle are noticed separately; other antiquities being vestiges of Hynd Castle and the Hair Cairn on the western border, only survivor of several cairns which appear to have been raised there as monuments of some ancient battle. The property is divided among five. Monikie is in the presbytery of Dundee

and the synod of Angus and Mearns; the living is worth £100. The parish church, at the hamlet, was built in 1812, and contains 921 sittings. There are also a Free church of Monikie and a U.P. church of Newbigging; and Bankhead public, Monikie public, and Monikie female Free Church schools, with respective accommodation for 65, 100, and 79 children, had (1883) an average attendance of 48, 71, and 82, and grants of £49, £55, 17s., and £70, 16s. Valuation (1857) £8411, (1884) £19,524, 9s., plus £2884 for railways. Pop. (1801) 1236, (1831) 1322, (1861) 1460, (1871) 1397, (1881) 1412.—*Ord. Sur.*, sh. 49, 1865.

Monimail (Gael. *monadh-mòil*, 'bare hill'), a village and a parish of Fife. The village is 9 furlongs NE of Collesie station, 5½ miles W by S of Cupar, and 4 N by W of the post-town, Ladybank.

The parish, containing also the post offices of Letham (under Ladybank) and Bow of Fife (under Cupar), is bounded N by Dunbog, Creich, and Moonzie, E by Cupar, S by Cults and Collesie, and W by Abdie. Its utmost length, from E to W, is 4½ miles; its utmost breadth, from N to S, is 3½ miles; and its area is 6554 acres. Streams there are none of any size, but the drainage is carried eastward to the Eden. The southern portion of the parish is tolerably level, nowhere sinking below 140 or exceeding 287 feet above the sea; but the northern is hillier, attaining 649 feet near Gowdie and 600 at Mount Hill. In the N the soil is mainly composed of clayey loam and decomposed trap, while in the S it is a light, thin alluvium, resting upon gravel. The parish is fairly well-wooded, containing, among others, the Connochie and Springfield woods. The Mount was the site of the house of the famous satirical poet, Sir David Lindsay (1490-1555), whom the late David Laing, however, considered to have most likely been born at Garmylton or Garleton near Haddington. The house stood on the S side of the hill, and its place is still marked by some old trees. 'Sir David's Walk,' where, it is said, he was wont to pace up and down while composing his satires, is still pointed out on the top of the hill, which is crowned by the Hopetoun Monument, a Doric column 92 feet high, with a capital of 15 feet, erected to the memory of John, fourth Earl of Hopetoun (1766-1823), the Peninsular hero. A spiral staircase leads to its summit, which commands a very fine view. The following well-known Scotsmen have been connected with Monimail, all but the first being natives:—Sir Robert Sibbald (1641-1712), physician, naturalist, and antiquary, who resided at Upper Rankeillour; Gen. Robert Melville, LL.D. (1723-1809), an eminent military antiquary; David Molyson (1789-1834), a minor poet; and the two brothers, both 'literary peasants,' Alexander Bethune (1804-43) and John (1802-39). An ancient castle is said to have stood at Balgarvie, but no vestige of it now remains. With reference to it, Sir Robert Sibbald writes: 'It is said that there was here a strong castle, which was taken and levelled by Sir John Pettsworth, as he was marching with the English forces to the siege of the castle of Cupar in the reign of King Robert I.' The lands of Monimail anciently belonged to the Archbishop of St Andrews, who had a castle here, which stood to the N of Melville House. It was originally built by Bishop William Lambertson who died in June 1328, and appears to have been enlarged and improved by Cardinal Beaton, as a head with a cardinal's cap was carved on different parts of the walls. Archbishop Hamilton resided at the castle of Monimail during a severe illness, when he was attended and cured by the famous Italian physician, Cardan. Fernie Castle is noticed separately, as also are the mansions of Balgarvie, Melville, and Rankeillour. Monimail is in the presbytery of Cupar and the synod of Fife; stipend and communion elements have a value of £320. The parish church is a handsome edifice of 1796, with a tower and 600 sittings. There is also a Free church; and two public schools, Easter Fernie and Letham, with respective accommodation for 54 and 75 children, had (1883) an average attendance of 27 and 48, and grants of £21, 6s. and £37, 6s. Valuation

(1865) £11,460, 18s., (1884) £11,564, 4s. 10d. Pop. (1801) 1066, (1831) 1230, (1861) 1054, (1871) 918, (1881) 834.—*Ord. Sur.*, shs. 48, 40, 1868-67.

Monkland, an ancient barony in the Middle Ward of Lanarkshire. It long constituted one district or parish; but in 1640 it was divided into the two parishes of Old or West Monkland and New or East Monkland. The name of Monkland was obtained from the district having been the property in early times of the monks of Newbattle. In the early part of the reign of Malcolm IV. (1153-65), that monarch granted to these monks a large tract of territory, which extended from the boundaries of Lothian on the E to the Clyde on the W, and which constituted a hundred pounds lands of the ancient extent, the monks having ample jurisdiction over all of it. Excepting the lands and manor-place of Lochwood, which belonged to the Bishops of Glasgow, the monks of Newbattle possessed every acre of territory in what are now Old and New Monkland, a considerable part of which they held in their own hands for cultivation, letting out the remainder in lease. From documents still extant it appears that they obtained permission from the landed proprietors of the west of Scotland, as well as those in the Lothians, for free passage for themselves, their servants, cattle, and goods, from their monastery of Newbattle to their domains in Clydesdale; and from King Alexander II. they obtained similar grants of free passage by the usual ways, with permission to depasture their cattle for one night, on every part of the route, excepting upon the meadows and growing corn. The rectorial revenues of Monkland were joined to those of Cadder in forming a rich prebend, which was held as the appropriate benefice of the sub-dean of Glasgow; and, although the period of this arrangement is not known, it continued till the Reformation. Previous to this era a chapel was erected at Kipps, on the borders of the present district of New Monkland, which was the property of the Newbattle monks; and the abbots are said to have held annual courts at it, when they levied their rents and feu-duties, and transacted the other business pertaining to their barony of Monkland. This chapel was destroyed at the stormy period of the Reformation, and its site can scarcely now be pointed out. About the same time the monastery of Newbattle was overthrown, and all the fair domains which had so long remained in the possession of the monks were wrested from them.

In 1587 the barony of Monkland was granted in fee to Mark Ker, the commendator of the abbey, who four years later was created Lord Newbattle; but afterwards the barony was divided, and parcelled out into various hands. A portion called Melrocs fell to the share of Lord Boyd; but a still larger share of the barony was acquired by the wily and hoarding Sir Thomas Hamilton of Binning, King's advocate under James VI. He obtained a charter for it from that monarch in 1602, and at the same time a grant of the patronage of the churches of Cadder and Monkland. Sir Thomas subsequently sold the barony to Sir James Cleland, whose son and heir, Ludovick, disposed of it to James, Marquis of Hamilton. In 1639 the Marquis secured his purchase by a charter from the King, granting him the lands and barony of Monkland, with the right of patronage of the churches of Cadder and Monkland, to be held of the King in fee for the yearly payment of a trifling sum in the name of bleach-ferm. In the reign of Charles II., the College of Glasgow purchased from the Duches of Hamilton the patronage and tithes of the sub-deanery of Glasgow, as well as of the churches of Cadder and Monkland; and for this a charter was also obtained from the King, which was ratified by act of parliament in 1672. Subsequently to this period the heritors of the parishes of New and Old Monkland purchased the right of presentation to both these parishes from the College, under authority of the act 1690 respecting the purchase of church-patronage.

Monkland is famous for its abundance of coal, iron, and other valuable minerals. Its coal has long been worked, and continues to be worked increasingly; but

iron-mining, its staple industry, is less than a century old. The increase in mining since the iron began to be worked has been almost magical, changing the face of the whole district, chequering it everywhere with towns and villages, rendering it all a teeming scene of population and industry, drawing through it a network of communications in road and railway and canal, and giving it, through its iron furnaces and coal-pits, a conspicuous or almost distinctive character for streams of flame and clouds of smoke. Its population rose from 8619 in 1801 to 65,139 in 1881. Its economic condition has, in consequence, become peculiar; presenting a medium character between that of an open country and that of a manufacturing city. The following official report upon it, drawn up in 1850, is still interesting:—

‘The large mining villages now no longer exhibit the aspect of extreme filth and neglect for which they were formerly conspicuous. It requires time to bring a population, not yet accustomed to habits of cleanliness, to regard it for its own sake; the masters are, therefore, obliged to employ men and carts expressly to keep the spaces about the houses free from accumulations of refuse, and to look to the drainage, etc. The effect has been salutary in many respects. The agents also occasionally inspect the houses themselves, prevent over-crowding, and fine or dismiss dirty and disorderly families. In many places proper drains have been made, either covered or laid with stone or brick, and hard and dry road-ways have taken the place of the natural soil, which in wet weather was often deep with mud. Much, therefore, has been done towards placing the population in circumstances in which the decencies and comforts of domestic life are possible; though the original arrangement of the majority of the mining villages in large squares or long unbroken rows must still remain an obstacle; and it has been so far recognised as such, that in most of the more recent works it has been abandoned, and the cottages have been built fewer together, larger, and with more rooms, and with garden-ground and all proper conveniences nearest hand. The number of schools, formerly so inadequate, is now increasing yearly, and there is every disposition to make them efficient, by appointing and paying well-qualified masters and mistresses. The Messrs Baird of Gartsherrie, who began these salutary measures some years ago, for their own immediate neighbourhood, by building a church and a magnificent establishment for all the branches of elementary education, have followed it up by opening other schools in some of the mining villages; and they speak with satisfaction of the good effects produced upon the habits of the population, and especially of the children, by the frequent supervision, advice, and instruction of resident clergymen and able teachers. Mr Wilson of Dundyvan also has entered very cordially into the improvement of the education at the four schools he has now established in connection with his extensive works; lending-libraries likewise are to be set on foot; and much has been done in the neighbourhood, and at his works especially, by the zeal of the minister of the Episcopal chapel at Coatbridge, to diminish excessive drinking. The excellent schools at the works of Mr Murray, Mr Stewart, and elsewhere, are increasing in numbers. A handsome school, with a master's house attached, is now being built at Airdrie by Mr Alexander, the proprietor of a large portion of the mineral dues of the district. An act of parliament was obtained two years ago for establishing a rural police in the mining portion of the county, the effect of which has been to produce much more general quiet and order and respect for the law in the mining villages. The administration of justice has been rendered more complete by the appointment of the proper staff of law officers to reside and hold their courts in the district. A water-company, which procured an act of parliament last year, has made good progress with their arrangements for supplying the town of Airdrie with water, the deficiency of which was great, and in all probability it will, before long, extend its supply to some of the large villages around, and to the great collections of houses near the principal works.’—*Ord. Sur.*, sh. 31, 1867.

Monkland Canal, an artificial navigable communication between the city of Glasgow and the district of Monkland in Lanarkshire. It commences in the northern suburbs of Glasgow, or rather is prolonged westward there into junction at Port-Dundas with the Glasgow branch of the Forth and Clyde Canal; and it proceeds east-south-eastward, through the Barony parish of Glasgow, and the parish of Old Monkland, to North Calder Water, at the boundary with Bothwell parish. It sends off four branches, one about a mile in length, to Calder Ironworks, near Airdrie, in the parish of New Monkland; one, about a mile in length, to Gartsherrie Ironworks; one, about $\frac{1}{2}$ mile in length, to Dundyvan Ironworks; and one, also about $\frac{1}{4}$ mile in length, to Langloan Ironworks—the three last all in the parish of Old Monkland.

The project of the Monkland Canal was suggested in 1769, as a measure for securing to the inhabitants of Glasgow, at all times, a plentiful supply of coals. The corporation of the city immediately adopted the project, employed the celebrated James Watt to survey the ground, obtained an Act of Parliament for carrying out the measure, and subscribed a number of shares to the stock. The work was begun in 1761; and the operations were carried on till about 10 miles of the canal were formed. The first 2 of these miles, extending from the basin to the bottom of Blackhill, are upon the level of the upper reach of the Forth and Clyde Canal; the other 8 miles, beginning at the top of the Blackhill, are upon a level 96 feet higher. The communication between these levels was at that early time carried on by means of an inclined plane, upon which the coals were lowered down in boxes, and re-shipped on the lower level. The capital which had been declared necessary to complete the undertaking was £10,000, divided into 100 shares; but this sum was found to be altogether insufficient; for, in addition to expending it, a debt of some amount was contracted in executing the above part only of the operations. The concern, in this unfinished state, produced no revenue, and the creditors naturally became pressing. A number of the stockholders, too, refused to make advances either for the liquidation of the debt, or for the completion of the plan. The whole stock of the company was consequently brought to sale, and purchased, in 1789, by Messrs William Stirling & Sons of Glasgow. These gentlemen, immediately after acquiring the property, proceeded to complete the canal; and, in 1790, having, in conjunction with the proprietors of the Forth and Clyde Canal, procured a second Act of Parliament, empowering the latter to make a junction between the navigations, by a cut from their basin at Port-Dundas in Glasgow to the Monkland Canal basin, they built locks at Blackhill, and extended the Monkland Canal to the river Calder. On these operations the Messrs Stirling are understood to have expended £100,000.

The Monkland Canal is 35 feet broad at the top and 24 at the bottom. The depth of water upon the lock-sills is $5\frac{1}{2}$ feet. To connect the upper and lower levels, at Blackhill, there are two sets of four double locks of two chambers. Each chamber is 71 feet long from the gates to the sill, and 14 feet broad; the ascent in each being 12 feet. The level at the top of the Blackhill is continued to Sheepfold, 8 miles, where there are two single locks of $11\frac{1}{2}$ feet each, after which the canal goes on upon the level it has then gained to the river Calder. The supplies of water for it are derived from the contiguous streams, from the river Calder, and from the reservoir at HILLEND, beyond Airdrie, which covers 300 acres of ground near the source of that river, and was formed at the expense of the proprietors of the Forth and Clyde navigation. From the advantage which the canal offers of easy communication with both the eastern and western seas, and from its unlimited command of coal, the vicinity of it has always been considered favourable for the establishment of manufactures, especially of a bulky nature. For a long series of years the revenue of the canal was wholly absorbed by the expenses of its extension and improvement. In

1807, when a dividend first began to be made, the gross revenue amounted to £4725; and in 1814 it was £5087, although the navigation during this year was stopped for eleven weeks, principally by the severe frost, but partly on account of necessary repairs. From 1814 or 1815 up to the year 1825 the traffic continued without much variation, but about the last-mentioned date a great impulse was given to it by the establishment of ironworks in the district of Monkland. When the project of opening up that district by railways to Glasgow and Kirkintilloch was first started, it created much alarm in the Canal Company, lest the traffic should be entirely diverted from their navigation to the new channels. The alarm was not unfounded, but it only induced the company to reduce their dues to about one-third of the rate which had been charged up till that time, and also to expend large sums in making such improvements on the canal, and on things connected with it, as seemed fitted to facilitate its traffic. One of these improvements was the making of additional reservoirs in the parish of Shotts, all uniting in the river Calder, which flows into the canal at Woodhall, near Holytown, thereby insuring an increased supply of water. Another improvement was the forming of extensive loading basins and wharves at Gartsherrie and Dundyyan, for the reception of traffic from the mineral railways in the vicinity. A third improvement was the making of new locks at Blackhill, near Glasgow, of such character as to excel all works of their class in Great Britain. These locks now comprise two entire sets of four double locks each, either set being worked independently of the other; and they were formed at an expense of upwards of £30,000. In 1850 the increase of traffic still going on, the supplies of water had again fallen short, and even the new locks at Blackhill could not pass the boats without undue delay. An inclined plane with rails was now formed at these locks, 1040 feet in length, and 96 feet in total ascent, at an expense of £13,500, by which empty boats are taken up at a saving of five-sixths of water, and about nine-tenths of time. Each boat is conveyed afloat in a caisson, and the traction is done by steam-power and rope-rolls. The plan is unique, was contrived by Messrs Leslie & Bateman, and has answered admirably. In 1846, under parliamentary sanction, the Monkland Canal became one concern with the Forth and Clyde Canal. The purchase price of it to Messrs Stirling and Sons in 1789 is said to have been only £5 per share; but the purchase price to the Forth and Clyde Company in 1846 was £3400 per share. As part of the FORTH AND CLYDE navigation, the Monkland Canal was taken over by the Caledonian Railway Company in 1867.—*Ord. Sur.*, sh. 31, 1867.

Monkland, New, a village and a parish of the Middle Ward, NE Lanarkshire. The village stands 1½ mile NNW of the post-town, Airdrie, adjoining Glenmavis, and is the seat of the parish church (1777; 1200 sittings) and a public school. Pop., with Glenmavis, (1871) 339, (1881) 369.

The parish contains also the town of AIRDRIE and the villages of Avonhead, East Langrigg, Greengairs, Longriggend, Plains, Riggend, Roughigg, Wattston, West Langrigg, Clarkston, and Glenboig, with one-eighth of Coatyke. It is bounded N by Kirkintilloch and Cumbernauld in Dumbartonshire (detached), E by Slamannan in Stirlingshire and Torphichen in Linlithgowshire, SE by Shotts, SW by Old Monkland, and W by Old Monkland and Cadder. Its utmost length, from E to W, is 9¼ miles; its utmost breadth, from N to S, is 5½ miles; and its area is 31¾ square miles or 20,117 acres, of which 232 are water. BLACK LOCH (½ × ¼ mile) lies right on the Stirlingshire border; and, issuing from it, North CALDER Water winds 2½ miles south-westward along the Slamannan, Torphichen, and Shotts boundary, till it expands into HILLEN Reservoir (10½ × 4¾ furl.), after which it meanders 5½ miles south-westward along all the rest of the Shotts boundary, and at Monkland House passes off from this parish on its way to the river Clyde. LUGGIE WATER, a feeder of the Kelvin, flows 6¼ miles

westward along the Dumbartonshire border; but some little head-streams of the river AVEN drain the north-eastern corner of New Monkland towards the Firth of Forth. Along both the Calder and Luggie the surface declines to less than 300 feet above sea-level; and thence it rises very gradually to 577 feet near Gartlee, 672 at Knowehel, 678 at the Hill of Drumgray, 763 near Little Drumbreck, and 771 at Lochend. Though much of the parish lies more than 600 feet above the sea, yet the dorsal ridge that runs through it from end to end ascends from so broad a base, so gently and continuously, as nowhere to form any height which, properly speaking, can be termed a hill. Much of the highest grounds is covered with moss, and could not be reclaimed except at great expense; but the lower tracts, on the banks of the streams and along the western border, present an agreeable diversity of vale and gently-rising ground, and are in a high state of cultivation. The soil of the arable lands in the eastern and central parts is mossy and late; but that of the northern and western divisions is partly of a dry character, partly a strong clay. The parish, for a long period, particularly during the Continental war, was famous for its culture of flax. In some years as much as 800 acres were under this species of crop; but the welcome advent of peace, and still more the cheapness and universal introduction of cotton, rendered flax-cultivation here, as elsewhere at that time, unprofitable. The present agriculture of the parish has no peculiar features. Its mining industry, however, as noticed in our articles AIRDRIE and MONKLAND, is pre-eminently great, or almost distinctive. The rocks are partly eruptive, partly carboniferous; and so far back as the writing of the *Old Statistical Account*, it is stated that 'coal and ironstone are, or may be, found on almost every farm.' Since then, the working of these minerals has been most extensive, and is still in the course of rapid increase. The quality is only equalled by the abundance of the coal, which in many places is found in seams from 9 to 10 feet thick. The ironstone is found both in balls and in seams; and much of it is of the valuable kind called blackband, which is so abundantly mixed with coal as to require little addition of fuel in the burning. Many of the extensive ironworks in the neighbourhood, or even at a distance, particularly those of Calder, Chapelhall, Gartsherrie, Clyde, and Carron, are supplied with ironstone from New Monkland. Limestone also is worked, particularly in the northern district, but not to a great extent. Several mineral springs, too, exist, chiefly of the chalybeate kind. The Monkland Well, near Airdrie, is the most famous, and at one time enjoyed so high a repute for its efficacy in the cure of scorbutic and other cutaneous diseases, as well as for complaints in the stomach and eyes, as to be a favourite resort even for the wealthy and fashionable citizens of Glasgow and its neighbourhood; but its character as a watering-place has long departed from it, both from a falling off—undeserved, it may be—in the reputation of the springs, and from the lack of features of rural beauty, which have been borne down by a network of railways and by the onward march of a mining and manufacturing population. Alexander Macdonald, M.P. (1821-81), the miners' advocate, was born at Dalnacouther farm. Mansions, noticed separately, are AUCHINGRAY and ROCHSOLES; and 16 proprietors hold each an annual value of £500 and upwards, 65 of between £100 and £500. Including the *quoad sacra* parishes of AIRDRIE and FLOWERHILL, with most of CLARKSTON, New Monkland is in the presbytery of Hamilton and the synod of Glasgow and Ayr; the living is worth £525. The parish poorhouse accommodates 155 inmates; a hospital was built in 1881-82 at a cost of £1200; and seven public and two Roman Catholic schools, with total accommodation for 1700 children, had (1883) an average attendance of 1153, and grants amounting to £883, 7s. 4d. Valuation (1860) £49,743, (1884) £88,454. Pop. (1801) 4613, (1831) 9867, (1841) 20,515, (1861) 20,554, (1871) 22,752, (1881) 27,816, of whom 14,367 were males, and 8284 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 31, 1867.

Monkland, Old, a parish of the Middle Ward, N Lanarkshire. It contains the towns of Baillieston, Coatbridge, and Whifflet and Rosehall, with two-thirds of Calder, seven-eighths of Coatdyke, and one-seventh of Tolleross, as also the villages of Bargeddie and Dykehead, Braehead, Broomhouse, Calderbank, Carmyle, Clyde Iron-works, Faskine, Mount Vernon, Swinton, West Maryston, etc. In shape resembling a rude triangle with northward apex, it is bounded NW by Shettleston, Cadder, and New Monkland, NE by New Monkland, and S by Bothwell, Blantyre, Cambuslang, and Rutherglen. Its utmost length, from E by N to W by S, is $9\frac{1}{2}$ miles; its utmost breadth is $4\frac{1}{2}$ miles; and its area is $17\frac{3}{4}$ square miles or $11,281\frac{1}{2}$ acres, of which $345\frac{1}{2}$ are water. From Monkland House, North CALDER Water meanders 10 miles west-south-westward along all the Bothwell boundary, till at Daldowie it falls into the CLYDE, which itself curves 4 miles westward along all the boundary with Blantyre, Cambuslang, and Rutherglen. Lochend Loch ($3\frac{1}{2} \times 1\frac{1}{2}$ furl.) communicates with Woodend Loch ($\frac{1}{2} \times \frac{1}{2}$ mile), and this again with Bishop Loch ($1 \times \frac{1}{2}$ mile), which lies on the Cadder boundary, and is one of the principal reservoirs of the Forth and Clyde Canal. The banks of all three are tame, with little or no beauty; but their waters contain some large pike. The surface of the parish is generally flat or gently undulating. Along the Clyde, in the extreme SW, it sinks to 32 feet above sea-level; and thence it rises gradually to 207 feet near Mount Vernon House, 356 near Westerhouse, 321 at Shawhead, 345 near Gartsherrie House, and 360 at Castlespails. Whether the fertility of its superficies, or the wealth of its mineral treasures be considered, Old Monkland is one of the most important and wealthy parishes in Lanarkshire. To quote the writer of the *Old Statistical Account*.—'A stranger is struck with the view of this parish. It has the appearance of an immense garden.' This account, penned nearly a century since, is still generally true, if we except the fact that improved culture has vastly increased the production of the soil, and that the rapid advance of population, the enormous progress of the mineral trade, and a perfect network of railways, have sadly marred those features of rural loveliness for which the district was formerly celebrated. Withal, there are few districts which combine so much of the attributes of country-life with the bustle and stir of manufactures; for the soil of Old Monkland is dotted at every little distance with the villas of the aristocracy of the western capital, with the blazing furnaces and tall chimneys of the iron and coal works, with belts of thriving plantation and clumps of old wood, with orchards, grassy holms, or waving grain, and with the homely farmsteads or lowly dwelling of the cottar. From the facilities of obtaining lime and manure, both by canal and railway, a soil—which is naturally fertile—has been improved to the highest degree; and the yearly value of the agricultural produce of the arable lands of the parish is superior to that of an equal extent of arable lands in most other parts of Scotland. The soil here, on the whole, is much more fertile than the soil above the coal measures in other parts of the country. The arable soil is of three kinds. That along the Calder and the Clyde is a strong clay, changed by cultivation into a good loam; that of the middle districts is a light sand, very fruitful in oats and potatoes; and that towards the N is mainly reclaimed bog or otherwise mossy. In the northern district, the coal crops out, and there are some 1500 acres of peat-moss. In Old, as in New, Monkland, flax used to be largely cultivated, some of the farmers having each as much as from 20 to 30 acres annually under that crop; but the system of agriculture now pursued on the best farms is a four-year rotation of potatoes or turnips, wheat, hay, and oats, with sometimes one year or two of pasture between the hay and the oats.

The parish, however, is chiefly remarkable for its working of coal and iron. In an account of it published before the beginning of the present century, one

reads: 'This parish abounds with coal; and what a benefit it is for Glasgow and its environs to be so amply provided with this necessary article! There are computed to be a greater number of colliers here than in any other parish in Scotland.' The progress in the coal-trade, since the period alluded to, has been almost magical; and as scarce a year passes without new pits being sunk, while the old ones continue in vigorous operation, it would seem that scarcely any limits can be set to the vast aggregate production. The pits have a depth of from 30 to 100 fathoms; and the principal working seams, according to the *New Statistical Account*, are as follow: '1. The Upper coal; coarse, and seldom workable; its average distance above the Ell-coal from 14 to 16 fathoms. 2. The Ell or Mossdale coal; 3 to 4 feet thick, of inferior estimation in this parish, and generally too thin to work; but in places a thick coal, and of excellent quality. 3. The Pyotshaw, or Rough-ell; from 3 to 5 feet thick, and from 7 to 10 fathoms below the Ell-coal. 4. The Main coal. It often unites with the above, and forms one seam, as at Drumpellier in this parish. These two seams are thus sometimes in actual contact, and in other instances separated by a wide interval of 6 or 7 fathoms. 5. Hump coal; seldom thick enough to be workable in this parish, and generally interlaid with fragments of freestone, about 10 fathoms below the main coal. 6. Splint-coal; about 4 fathoms below the Hump, and of very superior quality. It varies from 2 to 5 feet in thickness, and is mostly used for smelting iron. This seam, when of any considerable thickness, is justly esteemed, when got by the proprietors here, a great prize. 7. Little coal; always below splint, the distance varying from 3 fathoms to 6 feet. It is from 3 to $3\frac{1}{2}$ feet in thickness, and is a free, sulphury coal of inferior quality. 8. The Virtue-well or Sour-milk coal, from 2 to 4 feet thick, occurs from 26 to 28 fathoms below the splint. 9. The Kiltongue coal lies 22 fathoms below the Virtue-well, and, like it, is from 2 to 4 feet in thickness. 10. The Drumgray coal lies 6 fathoms below the Kiltongue, and perhaps from 60 to 100 fathoms above the first or upper band of limestone. It is seldom more than 18 or 20 inches thick. There are, besides these 10 seams, about 23 smaller seams between them, none of which are of workable thickness. The total thickness of the coal-measures above the lime may be about 775 feet.' The same account adds: 'This large and important coal-field is much intersected with dikes, and a knowledge of these is a knowledge of the strata, and of the manner in which they are affected by them.'

Still more than to its coal, however, is the parish of Old Monkland, in recent times, indebted to its ironstone and iron-works; although it is proper to mention that the ore for the supply of the latter is, to a great extent, drawn from New Monkland. The introduction of the hot air blast (1828), the increasing demand for iron for railway and other purposes, but, above all, the abundant possession of the most valuable of all the iron metals—the blackband—which contains so much coal as nearly to burn itself—are the main causes which have contributed to the almost unparalleled advance of Old Monkland in population and prosperity. To the burning of ironstone were added, in 1830 and the following years, works and machinery for the manufacture of malleable iron; and these have already risen to compare with the pig-ironworks, in the proportion of about 30 to 100 in the yearly value of their produce. Everywhere are heard the brattling of machinery, the sonorous stroke of mighty hammers, and the hissing and clanking of the steam-engine; and the flames which perpetually belch from the craters of its numerous furnaces, and for miles around light up the country on the darkest nights, have not inappropriately earned for Old Monkland the title of the 'Land of Fire.' Fortunes have here been realised in the iron trade with a rapidity only equalled by the sudden and princely gains of the adventurers who sailed with Pizarro to Peru. It is understood, for example, that the profits of a single establishment in this line during the year 1840, were nearly £60,000;

while little more than twenty years before the co-partners of this company were earning their bread by the sweat of their brow, in following the agricultural vocation of their fathers. The principal iron-works in the parish, or immediately adjacent to it, are those of Gartsherrie, Dundyvan, Monkland, Calder, Clyde, Summerlec, Carnbroe, and Langloan. The ironstone strata in Old and New Monkland—the strata from which the Monkland furnaces have their supply—are described in the *New Statistical* as follows: '1. The Upper blackband. It lies about 24 fathoms above the Ell-coal, as indicated in the succession of strata given above. It is of very local occurrence, like all the ironstones, and has only been found worth working at Palaeocraig. It is of inferior quality, and only about 18 inches thick. 2. The blackband, also called Mushet's blackband, from the name of its discoverer, Robert Mushet (1805). This is the great staple commodity for the supply of the iron-market, and when found to any extent is a certain source of wealth to the proprietor. Its average depth below the splint is about 15 or 16 fathoms; and it varies in thickness from 14 to 18 inches, and occupies an area of from 8 to 10 square miles. 3. Airdrie-hill blackband. In this property, which is in New Monkland, there is a band of ironstone, varying from 2 to 4 feet in thickness, lying about 3 feet below the blackband. It is found only in part of the lands of Airdrie-hill, and is by far the most local of all the ironstones.'

Several kinds of sandstone, and several varieties of trap, within the parish, are in great request for local building purposes, and have been largely quarried. The facilities of communication by road, railway, and canal, are remarkably great, having been multiplied and ramified in proportion to the large and rapidly increasing demands of the district for heavy traffic. The principal of them will be found described or indicated in our articles CALEDONIAN RAILWAY, MONKLAND CANAL, and NORTH BRITISH RAILWAY; whilst fuller information as to the various industries is furnished under BAILLIESTON, COATBRIDGE, GARTSHERRIE, GARTURK, etc.

Giving off the *quoad sacra* parishes of Baillieston, Bar-geddie, Coats, Gartsherrie, and Garturk, Old Monkland is in the presbytery of Hamilton and the synod of Glasgow and Ayr; the living is worth £500. The parish church, 1½ mile SSW of Coatbridge, was built in 1790 at a cost of only £500, and, as since enlarged, contains 902 sittings. A chapel of ease to it stands at Calderbank. The parish poorhouse accommodates 276 inmates; and 15 schools, with total accommodation for 6237 children, had (1883) an average attendance of 4917, and grants amounting to £448, 13s. 9d. Valuation (1860) £195,857, (1881) £160,013, 11s. 8d., (1884) £167,683, 2s. 6d. Pop. (1801) 4006, (1831) 9550, (1841) 19,675, (1861) 29,543, (1871) 34,073, (1881) 37,323, of whom 20,202 were males, and 13,471 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 31, 1867. See Andrew Miller's *Rise and Progress of Coatbridge and the Surrounding Neighbourhood* (Glasg. 1864).

Monkland Well. See MONKLAND, NEW.

Monklaw. See JEDBURGH.

Monk Myre, a lake (4 × 1 furl.) in Bendochy parish, Perthshire, 2½ miles SE of Blairgowrie. Originally a shallow reedy pool, covering a bed of rich marl, it was deepened into a lake by extensive digging for removal of the marl.

Monkkrigg, an estate, with an elegant modern mansion, in Haddington parish, Haddingtonshire, 1½ mile SSE of the town.

Monks Burn, a brook in Penicnik parish, Edinburghshire, rising among the Pentland Hills at an altitude of 1480 feet, and running 2½ miles south-by-eastward, till, after a total descent of 770 feet, it falls into the North Esk near Newhall, at the boundary with Peeblesshire, 4½ miles SW by W of Penicnik town. It enters the glen of the Esk in several considerable falls, amidst landscape of much beauty; is overlooked at its mouth, from the opposite side of the Esk, by a height called the Steel, said to have been so called from a skirmish on

it with a straggling detachment of General Monk's army; and seems to have got its own name from some association with General Monk.—*Ord. Sur.*, sh. 32, 1857.

Monks Island. See INCHTAVANNACH and MUCK.

Monkstadt, an old mansion in Kilmuir parish, Isle of Skye, Inverness-shire, near Columbkil Lake, 2½ miles S of Duntulm Castle. It was the seat of the Macdonalds, subsequent to their removal from Duntulm Castle; was occupied by Sir Alexander Macdonald at the time of Prince Charles Edward's disasters after the battle of Culloden; and was the place to which Flora Macdonald conducted the Prince, in the disguise of a maidservant, from the Outer Hebrides.

Monkton, a mansion in Inveresk parish, Edinburghshire, 2 miles SSW of Musselburgh. Its oldest part, now used as offices, is said to have been built by General Monk, who made it his favourite Scottish residence.

Monkton, a village and a coast parish of Kyle district, Ayrshire. The village stands 1 mile inland, and ½ mile E by N of Monkton station on the Glasgow and South-Western railway, this being 4½ miles N of Ayr, under which there is a post office. Pop. (1861) 403, (1871) 467, (1881) 354.

The parish, containing also the watering-place of Prestwick and half of the village of New Prestwick, since the close of the 16th or the beginning of the 17th century has comprehended the ancient parish of Prestwick Monachorum or Monkton, part of the ancient parish of Prestwick de Burgo, and the ancient chapelry of Crosby. Monkton proper lies in the middle, Prestwick in the S, and Crosby in the N; and the first got its name from its belonging to the monks of Paisley Abbey, the second from its being the 'habitation of a priest,' and the third from its having 'a dwelling at a cross.' The united parish of Monkton and Prestwick is bounded NW by Dundonald, NE by Symington, E by Craigie, SE by Tarbolton and St Quivox, SW by Newton-upon-Ayr, and W by the Firth of Clyde. Its utmost length, from N by E to S by W, is 4½ miles; its utmost breadth is 3 miles; and its area is 3971½ acres, of which 182 are foreshore and 20½ water. Rumbling Burn flows south-south-westward to the sea along all the Dundonald boundary, and a little above its mouth is joined by Pow Burn, which, after tracing part of the St Quivox boundary, strikes north-westward across the interior. The coast, 2½ miles in extent, consists of low flat sands, diversified only with sandy bent-covered knolls. The interior rises gently from the shore to 200 feet at the eastern boundary, but looks to the eye to be almost a dead level. Coal has not been worked for forty or fifty years; and sandstone is no longer quarried. The soil on the coast and over a considerable part of the southern district is light sand incapable of tillage; of the central district is deep rich loam; and of the N and NE is strong earthy clay. Nearly one-fourth of the entire area is pastoral or waste; some 65 acres are under wood; and the rest of the lands is in tillage. The roofless old church of Monkton, St Cuthbert's, is a structure of high antiquity, with walls nearly 4 feet thick, and is said to have been the building near which Sir William Wallace had the singular dream recorded by Blind Harry; the old church of Prestwick, St Nicholas, as ancient probably as that of Monkton, has stone buttresses at the E end, and serves as a landmark to sailors. St Ninian's leper hospital, at Kingcarse, between Prestwick and New Prestwick, was founded by King Robert Bruce; but only a well remains to mark its site. Mansions are Adamton, Fairfield, Ladykirk, and Orange-field; and 4 proprietors hold each an annual value of £500 and upwards, 7 of between £100 and £500, 6 of from £50 to £100, and 26 of from £20 to £50. Monkton and Prestwick is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £441. The parish church, midway between Monkton and Prestwick villages, was built in 1837, and then superseded the two old churches. One of the earliest efforts of the late David Bryce, R.S.A., it is a very handsome and conspicuous edifice, containing 825 sittings. Other places of worship are Monkton and Prestwick Free churches and Prestwick U.P. church (1884). Two public schools, Monk-

ton and Prestwick, with respective accommodation for 160 and 320 children, had (1883) an average attendance of 88 and 159, and grants of £64, 11s. and £120, 9s. Valuation (1860) £6985, 3s. 3d., (1884) £14,267, 8s. 4d., plus £2157 for railway. Pop. (1801) 986, (1831) 1818, (1861) 1973, (1871) 1744, (1881) 2121.—*Ord. Sur.*, shs. 14, 22, 1863-65.

Monktonhall, a hamlet in Inveresk parish, Edinburghshire, near the left bank of the river Esk, 1 mile SSW of Musselburgh.

Monkwood, a modern mansion in Maybole parish. Ayrshire, on the left bank of the Doon, $4\frac{1}{2}$ miles NNE of Maybole town.

Monquhitter, a parish of N Aberdeenshire, containing the villages of CUMINESTOWN and GARMOND, 6 miles E by N and 7 ENE of Turriff, under which the former has a post office. It is bounded N by King-Edward, E by New Deer and Methlick, S by Fyvie, and W by Turriff, from which last it was disjoined in 1649. Its length, from NNW to SSE, varies between $2\frac{3}{4}$ and $9\frac{1}{2}$ miles; its utmost width is $5\frac{1}{2}$ miles; and its area is 17,455½ acres, of which 22½ are water. Entering from King-Edward, the Burn of Monquhitter or IDOCH WATER flows $5\frac{1}{2}$ miles south-westward till it passes off into Turriff on its way to the Deveron; whilst Asleed or Little Water runs $7\frac{3}{4}$ miles southward along the eastern boundary on its way to the Ythan. Along Idoch Water the surface declines to 158 feet above sea-level; and hence it rises northward to 577 feet at the Hill of Cotburn, eastward to 586 at Waggle Hill, from which it again sinks south-south-eastward to 180 feet along Asleed Water. Much of Monquhitter is hilly, bleak, and barren of aspect, and even the rest presents a monotonous appearance, though culture and reclamation have done their best to render it pleasing and productive. Moors, bogs, and morasses were formerly very extensive, but have been greatly curtailed, and, with the exception of the deeper and firmer bogs, are fast approaching exhaustion as a source of fuel. Red sandstone abounds, and has been largely quarried, but does not form a good building material. The soils of the arable lands are a reddish loam and a deep black mould, both incumbent on boulder clay. But a small proportion of the parish is under wood, which does not thrive in any part of Buchan. Lendrum, in the SW corner, is the traditional scene of a three-days' battle between Donald of the Isles and the 'Thane' or Mormaer of Buchan in the latter half of the 11th century, when the Comyns are said to have won the victory. Down to at least 1793 it was firmly believed that corn growing on the 'bloody butts of Lendrum' could never be reaped without strife and bloodshed among the reapers. At Finlay's Mire some Covenants were cut off by the Ogilvies. Tillymaud and Northburn, with a rental of £1013, were vested in trustees by the late Messrs Chalmers for charitable purposes in Monquhitter and the city of Aberdeen. AUCHEY House (1767) is the chief mansion; and 4 proprietors hold each an annual value of £1000 and upwards, 6 of between £500 and £1000, 8 of between £100 and £500, and 3 of from £45 to £70. Giving off a portion to Millbrenx *quoad sacra* parish, Monquhitter is in the presbytery of Turriff and the synod of Aberdeen; the living is worth £315 (21 chalders). Previous to the Anti-patronage Act coming into operation, the Earl of Fife was patron of the church and parish; and Monquhitter was the last parish in which the right of presentation was exercised, on 29 Dec. 1874. The parish church, a plain edifice of 1868, stands on a slope to the N of Cuminstown, and contains 1050 sittings. A Free church (358 sittings) stands in a hollow to the S of Cuminstown, near whose centre is St Luke's Episcopal church (1844; 120 sittings). Three public schools—Garmond female, Greeness, and Monquhitter—and Balquhindachy proprietary school, with respective accommodation for 66, 120, 206, and 68 children, had (1883) an average attendance of 62, 82, 192, and 27, and grants of £54, 1s., £75, 4s. 8d., £181, 15s., and £18, 9s. 6d. Valuation (1860) £6185, (1884) £12,903, 2s. 10d. Pop. (1801) 1710,

(1831) 2004, (1861) 2580, (1871) 2949, (1881) 2794, of whom 2474 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 86, 87, 1876.

Monreith, an elegant modern mansion in Mochrum parish, SE Wigtownshire, $1\frac{1}{2}$ mile ESE of Port-William. White Loch ($4\frac{1}{2} \times 1\frac{1}{2}$ furl.) lies within the large and finely wooded park; and a 16th century cross, 7 feet high, has been placed in front of the house. Held by a younger branch of the Maxwells of Caerlaverock since 1481, Monreith is now the property of Sir Herbert Enstace Maxwell, seventh Bart. since 1681 (b. 1845; suc. 1877), who has sat as Conservative member for Wigtownshire since 1880, and who owns 16,877 acres in the county, valued at £15,290 per annum. The small village of Monreith is in Glasserton parish, at the head of little Monreith Bay, $2\frac{1}{2}$ miles SSE of Port-William and $5\frac{1}{2}$ W of Whithorn.—*Ord. Sur.*, shs. 4, 2, 1857-56.

Mons. See DALMENEY.

Montagu's Walk. See KINNOULL.

Montblairn, an estate, with a mansion, in Alvah parish, Banffshire. The mansion, on the left bank of the Deveron, $4\frac{1}{2}$ miles NNW of Turriff, was built in 1791 and enlarged in 1825. A handsome three-story edifice, it contains some interesting portraits, and has well-wooded grounds sloping down to the Deveron. The estate, which belonged in remote times to the Earls of Buchan and Mar, was sold by Major-General Andrew Hay (1762-1814) to the uncle of the late proprietor, Alexander Morison, Esq. (1802-79), who held 4154 acres in Banff and Aberdeen shires, valued at £3002 per annum.—*Ord. Sur.*, sh. 86, 1876.

Montcoffer, a seat of the Earl of Fife in the detached section of King-Edward parish, Aberdeenshire, on the right bank of the Deveron, 3 miles S of Banff. A fine old residence, it stands on the southern declivity of wooded Montcoffer Hill (346 feet).—*Ord. Sur.*, sh. 96, 1876. See DUFF HOUSE.

Monteith, a district of SW Perthshire. Excepting Balquhider parish, which anciently belonged to the stewartry of Strathearn, the district of Monteith comprises all the lands W of the Ochils in Perthshire, whose waters discharge themselves into the Forth. The vale of the Teith, whence the name is derived, occupies the central and larger part, but is flanked on the one side by the Perthshire section of the upper vale of the Forth, and on the other side by the lower part of the vale of Allan Water. The entire district measures about 28 miles in length from E to W, and 15 in extreme breadth; and includes the whole of the parishes of Callander, Aberfoyle, Port of Monteith, Kilmadock, Kincardine, and Leeropt, with part of the parishes of Kippen, Dunblane, and Logie. Large tracts of it are eminently rich in the finest elements of landscape. Previous to the abolition of hereditary jurisdictions, Monteith was a separate or independent stewartry. Forming with Strathearn the ancient province of Fortrenn, Monteith was the seat of an old Celtic earldom, whose first earl, Gilchrist, appears in the reign of Malcolm IV. (1153-65), and which, about the middle of the 13th century, passed by marriage to Walter Comyn, second son of the great Earl of Buchan. He was one of the regents of the kingdom at the time of his death in 1258, when the earldom was obtained by his brother-in-law, Walter Stewart, third son of the third High Steward of Scotland. Walter's great-great-granddaughter, Margaret, conveyed the earldom by marriage to Robert Stuart, Duke of Albany and Regent of Scotland, whose son and successor, Murdoch, was beheaded at Stirling in 1425. Two years later the earldom of Monteith was granted to Malise Graham, formerly Earl of STRATHEARN. His seventh descendant, William, for nearly two years was styled Earl of Strathearn and Monteith; but, on being deprived of those titles, in 1633 was created Earl of Airth and Monteith—a title dormant since 1694, but claimed by the Barclay-Allardice family. See Dr Wm. Fraser's *Red Book of Monteith* (2 vols., Edinb. 1880).

Monteith, Lake of, a placid sheet of water in the middle of Port of Monteith parish, SW Perthshire. Lying 55 feet above sea-level, it has an utmost length

from E to W of $1\frac{1}{2}$ mile, an utmost breadth from N to S of 1 mile, and a depth in places of 80 feet; and it sends off GOODIE WATER $3\frac{1}{2}$ miles east-south-eastward to the Forth. Its shores display none of the rude magnificence and grandeur that is characteristic of Highland scenery; but, on the other hand, they present an aspect of soft pastoral beauty which soothes the soul, and fills the contemplative mind with thoughts calm and quiet as its own transparent waters. The northern shore is beautifully adorned with oak, Spanish chestnut, and plane trees of ancient growth—survivors of those which adorned the park of the Earls of Monteith. On the same side, the manse and church of Port of Monteith, with the elegant mausoleum of the Gartmore family, seated close on the margin of the lake, increase the interest of the scene. The lake contains three islands, two of which, from the noble wood that adorns them, add greatly to the beauty of its expanse; whilst a long, narrow, wooded promontory running far into the water diversifies the southern shore. The largest island, called INCHMAHOME, has been noticed separately; that immediately to the W bears the name of Inch Talla or Earl's Isle. Here, from 1427, the Earls of Monteith had their fendal stronghold, the ruins of which still exist, comprising an ancient tower and some domiciliary buildings. The smallest island is called the Dog Isle, where the earls had their dog-kennel while the stables were situated on the western shore of the lake. Twice in Sept. 1869 Queen Victoria drove here from Inverrossachs. The trout-fishing is ruined by the pike.—*Ord. Sur.*, sh. 38, 1871. See P. Dun's *Summer at the Lake of Monteith* (Glasg. 1866); chap. xxv. of Thos. Hunter's *Woods and Estates of Perthshire* (Edinb. 1833); and other works cited under INCHMAHOME.

Monteith, Port of, a hamlet and a parish of SW Perthshire. The hamlet lies on the NE shore of the Lake of Monteith, 6 miles SSW of Callander, $4\frac{1}{2}$ E by N of Aberfoyle, and 4 NNW of Port of Monteith station, in Kippen parish, on the Forth and Clyde junction section of the North British railway, this being 13 miles W by N of Stirling, and $17\frac{1}{2}$ NE of Balloch. Erected into a burgh of barony by James III. in 1467, it long was called simply Port, as being the landing-place from Inch Talla and Inchmahome;* and has a little pier, a good hotel, and a post office under Stirling.

The parish, containing also the village and station of GARTMORE, since 1615 has comprehended the ancient parish of Port and a portion of that of LANY. It is bounded N by Callander, NE by Callander and Kilmadock, E by Kincardine (detached), S by Kippen and Drymen in Stirlingshire, SW by Drymen, and W by Aberfoyle. Its utmost length, from E to W, is $7\frac{1}{2}$ miles; its utmost breadth, from N to S, is 5 miles; and its area is $36\frac{1}{2}$ miles or 23,599 $\frac{1}{2}$ acres, of which 1361 $\frac{1}{2}$ are water. The FORTH has here a winding course of 13 $\frac{1}{2}$ miles—viz., 7 furlongs southward along the western border, 2 $\frac{1}{2}$ miles south-eastward across the south-western interior, and 10 $\frac{1}{2}$ miles eastward along all the southern border—though the point which it first touches and that where it quits the parish are but $7\frac{1}{2}$ miles distant as the crow flies. Kelty Water flows 2 $\frac{1}{2}$ miles east-northward along part of the Drymen boundary to the Forth, another of whose affluents, GOODIE WATER, goes 4 miles eastward from the Lake of Monteith ($1\frac{1}{2} \times 1$ mile; 55 feet) till it passes off into Kincardine. Loch DRUNKIE ($9 \times 7\frac{1}{2}$ furl.; 450 feet) lies on the boundary with Aberfoyle, and Loch VENNACHAR ($3\frac{3}{4}$ miles \times 5 furl.; 270 feet) on that with Callander; whilst in the NE interior are Loch Ruskie ($2 \times 2\frac{1}{4}$ furl.; 400 feet) and Lochan Balloch ($2\frac{1}{2} \times 1$ furl.; 1180 feet). The surface of the southern district is low and flat, sinking to 45, and rarely much exceeding 100, feet above sea-level; but N of the Lake of Monteith rise the Monteith Hills (1289 feet), Ben Dearg (1401), Ben Gullipen (1344), and Meall

nan Gobhar (812). This upland district, comprising one-third of the whole area of the parish, consists of a congeries of rocky and mountainous elevations, chiefly covered with heath, and admitting cultivation only in some confined hollows and along some narrow skirts. The SE corner comprises part of Flanders Moss, in all respects similar in character to the famous one of Kincardine. The rest of the parish, including the district along the Forth, consists of rich carse land towards the river, of 'dryfield' towards the hills, and presents an appearance of much fertility and high culture. The transition from the uplands to the lowlands of the parish is sudden and perfect. In the mountains is limestone of the quality of marble, having a blue ground streaked with white, which, when calcined, affords a quicklime of the purest white. A bluish grey sandstone occurs in the champagne district, close in texture, and very suitable for pavements and staircases. The soil of the carse lands is rich argillaceous alluvium; on most other lands of the champagne district is either a very fertile shallow loam, a stiff, intractable, tilly clay, a ferruginous and comparatively barren gravel, or a more or less fertile reclaimed swamp or meadow; on Flanders Moss and on two other smaller tracts is moss; and on the cultivable part of the uplands is chiefly reclaimed moor. An island in Loch Ruskie is the traditional site of a castle belonging to Sir John Monteith, Wallace's gaoler at DUMBARTON. Other antiquities are traces of a Roman road, defecting from the great Roman road to Brechin; vestiges of a Roman castellum at the north-western extremity of Flanders Moss; traces of an ancient military post on Keirhead, 1 mile NE of the castellum; and the ecclesiastical and baronial ruins on the islands in the Lake of Monteith. Tullimoss, to the NW of the Lake of Monteith, was the scene of a skirmish in 1489 between James IV. and the Earl of Lennox; and a spot called Suir, near Gartmore House, was the place where Rob Roy is said to have taken from the factor of the Duke of Montrose his collection of rents. From 1 to 10 Sept. 1869, the Queen, with the Princesses Louise and Beatrice, stayed at Inverrossachs, 'the recollection of the ten days at which—quiet and cozy—and of the beautiful country and scenery I saw in the neighbourhood, will ever be a very pleasant one' (pp. 116-147 of *More Leaves from the Journal of a Life in the Highlands*, 1884). Mansions are Blairhoyle, CALDROSS, GARTMORE, INVERTROSSACHS, Lochend (1715), and REDNOCK; and 6 proprietors hold each an annual value of £500 and upwards, 8 of between £100 and £500, 1 of from £50 to £100, and 5 of from £20 to £50. Giving off portions to the *quoad sacra* parishes of Gartmore, Norriston, and Trossachs, this parish is in the presbytery of Dunblane and the synod of Perth and Stirling; the stipend and communion elements have a value of £330. The parish church, at Port of Monteith hamlet, was built in 1878 in the Gothic style of the 13th century, and has a stained E window. Three public schools—Dykehead, Port of Monteith, and Ruskie—with respective accommodation for 66, 47, and 66 children, had (1883) an average attendance of 20, 26, and 33, and grants of £25, 17s., £32, 4s., and £38, 2s. 6d. Valuation (1860) £10,906, (1884) £12,649, 3s. 6d. Pop. (1801) 1569, (1831) 1664, (1861) 1375, (1871) 1243, (1881) 1175, of whom 60 were Gaelic-speaking, and 654 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 38, 39, 1871-69.

Monteviot, a seat of the Marquis of Lothian, in Craig parish, Roxburghshire, 2 miles E by N of Ancrum and 3 N by W of Jedburgh. It stands near the left bank of the winding Tweed, at the southern base of Peniel Heugh (774 feet), in a park of singular beauty, and is itself an imposing Gothic edifice, rebuilt in the course of the present century. At Monteviot died Miss Jean Elliot (1727-1805), author of the *Flowers of the Forest*, it then being occupied by her brother, Admiral Elliot. At Harestanes, within the park but in Ancrum parish, were remains of a stone circle till towards the close of last century; and a neighbouring 'serpent-mound,' being explored by Mr J. S. Phené, F.S.A., in

* The present minister, however, inclines to refer Port to the Latin *porta*, 'a gate, pass, or defile,' this parish being indeed a gate of the Highlands.

1872, was found to entomb two skeletons. See NEW-BATTLE and CRAILING.—*Ord. Sur.*, sh. 17, 1864.

Montgomerie. See COLLSFIELD.

Montgreenan, an estate, with a mansion and a railway station, in Kilwinning parish, Ayrshire, $3\frac{1}{2}$ miles ENE of Kilwinning town. Its owner, Robert Bruce Robertson-Glasgow, Esq. (b. 1842; suc. 1860), holds 2645 acres in the shire, valued at £2576 per annum.—*Ord. Sur.*, sh. 22, 1865.

Mont-Quhanie. See MOUNT-QUHANIE.

Montrave, a mansion of 1836 in Seconie parish, Fifeshire, 4 miles N of Leven. Its owner, John Gilmour, Esq., jun., of Lundin and Montrave, holds 2728 acres in the shire, valued at £5244 per annum. In 1877 a metal pot was found on the estate, containing 9615 silver coins—8675 of them English, of Edward I. and III. See LARGO.—*Ord. Sur.*, sh. 40, 1867.

Montrose, a parish containing a royal burgh of the same name, on the coast, at the NE corner of Forfarshire. It is bounded N by Logie-Pert parish and by Kincardineshire, E by the North Sea, S by Craig parish, and SW by Dun parish. The boundary with Kincardineshire has evidently followed the course of the North Esk river, but now, both above and below the bridge by which the coast road from Dundee to Aberdeen crosses the river, the line follows an old channel, in the former case to the S, and in the latter to the N, of the modern one. The boundary on the S is the river South Esk, and on the SW the eastern foreshore of the Montrave Basin, along the track of Tayock Burn, which enters it W of Newmanswells House, and then it follows the course of this stream for almost a mile to a point E of Newbigging. Elsewhere it is artificial. In shape the parish is, roughly speaking, a triangle with blunted corners, the sides being on the N, E, and SW. The greatest breadth across the N end, from the point on the W where Dun, Logie-Pert, and Montrose parishes meet to that on the E at the old mouth of the North Esk river, is $3\frac{1}{2}$ miles; the breadth, from the North Esk opposite Stone of Morpie (Kincardineshire) on the N to the South Esk at Montrave harbour on the S, is $3\frac{1}{2}$ miles; and the area is 4722·415 acres, of which 95·855 are water, 492·172 foreshore, and the rest land. All along the coast, between the rivers, a flat sandy beach is bounded by a line of sandhills from 20 to 30 feet high, covered with bent. Immediately within these is a belt of sandy undulating ground, with close short herbage, known to the N as Charleton and Kinnaber Links, and to the S as Montrave Links. From this the ground rises, at first gradually, but afterwards more steeply, to the W, the greatest height (317 feet) being reached near the W corner, to the W of Hillhead of Hedderwick. From this rising ground, sometimes known as Montrave Hill, along the lower slopes of which are the numerous villas and houses forming the village of Hillside, there is an excellent view of the Forfarshire and Kincardineshire Grampians; of the end of the vale of Strathmore, with its mansions and woodland; of the round tower and spires of Brechin, and the windings of the South Esk, down past the basin and on to the mouth below the town of Montrose. In the N, along part of the course of the North Esk, there are high wooded banks, while thriving plantations extend along the W side of the Links of Charleton and Kinnaber. The soil all over the links is sandy, and the shells show that the deposit is a modern one, so that within the recent period Montrave Basin must have been a bay. On the W side of the links is a raised beach of shingle, and to the W of this the soil is very fertile, being a strong clayey loam. A stiff underlying clay of marine origin, and containing remains of starfishes, is worked for the manufacture of bricks and tiles at Dryleys and Puggieston. The underlying rocks belong to the Lower Old Red sandstone formation. The drainage of the parish is carried off by the North Esk and the South Esk. The north-western part of the parish is traversed for over $2\frac{1}{2}$ miles by the Perth and Aberdeen section of the Caledonian railway system, and from Dubton Junction station a branch line, 3 miles in length, communicates with the town of Montrose

through the SW part of the parish. The Montrose and Arbroath section of the North British system, crossing the South Esk by a viaduct over $\frac{1}{4}$ mile long, passes by the NW side of the town, and, after a course of $2\frac{1}{2}$ miles, unites with the Caledonian system at Kinnaber Junction to the N. From this the Montrose and Bervie railway, also belonging to the North British system, branches off and runs parallel to the coast along the W edge of Montrose and Kinnaber Links, for a distance of 2 miles, till it crosses the North Esk. The parish is also traversed by the main road along the coast from Dundee to Aberdeen, which, entering at the SW corner of Montrose, passes through the town, and then along the W edge of Montrose and Kinnaber Links, parallel to the Montrose and Bervie railway, till it reaches Kincardineshire at the North Esk, which it crosses by a good stone bridge erected in 1775-80. There are also a number of good district roads, of which the principal are those to Brechin and to Fettercairn. Near the centre of the N border of the parish, 2 miles NNW of the town of Montrose, is Sunnyside Lunatic Asylum, erected at a cost of over £20,000, and subsequently enlarged, and with accommodation for over 400 patients. This institution originated with a Mrs Carnegie of Charleton, and the original building on the links, near the town, was erected in 1780-82. A royal charter of incorporation was obtained in 1810, and the present building was erected in 1860. It is supported by endowments and by fees received for patients, of whom the average number is about 470, about $\frac{1}{4}$ being pauper lunatics. The asylum, which is managed by a medical superintendent, a medical assistant, a steward, a matron, and a lady superintendent, is considered one of the best establishments of the kind in the country. Kinnaber, in the NE of the parish, is associated with the story of George Beattie, author of *John o' Arnha* [see ST CYRUS]. The industries are mostly connected with the town, but there is a bleachwork and mills on the North Esk, and brickworks at Dryleys and Puggieston. Besides the town of Montrose the parish has also, close to Dubton station, on the NW, the village of Hillside, which is mainly composed of villas. The mansions are Charleton House, Newmanswells House, and Rosemount House. Ten proprietors hold each an annual value of £500 or upwards, 49 hold each between £500 and £100, 99 hold each between £100 and £50, and there are a large number of smaller amount. The parish is in the presbytery of Brechin, in the synod of Angus and Mearns. The charge is collegiate, with two ministers; and the living is worth £530 a-year. The civil parish includes also the *quoad sacra* parishes of Melville (in the town of Montrose) and Hillside. Besides the church at the latter place, and those mentioned in connection with the burgh, the Free church of Logie-Pert is also just within the border of the parish, on the N. The landward school-board has under its charge Loanhead public school, which, with accommodation for 210 pupils, had (1883) an average attendance of 116, and a grant of £91, 15s. Landward valuation (1857) £5853, (1884) 49151, 13s., plus £3521 for railways. Pop. of parish (1755) 4150, (1801) 7974, (1831) 12,055, (1851) 15,668, (1871) 15,738, (1881) 16,303, of whom 7352 were males and 8951 females. Of the total population in the civil parish in the latter year 11,746 were in the ecclesiastical parish, while 3077 were in the Melville *quoad sacra* parish, and 1480 were in Hillside *quoad sacra* parish.—*Ord. Sur.*, sh. 57, 1868.

Montrose (Gael. *All-moine-ros*, 'the burn of the mossy point'), a seat of manufacture, a seaport, and a royal burgh in the parish just mentioned, at the mouth of the South Esk. It is, by the Caledonian railway, $9\frac{1}{2}$ miles E of Brechin, $21\frac{1}{2}$ NNE of Arbroath, 38 NE of Dundee, 42 $\frac{1}{2}$ SSW of Aberdeen, 53 $\frac{1}{2}$ ENE of Perth, 116 $\frac{1}{2}$ ENE of Glasgow, and 123 NNE of Edinburgh *viâ* Stirling. By the North British railway it is 13 $\frac{1}{2}$ miles from Arbroath, 30 $\frac{1}{2}$ from Dundee, and 76 from Edinburgh *viâ* Broughty Ferry and Burntisland. It is the terminus of the Caledonian branch line from Dubton, and of the Montrose and Bervie line as well as a main station on

the Montrose and Arbroath railway. The site of the town is a peninsula jutting southwards, bounded on the E by the sea, and on the S and W by the waters of the South Esk. Except for the low sand-bank along the edge of the links, the ground is almost entirely level. To the W of the town the river expands into a broad tidal loch known as the Montrose Basin and measuring 2 miles by 1½ mile. At high water the whole area is covered, but at low water by far the greater portion becomes an unsightly expanse of mud. As the channel to the NE of the town is only from 115 to 130 yards wide, the tidal current sets up and down with great swiftness—often from 6 to 8 miles an hour; but this rush of water is beneficial, as its force clears off deposits from the town, and prevents the formation of any considerable bar across the mouth of the river. In 1670, by running a dyke from near the Forthill along the bank of the South Esk towards Dun, an attempt was made to drain and add to that estate some 2000 acres, but the bulwark—known as the 'Drainer's dike'—had hardly been completed when it was breached and destroyed by a violent storm, traditionally said to have been raised by Meggie Cowie, one of the last local witches. A small portion of the area has, within the last five years, been reclaimed by the Montrose and Arbroath railway company. The basin is frequented by wild geese, ducks, and other aquatic birds. Although complaints of damp sometimes arise, neither the flatness of the site nor the large expanse of water around seem to have an injurious effect on the health of the inhabitants. The almost insular situation makes the climate very mild; and the basin at high water adds materially to the beauty of the neighbourhood.

History.—The origin of the name of Montrose has given rise to many conjectures—*Mons Rosarum*, the French *Mons-trois* ('three hills'), the British *Manterrose* ('the mouth of the stream'), the Gaelic *Mon-ross* ('the promontory hill'), *Moin-ross* ('the promontory of the moss'), and *Meath-an-ross* ('the field or plain of the moss'), have all been brought forward, but the most likely seems to be that at the beginning of the article, which connects the name first with Old Montrose and so with Montrose, and seems also to account for the tradition (certainly unfounded), that the town at first stood at the former place. According to Boece the original name of the town was *Celurca*, but this seems rather to have been a contiguous place, as both Montrose and *Salork* are mentioned in a charter in the time of Malcolm IV., and again in the time of William the Lion. All trace of the latter is now gone, but it was possibly higher up the basin than Montrose. Of the origin of the town nothing is known, but it has a high antiquity, for as early as the 10th century, when the Danes found the estuary a convenient anchorage, there was, according to Boece, a town here, and in 980 the inhabitants were massacred by a band of these searovers. In the 12th century, under Malcolm IV., we find that mills and saltpens had been established, and his successor, William the Lion, lived in the castle from time to time between 1178 and 1198. In 1244 the town was burned, and at that time it seems to have been one of the considerable places of the kingdom. When it obtained burghal privileges is not known, but probably in the time of David I. At any rate, burgesses of Montrose are mentioned in 1261-62, and in 1296 twelve burgesses went to Berwick, and in presence of Edward I. took the oath of allegiance on behalf of themselves and the burgh. Edward himself was in Montrose the same year, from the 7th till the 12th July, when he lived at the castle which then stood on the Forthill. According to Wyntoun, Blind Harry, and Balfour, it was here that John Balliol 'did render quietly the realm of Scotland as he that had done amis.'

'This John the Balliol, on purpous
He tuk and brocht hym til Munros,
And in the castell of that town,
That then was famous in renown,
This John the Balliol dyspoyled he
Of all his robys of ryalite.'

But this is a mistake, for, though the ceremony took place while Edward was here, the scene was at Stracathro, whither Edward went for the purpose, returning the same day. The castle was captured by Wallace in the following year, and seems to have been completely destroyed, for there is no more word of it.* Wallace landed here on his return from France:—

'Eaith Forth and Tay thair left and passy by
On the north cost [quod] Guthrie was thair gy,
In Munros hawayn thair brocht bym to the land.'

and, according to Froissart, Montrose was the port whence Lord James Douglas, at the head of a brilliant retinue, embarked in the spring of 1330 to fulfil the last charge of King Robert Bruce to carry his heart to Jerusalem and deposit it in the holy sepulchre. This, however, is against the testimony of the Scottish historians, particularly Barbour, who says Douglas sailed from Berwick. In the rolls of the parliament, held in Edinburgh in 1357 to arrange the ransom of David II., Montrose occupies the central position among the royal burghs, eight preceding and eight following it, and would therefore appear to have, at that period, attained considerable consequence. Subsequently, in the same year, John Clark, one of the magistrates, was among those who became hostages for the payment of the ransom. In 1369, David himself visited the town; and when the truce made between France and England in 1379 was renewed in 1383, with the stipulation that Scotland should be included if that country wished, a band of thirty distinguished French knights, who came to Scotland in the hope of the war going on, landed at Montrose and passed S by Perth to Edinburgh. During the 15th century the inhabitants had a bitter feud against the Erskines of Dun, seemingly on account of oppression endured at their hands, but this was changed by the well-known laird who figured among the Reformers, and who possessed great influence in the town, and established there a school where the Greek language was taught for the first time in Scotland by Pierre de Marsiliers, who had been brought by Dun from France in 1534. In 1548 the English fleet, which was sailing along the coast doing whatever mischief was possible, made a night attack, but the landing parties were, after a stiff struggle, beaten back by the inhabitants with Erskine at their head. Influenced, no doubt, by such a leader, and probably also prepared for the reception of the new views by their trading intercourse with the Continent, and particularly with Holland, the people early embraced the doctrines set forth by the Reformers. The spread of these must have been greatly aided by the teaching of George Wishart, who seems to have been first a pupil of, and then assistant to, Marsiliers, and who taught and circulated the Greek Testament so extensively among his pupils, that in 1538 the Bishop of Brechin summoned him to appear on a charge of heresy, and he had to flee to England. He returned in 1543, and for a time preached and taught openly 'in Montros within a private house next unto the church except one.' When he had again to flee, the people, determined to have what they wished, got another preacher named Paul Methven, originally a baker in Dundee, who, we are told, having administered the sacrament 'to several of the lieges in a manner far different from the Divine and laudable use of the faithful Catholic church, was denounced rebel and put to the horn as fugitive' in 1559, while the inhabitants were ordered to conform to the old state of things and to attend mass. Andrew Melvil, who was born at Baldozie in the adjoining parish of Craig, was one of Marsiliers' later pupils, and his nephew James Melvil, who has in his *Diary* left an interesting account of his

* The castle seems to have been the royal residence when William the Lion was at Montrose, and Edward I. lived there, but there is no record as to where David II. resided. In 1488 the grant by James III. to David Lindsay, Earl of Crawford, of 'the loftier title' of Duke of Montrose, mentions no castle but only the 'Castled', which would seem to imply that the castle was a ruin, or had altogether disappeared. The site was at the Forthill, near where the Infirmary now stands.

studies, was also educated here, but the teacher then (1569) was Mr Andrew Milne. The first minister, after the Reformation, was 'Mr Thomas Andersone, a man of mean gifts bot of singular guid lyff'; and the second was John Durie, who would seem to have been one of the stirring men of the time, for his future son-in-law, James Melvil, describes him on the occasion of their first meeting, when Durie was minister of Leith, as 'for stoutness and zeall in the guid cause mikle renouned and talked of. For the gown was na sooner af, and the Byble out of hand fra the kirk, when on god the corslet and fangit was the hagbot and to the fields!' Before his death, too, in 1600, he had received in favour of himself, his wife, and his son, or the longest liver of them, a pension in consideration of 'the greit lang and ernst travellis and labouris sustenit in the trew preaching of Goddis word, besydes the greit charges and expenses, maid he him thir mony zeiris bygane in advancing the publick affayres of the kirk—thairwithall remembering the greit household and familie of bairnis quhairwith he is burdynit.' His death took place just immediately before the meeting of the General Assembly of 1600, which was held at Montrose in March in presence of the king, who was busy trying to force on his scheme of Episcopacy. One of the great struggles was about the sitting of the bishops in parliament, but on this and other points the Episcopal party were worsted, chiefly by the influence of Andrew Melvil, who 'remanit in the town all the whyll, and furnisit arguments to the Breithring, and mightelie strytnhed and incuragit tham.' When reproached by the king for coming, he, 'effir the auld maner dischargit his conscience,' and said, 'Sir, tak yow this head, and gar cut it af, gif yie will; yie sall sooner get it, or I betray the cause af Chryst.'

The great Marquis of Montrose was born at Old Montrose in MARYTON parish; but some of his dealings with the neighbouring town of Montrose were of doubtful advantage thereto. In 1644, while he held Aberdeen for the king, a party of his men, headed by Alexander Irvine, younger of Drum, 'passit all over Die, intending onlie to go to Montroiss and to tak the tua brassin cartowis lying thair, if thay war not impedit; . . . and upone Wednesday the 24th of Aprile, be tua hours in the morning, with sound of trumpet they cam to the town, who had set on fyres upon thair steepl to walkin the countrie, and wes in armes thame selfis, and rang the commoun hell, bot all for nocht. Thay boldie enterit Montross, dang the toune's peple fra the calsey to thair houssis, and out of the foirstaires they schot desperately, bot thay war forssit to yeild by many feirfull schotes schot aganes thame; quhair unhappelie Alexander Peirson, one of thair balleis, wes slayne, sum sayes by Nathaniell Gordoun, utheris holdis by ane hieland man, whom the said baillie also slew. Thairefter, it wes said, thay intendit to schip thir cartowis in ane schip lying in Montroiss water, pertening to Alexander Burnet, elder in Abirdene, be consent of Alexander Burnet, his sone, who happit to be thair, and had promesit no less, being ane antecovenanter. Bot, by this Burnetis knowlege, James Scot, now prouest of Montross, with certane of his neighbouris, had quietly conveyit thame selfis with thair best goodis into the said schip. When seho began to fleit, scho drawis nar the schoir, quhair young Drum and his men war thinking to schip thair cartowis, according to Alexander Burnetis promeis fairsaid, and to haue had thame about be sea to Abirdene. Bot, for by thair expectation, this schip schot fyve or six peice of ordinans disperatit amongis thame, with about fourtie muscattis, quhair, by the gryte providens of God, thair wes bot onlie tuo men killit and sum hurt. Drum seeing this, thay returnit thame selfis, brak the quheillis of the cartowis, for moir thay culd not do, nor brak them thay nicht not, and threw thame over the schoir, to mak them unserviceable. Drum returnis to the toune, and beginis to brak wp merchand bootis, plunder, and cruellie spolzie ritche merchandice, clothis, silkis, velvotis, and uther costlie wair, silver, gold and silver wark, armes, and all uther

thing, quhairt the hieland men wes not slow. Thay brak wp a pype of hispanil wyne and drank hartfullie. Thay took Patrik Lichtoun, lait prouest, and Andrew Gray, prissoneris. They left Montroiss in woful cace, about tuo efternone. . . . Thay wes takin 32 hieland men—sum sayis 52—who had unwyslie biddin behind the rest, plundering the Montross goodis, and is takin, schaklit, and sent to Edinbrough to pay for thair faultis. It is heir to be nottith that, notwithstanding of the many schotis schot within the toune and out of the schip, yit it pleissit God that few wes killit to Drumis syde, except tua or thrie persones, mervallous to sie! and als few to the uther syde, except Alexander Peirson, baillie, who wes schot be Nathaniell Gordoun. Thair intencion wes to haue schippit thir cartowis within the foirsaid schip, to haue brocht about when seho cam with hir lading to Abirdene; bot thay gat ane cruell assault, as ye haue befor, and wes nichtellie disapoyntit. The Tutor of Struan, with sum hieland men, did brave service with thair schort gunis. It is said that Drum causit rais fyre tua severall tymes in Montross, yit Major Gordoun still quenshit and pat out the samen.' Again, in 1645, while the marquis and Baillie wer keeping one another, so to speak, in sight, the royalist cavalry wer ordered to Montrose, 'with charge to tak thair intertynement, bot no moir. Thay took the same, and wyne aneuche, but did no moir harme to the toune.'

James Melvil mentions 'a pest quihik the Lord, for sinne and contempt of his Gossell, sent upon Montros' in 1566; and from May 1648 till February 1649 the plague again desolated the town, driving crowds to the country in panic, and making such fearful havoc among those who remained, that a large tumulus is pointed out on the Links, immediately NE of the town, as the place where many victims to it wer interred. In spite of all these misfortunes, the place continued to prosper; the enumeration of the articles in the merchants' booths plundered by Montrose's men, and mentioned above, would indicate a considerable trade; and a long, contemporary account of it, in the 17th century, describes it as 'a very handsome well-built toune, of considerable trade in all places abroad; good houses, all of stone, excellent large streets, a good tolbuith and church, good shipping of their own, a good shore at the toune, a myle within the river South Esk. . . . It is a very cheap place of all things necessary except house-rent, which is dear, by reason of the great distance they are from stones, and makes their buildings very dear.' There wer then on the outskirts 'malthouses and kilns and granaries for cornes, of three storeys high, and some more, and are increased to such a number that in a short time it is thought they will equal if not exceed the toune in greatness. . . . They haue a good public revenue, two wind-milnes, ane hospitall with some mortifications belonging to it; they are mighty fyne burgeses and delicate and painfull merchants. There haue been men of great substance in that toune of a long time, and yet are, who haue and are purchasing good estates in the countrie. The generalitie of the burgeses and merchants doo very far exceed these in any other toune in the shire.* About this time, too, the neighbourhood was highly esteemed for its beauty, which was celebrated in Latin verse by John and Arthur Johnston; while Franck, in his *Northern Memoirs* (1658), declares (he must surely have found the fishing in the neighbourhood very good) that it is 'a beauty that lies concealed as it were in the bosom of Scotland, most delicately dressed up and adorned with excellent buildings, whose foundations are laid with polished stone, and her ports all washed with silver streams that trickle down from the famous Ask.'

* The 'wind-milnes' must have been deemed of some importance, for in the beginning of the 18th century one of the citizens named John Young was sent by the magistrates to Holland to learn the best known methods of constructing and working windmills; and after his return he was the only person to be found in Scotland who understood the management of pumps in coalworks. In an 18th century print a windmill standing to the S of the Steeple, probably about the site of the present Infirmary, forms a prominent feature.

The church became a collegiate charge shortly before the Revolution, the inhabitants agreeing to tax themselves for a stipend to the second minister. This was during the time of the last Episcopal clergyman, David Lyell, who had been a presbyterian, but had conformed. He does not seem to have found his conscience quite easy under the change, or, at any rate must have harped uncomfortably over it, for, 'some days before his death, as he was walking in the links about the twilight, at a pretty distance from the town, he espied, as it were, a woman all in white standing not far from him, who immediately disappeared, and he, coming up presently to the place, saw nae person there, though the links be very plain. Only casting his eye on the place where shee stood, he saw two words drawn or written, as it had been with a staff upon the sand, "Sentenced and condemned;" upon which he came home pensive and melancholy, and in a little sickens and dyes.'

On 21 Dec. 1715 the vessel in which the Chevalier had sailed from France made its appearance off Montrose, where probably a landing would have been made had it not been for the appearance of a ship which was suspected to be a man-of-war. On this account sail was made to the northward, and the actual disembarkation took place at PETERHEAD. In the following year, however, when all hope of success had vanished from the minds of the Jacobites, their forces in the retreat from Perth reached Montrose, where previous arrangements had been made for James to escape to France. Though the matter was kept a profound secret, a rumour of it had got spread abroad among the soldiers, and in order to allay suspicion, the royal baggage had to be sent forward with the main body of the army during a night march towards Aberdeen. James himself had his usual guard paraded before the door of the house where he was, as if for his departure, but slipping quietly out by a back door, he joined the Earl of Mar, and both passed through the gardens to the water's edge, where a boat was ready to carry them on board ship. The house where he had spent the day—and which is said to have been the same as that in which the Marquis of Montrose was born—has long been gone. It was the town house of the Duke of Montrose, and stood behind Peel's monument at the S end of High Street. It was here that James wrote to the Duke of Argyll expressing his regret at the misery caused by some of his operations, and telling how he had left a sum of money to make good the losses sustained. 'Among the manifold mortifications I have had in this unfortunate expedition, that of being forced to burn several villages, etc. as the only expedient left me for the publick security was not the smallest. It was indeed forced upon me by the violence with which my rebellious subjects acted against me, and what they, as the first authors of it, must be answerable for, not I; however, as I cannot think of leaving this country without making some provision to repair that loss, I have therefore consigned to the Magistrates of — the sum of — desiring and requiring of you, if not as an obedient subject, at least as a lover of your country, to take care that it be employ'd to the design'd use, that I may at least have the satisfaction of having been the destruction and ruin of none, at a time I came to free all.' The letter was given to the officer left in command of the army, General Gordon, with instructions to fill up the blanks with the name of the town and the sum, before forwarding it to the Duke of Argyll, the money being the amount left over after providing for the subsistence of the army.

For a short time in 1745 the Royalists had their quarters here, but they were driven out by the Jacobites, whose influence in the neighbourhood seems then to have been considerable. The 'Hazard,' a sloop-of-war of 16 guns and 80 men, was then sent to regain the position, and entering the basin commanded the town with her guns, so that the anti-Government party were compelled to retire. Captain David Ferrier of Brechin, the Jacobite deputy-governor, was not, however, so easily dispossessed of his prize, for entering the town at night

he took possession of the island of Inchbrayock, and erected an earthwork to protect his men. The same afternoon a French vessel, which was coming in with troops, was run on shore out of reach of the 'Hazard's' guns, her cannon were dragged to land and mounted at the island, and the fire opened from these at last compelled the government ship to surrender. The 'Hazard' proved for a time serviceable to Prince Charles Edward, but early in the following year she was driven ashore at the Bay of Tongue and lost to the Jacobites, as was also a large sum of money then on board. Admiral Byng came to avenge her capture, but had to confine himself to sinking the long boat of a French vessel that was lying off the coast. In 1746 the Duke of Cumberland passed through the town—the site of the house where he slept being now occupied by the National Bank—and a garrison was posted at the place, notwithstanding which, on 10 June (the anniversary of the old Chevalier's birthday), the Jacobite ladies showed their constancy by wearing white gowns, while the boys made bonfires along the streets. The officer in command of the station overlooked the matter, as he had no wish to punish ladies and children, but Cumberland with his usual vindictive cruelty had him deprived of his commission, and threatened to cause the children to be whipped at the cross to frighten them from their bonfires, a threat which he is actually said to have had carried into execution in some cases, it being alleged that one of the culprits so treated was Coult's, afterwards the great London banker.

In 1773 Montrose was visited by Dr Johnson and Boswell on their way from Edinburgh to the Hebrides. 'We found,' says Boswell, 'a sorry inn where I myself saw another waiter put a lump of sugar with his fingers into Dr Johnson's lemonade for which he called him "Rascal!" It put me in great glee that our landlord was an Englishman. I rallied the Doctor upon this, and he grew quiet. . . . Bef-er brakfast [the next morning] we went and saw the town-hall, where is a good dancing-room and other rooms for tea-drinking. The appearance of the town from it is very well; but many of the houses are built with their ends to the street, which looks awkward. When we came down from it I met Mr Gleig, a merchant here. He went with us to see the English chapel. It is situated on a pretty dry spot, and there is a fine walk to it. It is really an elegant building, both within and without. The organ is adorned with green and gold. Dr Johnson gave a shilling extraordinary to the clerk, saying, "He belongs to an honest Church." I put him in mind that Episcopal were but dissenters here; they were only tolerated. "Sir," said he, "we are here as Christians in Turkey." The Doctor himself records his impression briefly. "We travelled on to Montrose which we surveyed in the morning, and found it well built, airy, and clean. The town-house is a handsome fabric with a portico. We then went to view the English chapel, and found a small church, clean to a degree unknown in any other part of Scotland, with commodious galleries; and what was yet less expected, with an organ." The town in those days seems to have had a number of beggars, for in the passage immediately following, Johnson remarks that when he had proceeded thus far he had opportunities of observing what he had never heard, 'that there are many beggars in Scotland,' though, to their credit be it said, that they solicited 'silently or very modestly.' The English Episcopal Church that is mentioned is St Peter's, which was founded in 1722, but was unfortunately burned down in 1857, just after it had been repaired.

Except a visit from Burns in 1787, and another from the Queen, who took train to Perth from a temporary station near the present Victoria Bridge, on her return from Balmoral in 1848, the town may be said to have no later history. Although since the latter part of last century it has had less increase of population and less growth of trade and industry than most towns of its class and in its position, it has yet thriven in a steady way that is perhaps better than sudden bursts of pro-

spirit would have been, and there is but little sign of the fulfilment of the old rhyme:—

' Bonnie Munross will be a moss:
Dundee will be dung donn;
Forfar will be Forfar still;
And Brechin a braw burgh town.'

The town was the birthplace of Robert Brown (1773-1858), the eminent botanist; Joseph Hume (1777-1855), politician and reformer; Sir Alexander Burnes (1805-41), Asiatic scholar and traveller; Sir James Burnes, his elder brother, who also distinguished himself in India; Sir James Duke (1792-1873), Lord Mayor of London in 1848-49; Sir William Burnett, the inventor of the process known as 'Burnettising' for deodorising bilge water and preserving timber from rotting; and George Paul Chalmers, R.S.A. (1836-78). Alexander and James Burnes were sons of a cousin of Robert Burns, and the former was killed at Cabul, where he was political resident. Old Montrose has given to the family of Graham the successive titles of Earl (1505), Marquess (1644), and Duke (1707) in the peerage of Scotland. This family can be traced back to 1128, when William de Graham witnessed a charter of King David I. to the monks of Holyrood. The early members of the race were all distinguished for their bravery. The first of them connected with Forfarshire was Sir David Graham, who obtained a grant of Old Montrose from Robert I. The first Earl was killed at Flodden, and the third was appointed Viceroy of Scotland in 1604. The first Marquess was James, who figures so prominently in the time of Charles I. His son and successor, who was restored to the title and the estates in 1660, was known as the 'Good Marquiss.' Viscount Dundee was sprung from a branch of the same family. The dukedom was conferred on the fourth Marquess as a reward for his steady support of the Union. The family has long ceased to have any connection of interest with either the town or neighbourhood. Their present seat is Buchanan Castle, Stirlingshire.

Streets and Public Buildings.—The town has two principal lines of street running in a general direction from N to S. That to the W is the principal, and from N to S has the names of Northesk Road, The Mall, Murray Street, and High Street; that to the E is known to the N as Mill Street, and to the S as Baltic Street and Apple Wynd, and is mostly very irregular and narrow. On the W side of High Street a fine wide street—Hume Street—was formed in 1880 to give access to the new station of the Montrose and Arbroath section of the North British railway system. High Street is continued westwards to the river by Castle Street and Upper Fishergate, much improved in recent years, but still of unequal width, narrow, and winding. To the W of this, branching off also from High Street, is the wide modern Bridge Street. Along the side of the river is Wharf Street, eastward of which, towards the old station and harbour, are Hill Street, Commerce Street, Ferry Street, and River Street. Eastwards of Baltic Street and Mill Street is an open space, partly laid out as public gardens, which is known as The Middle Links, about which are a number of excellent houses. The chief cross streets from E to W are Broomfield Road at the extreme N end of the town, Rosehill Road at The Mall, and John Street off High Street and continued across the Middle Links by Union Street. The line by Bridge Street or Castle Street, High Street, Murray Street, The Mall, and Northesk Road lies along the main coast road from Dundee to Aberdeen.

Till near the end of last century the traffic was conveyed across the South Esk by ferry-boats crossing the river between FERRYDEN and the harbour, but the road was then diverted to the westward, and bridges constructed between Montrose and INCHBRAYOCK,* and across the south channel between Inchbrayock and the S bank of the river. The bridge over the south channel was a substantial stone structure and still remains, that over the main channel was a heavy timber bridge, erected in 1793-96, and deemed a wonderful structure.

* So named from an old church dedicated to St Enoch.

One of the openings was moved like a drawbridge, in order to allow of the passage of ships up the river. In consequence, however, of an ill-advised narrowing of the channel at its site, the rapid current soon carried away the old bed of the river, and threatened to sweep away the foundations of the bridge; and after various expedients had been tried to prevent its destruction, it eventually became a piece of mere shaking patchwork, and was condemned. In its place it was determined to erect a suspension-bridge, and this, designed by Sir Samuel Brown, R.N., and founded in Sept. 1828, was finished in Dec. 1829 at a cost of £23,000. The distance between the points of suspension is 432 feet, and the total length, including approaches, is about 800 feet. The towers are 23½ feet high from foundation to roadway, and 71 feet high altogether; 39½ feet wide at the roadway; and each is pierced by an archway 18 feet high and 16 wide. At a distance of 115 feet from the towers are the chambers where the ends of the chains are secured. The chains themselves, which are double, and 1 foot apart, are made of the best cable iron, with bars 8 feet 10 inches from centre to centre, and the joints of the upper main chains over the middle of the bar in the lower. The suspending rods are 5 feet apart. In 1838, on the occasion of a boat-race in the river, a large crowd on the bridge rushed from one side to the other, and the sudden strain, owing to some imperfection in one of the saddles on the top of the north tower, causing the upper chain on one side to give way, it fell on the lower chain, killing several people. Had not the under chain proved sufficiently strong to support the sudden strain, the whole crowd would have been precipitated into the water. The bridge was speedily repaired, but in October the same year a violent south-westerly gale produced such violent vibrations as to tear up, destroy, and throw into the river about two-thirds of the roadway. The main chains, however, remained uninjured, but repairs were necessary to the amount of £3000. Hitherto the lateral oscillation in the centre had been as much as from 3 to 4 feet, but now, by the introduction of new supports, designed by J. M. Rendal, London, this was reduced so as not to exceed 3 or 4 inches. A portion of the roadway at each side, reserved for foot-passengers, is railed off from the carriageway by longitudinal timber traverses, which so abut upon the towers, and extend above and below the roadway, as to thoroughly stiffen the whole structure. When this bridge was first erected, the centre span of the stone one, across the south channel, was taken down and replaced by a draw-bridge to allow vessels to pass up to Old Montrose, but it is hardly ever used. Financially the suspension-bridge has always been in difficulties, for, notwithstanding the postage income, there still in 1871 remained a debt of more than £18,000, and as the revenue derived from tolls was then threatened with a great reduction, should the proposed formation of a direct Montrose and Arbroath railway be proceeded with, the company promoting that line became bound to pay annually £983, 6s. in perpetuity as compensation for the anticipated loss. When the Roads and Bridges Act came into operation in 1883 the postage was finally abolished. Whilst the foundations of the northern towers were being dug, a large number of human bones were found in the small eminence close by, on which the castle stood, and which is known as the Castlehill or Forthill. A short distance up the river from the suspension-bridge is the viaduct by which the Arbroath and Montrose railway crosses the South Esk. It was designed by Mr W. R. Galbraith, and is 475 yards long. There are 16 spans, the one at the S side being 63 feet wide, the two at the N side respectively 54 feet and 57 feet 6 inches, and the others 96 feet. The girders are supported on double cylindrical piers sunk in the bed of the river to an average depth of 18 feet, 7 feet 6 inches in diameter up to low water, and thence 5 feet in diameter. It was erected in 1882-83 to replace the original viaduct constructed in 1878-80, somewhat on the same plan as the Tay Bridge; but after the disaster to that structure, although it was used for goods traffic, the Board of Trade refused to grant it the

necessary certificate for passenger traffic, and it was removed. Across the south channel there is a brick viaduct of 16 arches.

The infirmary, near the N end of the suspension-bridge, was originally connected with the old lunatic asylum noticed in the account of the parish. It afterwards became separate, and the present building, erected in 1837 at a cost of £2500 and enlarged in 1865, includes a fever ward, a small-pox ward, and a dispensary. It is under the charge of the same directors as the lunatic asylum, and the average annual number of patients is over 400.

High Street was, till 1748, divided along the centre into two streets by a row of houses called Rotten Row, but it is now a wide handsome open thoroughfare. Many of the houses still present their gables to the street, but these older features are slowly disappearing. Projecting into the street towards the S end is the town-hall, erected in 1763, and with an upper story added in 1819, a plain building, with arcaded basement and a pediment containing an illuminated clock. It contains a council-room, a guild-hall, a court-room, a coffee-room, a reading-room, and a large apartment used as a public library (founded in 1785; annual subscription one guinea). There is an extensive collection of books amounting to over 19,000 volumes. Besides this there is a trades' or mechanics' library with 7000 volumes (founded 1819; annual subscription 4s. 4d.) and a grammar school library, founded in 1686, and containing many old and rare books. The old Trades' Hall on the E side of High Street, a short distance N of the town-hall, is now known as the Albert Hall. The statues close by are those of Sir Robert Peel, erected in 1855; and of Joseph Hume, M.P.—a native and for some years member for the Montrose district of burghs—erected in 1859. The prison to the S of the town-hall superseded a disgraceful old jail in the Steeple with only two or three miserable cells. Built in 1832, it has become almost useless in consequence of the transference of all long-sentence prisoners to the prison of Dundee, though those with sentences of not more than 14 days are still kept here, and part of it is used as a police court-room.

There seems to have been a parish church as early as the 13th century, but the present building, which is immediately E of the town-hall, was erected in 1791 on the site of an older church, and measures 98 by 65 feet. It is one of the largest in Scotland, the double tier of galleries and area containing 2500 sittings. The square steeple of the older church with its octagonal spire formed a prominent feature in old views of the town. The spire was of later date, having been added in 1694—the date on the vane now in the museum. It was in it that Thomas Forster, a priest, met his death at the hands of John Erskine of Dun, a circumstance that led to the young laird's retirement to the Continent for a season, and thus to his adherence to the doctrines of the Reformation; and on it 'a fyre of joy' burned in June 1566 on the reception of the news of the birth of James VI. The steeple having become somewhat rickety was taken down in 1831, and the present one, 200 feet high, erected in 1832-34 after designs by Gillespie Graham at a cost of £3500, the gable of the church being altered and improved at the same time. There is a fine brass chandelier which belonged to the old church. Round the building is the old burial ground, which contains the grave of Maitland the historian. There is a new cemetery at Roshill Road on the NE of the town. Melville Established church, built in 1854 as a chapel of ease, is now a *quoad sacra* parish church. It has 800 sittings. St John's Free church, in John Street, a Grecian building, was erected in 1829 as a chapel of ease at a cost of £3969, and contains 1370 sittings. St George's Free church, built soon after the Disruption, contains 1300 sittings; and St Paul's Free church, a plain Gothic building with a spire (1860), has 520 sittings. Mill Street U.P. church, built in 1830 for a congregation formed in 1750, contains 500 sittings; John Street U.P. church, built in 1824 for a congregation formed in 1787, has accommodation for 750

persons; and Knox U.P. church, in Castle Street, built in 1860, for 300. The Independent church, in Baltic Street, was built in 1844 in place of a previous chapel, and contains 700 sittings. The Evangelical Union church (1849) has accommodation for 400; and the Wesleyan church at the foot of New Wynd, built in 1873 in room of an older church dating from 1814, accommodation for 330. The Scottish Episcopal church (St Mary), in Panmure Place, was built in 1844, partly with a donation of £1000 from H. Scott, Esq. of Brotherton, and, as restored and enlarged in 1878, is a good Early English edifice, with organ, fine stained-glass windows, and 350 sittings. The English Episcopal church (St Peter), whose early history has been already referred to, was rebuilt in 1859, and contains 500 sittings. Within garden ground on the W side of Murray Street there were, till the beginning of the present century, remains of a Dominican monastery. The original building, 'biggit and foundit' and dedicated to the Virgin Mary in 1230 by Allan the Durward, last male representative of the De Lundings, seems to have stood on the portion of the links known as St Mary's, near Victoria Bridge, but in 1516 the monks removed to new buildings in the position first mentioned. Almost nothing more is known of their history except that they found themselves disturbed in their new abode by the noises in the streets, and were, in 1524, allowed to return to their first dwelling.

Montrose Academy stands on the Links, and was, as we have already seen, in existence as early as the middle of the 16th century at least. Its early fame and its connection with Wishart and the Melvils has been already noticed. One of the teachers in the 17th century was David Lyndsay, a cadet of the Edzell family, who became Bishop of Brechin, and was afterwards Bishop of Edinburgh when Jenny Geddes threw her stool at Dr Hanna's head. 'The bishop of Edinburgh, named Mr David Lyndsay, cuming to preiche, heiring of this tumult cam nevertheless to Sanct Geillis kirk and teichit, but inquitiation. Sermon endit and he going out of the kirk dar, these rascal wemen cryit out against bishopsis, reddie to stane him to the death, but being a corpulent man was haistellie put in the Erl of Roxbrugh coache, standing hard besyde, and was careit to his lodging; the samen rascalis still following him and throwing stones at the coache, so that he escapit narrowlie with his lyf.' Among the later pupils were Joseph Hume and Sir James and Sir Alexander Burnes. The present building, which is surmounted by a low dome, was erected in 1820, and contains accommodation for over 700 pupils. The average attendance is about 300, and the work, embracing the usual secondary subjects, is carried on by a rector, six masters, and three assistants. There is a very small endowment, so that the income is to a large extent dependent on fees. From funds bequeathed by Mr John Erskine, of Jamaica, in 1786, education is provided at this school for eight poor boys, and a salary of £50 is paid to one of the assistant masters. Dorward's Seminary—near the Academy, erected in 1833 partly at the expense of the Incorporated Trades and partly by subscription, and afterwards transferred to the management of Dorward's Trustees—gives instruction in English, writing, arithmetic, navigation, Latin, and French, and the work is carried on by a master and mistress. In 1833 thirteen schools, with accommodation, average attendance, and Government grant, were:—Erskine Street (152, 135, £114, 13s. 4d.), High Street (73, 119, £100, 10s. 6d.), Lochside (120, 74, £57, 4s.), Montrose (381, 291, £232, 6s.), Townhead junior (180, 109, £80, 0s. 6d.), Townhead senior (207, 206, £193, 14s.), White's Place (204, 191, £88, 17s. 6d.), White's Place infant (163, 154, £114, 18s.), Castle Street mission (242, 193, £115, 18s. 9d.), Dorward's Seminary (136, 61, £42, 15s.), Dorward's Lower Seminary (123, 60, £27, 3s. 7d.), St John's Free Church (320, 179, £106, 3s.), and Union Street Works (83, 32, £29, 14s.).

Dorward's House of Refuge, at the N end of the Middle Links, was erected in 1839, and is endowed from

a fund of £29,600 bequeathed by William Dorward, merchant in Montrose. It is a neat Elizabethan building, affording accommodation for 150 inmates, but has generally only about 80. In 1852 there were 23 men, 15 women, 25 boys, and 15 girls. It is managed by trustees from various public bodies. The Museum of the Natural History and Antiquarian Society is a neat building in Panmure Place, erected in 1837. It contains valuable collections of natural history objects, and a fine collection of coins and other antiquities. On Saturday it is accessible for the very small charge of one penny. The Barracks, to the NE of the harbour, were originally the buildings of the lunatic asylum, which were transferred to Government in 1860 to be converted into a dépôt for the Angus and Mearns militia, officially the 5th Brigade Scottish division R.M. Artillery.

Commerce and Trade, etc.—The manufacture of linen yarn and thread was introduced at a comparatively early period, and has been vigorously carried on. An annual market for these products was held in the early years of last century, and drew to it manufacturers from all parts of Forfarshire and Kincardineshire and from some parts of Aberdeenshire, to dispose of their goods. The making of sailcloth was begun in 1745; but after a short burst of prosperity it fell off, so as almost to become extinct. It has, however, now again revived and become very extensive. The manufacture of sailcloth, fine linen, lawns, and cambric was so prominent at Pennant's visit to the town in 1776, as to draw from him a eulogy on the skill and industry employed, as well as the beauty of many of the fabrics produced. Flax-spinning, with newly-invented machinery worked by one of Boulton and Watt's engines, was commenced in Ford's Mill, a factory built for this in 1805; and in 1805-6 the engineman who had charge of the machinery of this work was the great inventor of the locomotive engine, George Stephenson. An engineman's wages in those days could not have been large, but during the year Stephenson was in Montrose he saved a sum of no less than £28. Flax-spinning is now the principal industry, and gives employment to a large number of hands, both in the town and in its neighbourhood, as does also the weaving of part of the yarn into floor-cloths, ducks, sheetings, dowlas, canvas, and other fabrics, and the bleaching operations therewith connected. There are also extensive rope-works, tan-works, mills, machine-making establishments, breweries, starch-works—dating from 1798—soap-works, and an artificial manure and chemical work. Shipbuilding was once extensively carried on, but is now extinct, though there is still a good deal of boatbuilding. The registration or custom-house port used formerly to comprehend the whole coast from Buddon Ness on the S to Bervie-brow or Todhead on the N, and included Westhaven, Easthaven, Arbroath, Johnshaven, and Gourdon; but it is now restricted to the reach from Redhead to Todhead, and therefore includes now only Johnshaven and Gourdon. The number of vessels within the smaller range, with their tonnage, has been at various dates as follows:

| Year. | Sailing Ships. | Tons. | Steamers. | Tons. | Total Vessels. | Total Tons. |
|-------|----------------|--------|-----------|-------|----------------|-------------|
| 1868 | 112 | 17,320 | 2 | 40 | 114 | 17,360 |
| 1875 | 78 | 13,520 | 4 | 1156 | 82 | 14,685 |
| 1882 | 50 | 9,257 | 7 | 2053 | 57 | 11,340 |
| 1883 | 44 | 8,256 | 8 | 1840 | 52 | 10,996 |

By far the greater part of the ships belong to Montrose itself.

The harbour comprises the whole reach of the South Esk from the bridge to the sea, but is occupied principally in the upper part of that reach. It is naturally very good, and has been well cared for. The entrance is somewhat narrow, and cannot easily be taken, with the wind from certain points; but the depth over the bar is

18 feet at low water of spring tides, and it is therefore accessible at all hours to vessels of large draught. To the N of the fairway is a dangerous bank called the Annet Sands. There are leading lights, and on the promontory at the S side of the mouth of the river is Montroseness or Scurdyness lighthouse (1870), with—since 1881—a double intermittent or occulting light, its periods of light being always four seconds, and its periods of darkness two seconds and eight seconds alternately. The light is visible at a distance of 17 nautical miles. The quays are well constructed and commodious. A wet dock, measuring 450 by 300 feet, with a depth of 19 feet at spring tides and 15 at neaps, and capable of accommodating 6000 tons of shipping, was formed in 1840 at a cost of £43,000. There is a patent ship, capable of raising vessels of 400 tons. Tramways connect the harbour with both the Caledonian and North British railway stations. The present trustees are 5 elected by the county, the sheriff of the county, the provost and senior bailie of Montrose, 2 members elected by the town council, 9 chosen by the municipal electors, and 4 elected by the town council of Brechin. It was acquired by this body from the town council in 1837, under act of parliament, by which a payment of £600 a year in perpetuity is to be made to the latter body. The following table shows the tonnage of vessels that entered from and to foreign ports and coastwise, with cargoes and ballast, at various dates:—

| Year. | ENTERED. | | | CLEARED. | | |
|-------|----------|----------|--------|----------|----------|--------|
| | British. | Foreign. | Total. | British. | Foreign. | Total. |
| 1800 | 48,882 | 17,638 | 66,520 | 33,790 | 17,066 | 50,856 |
| 1874 | 66,915 | 25,414 | 92,329 | 66,902 | 22,479 | 89,381 |
| 1881 | 71,319 | 21,426 | 92,745 | 68,122 | 20,947 | 89,069 |
| 1882 | 65,908 | 28,041 | 94,039 | 67,450 | 26,214 | 93,664 |

The foreign trade is chiefly with the Baltic and Canada. The chief exports are grain, manufactured goods, and fish, and the chief imports are timber, coal, flax, hemp, and wheat. The trade in wool is second only to that on the Clyde, and more unmanufactured tobacco is imported here than is brought into any other port in Scotland except Glasgow and Leith. The amount of customs in 1866 was £3154, in 1874 £1787, in 1881 £1305, and in 1882 £1093. Montrose fishery district embraces the coast from Broughty Ferry to Gourdon, and on 1 Jan. 1883 had a total of 132 first class boats, 244 second class boats, and 193 third class boats, with a total tonnage of 4954, and 1180 resident fishermen and boys. Of these, however, only 1 first class boat, 4 third class boats, and 8 men and boys belonged to Montrose itself. In the year before the value of the boats was £37,012, of the nets £25,500, and of the lines £7624. The total persons employed in connection with them were 2882, the number of barrels of herrings salted or cured 39,199, and the number of cod, ling, or hake taken 110,392. Of the whole number of boats, about a quarter belongs to the small fishing-village of FERRYDEN, on the opposite side of the South Esk from Montrose. But few of the boats fish at home, the number in 1883 being 174, which had a total catch of 15,344 crans.

Municipality, etc.—As already noticed it is uncertain when Montrose became a royal burgh, but in the charters of confirmation and renovation granted by David II. in 1352, and by Robert II. in 1355, there is a rescript of a charter believed to have been granted by David I. Subsequent extension of privileges was granted by James IV. Municipal matters are attended to by a provost, 3 bailies, a dean of guild, a treasurer, a hospital master, and 12 councillors, and this corporation is probably the only one in Scotland that can boast of ever having had female burghesses, since in 1751 the ladies Jean, Mary, and Margaret Falconer, daughters of Lord Falconer of Halkerstone, were raised to that dignity. The council acts also as the police commission, and the police force consists of 12 men (one to every 1247 of the population)

with a superintendent, whose salary is £150. The number of persons tried at the instance of the police in 1883 was 237, the number of those convicted was 234, the number committed for further proceedings 5, and the number not dealt with 21. The corporation property is valued at about £72,000, and the liabilities to be charged against it to about £38,000. The annual revenue is about £2900. Gas is supplied by a company formed in 1827, whose works are in Lower Hall Street. Water was brought first from Glenskenno in 1741 at a cost of £1300; and the present supply, which comes from the North Esk above Kinnaber, was introduced in 1857 at a cost of about £5800. A thorough scheme of drainage was carried out subsequent to 1873. The incorporated trades are blacksmiths, wrights, shoemakers,

weavers, masons, and tailors. Under various trustees there are 23 charitable funds bequeathed between 1744 and 1882 with capitals varying from £50 to £4000, the interests being chiefly applied to the assistance of indigent persons not paupers. The hospital fund granted by King James VI. in 1587 gives assistance to about 150 persons, who receive quarterly allowances from it. The burgh arms are,

Seal of Montrose.

On a shield argent, a rose sceded and barbed proper: the supporters are two mermaids proper; the crest a hand sinister issuing from clouds, and holding a branch of laurel, with the motto, *Mare dicit, rosa decorat.*

The town has a head post office, with money order, savings' bank, insurance, and telegraph departments, and offices of the Bank of Scotland, British Linen Company, Clydesdale, Commercial, National, North of Scotland, Royal, and Town and County Banks. There is also a National Security Savings' Bank, agencies of 49 insurance companies, and 8 hotels. The newspapers are the *Liberal Montrose Review* (1811) and the *Conservative Montrose Standard* (1837), and are both published on Friday. There are three Masonic lodges—Kilwinning, St Peter's (No. 120), and Incorporated Kilwinning (No. 182). Among the miscellaneous institutions may be noticed the Rossie Pleasure-Grounds (to the S of the town, laid out in 1868-70, and open to the public), the Rossie Boys' Reformatory (1857)—with about 65 inmates—in Craig parish, a public coffee house and reading-room (1850) in Castle Street, a model lodging-house in South Esk Street, the Temperance Hall in Market Street, the Assembly Hall in High Street, the Lifeboat station, the Natural History and Antiquarian Society, the Scientific and Field Club, a Young Men's Christian Association, a branch of the Bible Society, a Town Mission, a Society for Improving the Condition of the Poor, a Destitute Sick Society, a Ladies Clothing Society, a Temperance Society, six Good Templar Lodges, a Court of Foresters, two Lodges of Oddfellows, two Lodges of Free Gardeners, a St Crispin Lodge, a United Society of Seamen, a branch of the Shipwrecked Fishermen and Mariners' Royal Benevolent Society, a Horticultural Society, an Orchestral Society, a Harmonic Union, a Tonic Sol-fa Association, six golf clubs—the links affording one of the best golfing greens in Scotland—a curling club, two bowling clubs, three cricket clubs, and five football clubs. The volunteer hall was opened in 1883; and there are an artillery and two rifle volunteer corps, in connection with which the Angus and Mearns Rifle Association (1860) holds a meeting on Montrose Links annually in August. Sheriff small debt courts for the parishes of Craig, Dun, Logie-Pert, Lunan, Maryton, and Montrose are held on the third Friday of January, March, May, July, September, and November; and there is a justice of pence small debt court on the first Monday of every month. The weekly market is on Friday, and there was formerly an annual fair—which figures in *John o' Arnha*—on 3 May, Rood Day, whence the name

Ruid or Rood Fair. This and another old fair held in July, and lasting four days, are now abolished, and fairs are held on the Fridays after Whitsunday and Martinmas (o.s.).

Montrose unites with Arbroath, Brechin, Forfar, and Bervie in returning a member to parliament (always a Liberal since 1837), and is the returning burgh. Parliamentary constituency (1833-84) 2050, municipal constituency 2112. Valuation (1876) £51,144, (1883-84) £57,142, 13s. 6d., including £4399 for railways. Pop. of parliamentary burgh (1831) 12,055, (1841) 13,811, (1851) 15,238, (1861) 14,563, (1871) 14,548, (1881) 14,973, of whom 6705 were males and 8268 females. Houses (1881) 2777 inhabited, 66 vacant, 6 building. Of the total population at last census 3023 men and 1908 women were engaged in connection with industrial handicrafts or dealing in manufactured substances, while 2522 were boys and 2394 were girls under 15 years of age.

See also Jervise's *Memorials of Angus and Mearns* (Edinb. 1861); and Mitchell's *History of Montrose* (Montrose, 1866).

Montrose, Old. See MARYTON.

Monymusk, a village and a parish of central Aberdeenshire. The village stands, 302 feet above sea-level, within 3 furlongs of the Don's S bank, and $\frac{3}{4}$ mile N by W of Monymusk station on the Alford branch of the Great North of Scotland railway, this being $8\frac{1}{2}$ miles E by S of Alford, $7\frac{1}{2}$ WSW of Kintore Junction, and $20\frac{1}{2}$ (E by road) WNW of Aberdeen. A place of high antiquity, it was almost entirely rebuilt about 1840, and now forms a neat square, with some fine old trees in the centre. It has a post and railway telegraph office and an hotel.

The parish is bounded N by Oyne, NE by Chapel-of-Garioch, E by Kennay, S by Cluny, and W by Tough and Keig. Its utmost length, from E to W, is 5 miles; its breadth increases westward from $\frac{1}{4}$ mile to $4\frac{1}{2}$ miles; and its area is 10,816 acres, of which $87\frac{1}{2}$ are water. The Dox winds 10 miles east-south-eastward, partly along the Keig, Oyne, and Kennay boundaries, but mainly through the north-eastern interior; and Ton Burn, its affluent, traces all the southern and south-eastern boundary. Sinking along the Don to 250 feet above sea-level, the surface thence rises westward to 1244 feet at Pitfichie Hill, 1469 at Cairn William, and 1306 at Green Hill. Granite is the predominant rock in the hills, and is largely quarried. Felspathic rock, of quality suitable for pottery purposes, also occurs, and was for some time worked by an agent of one of the Staffordshire potteries. Iron ore, containing 65 per cent. of iron, has long been known to exist, but has not been worked on account of the dearth of fuel. The soil of the arable lands is partly clayey, but principally a light loam. About three-sevenths of the entire area are in tillage; nearly one-third is under wood; and the rest is either pastoral or waste. The proportion under wood, it will be noticed, is very large, the planting of larches, spruces, Scotch firs, and hardwood trees having begun in 1716, and carried on constantly to the present time. A field beside the Don, $\frac{1}{4}$ mile E of Monymusk House, is said to have been the camping-ground of Robert Bruce's army before the Battle of Barra (1308), and bears the name of Campfield. Antiquities are vestiges of two ancient Caledonian stone circles, a sculptured standing-stone and Latin cross, the roofless ruin of Pitfichie Castle, and vestiges of a chapel, which was one of the earliest seats of the Culdee missionaries in the North of Scotland. Malcolm Ceannmor in 1078, proceeding on a military expedition against the rebels of Moray, arrived at Monymusk; and, finding that its barony belonged to the Crown, he vowed it to St Andrew, in order to gain the victory, and is said to have marked out the base of the church tower with his spear. In 1170 we hear of the Kelelei or Culdees of 'Munimuse,' for whom thirty years later Gilchrist, Earl of Mar, appears to have built a priory, whilst enforcing on them the canonical rule. Disputes arose between them and the Bishops of St Andrews, and

by 1245 the Culdees had quite given place to 'the prior and convent of Monimusk, of the order of St Augustine' (Skene's *Celtic Scotland*, ii. 389-392, 1877). The very foundations of the priory were dug up about 1726. Alexander Nicoll, D.C.L. (1793-1828), an eminent Orientalist and Regius Professor of Hebrew in the University of Oxford, was a native. Monymusk House, on the left bank of the Don, 3 furlongs NE of the village, is a large old building, with a valuable library and a good collection of paintings. In 1712 the estate was purchased from Sir William Forbes, Bart., of the Pitsligo family, for £116,000 by Sir Francis Grant, Bart. (1660-1726), who, on his elevation to the bench in 1709, had assumed the title of Lord Cullen. His fifth descendant, Sir Archibald Grant, seventh Bart. since 1705 (b. 1823; suc. 1863), holds 14,881 acres in the shire, valued at £7698 per annum. Monymusk is in the presbytery of Garioch and the synod of Aberdeen; the living is worth £254. The parish church, St Mary's, on the E side of the village square, is a very old building, parts of it being doubtless coeval with the priory. Comprising the Norman basement of a W tower ($17\frac{1}{2} \times 15\frac{1}{2}$ feet; 50 high), a nave ($48\frac{3}{4} \times 20\frac{7}{8}$ feet), and a choir ($16\frac{3}{4} \times 14\frac{1}{2}$ feet), with a later polygonal apse, it was enlarged by a N aisle, roofed, and reseated for 580 worshippers in 1822, when the spire was also renewed. Its two pure Norman arches of Queen Margaret's time are objects of much interest. An Episcopal church, containing 130 sittings, was converted from secular purposes in 1801; and the public school, with accommodation for 164 children, had (1883) an average attendance of 107, and a grant of £92, 2s. Valuation (1860) £5472, (1884) £6989, 15s. 5d., plus £1288 for railway. Pop. (1801) 900, (1831) 1011, (1861) 988, (1871) 996, (1881) 1155. — *Ord. Sur.*, sh. 76, 1874.

Monyuk Water, a rivulet of Haddington and Berwick shires. Rising among the Lammernuir Hills at an altitude of 1112 feet, and running $7\frac{3}{4}$ miles south-south-eastward, through or along the borders of Innerwick, Oldhamstocks, and Abbey St Bathans parishes, it falls into Whitadder Water at Abbey St Bathans hamlet. — *Ord. Sur.*, sh. 33, 1863.

Monzie, a hamlet and a parish of central Perthshire. The hamlet stands on the left bank of Shaggie Burn, 3 miles NNE of the post-town, Crieff.

The civil parish consists of a main body (containing the hamlet) and of three detached portions—the Innerpeffray, Auchnafree, and Logiealmond sections. Its total area is $33\frac{3}{4}$ square miles or 21,592½ acres, of which $10\frac{3}{4}$ are water, and 3849½ belong to the main body. This, with an utmost length from NNW to SSE of $4\frac{1}{2}$ miles, and an utmost breadth of 2 miles, is bounded NE and E by Fowlis-Wester, and S, W, and N by Crieff. SHAGGIE BURN, rising on the NE border at an altitude of 2050 feet, runs $5\frac{1}{2}$ miles south-south-eastward and south-south-westward, mainly along the north-eastern and southern boundaries, but for $1\frac{1}{2}$ mile across the interior, till it passes off into Crieff, $\frac{3}{4}$ mile above its influx to Turret Burn; and KELTIE BURN, rising at an altitude of 2200 feet, runs $4\frac{1}{2}$ miles south-south-eastward along the western border, till it falls into Shaggie Burn at the SW corner of the parish. The surface sinks here to 250 feet above sea-level, and rises to 700 feet on the *northern slope of the Knoek of Crieff (911), 1153 at *Milquhanzie Hill, 1461 at Cnoc Beithe, and 2255 at *Mealneveron, where asterisks mark those heights that lie upon the boundaries.

Of the three detached sections, the smallest ($1\frac{1}{2} \times 1\frac{1}{2}$ mile) contains the ruins of INNERPEFFRAY Castle, 4 miles SE of Crieff, and is bounded NE by Madderty, E and SE by Trinity-Gask, SW by Muthill, and W and NW by Crieff. The EARN flows $1\frac{1}{2}$ mile south-eastward along all the Muthill boundary; and the surface sinks nowhere much below, and nowhere much exceeds, 100 feet above sea-level. Of the two GLENALMOND sections, the upper ($4\frac{1}{2} \times 4\frac{1}{2}$ miles) contains Auchnafree Lodge, 7 miles WSW of Amulree, and is bounded SE by Crieff, S by Monzievairst and Comrie, W and NW by Kenmore, and N and E by detached portions of Dull, Weem,

Kenmore, and Fowlis-Wester. The new-born ALMOND has here an easterly course of 4 miles; and along it the surface declines to 880 feet, chief elevations being BEN CHONZIE (3048 feet) at the SW corner, and a nameless summit (2838) on the northern boundary. The LOGIE-ALMOND section ($5\frac{3}{4} \times 4\frac{1}{2}$ miles) in its SE corner contains GLENALMOND College, $9\frac{3}{4}$ miles NE of Crieff and $11\frac{1}{2}$ WNW of Perth, under which there is the post office of Heriotfield. It is bounded NE by detached portions of Methven and Redgorton, E by Auchtergaven and Moneydie, S by Methven and Fowlis-Wester, W by Fowlis-Wester, and NW by Little Dunkeld. The ALMOND winds 6 miles eastward, mainly along the southern border; Milton Burn runs to it $4\frac{1}{2}$ miles south-south-eastward along the western border; and Shochie Burn, another of its affluents, runs $2\frac{1}{2}$ miles south-eastward along the Auchtergaven and Moneydie boundary. The surface sinks to 450 feet along the Almond, and rises to 654 feet near Saddlebank, 773 near Montreal, and 1913 at Meikle Crochan on the Little Dunkeld boundary.

Such are the general features of this large and scattered parish, whose rocks include excellent slate, red sandstone compact and durable, and limestone of indifferent quality. The soil of most of the arable lands is light, dry, and fertile. There are several hundred acres of thriving plantation; but fully two-thirds of the entire area are desolate upland, partly green, mostly heathy, and good only for the grazing of Highland or blackfaced sheep. 'Weems,' or subterranean dwellings, have been discovered in Monzie Park, where also are remains of several stone circles. Monzie Castle, 5 furlongs SSW of Monzie hamlet, bears date 1634, and is a square, three-story, battlemented pile, with a western two-story wing, and round towers flanking the angles. In its beautiful grounds are four out of five larches, coeval with those of DUNKELD (1738), and one of them 18 feet in girth at 3 feet from the ground. The estate belongs to George Johnstone, Esq. of LATHRISK, his father having purchased it from Alex. Cameron-Campbell, Esq., who died in 1869, and who from 1841 to 1843 was Conservative member for Argyllshire. (See INVERAWE.) Another estate, with a mansion, is the CAIRNIES in Logiealmond; and altogether 5 proprietors hold each an annual value of more than £500, and 3 of less than £100. Ecclesiastically, the parish, as redistributed at various periods between 1702 and 1871, takes in part of Fowlis-Wester, and gives off its own detached sections to Muthill, Amulree, Methven, and Logiealmond. Monzie itself is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £200. The parish church, at the hamlet, was built in 1831, and contains 512 sittings. There is also a Free church of Monzie; and Monzie public school, with accommodation for 133 children, had (1883) an average attendance of 50, and a grant of £58, 10s. Valuation (1860) £7753, (1884) £8868, 1s. 1d. Pop. of civil parish (1801) 1157, (1841) 1261, (1861) 972, (1871) 803, (1881) 753; of ecclesiastical parish (1871) 324, (1881) 304, of whom 208 were in Fowlis-Wester. — *Ord. Sur.*, shs. 47, 48, 1869-68.

Monzievairst and Strowan, a parish of Upper Strathearn, central Perthshire, whose church, $\frac{1}{2}$ mile from the Earn's N bank, is $3\frac{3}{4}$ miles ENE of Comrie and $3\frac{3}{4}$ WNW of the post-town, Crieff. It comprises the ancient parishes of Monzievairst and Strowan, united prior to 1662, and consists of a main body and three detached sections, the area of the whole being 26,493½ acres, of which 5988 belong to those sections, and 400½ are water. The main body is bounded N by Monzie (detached), NE and E by Crieff, S by Muthill, and W by Comrie. Its utmost length, from N to S, is $7\frac{1}{2}$ miles; its utmost width, from E to W, is $5\frac{1}{2}$ miles; and its area is 20,505½ acres. From Comrie village to near Crieff town the EARN flows $5\frac{1}{2}$ miles east-by-southward, partly along the Comrie boundary, but mainly across the interior; TURRET Burn, rising on the eastern side of Ben Chonzie at an altitude of 2000 feet, runs $8\frac{1}{2}$ miles

south-eastward and southward—for the last 2 miles along the Crieff boundary, till, after a descent of 1900 feet, it falls into the Earn at a point $\frac{1}{2}$ mile W of the town of Crieff; and the LEDROCK, over the last $3\frac{1}{2}$ miles of its course, runs south-south-eastward along the Comrie boundary to the Earn at Comrie village. The largest sheets of water are Lochan Caine ($1 \times \frac{1}{2}$ furl.; 1523 feet) and Loch Turret (1 mile \times 2 $\frac{1}{2}$ furl.; 1127 feet) towards the head of GLENTRETT; Ochertyre Lake ($4\frac{1}{2} \times 1\frac{1}{2}$ furl.); and St Serf's Water ($1\frac{1}{2} \times \frac{1}{2}$ furl.). Along the Earn the surface declines to close on 100 feet above sea-level; and thence it rises southward to wooded "Forlum (1291 feet), northward to Tomachaistel (434), Dramachargan (512), Creag Each (988), Creag Chaisean (1809), Carn Chois (2671), "Anchnafree Hill (2565), and *BEN CHONZIE (3048), where asterisks mark those summits that culminate on the confines of the parish.

Of the three detached sections, all lying in GLEN-ARTNEY, the largest, containing Auchnashelloch and Findhughen farms, $6\frac{1}{2}$ miles SW of Comrie, is bounded NW and N by Comrie, E by Muthill, SE by Dunblane, S by Kilmadock, and SW by Callander. Its utmost length, from NE to SW, is $3\frac{1}{2}$ miles; its utmost breadth is $3\frac{1}{4}$ miles; and its area is 4570 $\frac{1}{2}$ acres. The Water of RUCHILL flows 2 miles north-eastward along all the north-western boundary, and Findhugh Glen descends to it for $2\frac{1}{2}$ miles in a north-westerly direction. In the extreme N the surface declines to 600 feet above sea-level, thence rising southward to *UAMH Bheag (2179 feet). The next largest section (1352 acres), containing Meiggars farm, 3 miles S of Comrie, is bounded E by Muthill, and on all other sides by Comrie. The Water of Ruchill flows 5 furlongs along the north-western boundary; and the surface rises from 400 to 1250 feet. The smallest section (64 $\frac{1}{2}$ acres), $2\frac{1}{2}$ miles S by W of Comrie, is bounded or traversed for $\frac{1}{2}$ mile by the Water of Ruchill.

The line of junction between the clay slate and the Old Red sandstone passes north-eastward from Glentartney to Glenturret; and both slate and sandstone have been quarried. The soil of the low grounds is light, gravelly, and fertile; that of the hills is much of it moorish. Barely 3500 acres are in tillage; about 2400 are under wood; and the rest of the parish is pastoral or waste. Much of the woodland is natural forest; and, as an old song tells, the oak is a favourite tree:—

* By Auchertyre there grows the aik.*

The remains of Castle Cluggy, comprising a tower 18 feet square within the walls, stand on a gentle rising-ground, which runs into the middle of Ochertyre Lake, and most anciently have been an island, or nearly so, accessible only in one place by a drawbridge. Formerly of much greater extent than now, the castle is traditionally said to have belonged to the Red Comyn, the rival of Bruce, who here, about 1306, besieged Malise, Earl of Strathearn. It is called "an ancient fortalice" in a charter of the year 1467; and it was inhabited for some time about the middle of the 17th century by Sir William Murray, first baronet of Ochertyre. Towards the head of the lake is an artificial crannoge. An ancient castle of the Earls of Strathearn stood on the summit of Tomachaistel, a beautiful eminence 3 miles W of Crieff, commanding very romantic prospects, and possessing the greatest capabilities of military defence in days before the invention of gunpowder. The foundations of this castle were still visible in 1832, when they were removed to give place to a monument in memory of General Sir David Baird of FERN-TOWER (1757-1829), the hero of Seringapatam. This monument still is a conspicuous feature in the general landscape of Upper Strathearn, though the damage caused by a thunderbolt in 1878 has not yet been restored. It is an obelisk 82 feet high, an exact imitation of Cleopatra's Needle, and is formed of blocks of Aberdeen granite, some of them weighing 5 tons each. In 1511 eight score of the Murrays, with their wives and children,

were massacred by a body of Drummonds and Campbells, the former having taken refuge in the heather-thatched church of Monzievairst, while the latter, who were at feud with them, set fire to the church, and prevented their escape from the flames. The mausoleum of the Murrays of Ochertyre now stands on the site of the church, and is a Gothic building of 1809, with stained-glass windows. On the estate of Ochertyre are vestiges of two Roman posts of observation, commanding views of the camps at Dalginross and on the Moor of Orchil. Many sepulchral cairns near the Earn have been removed as material for stone fences; but a very large one, called Cairn Chainichin, 'the monumental heap of Kenneth,' still exists, and is supposed to have been raised to the memory of Kenneth, King of Alban, who was slain at 'Moegharvad' in 1004. Vestiges of a pre-Reformation chapel exist to the S of Lawers House; and an ancient cross, bearing the sacred initials I. N. R. I., stands a little to the SW of Strowan, on a spot where markets used to be held. Among distinguished natives may be mentioned the two Colonels Campbell of Lawers, who figured in the 16th and 17th centuries; Colonel Alex. Dow (d. 1779), author of a History of Hindostan; Sir Patrick Murray (1771-1837), judge and statesman; and Sir George Murray (1772-1846), quarter-master-general to the British army throughout the Peninsular War, and afterwards statesman and cabinet minister. Mansions, noticed separately, are CLATHOCK, LAWERS, OCHERTYRE, and STROWAN. Giving off portions to Comrie and West Church (Crieff), this parish is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £265. The old church of Monzievairst (Gael. *monadh-a-bhaird*, 'the bard's hill') was dedicated to St Serf, and that of Strowan to St Ronan or Rowan, whence the name *Strowan* itself. Both were in use on alternate Sundays till 1804, when the present church was built, containing 400 sittings. The public school, with accommodation for 134 children, had (1883) an average attendance of 65, and a grant of £81, 12s. Valuation (1865) £10,502, (1884) £11,613, 1s. 2d. Pop. (1801) 1033, (1831) 926, (1861) 782, (1871) 744, (1881) 709, of whom 547 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 47, 39, 1869.

Moodiesburn, a village in Cadder parish, Lanarkshire, $6\frac{1}{2}$ miles ENE of Glasgow, and $1\frac{1}{2}$ mile NE of Garmirkirk station.

Moonzie, a very small parish of N Fife, whose church stands 3 miles NW of the post-town, Cupar. It is bounded W and NW by Crich, NE by Kilmarny, SE by Cupar, and SW by Monimail. Its utmost length, from NNW to SSE, is 2 miles; its utmost breadth is $1\frac{1}{2}$ mile; and its area is 1257 $\frac{3}{4}$ acres. Sinking to less than 200 feet above sea-level along the boundaries, and rising to 453 feet near the church and 430 at COLLUTHIE Hill, the surface presents a pleasing diversity of hill and dale. A considerable loch or marsh on Lordscairnie farm was drained about the beginning of the century; and Moonzie Burn, issuing from what was once its bed, runs eastward to the river Eden's estuary. Trap tufa is the predominant rock. A few acres on the top of Colluthie Hill are under plantation; about 36 acres on Lordscairnie farm are reclaimed moss, under the plough; and all the rest of the parish has excellent soil, partly a strong clay, chiefly a black loam, and is in a state of high cultivation. An interesting antiquity is Lordscairnie or 'Earl Beattie's' Castle. This is said to have been built about the middle of the 15th century by Alexander, fourth Earl of Crawford, commonly called 'Earl Beattie' from his great beard, or the 'Tiger Earl' from the fierceness of his disposition. All that remains of it is the keep or donjon, and a round tower which formed a defence for the wall that surrounded the courtyard. This ruin is four stories high, and appears to have lost nothing of its original height, with the exception of the bartizans. It is 53 feet long and 42 broad without the walls. The walls are strongly built, and between five and six feet thick. The ground-floor—as is common in such structures—appears to have been wholly occupied by cellars

having arched stone roofs. The second floor was occupied entirely with the great hall, which is 40 feet long and over 20 feet broad. The defence of the castle and its outworks was anciently strengthened by a broad morass, which appears to have entirely surrounded the slight rising ground on which they were situated. COLLUTHIE, noticed separately, is the only mansion; and the Earl of Glasgow divides the parish with two lesser proprietors. Moonzie is in the presbytery of Cupar and the synod of Fife; the living is worth £225. The church, which from its elevated position serves as a landmark to mariners entering the Firth of Tay, is a small old building, containing 171 sittings, and greatly improved by extensive repairs in 1882. Although it were impossible to ascertain the exact date of the present structure, there can be no doubt as to its great antiquity. The church and teinds of the parish of Moonzie were gifted in 1238 by Bishop Malvoisin to a religious fraternity at Scotlandwell in Kinross-shire. About 1564 Moonzie was conjoined with Cupar, but this arrangement lasted only a few years, after which it was again made a separate parish. After the Revolution, we find it stated in the Kirk Session records, that, when the minister was 'outed,' the great hall of Earl Beattie's castle was fitted up as a meeting-place for him and his adherents; and in 1693 'the Session appoints that the seats now standing in the meeting-house at [Lords-] Cairnie be transported with all conveniency to the Kirk.' The public school, with accommodation for 54 children, had (1883) an average attendance of 40, and a grant of £49, 5s. Valuation (1866) £2338, 4s. 3d., (1884) £2614, 7s. Pop. (1801) 201, (1831) 188, (1861) 179, (1871) 154, (1881) 148.—*Ord. Sur.*, sh. 48, 1868.

Moorbeck, a hamlet on the coast of Cummertrees parish, Dumfriesshire, 2½ miles SW of Annan.

Moorfoot, a double range of moorish hills, chiefly on the eastern part of the southern border of Edinburghshire, and partly on the mutual border of Edinburgh and Peebles shires. Commencing on the W side of the head of the vale of Gala Water, and hindered only by that vale from being continuous with the Lammermuirs, it extends south-westward in two mutually divergent lines to the E flank of the vale of Eddleston. With a roughly triangular outline, about 10 miles in length and 6 in mean breadth, it comprises masses and summits, generally rounded, sometimes isolated, and nowhere linked into continuous ridge; culminates in BLACKHOPE SCAR (2136 feet); consists of Lower Silurian rocks; and has mostly a bleak and pastoral character.—*Ord. Sur.*, shs. 32, 24, 1857-64.

Morar, a territorial district and a lake of W Invernesshire. The district is bounded N by Loch Nevis, E by the district of Lochiel, S by Arasaig, and W by the Sound of Sleat. Its utmost length, from E to W, is 19 miles; and its breadth varies between 4 and 9. Loch Morar bisects a great part of its lengthwise, and divides it into two nearly equal sections, which are called respectively North and South Morar. The lake, which is 11¾ miles long and from 5 furlongs to 1¾ mile broad, is overhung nearly all round, and, at a very brief distance, by water-shedding Highland heights. Its foot is 'very prettily wooded—a pleasant contrast to the wilder scenery of the upper end. The shore here is much indented; and there are two or three picturesque islands, on the largest of which, in the hollow of a tree, Simon Fraser, Lord Lovat, found a hiding-place in June 1746.' On the E Loch Morar is fed by streamlets coming from the lochlets Beoraich and Anamack; and it discharges its superfluous on the W by a stream of only a few furlongs in length into a small bay. Its waters contain good store of salmon, sea-trout, and loch trout. North Morar belongs to the parish of Glenelg, South Morar to that of Ardnamurchan; and

both are included, in a large sense, in the comprehensive district of Lochaber. Morar is mainly peopled by Roman Catholics; and in 1837 was provided, by voluntary subscription, with a new Roman Catholic chapel at Brachara. Morar, 43 miles WNW of Fort William, is the seat of Eneas Ronald Macdonell, Esq. (b. 1822), who holds 3000 acres in Inverness-shire, valued at £671 per annum. See an article by Capt. T. P. White on p. 634 of *Good Words* (1873).

Moray Firth, the largest and most regular arm of the sea indenting the coast of Scotland, and the largest opening on the E coast of Great Britain. Taking it in its widest sense it may be roughly described as a triangle with one angle at DUNCANSBAY Head in CAITHNESS; another at Cairnbulg Point, 3 miles E of KINNAIRD'S Head, in Aberdeenshire; and the third at the mouth of the BEAULY river. From Duncansbay Head to Cairnbulg Point across the mouth of the Firth the distance in a straight line is 78½ miles, while, in a straight line, the distance from Duncansbay Head to the mouth of the Beauly is 96 miles, and from the mouth of the Beauly to Cairnbulg Point 95 miles. The coast-line along the NW side—which is bounded by the counties of Caithness, Sutherland, and Ross—is considerably broken, first by STANCLAIR Bay N of Wick, next by the DOENOCHE Firth, and again by the CROMARTY Firth. The coast-line on the S—which is formed by the counties of Inverness, Nairn, Elgin, Banff, and Aberdeen—is much evener, the largest breaks being at Burghhead Bay and Spey Bay. The principal rivers flowing directly into the firth are the WICK and BERRIEDALE from Caithness, the HELMSDALE and BROGA from Sutherland, the BEAULY and NESS from Inverness-shire, the NAIRN from Nairnshire, the FINDHORN, LOSSIE, and SPEY from Elginshire, and the DEVERON from Banffshire. The depth near the mouth is about 60 fathoms at the deepest part. All along the bottom of the firth near the centre is a deep trough or channel known among the fishermen as the 'Trink'—i.e., Trench. Its width and depth vary, but where the bottom is not rocky the hollow is about ½ mile wide and sinks to a depth of some 15 fathoms below the ordinary bottom level. Where it passes through rocks the sides become more or less perpendicular and the channel narrower. It marks the former course of a large river, which must—in the pleistocene period of British history when the country was united to the Continent—have had its main source in the BEAULY, and which, after receiving all the present rivers of the firth as tributaries, flowed NW to join an enormous stream which, formed by the joint waters of all the rivers that now flow into the North Sea, poured its mighty volume into the Atlantic Ocean to the NE of the Shetland Islands. At the bottom of the Trink there is a thick deposit of mud, and in some places it is a favourite habitat for skate and ling. The waters of the firth abound with fish, and the coasts are studded with small fishing villages, while Wick, Helmsdale, Banff and Macduff, and Fraserburgh are four of the chief stations in the north for the prosecution of the herring-fishing by first-class boats. Of the 26 fishery districts into which Scotland is divided the Moray Firth has the 6 entire districts of Banff, Buckie, Findhorn, Cromarty, Helmsdale, and Lybster, and portions of Fraserburgh and Wick. As regards general fishing, in 1882 out of a total of 5101 first-class, 4423 second-class, and 5449 third-class boats, or a total of 14,973 boats in all the fishery districts of Scotland, 2305 first-class, 457 second-class, and 717 third-class boats, or a total of 3509 belonged to Moray Firth ports; while of a total of 99,396 persons employed in connection therewith, 29,171 were employed among the Moray Firth villages; and the value of the boats, nets, and lines was calculated at respectively £230,732, £261,082, and £37,254, out of totals for all Scotland of £646,883, £711,039, and £114,278. The large increase, proportionally, in the value is due to the fact that by far the larger number of the Moray Firth boats are of the first-class, the total being 2305 out of 5101 for all Scotland. Of 1,282,973 barrels of herring caught and cured in Scotland in the same year,

239,292 barrels were brought into Moray Firth ports, the smaller proportion being explained by the number of boats that leave the district to fish at other stations. Of 3,666,596 cod, ling, and hake caught in 1882—of which, however, 2,039,174 are from Shetland alone—262,303 were brought into ports along this coast.

The description and limits already given applies to the firth in its widest extent, but the name is sometimes more particularly confined to that portion which lies to the SW of a line drawn from Tarbertness in Ross-shire to Stotfield Head near Lossiemouth in Elginshire. This inner portion of the firth measures 21 miles along the line just mentioned, and 39 miles in a straight line thence to the mouth of the Beaully river. It consists of three portions, the outer running up as far as the projecting points of Chanonry (Ross) and Ardersier (Inverness), and forming a triangle 21 miles across the mouth, 23 in a straight line along the Ross-shire side, and 32 in a straight line along the Inverness-shire, Nairnshire, and Elginshire side. The points just mentioned project about $1\frac{1}{2}$ mile beyond the general line of the coast on each side and overlap one another, but so as to leave a passage at right angles to the main line of the firth and $\frac{3}{4}$ mile wide. This strait gives admission to the much shallower portion known as the Inner Moray Firth or Firth of Inverness, extending from Fort George 8 miles south-westward to the mouth of the Ness, with an average breadth of from $2\frac{1}{2}$ to 3 miles, with Munloch Bay running off on the NW side and Petty Bay on the SE side. Immediately to the W of the mouth of the Ness the waters of the firth are narrowed by the projecting point at Kessoek to 650 yards, but they broaden out again into the Beaully Firth, which extends westward for $6\frac{1}{2}$ miles, with a breadth of from $1\frac{1}{2}$ to 2 miles. This portion of the firth is very shallow, and nearly the half of its whole area is laid bare at low water. The fishing in the Inverness and Beaully basins is very poor except as regards the capture of garvies or sprats, which are found there in immense numbers, about 10,000 crabs being sent to the south markets every year. The three portions of the firth just described correspond to the *Æstuarium Fararis* of the ancient geographers.

The coast-line along the firth varies considerably. From Duncansby Head to Helmsdale, on both sides of the Cromarty Firth, between Burghead and Lossiemouth, between Buckie and Banff, and along a considerable portion of the Aberdeenshire coast, it is rocky, but elsewhere low. It is well cultivated, and the reaches to the W of Fort George are finely wooded.

Moray, Province of, an extensive district lying to the S of the inner portion of the firth just described. It is almost co-extensive with one of the seven provinces into which, during the Celtic period, we find the whole of modern Scotland divided. The northern boundary was the Moray Firth and the river BEAULY as far as KILMORACK; from this point the line passed to the S along the watershed between Glen Farrar and the streams flowing to Loch Ness. After rounding the upper end of Glen Clunie it turned eastward along the watershed between Glen Loyne and Glen Garry, and between the river Garry and the streams flowing to the river Oich; then SE by the lower end of Loch Lochy, as far as the SW end of Loch Laggan, and on to Beinn Chumbann, whence it followed the line between the modern counties of INVERNESS and PERTH, by Loch Erich, the Athole Sow, and Carn-na-Caim, to Cairn Ealar. From that hill it followed the boundary of INVERNESS-SHIRE and BANFF-SHIRE, along the Cairngorms, and down the Water of Ailnack. Here, however, it left the county boundaries and followed this stream to the Aven above Tomintoul, and then followed the course of the Aven to the Spey, and the latter river back to the Moray Firth. The province thus included within its limit the whole of the counties of Elgin and Nairn, the greater part of the mainland division of the county of Inverness, and a portion of the county of Banff. In later times the configuration has sometimes been considered as rather co-extensive with the sway of the Bishop of Moray, and

so with the jurisdiction of the modern synod, but this must hold true as applying more to ecclesiastical authority than to territorial limits. At one time the province must have stretched across the island from sea to sea, for, in one of the statutes of William the Lion, Ergadia, i.e., Arreigathel, or the whole district W of the watershed between the German Ocean and the Atlantic Ocean, and extending from Loch Broom on the N to Cantyre on the S, is divided into 'Ergadia, which belongs to Scotia,' and 'Ergadia which belongs to Moravia.' This part afterwards fell into the hands of the Earls of Ross. The Highland line, marking the division between the Highlands and the Lowlands, passed across the province in a general north-westerly direction from the junction of the Aven and Spey to the mouth of the river Nairn; the part to the NE of this line being peopled with Lowlanders, who suffered continually from the peculiar ideas entertained by their Highland neighbours regarding *neum* and *tuam*. Peopled by an alien race, whose introduction will be noticed afterwards, greatly more peaceable, and less acquainted with the use of arms than the inhabitants of the Highland districts, the rich and fertile plain of Moray was regarded by the Highland Caterans as open and ever available spoilage ground, where every marauder might, at his convenience, seek his prey. So late in fact as the time of Charles I., the Highlanders continually made forays on the country, and seem to have encountered marvellously little resistance. In 1645 we find Cameron of Lochiel apologising to the laird of Grant for having carried off cattle from the tenant of Moyness, and giving the reasons that he 'knew not that Moyness was ane Graunt, but thocht that he was ane Moray man,' and that the spoilers did not intend to hurt the laird of Grant's friends but to take booty from 'Moray land quhare all men take their prey.' The Moray people, it has been remarked, appear to have resembled the quiet sarnine Dutch settlers of North America who, when plundered by the Red Indians, were too fat either to resist or to pursue, and considered only how they might repair their losses; and the Celts, looking on the Lowlanders as strangers and intruders, thought them quite fair game, and could never comprehend how there could be any crime in robbing a 'Moray man.' So late as 1565, as appears from the rental of the church-lands in that year, the inhabitants of the 'laich' remained entirely a distinct people from the Highlanders, and all bore names of purely lowland origin. Nearly all the interest of Moray as a province, and often all the associations of the name are connected with its lowlands in the N. These have long been famed for mildness and dryness of climate, though the rivers that wind through them, having their sources among mountains high enough to arrest the moisture brought in from the Atlantic by the south-west winds, are sometimes liable to sudden freshets. The great floods of 1829, so admirably recorded in Sir Thomas Dick Lauder's *The Moray Floods*, form an extreme example. Probably no part of Scotland, not even East Lothian, can compete with Moray in regard to the number of spontaneous testimonies which have been borne to the richness of its soil. An old and common saying asserts that Moray has, according to some versions, 15, according to others, 40 days more of summer than most other parts of Scotland. Holinshed (practically an Anglicised form of Beldend's translation of Boece's *Chronicle*) says, 'In Murrey land also is not onlie great plentie of wheat, barlie, otes, and suchlike graine, besides nuts and apples, but likewise of all kinds of fish, and especially of salmon.' George Buchanan extols the province as superior to any other district in the kingdom in the mildness of its climate and the richness of its pastures. 'So abundant,' he says, 'is this district in corn and pasturage, and so much beautified as well as enriched by fruit trees, that it may truly be pronounced the first county in Scotland.' Whitelock, in Cromwell's time, says, 'Ashfield's regiment was marched into Murray-land, which is the most fruitful country in Scotland.' William Lithgow (1583-1645), after glancing

at Clydesdale and the Carse of Gowrie, says, 'The third most beautiful soil is the delectable plain of Moray, whose comely gardens, enriched with corns, plantings, pasturage, stately dwellings, overfaced with a generous Octavian gentry, and topped with a noble Earl, its chief patron, may be called a second Lombardy, or pleasant meadow of the north.' Sir Robert Gordon of Straloch, describing the province in 1640, says, 'In salubrity of climate, Moray is not inferior to any, and in richness and fertility of soil it much exceeds our other northern provinces. The air is so temperate, that when all around is bound up in the rigour of winter, there are neither lasting snows nor such frosts as damage fruits or trees. There is no product of this kingdom which does not thrive there perfectly, or, if any fail, it is to be attributed to the sloth of the inhabitants, not to the fault of the soil or climate. Corn, the earth pours forth in wonderful and never-failing abundance. Fruits of all sorts, herbs, flowers, pulse are in the greatest plenty, and all early. While harvest has scarcely begun in surrounding districts, there all is ripe and cut down, and carried into open barnyards, as is the custom of the country; and, in comparison with other districts, winter is hardly felt. The earth is almost always open, the sea navigable, and the roads never stopped. So much of the soil is occupied by crops of corn, however, that pasture is scarce; for this whole district is devoted to corn and tillage. But pasture is found at no great distance, and is abundant in the upland country, and a few miles inland; and thither the oxen are sent to graze in summer when the labour of the season is over. Nowhere is there better meat nor cheaper corn, not from scarcity of money but from the abundance of the soil.' Notwithstanding, however, this fertility, years of comparative scarcity were by no means infrequent. During the summer of 1743, 'the dear year,' so memorable all over Scotland, thousands of the people of Moray wandered among the fields devouring sorrel, the leaves and stems of unfilled pulse, and whatever could mitigate the pangs of hunger, while many died of actual starvation or diseases brought on by want of food. Even so late as 1782, the noted year of the 'frosty harst,' or harvest, the province suffered severely from famine. When the era of agricultural improvement set in, and many districts, becoming aware of their poverty, made a sudden and strenuous movement towards wealth, Moray was content to live on its fame, and so soon lost its pre-eminence, which it has, however, since regained, as may be seen from the notices of the agricultural condition of the counties of Elgin, Nairn, and Inverness. Some portions were long rendered barren by a curious layer known as 'Moray Coast' or 'Pan.' This was a thin stratum of sand and gravel which, by the infiltration of black oxide of iron, had become a hard compact mass, capable of damaging ploughs when brought into contact with it. It at the same time occurs at the distance of about a foot from the surface, and offers unconquerable resistance to the attempts of trees or shrubs to penetrate it with their roots. The only method of dealing with it is to lay it bare, break it up with a pickaxe, and expose the fragments to the slow influence of the weather. The physical characteristics and present condition of the province are discussed in the articles on the counties of Inverness, Elgin, Nairn, and Banff, and it remains here to notice historical details connected rather with the district as a whole than with the individual counties into which it has been broken up.

At the beginning of the Christian era we find the eastern part of Moray inhabited by the Vacomagi, to the W of whom were the Caledonii with, according to Ptolemy, a town called Banatia, on the E side of the river Ness; another called Ptoroton, on the promontory where Burghhead now stands; and a third called Tuessis, on the bank of the Spey; and subsequently we find the district included in Northern Pictavia, of which the capital was situated somewhere near Inverness. The Pictish nation seems to have been formed by a union of various Celtic tribes or *tuaths* which united to form *mortuaths* or confederations, and these

mortuaths again to form a larger confederation embracing the whole realm. The mortuaths were governed by Mormaers, and seem to have corresponded to the districts that afterwards became the provinces governed by the original great territorial Earls of Scotland. That the country N of the Firths of Forth and Clyde was, during the Celtic period of its history, divided into seven provinces is certain, and there are, in the older records, accounts of them by name. One dating from the 12th century tells us that the region formerly known as Alban, was divided by seven brothers into seven parts. The principal part was Engus and Moerne, so-called from Engus, the eldest of the brothers. The second part was Adtheodhle and Coneriu. The third Strathdearn and Meneted. The fourth Fif and Fothreve. The fifth Mar and Euchen. The sixth Muref and Ros. The seventh Cathanesia Cismontane and Ultramontane. The seven brothers were the seven kings of these districts, and are regarded by Dr Skene as the Eponymi of the people of the seven provinces. The tuaths themselves seem to have corresponded with the smaller divisions that appear as thanages, and so we may identify the localities of some of them by the thanedoms of Dyke, Brodie, Moyness, and Cawdor, along the shore of the Moray Firth between the river Nairn and the Burn of Lethen; the great district of Moravia proper between the Lethen and the Lossie; and along the Lossie farther E was Kilmalemock, the greater part of which now forms the parish of St Andrews-Lhanbryd and Essy. Cromdale and Rothiemurchus seem also to have been thanedoms. The Mormaers were also styled Ri or King, and one, termed the Aulri, always held a loose sway over all. The succession was tanistic, that is, hereditary in a family but elective as to the person, the senior male capable of ruling being chosen in preference to the direct descendant; and it seems even to have been regulated by that particular form where the supreme power passed alternately from one to the other of two branches of a family. It will be seen from what has been said already, that at this early date Moray and Ross were united and formed but one province. The oldest form of the name seems Moreb or Mureb, and Morovia and Moravia also occur.

In the latter part of the 9th century Harald Harfager having swept the northern seas of the Vikings, made offer of the Jarldom of Orkney to one of his most noted warriors Rögnvald, who, however, preferring to return to Norway, obtained Harald's consent to making over the dignity and dominion to his brother Sigurd. Though the tenure of the Jarldom was conditional on his suppression of Viking plundering, this ruler seems to have had somewhat elastic notions as to how far this was binding in the case of raids made on other countries than Norway, and consequently we find him invading Scotland, and making himself master of a considerable portion of the North. According to one account, he held 'all Caithness and much more of Scotland—Maerhaefui (Moray) and Ross—and he built a burg on the southern border of Maerhaefui.' He did not, however, long enjoy his conquests, for, as has been noticed in the article FORRES, he died of a wound inflicted by the tooth of the dead Mormaer Melbrigla or Malbride, whose head he was carrying fastened to his saddle. On Sigurd's death the Jarldom reverted to the descendants of Rögnvald, and they were, for long, so much occupied with family feuds that probably they were unable to bestow much thought or attention on a turbulent province, and so, during the greater part of the 10th century, Moray must have been more or less free from the Norse dominion and under the independent rule of its native Mormaers. According to the Landnamabok, Thorstein conquered the whole of the north, and forced more than half of Scotland to acknowledge him as king, but his conquest, if ever firm, must have been of but short duration. The people of Moray were, however, only relieved from attack on the N to have to meet it from the S. The kings of Alban had begun to dream of a united Scotland under one ruler, and in the beginning of the 10th century Donald II. was slain

at Forres, whither he seems to have penetrated on a military expedition. His son, Malcolm I., was, according to the *Ulster Annals*, slain at Fetteresso by the men of the Mearns in 954, but later annalists attribute his death to the men of Moray, and fix it at Ullern or Ullern near Forres, which used formerly to be identified with Auldearn, but which is more probably Blerwie, which is close to Forres. The locality was very fatal to the family, for Duff, Malcolm's son and successor, is also said to have been killed at Forres by the governor of the castle in 967. His body was concealed in a deep pool under a bridge near at hand, and till it was found the sun did not shine on the spot.

Towards the end of the century, however, matters once more changed as regarded the Norse. The Mormaer then was Melbrigda, son of Ruaidhri, who in the quarrel for power between Liot and Skáli, the great-grandsons of Ríomvald, seems to have sided with the latter. Both leaders were slain, but Liot's party triumphed. That ruler was in 980 succeeded by his nephew, Sigurd the Stout, who, either from a desire to avenge his kinsman's death, or from wish for greater power, proceeded vigorously to assert the old rights, and, after a severe struggle, succeeded in wresting the province from 'Findlaec, son of Ruadri, Mormaer Moreb,' brother of the Melbrigda just mentioned, and the Finnleikr Jarl of the Sagas. Sigurd fell in 1014 at the battle of Cluntarbh or Clontarf, fighting against Brian Boroimne, King of Munster, and after his death, Findlaec once more became ruler of Moray, and reigned till 1020, when it is recorded that he was slain by the sons of his brother Melbrigda, one of whom, Malcolm, succeeded to power and ruled till his death. As both he and Findlaec are, in the *Ulster Annals* and in *Tighernac*, designated as Rí Alban, their dominion probably extended at this time beyond the limits of Moray proper, a supposition which is confirmed by the Book of Deer, in which it is recorded that this Malcolm gave to the clerics of Deer lands, situated, probably, in the neighbourhood of their monastery, and so in a district usually under the rule of the Kings of Alban. Malcolm was succeeded by his brother Gilcomgan, who was burned in his rath in 1032, probably by Macbaethe, who is better known to us as Macbeth. From a notice in the *Saxon Chronicle* the province was then quite independent, and the Mormaer had the power of a Rí or King. It is there stated that King Cnut in 1031 invaded Scotland, and received the submission not only of the King of Scots but also of two other Kings, Maelbaethe and Iehmarc; and as Drumalban and the river Spey formed the boundaries of Scotland proper these two rulers would represent the districts lying beyond.

What was the real cause of the great contest that arose on the death of Malcolm II. in 1034 will probably never be exactly settled, but, the male line being extinct, it in all probability originated in rival claims set up by Malcolm's grandsons. A daughter of Malcolm was the second wife of Sigurd the Stout, and the mother of his youngest son Thorfinn, who was, at his father's death in 1014, a boy of five years old. His grandfather created him Earl of Caithness, and by 1034 he held considerable power in the Orkneys besides. When Malcolm died, Duncan, who was the son of his eldest daughter, claimed the kingdom, and his claim was admitted by the southern part of the realm, but Thorfinn disputed his right to any part of the north. According to the sagas, Duncan, who there figures as Karl Hundason, desired to exact tribute and homage from Thorfinn, and on his refusal to render either, bestowed the title of Earl of Caithness on his nephew, or one of his leading supporters called Moddan, and about 1040 sent him northward with a large army to take possession of the region. Thorfinn, supported by Thorkel Fostrri his foster-father and by his Norsemen, defeated Moddan, and driving him back beyond the Moray Firth, made war 'far and wide in Scotland.' Duncan, bent on vengeance, got together a fleet and collected a very large army, 'as well from the south as the west and east of Scotland, and all the way south from

Satiri [Kintyre]; and the forces for which Earl Modan had sent also came to him from Ireland. He sent far and near to chieftains for men, and brought all this army against Earl Thorfinn.' The fleet was defeated in the neighbourhood of Duncansbay Head; and no better fortune awaited the army in the great struggle that took place somewhere between Burghead and Forres when

'The wolves' bit [sword] reddened its edges
In the place called Torfness.
A young ruler was the cause,
This happened on a Monday.
In this congress south of Ekkial,
The thin [well-sharpened] swords sung,
When the valiant prince fought
Against the ruler of Scotland.'

Torfness seems to have been Burghead, which was probably the burg already referred to as having been built by Sigurd; while Ekkial or Ekkial, which was by Worsaae, and afterwards by Dr Joseph Anderson in his edition of the *Orkneyinga Saga*, identified with the Oykel on the border of Sutherlandshire, is now by Dr Skene, and with much greater probability, considered to be the Findhorn—and indeed some of the accounts expressly say that the battle was fought 'south of Breidafjord,' the Norse name for the Moray Firth. The Irish division was defeated almost at once; and a long and fierce contest between the Norwegians and the Scots, headed by Duncan himself, ended in the victory of Thorfinn and the flight of the Scottish king. What the fate of the latter was the writer of the saga does not seem to have known, for he adds doubtfully, 'some say he was slain,' but by other writers it is recorded that he died at or near Elgin, and some of them even fix the place at Bothgouanan, which Dr Skene identifies with Pitgavreny. In the *Register of St Andrews* it is recorded that 'Donchath Mac-Trini abbatís de Dunkeld et Bothoc filíe Malcolm-Mac-Kinat interfectus a Macbeth-Mac-Fingie in Bothgouanan et sep. in Iona;' but whether he died of his wounds or was murdered may be left somewhat doubtful, though the probabilities seem in favour of the latter. Be that as it may, Macbeth, who as Mormaer of Moray fought on the side of Duncan against the old enemies of his lands, at once after his defeat passed over to the side of the conqueror; and the new allies overran the kingdom as far S as the Firth of Forth, whereby Macbeth became able to style himself King of Moravia and of Scotland.

When Malcolm Ceannmor, the son of Duncan, came to his own again, Macbeth was slain in 1056 or 1057, and Lulag, son of the Gilcomgan already mentioned, succeeded as Mormaer of Moray, and for a short time maintained a claim to be styled King of Scotland. He does not seem to have been able to hold the lowlands against Malcolm, but to have retired to the mountain fastnesses of Lochaber, to a stronghold on Loch Deabhra, the glen leading to which is still known as Glen-Ri, near which he was slain in 1058. He was succeeded by his son Maelsnechtan or Maelsnechtai, who still maintained the independence of his native district, and who appears in 1073 again opposing Malcolm, who after the death of the great Thorfinn in 1064 seems to have made another powerful effort to gain a firm hold of the north. According to the *Ulster Annals*, and contrary to the usual fate of his race, Maelsnechtan died 'in peace' in 1085 or in 1086. During the troubles that took place between the death of Ceannmor and the accession of Alexander I., the semi-independence of the province probably became more or less complete; and so it is not to be wondered at that we find the latter king, somewhere between 1114 and 1120—the *Ulster Annals* say 1116—compelled to assert his power by force of arms, and with such vigour and success that the Mormaer—probably Angus—was driven across the Firth into the mountain fastnesses of Ross and Sutherland. The death of Alexander and the accession of David I. provoked a fresh outbreak, headed by Angus, with whom was associated Malcolm, his brother, or, according to other accounts, an illegitimate son of Alexander I. This

Angus was the son of a daughter of Lulag, who succeeded Macbeth, and therefore a nephew of the Maelsnechtan already mentioned, but, in accordance with the new feudal system, then slowly developing, he appears as Earl of Moray, so that Maelsnechtan was the last of the Mormaers. The leaders probably relied somewhat for success on the fact that, at the time (1180), David was in England, and that therefore much might be accomplished before he had time to oppose them; but in this they were deceived, for David's cousin, Edward, son of Sward, Earl of Mercia, raising a force, met and defeated them in the parish of Stracatbro in Forfarshire, on the SW bank of the West Water, a little above its junction with the South Esk, and, following up his success, entered Moray and obtained possession of the whole district. Angus was slain in the battle, and with him became extinct the line of the old Celtic Mormaers. From his title of earl, and the fact that the *Scotom Chronicle*, in noticing the event and recording his death, declares that 'there was God's right wrought upon him, for that he was all forsworn,' it may be inferred that he had previously sworn allegiance to David. For the next two hundred years the district seems to have been considered too fiery and dangerous to be entrusted to the control of any single ruler; and, though various Custodes Moravie are mentioned in the intervening period, not till the reign of Robert Bruce was there another Earl of Moray. The hold thus acquired David vigorously confirmed by the erection of royal castles and the creation of king's burghs, while an equally powerful agent in the work of civilisation and pacification was brought into play by the establishment of the Priory of URQUHART and of the Abbey of KINLOSS. He seems also to have resided in the district at different times, and to have been successful in personally winning the favour and allegiance of his turbulent northern subjects, for at the Battle of the Standard in 1138, the rearguard, led by the king himself, consisted of Scots and Moray men.

The death of David was the signal for fresh troubles, and on the accession of his grandson, Malcolm IV., Malcolm Macheth, who claimed to be sprung from Earl Angus, raised the Celtic population in revolt, and aided by the petty prince of Argyll, to whose daughter he was married, made a vigorous effort to regain his patrimony. Somewhat was, however, compelled to make peace in 1159, and in 1160 Malcolm entered Moray and inflicted signal punishment on the rebels. Many of the inhabitants of David's burghs were probably strangers, and now his successor determined to carry this policy still farther by dispossessing large numbers of the natives, scattering them throughout the country, and giving their possessions to settlers on whose fidelity he could rely. For-dun speaking of his treatment of the inhabitants, says that he 'removed them all from the land of their birth, and scattered them throughout the other districts of Scotland, both beyond the hills and on this side thereof, so that not even one native of that land abode there, and he installed therein his own peaceful and peculiar people,' who would seem to have been Flemings. This must, however, be somewhat of an exaggeration. 'Such a story of wholesale transmigration,' says Cosmo Innes, 'cannot be true to the letter. Some old institutions unquestionably survived the measure; and a native rural population in the condition of that of Scotland in the 12th century could have no political sentiments, nor be called to account for political conduct. That there was some revolution, however, seems proved by charter evidence, and by the sudden appearance at that time, in the records of the province, of a great number of Southerns obtaining grants of land in Moray, for whom room must have been made by some violent displacement of the former lords of the soil, . . . and thus it came to pass that Berowald of Flanders obtained the lands of Innes all from Spey to Lossie, except the priory lands of Urquhart.' This clearance would seem to have affected the low district along the shore of the Moray Firth more than the other districts, and the latter were from 1174 to 1187 in a chronic state of dis-

affection and rebellion, part of the Celtic population and the Norse settlers claiming that the family of Macheth should be restored to their former position, and that a northern chief, Donald Ban or MacWilliam, descended from Malcolm Ceannmor and the Norwegian princess Ingiborg, was of the nearer line of the royal family, and therefore the rightful sovereign; while those who cared but little for this were alienated through anger at the disgraceful bargain of William the Lion with the English. Though the first active outbreak seems to have taken place in 1181, it was not till 1187 that the King found time to attend to the North, but in that year he entered Moray at the head of a large army, and, fixing his headquarters at Inverness, detached a body of troops to lay waste the western parts of the province. In the decisive battle, which took place in the upper valley of the Spey, at a place called Mamgarvia, probably in Laggan, MacWilliam was slain. From the number of charters granted by William at different times and different places in Moray, he seems to have been often in the north, and, as he followed up his success by reducing Ross to subjection, and bringing Sutherland and Caithness directly under the power of the crown, he kept the North quiet for the rest of his reign. Hardly, however, had Alexander II. succeeded, when, in 1215, Donald Ban, son of the Donald who was killed at Mamgarvia in 1187, having obtained assistance from Ireland, rebelled and burst into Moray at the head of a large army. He was, however, attacked and defeated by Ferquhard Macintagart, the lay possessor of the extensive lands of the old monastery at Applecross, and the pretensions of both the MacWilliams and the Macheths were finally extinguished by Alexander in 1222, from which time onward the historical events are all connected with national matters. Alexander seems to have had a great liking for the 'Laich of Moray,' and we find him keeping Yule at Elgin in 1231; and again in 1242,

'The King and the Qwene alsu,
And an honest court wyth tha,
That ilk yhere in Murrawe past.'

He founded and endowed many of the religious houses in the district, and was a great benefactor to several of the burghs. Alexander III. does not seem to have visited the province very often, though he appears to have been here shortly before the battle of Largs. One of the claimants for the crown, after the death of Alexander III., was John Cumyn, who had, on the death of his uncle, Walter, Earl of Menteith, in 1253, become Lord of Badenoch, but otherwise Moray does not seem to have been connected with the contest of succession that then arose, nor with events in the inglorious reign of John Balliol. After that 'Tulchan' monarch was deprived of the crown, Edward I., having set himself to subdue the kingdom, marched north with a large army, and, crossing the Spey on 25 July 1296 near Bellie, entered the province and advanced as far as Elgin, whence detachments of his force were sent to occupy the castles of Forres, Nairn, Inverness, Dingwall, and Cromarty. Finding, however, that the province was quiet, and that all the leading nobles were favourably disposed towards his rule, he extended his march no farther, but returned southwards by ROthes and so through Banffshire and Aberdeenshire. Traditionally, Wallace passed along the sea-coast and crossed thence to Cromarty where he destroyed the castle, but it seems doubtful whether he was ever so far north, though a revolt against the English rule was stirred up by Sir Andrew Moray, the younger of Petty and Bothwell, and seems to have spread over the whole district. This was in May and June in 1297, and we find him associated with Wallace down to the close of the year, after which he disappears from history during the rest of the reign of Edward I. On the second English invasion in 1303 Edward again penetrated to Moray, but this time advanced to Kinloss and thence southward into Badenoch where he spent some time at LOCHINDORB Castle.

After the close of the war of independence we find

Bruce erecting the district once more into an Earldom, in favour of his nephew, Thomas Randolph, and the King himself seems to have been several times in the north, but almost nothing is known of his movements. During the troubles that followed his death Moray remained stanch to his son, and seems to have been partly held by Sir Andrew Moray on his behalf; and later David II. himself came to Inverness in 1369 in order to have an interview with John, Lord of the Isles, some of whose turbulent subjects had been in rebellion.

In 1371 King Robert II. granted to Alexander, his fourth son by his first wife, Elizabeth Mure, the whole lands of Badenoch which had belonged to the Comyns, and at a later date in the same year he was appointed King's Lieutenant in the north. Two years later he was made Earl of Buchan, and as he was Earl of Ross in right of his wife, he was for a time the most powerful noble in the country. He scarcely, however, maintained the dignity of his position, for, better known as the Wolf of Badenoch, he thoroughly deserved the title, and some of his exploits will be found noticed in the articles on Elgin, Forres, and Lochindorb.* Hardly recovered from the effects of the Wolf's deeds the lower part of the province again suffered in 1402 from an inroad of Alexander, third son of the first Lord of the Isles, at the head of a large following; and in 1411 his brother Donald, second Lord of the Isles, passed through on his way to the battle of HARLAW. After the progress of James I. through Moray in 1427 (see INVERNESS) Donald, the then Lord of the Isles, assembled a force and advanced with it as far as Lochaber, but there he was met by the royal forces and his army dispersed. He afterwards made submission, but his lieutenant, Donald Balloch, in 1431, again advanced to Lochaber with a large body of followers. This led to another royal visit to the north, but the route is not clear. The time indeed does not seem to have been a pleasant one in the regions, for a writer in the Charters of Moray says that 'in these days there was no law in Scotland, but the more powerful oppressed the weaker, and all the realm was one mass of robbery. Murder, plundering, fire-raising went unpunished, and justice was banished from the land.'

One of the Douglasses being Earl of Moray, we find the province concerned in the contests that arose in 1452 with the 'banded earls' (see ELOIN). The earl did not succeed in getting his vassals to join him in any number when he took part in the Douglas rebellion of 1454-55, but after his death James Douglass stirred up Donald, Lord of the Isles, with whom he had taken refuge, to invade the mainland, where 'at last he past to Lochaber, and therefrom to Murray, where he invaded . . . with great cruelty, neither sparing old nor young, without regard to wives, old, feeble, and decrepit women, or young infants in the cradle, which would have moved a heart of stone to commiseration; and burned villages, towns, and corns, so much thereof as might not goodly be carried away, by the great prize of goods that he took.' These disorders caused James II. to come north in 1455 and set the Earldom of Moray, which was now bestowed on his infant son David, in thorough order. He remained here for two years, and part of the country was thrown waste to provide a forest for his hunting. In 1464 James III. was here; and in 1474 or 1475 John, Lord of the Isles, surrendered to the Crown the sheriffdoms of Inverness and Nairn, which were in 1492 granted to the Earl of Huntly, whose influence in the north was supreme from this time till the Reformation. James IV. must frequently have passed through the province on his way to and from the shrine of St Duthac at Tain, which he often visited; and in the Treasurer's accounts for 1504 we find payments recorded to 'the maidens of Forres that dansit to the king,' and others 'that dansit' to him at Elgin and Darnaway. During the time of James V. and the minority of Queen Mary, the whole of the north and north-west was in a very disturbed state, and the portions of Moray about Badenoch and Lochaber

The inscription on his tomb in Dunkeld Cathedral was made to record that he was a man 'bone memorie!'

and to the NW of the Great Glen were in an almost continual state of warfare; and in 1556 the Queen Regent, Mary of Guise, advanced to Inverness to try to settle matters, but her attention on her return to the south being almost immediately drawn off by the beginnings of the Reformation, matters were but little improved, the cause being in part the disturbances created by the Lord of the Isles, in part the quarrels among the clans themselves, and in part the bad government of Huntly.

No sooner, however, had Queen Mary assumed the government, than, acting probably under the advice of the great Earl of Murray, she determined to adopt severe measures, and, setting out in 1562, reached Elgin on 6 Sept. Her doings at INVERNESS, where she was from the 11th to the 15th of the same month, are noticed in that article; and Huntly's power was broken almost immediately afterwards at the battle of Corrichie in Aberdeenshire. Fresh feuds again broke out in consequence of the murder of 'the bonny Earl of Moray' by the Earl of Huntly at Donibristle in 1592, and these were prolonged and intensified by the proceedings in 1594 against the Earls of Huntly, Angus, and Errol, who were charged with plotting with Philip of Spain for the restoration of the Catholic religion in Scotland. It was on this occasion that mass was said for the last time in Elgin Cathedral, though groups of worshippers of the old faith are said to have by stealth frequented corners of it down to the reign of Queen Anne.

In 1603-4 the district seems to have suffered severely from plague, for the magistrates of Elgin sent to Edinburgh for Thomas Ahannay and two servants 'for cleming of the infected parts, together with the bodies of the persons infected,' and the sheriffs of Elgin, Nairn, and Inverness were authorised by the Lords of Council to assess for the expenses, amounting to 600 merks. The province suffered considerably during the civil wars in the time of the Stewart kings, partly in consequence of the people generally declaring for the cause of the Solemn League and Covenant, and partly from the district becoming the scene of one of the campaigns of Montrose and his ally, Lord Lewis Gordon, who indeed obtained the unenviable notoriety of being classed by a rhymist of the period with two of the worst plagues of an agricultural country:—

'The gule, the Gordon, and the hoodie-craw
Are the three warst evils Moray ever saw.'

Probably, however, the author had more than Lord Lewis in his mind when he thus irreverently spoke of the descendants of the 'Cock of the North.' In Sept. 1644 Montrose came northward by Aberdeen, and 'begins to marche towards Spey side, bot could not win over the water, the boitis being drawin on the uther side, and Moray convent in armes; and so he turned back, only, however, to return again after his victory at Inverlochy. In the following year he marched rapidly on the low country, and 'merchit bak throw Lochquhaber with displayit baner towards Innerniss with incredibill diligens; and synding the toune stronglie fortifeit and garisonis lying about or rather within the toune, . . . thairfor merchit peccabile by Innerniss doun throw the countrie of Moray;' and of such of the proprietors as would not join him he 'plunderit, spoizeit, and brynt' the houses and lands, and 'sent out paitreis throw the countrie with fyre and plundering.' The Committee of Estates sitting at Elgin broke up, and many of the townspeople fled, with 'thair wyves, barnes, and best goodis,' to SPYNE and other strongholds. The Marquis reached Elgin on 19 Feb., and was joined by Lord Lewis Gordon shortly after. He received 4000 merks to save the town from being burned; 'bot his soldiouris, especiallie the Laird of Grantis soldiouris, plunderit the toune pittifullie, and left nothing tursabill oncareit away, and brak doun bedis, burdis, insight, and plenshing.' Thereafter he marched southward, but returned again in May, following up Hurry and his Covenanters, who preceded him by two days, and whom he shortly afterwards defeated at the battle of ATLEDARNE. This victory was

but the prelude to fresh plundering and spoiling, during which Elgin was partially burned, and then the Royalist army passed on its way southward to the final disaster at PHILIPHAUGH. Much, however, as the district thus suffered, the adherence of the men of Moray to Presbyterianism was political rather than religious, and they consequently never showed that zeal for the cause which marked the people of the southern and western counties of Scotland. The other historical events connected with the province, such as the landing of Charles II. at Garmouth and the battle of CROMDALE, are noticed in detail in conjunction with the different places with which they are more particularly connected, and need not now be further alluded to. In 1746 the Highland army on their northward retreat broke up into three divisions, one of which followed the Highland road by the upper waters of the Spey, and by Duthill on to Inverness; a second marched by the braes of Angus and Strathdon to Elgin, where they were joined by a third body, which had retired along the great coast road; and the whole army was reunited at Inverness. The Duke of Cumberland entered the province on 12 April, and on the 16th was fought the Battle of CULLODEN, the last in which opposing armies met in array on British soil. After their defeat the Highlanders retired south-eastward by Moy and Badenoch to the place of their final dispersion at Clova. The clan distribution to the SW of the Highland line was: the Grants, Shaws, and Macphersons along Strathspey; the Mackintoshes along the upper portions of the valleys of the Findhorn and Nairn; the Frasers to the SE and N of Loch Ness, and also in Strath Affric and Glen Cannich; the Chisholms in Strath Farrer and Strath Glass; the Grants to the NW of Loch Ness; and to the S of them the Glegarry Macdonalds.

The division into the present shires seems to have taken place in the second half of the 13th century, but for long after that their boundaries were somewhat variable. From the time of Queen Mary no Scottish or British sovereign visited the province till 1872, when Queen Victoria passed through on her way to Dunrobin Castle on a visit to the Duke of Sutherland, and she again traversed the 'laich' on her way to Loch Maree in 1877.

The EARLDOM of Moray was long one of the most important in Scotland. The first Earl, Angus, was, as we have seen, in direct descent from the old Celtic Mormaers; but after his death in 1130 no Earl was allowed to exist for nearly two centuries, the management of the province being kept in the hands of the Crown, or committed for brief periods to different Scottish nobles, as when, during the early part of the 13th century, we find Malcolm, Earl of Fife, thus acting at one time, and William Cumyn at another, each being simply styled *Custos Moravia*. This state of matters came to an end about 1313 or 1314, when Robert Bruce granted the whole of the province to his nephew and trusted friend Sir Thomas Randolph. The charter, which bears no date, but which must have been granted shortly before the convention at Ayr in 1315, defines the estate as including the lands of Fochabers and Boharm beyond the Spey, thence extending up that river to Badenoch, including Kincardine, Glencairn, Badenoch, Maymeze, Locharked, Glegarry, and Glenelg, passing along the NW border of Argyllshire to the western sea, bounded on the N by the Earldom of Ross to the river Farrar, and thence down that stream and the Beauly to the Moray Firth. The estate and the title of the Earldom were, according to the original principle of peerages, inseparable, the title becoming extinct upon the alienation of the estate. Randolph died in 1332, and was succeeded by his eldest son, Thomas also, who was killed at DUFFLIN in 1332, 28 days after his succession. The second son, John, who then succeeded, was taken prisoner by the English at the battle of KILBLAIN in 1335, but was exchanged for the Earl of Salisbury in 1341. Becoming Warden of the West Marches, he accompanied David II. on his expedition into England, and was killed at the battle of Durlin in 1346. There being no male heir the

Earldom then reverted to the Crown, but Patrick Dunbar, who was married to the daughter of the first Earl—Black Agnes, whose name is well known in connection with her defence of Dunbar Castle—was generally styled Earl of Mar and Moray. His second son, John Dunbar, who was married to Marjory, daughter of Robert II., was made Earl of Moray in 1372; but his domains were lessened by the large districts of Badenoch, Lochaber, and Urquhart, which were constituted into a lordship for the King's son, Alexander, better known as the Wolf of Badenoch. The succeeding Earls were Thomas, the son of John, his son also called Thomas, and James, the cousin of the third Earl, with whom the male line became again extinct,* and the succession passed to Archibald Douglas, the husband of the younger of the two daughters left by Thomas Dunbar. Supported by the influence of his brother, the Earl of Douglas, he obtained the Earldom in 1446; but having joined the family rebellion of 1452, and being killed in 1455, the title and possessions again passed to the Crown, with whom they remained till 1501, when the honour was granted to James Stewart, an illegitimate son of James IV., who died in 1544 without issue. From 1548 to 1554 the Earldom was granted to the Earl of Huntly, but was again, from 1554 to 1562, in the possession of the Crown. In the latter year it was bestowed on James Stewart, afterwards the well-known Regent, and in his line it still remains. In 1563 he obtained a second charter limiting the succession to heirs male, in 1566 a fresh one opening the succession to heirs general, and in 1567 a ratification by the Estates of the deed of 1563. At his death he left two daughters, and James Stewart, Baron Doune, who married the eldest, Lady Elizabeth, assumed the title of Earl of Moray. This Earl figures in history as the Bonnie Earl of Moray, and is the hero of the ballad of that name.

'He was a braw gallant,
And he played at the ghve
And the bonnie Earl of Moray
He was the Queene's luvie.'

He was in 1592 murdered at Donibristle by the Earl of Huntly, who was nominally acting on a commission to pursue the Earl of Bothwell and his associates, of whom Moray was alleged to be one, but is supposed in reality to have been instigated to the deed by King James VI. 'It was,' says Sir James Balfour, 'given out and publicly talked that the Earl of Huntly was only the instrument of perpetrating this fact to satisfy the King's jealousy of Murray, (whom the Queene, more rashly than wylie, some few days before had commended in the King's heiringe, with too many epithets of a proper and gallant man.' His son and successor was by the King's special efforts reconciled to Huntly, and married his daughter, Lady Anne Gordon. He obtained in 1611 a fresh charter of the Earldom with entail to male heirs only. His grandson, Alexander, fifth Earl, was Secretary of State and Lord High Commissioner between 1650 and 1686. Francis, the ninth Earl (1737-1810), was noted as an agriculturist, and is said to have planted on his estates upwards of thirteen millions of trees. The present Earl, George (b. 1814), succeeded in 1872. The other titles are Baron Doune (1581) and Baron St Colme (1611), both in the peerage of Scotland, and Baron Stewart of Castle Stewart (1796) in the peerage of Great Britain. The family seats are DARNAWAY Castle in Elginshire, DONIBRISTLE Castle in Fifeshire, Castle Stewart in Inverness-shire, and Doune Lodge in Perthshire.

Of the early religious state of the province almost nothing is known. St Columba's visit to INVERNESS is noticed in that article, and other traces of the Culdee church and its influence remain in the gifts already mentioned made by some of the early Mormaers to the clerics of Deer as well as in the associations of the names

* The fourth Earl had a son, Sir Alexander Dunbar of Westfield, by his first marriage with his cousin Isabella Innes of Innes, but as she was within the forbidden degree, and died before a Papal dispensation could be procured, this son was deemed illegitimate, and very wrongly barred from the succession.

of St Gernadins, St Moran, and St Bride, and other early clerics, with different localities. There are also accounts of old churches not connected with any saint's name at Birnie, Elgin, and Kintrine, near the latter of which is also Inchagarty or 'the priest's island.' The ancient DIOCESE, of later date, has been already noticed in the article ELGIN. With it the modern SYNOD of Moray is nearly co-extensive. The latter body meets at Elgin and Forres alternately, on the fourth Tuesday of April, and in either of those towns, or in some place fixed by the members, on the last Tuesday of September. It includes the presbyteries of Strathbogie, Abernethie, Aberlour, Elgin, Forres, Inverness, and Nairn, and contains 52 *quoad civilia* parishes, 9 *quoad sacra* parishes, and 3 mission churches. There is also a synod of Moray in connection with the Free Church, including the same presbyteries as in the Established Church. It contains 57 churches. The Episcopal Church has a united diocese of Moray, Ross, and Caithness, with the cathedral and bishop's residence at Inverness, and churches at Aberchirder, Arpafealie, Craigellachie, Dingwall, Elgin, Fochabers, Forres, Fortrose, Glen Urquhart, Highfield, Huntly, Inverness, Keith, Nairn, Strathnairn, Thurso, and Wick.

Moraylaws, a village near Auldearn, in Nairnshire.

Moray's Cairn, a quadam large stone tumulus, supposed to have been commemorative of a battle, in Alves parish, Elginshire.

Morayshire. See ELGINSHIRE.

Mordington, a hamlet and a coast parish of SE Berwickshire. The hamlet lies 4 miles WNW of the post-town, Berwick-on-Tweed. The parish, containing also the fishing hamlet of Ross, since 1650 has comprehended the ancient parishes of Mordington and LAMBERTON. It is bounded NW by Ayton, NE by the German Ocean, SE by the Liberties of Berwick, SW by Hutton, and W by Foulden. Its utmost length, from NNE to SSW, is 5½ miles; its breadth varies between 1½ furlong (at the glebe) and 2½ miles; and its area is 3069¾ acres, of which 1144 are foreshore and 16 water. WHIFLADER Water winds 2½ miles south-south-eastward along all the Hutton boundary, though the point where it first touches and that where it quits the parish are only 1½ mile distant. Its serpentine folds and steep rocky wooded banks are singularly picturesque. One burn rises and runs 3 furlongs in the interior, and then goes 2 miles south-south-westward to the Whitadder along the Foulden boundary; and another, running ¾ mile north-eastward to the sea along the north-western border, in the last part of its course makes a series of waterfalls down the gully cut by it in the precipitous cliff. The coast, 2½ miles in extent, and trending in a south-south-easterly direction, rises steeply from the sea to a height of 200 feet, and is all a bold breastwork of rugged sandstone, pierced with many caverns, where smugglers once hid their stores. Here and there huge masses of detached rock stand out into the sea; and only in the extreme N is there a small recess, Ross Bay, with the conjoint fishing village of Ross and BURNMOUTH, the latter in Ayton parish. The North British railway skirts the brink of the cliffs; and beyond it the surface rises westward to 614 feet at Lamberton Moor, 712 at Hab or Habbchester near the meeting-point with Foulden and Ayton, and 649 at the

Witches' Knowe—heights that command a magnificent view of the Eildons, the Lammermuirs, the Ocean, and Bambrough Castle. Sandstone and poornish limestone are plentiful: coal has been worked; and ironstone occurs in small veins. The soil for some distance from the Whitadder is a stiff clay, yielding good crops of wheat and beans, and thence to the coast is mostly a light loam, well suited for turnips, and for sheep-grazing; but that of the loftiest parts of the high grounds is mostly thin and poor, and partly heathy or boggy. Some 25 acres, all in the southern district, are under plantation; about one-fourth of the entire area is pastoral or waste; and all the rest is in tillage. The barony of Mordington, which at one time belonged to a family of its own name, by Robert Bruce was granted to Thomas Randolph, Earl of Moray; and, passing at the third Earl's death to his sister, Blak Agnes, Countess of Dunbar, was given as a dowry to her daughter Agnes, who married Sir James Douglas of Dalkeith. It continued to be held by his descendants, the Earls of Morton, till 1581, when it reverted to the Crown; but in 1634 the lands and barony of Over Mordington were conferred on another James Douglas, the second son of the tenth Earl of Angus; and in 1641 he was created Baron Mordington in the Scottish peerage—a title which became dormant in 1791. Mordington House, on a rising-ground to the NE of Mordington hamlet, was Cromwell's headquarters when he first passed the Tweed in July 1650; and now is the seat of Major Charles Frederick Campbell Renton of Lamberton (b. 1819; suc. 1866), who holds 2487 acres in the shire, valued at £3560 per annum. EBRINGTON CASTLE and Ebrington House have been noticed separately. A sequestered glen, the scene, it is said, of the famous song of *Tibbie Fowler o' the Glen*, lies in the southern district, not far from Ebrington House. On Habbchester are vestiges of a so-called Danish camp, consisting of two trenches whose mounds, 18 or 20 feet high, appear to have been faced with stones brought toilsomely from the bed of the Whitadder; and on the abrupt Witches' Knowe a woman is said to have been burned for sorcery so late as the beginning of last century. Mordington is in the presbytery of Chirnside and the synod of Merse and Teviotdale; the living is worth £261. The parish church, at Mordington hamlet, was built in 1869, and contains 173 sittings. A Free church, a little S of the parish church, contains 172 sittings; and the public school, with accommodation for 57 children, had (1883) an average attendance of 34, and a grant of £38, 10s. Valuation (1865) £3717, 6s., (1884) £5323, 10s., plus £1146 for the 2½ miles of railway. Pop. (1801) 330, (1831) 301, (1861) 377, (1871) 402, (1881) 367.—*Ord. Sur.*, shs. 34, 26, 1864.

Morebattle, a Border village and parish of E Roxburghshire. The village stands, 320 feet above sea level, on a gentle eminence, not far from the left bank of the winding Kale, 4½ miles SW of Yetholm and 7½ SSE of Kelso, under which it has a post office, with money order, savings' bank, and telegraph departments. Pop. (1871) 327, (1881) 322.

The parish, comprising the ancient parish of Mow, is bounded NW by Linton, NE by Yetholm, E and SE by Northumberland, SW by Hounam, and W by Eckford. Its utmost length, from NNW to SSE, is 9½ miles; its utmost breadth is 7 miles; and its area is 35½ square miles or 22,518 acres, of which 183½ are water. KALE Water flows 4½ miles northward and westward, partly along the Hounam and Linton boundaries, partly across the western interior; and BOWMOXN Water, formed at Cocklawfoot (750 feet) by head-streams that rise among the Cheviots on the English Border at altitudes of from 1700 to 2350 feet, runs 7½ miles north-westward and northward till it passes off near Hlayhope into Yetholm parish. Yetholm or Primside Loch (3 x 1½ furl.) lies just on the Yetholm boundary. Along Bowmoxn Water the surface declines to 385, along Kale Water to 220, feet above the sea; and chief elevations, from N to S, are *Linton Hill (926 feet), Clifton Hill (905), *Windshaw Hill (1067), Morebattle Hill (719), the CURR (1849), the

*Schel (1979), *Auchopceairn (2422), and *Windygate Hill (2034), where asterisks mark those summits that culminate on the confines of the parish. Indeed, excepting two small tracts in the extreme NW and N, all Morebattle consists of hills and narrow valleys, and runs up along the whole boundary with England to the highest summits of the CHEVIOTS. Its heights command, in many instances, very grand and map-like views of Teviotdale, Merse, and Northumberland, fringed on the E by the German Ocean; and generally have a graceful outline and a deep verdure, unlike the usual stern features of a mountainous district. Only a fair proportion of wood is wanted to complete that blending of grandeur into beauty which is due to the district's natural form and clothing. The predominant rocks are eruptive; and the soil of the arable lands is mostly light, well suited to the turnip husbandry. The higher grounds are chiefly disposed in pasture. Corbet Tower, near the Kale's left bank, 1 mile SSE of the village of Morebattle, was burned by the English in 1522 and 1545. Rebuilt in 1575, it gradually fell into decay, till early in this century it was renovated by Sir Charles Ker of Gathesaw, though never inhabited. Whitton Tower, $\frac{1}{2}$ mile SSW of the village, was sacked by the Earl of Surrey in 1523, and burned by Hertford in 1545, and is now in a ruinous condition. Other towers and peel-houses of the parish which figure in Border records have disappeared; but on many of the heights are encampments. The church of Merebotle or Morebattle ('village on the mere or lake') belonged to Glasgow cathedral as early as the 12th century, but was the subject of pertinacious controversy regarding the right to its temporalities; and eventually, in 1228, was declared to be a prebend of Glasgow, whose archdeacon should receive thirty merks a year for a mansion, but should claim nothing of the rectory. There were two pre-Reformation chapels in the parish—the one at Clifton on Bowmont Water, and the other at Whitton, now called Nether-Whitton. Now or Moll included the highest grounds or southern and south-eastern parts of the united parish. Its village stood on Bowmont Water near Mowhaugh, $\frac{5}{8}$ miles S of Yetholm; and its church stood a little lower down the river. The church belonged to the monks of Kelso. Those of Melrose also held lands in the parish; and their refusal to pay the tithes gave rise to a dispute, which was finally settled in 1309. The principal residences are Lochside, Otterburn, and Gathesaw; and 7 proprietors hold each an annual value of £500 and upwards, 2 of between £100 and £500, and 4 of from £20 to £50. Morebattle is in the presbytery of Kelso and the synod of Merse and Teviotdale; the living is worth £343. The parish church, at the village, was built in 1757, and contains 300 sittings. In the village are also a Free and a U.P. church, the latter representing the oldest Secession congregation in the South of Scotland. Their first minister, Mr Hunter, was ordained in 1739, and was the earliest Secession licentiate; but he died a few months after his ordination. The original meeting-house stood at Gathesaw Brae or Corbet, and the present one was built in 1866. A great religious meeting, conducted by a body of Secession ministers from a distance, was held in 1839, on Gathesaw Brae, to celebrate the centenary of Mr Hunter's ordination. Two public schools, Morebattle and Mowhaugh, with respective accommodation for 125 and 28 children, had (1883) an average attendance of 104 and 19, and grants of £94, 11s. and £34, 2s. 6d. Valuation (1864) £13,013, 18s. 11d., (1884) £13,962, 8s. 2d. Pop. (1801) 785, (1831) 1055, (1861) 1031, (1871) 986, (1881) 1003.—*Ord. Sur.*, sh. 18, 1863.

More dun, a mansion in Liberton parish, Edinburghshire, $3\frac{1}{2}$ miles SSE of Edinburgh. Its late owner, David Anderson, Esq. (1813-81), held 194 acres in the shire, valued at £851 per annum.—*Ord. Sur.*, sh. 32, 1857.

More dun Hill. See MONCREIFFE.

More, Loch. See EDRACHILLIS.

Morgay. See MORGAY.

Morham, a parish of central Haddingtonshire, whose

church stands 4 miles ESE of Haddington. Bounded W and NW by Haddington, NE by Prestonkirk, and SE by Whittingham and Garvald, the parish has an utmost length from ENE to WSW of $3\frac{1}{2}$ miles, an utmost breadth of $1\frac{1}{2}$ mile, and an area of 2087 $\frac{1}{2}$ acres. The surface, drained to the Tyne by Bearfoot Burn, is part of a gently undulating plain, with northward declension, which sinks little below 200, and little exceeds 400, feet above sea-level. A pretty little glen forms the minister's pasture glebe; but elsewhere the scenery is tame and bare. Trap rock abounds, and sandstone has been quarried; whilst coal of inferior quality was formerly worked. The soil in general inclines to clay. Morham Castle, which stood near the parish church, has wholly disappeared. The Earl of Wemyss divides the parish with four lesser proprietors. Morham is in the presbytery of Haddington and the synod of Lothian and Tweeddale; the living is worth £234. The parish church, built in 1724, contains 100 sittings; and the public school, with accommodation for 54 children, had (1883) an average attendance of 27, and a grant of £31, 4s. Valuation (1860) £3482, (1884) £2837, 5s. Pop. (1801) 254, (1831) 262, (1861) 281, (1871) 204, (1881) 209.—*Ord. Sur.*, sh. 33, 1863.

Morie, Loch. See MARY'S LOCH.

Morir. See MORAE.

Morishill, an estate, with a mansion, in Beith parish, Ayrshire, close to Beith station. Its owner, John Shedden-Dobie, Esq. (b. 1820; suc. 1883), holds 272 acres in the shire, valued at £578 per annum.—*Ord. Sur.*, sh. 22, 1865.

Morison's Haven, a harbour in Prestonpans parish, Haddingtonshire, adjacent to the boundary with Edinburghshire, $\frac{1}{2}$ mile WSW of Prestonpans town. Formed in 1526 by the monks of Newbattle for exporting coal from their lands of Prestongrange, it was called originally Newhaven, afterwards Acheson's Haven, eventually Morison's Haven; and it serves now as the port for Prestonpans, and for extensive neighbouring works and collieries of the Prestongrange Coal and Iron Company, employing upwards of 400 men. About 1873 it acquired new importance by the formation of a village for the neighbouring work-people, the erection of a large brick and tile work, and the construction of branch lines of railway. Its tidal harbour, reckoned to be one of the best in the Firth of Forth, afforded a very limited reach for the loading of vessels; but in 1875-77 it was greatly improved and extended, after engineering plans by J. Buchanan, at a cost of £10,000.—*Ord. Sur.*, sh. 32, 1857.

Moriston, a beautiful river of NW Inverness-shire, issuing from Loch CLUNIE (606 feet above sea-level), and flowing 19 $\frac{1}{2}$ miles east-north-eastward, till, after a total descent of 556 feet, it falls into Loch Ness at INVERMORISTON, 7 miles NNE of Fort Augustus. It receives, within 3 $\frac{3}{4}$ miles of its exit from Loch Clunie, the tribute of the Loyne and the Doe; riots wildly along picturesque GLEN MORISTON, now from side to side, now on reaches of deep, rocky, ledgy channel, here in gorge or narrow ravine, there in tiny lacustrine expansions studded with romantic rocks or wooded islets; is so impetuous as to have repeatedly swept away bridges from its path; and makes, in its last reach, a foaming cataract, margined with wood, and overhung by green or wooded hills. Its waters contain abundance of trout, and have been made accessible to salmon.—*Ord. Sur.*, shs. 72, 73, 1880-78.

Morlich, Loch. See DUTHIL.

Mormond, a station in Strichen parish, NE Aberdeen-shire, on the Formartine and Buchan branch of the Great North of Scotland railway, $2\frac{1}{2}$ miles ENE of Strichen and $7\frac{3}{8}$ S by W of Frascrburgh. Mormond House, in Rathen parish, on Cortes estate, 5 miles S of Frascrburgh, and 9 furlongs WNW of Lonmay station, was erected early in the present century by John Gordon, Esq. of Cairnbulg, and is a commodious mansion, with an elegant portico, an artificial lake ($2\frac{1}{2} \times \frac{1}{2}$ furl.), and finely-wooded grounds. Its owner, William Fraser Cordiner, Esq., holds 1585 acres in the shire, valued at

£1325 per annum. Mormond Hill, on the mutual boundary of the three parishes of Strichen, Rathen, and Fraserburgh (detached), 6½ miles SSW of Fraserburgh, rises in two summits—the higher to the W—of 769 and 749 feet above sea-level, and serves as a landmark to mariners. On its south-western brow, overlooking Strichen village, is the figure of a horse which, occupying a space of nearly half an acre, consists of pieces of white quartz rock, fitted into cuttings in the turf, and was formed about the beginning of the present century by the tenantry of the Strichen estate, to commemorate the war-horse of Lord Lovat. The figure of a stag on the seaboard face of the hill, directly over Whiteside farm, occupies a space of nearly an acre; measures 240 feet from the tip of the antlers to the hoof; consists of similar materials to those of the 'White Horse'; appears in bold relief from the contrast of its quartzite stones to the circumjacent mossy soil; and was formed in 1870 by Mr Cordiner to serve as a conspicuous landmark. A massive cairn of quartzite stones stands in the near vicinity of the stag, and was erected in the latter part of 1870, to commemorate the formation of the stag. A waterspout, which burst on the SW shoulder of the hill, one July morning of 1789, tore vast masses of moss from their native bed, made cavities 18 to 20 feet deep, and poured such a deluge down Ugie Water as swept away bridges, and lodged masses of moss on the river's banks down to its mouth at Peterhead. See STRICHEN.—*Ord. Sur.*, sbs. 87, 97, 1876.

Morningside. See EDINBURGH.

Morningside, a mining village in Cambusnethan parish, Lanarkshire, with stations on branch lines of both the Caledonian and North British railways, 3 miles by road E by N of Wishaw, and 7 by railway SSE of Holytown. It has a post and telegraph office and a public school. Pop. (1861) 780, (1871) 428, (1881) 740.—*Ord. Sur.*, sh. 23, 1865.

Morphie, an estate in St Cyrus parish, Kincairdineshire, 4 miles N of Montrose. Its owner, Francis Barclay Grahame, Esq. (b. 1838; suc. 1877), holds 1175 acres in the shire, valued at £2731 per annum.—*Ord. Sur.*, sh. 57, 1868.

Morrison's Haven. See MORRISON'S HAVEN.

Morrison. See LEGERWOOD.

Morrison, Inverness-shire. See MORRISON.

Morthill. See MURKLE.

Mortlach (anciently Murthlak, Murthelach, and Murthlache; Gael. ? *Mohr-tulloch*, 'the great hills'), a parish near the centre of Banffshire. It is bounded N by Boharm, NE by Botriphnie parish, for fully 3¼ miles near and at the extreme E corner by Aberleenshire, SE by Glass parish and Cabrach parish, SW by Inveraven parish, and W by Aberlour parish. The boundary is largely natural, following along the NE a line of rising grounds, at the E corner for 1¼ mile the course of the Deveron, along the SE Edinglassie Burn and the rising grounds between the basins of the Fiddich and the Deveron, along the SW the line of heights between Glens Fiddich and Rinnes and Glenlivet, and at the W corner and W side for 4½ miles the Burn of Favat to nearly its junction with the Corryhabbie Burn. The shape of the parish is very irregular, but the greatest length, from Hillhead of Kininvie on the N to Cook's Cairn on the S, is 11½ miles; the greatest breadth, from the boundary with Aberlour parish between the Convals on the W to the Deveron at Hangh of Glass on the E, is 9½ miles; and the area is 34,283·681 acres, of which 99·661 are water. The height above sea-level varies from 600 to 900 feet along the northern border, and from this it rises along the western border to the Little Conval Hill (1810), Meikle Conval (1867), the Round Hill, on the flank of Ben Kinnes (1764), and the Hill of Auchmore (1672) at the S end of Glen Rinnes; in the centre, between Glen Rinnes and Glen Fiddich, to Jock's Hill (1568), Laird's Seat (1498), Thunderslap Hill (1708), Tor Elick (1420), Hill of Glenroads (1544), and Corryhabbie Hill (E. 2653; W. 2393); in the Wood of Kininvie to Scaut Hill (1194), and along the NE

border, to Tips of Clunymore (1296), Carran Hill (1366), Tips of Corsenaul (1339); between the Markie and Fiddich to the Hill of Mackalea (1529) and the Scalp (1599); and along the SE border to Meikle Balloch Hill (1529), Cairn Crome (1657), Hill of Clais nan Earb (1717), Scat Hill (1987), and Cook's Cairn, the extreme S, (2478). About one-sixth of the whole area is arable land, either alluvial along the valleys of the streams or poor high-lying land along the slopes of the glens. About 700 acres are under wood, and the rest of the parish is either upland pasture or heathy moor. The soil varies from good fertile loam—particularly along the lower Fiddich, 'Fiddichside for fertility' being an old district proverb—to thin clay. The underlying rocks are granite, dark clay slate—both worked to a small extent for building purposes—and limestone of excellent quality, which is extensively worked at Tinniver and elsewhere, and in some places passes into an inferior quality of marble. A rock suitable for whetstones is also found as well as traces of antimony, lead, alum, and some small garnets. Near Kininvie House is a spring highly charged with lime, and there are chalybeate springs at several places. The drainage of the parish in the E is effected by the Markie and some other small streams that flow into the Deveron; and in the SW by the Favat and Corryhabbie Burns, which, after separate courses of about 3½ miles, unite at Mill of Laggan to form the Dullan which, for over 5 miles, drains the western part of the parish along the centre till it unites with the Fiddich at Dufftown. The S, centre, and N of the parish is drained by the Fiddich—which has here, from its source till it quits the parish on the NE, a course of almost 15 miles—and the streams that flow into it. The glen through which the upper waters of the Dullan flow is known as Glen Rinnes, and that along the upper waters of the Fiddich as Glen Fiddich, the surrounding district forming a deer forest belonging to the Duke of Richmond. It was by the road along Glen Rinnes that the Queen drove when she visited Glen Fiddich Lodge in September 1867. Her Majesty's impressions are thus recorded in *More Leaves from the Journal of a Life in the Highlands* (1884):—'We drove on for an hour and more, having entered *Glen Rinnes* shortly after *Tomnavoulin*, with the hills of *Ben Rinnes* on the left. There were fine large fields of turnips, pretty hills and dales, with wood, and distant high hills, but nothing grand. The day became duller, and the mist hung over the hills; and just as we sat down by the roadside on a heathery bank, where there is a very pretty view of *Glenlivet*, to take our tea, it began to rain, and continued doing so for the remainder of the evening. Lindsay, the head keeper, fetched a kettle with boiling water from a neighbouring farmhouse. About two miles beyond this we came through *Dufftown*—a small place with a long steep street, very like *Grantown*—and then turned abruptly to the right past *Auchindown*, leaving a pretty glen to the left. Three miles more brought us to a lodge and gate, which was the entrance of *Glenfiddich*. Here you go quite into the hills. The glen is very narrow, with the Fiddich flowing below, green hills rising on either side with birch trees growing on them, much like at *Inchrory*, only narrower. We saw deer on the tops of the hills close by. The carriage-road—a very good one—winds along for nearly three miles, when you come suddenly upon the lodge, the position of which reminds me very much of *Corn Davon*, (near Balmoral, not far from Loch Bulg.) only that the glen is narrower and the hills just round it steeper.'

Both Dullan and Fiddich are good fishing streams, and except where the latter is within the deer forest of Glen Fiddich, they are open to the public. There is some pretty scenery along their banks, particularly on the Dullan about the 'Giant's Chair,' and at the small waterfall called the 'Linen Apron.'

Many parts of the slopes in these glens are occupied by crofters, to whose comfortable position the following testimony is borne by a writer in the *North British Agriculturist* (1883), speaking of Mortlach, Glenlivet,

Cabrach, and Kirkmichael. After noticing the village groups at Knockandow in Glenlivet and elsewhere, and the benefit they confer on the district by retaining in it tradesmen who might otherwise be lost, and by forming also nurseries for the best of agricultural labourers, though 'the ground would have been worth more to the landlord in its natural state,' he proceeds:—'Where no such thing as village order is observed, and people have planted themselves down on the hillside, the size of the crofts is greater, though still various. Even in this case the rent is only the eighth part of a sovereign—that is to say if there was no arable land to start with. Some, however, had such facilities for reclamation that from 20 to 30 acres are now under the plough, in a few cases in the parish of Mortlach. Nevertheless, the rent goes on at the same rate year after year. Some of the crofts were made up of outlying portions of arable farms. In other words, the land had been under the plough before. In that case a common rent is £2 for from 7 to 10 acres—sufficient to keep two cows and a stirk, or a cow, a calf, and a pony. This is extremely cheap. The crofters seem content, and so they may. They cannot fail to observe that their brethren on most other properties are not so leniently or generously treated. Within the last few weeks we ascertained that many crofters in the same county, who occupy land on other properties that was arable before they got it, pay nearly three times as much rent as the Duke's small holders do. In fact, we have not, from one end of Scotland to the other, found so generous treatment dealt out to small holders as prevails on his Grace's upland Banffshire estates. . . . that they [the crofters] have for so many years been, and still are, sitting almost "rent free," and are generally happy and prosperous, in our opinion, deserves notice in these columns, particularly at a time when almost all that is heard or read publicly of crofters, takes the form of grievances, rack-renting, and alleged ill-treatment. The Duke has a very small revenue indeed from his crofts, but they serve, as already explained, a good purpose, not only for his own estates, which are very extensive, but for the country. . . . His crofters occupy an enviable position among their brethren. There is no word of, and no necessity for a Royal Commission to inquire into their condition. In this respect, as in most others, the Duke of Richmond and Gordon shows a noble example to his brother landlords.' A pass near Auchindoun Castle, called the Glacks of Balloch, is said to be the locality alluded to in the song of *Roy's Wife of Allivulloch*, and the writer in the *Old Statistical Account* says that 'Tibbie Fowler of the Glen' also lived near Auchindoun, but the allusion to Tintock Tap seems to negative this statement. The mansions are Balvenie, which is separately noticed; Buchrumb House, a building in the baronial style, erected in 1873-74; and Kinivie House, erected partly in 1725-26 and partly in 1840-42, but with a keep dating from the end of the 15th or the beginning of the 16th century. The Leslies of Kinivie are cadets of the family of Balquhain, and have held the estate since 1621. The Duke of Richmond has a shooting-lodge in the S of the parish, in Glen Fiddich. The old castles of Auchindoun and Balvenie are separately noticed; and Keithmore, 2 miles E of Dufftown, was the property of Alexander Duff, one of whose sons became Duff of Braco, and the ancestor of the present Earl of Fife. There is a circular British hill fort on the top of Little Conval Hill; and in Glen Rinnes, not far from Mill of Laggan, are three large stones lying on a spot known as The King's Grave. Below the church of Mortlach (3½ furlongs S of Dufftown), on the bank of the Dullian, is the Stone of Mortlach, a so-called 'runic' stone, with the usual symbols, a drawing of which will be found in the first volume of the *Spalding Club Sculptured Stones of Scotland*. The traditional account of it is, that it was erected to commemorate a victory which Malcolm II. gained over the Northmen or 'Danes' at this spot in 1010. This battle rests pretty much on a brief mention in Fordun and a full and elaborate account in Boece, where we are told that

the Scots being likely to be beaten, Malcolm looked up to the chapel dedicated to St Moloc, which was near at hand, and lifting up his hands, prayed to God for aid, vowing that if it were granted he should erect there a cathedral church and found a bishop's see. His prayer was heard, the rout was stayed, and his army returned to the fight; while Malcolm himself, finding the leader Eretus prancing up and down the field without a helmet, as if the Scots had been finally defeated, slew him with his own hand, and the Danes were driven into Murrayland, totally defeated. That some battle may have taken place is highly probable, as the Norsemen, under Sigurd the Stout, had just before overrun the province of MORAY, and they may, therefore, while attempting to press across the Spey and penetrate Alban, have been met and defeated by the king of the latter region; but all the details given by Boece must be received as merely proofs of that spirit of invention which characterised him, and which has made so much of the early history of Scotland, down even to our own day, a mere tissue of fabricated legends. Fordun merely states that Malcolm, in 1011, thinking over the many benefits he had received from God, determined to promote the power of Christianity, and so founded a new bishopric at 'Murtthillach, not far from the place where he had obtained a victory over the Norwegians.' It is, however, certain that, as we must reject the fictitious details of the battle, we must reject as equally untrue both the date and the circumstances of the foundation of the see of Mortlach. In fact, there never was a see of Mortlach. 'It was not,' says Dr Hill Burton, 'the day when kings of Scotland erected bishoprics off-hand. We have here an instance of the provoking practice, to be hereafter dealt with, by which history and documents were tampered with, for the purposes of carrying into remote antiquity the phraseology and practices of later ages of the Church.' The records of the see of Aberdeen, from which, probably, both Fordun and Boece drew, still remain, and remain in a suspicious state. 'The charters,' says Cosmo Innes, 'quoted by him [Boece] are all to be found in the extant registers, and some of the alterations of the record and dates superinduced on the margin, agree in so surprising a way with his book, that they give the impression of his own hand having made them.' All the first five charters recorded in the *Registrum Episcopatus Aberdonensis* must, we fear, be regarded as forgeries—and indeed, in the first, which has been originally written so as to refer to Malcolm III., an attempt at alteration has been subsequently made, so as to try to make it refer to Malcolm II. There is also other evidence that proves that at that time the only bishopric in Scotland was that of Dunkeld. If we admit that Malcolm III. may have granted some lands to Mortlach for ecclesiastical purposes, and that a church scribe in the diocese of Aberdeen afterwards recorded this in a form common at the time when he wrote, we have allowed all that the authentic evidence will permit. The ordinary story of the foundation of the see by Malcolm II., and of its transference to Aberdeen by David I., must be rejected. Mortlach was, however, the site of a religious establishment at a very early date, and if Malcolm did not look up and see 'a chapel dedicated to St Moloc,' he might have done so. The patron saint is sometimes also styled St Wollok, Makuvolokus, or Makulocus, and is assigned to the beginning of the 8th century; but he must rather be identified with the Irish saint, Moloc or Mo-Inag, who was a disciple of St Brendan, and who died, according to the *Chronicon Hyense*, in 592.* He assisted St Boniface in his labours in the north, and may possibly himself have taught at Mortlach and in the neighbourhood, for his name is also associated with a well in the parish of Glass. Whether this was so, and he was the founder of the cell, or whether it was founded and dedicated to him by one of his disciples, cannot be settled; but when

* Although a good deal of confusion exists as to St Moloc and St Wollok, they seem to have been entirely different persons, the feast of the former being on the 25th June and of the latter on 29th January. Both seem to have laboured in the north. St Moloc's fair at Mortlach was held on the flat ground below the church about the sculptured stone already noticed.

the Columban Church began to spread over the north in the 8th century, one of their monastic establishments was fixed here; and in a Bull of Adrian IV. in 1157 we find 'villam et monasterium de Murchillach cum quinque ecclesiis et terris eisdem pertinentibus,' and also the dependent 'monasterium de Cloneth' or Clova, confirmed to Edward, the first Bishop of Aberdeen. Heads of and connected with this monastery were probably the four clerics who figure as the bishops of the supposititious see, viz.: Beyn, Douart, Cormac, and Nectan. Practically nothing is known of them but their names. The present church, which consists of a main portion standing E and W, with an aisle projecting from the centre of the N side, was long implicitly believed to date from the 11th century; and a mark 18 feet from the W end of the main portion was pointed out as showing the point from which, in accordance with Malcolm's vow, it was lengthened three spear-lengths. The eastern portion, measuring 72 feet by 28, and with walls more than 4 feet thick, formed of small round stones, such as may be found in the bed of the Dulnan, set in run lime, dates probably from the 12th century, and it has been afterwards really extended for 18 feet to the W in much later masonry. The N aisle was added in 1826. In 1876 the whole building was extensively repaired at a cost of £1400, and 10 feet were added to this northern portion. During the operations, it was found that an old three-light lancet window in the E gable had been partly built up, and this is now restored to its original condition and filled with stained glass. An old effigy of a knight in armour, supposed to represent Alexander Leslie, the first of Kininvie, which used to stand upright, has been replaced in its proper position in an arched recess. An old circular-headed doorway was also discovered, which shows that the floor of the church must originally have been about six feet below its present level. An old 'jongs' which was dug up inside has been fastened to the wall. In a niche in the wall is also an old ecclesiastical hand-bell. Prior to the repairs in 1826 three skulls, traditionally those of Danes slain in the battle, occupied niches in the wall of the church. Both in the church and in the churchyard there are a number of interesting monuments, from 1417 downwards; but many of the inscriptions that existed at the beginning of the present century have now become illegible. It is now (1884) proposed to introduce an organ. The other churches are noticed in the article on the police burgh of DUFFTOWN, in which they stand; and a new Established church was built in the *quoad sacra* parish of Glenrinnies in 1833. Four public schools—Auchindoun, Mortlach, the female, and the infant—and Dufftown Roman Catholic school, with respective accommodation for 60, 200, 119, 63, and 281 pupils, had (1883) an average attendance of 25, 85, 80, 68, and 60, and grants of £23, 0s. 6d., £89, 18s. 6d., £70, £59, 10s., and £38, 3s.

The parish is in the presbytery of Strathgogie and the synod of Moray, and the living is worth £342. The civil parish contains also part of the *quoad sacra* parish of Glenrinnies. Prior to the Reformation it was in the deanery of Mar in the diocese of Aberdeen. After the formation of presbyteries and synods it was placed at first in the synod of Moray, but after the union of the synods of Banff and Aberdeen it was placed in the presbytery of Fordyce in the synod of Aberdeen, in which it remained till 1688, when it was again transferred to the presbytery of Strathgogie and the synod of Elgin, an arrangement sanctioned, however, by the General Assembly only in 1706. There are good district roads throughout the parish, and the N end is traversed for 4½ miles by the Keith and Elgin section of the Great North of Scotland railway system, with a station called Dufftown 1 mile N of the police burgh of that name. The principal proprietors are the Duke of Richmond and the Earl of Fife, and one other besides holds an annual value of £500 or upwards, 1 holds between £500 and £100, 3 hold between £100 and £50, and there are a few of smaller amount. Valuation (1860) £6677, (1884) £10,736, including £540 for the railway.

Pop. (1801) 1876, (1831) 2633, (1861) 3095, (1871) 3059, (1881) 2934, of whom 1448 were males and 1486 females, while 283 were in the *quoad sacra* parish of Glenrinnies.—*Ord. Sur.*, shs. 85, 75, 1876.

Morton, a parish of Upper Nithsdale, NW Dumfriesshire, containing the post-town of THORNHILL, 1 mile SW of Thornhill station on the Glasgow and South-Western railway, this being 14½ miles NNW of Dumfries and 2½ SW of Cumlock. Containing also CARRONBRIDGE village, the parish is bounded N by Durisdeer, NE by Crawford in Lanarkshire, E and S by Closeburn, and W by Penpont and Durisdeer. Its utmost length, from NNE to SSW, is 6½ miles; its width varies between 7 furlongs and 2½ miles; and its area is 8126½ acres, of which 90 are water. The NITH curves 2½ miles southward along or close to all the Penpont border, and is joined by CARRON Water, coming in from Durisdeer, and running 3¼ miles south-south-westward along the boundary with that parish, and also—just within Closeburn—by CAMPLE Water, which, rising on Wedder Law, runs 8 miles south-south-westward, mainly along the Closeburn border. Morton Loch (3¼ × ½ furl.) is the only sheet of water of any size. The surface declines along the Nith to less than 200 feet above sea-level, and rises thence to 1075 feet at Deer Camp, 1452 at Bellybought Hill, and 2185 at Wedder Law on the Lanarkshire border. Along the Nith, and a short way up the Cample, are beautiful belts of very rich holm or haugh, liable to inundation, but well protected by embankments. Screening the holm-lands, a considerable ridge of rising ground swells up from the margin, somewhat bold near the middle, but gentle in gradient at either extremity. The summit of this ridge is occupied by the town of Thornhill, and commands a picturesque prospect of a considerable extent of the valley and hillscreens of the Nith. North-eastward of the town rise two other hilly banks, parallel and of different height, running across the parish like huge natural galleries. Beyond the more northerly, the surface descends at a gentle gradient, and forms a valley; and then it shoots up in bold pastoral heights, which occupy about one-third of the whole area, form part of the Southern Highlands of Scotland, and climb up to the water-shedding line between the two great basins of the Lowlands. The rocks of the lower grounds are Devonian, those of the uplands are Silurian; and Gateleybridge quarry yields excellent freestone. The soil of the first or most southerly low ridge of the parish is a light but fertile loam on a gravelly bottom; that of the ridges immediately N of Thornhill is heavy and retentive, and lies on a clayey bottom; that of the interior valley is partly alluvial and all excellent; and that of the mountainous district gives frequent way to the naked rock, and is elsewhere so thin and poor as to bear but a mottled sward of heath and coarse grass. A considerable tract, lying principally between Thornhill and the upper valley, is still unreclaimed, but would repay improvement. Nearly three-tenths of the entire area are in cultivation; 1167 acres are under wood; and the rest is either pastoral or waste. Towards the centre of the parish, 2½ miles NNE of Thornhill, on the brink of the glen of a little tributary of Cample Water, stands Morton Castle, one of the least dilapidated ruins of its class in Nithsdale. What remains, although but a fractional part of the original structure, measures 100 by 30 feet. The S front is nearly entire, rises to the height of 40 feet, has at each corner a circular tower 12 feet in diameter, and is from 8 to 10 feet thick in the wall. The glen on the N side, with its water dammed up to form Morton Loch, and deep intrenchments on the other sides, must have rendered the place very strong. Of several conflicting accounts which are given of the proprietorship of this castle, perhaps the most plausible is that of the Macfarlane MSS. in the Advocates' Library, as quoted by Grose. According to this, the castle, of unknown origin, was held, in the minority of David Bruce, by Thomas Randolph, Earl of Moray; and, afterwards passing into the possession of that branch of the Douglasses who became Earls of

Morton, gave them their title, and was allowed by them, in their solicitude about other strengths, to go to ruin. Yet the castle has smart competition for the honour thus assigned it, especially with the lands of Mortoune, in the ancient parish of East Calder, Edinburghshire. (See DALMAHOY.) A little way N of the castle, on the other side of the glen, are remains of Deer Camp, a strong fortification with intrenchments, which seems to have been a Roman fort or castellum; and 300 yards S of the castle, on a rising ground, is the vestige of a small station or camp called Watchman Knowe. In various parts, principally in the vicinity of the castle, there formerly existed, or were found, memorials of the ancient Britons and of the feudal times. Close to Gateleybridge quarry, 2 miles ENE of Thornhill, is the Upper Nithsdale Combination Poorhouse, built in 1854-55 at a cost of £5218, and having accommodation for 126 inmates. The Duke of Buccleuch is almost sole proprietor. Morton is in the presbytery of Penpont and the synod of Dumfries; the living is worth £420. The places of worship are noticed under THORNHILL. Four schools—Morton public, Morton infants' public, Carronbridge, and Gateley Bridge—with respective accommodation for 203, 159, 101, and 62 children, had (1882) an average attendance of 121, 92, 110, and 31, and grants of £89, 19s., £72, 13s., £96, 2s., and £21, 3s. Valuation (1860) £5542, (1884) £8782, 13s. Pop. (1801) 1255, (1831) 2140, (1861) 2253, (1871) 2099, (1881) 2118.—*Ord. Sur.*, shs. 9, 15, 1863-64. See DR C. T. Ramage's *Drumlaurig Castle and Morton* (Dumf. 1876).

Morton. See HALF MORTON.

Morton Hall, a mansion in Liberton parish, Edinburghshire, 3½ miles S of Edinburgh. Built in 1769 and improved about 1835, it is a fine edifice, with beautifully wooded grounds. The estate, which was bought by his ancestor in 1641, is now the property of Lieut.-Col. Henry Trotter (b. 1844; suc. 1874), who holds 2490 acres in Edinburghshire and 6780 in Berwickshire, valued at £6759 and £12,703 per annum.—*Ord. Sur.*, sh. 32, 1857. See CHARTERHALL, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1833).

Morton House, a mansion in Liberton parish, Edinburghshire, 4½ miles S of Edinburgh. Here, on 10 Aug., died the historian, John Hill Burton, LL.D. (1809-81).

Mortoune. See CALDER, EAST.

Morven, a mountain in Latheron parish, S Caithness, culminating, 7½ miles NNW of the Ord of Caithness, at an altitude of 2313 feet above sea-level. It serves as a landmark throughout most of the Moray Firth, and commands extensive and magnificent views.—*Ord. Sur.*, sh. 109, 1878.

Morven, a round-topped felspathic mountain (2862 feet) on the mutual border of Glenmuick and Logie-Coldstone parishes, SW Aberdeenshire, 5½ miles N of Ballater. The Queen ascended it, with the Princess Alice, on 14 Sept. 1859; and 'the view,' she writes, 'from it is more magnificent than can be described; so large and yet so near everything seemed, and such seas of mountains with blue lights, and the colour so wonderfully beautiful.'—*Ord. Sur.*, sh. 75, 1876.

Morven, an indefinite region in the Highlands, figuring, or supposed to figure, in Ossian's poems. The name, which in Gaelic orthography is Mor-Bheimn, signifies simply the 'Great Mountain,' and, as occurring in Ossian, it seems to designate either the Highlands generally or such portions of them as most abound in fastnesses or alpine heights.

Morvern or Morven, a parish of NW Argyllshire, containing a post office of its own name under Oban, with money order, savings' bank, and telegraph departments. It forms a peninsula, extending south-westward between Lochs Suinart and Linnhe to the Sound of Mull, and connected with the district of Ardgour by an isthmus of 6 miles. With a roughly triangular outline, it is bounded NW by Loch Suinart, N by Loch Suinart, Ardnamurchan, and Kilmallie, SE by Loch Linnhe, and SW by the Sound of Mull, which divides it from the

island of Mull. Its utmost length, from E to W, is 20 miles; its utmost breadth is 15 miles; and its area is 141¼ square miles or 90,737 acres. It comprises also the small islands of Oronsay and Carna, in Loch Suinart; and its extent of coast-line, even exclusive of these, is little short of 100 miles. A chain of lakes, partly marine and partly fresh-water, commencing with Loch Teacuis on the NW, and terminating with Loch Aline in the S, nearly isolates most of the district lying along the Sound of Mull from the upper and much the larger district, the Braes of Morvern. Streams and torrents are everywhere numerous; and here and there are fine cascades and other interesting features of water scenery. The general surface, however, is bleak, tame, heathly upland. Its highest summits are Glashven (1516 feet) in the SE, BENEADDAN (1873) in the N, Beinn Mheadoin (2423) in the E, and Fuar Bheimn (2500) on the Ardnamurchan boundary. Several others of its mountains, also, have a considerable altitude; but all are destitute of what writers on landscape call character, and, when seen in connection with the bold ranges of Appin and Mull, look very uninteresting. Yet there are portions of the parish which present very striking features. Much of its seaboard along the Sound of Mull is highly picturesque; and the valley of Unimore, occupied by the chain of lakes from Loch Teacuis to Loch Aline, overhurling on one side by a range of high precipitous rocks, on the other by Beneaddan, is one of the most brilliant pieces of scenery in the Highlands, blending together nearly all styles of landscape from the gently beautiful to the terribly sublime. Professor Wilson pronounced this valley no less than 'an abyss of poetry,' exclaiming also,

'Morvern and morn, and spring and solitude,
In front is not the scene magnificent?
—Beauty nowhere owes to ocean
A lovelier haunt than this! Loch Unimore!
A name in its wild sweetness to our ear
Filly denoting a dream-world of peace!'

Less than one-twentieth of the entire area is in tillage; little more than one-thirtieth is under wood; and the rest is either pastoral or waste. Much of the arable land lies along the Sound of Mull, either on rapid declivities, or at a considerable elevation above the sea. The soil in general is a poor, light, open earth, in places intermixed with gravel and small stones. The woods extend chiefly along the side of Loch Suinart, round the shores of Loch Aline, and in the SW district adjacent to the junction of Loch Linnhe with the Sound of Mull. A predominant rock is gneiss, originally covered by a deposit of secondary rocks, consisting of limestone and sandstone, with coal occasionally interspersed—a deposit overwhelmed by trap, which in its turn has been much abraded and worn away. The situation of the coal is, on certain occasions, very remarkable; and occurring as it does on the summits of primary mountains of great elevation, it is quite fitted to startle a geologist nearly as much as a coal surveyor. Sandstone of excellent building quality has been quarried at Loch Aline and Arternish. Lead ore was formerly mined at Lurg in Glendubh, a glen which runs parallel to Loch Suinart; and copper ore was mined at Ternate, on the estate of Arternish. Three interesting old castles are noticed under ARTERNISH, LOCH ALINE, and KILLUNDINE. There are, on the sea-coasts, remains of several small forts, which were probably erected in the times of the Danish invasions. Of several tumuli, one, Carn-na-Caillich, or the 'old wife's cairn,' is a lofty pile of loose stones, 243 feet in circumference. On elevated spots, in various parts of the parish, but especially along the coast of the Sound of Mull, are Druidical circles of various diameters, but in no instance exceeding 24 feet. Dunhinn, Fingal's fort or hill, situated on the farm of Fianarg, and now part of the glebe, is a curious round rock of considerable height, very steep, yet partly covered on the sides with greensward, and washed at the base by a frolicsome stream which moves between high banks, and leaps along in little cataracts. The

area on the top of the hill measures about half a rood, bears evident marks of having been encircled by a wall, and commands an extensive prospect. A village was formed some years ago at Loch Aline, and a new and substantial pier was built near it in 1883; so that now this locality is a seat of trade to the parish; yet Tobermory and Oban, the former about 4 miles distant from the nearest point of the parish, are still convenient resorts for marketing. Norman Macleod, D.D. (1783-1862), was a son of the parish minister; and his son, Norman Macleod, D.D. (1812-72), has given a vivid description of Morvern in his *Recollections of a Highland Parish* (1868). Mansions, noticed separately, are Loch ALINE HOUSE, DRIMMIN, and KILLINDINE; and 8 proprietors hold each an annual value of £500 and upwards. Giving off portions to Aharacle and Strontian *quoad sacra* parishes, Morvern is in the presbytery of Mull and the synod of Argyll; the living is worth £314. The present parish comprises the ancient parishes of Kiltuintak and Kilocumkill, united, it is believed, shortly after the Reformation. There are two parish churches, belonging respectively to the two ancient parishes, and both situated on the coast, 9 miles from each other. That of Kiltuintak, the 'cell of Winifred,' was built in 1780, and contains 300 sittings; while that of Kilocumkill, the 'church of the cell of Columba,' was built in 1799, and contains 500 sittings. The minister preaches in them alternately, and also preaches occasionally at places in the inland districts of the parish. There are also a mission under the royal bounty for part of Morvern, a Free church, and Drimmin Roman Catholic church of St Columba (1833; 80 sittings). Four public schools—Bunavullin, Claggan, Kinloch, and Loch Aline—with respective accommodation for 55, 68, 40, and 64 children, had (1883) an average attendance of 13, 17, 21, and 25, and grants of £27, 16s. 6d., £30, 19s. 6d., £34, 19s. 6d., and £37, 0s. 6d. Valuation (1860) £6374, (1884) £8676, 17s. 10p. (1801) 2083, (1831) 2137, (1861) 1226, (1871) 973, (1881) 828, of whom 714 were Gaelic-speaking, and 758 in the ecclesiastical parish.

Moss, an estate, with a mansion, in Killearn parish, SW Stirlingshire, $\frac{1}{2}$ mile SSW of Killearn village, and $\frac{1}{4}$ miles SSW of Balfour. See KILLEARN.

Mossat. See KILDRUMMY.

Mossbank. See GLASGOW, p. 154.

Mossbank, a village in Delfing parish, Shetland, 29 miles N by W of Lerwick, under which it has a post office. Here are also a U.P. church and a public school.

Mossburnford, a place in Jedburgh parish, Roxburghshire, near the right bank of Jed Water, 4 miles SSE of Jedburgh town. A baronial fortalice here continued to be inhabited till about the middle of last century.

Mossend, a town in Bothwell parish, Lanarkshire, 7 furlongs E by N of Bellshill, $\frac{1}{4}$ mile W of Holytown, and $\frac{1}{4}$ miles S by E of Coatbridge. Of recent origin, it has a station on the Caledonian railway, a post and telegraph office, extensive iron and steel works, public and Roman Catholic schools, and a fine new Roman Catholic church, erected in 1883-84 from designs by Messrs Pugin. Pop. (1871) 1501, (1881) 3030, of whom 1701 were males. Houses (1881) 531 inhabited, 23 vacant.—*Ord. Sur.*, sh. 31, 1867.

Mossend, a village in West Calder parish, Edinburghshire, on the left bank of West Calder Burn, 3 furlongs N of West Calder village. Pop. (1871) 940, (1881) 669.

Mossennan House, a good two-story mansion in Broughton and Glenholm parish, Peeblesshire, on the left side of the Tweed, $\frac{3}{4}$ miles SE of Biggar. Purchased by his ancestor in 1753, the estate now is held by the Rev. William Welsh (b. 1820; suc. 1855), who owns 1509 acres in the shire, valued at £634 per annum.—*Ord. Sur.*, sh. 24, 1864.

Mossiel, a farm in Mauchline parish, Ayrshire, 1 mile N by W of Mauchline town. Extending to 118 acres, it was rented for £90 a year from 1784 till 1788 by Robert Burns and his brother Gilbert, the latter of whom continued to tenant it till 1800. The 'auld clay biggin' of his *Vision*, it was the place where the poet wrote many of his most famous pieces; and, though

itself destitute of scenic beauty, except for the views that it commands, his fame has clothed it with charm and literary interest.

'Hither romantic pilgrims shall betake
Themselves from distant lands. When we are still
In centuries of sleep, his fame will wake,
And his great memory with deep feelings fill
These scenes that he has trod, and hallow every bill.

We may not omit Wordsworth's sonnet on this plain but consecrated spot:—

"There!" said a stripling, pointing with much pride
Towards a low roof with green trees half concealed,
"Is Mossiel Burn, and that's the very field
Where Burns ploughed up the Daisy." Far and wide
A plain below stretched seaward, white, deserted
Above sea-clouds, the Peaks of Arran rose;
And, by that simple notice, the repose
Of earth, sky, sea, and air was vivified.
Beneath "the random field of clod or stone,"
Myriads of daisies have shone forth in flower
Near the lark's nest, and in their natural hour
Have passed away: less happy than the one
That, by the unwilling ploughshare, died to prove
The tender charm of poetry and love."

The original farm-steading, a low thatched house, with kitchen, bedroom, and closet, the floors of kneaded clay, the ceilings of moorland turf, was almost entirely rebuilt not long before the close of 1859. While residing here Burns published, in 1786, by the advice of his superior and patron, Mr Hamilton, the first edition of his poems.—*Ord. Sur.*, sh. 14, 1863. See Wm. Jolly's *Robert Burns at Mossiel* (2d ed. 1881), and an article in the *Century Magazine* (1883).

Mossgreen, a village in the N of Dalgety parish, SW Fife, near the larger village of Crossgates. A public school, built in 1876 at a cost of £1900, is a handsome Gothic edifice, with accommodation for 220 children; and an Established church, built as a chapel of ease at a cost of £600, and raised to *quoad sacra* status in 1879, contains 500 sittings. The *quoad sacra* parish, with an endowment of £100, is in the presbytery of Dunfermline and the synod of Fife, and had a pop. (1881) of 1609, of whom 847 were in Dalgety, 728 in Aberlour, and 34 in Inverkeithing.—*Ord. Sur.*, sh. 40, 1867.

Moss House. See Moss.

Mossknow, a good modern mansion in Kirkpatrick-Fleming parish, SE Dumfriesshire, 5 furlongs SSE of the village. Its owner, William Mair Graham, Esq. (b. 1832; suc. 1882), holds 4019 acres in the shire, valued at £4993 per annum.

Mosspsall. See EWES.

Moss-Side, a village in Nairn parish, Nairnshire, 3 miles WSW of the town.

Mossodloch, a village in Speymouth parish, Elginshire, near the left bank of the Spey, $\frac{1}{4}$ mile NW of Fochabers.

Moss-Tower, a farm in Eckford parish, Roxburghshire, 3 furlongs NE of Eckford village. A peel-house here, situated in a marsh, and accessible only by a causeway, seems to have been one of the strongest fortresses on the Scottish border. Tradition makes it a residence of one of the Earls of Bothwell; but history knows it only as belonging to the Scotts of Buccleuch, whose descendant, the Duke of Buccleuch, still owns the farm. It was thrice destroyed by the English, in 1523, 1544, and 1570. Strongly rebuilt after the first and the second demolitions, but allowed to remain a ruin after the third, at length, in the latter part of last century, it was all taken down as building material for the neighbouring farm-offices.—*Ord. Sur.*, sh. 25, 1865.

Motherwell, a town in Dalziel and Hamilton parishes, Lanarkshire, on the Caledonian railway, at the junction of the two lines from the N and S sides of Glasgow, and at the intersection of the cross line from Holytown to Hamilton and Lesmahagow, $\frac{1}{4}$ mile from the left bank of South Calder Water, $\frac{1}{4}$ from the right bank of the Clyde, $\frac{1}{4}$ miles NE of Hamilton, $\frac{1}{4}$ SSE of Holytown, $\frac{1}{4}$ SE by E of Glasgow, $\frac{1}{4}$ NW of Carstairs Junction, and 43 W by S of Edinburgh. It took its name from a lunons well, dedicated in pre-Reformation times to the Virgin Mary; and it

occupies flat ground, 300 feet above sea-level, amid richly cultivated and well-wooded environs. Consisting largely of the dwellings of miners and operatives employed in neighbouring collieries and ironworks, it serves, in connection with the railway junctions, as a great and bustling centre of traffic; and it ranks as a police burgh, governed by a senior magistrate, 2 junior magistrates, a clerk, a treasurer, and 6 commissioners. Motherwell has a post office, with money order, savings' bank, insurance, and railway telegraph departments, branches of the Bank of Scotland and the Clydesdale Bank, offices or agencies of 18 insurance companies, 5 hotels, the combination poorhouse for Dalziel, Bothwell, Cambusnethan, and Shotts parishes, and a Saturday paper, the *Motherwell Times*. The streets are lighted with gas; and in 1877 a splendid water supply was brought in from two burns on the estate of Lee at a cost of over £14,000. In Merry Street is the new parish church of Dalziel, erected in 1874 at a cost of £5700; whilst the former parish church (1789; enlarged 1860) belongs now to the *quoad sacra* parish of South Dalziel, constituted in 1880. One of the two U.P. churches was built in 1881 at a cost of £3750, and from its site—the highest in the town—uprears a conspicuous steeple. There are also a Free church, a Primitive Methodist chapel, an Evangelical Union chapel, and the Roman Catholic church of Our Lady of Good Aid (1873; enlarged 1883). No Scottish town—not even Hawick—has grown so rapidly as Motherwell, such growth being due to the vast extension of its mineral industries. These, at the census of 1881, employed 2470 of the 3671 persons here of the 'industrial class'—1024 being engaged in coal-mining, 20 in ironstone-mining, 1069 in the iron manufacture, 58 in the steel manufacture, etc. The malleable iron-works of the Glasgow Iron Company are the largest in Scotland, with 50 puddling furnaces and 8 rolling mills; and Mr D. Colville's steel-works, where operations were commenced on 20 Oct. 1880, now employs over 1000 men. Pop. (1841) 726, (1861) 2925, (1871) 6943, (1881) 12,904, of whom 7041 were males, and 2209 were in Hamilton parish. Houses (1881) 2346 inhabited, 146 vacant, 50 building.—*Ord. Sur.*, sh. 23, 1865.

Moulin, a village and parish of NE Perthshire. The village, in the S of the parish, stands 500 feet above sea-level, and 7 furlongs NNE of Pitlochry station on the Highland railway. It is a collection of small cottages, irregularly situated along the line of road, and contains the parish church, a public school, an inn, and a post office under Pitlochry. The former church, a Gothic structure with a low tower, built in 1831 to hold 650, was burned in March 1873. Moulin is the seat of a ploughing society, and has a horse fair on the first Tuesday in March.

The parish, containing also PITLOCHRY village, KILLIECRANKIE station, and the hamlets of KINNAIRD, AULCLUNE, and ESCHDHU, is bounded NW by Blair Athole, NE and SE by Kirkmichael, S by the Daleapon section of Dowally and by Logierait, and W by Dull. Its greatest length, from ENE to WSW, is 14½ miles; its breadth varies between 1¼ and 8¼ miles; and its total area is 44,818 acres, of which 178 are water, and 435½ are in two small sections, slightly detached, to the S and W. The outline of the parish is exceedingly irregular. The general surface is a congeries of hills and mountains, intersected by the valleys and ravines of the various streams. The fields round the village form a level portion of arable land, 1½ mile long by ½ broad, known as the Howe of Moulin. This is one of the most fertile spots in Perthshire, and has been called the Garden of Athole. The rest of the arable land is on the slopes and margins of the rivers. The highest point in the parish is the summit of BEN VRACKIE (2757 feet). The other hills, mostly heath-clad, though some are wooded, are not very lofty; those of GLENFEARNACH are beautifully verdant. The river GARRY, coming from the NW, flows 3 miles south-south-eastward, through the Pass of Killiecrankie, and along the western boundary, till it falls, near Faskally House, into the TUMMEL, which

itself winds 6½ miles east-south-eastward—for 2 miles across the interior, but mainly along the confines, of the parish. Both streams abound in river-trout, salmon, sea-trout, and grilse; and the scenery on their banks within the parish is beautiful and grand, culminating in the Pass of KILLIECRANKIE. The Allt Ginnag joins the Garry at the upper end of the Pass, while six or seven burns—the longest 4 miles long—join the Garry and Tummel within the parish. A line of summits, running parallel to these two chief streams, about 4½ miles distant, separates the SW or Athole part of the parish from the NE, which belongs to the district of Strathairle. The AIRDLE or Ardle, which is here the main stream, is formed by the confluence of the Allt Fearnach, the Brerachan, and the Allt Doire nan Euni, the separate courses of which also lie in the parish for some miles. Cascades occur on nearly all the running waters of the parish. Those at Elnadour and Urrard are particularly admired, and have been celebrated in song, but the Falls of Tummel excel them both in beauty, size, and fame. Loch Broom (5½ × 2 furl.), a small lake frequented by anglers, lies in the hollow of a hill round the meeting-place of Moulin, Logierait, and Dowally parishes. The soil in the Athole district of Moulin is, on the whole, fertile; that in Strathairle is shallower, and yields lighter crops. About 2800 acres are in tillage and 2000 under wood, the rest being pasture or waste. Mica-slate veined with quartz is the chief rock; limestone occurs in boulders of a fine marble texture, but is little worked; granite, quartz, and fluor-spar are found detached; and rock-crystal is found on Ben Vrackie. The parish is traversed by a good road up the Tummel and Garry, by another up the Airdle and Brerachan, and by a third connecting these. Mansions are Baledmund, Balnakeilly, Dinnanean, FASKALLY, KINDEGON, STRATHGARRY, and URRARD; and 7 proprietors hold each an annual value of £500 and upwards, 3 of between £100 and £500, 4 of from £50 to £100, and 14 of from £20 to £50. The main industry of the parish is agriculture; and what little manufacture or commerce there is centres in the rising village of PITLOCHRY. The parish contains two distilleries, one corn-mill, and three saw-mills. Giving off a portion to the *quoad sacra* parish of Tenantry, Moulin is in the presbytery of Dunkeld and the synod of Perth and Stirling; the living is worth £202. Places of worship, besides the parish church, are noticed under PITLOCHRY and STRALOECH. Three public schools—Moulin, Pitlochry, and Straloech—with respective accommodation for 135, 258, and 106 children, had (1883) an average attendance of 73, 165, and 21, and grants of £72, 10s. 6d., £153, 13s. 6d., and £37, 2s. Valuation (1860) £11,956, 7s. 5d., (1884) £21,289, 17s. 10d. Pop. (1801) 1908, (1831) 2022, (1861) 1831, (1871) 1793, (1881) 2066, of whom 1048 were Gaelic-speaking.

The principal antiquity is a ruin near Moulin village, supposed to have been either a religious house or a castle of the Earls of Athole and Badenoch. It is generally referred to the 11th or 12th century, and seems to have measured 80 feet by 76, with a round turret at each corner. The remains, which consist of most of the walls on three sides and chief part of one turret, are surrounded and grown over with trees. The building is known in the district as the Black Castle. Caledonian standing-stones, Druidical circles, Pictish forts, and sites of pre-Reformation burying-grounds are in different parts of the parish. The main events in the history of Moulin parish are the Battle of KILLIECRANKIE in 1689 and a remarkable religious revival in 1800. Among the men connected with this parish was the Rev. Dr Stewart, who died minister of the Canongate in Edinburgh, after being nineteen years minister of Moulin, and writing his Gaelic grammar there. Famous natives of Moulin are the Rev. Alexander Duff, D.D., LL.D. (1808-78), the first missionary of the Church of Scotland to India; Duncan Forbes (d. 1868), Professor of Oriental Literature at King's College, London; Donald McIntosh (b. 1743), compiler of the Gaelic 'Proverbs'; and Captain Colin Campbell of Finnah, the gallant defender of the

unfortunate Scottish colony of Darien (1700).—*Ord. Sur.*, shs. 55, 56, 1869-70.

Mound. See FLEET.

Mount-Annan, a mansion, with beautiful grounds, in Annan parish, Dumfriesshire, near the left bank of the river Annan, and 2 miles N of the town. Its owner, Miss Dirom (suc. 1878), holds 1502 acres in the shire, valued at £1480 per annum.—*Ord. Sur.*, sh. 10, 1864.

Mount-Benger, a farm in Yarrow parish, Selkirkshire, on the left side of Yarrow Water, 12 miles WSW of Selkirk. James Hogg (1772-1835), the 'Ettrick shepherd,' in 1821 took a nine years' lease of it, and during its tenure lost upwards of £2000. 'A gey cauld place,' he remarks of it in the *Notes*, 'stannin' yonder on a knoe in a funnel, in the thoroughfare of a perpetual sugh; yet 'twas cheerft' in the sun-glints, and hallowed be the chaumer in which my hairns were born.'—*Ord. Sur.*, sh. 16, 1864.

Mount-Cameron. See KILBRIDE, EAST.

Mount-Charles, a mansion in Ayr parish, Ayrshire, on the right bank of the Doon, 2½ miles S of Ayr town.

Monteviot. See MONTEVIOT.

Mount-Ferguson. See MOUNT OLIPHANT.

Mountflowery, a hamlet in Scoonie parish, Fife, 1 mile WNW of Leven.

Mountgerald House, a mansion in Kiltlearn parish, Ross-shire, near the NW shore of the Cronarty Firth, 2 miles NNE of Dingwall. Its owner, Major James Dixon MacKenzie of Findon (b. 1830; suc. 1865), holds 5804 acres in the shire, valued at £4022 per annum.—*Ord. Sur.*, sh. 93, 1881.

Mountgreenan. See MONTGREENAN.

Mount Hecla. See URST, SOUTH.

Mount Hill. See MONIMAIL.

Mount-Keen. See KEEN.

Mount-Melville, a mansion in Cameron parish, Fife, 2½ miles SW of St Andrews. Its late owner, John Whyte-Melville, Esq. (1797-1853), held 2940 acres in the shire, valued at £6150 per annum. His son, Major George John Whyte-Melville (1821-78), was author of the *Interpreter* and many other popular novels. See ST ANDREWS.—*Ord. Sur.*, sh. 49, 1865.

Mount-Misery. See KILMARNOCK.

Mount Oliphant, a farm in Ayr parish, Ayrshire, 4 miles SSE of Ayr town. The home of Robert Burns (1759-96) from his seventh to his nineteenth year, it familiarised him with 'Alloway Kirk,' the 'Banks and Braes o' Bonnie Doon,' and other themes of his poetry. His father leased its 80 or 90 acres for £40 a year from his kind master, Provost Ferguson of Doonholm, who lent him £100 to stock it; but the land was hungry and sterile; and the seasons proved rainy and rough; his cattle died; and the family had a hard time of it.—*Ord. Sur.*, sh. 14, 1863.

Mount-Pleasant. See GRETNA.

Mount-Pleasant. See NEWBURGH.

Mount-Quhanie, a good modern mansion in Kilmarry parish, Fife, 5 miles NNW of Cupar. Its owner, David Gillespie, Esq. (b. 1814; suc. 1827), holds 3793 acres in the shire, valued at £6572 per annum.—*Ord. Sur.*, sh. 48, 1868.

Mount-Stuart, a seat of the Marquis of Bute, in Kingarth parish, Bute island, Buteshire, within ¼ mile of the E coast and 5 miles SSE of Rothesay, from which it is approached by a splendid avenue 1½ mile long. The original mansion, built in 1712-18 by the second Earl of Bute, was a spacious but very plain edifice, consisting of a main block (200 × 50 feet), with wings to the W of both the N and S gables. This main block was destroyed by fire on 3 Dec. 1877, the damage being estimated at £14,000; but a beautiful Catholic chapel, which had been recently formed in the N wing, was saved, besides the plate, much of the furniture, Rubens' portrait of himself, Kneller's portrait of Lady Mary Wortley Montague, and paintings by Nasmyth, Ramsay, etc. As rebuilt since 1879, from designs by Mr Rowand Anderson, at a cost approaching £200,000, Mount-Stuart is a magnificent Gothic pile (230 × 150 feet). The great central hall (60 feet square) is surrounded on all

sides by a marble Gothic arcade; and to right and left of it are the dining and drawing rooms (each 58 × 22 feet). The outer walls of the first and second floors are of reddish sandstone, but the upper story is brick, with oak frame. Special features of the exterior are the high-pitched roofs and dormers, the angle turrets, the corbelled oriel windows, and a stone balustrade in front of an open gallery. Sir John Steuart, a natural son of Robert II., received from his father about 1385 a grant of lands in the isle of Bute, along with the hereditary office of sheriff of Bute and Arran. His sixth descendant, Sir James Steuart, was created a baronet in 1627; and his grandson, Sir James, in 1703 was raised to the peerage as Earl of Bute, Viscount Kingarth, and Lord Mountstuart, Cnma, and Inchmarock. John, third Earl (1713-92), played a leading part in the first three years of the reign of George III.; and John, his son (1744-1814), in 1796 was created Marquis of Bute in the peerage of the United Kingdom. His great-grandson, Sir John Patrick Crichton-Stuart, present and third Marquis (b. 1847; suc. 1848), holds 29,279 acres in Buteshire and 43,734 in Ayrshire, valued at £19,575 and £25,263 per annum. He was admitted into the Catholic Church in 1868.—*Ord. Sur.*, sh. 29, 1873. See also DUMFRIES HOUSE.

Mount-Teviot. See MONTEVIOT.

Mount-Vernon, a station in Old Monkland parish, Lanarkshire, on the Rutherglen and Coatbridge section of the Caledonian railway, 5½ miles E of Glasgow.

Mousa, an island in Dunrossness parish, Shetland, near the E coast of the mainland, 11 miles S by W of Lerwick, and 10 NNE of Sumburgh Head. It measures 1½ mile in length from NNW to SSE, and ¾ mile in extreme breadth. A 'Pictish' round tower on it, called Mousa Burgh, is perhaps the most perfect antiquity of its class in Europe. It is 42 feet high, and measures 50 feet in exterior, 20 feet in interior, diameter; contracts in form somewhat like the bust of a well-formed human body; and consists of double concentric walls, each about 5 feet thick, with a passage or winding staircase between them. Its low narrow doorway conducts to the interior by a low narrow passage 15 feet long, such as to admit only one person at a time, and even him only on all fours. Built of the surrounding shingle, without mortar, it shows no mark of a tool; and its builders certainly were unacquainted with the arch. As to its origin and purpose we are left to conjecture; but tradition records that Erland, the son of Harold, having carried off a beautiful Norwegian widow, was for some time besieged by her son in the burgh of Mousa.

Mouse Water, a stream of the Upper Ward of Lanarkshire, rising at an altitude of 1100 feet on the north-eastern verge of the county, 1½ mile NNE of Wilson-town. Thence it winds 15½ miles south-westward through Carnwath, Carstairs, and Lanark parishes, till, after a total descent of 805 feet, it falls into the Clyde 330 yards below Lanark Bridge. It receives, in its progress, the tribute of DIPPOL WATER; and traverses first a bleak moorish country, next a pleasant cultivated tract, lastly the profound and romantic chasm of CARTLAND CRAIGS. (See CLYDE.) The Caledonian railway crosses it in the vicinity of Cleghorn station; two bridges cross it at Mousemill, and three at respectively Cleghorn, Lockhartford, and Cartland Craigs; and one of the two at Mousemill is very ancient and curious. Small detached pieces of jasper have been found in its bed; sandstone was formerly quarried adjacent to it near Mousebank; and old disused mining-shafts are on the banks of its upper reaches.—*Ord. Sur.*, sh. 22, 1865.

Mouswald, a village and a parish of S Dumfriesshire. The village stands 2½ miles ESE of Racks station, and 7 ESE of Dumfries, under which it has a post office. It occupies a site once covered with forest, in the eastern vicinity of Lochar Moss, and thence derives its name, written anciently Mosswald, and signifying 'the forest near the moss.'

The parish is bounded N by Lochmaben, E by Dalton, S by Ruthwell, SW by Caerlaverock, and W by Torthor-

wald. Its utmost length, from N by W to S by E, is $4\frac{1}{2}$ miles; its breadth increases southward from $1\frac{1}{2}$ to $4\frac{1}{2}$ miles; and its area is $5891\frac{1}{4}$ acres, of which $2\frac{1}{2}$ are water. Lochar Water for $1\frac{1}{2}$ furlong traces all the Caerlaverock boundary; Wath Burn, coming in near its source from the N, traces all the western boundary to Lochar Water, and looks mostly like a mossy grass-grown ditch; and four small burns rise in the interior, and run sluggishly to Wath Burn. Springs of pure water are numerous and copious; and one of them, called St Peter's Well, near the parish church, is a continuous fountain for 100 feet, and, running to the Wath Burn's largest tributary, prevents that rivulet from ever freezing for a considerable way below their confluence. The south-western district, to the extent of nearly 900 acres, is part of LOCHAR MOSS, only 30 to 40 feet above sea-level; the central district is variously flat and undulating; and the northern consists of spurs from the broad-based range of Tinwald and Torthorwald, rising so gradually as to be arable to the summit, attaining an extreme altitude of 816 feet above sea-level, and commanding an extensive and very beautiful view. Greywacke and greywacke slate are the predominant rocks; blue limestone is found on Bucklerhole Farm; and fine white sand underlies Lochar Moss. The soil of the lands adjacent to Lochar Moss is partly reclaimed bog; of the low tracts further E and N is light and sandy; and of the higher grounds is tolerably deep and rich. Nearly three-fourths of the entire area are in tillage; about 190 acres are under wood; and the rest is either pastoral or waste. Mouswald Mains or Place, the ruined fortalice of the Carruthers family, was the largest of five square strongholds, of which Raffles is the most entire. Other antiquities are a strong double-ditched camp on Burrow Hill; a watch-tower on Panteth Hill; Tryal Cairn, 288 feet in circumference, $1\frac{1}{2}$ mile NE of the parish church; and a recumbent effigy of Sir Simon Carruthers of Mouswald. ROCKHALL, noticed separately, is the only mansion; and Sir A. D. Grierson, Bart., is chief proprietor, 4 others holding each an annual value of more, and 4 of less, than £500. Mouswald is in the presbytery of Lochmaben and the synod of Dumfries; the living is worth £300. The parish church, on a fine eminence adjacent to Mouswald village, was built about 1830, and is a handsome edifice, seen from most parts of the parish, and containing 386 sittings. The Free church of Ruthwell stands at the southern boundary, 7 furlongs SSE of Mouswald village; and Mouswald public school, with accommodation for 135 children, had (1883) an average attendance of 68, and a grant of £67, 5s. Valuation (1860) £4741, (1884) £6795, 12s. 4d. Pop. (1801) 705, (1831) 786, (1861) 633, (1871) 647, (1881) 558.—*Ord. Sur.*, sh. 10, 1861.

Mow. See MOREBATTLE.

Moy. See DYKE and MOY.

Moy and Dalarossie (Gael. *Magh*, 'a plain,' and *Dal-Fhearghais*, 'Fergus' dale'), a parish partly in the NE of Inverness-shire and partly in the SW of Nairnshire. It is bounded N by the parish of Croy and Dalross and by Cawdor parish, on the E by the parish of Duthill and Rothiemurchus, on the SE by the parishes of Alvie and Laggan, S by Laggan, W by the parish of Coleskieue and Abertariff, and SW by the parish of Daviot and Dunctlichity. Except on the N the boundary is largely natural, following, along the SE, the line of heights that form the watershed between the basins of the Findhorn and Dunan, thereafter between the basins of the Findhorn and the Spey, round the head-waters of the Findhorn on the S, and along the NE between the basin of the Findhorn and the streams that flow first to Loch Ness and afterwards to the river Nairn. At the NW corner it crosses this line and takes in part of the hollow down which the Dalriach Burn (river Nairn) flows. For $2\frac{1}{2}$ miles, from near the source of this burn to Carn nan tri-tighearnan, the line coincides with the boundary between the counties of Inverness and Nairn, as it does also for $2\frac{1}{2}$ miles SE from the top of Carn an t-Seanliathanaich on the NE border, and for $5\frac{1}{2}$ miles on the NW side, where it coincides with the boundary

of a detached portion of Nairnshire. The greatest length of the parish, from Carn nan tri-tighearnan on the N, south-south-westward to the source of the Findhorn, is $2\frac{1}{2}$ miles; and the average breadth about 7 miles, except at the N end where it is more, and at the S end where it tapers to a point. The total area is 112,161'365 acres, of which 685'269 are water; of the whole, 106,572'876 acres (of which 635'120 are water) are in Inverness-shire, and 5588'499 (of which 50'149 are water) are in Nairnshire. The whole parish may be said to consist of two straths, that in the NW occupied by Loch Moy and the streams flowing into it, and the much larger one extending south-westward through the length of the parish being occupied by the Findhorn and the streams flowing into it. The height above sea-level rises from 750 feet at the point where the Findhorn leaves the parish on the NE to the heights of Beinn Bhreac (1675) N of Moy Burn, Meall Breacribh (1809) SE of Moy Burn, Carn nan tri-tighearnan (2013) and Carn na Sgabaich (1522) on the N border; Carn an t-Seanliathanaich (2056 and 2076) and Carn Glas (2162) on the NE border; Carn nam Bain-tighearna (2040), Carn na Larach (1957), Carn Phris Mhoir (2021), Carn Dubh aig an Doire (2462), Carn na Luibe Glaise (2826), Carn na Guaille (2300), Carn Coire na h-Easgairn (2591), Carn na Cuillich (2500), Carn Sgulaich (2606), Am Bodach (2709), another Carn Sgulaich (3015), Carn Ballach (3000), and Carn Mairg (3087), all along the SE and latterly among the Monadhliath mountains; Carn Odhar na Criche (2670), Fadh Fardach (2805), Borrach Mor (2686), Carn na Saobhaidhe (2658), Meall a Phioabaire (2464), Carn Odhar (2618), Carn Ghriogair (2637), the ridge between this and Carn na Saobhaidh (2455), the latter itself (2321), Carn Glac an Eich (2066), Beinn Bhreac and the heights to the E of it averaging about 1800 feet, Carn nan Uisgean (2017), Beinn a' Bheurlaich (1575), and Beinn na Buchanich (1312) on the W and NW border. Except Beinn Bhreac and Meall Breacribh these are all on or close to the border, and along the E side of the Findhorn, from N to S, there are also Carn Mor (1500), Carn Torr Mheadhoir (1761), Carn an t-Seanliathanaich (2076), Carn a Choire Mhoir (2054), Creagan Tuim Beg (1453), An Socach (1724), Carn Coir Easgrath (2449), and Calbh Mor (2668)—the last three among the Monadhliath mountains. To the W of the Findhorn, from S to N, are Carn Coire na Criche (2702), Eiloch Bhan (2538), Carn Leachier Dubh (2133), Carn a' Choire Ghalaich (2240), Beinn Bhreac Mhor (2641), Aonach Odhar (2103), Carn an Rathaid Dhùibh (2195), another of the several Beinn Bhreacs (1969), Carn na Seannachoil (1787), Creag a' Bhealaidh (1724), Carn a Bhadain (1333), Carn Moraig (1832), Tom na h-Ulaidh (1238), and Caru an Loin (1319), the last two S of Loch Moy. It will thus be seen that the greater portion of the parish lies high above sea-level, and so the only inhabited portions are the small glen in which Loch Moy is, and a narrow strip along the banks of the northern portion of the course of the Findhorn at a height of from 800 to 1200 feet. Except along those portions, where there are patches of alluvium, the soil is a thin clay or moss. About 2000 acres are under wood, natural or planted; in the N end and along the banks of the Findhorn, from 3000 to 4000 acres are arable; and the rest is pasture or waste. On the higher grounds there is good hill shooting. The underlying rocks are granite and gneiss. The drainage of the parish is effected along its entire length, from SW to NE, by the river Findhorn, which has, following the windings from its source to the point where it quits the parish on the E side, a course of 32 miles. Formed by the union of the river Eskin with the Abhainn Cro Chlach, it receives on the E the Eilrick Burn, the Allt an Duibhidh, the Allt Fionndairnich, the Allt a' Mhuilinn Creag Bhreac, the Allt a' Mhuilinn, the Allt Lathachaidh, the Clune Burn, the Allt na Feithe Sheilich, and the Burn of Edinchat; and on the W Allt Creagach, Allt Feitheanach, Allt Odhar Mor, Glenmazeran Burn, Kyllachie Burn, Allt Nicrath, Allt na Frithe, and the Funtack Burn. The upper portion

of the valley is known as Strath Dearn, the Gaelic name of the river being Earn or Eire. It is a narrow strath, with the bottom more or less broken and the steep hills grassy rather than heathy. Along the upper ten miles, except the summer shielings, hardly a dwelling is to be seen; afterwards there are alluvial banks and well-marked river terraces, and further N, just where the river quits the parish, is the commencement of the wild gorge of Streens, where the narrow strip of ground along the edge of the river is completely overshadowed either by hills or in some places by granite precipices. Kyllachie is associated with the name of Sir James Mackintosh, whose patrimony this estate was, and where (though he was born in the parish of Dores) he spent many of his earlier years.

The north-western part of the parish is occupied by the glen of Moy, the drainage of which is carried off by the Funtack Burn, which has a course of about 2½ miles from Loch Moy to the Findhorn. It receives from the NE the small Burn of Tullochclary, and from the SW Allt a Chail. Loch Moy, the only considerable sheet of water in the parish—the smaller Lochan a Chaoruinn on the Dalriach Burn, farther to the NW, and some other still smaller lakelets being hardly worth mentioning—is 1½ mile long and 3¼ furlongs wide at the broadest part. The surface is about 893 feet above sea-level, and the area is about 200 acres; but operations are now (1884) being carried out which will have the effect of reducing the level of the water some 4 or 5 feet. For this purpose a new channel, 25 feet wide at bottom, and with a fall of 1 in 2000, is to be made nearly in the line of the old channel of the Funtack for about 1½ mile. The water area will be lessened to a very small extent, but the lowering of the surface will greatly improve the drainage of Moy Hall, and of from 200 to 300 acres of damp soil on the home farm of Moy. The loch is surrounded by woods, and the reclaimed margins are to be planted. On a small wooded island, of some 5 or 6 acres in extent, the ruins of a castle, long inhabited by the chiefs of Mackintosh, are still to be seen. A paved road, with buildings on each side, seems also to have extended along the island. It was first occupied in 1337, and is said to have had in 1422 a garrison of 400 men. The castle was inhabited down to 1665. In 1762 two ovens were discovered, each capable of baking 150 lbs. of meal. Connected with the chief who erected this island fortress, it is told that at the house-warming he incautiously, before a wandering harper, expressed his pleasure at being for the first time able to retire to rest free from fear of Allan Macrory, fourth chief of Clanranald of Moidart. The story was carried by the harper to Allan, who at once summoned his vassals, and rested neither day nor night, till, arrived at Loch Moy, he crossed at night to the island in currachs, and having stormed the castle, carried Mackintosh a prisoner to Castle-Tirrim, where he kept him for a year and a day, at the end of which period he dismissed him with the advice, 'never to be free from the fear of Macdonald.' The outlet of the loch is associated with a clan disaster that seems to have occurred between 1410 and 1420. During a feud between the Cumyns and the Mackintoshes, the latter were all driven to take refuge on the large island in Loch Moy, and their foes, thinking this a capital opportunity to put an end to the whole of their troublesome neighbours, determined to dam up the waters of the loch so as to drown them all. One of the Mackintoshes, however, proved equal to the occasion, for having procured a raft, 'and supplying himself with twine, he descended in the dead of night to the dam. This was lined towards the water with boards, through which the adventurer bored a number of holes with an auger, and in each hole he put a plug with a string attached.' When everything was ready he pulled all the strings at once, and the water rushed out with such force as to carry away the embankment and the whole of the Cumyns who were encamped behind it. Such at least is the tradition of the district, and the writer in the *New Statistical Account* adds as an additional, but somewhat illogical, reason for accepting it, 'the

nature of the place where the dam was erected—it being a narrow gorge easily admitting of such a construction.' At an excursion of the Inverness Field Club to the district in 1881, it was stated that some of the hero's descendants were still tenants on the Mackintosh estates at Dalaross, and were locally known as 'Torrie,' the word *torra* being the Gaelic for auger. In the centre of the island there is now a granite obelisk, 70 feet high, erected in 1824 in honour of Sir Æneas Mackintosh, Bart., the twenty-third chief, who died in 1820. About 200 yards SE of the main island is the small Eilan nan Clach, formed of boulders, and only about 12 yards across and 3 feet above the present level of the water. It was used as a prison, the captive being chained to a stone in the centre. A gallows stood on it till about the end of the last century, and the prisoners were either set free or executed within twenty-four hours. Both islands figure in Morritt's ballad of *The Curse of Moy*, and are associated with many of the other traditions of the district. The loch receives at the W end Moy Burn, with two smaller streams, and the surplus water is carried off to the Findhorn by the Funtack Burn. The fishing is fair, but the trout are small. At the NW corner is Moy Hall, the seat of Mackintosh of Mackintosh. It was formerly a plain building, used as a jointure house, but large additions and alterations were made a few years ago at a cost of £14,000. The entrance-hall has been designed in imitation of that at the old castle of Dalaross; and in the library are a sword, said to have been presented by Pope Leo X. to James V., and by him given to the then chief of Mackintosh; the sword worn by Dundee at Killiecrankie; a sword that formerly belonged to Charles I.; and a gold watch that belonged to Mary Queen of Scots. A mile and a half W of the loch is the pass known as Stairsneach-nan-Gael, or the 'threshold of the Highlanders,' across which is the principal passage from Badenoch and Strathspey to the low country about Inverness and Nairn, just as the Streens led to that about Forres and Elgin. Once through this, the clansmen returning from a foray in the 'laich' considered themselves safe, and the chief of Mackintosh is said to have exacted from the neighbouring clans a tax called 'the collop or steak of the booty,' for permitting their quiet passage with their plunder. The hollow of Ciste Cregan-coin, near by, is said to have been sometimes used as a place of concealment for the women and children in times of danger. The whole pass, of which Stairsneach-nan-Gael is only the narrowest part, is known as Cregan-coin, and was in 1736 the scene of the incident known as the 'Rout of Moy.' Prince Charles Edward Stewart, on his march northward, had on 16 Feb. advanced in front of his troops with only a small escort, in order to pass the night at Moy Hall, where he was received by Lady Mackintosh—sometimes called 'Colonel Anne,' on account of the spirit with which, in defiance of her husband, who remained loyal to the House of Hanover, or perhaps in obedience to his secret wishes, she raised the clan for the Jacobite cause. Lord Loudoun, who was in command of the garrison at Inverness, having received intelligence of the visit, started with a force of 1500 men, with high hopes of effecting the important capture of the Prince. Word of the movement was brought by a boy in breathless haste from Inverness, and the lady and one of her trusted followers, Donald Fraser of Moybeg, proved equal to the occasion. Fraser and four men were sent to take up their position in the darkness at Cregan-coin. After placing his men some distance apart, Donald waited the arrival of the royal troops, and on hearing them coming up, gave the command in loud tones for 'the Mackintoshes, Macgillivray, and Macbeans, to form in the centre, the Macdonalds on the right, and the Frasers on the left,' while at the same time all the party fired off their muskets. The flashes coming from different points, Loudoun fancied that he was confronted by a whole division of the highland army, and a man being killed by one of the random shots, a panic set in, and the royalists fled in headlong haste to Inverness, and

hardly halted till they had crossed Kessock Ferry into Ross-shire. Lady Drummuir, in whose house both Charles Edward and the Duke of Cumberland lived in Inverness, was the mother of 'Colonel Anne.' Fraser's descendants remained on the estate till 1840. About $\frac{1}{2}$ mile NW of the scene of the 'Rout' is a small cairn called Uaigh-an-duine-bheo, or 'the living man's grave,' on account of a vassal of the Laird of Dunmaglass having been here buried alive as a punishment for perjury. In a dispute as to marches he had gone to a certain spot and sworn by the head under his bonnet, that the earth under his feet belonged to the Laird of Dunmaglass, but on examination it was found that there was a cock's head concealed in his bonnet, and that his brogues contained earth, and so he paid the penalty of his falsehood. To the NE of the loch, near the source of the Burn of Tullochary, is the traditional scene of the slaughter of the last wolf of Strath Dearn, the story of which—except for the Scotch dialect—is well told in Chap. iii. of Sir Thomas Dick Lauder's *Account of the Great Floods of 1829 in the Province of Moray*, where there is also an interesting account of the ravages of the Findhorn and the other streams in the parish during this great flood. During the clan period Moy was, as may be inferred from what has been already said, wholly in the possession of the Mackintoshes. A main road from Inverness by Daviot enters the parish on the NW by the hollows of Craggie Burn and Moy Burn, and skirting Loch Moy turns up the side of the Findhorn for 3 miles, till, at the Free church above Tomatin House, it crosses the river by a bridge erected at a cost of £2600, to replace one swept away by the flood of 1829, and strikes south-eastward through Duthill to Carbridge, and so to the highland road through Strathspye. Should a bill, promoted by the Highland Railway Company this year (1884), obtain the assent of Parliament, a loop branch of their system will be formed from Aviemore to Inverness, following very closely the line of this road. From the mouth of Glen Moy downward, and from Findhorn Bridge upward to Dalveg 8 miles from the source of the river, there are good district roads, and from the E end of Loch Moy the old military road formed by General Wade struck westward by Creag-nan-coin and on to Inverness. There is a Kirkton at Moy and a hamlet at FREEBURN, between Moy and Findhorn Bridge. At the latter place great cattle and sheep fairs are held. Mansions and shooting-lodges are Moy Hall, Tomatin House, Kyllachie Lodge, Dalmigavie Lodge, and Glenmazeran Lodge.

The parish is in the presbytery of Inverness and the synod of Moray, and the living is worth £333 a year. A church of 'Dalfergussyn in Stratherne' is mentioned in the Chartulary of Moray between 1224 and 1242, and again subsequently as Tallaracie, and the name is possibly taken from Fergus, bishop and confessor, whose missionary labours extended as far N as Caithness, and to whom the church had been dedicated. The church of Moy is mentioned in 1222. Moy was divided between Dyke and Dalarossie in 1618. The church was included in the parish now described, and stands on the S bank of Loch Moy. It was built in 1765 and repaired in 1829. The church of Dalarossie proper is 7 miles distant on the bank of the Findhorn, and was built in 1790. Each contains about 450 sittings, and is surrounded by a churchyard. There is a Free church midway between, at Findhorn Bridge. The public schools of Dalarossie and Raibeg, with respective accommodations for 50 and 90 children, had (1883) an average attendance of 17 and 45, and grants of £28, 9s. 6d. and £40, 13s. 6d. Three proprietors hold each an annual value of £500 or upwards, and S hold each between £500 and £100. Valuation (1865) £5933, (1882) £8494. Pop. (1755) 1693, (1821) 1334, (1831) 1098, (1861) 1026, (1871) 1005, (1881) 822, of whom 411 were males, and 634 Gaelic-speaking, while 803 were in Inverness-shire and the rest in Nairnshire.—*Ord. Sur.*, sbs. 84, 74, 73, 1876-77-78.

Moy, Broom of, a village in Dyke and Moy parish,

Elginshire, near the left bank of the Findhorn, $1\frac{1}{2}$ mile W by N of Forres.

Moydart, a district in the south-western extremity of the mainland of Inverness-shire, and a sea-loch on the boundary between Inverness-shire and Argyllshire. The district is bounded on the N and NE by Arasaig; on the SE and S, by Loch Shiel, the river Shiel, and Loch Moydart, which divide it from Argyllshire; and on the W by the Atlantic Ocean. Its greatest length, from E to W, is 18 miles; and its mean breadth is 7 miles. Its coast is deeply indented by Lochs Na-Nugh, Aylort, and Moydart; and its interior, though thoroughly Highland, possesses little interest. The principal objects challenging attention are the mansion of Kinloch Moydart, a Roman Catholic chapel, the ruined Castle-Tirrim, and some woods along Loch Shiel and portions of the coast. The district forms part of the enormous parish of Ardnurchan. Loch Moydart, opening due SE of Eigg island at a distance of 9 miles, penetrates 5 miles east-south-eastward; is split over two-thirds of its length by Shona island; lies mostly among low heathy hills; and, except for having on its shores Kinloch Moydart House, Castle-Tirrim, and some patches of wood, wears a bare and forbidding aspect. The section of it S of Shona island is the main channel, and has, in its mouth, two wooded islets.

Moy Lodge, a pretty shooting-box in Laggan parish, Inverness-shire, on the right bank of the Spean, $1\frac{1}{2}$ mile below its exit from Loch Laggan, and $38\frac{1}{2}$ miles SW of Kingussie. On the ARDVERIKIE property, it was tenanted by Mr R. Ansdell, R.A., in Sept. 1873, when the Queen drove past it on her way to Inverlochty.—*Ord. Sur.*, sh. 63, 1873.

Moyness, a village in AULDEARN parish, Nairnshire, 5 miles ESE of Nairn.

Muasdale, a village, with an inn and a post office, in Killen and Kilchenzie parish, Kintyre, Argyllshire, 4 miles S by W of Tavynloan.

Muchairn. See MUCKAIRN.

Muchalls, a village in Fetteresso parish, Kincardineshire, with a station on the North-Eastern section of the Caledonian railway, 5 miles NNE of Stonehaven, under which it has a telegraph and post office. Muchalls Episcopal church, St Ternan's, was built in 1831, and enlarged in 1865 and 1870. Four predecessors—the oldest dating from 1624—stood 1 mile to the S. Muchalls Castle, on a rising-ground, is a venerable edifice; and was long the seat of the baronet family of Burnett of Leys.—*Ord. Sur.*, sh. 67, 1871.

Muck, an Argyllshire island in the parish of Small Isles and the district of Mull, 3 miles NNW of the nearest point of the mainland, and $2\frac{1}{2}$ SSW of Eigg. Its length, from ENE to WSW, is $2\frac{1}{2}$ miles; its maximum breadth is 2 miles; and its area is 1586 acres. The surface is undulating throughout, and only one solitary decided hill, near the W end, shoots up from the general level, attaining the height of 600 feet. The shores are in general low and rocky, but at the W end they rise into cliffs of 50 or 60 feet in height. There are several more or less convenient landing-places for fishing-boats, and two small piers, but there is no safe harbour. The body of the island is trap of the predominant varieties of basalt and fine greenstone, but at the bay of Canusmore the protrusion of beds of sandstone and limestone indicates the presence of a lower stratum of secondary rocks. The soil of Muck is fertile when under tillage, and bears a rich crop of grass. The supply of spring-water is ample. But the chief natural want of the island is fuel, peat having to be procured with labour and expense from the neighbouring islands or the mainland. The main industry of the inhabitants is fishing.

Muck was for a long period the property of the Abbey of Iona, and its present name is said to be a corruption of Monk-island. Its Gaelic form is Eilean-nan-Mheud, signifying the 'island of the swine,' and this has been given by Buchanan in the literal translation 'insula porcorum.' An islet called Horse island lies on the N side of Muck, separated from it only by a foul rocky

narrow channel, which is left dry at low water in neap tides. Pop. of Muck (1831) 155, (1861) 58, (1871) 53, (1881) 51, of whom 22 were females, and 41 Gaelic-speaking.

Muckairn, a *quoad sacra* parish in Lorn district, Argyllshire, forming the southern portion of the *quoad civilia* parish of ARDCHATTAN and Muckairn, and containing TAYNUILT station on the Callander and Oban railway (1880), 15½ miles E by N of Oban and 71½ WNW of Stirling. It is bounded E by Glenorchy and Innishail, SE by Kilchrenan, SW and W by Kilmore and Kilbride, and N by the lower waters of Loch Etive, dividing it from Ardchattan. Its utmost length, from N to S, is 6½ miles; its utmost breadth, from E to W, is likewise 6½ miles; and its area is 21,025½ acres, of which 106 are foreshore and 175½ water. Loch NANT (7½ × 2½ furl.; 605 feet) lies on the Kilchrenan boundary, and sends off a stream 5¼ miles northward to Loch Etive; the reedy Black Lochs (1½ mile by 37 yards to 1½ furl.; 95 feet) send off Lusragan Burn 3½ miles northward along the Kilmore boundary; and the upper 6 miles of the river LONAN belong to Muckairn. The surface is everywhere hilly, but nowhere mountainous, chief elevations from N to S being Druim Ror (453 feet), Deadh Choimhead (1255), and Beinn Ghlas (1691). The coast, 8½ miles in extent, is low, but in places rocky, much indented with bays and headlands. Copces of oak and birch and mountain ash clothe much of the northern portion of the parish, whose arable area is small compared with the pastoral. There are sites of three pre-Reformation chapels, a standing-stone, and remains of several stone circles. Annexed to Ardchattan in 1637, Muckairn was constituted a *quoad sacra* parish by the ecclesiastical authorities in 1829, and reconstituted by the court of teinds in 1846. It is in the presbytery of Lorn and the synod of Argyll; the living is worth £140. The parish church, at Taynuilt, was built in 1829, and contains 350 sittings. There is also a Free church; and two new public schools, Achaleven and Taynuilt, with respective accommodation for 50 and 134 children, had (1883) an average attendance of 28 and 50, and grants of £40, 19s. and £45, 15s. Pop. (1801) 893, (1841) 812, (1871) 620, (1881) 615; of registration district (1871) 786, (1881) 831,* of whom 696 were Gaelic-speaking.—*Ord. Sur.*, sh. 45, 1876.

Muckerach. See MUCKRACH.

Muckersie. See FORTVEIOL.

Muckhart, a parish in the Ochil district of SE Perthshire, containing Pool village, 3½ miles NE of Dollar. In outline resembling a rude triangle with eastward apex, it is bounded NW and N by Glendevon, NE and SE by Fossoway, which is partly in Kinross-shire, and SW and W by Dollar in Clackmannanshire. Its utmost length, from E to W, is 3¾ miles; its utmost breadth is 3¼ miles; and its area is 4960½ acres, of which 33 are water. Along or near to all the Fossoway boundary, the 'crystal DEVON' winds 8½ miles east-south-eastward and west-south-westward, though the point where it first touches and that where it quits the parish are only 4¼ miles distant as the crow flies. During this course it exhibits the finest of its famous scenery, described in our articles, CROOK OF DEVON, DEVIL'S MILL, RUMBLING BRIDGE, and CALDRON LINN. The surface sinks in the extreme SW to 95 feet above sea-level, thence rising northward to 654 feet at Law Hill, 1442 at Seamab Hill, and 1500 at Commonedge Hill. The hills have fine outlines, verdant slopes, and beuty or heathy shoulders and summits; and Seamab, an eastward spur of the Ochils, terminates in a conical summit. The rocks of the hills, and throughout great part of the area, are mainly eruptive; but those near the Devon are carboniferous, and comprise workable strata of sandstone, limestone, ironstone, and coal. The soil in the upper districts is light and gravelly, more or less mossy; in portions of the middle districts is clayey; and in the lower grounds, particularly near Dollar, though sandy,

produces very good oats and barley. Nearly two-thirds of the entire area are in tillage; about 290 acres are under wood; and the rest of the land is either pastoral or waste. A fragment remains of Castleton House, built in 1320 by William Lambert, Archbishop of St Andrews; and stone coffins have been found from time to time. The Rev. Adam Gib (1714-83), a leader of the Antiburghers, was a native; and Ebenezer Henderson, LL.D. (1809-79), author of *Annals of Dunfermline*, died at Astral Villa, Blairhill, on the Devon's right bank, 4 miles ENE of Dollar, is the seat of James Richard Haig, Esq., F.S.A. (b. 1831; suc. 1865), who holds 2597 acres in Perth and Kinross shires, valued at £3686 per annum. The rest of the property is mostly divided among four. Giving off a portion to Blairingone *quoad sacra* parish, Muckhart is in the presbytery of Kinross and the synod of Fife; the living is worth £202. The parish church is a commodious edifice of 1838. There is also a U.P. church; and a public school, with accommodation for 118 children, had (1883) an average attendance of 67, and a grant of £60, 3s. Valuation (1860) £5211, (1884) £5918, 15s. 4d. Pop. (1801) 538, (1841) 706, (1861) 615, (1871) 612, (1881) 601, of whom 593 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 39, 40, 1869-67.

Muckle or Meikle Loch, a lake in Slains parish, Aberdeenshire, 1¼ mile WNW of the coast near Slains Old Castle, and 4¼ miles E by N of Ellon. Lying 134 feet above sea-level, it has an utmost length and breadth of 4 and 2¾ furlongs; was formerly of much greater extent than now; is overhung, to the N, by Round Top (216 feet); has a mean depth of 20 feet, and a maximum depth of 52; and sends off a streamlet to the river Ythan.—*Ord. Sur.*, sh. 57, 1876.

Muckle Burn, a stream of Nairn and Elgin shires, rising at an altitude of 1190 feet above sea-level, and winding 19½ miles north-north-eastward, through or along the borders of Ardelach, Auldearn, and Dyke parishes, till it falls into FINDHOEN Bay.—*Ord. Sur.*, shs. 84, 94, 1876-78.

Muckle Roe. See MEIKLE ROE.

Muck, Loch. See DALMELLINGTON.

Muckrach House, a mansion in the Inverness-shire portion of Cromdale parish, on the left bank of the Dulnain, 4 miles SW of Grantown. It is the seat of John Dick Peddie, Esq., A.R.A. (b. 1824), Liberal M.P. for the Kilmarnock burghs since 1880. Muckrach Castle, built in 1598 by the second son of John Grant of Fruechie, was the first possession of the Grants of Rothiemurchus, and is now a roofless ruin, itself somewhat picturesque, and beautifully situated.—*Ord. Sur.*, sh. 74, 1877.

Mucross. See ST ANDREWS.

Mudale, a rivulet of the SW of Farr parish, Sutherland. Issuing from Loch na Meide (3¼ miles × 70 yards to 5½ furl.; 490 feet above sea-level) at the meeting-point with Tongue and Durness parishes, it winds 7¾ miles east-south-eastward till it falls into the head of Loch NAVER (247 feet) near Altnaharrow inn. It affords good trout and salmon fishing, the trout running up to 2 lbs.—*Ord. Sur.*, sh. 108, 1880.

Mugdock, an ancient barony in Strathblane and New Kilpatrick parishes, Stirlingshire. From Maldwin, Earl of Lennox, it was acquired in the first half of the 13th century by David de Graham, ancestor of the noble family of Montrose; and it became, in 1646, the seat of their principal residence—Mugdock Castle, at the SW corner of Mugdock Loch (2 × 1½ furl.), 2½ miles N by W of Milngavie. A massive quadrangular tower, of unknown antiquity, this was so defended by a deep broad fosse, drawn around it from the lake, as to be inaccessible to any force that could be brought against it in the old times of rude warfare; was one of the scenes of the bacchanalian orgies of the Earl of Middleton and his associates, when employed in subverting the popular liberties under Charles II.; is now, and has long been, a ruin; and, together with its lake, figures finely amid the pleasant surrounding scenery. Mugdock Reservoir

* An apparent increase, due to the annexation in 1872 of the BUNAVE section of Glenorchy and Innishail parish, between Lochs Etive and Awe, to Muckairn registration district.

($5\frac{1}{2} \times 3$ furl.), the great store-place of the Glasgow water-works from Loch Katrine, lies $\frac{3}{4}$ mile N of Milngavie, at an altitude of 311 feet above sea-level. See GLASGOW, p. 165; and Dr William Fraser, *The Lennox* (2 vols., Edinb. 1874).

Mugdrum, an estate in Newburgh and Abernethy parishes, NW Fife, comprising Mugdrum island in the Tay and lands on the S side of the river, all contiguous to the Perthshire boundary. Mugdrum island measures $7\frac{1}{2}$ furlongs in length, $1\frac{1}{4}$ furlong in extreme breadth, and about 32 acres in area; and is mostly under cultivation. Mugdrum House, opposite the middle of the island, immediately W of Newburgh town, is a plain massive edifice of 1786, with extensive and finely-wooded grounds. Its owner, Edmund de Haya Patersen-Balfour-Hay, Esq. (b. 1849; suc. 1865), holds 2917 acres in Fife and Perthshire, valued at £4782 per annum. Mugdrum Cross, within the grounds, comprises a large oblong stone base, and a square stone pillar; displays, on its eastern face, in four compartments, very curious ancient sculptures; and is believed to have originally had arms, making it literally a cross.—*Ord. Sur.*, sh. 48, 1868.

Muick, a stream of Glenmuick parish, SW Aberdeenshire. Rising on Cairn Taggart, at an altitude of 3150 feet, near the Forfarshire border, it first dashes $1\frac{1}{2}$ mile east-north-eastward to wild and picturesque DHU LOCH ($5\frac{1}{2} \times 1\frac{1}{2}$ furl.; 2091 feet), thence hurries 2 miles east-by-southward to dark Loch Muick ($2\frac{1}{4}$ miles \times $\frac{1}{2}$ mile; 1810 feet), and thence runs $9\frac{1}{2}$ miles north-north-eastward, till, $\frac{1}{4}$ mile above Ballater Bridge and at 665 feet of altitude, it falls into the Dee. Midway it forms a fine waterfall, 36 feet high, the Linn of Muick; and everywhere it is very impetuous, no fewer than eight wooden bridges having been swept away at BIRKHALE during 1848-50. ALT-NA-GIUTHASACH, the royal shooting-lodge, stands near the foot of Loch Muick, on whose waters the Queen and Prince Albert were first rowed 30 Aug. 1849. 'The scenery,' she wrote then, 'is beautiful, so wild and grand—real severe Highland scenery, with trees in the hollow; and again, under date 7 Oct. 1863, 'Loch Muick looked beautiful in the setting sun as we came down, and reminded me of many former happy days I spent there.' The lake affords capital trout-fishing, and the stream contains both salmon and smallish trout.—*Ord. Sur.*, sh. 65, 1870.

Muick, Argyllshire. See MUCK.

Muir, Muiralehouse, or Muirton, a village in St Ninians parish, Stirlingshire, $\frac{3}{4}$ mile SSE of Bannockburn.

Muiravonside (popularly *Moranside*), a parish of SE Stirlingshire, traversed by the Slamannan and the Edinburgh and Glasgow sections of the North British railway, with the stations of Manuel, Causewayend, Bowhouse, Blackstone, and Avonbridge. It also contains Almond Iron-works, Blackbraes, Maddiston, and Standrigg villages, with parts of Linlithgow Bridge, Rumbford, and Avonbridge. It was anciently part of Falkirk parish, and does not appear on record as a separate parish till the year 1606. It is bounded S by Slamannan, NW by Falkirk and Polmont, and on all other sides by Linlithgowshire, viz., N by Borrowstounness, and SE by Linlithgow and Torphichen. Its utmost length, from ENE to WSW, is $6\frac{1}{2}$ miles; its utmost breadth is 3 miles; and its area is $8015\frac{1}{2}$ acres, of which $51\frac{1}{2}$ are water. The river AVEN, from which Muiravonside derives its name, winds $9\frac{1}{4}$ miles north-eastward and west-by-northward along all the Linlithgowshire border, though the point where it first touches and that where it quits the parish are barely 5 miles distant. Over most of its course it is crinated with wood, or flanked with the sides of a romantic dell, or otherwise picturesque. The Hollock, Manuel, Sandyford, and other burns, rise in the interior and run to the Aven, but are all short and small. Sinking in the extreme N to less than 200 feet above sea-level, the surface thence rises south-westward to 493 feet at Whiterig, 524 near Glenend, 547 near Candie House, 641 at Green-craig, and 546 near Blackhillend. Thus the extreme W

of the parish is part of the moorish plateau which flanks the S side of the great dingle traversed by the Forth and Clyde Canal, whilst the rest of it all declines in ever-varying ridges toward the dell of the Aven and the Carse of Forth. The higher grounds have rarely an elevation of more than 200 feet above the hollows at their base; yet they command a gorgeous prospect of the basin of the Forth, from Stirling to the Lothians, and from the flanks of the Carse to the Ochil Hills. The rocks are partly eruptive, partly carboniferous. A fine-grained blue trap has been largely quarried, as also has sandstone of very close grain, with a fracture resembling that of marble, and with capacity of retaining sculpture uninjured through centuries. Coal, which was formerly worked on only a limited scale, is now mined very extensively; and ironstone, yielding metal of the finest quality, but containing a large percentage of refuse, is worked by the Carron Company. The soil of the western district is partly spongy, and nearly all cold and wet; of the eastern district is light and gravelly, encumbered with many stones; and in parts of the interior is clayey. Much that was formerly moor and moss has nearly all been brought under the plough; and a fair proportion of the entire area is occupied by plantation, so disposed as to embellish tracts naturally bleak and dismal. MANUEL Priory is noticed separately; and other antiquities are a series of fortified eminences extending from Harlelar to Sight Hill, with ruins of a pre-Reformation chapel at Ballenbriech. Muiravonside House, on the left bank of the Aven, $3\frac{1}{2}$ miles SW of Linlithgow, is the seat of Andrew Stirling, Esq. (b. 1820; suc. 1867), who owns 688 acres in the shire, valued at £638 per annum. Mr Forbes of Callendar is chief proprietor; and 5 in all hold each an annual value of £500 and upwards, 17 of between £100 and £500, 6 of from £50 to £100, and 13 of from £20 to £50. Muiravonside is in the presbytery of Linlithgow and the synd of Lothian and Tweeddale; the living is worth £331. The parish church, 3 miles W by S of Linlithgow, was built about 1808, and contains 600 sittings. Three public schools—Blackbraes, Drumbovie, and Muiravonside—with respective accommodation for 182, 150, and 175 children, had (1883) an average attendance of 134, 80, and 117, and grants of £117, 5s., £69, 4s., and £113, 6s. 6d. Valuation (1860) £12,773, (1884) £21,534, 11s. 4d. Pop. (1801) 1070, (1831) 1540, (1841) 2238, (1861) 2660, (1871) 2653, (1881) 2713.—*Ord. Sur.*, sh. 31, 1867.

Muirburn, a mansion in Glassford parish, Lanarkshire, on the left side of Avon Water, $2\frac{1}{2}$ miles NE of Strathaven. Its owner, John Patrick Alston, Esq. (b. 1816), holds 666 acres in the shire, valued at £1337 per annum.—*Ord. Sur.*, sh. 24, 1865.

Muirdrum, a village in Panbride parish, Forfarshire, $5\frac{3}{4}$ miles SW of Arbroath, and $2\frac{1}{4}$ N of Carnoustie, under which it has a post office.

Muire Loch. See MARY'S LOCH.

Muirend, a collier village in Dalgety parish, Fife, 5 furlongs S of Crossgates.

Muirresk, a mansion in Turriff parish, Aberdeenshire, on the right bank of the Deveron, 2 miles W by S of Turriff town. Its owner, Henry Alexander Farquhar-Spottiswood, Esq. (b. 1859; suc. 1873), holds 1491 acres in the shire, valued at £1397 per annum.—*Ord. Sur.*, sh. 86, 1876.

Muirfield, a mansion in Dirleton parish, Haddingtonshire, $3\frac{1}{2}$ miles NNW of Drem Junction.

Muirfoot Hills. See MOORFOOT.

Muirhead or West Benhar, a village in Shotts parish, Lanarkshire, $3\frac{3}{4}$ miles W by S of Whitburn. Pop. (1871) 863, (1881) 1412.

Muirhead, a village in Cadder parish, Lanarkshire, $\frac{1}{2}$ mile SSW of Chryston, and $6\frac{1}{2}$ miles ENE of Glasgow.

Muirhead, a village in Old Monkland parish, Lanarkshire, close to Baillieston station.

Muirhead, a village in Bothwell parish, Lanarkshire, near Bellshill.

Muirhead, a village on the SW border of Kettle parish,

Fife, adjacent to the North British railway, 2½ miles SSW of Kettle village.

Muirhead of Liff, a village in Liff and Benvie parish, Forfarshire, near the Perthshire boundary, 4½ miles NW of Dundee.

Muirhouse, a village in Dalry parish, Ayrshire, 2½ miles NE of Dalry village.

Muirhouse, a mansion in Cramond parish, Edinburghshire, on the shore of the Firth of Forth, 1½ mile NNE of Davidson's Mains and 4½ miles WNW of Edinburgh. Only two round towers remain of a previous mansion (circa 1670); and the present house is a picturesque Tudor edifice of about 1830, with a square battlemented tower and beautiful well-wooded grounds. Its drawing-room is adorned with several frescoes by Zephaniah Bell. Purchased by his ancestor in 1776, the estate belongs now to Thomas Davidson, Esq., F.R.S., F.L.S., F.G.S. (b. 1817; suc. 1865), who holds 412 acres in the shire, valued at £1216 per annum.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Muirhouse, Forfarshire. See **MURROES**.

Muirhouses, a village in Carriden parish, Linlithgowshire, 2½ miles SE of Borrowstonness.

Muirhouseton. See **MURISTON**.

Muirkirk, a town and a parish in the NE of Kyle district, Ayrshire. The town, lying near the right bank of the Ayr, 720 feet above sea-level, has a station, the junction of the Douglasdale branch of the Caledonian with the Muirkirk branch of the Glasgow and South-Western railway, 10½ miles ENE of Auchinleck, 25½ E by N of Ayr, 57½ SSE of Glasgow (only 30 by road), and 49½ SW of Edinburgh. With environs bleaker perhaps than those of any other town in Scotland, Leadhills and Wanlockhead alone excepted, it is the seat of an extensive iron manufacture, and was brought into existence through the discovery and smelting of iron ore (1878). A small predecessor or nucleus existed previously under the name of Garan; and the transmutation of this into the town of Muirkirk is noticed as follows in the *Old Statistical Account*:—"The only village, or rather *clachan*, as they are commonly called, that deserves the name, lies at a small distance from the church, by the side of the high road, on a rising ground called Garan-hill, which therefore gives name to the range of houses that occupy it. They have increased greatly in number since the commencement of the works; and new houses and streets have risen around them. Many houses besides, some of them of a very neat structure, have been built at the works themselves; and others are daily appearing that will, in a short time, greatly exceed in number and elegance those of the old village, formerly, indeed, the only one that the parish could boast." The place has undergone great fluctuations of prosperity; but, during the last half century, and especially since the formation of the railway, it has been very flourishing, inasmuch as to rank among the great seats of the iron manufacture in Scotland. The works of the Eglinton Iron Company have 3 blast furnaces, 10 puddling furnaces, and 2 rolling mills, for the manufacture of pig and malleable iron; and coal-mining and lime-burning are actively carried on. New works for collecting ammonia as a by-product at the furnaces were erected at a large outlay in 1883. Muirkirk has a post office with money order, savings' bank, and telegraph departments, a branch of the Clydesdale Bank, 2 hotels, a gas company, a good library, hiring fairs on the Tuesday after 18 Feb. and the Thursday after 18 Dec., and a cattle and sheep fair on the second Friday in June. The parish church, built in 1812, and renovated in 1883 at a cost of £1700, contains 800 sittings. Other places of worship are a Free church built soon after the Disruption, a U.P. church (1823; 350 sittings), and St Thomas' Roman Catholic church (1856; 250 sittings), which last was enlarged and improved in 1882, when a presbytery also was built at the cost of the Marquess of Bute. Pop. (1861) 2281, (1871) 2376, (1881) 3470, of whom 1861 were males. Houses (1881) 637 inhabited, 32 vacant, 2 building.

The parish, containing also **GLENBUCK** village, formed part of Mauchline parish till 1631, and, then being constituted a separate parish, received, from the situation of its church, the name of Kirk of the Muir, Muirkirk, or Muirkirk of Kyle. It is bounded S by Auchinleck, W by Sorn, and on all other sides by Lanarkshire, viz., N by Avondale, NE by Lesmahagow, and E by Douglas. Its utmost length, from E to W, is 10½ miles; its utmost breadth, from N to S, is 8 miles; and its area is 47½ square miles or 30,429½ acres, of which 200½ are water. Two artificial reservoirs, together covering 121 acres, are noticed under **GLENBUCK**. Issuing from the first of these, and traversing the second, the river Ayr winds 6½ miles west-south-westward through the interior, then 2½ miles west-north-westward along the southern boundary. Its principal affluents during this course are **GAIPEL WATER**, running 4½ miles north-westward, and **Greenock Water**, running 9½ miles south-westward. Along the Ayr, in the extreme W, the surface declines to 567 feet above the sea; and chief elevations to the N of the river are *Burnt Hill (1199 feet), Meanleir Hill (1192), Black Hill (1169), *Goodbush Hill (1556), and *Priesthill Height (1615); to the S, Wood Hill (1234), *Wardlaw Hill (1630), the Steel (1356), and *CAIRNTABLE (1944), where asterisks mark those summits that culminate on the confines of the parish. On all sides, then, except the W, or over a sweeping segment of 25 miles, its boundary is a water-shedding line of heights. The interior is a rough and dreary expanse of moorish hills, tame in outline, and clad in dark purple heather, here rising in solitary heights, there forming ridges which run towards almost every point of the compass. Cairntable, on the boundary with Lanarkshire, near the SE extremity, is the highest ground, and commands, on a clear day, an extensive and varied prospect. At most one-sixth of the entire area has ever been regularly or occasionally in tillage; and all the remainder, excepting about 250 acres of plantation, is disposed in sheep-walks—some of them so excellent that Muirkirk black-faced sheep have carried off the first prize at several of the Highland Society's shows and at the Paris Exhibition of 1867. In the 12th century a natural forest extended over a large part, perhaps nearly the whole, of the parish; and has left dreary memorials both in such names as Netherwood and Harwood, now borne by utterly treeless farms, and in long trunks and branches deeply buried in moss. The mountain-ash is almost the only tree that seems to grow spontaneously. It adorns the wildest scenes, and unexpectedly meets the eye by the side of a barren rock and sequestered stream, seen seldom save by the birds of the air or the solitary shepherd and his flock. Coal lies on both sides of the Ayr, at no greater depth than 60 fathoms, in six seams aggregately 30½ feet thick, and severally 3½, 3, 7, 9, 2½, and 5½. It is mined, on the most approved plans and in very large quantities, both for exportation and for local consumption and manufacture. Ironstone occurs in the coal-field in five workable seams, so thick that three tons of stone are obtained under every square yard of surface. Limestone likewise is plentiful, and is worked with the ironstone and coal. Lead and manganese have been found, but not in such quantity as to repay the cost of mining. The parish is deeply and pathetically associated with martyrs of the Covenant. Of various monuments the most remarkable is that upon Priesthill farm to the 'Christian carrier,' John Brown, who, on 1 May 1685, was shot by Claverhouse, in presence of his wife and family. On the top of Cairntable there are two large cairns. Five proprietors hold each an annual value of £500 and upwards, 9 of between £100 and £500, 6 of from £50 to £100, and 26 of from £20 to £50. Muirkirk is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £234. Glenbuck public, Muirkirk public, Muirkirk Ironworks, and Wellwood Works schools, with respective accommodation for 288, 317, 365, and 102 children, had (1883) an average attendance of 192, 230, 345, and 92, and grants of £142, 148. 6d., £194. 7s., £301. 17s. 6d., and £70. 7s. Valuation (1860) £93L, (1884) £24,056, 1s. 9d., plus

£5179 for railway. Pop. (1801) 2560, (1831) 2816, (1861) 3270, (1871) 3253, (1881) 5123.—*Ord. Sur.*, shs. 15, 23, 1864-65.

Muir of Rhyne or **Rhynie**, a village in Rhyne parish, Aberdeenshire, standing 600 feet above sea-level, near the left bank of the Water of Bogie, 4 miles SSW of Gartly station, and 13½ NW of Alford. A neat place, it serves as a centre of trade for some extent of surrounding country, and has a post office (Rhyne), with money order, savings' bank, and telegraph departments, branches of the North of Scotland Bank and the Aberdeen Town and County Bank, two inns, a gas company, a good water supply, a police station, a public school, the parish church, a Free church, a Congregational chapel, and the Episcopal church of Auchindoir, St Mary's (1859; 80 sittings), which, Early English in style, was restored and decorated in 1883. Cattle fairs are held on the Saturday before the fourth Monday of January, February, March, April, May, November, and December, the day in September after Keith fair, and the day in October after Kennethmont fair; hiring-fairs on the Mondays before 26 May and 22 Nov. Pop. (1861) 349, (1871) 482, (1881) 442.—*Ord. Sur.*, sh. 76, 1874.

Muirshiel, a mansion in Lochwinnoch parish, Renfrewshire, on the left bank of the Calder, 4½ miles NW of Lochwinnoch town.

Muirside, a village in Old Monkland parish, Lanarkshire, 3 furlongs SW of Baillieston.

Muirton. See MARKYKILK.

Muirton, Stirlingshire. See MUIR.

Muirton, a village in Blairgowrie parish, Perthshire, 1 mile S by W of the town.

Muldron, a mansion of 1828 in West Calder parish, SW Edinburghshire, 2 miles S of Fauldhouse station.

Mull, an island of NW Argyllshire, separated from the mainland by the Sound of Mull and the Firth of Lorn, whilst the western extremity of the Ross of Mull is divided by the narrow Sound of Iona from the island of the same name. The remaining shores of Mull are wasted by what used to be known as the Deucealedonian Sea. The island of Mull is the third largest in the Hebridean group, Skye and Lewis alone being larger. It lies within 4 miles of the promontory of Arduamurchan on the N, within 7 miles of Oban on the E, and within 24 miles of Rudha Mhail Point in Islay on the S. Its greatest length, from ENE to WSW, is 30 miles; its greatest breadth, from NNW to ESE, is 29 miles; but the extreme irregularity of its form arising from the indentations of its coast-line prevents any adequate notion of its size being given by these measurements. Indeed, its circumference may be safely put down at 300 miles, if one follows all the inns and outs of the coast; and its area (including Iona, Gometra, Ulva, and some smaller islets) is 351½ square miles or 224,802 acres. The island has been fancifully described as presenting the general aspect of a cray-fish, the long narrow peninsula called the Ross of Mull forming the tail, and the eastern coast-line forming the curved back. Were a line drawn from Treshish Point on the NW to the headland on the W side of Loch Bay, the main body of the island lying to the E of that line would form an irregular parallelogram of 25 miles by 14, extending NW and SE; but this would be indented in several parts by the sea, especially in the W, where Loch-na-Keal would run for 8 miles E of the line. Between this line and the main coast the island would consist only of 6½ miles of the peninsula of Gribon between Loch-na-Keal and Loch Scridain, and about 16 miles of the Ross of Mull, which, notwithstanding its great length, has a mean breadth of little over 4 miles. No fewer than 468 islands, islets, and insulated rocks lie adjacent to Mull, and many are within the parish of Mull, but they are not included in the above measurements. By far the greatest irregularity of coast-line is on the W and S, especially the former; while the N and E, protected by the mainland, are comparatively unbroken. The chief inlets on the W coast, in order from N to S, are Loch Cuan, Calgary Bay, Loch Tuadh (between Ulva and Mull), Loch-na-Keal, and Loch Scridain, stretching

between the peninsula of Gribon and the Ross of Mull. Loch Lathaich is an inlet of the sea on the N coast of the Ross. Along the S and SW coast, in order from W to E, the chief inlets are Ardlamont and Carsaig Bays, square Loch Bay, Loch Spelvie, and Loch Don. Tobermory Bay is on the NE coast. Of the neighbouring islands the chief are Gometra, Ulva, Staffa, Iona, Kerrera, and Lismore.

Mull has a boisterous coast, a wet and stormy climate, and a rough, unpromising, trackless surface, redeemed only by a few spots of verdure and cultivation in the sheltered valleys, or at the head of the various lochs and inlets. Lord Teignmouth described it as 'a vast moor,' though of a spot near Tobermory he said that it is 'a sequestered scene of much beauty, recalling to the Italian traveller, in miniature, the recollection of Terni. Sacheverell, 150 years ago [in 1688], was struck with its resemblance to Italian scenery. A lake is enclosed by an amphitheatre of hills, covered with oak, interspersed with torrents, forming picturesque cascades.' Modern taste sees much to admire in the misty hills and stretching moors of Mull; and in many places the scenery is grand, and even magnificent. The northern district rises from the sea, sometimes in grassy slopes, sometimes in rocky cliffs or naked terraces, and sometimes in sheer walls of basaltic pillars. The picturesque SE seaboard rises from the coast, with much variety of contour, to a mean altitude of more than 2100 feet above sea-level. Its culminating point, BENMORE (3185 feet), 8 miles inland, is the highest summit in Mull; lesser elevations, from N to S, being Cairn Mor (1126), Spyon More (1455), Dnn-da-gu (2505), Creachheinn (2344), and Ben Bu (2352). The W peninsula of Gribon, between Loch Scridain and Loch-na-Keal, has an average breadth of 5 miles, and is formed of trap terraces reeding inland, and rising in their highest crest to 1400 feet, whence lofty plateaux extend to the shoulder of Benmore. The predominant rock throughout Mull is trap, to a large extent basaltic and columnar. Granite and metamorphic rocks are found in the W part of the Ross of Mull; and there is a quarry of fine red granite directly opposite Iona, whose cathedral has been largely built of that stone. Sycnite, blue clay, limestone, and sandstone belonging to the Lias and Oolitic formation are also found. Fresh water lakes are common. The largest are Loch Erisa in the N; Loch Houran, in the S, near the head of the salt-water Loch Bay; and Loch Ba, in the W, near the head of Loch-na-Keal. Streams are numerous, but, from the size and configuration of the island, are necessarily small. The soil, except on a small rocky district at the extremity of the Ross of Mull, and on the shoulders and summits of some of the mountains, is comparatively deep and fertile, and bears a larger proportion of pasture than Skye. But the beating rains and violent storms of Mull render it one of the least suitable of the Hebrides for grain cultivation. It is much more suited for exclusive attention to grazing. The cows of Mull are numerous and of excellent quality; and some southern breeds of sheep have thriven very well on the moist but verdant pastures of Mull. Natural forests were at one time extensive and flourishing, but they are now much scantier. Coppices of larch, Scotch fir, pine, etc., have been planted in the N; and the ash grows with vigour and beauty in sheltered spots in the E. Mull and the adjacent islands were divided into several parishes during Romish times; but at the Reformation these were united into a single parish of Mull. This is now subdivided into the *quoad civilia* parishes of Kilminian and Kilmore, Kilinichen and Kilvieckon, and Torosay; and into the *quoad sacra* parishes of Tobermory, Salen, Kinlochspelve, Iona, and Ulva. The only town and the seat of the civil administration is Tobermory in the NW. The chief villages and residences will be found named in the separate articles on the various parishes, to which reference must be made for more detailed information. Pop. (1851) 7485, (1861) 6834, (1871) 5947, (1881) 5229, of whom 2666 were females, and 4591 Gaelic-speaking. Houses, occupied 1055, vacant 43, building 6.

There are a number of interesting castles or fortalices

on the rugged shores of Mull, to which Scott alludes in his *Lord of the Isles*. The chief are those of AROS, DUART, and MOY. Other antiquities consist of barrows, cairns, camps, small forts, grave-stones, and sculptured stones; for an account of which see a paper in the *Proceedings of the Scot. Soc. of Antiq.*, 1883-4. A leading event in the past history of Mull was the fierce sea-battle between Angus of the Isles and the Earl of Crawford and Huntly, which was fought in the 15th century, and has given name to Bloody Bay, a little N of Tobermory.

The presbytery of Mull includes the *quoad civilia* parishes of Ardnamurchan, Coll, Kilfinichen, Kilninian, Morvern, Torosay, and Tyree, and the *quoad sacra* parishes of Acharacle, Hylipol, Iona, Kinlochspelve, Salen, Strontian, Tobermory, and Ulva. Pop. (1871) 15,233, (1881) 13,933, of whom 1225 were communicants of the Church of Scotland in 1878.—The Free Church also has a presbytery of Mull, whose nine churches had 1775 members and adherents in 1883.

Mull, Sound of, the boomerang-shaped belt of sea separating the island of Mull from the Scottish mainland, is identical in the N with the lower part of Loch Sunart, and in the S with the upper part of the Firth of Lorn. Sometimes it is regarded as stretching between, but excluding these. In this more limited sense, the sound stretches from the headlands of Bloody Bay on the NW, to Duart Point on the SE of Mull, a distance of 19 miles. Along its length it is flanked only by Morven on the mainland side; varies from 11 furlongs to 3½ miles in breadth; and has only 5 or 6 inconsiderable inlets, of which Loch Aline in Morven, and the Bays of Salen and Tobermory in Mull, are the chief. In the larger signification the name is extended to include the channel stretching beyond Duart Point to the headlands of Loch Bay and the northern point of Seil island—in all, a total length of 36 miles. This has occasionally a breadth of 8 to 10 miles, and embraces Kerrera and the smaller islands; and is flanked on the S by Mid and Nether Lorn. The Sound of Mull is deep, but navigation is difficult from the meeting of the tides and the fierce gusts which sweep down from the high hills on either side. The scenery is very beautiful and varied; and along its shores rise the picturesque and often striking ruins of old Highland towers and keeps, such as DUART, ARTORNSH, and AROS. The opening and much of the scene of Sir Walter Scott's *Lord of the Isles* is laid on the Sound of Mull. He refers to the difficulty of navigation in the passage:

'With eve the ebbing currents boiled
More fierce from strait and lake,
And midway through the channel met
Conflicting tides that foam and fret,
And high their mingled billows jet,
As spears that, in the battle set,
Spring upward as they break.'

Mulroy. See KILMONIVAIG.

Munadhliath. See MONADHLIATH.

Munches, a handsome modern mansion of granite, with finely-wooded grounds, in Buittle parish, Kirkcubrightshire, near the right bank of UIR Water, 2 miles S of Dalbeattie. Its owner, Wellwood Herries Maxwell, Esq. (b. 1817; suc. 1858), from 1868 to 1874 was Liberal M.P. for the Stewartry, in which he holds 4597 acres, valued at £5149 per annum.—*Ord. Sur.*, sh. 5, 1857.

Muncraig Hill. See BORGUE.

Munloch, a village in Knockbain parish, Ross-shire, ½ mile W of the head of Munloch Bay, 5½ miles WSW of Fortrose, and 6½ N by W of Inverness, with which it communicates daily by the mail gig. It has a post office under Inverness, with money order, savings' bank, and telegraph departments, a public school, a reading-room and library, yearly games of the Black Isle Athletic Association, a jetty, and a considerable export trade in wood—props, staves, and sleepers. Munloch Bay, an inlet of the Moray Firth, extends 2½ miles westward; has a maximum width of ½ mile; and is an excellent fishing station.—*Ord. Sur.*, shs. 83, 84, 1881-76.

Murdoch Isle. See ARD, LOCH.

Murdostoun Castle, a mansion in Shotts parish, Lanarkshire, near the right bank of South Calder Water, 2 miles N of Newmains. Its owner, Robert King Stewart, Esq. (b. 1853; suc. 1866), holds 1760 acres in the shire, valued at £2833 per annum.—*Ord. Sur.*, sh. 31, 1867.

Murie House, a mansion in Errol parish, Perthshire, 1½ mile WSW of Errol village. The estate was sold in December 1872 for £78,500, and now belongs to John Brown Brown-Morison, Esq. of Funderlie and West Errol (b. 1840; suc. 1866), who holds 1918 acres in Perthshire and 164 in Kinross-shire, valued at £3741 and £426 per annum. Law Knoll, an artificial mound within the park, measures 120 feet in diameter at the base, 30 in diameter at the top, and 20 in vertical height; stands at the head of an old avenue of lofty oaks; and seems to have once been a seat of feudal courts of justice.—*Ord. Sur.*, sh. 48, 1868.

Murieston House, a mansion in Midealder parish, Edinburghshire, on the left bank of Murieston Water, 2 miles SSW of Midealder village. An old castellated edifice, it had fallen into decay, when it was partially rebuilt about 1836. Murieston Water, issuing from COBINSHAW Reservoir, runs 7½ miles north-north-eastward through West and Mid Calder parishes; and falls into Linthouse Water in the vicinity of Midealder village, near the Linthouse's influx to the Almond.—*Ord. Sur.*, sh. 32, 1857.

Murkle Bay, a creek (4 × 2½ furl.) on the S side of DUNNET Bay, N Caithness, at the mutual border of Thurso and Olrig parishes, 4 miles ENE of Thurso town. It was formerly noted for its fisheries and its manufacture of kelp, and is capable of being rendered a safe retreat to vessels in distress, from tempests in the Pentland Firth. Murkle estate, lying around the bay, belongs to Sir Robert C. Sinclair, Bart. of STEVENSON. The traditional scene of a victory over the Danes, it is said to have originally been called Morthill or 'the field of death.'—*Ord. Sur.*, sh. 116, 1878.

Murlaggan, a village in Kilmonivaig parish, Inverness-shire, near the right bank of the Spean, 16 miles ENE of Fort William.

Murlingden, a mansion in Brechin parish, Forfarshire, 1½ mile NNW of the town.

Murray, Wigtonshire. See PORT-MURRAY.

Murrayfield, a mansion in St Mungo parish, Dumfriesshire, near the right bank of the Water of Milk, 1½ mile E by S of Lockerbie.

Murrayshall, a mansion in a detached section of KINNOULL parish, Perthshire, 3 miles NE of Perth. Built by Sir Andrew Murray in 1664, and restored in 1864, it is the seat of Henry Stewart Murray-Graham, Esq. (b. 1848; suc. 1881), who holds 1913 acres in the shire, valued at £2679 per annum. Murrayshall Hill (918 feet), a prominent summit of the Sidlaws, is crowned by an obelisk erected in 1850 to the memory of Lord LYNEDOCHE.—*Ord. Sur.*, sh. 48, 1868.

Murrayshall, an estate, with a mansion, in St Ninians parish, Stirlingshire, 2½ miles SW of Stirling. Forming part of the POLMAISE property, it includes the western portion of the battlefield of Bannockburn; contains an interesting series of superpositions of rock, from columnar trap near the surface down to bituminous shale at a depth of 157 feet; and has a limestone quarry.—*Ord. Sur.*, sh. 39, 1869.

Murraythwaite, a mansion in Cummertrees parish, Dumfriesshire, 5½ miles WSW of Ecclefechan. Its owner, William Murray, Esq. (b. 1865; suc. 1872), holds 1256 acres in the shire, valued at £1625 per annum.—*Ord. Sur.*, sh. 10, 1864.

Murrin. See INCHMURRIN.

Murroch Burn, a rivulet of Dumbarton parish, Dumbartonshire, rising on Knockshanoch, adjacent to Dumbarton Muir, at an altitude of 870 feet above sea-level, and running 4½ miles south-westward, along a glen containing abundant supplies of limestone, till it falls into the river Leven, 9 furlongs N of Dumbarton town.—*Ord. Sur.*, sh. 30, 1866.

Murroes, a parish of S Forfarshire, containing two

small hamlets—Kellas or Hole of Murroes, $3\frac{1}{2}$ miles N of Broughty Ferry and 5 NE of the post-town Dundee; and Burnside of Duntrune (originally and more accurately Burnside of Easter Powrie), $4\frac{1}{2}$ miles NE of Dundee.

The parish is bounded N by Inverarity, NE by Monikie, E by Monifieth, S by Monifieth, Dundee, and Mains, and W by Mains and Tealing. Almost surrounding the detached or Duntrune section of Dundee parish, it has a very irregular outline, with an extreme length from N to S of $3\frac{3}{8}$ miles, an extreme breadth of $2\frac{1}{2}$ miles, and an area of $5304\frac{1}{2}$ acres, of which 7 are water. The surface has almost everywhere an undulating character, sinking in the S to a little less than 200 feet above sea-level, and rising north-westward to 378 near Barns of Wedderburn, northward to 443 near Kerryston Bank, 479 near Braeside, and 800 at the meeting-point with Monikie and Inverarity. It mostly presents a pleasant and highly cultivated appearance, and is drained by two streamlets, Sweet or Murroes Burn and Fithie Burn, which fall into Dichty Water. The predominant rocks are trap and sandstone; and the soil is a black loam, partly deep and fertile, partly light and less productive, and incumbent variously on rock, gravel, and clay. About 218 acres are under wood; 280 are uncultivated; and the rest of the land is in tillage. The principal antiquities are remains of Ballumbie, Powrie, and Wedderburn Castles; and the site is shown of Ballumbie chapel and graveyard, discontinued prior to 1590. The old mansion-houses of Gagie (1614) and Muirhouse still stand, with crow-stepped gables, massive walls and staircases, etc. Gagie is now an ordinary dwelling-house; and the Muirhouse, close to the church, from which the parish derives its name, is occupied as a farm-grieve's residence. Catherine Douglas, whose arm was crushed in a vain attempt to bar the door against James I.'s murderers at Perth (1436), is said to have been espoused to the heir-apparent of the Lovels of Ballumbie. Robert Edward, author of an elegant Latin account of Forfarshire (1678), was Episcopal minister of Murroes in the reign of Charles II. In 1589-90 the Rev. Henry Duncan removed from Ballumbie to Murroes, retaining Ballumbie in charge. This seems to indicate that there were originally two parishes—Ballumbie and Murroes—which would partly account for the very irregular shape of the parish. The only mansion is BALLUMBIE; but the landed property is divided among five—the proprietors of Powrie, Wedderburn, Gagie, Ballumbie, and Westhall. Murroes is in the presbytery of Dundee and the synod of Angus and Mearns; the living is worth £233. The parish church, built in 1848 over the vault of the FOTHERINGHAM family, is a neat edifice in the Gothic style, with a bell turret, several stained-glass windows, and 370 sittings. The public school, with accommodation for 150 children, had (1883) an average attendance of 103, and a grant of £103, 2s. Valuation (1857) £7143, (1884) £10,791, 7s., plus £643 for railway. Pop. (1801) 591, (1831) 657, (1861) 763, (1871) 751, (1881) 749.—*Ord. Sur.*, sh. 49, 1865.

Murthly. See WEEM.

Murtle House, a modern Grecian mansion in Peterculter parish, Aberdeenshire, near the left bank of the Dee and close to Murtle station on the Deeside railway, this being $5\frac{1}{2}$ miles WSW of Aberdeen. The estate is part of an ancient barony which once belonged to Aberdeen city; and is traversed by a burn of its own name, running to the Dee.—*Ord. Sur.*, sh. 77, 1873.

Murtly Castle, a seat of Sir Archibald Douglas Stewart, Bart., in Little Dunkeld parish, Perthshire, near the right bank of the Tay, $4\frac{1}{4}$ miles ESE of Dunkeld and $2\frac{1}{2}$ WNW of Murtly station on the Highland railway, this being $10\frac{1}{2}$ miles N by W of Perth, and having a post and telegraph office. Old Murtly Castle, said to have been a hunting-seat of the kings of Scotland, includes a keep of unknown antiquity and a beautiful modern addition. Its interior is richly adorned with paintings and other works of art. A little to the S is the new castle, a splendid Elizabethan structure, designed by Gillespie Graham, which, however, was left unfinished at

the death of the sixth baronet in 1838, and is hardly likely ever to be completed. The small pre-Reformation chapel of St Anthony the Eremita, to the N of the old castle, in 1846 was gorgeously restored for a Catholic place of worship. It is now dismantled, but is occasionally used as a Protestant place of worship. Between the two castles is a fine garden, laid out in 1669, and retaining much of its old Dutch character, with terraces, pools, and clipped hedges. The grounds are of singular beauty, both natural and artificial, with the 'Dead Walk' or ancient yew-tree avenue, the Douglas Avenue, the Lime Avenue (1711), the Deodara or Sunk Terrace, and every variety of hill and dell, wood and stream, carriage-drive and sequestered walk. Perth Lunatic Asylum, $\frac{1}{2}$ mile N of Murtly station, was erected in 1864 at a cost of £30,000, and, as lately enlarged at a cost of nearly £10,000, has accommodation for 300 inmates. The grounds, comprising some 60 acres, are tastefully laid out.—*Ord. Sur.*, sh. 48, 1868. See GRANTULLY, and chap. vi. of Thomas Hunter's *Woods and Estates of Perthshire* (Perth, 1883).

Musdile or Mousedale, an islet in Lismore parish, Argyllshire, adjacent to the SW end of Lismore island. LISMORE lighthouse stands on it.

Musselburgh, a post-town and parliamentary burgh in Inveresk parish, Edinburghshire, is situated near the mouth of the Esk, $2\frac{1}{2}$ miles ESE of Portobello, $3\frac{1}{2}$ W of Tranent, $3\frac{1}{2}$ N by E of Dalkeith, and $5\frac{1}{2}$ by road (6 by rail) E by S of Edinburgh. Its station is the terminus of a branch line of the North British railway, opened in 1847. The parliamentary boundaries much exceed the limits of the town of Musselburgh proper. This latter lies all on the right bank of the Esk, and excludes the beautiful rising-grounds and picturesque village of Inveresk on the S; while it occupies as its site a flat expanse a few feet above sea-level, divided on the N from the Firth of Forth by the grassy downs known as Musselburgh Links. The more extended boundaries of the burgh are N, the beach; E, Ravenshaugh Burn; S, Inveresk lands; and W, the burn at Magdalen Bridge. These limits comprise a length of $2\frac{1}{2}$ miles from E to W, an extreme breadth of $\frac{1}{2}$ mile N and S along the Esk, and about 400 yards of mean breadth over about $\frac{1}{2}$ mile at each end. They include the large suburb of Fisharrow, lying face to face with Musselburgh proper, along the left bank of the Esk; the considerable suburb of Newbigging, stretching in one main street for $\frac{1}{2}$ mile S from Musselburgh proper; the small villages of Westpans and Levenhall, near the mouth of the Ravenshaugh Burn; the hamlet at Magdalen Bridge on the W, besides considerable areas not yet in any way built upon. The environs are picturesque, and are studded with many villas and mansions; those parts of the public roads especially which fall within the legal limits of the burgh, but are just beyond the present town proper, being flanked with neat and pleasant-looking villas, many of them surrounded with gardens. The Musselburgh Heritages Company has also built of late years a number of villas at Linkfield, near the links. (See **ESK**, **INVERESK**, **NEWHALLES**, **PINKIE**, etc.) A certain extent of the land within the burgh, especially to the S, is occupied by fertile and prosperous market gardens. The links of Musselburgh, on the NE of the town, are also embraced within the burgh limits. They have long been noted as a golfing ground, and are crowded in the season with players from Edinburgh and the vicinity. The course consists of 9 holes; and forty strokes to the round is considered good play. The chief hazard, a deep and wide sand 'bunker,' is locally known as 'Pandy' or 'Pandomonium.' In 1816 the links became the chief scene of horse-racing in the Lothians. An irregularly oval race-course, about 2400 yards in circumference, stretches eastward along the links from a point 100 yards E of the Esk, and, for a considerable part of it, lies close to the beach. At the end next the town there has been erected a stand. On this course races have annually taken place every autumn since 1817, which are known indifferently as the Edinburgh or the Musselburgh Race Meeting. Still more ancient is the practice of archery

on the links. Every year the Royal Company of Archers, the Queen's Bodyguard in Scotland, compete there for a silver arrow, which was originally presented by the burgh. The winner each year receives a 'riddle of claret' from the town; and is bound to append a gold or silver medal to the arrow before the next year's competition. The custom was instituted before the close of the 16th century; and the arrow, which is carefully preserved and is still annually shot for, has a series of medals, in almost unbroken succession from 1603 to the present time, attached to it.

Musselburgh proper consists mainly of the High Street, running with varying breadth along the line of the Edinburgh and Berwick road for a distance of almost 650 yards. The houses on either side present a fairly well-built and comfortable appearance, without much pretension to handsomeness. The street in its central parts expands to a considerable breadth, giving a pleasant and spacious air to the town, which in its principal parts is kept tolerably clean. The High Street had formerly gates at its E and W ends. Two large pillars still mark where the former was placed; they bear the burgh arms and the date 1770. The W gate was at the old bridge, noticed below. A second street, known as Mill Hill, runs for about 450 yards NE from the end of the iron foot-bridge to the links, and derives its name from an old mill belonging to the town. Various lanes, alleys, and less important streets run parallel and at angles with these two main thoroughfares. Newbigging suburb stretches S at right angles to the High Street, from a point opposite the Cross. The suburb of Fisherrow, which lies between the E side of the Esk and the sea, consists of several parallel streets, and for all purposes it is regarded as part of Musselburgh, from which it is only separated by the river. It contains no buildings of any importance; and is, on the whole, inferior in appearance to Musselburgh proper. Mall Park, the suburb beside the station, which is at the SW extremity of the town, was about 1878 laid out for feuing, and several new tenements and works have been erected there. The Mall, from which the suburb derives its name, is a short but beautiful avenue, leading from the W end of the High Street to the station, and overarched on both sides with fine trees. These trees were preserved to the town in 1846-47 by the energy of the Rev. Mr J. G. Beveridge, parish minister, who got up a petition successfully praying the directors of the railway, then building, so to modify the original plans as to leave uninjured these great ornaments to the town.

The town-hall, on the N side of the wide central expansion in the High Street of Musselburgh, is a comparatively modern edifice, bearing the date 1762. It was altered in 1875-76 at a cost of £1000, and contains a public hall 48 feet long by 37 broad and 30 high, to hold 600; and includes apartments for the council and police business of the burgh. Adjacent to it is the tolbooth, built in 1590 of materials taken from the ancient Loretto chapel, noticed below. This is said to be one of the earliest instances in Scotland of the use of ecclesiastical materials in the construction of a secular building; and the action drew upon the burgesses of Musselburgh, for about two centuries, an annual sentence of excommunication at Rome. The tolbooth never had any pretensions to architectural beauty, and it suffered much from the weather; but about 1840 it underwent renovation and a certain amount of ornamentation. It is surmounted by a small and curious steeple (more ancient than the main body of the tolbooth itself), with a clock. The original clock is said to have been presented to Musselburgh by the Dutch States, in order to encourage commercial relations between the townspeople and the Dutch. The present clock was presented to the burgh by Mr Ritchie in 1883; and on its face it bears this latter date along with that of 1496. In 1746 a number of rebels were confined in the tolbooth; and even yet it is used for the detention of prisoners for periods of not more than 30 days. In front of the tolbooth stands the old cross, consisting of a heavy square pedestal, surmounted by a pillar, on the top of which

is a unicorn supporting a shield with the arms of the burgh. The cross indicates the old position of the *Midraa*, a row of houses standing in the middle of part of the High Street, and long interfering with its width and beauty. At the W end of the High Street is a monument erected in 1853 to the memory of David Moir, M.D., long prominent in the town as a public man and a physician, and well known to wider circles as the 'Delta' of *Blackwood's Magazine*. The monument consists of a statue 8½ feet high, by Handy-side Ritchie, on a pedestal 20 feet high, the base of which bears a suitable inscription. There are several buildings of antiquarian and historic interest within the limits of the burgh. On the margin of the links, immediately beyond the ancient eastern gate of the town, stood a celebrated chapel and hermitage, dedicated to Our Lady of Loretto. The chapel, founded most likely in 1533 by Thomas Doucette, a hermit, enjoyed a reputation for sanctity and miraculous powers akin to those ascribed to the famous Church of Loretto in Italy. Keith says the Musselburgh chapel was connected with the nunnery of Sciennes in Edinburgh; possibly it only placed itself under its protection. The hermitage attached to the chapel, inhabited by a solitary ascetic, added to the sanctity of the place, to which large numbers of pilgrims resorted annually. James V. himself performed a pilgrimage on foot to the chapel from Stirling in August 1536, before departing to France to woo a wife. The evils which too often sprang up with the assembling of heterogeneous crowds at shrines and pilgrim resorts, were not absent from Loretto; and Sir David Lindsay of the Mount directed one of his biting satires against the Loretto pilgrimages. The chapel is sometimes called St Allareit or Lariet, by old writers, e.g. by the Earl of Glencairn in a satirical letter against Romish friars, purporting to come from 'the halie Hermeit of Alareit,' and preserved by Knox in his *History of the Reformation*. In 1544 the chapel, along with much of the town, was destroyed by an English army, under the Earl of Hertford. Though repaired after this event, it was finally destroyed at the Reformation, its materials being used, as we have seen, to build the tolbooth of Musselburgh; and it is now only represented by a mound-covered cell, measuring 12 feet by 10. The present schoolhouse of Loretto, erected in last century, stands near the site of the ancient chapel. There were two other chapels in the town of Musselburgh, similar in character to that of Loretto, but of much less note; both have disappeared. The house in which occurred, on 20 July 1332, the death of the great Randolph, Earl of Moray, the friend and ally of Robert the Bruce, stood till 1809 at the E end of the S side of the High Street. The inhabitants are said to have formed a guard round the house during the earl's illness, and to have received for their devotion some reward, in the form of town privileges, from the Earl of Mar, the succeeding regent. It is also said that the motto of the burgh, 'Honesty,' was derived from Mar's openly expressed opinion that the burghers were 'honest fellows' in acting as they did on this occasion. At the W end of the High Street stands the house in which Dr Smollett was received by Commissioner Cardonell. In the Dam Brae, a back street, there are still extant portions of the Musselburgh Kilwinning Masonic Lodge built in 1612. In the villa of Eskside, near the Fisherrow end of the iron bridge, dwelt for some time Professor Stuart; and within its garden is the study of his son Gilbert, a detached, two-storied, circular building, in which several of the works of the latter were written. PINKIE HOUSE, in the SE outskirts of the town, is separately noticed. The manse of Inveresk, standing near the parochial church, which has been already noted in the article INVERESK, was built in 1806, and is supposed to occupy the site of the pre-Reformation parsonage. The former manse, built in 1681, had many literary associations. Within its walls were composed Williamson's sermons, and great part of Home's tragedy of *Douglas*. During the incumbency of Dr Carlyle, the manse was a favourite resort of Robertson, Hume, Campbell, Logan, Mackenzie,

Smollett, Home, Beattie, etc.; and when Dr Carlyle died, among his papers was found a complete copy of Collins's long-lost *Ode on the Superstitions of the Highlands*.

The river Esk flows through the town from SW to NE in a broad shallow stream, separating Musselburgh proper from Fisherrow. For the most part, its bed is disfigured with banks of gravel; and its waters are dirty; but in times of flood it sometimes attains great depth. Along the banks on either side run public walks, planted with trees. It is spanned by four bridges in and near the town. The chief communication between Musselburgh and Fisherrow is an elegant stone bridge of 5 elliptic arches, erected in 1806-7 from a design by Sir John Rennie. Across this passes the road between Edinburgh and Berwick. Some way higher up, the Esk is crossed by a new railway viaduct, which, erected in 1877-78 at a cost of between £2000 and £3000, consists of two spans of malleable iron, 97 and 75 feet long, resting on substantial piers of masonry. Near the station, between these two, and about 220 yards above the former, stands another stone bridge, believed to be originally of Roman workmanship, though many times repaired. It is narrow in the roadway and high in the centre; and it was formerly defended in the middle by a gate, some traces of which exist in the side wall. It has 3 arches, each 50 feet wide, with a spring of only 10 feet; and the segment of the circle is so much depressed in several parts towards a straight line, as to suggest that the frame or cover must have sunk during the erection of the bridge. The bridge is used only by foot passengers, for access is attained to it by steps at each end; but it is interesting as having been for ages the grand thoroughfare between the SE of Scotland and the Metropolis. While the Scottish army was passing along this bridge after the Battle of Pinkie in 1547, Lord Graham, eldest son of the Earl of Montrose, and several others were killed upon it by a shot from the English vessels lying off the mouth of the Esk. A mound was thrown up at Inveresk churchyard by Protector Somerset of England to defend the bridge as a pass, and was afterwards used for the same purpose by Cromwell. The Chevalier's highland army traversed the bridge in 1745, on their way to the field of Prestonpans. About 250 yards below the stone bridge of 1807 stands an iron foot-bridge upon iron pillars, replacing an earlier wooden bridge on the same site.

Churches.—The parochial church, as well as the interesting mansions, etc., of the vicinity are noticed in **INVERESK** and other articles. Northesk *quoad sacra* church stands on the N side of Bridge Street, in Fisherrow, not far from the principal bridge. It is a neat modern edifice, erected in 1838 at a cost of £2500 from designs by William Burn, and containing 500 sittings. The church at New CRAIGHALL is within this *q. s.* parish, which includes all the civil parish W of the river. The Episcopal church, St Peter's, on the S side of the E part of the High Street, was built in 1866. It is in the pointed style, and has a tower and spire, several fine stained-glass windows, and 220 sittings. There is also an Episcopal chapel in connection with Loretto school, with a new organ of 1880; and in 1880 Lady Mary Oswald's mission chapel (1843; 300 sittings) in Newbigging was converted into the Roman Catholic church of Our Lady of Loretto. Other places of worship are a Free church (1000 sittings), Bridge Street U. P. church (1820; 600 sittings), Mill Hill U. P. church (800 sittings), and a Congregational chapel (1800; 320 sittings).

Schools.—Musselburgh grammar-school dates from the latter part of the 16th century, though the present building was erected in 1835. It has 3 class-rooms and accommodation for 377 scholars. Before the Education Act it was under the town council, and endowed by them with £20 annually; it is now under the burgh school board, which consists of a chairman and 7 members. In 1883 the following were the schools under the board, with accommodation, average attendance, and government grant:—Grammar (377, 166, £147, 11s.), Fisherrow (528, 372, £278, 10s.), Musselburgh (451, 265,

£216, 3s.), and St Peter's Episcopal (116, 117, £93, 19s. 8d.). Of the private schools in Musselburgh, the chief is Loretto boarding school for boys, conducted after the method of English public schools.

Musselburgh has a head post office, with money order, savings' bank, insurance, and telegraph departments, branches of the Commercial, National, and Royal Banks, and offices or agencies of 18 insurance companies. The chief hotels are the Musselburgh Arms and the Royal Hotel; and there is also a temperance hotel, besides several lodging houses. The healthiness of Musselburgh, together with its comparative retirement yet easy accessibility to Edinburgh, renders it suitable for the situation of private lunatic asylums, of which there are 2 in Fisherrow, 1 at Newbigging, and 1 near Inveresk. The proximity of the links has largely encouraged the game of golf, and several clubs have club houses at or near the links. Among these are the Bruntsfield Links Golf Club (1761), whose club house includes a former Episcopal chapel; the Edinburgh Burgess Golfing Society (1735), the Honourable Company of Edinburgh Golfers (prior to 1744), and the Royal Musselburgh Golf Club (1774). These clubs are in the habit of holding competitions for medals and prizes over Musselburgh Links, once or oftener during the year. The gas company, whose works are on the links, was established in 1831. Among the charitable institutions, the Boy's Industrial School, at the Redhouse in Mill Hill, deserves special notice. Two funds, known respectively as Bruce's and Hastic's, are also in operation, under trusteeship of the minister, provost, etc. The former is for the relief of the poor; and the latter is to provide loans to decent tradesmen, and young men starting in business within certain local limits. It may be interesting to note, that perhaps the first evening school for poor lads in Scotland was started in Musselburgh about 1834 by the Rev. Mr Beveridge, the minister of the parish.

Industries.—Musselburgh is very favourably situated for the purposes of manufacture; but its industrial history has been fluctuating and curious. A broad-cloth manufactory, begun in the end of the 17th century, was long carried on, though to no great extent. A kind of checks, known as 'Musselburgh stuffs,' was made in the early part of the 18th century from coarse wool, at the price of from 23d. to 5d. a yard, and was exported for cheaper wear in America, until cotton fabrics drove it from the market. The manufacture of both coarse and fine woollen cloth lingered in Musselburgh till nearly the end of last century. About 1750 a cotton factory was begun, and employed in the town and environs about 200 looms; but the competition of other parts of the country compelled it to close—a fate which likewise befell a manufactory of thicksets, waistcoats, handkerchiefs, etc., which was started on a small scale near the end of the century. A china manufactory at West Pans was compelled to abandon the finer manufactures and devote itself to the productions of coarser earthenware, from a similar cause. There are now two potteries in the burgh, besides brick and tile works. A starch work at Monkton, S of Musselburgh, paid in 1792 upwards of 44000 of excise duty, but was given up in the following year. A salt work, very long in operation at Pinkie Pans, still exists; but the adjacent chemical work is not now in operation. There was also a chemical manufactory near the links. Brewing was once extensively carried on in Musselburgh; but since the end of last century it has undergone a great decrease, and is now carried on by only two firms. Dyeing long formed a prominent feature in the trade of the town, but is now almost extinct. The tanning and currying of leather is carried on in three establishments, and employs about 80 workmen; and the manufacture of sheepskin mats engages two firms. The manufacture of sail-cloth was commenced on a small scale in 1811, and rose in a few years to a flourishing condition, occupying large premises, and employing a steam engine of 55 horse-power. The weaving of hair-cloth, principally for chair and sofa

covers, was commenced in 1820, and in 1838 employed nearly 200 persons, but has now died out. The making of nets and twine is an important industry, dating from 1820. It was carried on in a factory built in 1854 near the station, which was doubled in size in 1867, and superseded a smaller factory of 15 years' standing. The present establishment is probably the largest net-factory in the country, and produces a very large quantity of goods. It includes a weaving shed with 300 looms; hemp repairing and hemp spinning departments, with 3500 spindles; and a fine cotton mill with 2000 spindles, and machinery driven by 2 engines of 100 horse-power each. There are 450 net machines; and in addition to 1200 bales of cotton annually prepared in the mill within the factory, about 5 tons of cotton per week, brought from Manchester, etc., are used in the manufacture. About 700 hands, many of them women, are employed in this industry. Beside the net-factory stands a paper-mill, which has two large machines; employs 300 hands; and turns out about 50 tons of paper per week. There are also an extensive wire-mill and tinning and galvanizing work, and an iron and brass foundry. Seed-crushing, oil-refining, glue-making, and salt-extraction also employ a number of hands in Musselburgh. There are 3 corn-mills in the burgh. The employment of a large number of boys and youths as 'golf-caddies,' and the manufacture of golf clubs and balls deserve also to be included among the industrial resources of the inhabitants.

Fishing and Harbour.—The fishing industry of the burgh has its seat entirely in Fisherrow, on the W side of the Esk. White fishing has been from a very early date a staple source of income; but the Fisherrow boats are also in the habit of actively carrying on the herring fishery, both in the Forth and on the E coast of England, and even on the Irish coast. The fisher population of Fisherrow share in great part the exclusiveness and other peculiarities of the Newhaven fisher folk; and the women of the two places are dressed in similar costume. There are about 40 first-class and 11 second-class boats, with 250 resident fisher men and boys. Seven men were lost in the great gale of 14 Oct. 1881. The harbour of the burgh is usually spoken of as Fisherrow harbour; and is situated more than half a mile W of the mouth of the Esk. An attempt was made in the beginning of the 18th century to change its position to the mouth of the river, but the basin was quickly filled up by the deposits of the stream; and before the middle of the century a return had to be made to the former and present site, which is believed to have been used as a port, even in Roman times. In the Middle Ages some commerce seems to have been carried on between Holland and Musselburgh; and before Leith attained its present predominance, Fisherrow was probably of some little importance. It is believed that the sea has even in modern times receded at this point of the coast, from the fact that English vessels could command the bridge in 1547 with their guns; while there is ample geological evidence to prove that at one time the inland hill on which Inveresk church now stands was the sea-cliff. The present harbour is a small tidal basin, enclosed by two substantial stone piers. Standing on the inner edge of a broad expanse of sand, it is shallow at the best of times; and when the tide is out is quite inaccessible to boats. The average depth at high water is 7 feet in neap tides and 10 in spring tides. The burgh is proprietor of the harbour, but for many years nothing has been done to it, except in the way of necessary repairs. About forty years ago the present W pier was built, and the expense left a debt of £6000 on the harbour, while the annual income, barely and irregularly £100, has been quite insufficient to pay the interest on this capital sum, and the debt of unpaid interest has been steadily growing. The fishing boats belonging to this harbour vary from the smallest size up to 46 tons. Between 200 and 300 fishermen (besides women and children) make their living by these; and the wealth brought into the town by them in the shape of fish per-

laps counterbalances the deficit in the revenue. The dues leviable by the town, which are believed to be incalculable only by Act of Parliament, are 2s. 6d., 5s., and 7s. 6d., according to the size of boat. The harbour still carries on a little coasting-trade, importing rock-salt from Carrickfergus, and salt, pipeclay, linseed, and a little tanner's bark from England. There are no exports, though rails were laid on the unfortunate W pier in the expectation that the shipping of coal and minerals would develop. Even the existing trade, small though it is, appears to be on the wane. The custom house is in New Street; and the port ranks as a creek under Leith.

Municipal History.—Musselburgh, before being constituted a parliamentary burgh, was a burgh of regality. David I. granted the manor of Great Inveresk or Musselburghshire, including Musselburgh, Fisherrow, Inveresk Church, with their pertinents, to the monks of Dunfermline; and this was confirmed by Gregory IX. in 1236; while subsequent grants by certain of David's successors increased the original baronial jurisdiction to one of regality. Alexander II. added the right of free forestry, and Robert III. gave the monks all the new customs leviable within the burgh. The church of Inveresk was administered by 'vicars of Musselburgh,' whose names occasionally appear among those of distinguished and influential men as witnesses to charters. After the Reformation the regality and the appertaining property passed to John Maitland, Lord Thirlestane, with whose descendants (the Earls and the Duke of Lauderdale) it remained till 1709, when it was finally purchased by the Duchess of Monmouth and Buccleuch. In 1747, when hereditary jurisdictions were abolished, the Duke of Buccleuch claimed £3000 for the regality of Musselburgh; but for that and certain other rights he only received £3400. The Duke of Buccleuch remained, however, the superior of the burgh. The burgh holds a charter from John, Earl of Lauderdale, confirming various grants and charters of the monks of Dunfermline; and especially, of a charter by Robert, commendator of Dunfermline, dated 1502. This last charter secured various rights and privileges to the bailies, councillors, and community of the burgh; and permitted the magistrates to hold courts for the punishment of offenders, and to levy small dues and customs. This charter of Lord Lauderdale was confirmed by Charles II. on 21 July 1671; and under this last confirmation the property of the burgh is now held. In 1632 a charter under the great seal erected Musselburgh into a royal burgh; but in the same year the magistrates of Edinburgh prevailed upon those of Musselburgh to consent to renounce that privilege. Practically, however, it continued to enjoy most of the rights of the royal burgh except that of parliamentary representation, which, however, was at last secured for it by the Reform Bill of 1833. In connection with the above-noted action of the Edinburgh magistrates, it is interesting to recall the old rhyme:

'Musselburgh was a burgh
When Edinburgh was nae,
And Musselburgh'll be a burgh
When Edinburgh is gane.'

Present Municipal Government.—Musselburgh is governed by a provost, 3 bailies, a treasurer, and 7 councillors, whose jurisdiction extends equally over Fisherrow and other parts of the burgh, but does not include the village of Inveresk. The council are also commissioners of police, the harbour, and the water trust. The magistrates hold small debt courts for sums not exceeding £5, and for minor criminal offences. The police force is amalgamated with the county constabulary. In 1881 an arrangement was put in force, according to which the Edinburgh Water Trust supplies the burgh with water, superseding an older system of waterworks. The gasworks on the links, erected in 1832, supply both Musselburgh and part of Portobello. Extensive

* It may be interesting to note that this rhyme has been explained as a pun, as *broch* or *brugh* signifies a 'mussel-bed'; but the honest men of Musselburgh reject this interpretation as unsatisfactory.

property at one time belonged to the burgh, consisting largely of feus, but it has been much alienated. About

1845 it was found that the finances of Musselburgh had been so clumsily managed, that it was forced to become bankrupt, with a debt of about £19,000. Since that time the revenues have been in the hands of trustees; and the town council controls only some £150 annually; though several of its members, *ex officio*, members also of the board of trustees. The harbour, as already explained, is a serious burden on the finances. The debt now amounts to £9300. Musselburgh unites with Leith, Portobello, and Newhaven in returning a member to parliament. The corporation revenue in 1882-83 was £2293; whilst the municipal and the parliamentary constituency numbered 1286 and 1044 in 1881, when the annual value of real property was £26,633 (£18,296 in 1867). Pop. of parliamentary burgh (1841) 6366, (1851) 7092, (1861) 7423, (1871) 7513, (1881) 7866, of whom 4073 were women, whilst 4370 were in Fisherrow, 3266 in Musselburgh, and 244 in West Pans. Houses (1881), inhabited 1621, vacant 122, building 2.

History.—Musselburgh is believed to derive its name from a mussel-bank near the mouth of the Esk; its earliest name appears to have been Eskemuthe or Esk-mouth; and its next, including the manor over which it presided, was Musselburghshire. It is mentioned as Eskemuthe by Simeon of Durham as early as the 7th century; and the probability is that even in the earliest times it was the centre of a well-peopled district; and considerable Roman remains have been discovered in its immediate neighbourhood. When the Lothians were formally ceded to the Scottish king in 1020, the *Ecclesia de Muskilburgh*, dedicated to St Michael, passed under the jurisdiction of St Andrews. In 1201 the barons of Scotland assembled at Muschelburg to swear fealty to the infant son of William the Lion, afterwards Alexander II. In 1544 part of the town, including the chapel of Loretto, the council-house, and the tolbooth, were burned by an English army under Somerset. Three years later, the fatal battle of Pinkie was fought; and in 1543 Lord Grey, who commanded the English horse at Pinkie, razed the towns of Dalkeith and Musselburgh; and Tytler says that on this occasion the archives and charters of the latter burgh were destroyed. In 1638 the Marquis of Hamilton, bearing a commission from Charles I. to destroy the power of the Covenanters, was met by thousands of these people on the links of Musselburgh, prepared to defend their religion. In 1650 the chief part of Cromwell's infantry encamped on the links, while his cavalry was quartered in the town, and they remained there during nearly two months. The site of Cromwell's own tent used to be pointed out opposite Linkfield House. During the rising of 1715 the town of Musselburgh was put to some expense in providing men and money, both for its own defence and to share in the defence of Edinburgh. In the '45, as has already been noted, Prince Charles the Pretender marched through part of the town on his way to the battle of Prestonpans; and the burgh was required to pay a sum for the uses of that leader. Again, on his way to England, Charles led his army through Musselburgh. The remaining history of the burgh, to be gleaned from the council-books, which are tolerably perfect from about 1679, is uneventful. From 1792 till near the end of the continental war, Musselburgh was the site of military wooden barracks so extensive as to accommodate more than 2000 men of the militia and volunteer cavalry. In 1797 and subsequent dates, Sir Walter Scott, as

quartermaster of the Edinburgh Light Horse, was much in Musselburgh; and about the same time the very different novelist 'Monk Lewis' was a resident in Fisherrow. The presence of so large a body of troops added greatly to the business of the burgh, and when the last regiment finally marched away, a wag gave expression to the general despondency of the burghers by writing on the walls 'A town to let.' Musselburgh has suffered very severely from cholera, no less than four visitations of that disease having taken place since 1831-32. The first was, however, the worst, no fewer than 500 deaths being caused by it.

Reference has already been made to the famous literary men connected with Musselburgh and Inveresk. The parish was the birthplace of David Macbeth Moir (1798-1851); of William Walker (1791-1867), an eminent portrait engraver in London; of John Burnet (1785-1868), an engraver, and his brother James (1788-1816), a landscape painter; of Alexander Handyside Ritchie (1804-70), sculptor, a favourite pupil of Thorwaldsen; and of Gilbert Stuart (1742-86), historical writer. Lord Clive and Sir Ralph Abercromby were, at different times, inhabitants of the villa of Loretto. Logan, the poet and divine; Lieutenant Drummond, inventor of the 'Drummond lights'; and Mary Somerville, were educated in the parish. The parish is the death-place of the Earl of Randolph, previously noted; and of Major-General Stirling, captor of the standard of the Invincibles in Egypt. See James Paterson's *History of the Regality of Musselburgh* (Muss. 1857).—*Ord. Sur.*, sh. 32, 1857.

Muthill, a village and a parish of Upper Strathearn, central Perthshire. The village lies 270 feet above sea-level, 3 miles S of Crieff and 1½ mile W by N of Muthill station on the Crieff and Methven branch (1866) of the Caledonian railway, this being 5 miles NNW of Crieff Junction and 22 NNE of Stirling. A seat of Culdees at the close of the 12th century, it was later the residence of the Deans of Dunblane, and for some time after the Reformation gave name to the present presbytery of Auchterarder. The Highlanders burned it in the '15; and now it is one of the best-built and pleasantest villages in Scotland, having a post office, with money order, savings' bank, and telegraph departments, two hotels, a library, a masonic lodge, two curling clubs, building and horticultural societies, and drainage and water works, constructed in 1872 at a cost of £1600. Engirt by innumerable yew-trees, the Romanesque square, saddle-roofed belfry, 70 feet high, of the ancient church adjoins the ruins of the later nave and aisles, rebuilt by Bishop Michael Ochiltree of Dunblane about the year 1430. The present parish church, erected in 1826-28 at a cost of £6900 from designs by Gillespie Graham, is a handsome Gothic edifice, containing 1600 sittings. Other places of worship are a Free church and St James's Episcopal church. Pop. of the village (1841) 1089, (1861) 1074, (1871) 1024, (1881) 882.

The parish, containing also a small suburb of Crieff, included till 1857 the present parish of ARDOCH. It is bounded N by Monzievaired, NE by Crieff and Monzie (detached), SE by Trinity-Gask and Blackford, S by Ardoch and Dunblane, and W by Comrie and two detached sections of Monzievaired. Its utmost length, from E to W, is 9½ miles; its utmost breadth, from N to S, is 5½ miles; and its area is 34½ square miles or 22,095½ acres, of which 179½ are water. The EARN winds 5½ miles south-eastward along all the north-eastern border; and MACHANY WATER, from a point ½ mile below its source, flows 8½ miles eastward across the middle of the parish, then 1 mile along the Blackford boundary, till it passes off near Muthill station into Blackford, 3½ miles above its influx to the Earn. Three sheets of water are the quiet little Loch of Balloch (1½ × 1 furl.), the splendid artificial Pond of Drummond (5 × 2½ furl.), curtained with wood, and flanked to the N by rocky Conraig (273 feet); and, immediately E of it, Benniebeg Pond (4 × ½ furl.). The surface sinks along the Earn to 95 feet above sea-level, thence rising to 1291 feet at conical pine-clad Torlum on the northern border, 1089 at

Seal of Musselburgh.

*Corryaur, 969 at Dunruchan Hill, 876 near Culloch, 1129 at Little Hill, 1748 at Ben Clach, and 1653 at *Slymaback, where asterisks mark two summits that culminate on the southern boundary. The western half of the parish, lying within the Highlands, is bleak, barren, and wildly pastoral; the eastern luxuriates in the picturesque and fertility of strath and glen, of pleasant slopes and diversified surface. The NE corner, consisting of a large tract, is one of the most delightful parts of Strathearn. Along the margin of its level and hanging grounds sweeps a hilly ridge, green and cultivated, terminating westward in the most conspicuous object in the parish, the hill of Torlum. To the S of the ridge which ends in this fine hill, lies a narrow vale, the basin of the Machany; and, screening that vale along the other side, runs a naked and chilly upland range, akin in character to the Highland heights of the W, and abruptly losing itself among their huddled mass. This range, commencing on the E, in what is called the Muir of Orehill, bears the name of Corryaur, and forms the watershed between the tributaries of the Forth and those of the Earn. Seen from a height on its southern border, the eastern part of Muthill appears 'an extensive plain, richly wooded, and studded with noblemen's and gentlemen's seats—to the left the grounds of Drummond Castle, backed by Torlum and lofty Ben Vorlich—in the foreground, the village of Muthill, embosomed in wood, with Crieff and Crieff Knock beyond, overtopped by the Grampian range—a landscape of singular beauty, variety, and grandeur.'

The predominant rocks are sandstone and trap; and the former has been quarried for building material, the latter for road-metal. The soil along the Earn is alluvial; and that on the ascent thence to the watershed is, first, a light irretentive soil on a free bottom; next, a strong sandy soil, with a mixture of gravel, on a wet retentive bottom; and next, a poor moorish soil, naturally covered with heath and whins. About three-sevenths of the entire area are in tillage; one-tenth is under wood; and the rest is either pastoral or waste. Commanding a view eastward for 40 or 50 miles is a small rock close by Drummond Castle, called Eagle's Craig, and, by the country people, Beacon Hill, whose top is flat and covered to a considerable depth with ashes. A Roman road ran north-north-eastward from Ardoch to the Roman redoubt of Kaims Castle at the southern boundary and Strageth Camp (95 × 50 paces) on the left bank of the Earn. BLAIRINROAR, in the W of the parish, by Gordon was supposed to be the scene

of the Battle of the GRAMPIANS; and two wells here, Straid and St Patrick's, were long regarded with superstitions awe, the former being deemed good for hooping-cough; whilst at a third, the Well of Struthill, lunatics would be left bound over-night, as by the Tenib of St FILLAN. Near the Mill of Steps, 1½ mile S by W of Muthill village, was born, about the middle of last century, a blacksmith's daughter, Glog by name, of exceeding beauty, who, on the outward voyage to America, was captured by an African corsair, and, being sold to the Emperor of Morocco, was admitted into his harem, and at length was raised to the dignity of Empress. Mansions, noticed separately, are DRUMMOND CASTLE and CULDEES CASTLE; and the Baroness Willoughby de Eresby is much the largest proprietor, 5 others holding each an annual value of £500 and upwards, 4 of between £100 to £500, 2 of from £50 to £100, and 10 of from £20 to £50. Taking in the Innerpeffray section of Monzie, and giving off a portion to Comrie, Muthill is in the presbytery of Auchterarder and the synod of Perth and Stirling; the living is worth £377. Blairinroar public, Drummond Street public, Innerpeffray Episcopal, and Muthill Episcopal schools, with respective accommodation for 40, 189, 56, and 90 children, had (1853) an average attendance of 8, 135, 17, and 62, and grants of £23, £137, 17s. 6d., £30, 1s. 6d., and £45, 3s. Valuation (1860) £20,491, (1884) £22,513, 6s. Pop. of civil parish (1861) 2001, (1871) 1916, (1881) 1702; of ecclesiastical parish (1851) 1729.—*Ord. Sur.*, shs. 47, 39, 1869.

Mutiny Stones. See BYRECLEUGH.

Muttonhole. See DAVIDSON'S MAINS.

Myers. See MYRES.

Mylnefield Feus, a village at the Forfarshire border of Longforan parish, Perthshire, 4 miles W of Dundee, under which it has a post office (Mylnefield), with money order and savings' bank departments. Mylnefield House stands 1 mile to the W. Pop. (1871) 357, (1881) 348.—*Ord. Sur.*, sh. 48, 1868.

Myot Hill. See DENNY.

Myrehead. See DRYFSDALE.

Myres Castle, a mansion in Auchtermuchty parish, Fife, ½ mile S of Auchtermuchty station. A fine old building, greatly enlarged about 1828, it is the property of A. H. Tyndall-Bruce, Esq. of FALKLAND.—*Ord. Sur.*, sh. 40, 1867.

Myreton, Clachan of, a tiny hamlet in Glasserton parish, Wigtonshire, at the E side of Monreith Park, 3 miles E by N of Port William. See MOCHRUM.

N

NAIRN (Gael. *Uisge-Naearn*, 'the river of alders'), a river on the S side of the Moray Firth, partly in Inverness-shire and partly in Nairnshire, rising in the former county at a height of 2500 feet above sea-level near the top of Carn Ghriogair (2637), close to the eastern corner of a detached portion of Nairnshire to the E of Loch Ness, and 10 miles due E of the point where the river Foyers enters that loch. The river flows NW for 3¼ miles, and then, taking the name of the Nairn, flows 1 mile N, and from that in the main an irregular north-easterly course to the sea. Measuring in a straight line the whole course from source to sea is 30½ miles, and following windings it is about 38 miles. Of the straight course, 18½ miles are wholly in Inverness-shire; the next 7 miles are through a district where the county boundaries are very irregular, and each in turn reaches or crosses the river; and the remaining 5½ miles are wholly in Nairnshire. It receives no tributaries of any great size, the principal from source to mouth being, on the SE, the river Brin, the Flichity Burn, the Fernac formed by the combined streams of the Allt Beag and the Uisge-Dubh; the united stream of Allt na Fuar-

ghlaic and Millaigs Burn, Craggie Burn, Cawdor Burn, formed by the junction of the Allt Dearg and the Kiereach Burn, and Rait Burn. From the SW there is a stream from Loch Duntuilchag (702 feet) and a smaller one from Loch Buauchton (701). The upper part of the course is in the parish of Daviot and Dunlichity, and the lower in the parishes of Croy and Dalross and of Nairn. The upper part of the course in Inverness-shire, from 400 to 700 feet above sea-level, is through a glen from 1 to 1½ mile wide, flanked by bare heathy hills—those on the SE having a height of from 1500 to 2000 feet, and those to the NW of from 700 to 1000 feet. There is a good deal of haugh land, and many farms are scattered along the glen, which is known as Strath Nairn, while at many points, particularly about Daviot and higher up at Farr, the lower heights and hill skirts are covered with thriving plantations, and elsewhere there are coppices of alder and birch. The heights to the SE are of gneiss; those to the NW of Old Red sandstone. Patches of till are found up to about 1700 feet to the SW, and during the later glacial epoch the whole strath seems to have been occupied by a small glacier, which has left numerous

traces of its moraines. Along the portion of the course through Nairnshire the heights bounding the basin are much lower, reaching on both sides an altitude of from 200 to 300 feet, and the country is fertile and well wooded. During the great floods of 1829 the river was in high flood, and did a great deal of damage, the current being so strong that in one case a heavy mass of machinery from a tulling-mill was carried along for 11 miles. The salmon fishing used to be very poor, in consequence of a weir at the Nairn mills near the mouth, but these were in 1882 purchased by the proprietors along the river at a cost of £3150, and the dam removed. The rod season is from 11 Feb. to 15 Oct., and the trout fishing is good. A district board was constituted in 1863, but it having been allowed to lapse in 1876, a new one was constituted in 1884.—*Ord. Sur.*, shs. 73, 74, 84, 1876-78.

Nairn, a parish at the mouth of the river just mentioned, on the sea-coast, in the NW of Nairnshire. It is bounded N by the Moray Firth; E by the parishes of Auldearn, a detached portion of Cawdor, Auldearn, and Ardlach; SW by the parish of Cawdor and the parish of Crox and Dalcross; and W by Inverness-shire. The boundary line is almost entirely artificial and highly irregular, the parish being formed by a compact portion on the N—measuring 5 miles from E to W, and 2 miles from N to S—from the SE corner of which a long, straggling projection, varying in breadth from 1 to 1½ mile, runs S for 3 miles to the Burn of Blarandualt. The area is 9387·261 acres, including 86·864 of water, 454·764 of foreshore, and 19·085 of tidal water. The surface slopes from the sea-beach till it reaches, along the S of the parish, a height of 120 feet, and in the southern prolongation already mentioned it reaches, at Hill of Urchany, a height of over 700 feet. Almost the whole of the surface is under cultivation or woodland. The soil about Kildrummie on the S, round the town of Nairn, and along the coast is sandy and light; along the river it is sand mixed with clay; and throughout most of the southern district it is a good rich loam. The underlying rock is Old Red sandstone. The drainage is effected by the river Nairn, which has a course of 4 miles along the centre and towards the E of the parish and by Lochdhu Burn, which, rising in the SW, has a course of 3 miles, first E and then N, till it reaches the sea 1½ mile W of the mouth of the Nairn. Close to the town of Nairn, on the SW, is the poorhouse for the Nairn Poor-law Combination, which includes the parishes of Abernethy, Ardlach, Ardersier, Auldearn, Cawdor, Cromdale, Crox, Duthil, Dyke, Edinkillie, Nairn, and Petty. It is a plain building, with accommodation for 75 paupers, and the average number of inmates is about 45. Besides Kilravock Castle and Geddes House, which are separately noticed, the mansions are Achareidh, Fir Hall, Honsell, Larkfield House, Ivybank, Millbank, Newton, and Viewfield. Geddes is associated with the name of John Mackintosh (1822-51), 'The Earnest Student,' the story of whose life has been so gracefully told by Dr Norman Macleod. At Geddes House once stood a chapel dedicated to the Virgin Mary, but which appears in the Ordnance Survey Map under the somewhat unrecognisable title of St Waru's Chapel. No remains of it are now to be seen, but the site and the surrounding ground is still used as a churchyard, and it is the burial-place of the family of Kilravock, by whom the chapel was founded at least as early as the first half of the 13th century. In the 15th century it was held in high repute for sanctity, and in 1475 Pope Sixtus IV. granted relief from 100 days' penance to all who made pilgrimage to it at certain festivals, or contributed a certain amount to the repair of the building. Three-quarters of a mile E of Geddes House are the ruins of Rait Castle, anciently the seat of the Mackintoshes of Rait, and prior to that of a branch of the Cumyns, and also, it is said, of the family of Rait of Rait, which disappeared from the county in the end of the 14th century, and became, according to Shaw in his *History of the Province of Moray*, the founders of the family of Rait of Halgreen in Kincardineshire. The last of the

Nairn family was, according to the same authority, Sir Alexander Rait, who, between 1395 and 1400, murdered the then thane of Cawdor. There seems also to have been at an early date a chapel here dedicated to the Virgin Mary; for incidental mention is made in 1343 of 'the hermit of the chapel of St Mary of Rait.' Close to the castle are the remains of an old British fort, called Castle-Findlay. The parish is traversed in the N for 5½ miles by the main coast road from Inverness to Aberdeen, and also for 4½ miles by the Inverness and Forres section of the Highland Railway system with a station at Nairn. Besides the town of Nairn, there are the small hamlets of Delnies (N) and Moss-side (centre).

The parish is the seat of a presbytery in the synod of Moray, and the living is worth £390 a year. The churches are noticed in the following article. Under the landward school board the public schools of Delnies and Geddes, with respective accommodation for 173 and 60 pupils, had (1883) an average attendance of 69 and 53, and grants of £61, 0s. 6d. and £36, 3s. Five proprietors hold each an annual value of £500 and upwards, 30 hold each between £500 and £100, and there are a large number of smaller amount. Valuation, exclusive of burgh, (1860) £7986, (1884) £7778, 8s. 1d., plus £1271 for the railway. Pop. (1801) 2215, (1831) 3266, (1861) 4486, (1871) 4869, (1881) 5368, of whom 2913 were females, and 570 Gaelic-speaking, while 1207 were outside the limits of the police burgh.—*Ord. Sur.*, sh 84, 1876.

The presbytery of Nairn comprehends the parishes of Ardlach, Ardersier, Auldearn, Cawdor, Crox, and Nairn. Pop. (1871) 11,497, (1881) 12,642, of whom 539 were communicants of the Church of Scotland in 1878.—The Free Church has also a presbytery, comprising the Free churches in the same parishes, which 6 churches together had 2106 members and adherents in 1883.

Nairn (formerly *Invernairn*), the county town of Nairnshire, and a royal and police burgh on the W bank of the river of the same name, at its mouth, and near the E side of the sea-coast of the parish just described. By rail it is 9½ miles W by S of Forres, 15½ ENE of Inverness, 21½ W by S of Elgin, 92½ NW of Aberdeen, 145 SSW of Wick, 175 NNW of Edinburgh, and 191 N of Glasgow. It is a seaport and an important and well-known watering-place, in which connection it has been styled the 'Brighton of the North;' and though this is a somewhat lofty title, it is nevertheless a clean, bright, pleasant, little town, with a remarkably dry climate, partly due to small rainfall, which averages about 23 inches annually, and partly to the rapidity with which the light sandy soil of the neighbourhood absorbs moisture. The adjacent beach, which is sandy, and has a very gentle slope, affords excellent bathing ground, well sheltered and secluded, and for those who do not care for open air bathing, provision is made in the Public Baths to be afterwards noticed. The surrounding country has also many attractions, both from beauty and historical associations (see AULDEARN, BRODIE, CAWDOR, DARNAWAY, FINDHORN, FORRES, KILRAVOCK, etc.); while the view across the Firth and along the shore beyond is very good. By London physicians the town is often recommended for invalids requiring a dry and bracing, yet moderate climate, and more than half of the visitors every year come from London and the S of England.

History.—The burgh is of considerable antiquity, and some writers have held that it was here that Sigurd built his burg in the latter part of the 9th century (see MORAY), and have identified it with the Narnin of Boece. This identification, though found in the later editions of Camden, and generally given on his authority, can be traced no farther back than Bellenden's translation of Boece, and was probably adopted by Camden from Holinsbed's *Chronicle*, which is merely an Anglicised form of Bellenden. Gordon of Straloch and the writer in the *Old Statistical Account* mention an old castle whose site was then covered by the sea, and the latter asserts that there were people then alive who remembered seeing vestiges of it; while, on the

other hand, Shaw, in his *History of the Province of Moray* (and he was well acquainted with the district, as he was for fifteen years minister of the adjoining parish of Cawdor), says that no Danish fort or any tradition of it existed. The existence of the royal burgh is said to date from the time of William the Lyon, according to charter mention in the reign of Alexander II., when the king granted certain lands to the Bishop of Moray 'in excambium illius terre apud Invernarnam quam Dominus Rex Willelmus, pater meus, cepit de episcopo Moraviensi ad firmandum in ea castellum et burgum de Invernarnam.' The castle stood in what was known as the Constabulary garden near High Street, and in the 13th century the sheriffs of Nairn were *ex officio* keepers of it. In 1264 Alexander de Moravia, the then sheriff, was repaid by the royal treasurer for expense incurred in plastering the hall, in placing locks on the doors of the keep, and in providing two cables for the drawbridge. In the 14th century the office of sheriff and constable of the castle became hereditary in the family of Cawdor, and with them it remained till the abolition of hereditary jurisdictions in 1747, when the then thane claimed £3000 as compensation for the first office, and £500 for the second. The lands and town itself were granted by Robert I. to his brother-in-law, Hugh, Earl of Ross, and they probably continued in the possession of that family till the forfeiture of John, Earl of Ross and Lord of the Isles, in 1475. At that period the tenure of the lands in Nairnshire, which had been formerly held under the Earls of Ross, was changed to a crown-holding; and a similar change very probably took place with regard to the town of Nairn, which then begins to be styled in records the king's burgh and the royal burgh of Nairn; unless it may be thought that the terms of Robert I.'s grant of the earldom of Moray to Thomas Randolph (which cannot easily be reconciled with the Earl of Ross's charter) are sufficient to prove that Nairn, as well as Elgin and Forres, was then of the rank of a royal burgh. The town stands across the line marking the division between the highlands and lowlands which intersects High Street about Rose Street. The part of the town NE of this was inhabited by Saxon-speaking fishermen, the part to the SW by Gaelic-speaking Highlanders, and hence the story that James VI., when twitted, after his accession to the English throne, about the inferior importance of the towns of his old kingdom, replied that, however that might be, he had a town in Scotland 'sae lang that the inhabitants of the one end did not understand the language spoken at the other;' and when Dr Johnson passed through the town 170 years later, he found no great change had taken place, for he says: 'At Nairn we may fix the verge of the Highlands; for here I first saw peat fires, and first heard the Erse language.' He is otherwise very hard on the town, for he says: 'We came to Nairn, a royal burgh, which, if once it flourished, is now in a state of miserable decay; but I know not whether its chief annual magistrate has not still the title of Lord Provost.' In the Covenanted troubles of the 17th century the burgh does not seem to have taken a very active part, or to have suffered much, though, after the battle of Auldearn, Montrose's men burned and destroyed Cawdor's house in the town. The Duke of Cumberland spent the night of 14 April in the Laird of Kilravock's town-house here, and the night following at the old house of Balblair not far off. To the W of the town, between Balblair and Kildrummie, are the fields where the Royalist army encamped, where they held their rejoicings on the Duke of Cumberland's birthday, the 15th April, and where they were when the Highlanders attempted their night surprise. The only distinguished native of the town is Lieutenant-Colonel James Grant, C.B. (b. 1827), son of a former parish minister. Colonel Grant accompanied Speke in his journey to the sources of the Nile in 1863, and gave an account of the expedition in his *Walk across Africa*.

Streets, etc.—The principal street, High Street, extends from the river south-westward for about $\frac{1}{4}$ mile, and contains now a number of very good buildings.

From it the older streets branch off, but along the sea and on the W side there are large numbers of handsome villas, many of them built for the purpose of being let to visitors, but others built by their proprietors as seaside residences for themselves. The county buildings, near the middle of the NW side of High Street, were erected in 1818, and greatly improved in 1870. They have a good front and spire, and, besides providing accommodation for the county offices, contain a large county hall, used also as a court-room. The prison cells erected behind have, since the passing of the Prisons' Act, become almost useless. The public hall was projected in 1865, and built by a joint-stock company at a cost of about £1200. It contains a large hall, with accommodation for 800 persons, supper-rooms, and ante-rooms. On the SE of the town the railway crosses the river Nairn by a handsome stone bridge of four arches, each with a span of 70 feet and 34 feet high. A little farther down the river is the bridge for the great coast road. It was originally built by Rose of Clava in 1632, but has since been very extensively repaired in consequence of damage received in heavy floods in 1782 and 1829. The parish church is a very plain building, erected in 1811, and containing 902 sittings. It is at present (1884) proposed to erect a new one at the corner of Seabank Road at a cost of over £6000. The new Free church to the S is a fine building, Early French Gothic in style, erected in 1880-81 at a cost of £7000, and containing 1200 sittings. There is a handsome spire with clock and bell. The U.P. church, erected in 1851-52, contains 512 sittings. The Congregational church, erected in 1804 at a cost of £575, contains 416 sittings. St Columba's Scottish Episcopal church is an Early English edifice of 1857, containing 225 sittings; and St Mary's Roman Catholic church (1864) contains 150. There is also a small English Episcopal church. At the SW end of the town is Rose's Academical Institution, built by subscription on ground given by Captain Rose, and supported partly by endowment, and partly by subscriptions and fees. It is managed by a body of directors elected by the subscribers. Near it is a monument erected by old pupils as a memorial of Mr John Strath, who for 40 years held the office of parochial schoolmaster. Church Street and the Monitory public schools, with respective accommodation for 300 and 400 pupils, had (1883) an average attendance of 270 and 287, and grants of £249, 1s. and £251, 2s. 6d. There are also some private schools. The Town and County Hospital, to the W of the town, was erected by subscription in 1846, and is supported by donations and subscriptions. It is managed by directors chosen by the subscribers. The museum calls for no particular mention. There is a cemetery E of the town.

Two large bathing establishments possess all kinds of artificial baths, cold, tepid, and warm. The Marine Hotel salt-water baths are open to the public at all seasons. Near the sea-shore is a large swimming-bath, erected in 1872-73 at a cost of £1200. The main building is a square measuring 91 feet each way, covered with a glass roof. The plan of the bottom has been so ingeniously managed, that, while the depth of water slopes gradually from 1 foot 3 inches to 6 feet, yet there is a swimming course all round of about 100 yards. Water is pumped from the sea by a centrifugal pump worked by steam, and the bath when full holds 140,000 gallons. A large number of bathing coaches ply on the beach during the summer months.

A wharf and harbour were constructed at the mouth of the river in 1820, according to a plan by Telford, the principle being to increase the depth of the river, and by straightening its course from the bridge downwards to increase the scour, and so prevent the silting up of the opening. Inclusive of a sum paid for injury to the neighbouring salmon fishings, the operations cost £5500, but so great was the damage done by the flood of 1829 that only very small vessels and fishing boats frequented the place. Fresh works, on a similar plan, were afterwards again constructed; a breakwater of wood and stone, 400 yards long, was extended from the

E side of the river, so as to afford shelter against the only winds to which the harbour is exposed; and further improvements have subsequently been made. The rise of spring tides in the harbour is about 14 feet, and of neaps 11 feet. In its custom-house relations it is a creek under the port of Inverness. In 1882 there were 91 boats belonging to the place, of which 52 were first-class, 37 second-class, and 2 third-class, and connected with them were 250 resident fisher men and boys. Most of these boats prosecute the herring-fishing from ports farther down the firth. The exports are timber, corn, potatoes, eggs, smoked haddocks, and freestone; and the imports are foodstuffs, soft-goods, hardware, lime, manures, and coal. The white fishing is successfully prosecuted, and there are good salmon fishings along the coast on both sides of the river. The harbour affairs are managed by the town council, who are at present (1884) attempting to form a mussel-bed near the mouth of the river. Should it succeed it will prove of very great benefit to the fishermen of the place. There are excellent sandstone and granite quarries within a few miles of the town, and a well-known distillery at Brackla is 4 miles off.

Municipality, &c.—Any charters erecting the town into a royal burgh, or granting or ratifying its privileges, appear to be lost; but a charter of confirmation, granted by James VI. in 1597 and approved by act of parliament, refers to one of Alexander I. The town is now governed by a provost, a dean of guild, a treasurer, and 11 coun-

Seal of Nairn.

cillors, and the council act also as the police commission, but the police force is incorporated with that of the county. The corporation at one time possessed a considerable amount of landed property, but most of it has been alienated. The revenue is about £1000 a year. Gas is supplied by a private company formed in 1839. Water was introduced many years ago, and in 1884 the supply was improved by the erection of a concrete collecting well near the springs at Urchany, the cost of the improvement being about £900. In 1878 a scheme was proposed for the utilisation of the sewage, and this was carried out between that year and 1880. The whole refuse is carried across the river in an iron pipe 18 inches in diameter, and spread by irrigation over the surface of a salt marsh, from which the sea has been dammed out by an embankment of clay down to the rock. The pipe is carried across the river on two iron cylinders filled with concrete, and this portion has been converted into a foot-bridge, while beyond it is embedded in an embankment, on the top of which is a walk. The total cost was £3000, of which £1542 was spent on the irrigation scheme alone. The arms of the town are St Ninian in a proper habit, holding in his right hand a cross fitchée, and in the left an open book.

The town has a head post office, with money order, savings' bank, insurance, and telegraph departments; offices of the British Linen Company, Caledonian, National, and Royal banks; agencies of 21 insurance offices; and 6 hotels. The newspapers are the Conservative *Moray and Nairn Express* (1880), published on

Saturday, and the Liberal *Nairnshire Telegraph* (1841), published on Wednesday. There is a masonic lodge, St Ninian's (No. 575); and among the miscellaneous institutions may be noticed the Volunteer Hall, the Literary Institute, the National Security Savings' Bank, the Nairn Friendly Society, a branch of the Shipwrecked Mariners' Society, the Nairn Building Society, a Farming Society, John Rose Troup's Education and Charitable Fund, the Ladies' Benevolent Society, the Nairn Coal and Meal Fund, the Orchestral Society, the Swimming Club and Humane Society, the Bowling Club, the County Cricket Club, and the 12th and 13th batteries of the 1st Inverness Artillery Volunteers. Ordinary and small debt sheriff courts are held every Friday during session. Quarter sessions are held on the first Fridays of March, May, and August, and on the last Tuesday of October. Ordinary weekly markets are held on Tuesday and Friday, and there is a weekly corn market on Thursday. Fairs for cattle and other live stock are held monthly on the Saturday after Muir of Ord, and hiring fairs on the Thursdays preceding 26 May and 22 Nov.

Nairn unites with INVERNESS, FORRES, and FORTROSE in returning a member to serve in parliament. Parliamentary constituency (1883-84) 359; municipal constituency 494 (135 females). Valuation (1875) £10,030, (1884) £13,710 inclusive of railway. Pop. of parliamentary burgh (1841) 2388, (1851) 2977, (1861) 3435, (1871) 3735, (1881) 4161, of whom 1867 were males, and 2294 were females. Houses (1881) 841 inhabited, 33 vacant, 12 building.

Nairne. See AUCHTERGAVEN and MEIKLEOUR.

Nairnshire, a small county in the N of Scotland, consisting of a main body and five detached sections. The main body lies on the S shore of the Moray Firth, and is bounded N by that arm of the sea, E by Elginshire, and S, SW, and W by Inverness-shire. The outline is very irregular, and to a very large extent artificial. Starting from the NE corner at the middle of the bank known as the Bar, midway between the mouth of the river Nairn and that of the river Findhorn, it proceeds irregularly S by E to the Muckle Burn, close to Earlsmill, and after following the course of that stream for 2 miles again strikes in its former direction to the Findhorn at the bend SW of Douduff. After following the course of the Findhorn for 7 furlongs it strikes SE to the high ground between the basins of the Dorbock and the upper tributaries of the Findhorn, which—except for a zig-zag to the E at Lochan Tutach and another to the E at Lochindorb—it follows S and S by W to its most southerly point at Carn Glas (2162 feet). The principal summits along this line, from N to S, are Carn Dubhaidh (1000 feet), Hill of Aitnoch (1351), Carn nan clach Garbha (1362), Carn Allt Lèoigh (1872), and Carn Glas. From this last summit the line passes irregularly north-westward—between the basins of the Edinehat Burn (SW) and the Leonach and Khilean Burns (NE), all flowing to the Findhorn—by Carn an t' Sean-Iathanaich (SE, 2076; NW, 2056) and Carn Torr Mheadhoich (1761) to the Findhorn, which it reaches near the upper end of the Streens, midway between Polochaig and Ballerochan. It turns up the river for 5 furlongs, and then strikes first N by W to the summit of Carn nan tri-tighernan (2013 feet), and thence westward to the Dalriach Burn near its source. It follows the course of this stream for 1½ mile to the bend where the burn turns to the S, and then pass NW to the top of Ceinn na Euchanich, whence the course northward to the shore of the firth, 3½ miles E of Ardersier Point at Fort George, is a series of most involved zig-zags too complicated to be here particularly described. The length of this main portion of the county is 17½ miles from the mouth of the Nairn on the N to Carn Glas on the S, and the mean breadth is about 11 miles. Of the detached portions, three are in the county of Elgin, one in the county of Inverness, and one in the county of Ross. Of those in the county of Elgin two are detached portions of the parish of Ard-clach, and lie locally in the parish of Edinikillie. They are close together, near the centre of the eastern

boundary of the main part of the county, and the nearest is distant from it about $1\frac{1}{2}$ mile. This portion, which is 2 miles long from N to S, and $\frac{3}{4}$ mile wide, has an area of 749 acres. The second portion, $\frac{1}{2}$ mile further to the E, is $4\frac{1}{2}$ miles long from NW to SE, with an average breadth of about $\frac{3}{4}$ mile, and has an area of 2119 acres. The third portion, which has an area of only 43 $\frac{1}{2}$ acres, inclusive of water, is at Moy Carse, in the parish of Dyke, on the river Findhorn, about $\frac{1}{2}$ mile below Forres. The portion in Inverness-shire belongs to the parish of Daviot and Dunlichity, and is the largest of all, the area being 10,568'652 acres. The centre of it is about $7\frac{1}{2}$ miles E of the mouth of the Foyers on Loch Ness, and $12\frac{1}{2}$ miles from the nearest point of the main body of the county. The greatest length from N to S is $7\frac{1}{2}$ miles, and the greatest breadth from E to W slightly over 5 miles. The portion in Ross-shire embraces the barony of Ferintosh, and lies along the SE side of the Cromarty Firth, at the mouth of the Beaully. It measures $3\frac{1}{2}$ miles from NE to SW, 3 miles across from NW to SE, and is $10\frac{1}{2}$ miles from the nearest point of the main body of the county. The area is about 6000 acres. These detached portions have been included in Nairnshire since 1476, when William, Thane of Cawdor, had influence enough to have all his lands in the neighbouring counties included in the county of Nairn, where the main body of his estates lay. Ferintosh is the Gaelic *Fearn-tosh*, 'The Toishach's or Thane's land.' The total area of the county is 199'853 square miles, or 127,905'784 acres, of which 124,967'612 are land, 920'087 water, 1987'770 foreshore, and 30'315 tidal water. Of the land area of 124,967'612 acres—26,419 acres were under cultivation in 1883, and 13,241 were under wood, while 2043 were under permanent pasture, and the rest was rough grazing, heath, and waste, there being a considerable amount devoted to grouse. Among the counties of Scotland Nairnshire is thirtieth as regards area, thirty-second as regards population, and thirty-third as regards valuation.

The first, second, and fourth detached sections are pieces of wild upland, but the others are fertile. Of the main portion of the county, the portion near the coast is part of the well-known 'laich of Moray.' It is fertile and well-wooded, and within 2 miles of the shore rises to an average height of from 70 to 80 feet above sea-level. Within the next 6 miles this rise is continued to a height of about 600 feet, and the whole district is under cultivation or covered with thriving woods. S of the 800 feet contour line the whole county is wild moorland, with an average height of from 1200 to 1500 feet, and having, besides the heights already mentioned, along the boundary the tops of Carn Maol (1000), Creag an Daimh (1180), Carn a Chrasgie (1314), Carn na Callich (1218), Beinn Bluide Mhor (1797), Carn Sgumain (1370), Maol an Tailleir (1373), Carn na Sgubaich (1522), and Carn a Garbh glaic (1523). The drainage of the S and E is effected by the Findhorn and its tributaries. The Findhorn enters the county near the centre of the SW side, and flows across towards the NE, quitting it near Dounduff after a course of almost 19 miles. From the S it receives the Tomlachan, Leonach, and Rhilean Burns, which drain the extreme S of the county, but none of the other tributaries are of any great size or importance. The centre of the county is drained partly by the Muckle Burn—which, rising at Carn a Chrasgie, has a north-easterly course of about 16 miles ere it passes into Elginshire—and its tributaries the Blarandault Burn (W) and the Lethen Burn (E); and partly by the Riereach Burn and Allt Dearg which rise in the SW, and, joining near Cawdor, flow to the river Nairn. The drainage on the W is carried off by the Nairn and by a small burn that flows into the sea $1\frac{1}{2}$ mile W of the mouth of the Nairn. The lochs are neither large nor important. In the NE corner, near the sea, and within $\frac{1}{2}$ mile of one another, are Loch Loy ($1\frac{1}{2} \times \frac{1}{2}$ mile) and Cran Loch ($3 \times 1\frac{1}{2}$ furl.); near the NW border is the Loch of the Clans ($1\frac{1}{2} \times 1$ furl.); and on the border, and partly in Inverness-shire, is Loch Flemington (1 mile \times $1\frac{1}{2}$ furl.); near the centre

of the E side is Loch of Belivat (3×1 furl.); near the centre of the county the Loch of Boath ($2 \times \frac{1}{2}$ furl.); and a portion of Lochan Tutach. None of the lochs are of importance for angling, and, except the Findhorn, the Nairn, and Cawdor Burn, none of the streams.

Geology.—The geological features of Nairnshire, though presenting no great variety, are nevertheless of considerable interest and importance. The rock formations occurring within the boundaries of the county may be classified as follows: 1. the stratified crystalline rocks with the associated granite masses; 2. the representatives of the lower and upper Old Red Sandstone; 3. the glacial, post-glacial, and recent deposits, which attain a remarkable development. The belt of low ground bordering the Moray Firth is occupied by members of the Old Red Sandstone, while the high-lying districts are composed of metamorphic and igneous rocks. Indeed the distribution of the rock formations in this county furnishes ample proof of the close relation between the superficial features and the geological structure.

In the tract lying between the basins of the Nairn and Findhorn, the stratified crystalline rocks are thrown into a great synclinal fold, the axis of which runs approximately from Dallschyle southwards in the direction of Creag an Daimh. In the Riereach Burn, and in the streams which unite to form the Muckle Burn, the general inclination of the strata is towards the NW and WNW, but as we proceed towards the W boundary of the county we find that the same strata gradually swing round till the strike is nearly at right angles with its former course. This change in the strike of the beds, which is evidently due to an extensive fold, may be followed in the streams draining the W slope of Carn nan trighearnan, and in the higher reaches of Allt Dearg. There is little variety in the lithological character of the strata throughout the area just indicated, as they consist for the most part of grey micaceous flaggy gneiss, thin bedded mica schists, and bands of micaceous quartzite. In the centre of the synclinal fold, however, between Dallschyle and Creag an Daimh, the flaggy gneiss is overlaid by a more massive series, in which the foliation is not so well marked, and the mica is not so abundantly developed. The latter might be regarded as micaceous quartzites shading into incipient gneiss. Far up on the N slope of Carn nan trighearnan there is an interesting band of porphyritic gneiss, containing large crystals of felspar, round which the quartz, felspar, and mica curve in irregular folia. In general character this rock resembles the well-known bands of porphyritic gneiss in Banffshire. Throughout the area occupied by these stratified rocks there are numerous veins of granite, diorite, and amphibolite. The best example of the last occurs near Rehiran, about 3 miles SW of Cawdor, the chief constituent being hornblende, which is associated with a small quantity of mica and felspar.

There are three masses of granite within the limits of the county. Of these by far the largest is situated along the E boundary, extending from Lethen Bar Hill S by Ardclach and Glenferness to the Bridge of Dulcie, a distance of 6 miles. The second area lies along the W border, between Ben nan Cragan and Ben Buidhe Mhor; while the third extends from Rait Castle E to near Kinsteary. Though of limited extent, the last of these granite masses is of considerable commercial value, as the rock forms an admirable building stone, and when polished presents a beautiful appearance. The beauty of the rock is due to the presence of large crystals of pink orthoclase felspar, which are developed porphyritically in the midst of the quartz, felspar, and mica. Indeed the lithological character of the rock is so distinct that boulders of it can be detected in the superficial deposits, far to the E, in the low grounds of Elgin and Banffshire.

The relations between these ancient crystalline rocks and the overlying strata of Old Red Sandstone age clearly show that the old land surface must have undergone considerable denudation prior to Old Red times. Not only do the breccias rest on a highly eroded plat-

form; they frequently fill up considerable hollows in the metamorphic series. Even at that far off time, there must have been hollows or valleys between Dallaschyle and the Hill of Urchany, and between the latter hill and Lethen Bar, but there is no evidence pointing to the conclusion that the valleys of the Findhorn and Nairn were excavated at that ancient date. Beginning first with the lower Old Red Sandstone strata, it is observable that the inland boundary, when followed from Lethen Bar W to the valley of the Nairn at Cantray, maintains a sinuous course. From Lethen Bar the boundary line sweeps in a great curve by Little-mill and the Wine Well round the N margin of the granite of Park. From the latter point it stretches SW by Little Urchany to the ravines S of Cawdor, where it forms a similar curve to that described, thence winding round the ridge of gneiss at Dallaschyle to the S slope of the valley of the Nairn. The general succession of the strata belonging to the lower division is remarkably uniform in different parts of the county; the chief variation being due to the irregular thickness of the basement breccias. Resting unconformably on the gneiss, and forming the lowest member of the series, we find a coarse breccia, which is composed of angular and sub-angular fragments of the underlying rocks. Though the dominant ingredients consist of gneiss and quartzite, it is of importance to note that the breccia at certain localities is largely made up of granitic detritus. On the NW slope of the Lethen Bar Hill, and again in the valley of the Nairn near Cantray, numerous blocks of granite are met with in the basal beds which have been derived from the adjacent granite masses. It is obvious therefore that the latter must have been exposed to denudation ere the lowest beds of the Old Red Sandstone in this county were deposited on the sea floor. By far the best section of the basal breccias and conglomerates is exposed in the ravine S of Cawdor, where the Kiereach Burn has cut a narrow gorge through them. From their development at this locality there can be little doubt that they fill a bay in the ancient coast-line, a supposition which gains support from the fact that the basement breccia thins away to a few feet against the projecting spurs of gneiss at Rait Castle and Dallaschyle. The strata just described are succeeded by the well-known fish bed, which forms such an important horizon in the Moray Firth basin. At certain localities thin reddish sandstones are intercalated between the breccias and the fish bed. The latter presents the features so characteristic of this important zone, the fish-remains occurring in the heart of limestone nodules, while the nodules are embedded in soft clays or shales. At several localities it has proved highly fossiliferous. Of these, perhaps the most celebrated within the county is Lethen Bar, where numerous ichthyolites have been obtained in a fine state of preservation. The old quarry where the limestone was formerly wrought is now covered up, but by making a series of trenches through the boulder clay in the farm of Breavil it is still possible to exhume excellent specimens. On the farm of Clune, close by Breavil, fossils have also been met with in the fish bed. The following species, among others, have been gathered from these localities: *Pterichthys Milleri* (Ag.), *P. cornutus* (Ag.), *P. oblongus* (Ag.), *P. productus* (Ag.), *Cocosteus oblongus* (Ag.), *Diplacanthus striatulus* (Ag.), *Chirolepis Cummingii* (Ag.), *Osteolepis major* (Ag.), *Glyptolepis leptopterus* (Ag.).

The fish bed caps the NW slope of Lethen Bar Hill, and is isolated from the outcrop on the N bank of the Muckle Burn, near Lethen House. This stream has cut down to the basal conglomerate underlying the fish bed, and displays excellent sections of the breccias between Fleenasgael and Burnside. To the W of the projecting spur of gneiss and granite at Rait Castle and Park the clays with the fossiliferous limestone nodules reappear at Knockloan about 3 miles S of Nairn, while in the valley of the Nairn they are to be met with on the N bank of the river between Cantray and the W boundary of the county. Owing to the vast accumulation of superficial deposits in the low-lying parts of

Nairnshire there is no continuous section of the strata which succeed the fish bed. From the various exposures, however, it is evident that the general character of the beds is widely different from the massive sandstones of the upper division. They consist of fissile micaceous shales, which are frequently charged with beautiful specimens of *Psilophyton*, grey grits and sandstones, well-bedded flagstones and shales. Indeed the general order of succession of the lower Old Red Sandstone in Nairnshire closely resembles that in the adjacent portions of Inverness-shire.

To the S of the main boundary line of the lower division there are two small outliers of coarse conglomerates and sandstones, which evidently belong to the same series. One of these occurs in the Muckle Burn near Highland Boath, while the other is met with in the Findhorn basin near Drynachan Lodge. The former rests unconformably on the ancient crystalline rocks, while the latter is brought into contact with them by two parallel faults. Though they are now completely isolated from each other as well as from the main area, they clearly indicate the original extension of the members of the lower division far up the slopes of the Highland hills.

An interesting feature connected with this formation in Nairnshire is the evidence of an unconformity between the upper and lower divisions of the system. Attention has already been directed (see vol. iii., p. 586, *Ord. Gaz.*) to the magnificent section of the upper Old Red Sandstone in the Findhorn N of Sluic. The strata present the same characters in the Muckle Burn between Earlsmill and Whitemire and along the shore at Nairn. Grey and reddish grey false-bedded sandstones, with bands of fine conglomerate and thin seams of red clays or shales, follow each other with little variation. The sandstones frequently contain pellets or nodules of green clays, which decompose readily under atmospheric agencies. These beds have been largely quarried in the neighbourhood of Nairn, and various old quarry holes are to be seen along the ancient coast-line bounding the 25-feet terrace. Numerous plates of *Pterichthys major* have been obtained from these sandstones in the Kingsteps and Seabank quarries at Nairn. The great divergence in lithological character and organic contents between the members of the upper and lower divisions in this county was first detected by Dr Malcolmson, and the unconformity between the two divisions has been recently demonstrated by Dr Archibald Geikie. From the manner in which the sandstones of the upper division steal across the edges of the lower Old Red strata as we pass E from the town of Nairn towards the Muckle Burn at Glen-shiel, it is evident that there is a gradual overlap of the one series on the other. Near the latter locality the upper Old Red Sandstone rests on the oldest members of the lower division, while still further E, in the Findhorn section, the former rests directly on the ancient crystalline rocks. It follows therefore that during the interval which elapsed between the lower and upper divisions of this formation the members of the lower Old Red Sandstone must have undergone considerable denudation.

Between the Old Red Sandstone period and glacial times there is a gap in the geological record of the district. If any of the secondary formations were ever deposited in the low grounds of the county they have been completely removed by denudation. The superficial deposits of glacial and post-glacial age are splendidly developed in the lower districts; indeed, owing to this fact, few glaciated surfaces are exposed by means of which the direction of the ice-flow can be determined. At the granite quarry near Newton of Park an admirable example is seen of a striated surface, the striae pointing E and a few degrees S of E. Along the W border of the county, between the Nairn valley and the coast-line, the ice markings trend to the N of E. When these facts are viewed in connection with the evidence supplied by the adjacent counties of Inverness and Elgin, it is apparent that the ice issuing from the Great Glen towards the Moray Firth moved first of all in an ENE

direction, and was gradually deflected towards the E and ESE on approaching the plains of Nairn and Moray. In certain parts of the county there are two distinct boulder clays, which are separated by an important series of inter-glacial sands, gravels, and finely laminated clays. The older of the two boulder clays is usually more tenacious than that which overlies the inter-glacial beds, and the stones are generally more distinctly grooved. Admirable sections showing the order of succession of this glacial series are exposed in the streams draining the Cawdor moors. An examination of the stones embedded in the boulder clays shows that even in the areas occupied by the gneiss striated blocks of red sandstone occur in considerable abundance, thus indicating that the ice was compelled to move E along the slopes of the hills, bearing along with it the detritus from the Old Red Sandstone tracts to the areas occupied by the metamorphic series. In the valley of the Nairn, at Clava, Mr Fraser, C.E., Inverness, has obtained marine shells from fine blue clay belonging to this inter-glacial series. The upper part of the section is composed of yellowish boulder clay, consisting of gravel, sand, and stones, with a mixture of clay, which reaches a depth of 45 feet. About 20 feet of sand underlies the boulder clay, and below the fine sand the shelly clay is met with, the bottom of which has not been pierced. A few smooth stones occur in the shelly clay, but they are not so numerous as in ordinary boulder clay. Indeed, from the nature of the deposit, as well as from the state of preservation of the shells, it is evident that these stratified sands and clays indicate a depression of the land in inter-glacial times. The height of the shelly clay is about 500 feet above the present sea-level, so that the submergence must have equalled, if it did not exceed, this amount. The following shells were noted from this section: *Littorina litorea*, *Leda peruviana*, *Natica Groenlandica*, *Pleurotoma turricula*, *Nucula tenuis*, *Tellina Balthica*, *Cardium edule*, *Astarte compressa*, *Buccinum undatum*, etc. The clays also yielded a considerable number of species of *Foraminifera*.

Resting on the upper boulder clay there is a great development of morainic gravels on the moory ground between the basins of the Nairn and Findhorn; sometimes forming long sinuous ridges upwards of $\frac{1}{2}$ mile in length, which enclose shallow lochans or patches of peat. By far the most interesting development of the kamiform series occurs on the low ground between Nairn and the W boundary of the county. Beginning at Meikle Kildrummie this prominent ridge of sand and shingle is traceable W to Loch Flemington, a distance of 3 miles. At the former locality the height of the kames is about 100 feet above the sea-level, and towards the W limit they rise to the level of 140 feet. This long kame forms a prominent feature on the broad platform of sand and gravel to the S of the railway between Nairn and Fort George. It stands indeed at the edge of the belt of fertile ground formed by the 100-foot terrace. In addition to this ancient terrace there are remains of the 50-foot beach to the E of the town of Nairn, though of limited extent. But along the shores of the firth between Fort George and the mouth of the Findhorn the 25-foot terrace is well developed, though covered to a considerable extent by vast accumulations of blown sand. The inland cliff, consisting of stratified sands, gravel, and clay, resting on boulder clay, which marks the border of this ancient beach, is easily followed from Fort George to Loch Loy. The terrace is of variable breadth, sometimes measuring only 200 yards from the present coast-line, sometimes $2\frac{1}{2}$ miles across. One of the most interesting features connected with this sea beach is the great development of sand drift on its surface, particularly in the neighbourhood of Culbin. Formerly one of the most fertile tracts in the province of Moray, where stood the mansion-house of Culbin among richly cultivated fields and homesteads, the area occupied by the Culbin sandhills is now but a desert waste, whose contour is changed by every wind that blows. The invasion of the sand-drift

took place in 1694, and so effectual was the inroad that only a small portion of the estate escaped, which was buried by succeeding storms. Various interesting relics are now and again picked up where the drifting of the sand has laid bare part of the old cultivated land. These consist of coins and farm implements, but numerous flint arrow heads belonging to neolithic times are also met with in isolated heaps. A considerable development of sand dunes rests on the 25-foot beach near Fort George, but to the E of the town of Nairn, between Loch Loy and the mouth of the Findhorn, the features which they present are worthy of special note. The Maviston Sandhills, which lie about 4 miles to the E of Nairn, consist of two prominent dome-shaped masses of sand—the one lying to the E of the other—which are partly surrounded by small conical heaps of sand. Each of these sand domes slopes gently to the W at an angle of 5°, while at the E limit the angle of inclination is between 30° and 40°. Beyond the county boundary the extensive forest named the Low Wood covers the plain of the 25-foot beach, which is dotted at intervals with minor accumulations of blown sand. To the E of this plantation lies the tract of the Culbin Sands, measuring about 3 miles in length and about 2 miles in breadth. The centre of the area is occupied by a succession of great ridges of sand upwards of 100 feet high, sloping towards the W at a gentle angle of a few degrees and with a much higher inclination towards the E. These dome-shaped accumulations are surrounded by conical heaps and ridges trending from WSW to ENE, and varying in height from 10 to 30 feet. The surface of the great domes as well as the minor heaps are beautifully ripple-marked by the wind, and sections of the mounds display excellent examples of false bedding. With reference to the question of their origin the following explanation has recently been given: 'There is a combination of circumstances in that district favourable to their formation. The Findhorn carries an enormous quantity of sand at present to the sea every year, and thus denudation must have proceeded steadily since glacial times. When this sediment is discharged into the sea, it is borne W and SW by the currents along the shore, and is eventually deposited on the shelving beach by tidal action. It is then caught up by the winds and borne inland in an E direction. But in addition to this it is highly probable that the prevalent W winds caught up the deposits of sand belonging to the 100-foot beach and swept them onwards in the direction of the Culbin area. Viewed in this light these sandhills give us some idea of the enormous denudation which is constantly going on over the surface of the land.' The course of the Findhorn at its mouth was changed after the advance of the Culbin Sands. Formerly it flowed W from Binsness for a distance of 3 miles and joined the sea at the old bar, but owing probably to the sand drift it was compelled to flow N into the sea.

Soils and Agriculture.—The soil in the eastern part of the 'laich' is a rich free loam, overlying sand or gravel, and in the western part is in some places a stiff strong clay, in others a sharp mould inclining to gravel. In the uplands the arable lands are haughs along the valleys of the streams, or light stony, or sandy, soil on the slopes and braes. The arable land is mostly in the coast and centre district, and the proportion fit for cultivation found among the uplands and mountains is less than in most other counties. Great improvement has taken place during the present century. The acreages under the various crops at different dates are given in the following tables:—

GRAIN CROPS.—ACRES.

| Year. | Wheat. | Barley or Bere. | Oats. | Total. |
|-----------|--------|-----------------|-------|---------|
| 1854. . . | 1714½ | 3130½ | 7752½ | 12,597½ |
| 1870. . . | 266 | 2237 | 6089 | 8,592 |
| 1877. . . | 91 | 2701 | 6045 | 8,837 |
| 1883. . . | 35 | 3099 | 5897 | 9,031 |

GRASS, ROOT CROPS, ETC.—ACRES.

| Year. | Hay, Grass, and Permanent Pasture. | Turnips. | Potatoes. |
|-----------|------------------------------------|----------|-----------|
| 1854, . . | | 4467 | 1542 |
| 1867, . . | 10,694 | 3893 | 666 |
| 1877, . . | 11,758 | 4085 | 785 |
| 1883, . . | 12,418 | 4133 | 572 |

while there are about 300 acres on an average annually under beans, rye, vetches, fallow, etc. The permanent pasture not broken up in rotation is a little over 2000 acres. There has been, as in most of the other northern counties, a very great decrease in the area under wheat, and if the return for 1854 be correct, there has within the last 30 years been a decrease of 3000 acres in the area under cultivation. The farms are mostly worked on the five shift system, and the average yield of wheat per acre is 28 bushels; barley, 32 to 40 bushels; oats, 28 to 40 bushels; turnips, from 12 to 20 tons; and potatoes, from 4 to 5 tons, but the latter two are very variable.

The agricultural live stock in the county at different dates is shown in the following table:—

| Year. | Cattle. | Horses. | Sheep. | Pigs. | Total. |
|-----------|---------|---------|--------|-------|--------|
| 1854, . . | 8304 | 1826 | 28,230 | 1489 | 39,849 |
| 1870, . . | 5566 | 1123 | 17,278 | 733 | 24,640 |
| 1877, . . | 6513 | 1247 | 16,971 | 932 | 25,663 |
| 1883, . . | 5676 | 1292 | 16,799 | 926 | 24,633 |

The early returns seem again faulty. Not much attention is given to the breeding of pure stock, and the cattle are mostly crosses. The sheep in the lowlands are mostly Leicesters, though Cheviots are also kept; those in the uplands are blackfaced. The farms are generally held on leases of 19 years. There were in the county, in 1881, 259 farmers employing 354 men, 90 boys, 67 women, and 147 girls. There were at the same time 31 farms under 15 acres, 55 between 15 and 50 acres, 59 between 50 and 100 acres, 92 between 100 and 500 acres, and 21 of larger size. There are in the parishes of Ardelach, Auldearn, Cawdor, and Nairn, 15 proprietors holding each an annual value of £500 or upwards, 23 holding each between £500 and £100, 30 holding each between £100 and £50, and 63 holding each between £50 and £20. The principal mansions, most of which are separately noticed, are Achareidd, Boath, Cawdor Castle, Coulmony, Delnies House, Fir Hall, Geddes House, Glenferness House, Househill, Ivy-bank, Kilravock Castle, Kinstearry, Letben House, Millbank, Nairngrove, Nairnside, Newton, and Viewfield. Manufactures there are practically none, except at Brackla Distillery, 3½ miles SW of the town of Nairn; and besides agriculture, and those connected with the town and the coast fishings, the only industries are the sandstone and granite quarries—the latter at Kinstearry, opened up in 1872.

Roads, &c.—The Perth and Forres section of the Highland railway touches the E border of the first detached section described, and the Forres and Inverness section of the same system traverses the whole main part of the county from E to W near the coast for a distance of 8½ miles. The main coast road from Inverness to Aberdeen passes along near the line of railway from the town of Nairn; a good road strikes south-westward to Croy, and another south-eastward by Bridge of Logie (Findhorn) to the road from Forres to Grantown. From a point 1 mile S of Bridge of Logie a branch goes off to the NE and joins the Forres road, while another passes S by W to Duthill. General Wade's military road from the Highland road to Fort George enters the county ½ mile W by S of Lochan Tutach, and, crossing the Findhorn at Dulsie, passes through the centre of the county in a north-westerly direction till it enters Inverness-shire, 1 furlong SE of Fort George railway station. There are also a large number of good district roads.

The only royal or police burgh is Nairn; the only burgh of barony or village with more than 300 inhabitants is Auldearn; and the principal smaller villages are Cawdor, Delnies, and Newton. The civil county comprises the three entire *quoad civilia* parishes of Nairn, Auldearn, and Ardelach, the greater part of Cawdor (shared with Inverness-shire), and smaller portions of the parishes of Dyke (shared with Elginshire), Moy, Croy, Petty and Daviot (also shared with Inverness-shire), and Urquhart (shared with Ross-shire). The parishes of Ardelach, Auldearn, Cawdor, Croy, and Nairn are ecclesiastically in the presbytery of Nairn, in the synod of Moray; the portions of Daviot, Moy, and Petty, in the presbytery of Inverness and the synod of Moray; the portion of Dyke, in the presbytery of Forres and the synod of Moray; and the part of Urquhart, in the presbytery of Dingwall, in the synod of Ross. Within the limits of the county there are 5 places of worship connected with the Established Church, 4 in connection with the Free Church, 1 in connection with the U.P. Church, 1 in connection with the Scottish Episcopal Church, 1 in connection with the English Episcopal Church, and 1 in connection with the Roman Catholic Church. In the year ending Sept. 1882 there were 16 schools (15 public), which, with accommodation for 2047 children, had 1590 on the rolls, and an average attendance of 1173. Their staff consisted of 20 certificated and 8 pupil teachers. Nairnshire, with a constituency of 300 in 1883-84, unites with Elgin in returning a member to serve in parliament. The county is governed by a lord-lieutenant, 13 deputy lieutenants, and 31 justices of the peace. It forms a part of the sheriffdom of Inverness, Elgin, and Nairn, but there is now no resident sheriff-substitute, the office being conjoined with that of Elginshire. Ordinary and small debt courts are held at Nairn weekly on Friday during session; justice of peace courts are held as required; and quarter-sessions are held at Nairn on the first Tuesdays of March, May, and August, and on the last Tuesday of October. There is a police force of 7 men (1 to each 1493 of the population) under a chief constable, with a salary of £135 a year. In 1883 the number of persons tried at the instance of the police was 109, convicted 99, committed for trial 5, not dealt with 38. The number of registered poor on the roll at 14 May 1883 was 273, and of casual poor 43. The expenditure for Poor Law purposes in the same year was £2641. The Poor-law combination has been noticed under the parish of Nairn. The proportion of illegitimate births averages about 10 per cent. The death-rate averages about 13 per thousand. Valuation (1674) £1264, (1815) £14,902, (1849) £20,156, (1862) £25,982, (1884) £37,143, of which £2085 is for the railway. Pop. of registration county, which takes in the part of Croy in Inverness-shire, but gives off all the other portions of parishes, (1871) 8372, (1881) 8847; of civil county (1801) 8322, (1811) 8496, (1821) 9286, (1831) 9354, (1841) 9217, (1851) 9956, (1861) 10,065, (1871) 10,225, (1881) 10,455, of whom 4979 were males, 5476 females, and 1980 Gaelic-speaking. In 1881 the number of persons to each square mile was 58, the number of families 2363, the number of houses 2094, and the number of rooms 8578. Of the whole population 1288 men and 237 women were, in 1881, engaged in occupations connected with farming and fishing, of whom 950 men and 123 women were connected with farming alone, while 992 men and 212 women were engaged in industrial occupations; and there were 1435 boys and 1463 girls of school age.

The county of Nairn seems to have been separated from Inverness in the second half of the 13th century. Such separate history as the district has is noticed for general purposes in the article MORAY and separate incidents; and the antiquities are noticed in the articles on the separate parishes, as well as in those on CULLODEN and KILRAVOCK. During the clan period the 'laich' was held by the Earl of Moray, and the upper districts by the Mackintoshes. In the middle of the 17th century Nairnshire was celebrated for its

witches, the place most infested with them being the neighbourhood of Auldearn. A crazy woman named Isobel Gowdie made, in 1662, a long confession of the delinquencies in this connection of herself and many others. She declared that the body was 'so numerous, that they were told off into squads and *corines*, as they were termed, to each of which were appointed two officers. One of these was called the Maiden of the Covine, and was usually like Tam o' Shanter's Nannie, a girl of personal attractions whom Satan placed beside himself, and treated with particular attention, which greatly provoked the spite of the old bags, who felt themselves insulted by the preference. When assembled they dug up graves to possess themselves of the dead bodies for the purpose of making charms and salves from the bones. They also metamorphosed themselves into different forms—crows, cats, and hares, seeming to have been those most common—and rode on straws, bean-stalks, and rushes, though seemingly more for their own pleasure than on business. Satan, according to poor Isobel's tale, proved but a hard master, scourging and beating them sometimes without mercy, but this notwithstanding they were always ready to obey his behests, and do all kind of harm to their neighbours, stealing their crops, shooting at them with elf-arrows, and forcing their mischievous way into all houses not fenced against them by vigil and prayer.

Nant, Loch, a lake in Lorn district, Argyllshire, on the mutual border of Kilchrean and Muckairn parishes, 4 miles NW of Port Sonnachan on Loch Awe. Lying 605 feet above sea-level, it has an utmost length and breadth of $7\frac{1}{2}$ and $2\frac{1}{2}$ furlongs, and sends off a rivulet $5\frac{1}{2}$ miles northward to Loch Etive. This stream, running nearly parallel to the river Awe, along a narrow thickly-wooded glen, with precipitous sides, makes several waterfalls, passes Taynmilt village, and during the lower part of its course takes down the road from Port Sonnachan to Oban. Like the lake it affords good trout-fishing.—*Ord. Sur.*, sh. 45, 1876.

Na-Nuagh, Loch, a sea-loch on the mutual border of Arasaig and Moydart districts, Inverness-shire. Opening opposite Elgg island, it penetrates the land $6\frac{1}{2}$ miles east-north-eastward; has a maximum breadth of $3\frac{1}{2}$ miles; and sends off, at an acute angle, from its SE side, a bay, Loch Aylort. See BOKKODALE.

Naughton, a mansion in Balmerino parish, Fife, $4\frac{1}{2}$ furlongs S of the Firth of Tay, and $4\frac{1}{2}$ miles SW of Newport. Built towards the close of last century, and since much altered and improved, it is the seat of Mrs Dnncan-Morison, who holds 1591 acres in the shire, valued at £3421 per annum. Naughton Castle, to the N of the mansion, is said to have been built by a natural son of William the Lyon; and is now reduced to a few fragments of the lower parts of the side walls. Dolhanba, a Culdee establishment, in connection with that of St Andrews, is stated by Sibbald to have stood near the Castle's site. The estate belonged so early as the time of Alexander III. to the Hays, ancestors of the noble family of Errol; went by marriage, in 1494, to the Crichtons; and passed by sale, in 1737, to the Morisons.—*Ord. Sur.*, sh. 48, 1868.

Naunt, Loch. See NANT, LOCH.

Navar. See LETHNOT.

Nave or Noamb, an islet of Kilchoman parish, Islay island, Argyllshire, to the W of the mouth of Loch Gruinnard, 10 miles N by W of Bowmore. Its name signifies 'Holy,' and alludes to an ancient church and a large burying-ground. The church is still represented by some ruins, and the burying-ground contains some clay-slate grave-stones, with curious sculptures.

Naver, a lake and a river of Farr parish, Sutherland. Lying 247 feet above sea-level, and commencing near ALTAHARROW inn, 21 miles N by W of Lairg station and 17 S by W of Tongue, Loch Naver extends $6\frac{1}{2}$ miles east-north-eastward, and has a maximum breadth of $4\frac{1}{2}$ furlongs. Its depth in some parts is 30 fathoms, and BENCLEBRICK rises from its southern shore to a height of 3154 feet. It receives at its head the River of MCDALE, is fed by sixteen other streams and rivulets,

and contains near its SE shore a tiny islet, on which is a circular Pictish tower, built of large stones without any cement. Its waters are stocked with salmon, grilse, sea-trout, and trout, but, whilst the trout-fishing is poor, 52 salmon have been killed by a single rod in seven weeks. Parts of the shore are pebbly, others rocky and sandy. The surrounding scenery is of great beauty. The immediate banks are well tufted with natural wood, and the surface behind rises generally into abrupt rocks or low hills, but sears on the S into alpine Benclerrick, the second highest mountain in Sutherland, whilst the backgrounds to E and W are formed by the grand summits of Kildonan and the Reay country.

The river Naver (the *Nabarus* of Ptolemy) issues from the foot of Loch Naver, and winds $18\frac{1}{2}$ miles north-by-eastward through broad green meadows or between steep birch-clad slopes, till it falls into Torrisdale Bay, 9 furlongs W of Bettyhill of Farr. It is joined, $\frac{1}{2}$ mile below its mouth, by the Abhainn a' Mhail Aird, running $7\frac{1}{2}$ miles north-by-eastward from Loch Corr, and, lower down, by forty-six lesser streams and rivulets. The Naver, as a salmon river, is the earliest and by far the best of all the rivers in the N of Sutherland, its six 'beats' letting each for £100 a year. Its vale, Strathnaver, the finest strath perhaps in the county, contains a considerable extent of fertile houghland, a mixture of sand, gravel, and moss, which for many years prior to 1820 was cultivated by upwards of 300 families. But since the famous Sutherland 'evictions,' brought freshly to mind by Prof. Blackie and Mr Sellar, Strathnaver has been wholly pastoral.—*Ord. Sur.*, shs. 108, 109, 115, 114, 1878-80.

Navity, a mansion in Cromarty parish, $2\frac{1}{2}$ miles S o' the town.

Neartay, a small island in the Sound of Harris, Outer Hebrides, Inverness-shire, $2\frac{1}{2}$ miles N of North Uist, and 3 E of Bernera.

Neaty, Loch. See KILTALITY.

Needle's Eye. See GAMRIE.

Neidpath Castle, an old baronial fortalice in Peebles parish, Peeblesshire, on the Tweed's N bank, 1 mile to the W of Peebles town. It is the strongest and most massive of the numerous feudal strengths still extant in Peeblesshire; and, though ruinous and partly fallen, it still exhibits an imposing quadrangular pile. Its walls are 11 feet thick, and consist of greywacke stones held together by a cement as hard almost as themselves. The castle stands on a rock at the lower end of a wide semicircular bend of the murmuring Tweed. The concave bank, or that on the side of the castle, is very steep, and of great height; the convex bank commences with a little plain half encircled by the river, and rises in a bold and beautiful headland, which seems to stand sentinel over the bend. Amidst this scene, the castle commands, on the NW side, an important pass; and, on the E, it overlooks the opening vale of the Tweed and the bridge and town of Peebles. Siugs Pennicuk in his *Description of Tweeddale* :—

'The noble Neidpath Peebles overlooks,
With its fair bridge, and Tweed's meandering brooks.
Upon a rock it proud and stately stands,
And to the fields about gives forth commands.'

The woods which embowered the castle were felled by 'Old Q,' the last Duke of Queensberry, either meanly to impoverish the estate before it should fall to the heir of entail, or to fling what he could in the lap of his natural daughter. Wordsworth, who came hither with his sister Dorothy on 18 Sept. 1803, has thus denounced this act of vandalism :

'Degenerate Douglas! thou unworthy Lord,
Whom mere despite of heart could so far please,
And love of havoc (for with such disease
Fame taxes him), that he could send forth word
To level with the dust a noble horde,
A brotherhood of venerable trees,
Leaving an aneient dome and towers like these,
Beggard and outraged! Many hearts deplored
The fate of those old trees; and oft with pain

The traveller at this day will stop and gaze
On wrongs which Nature scarcely seems to heed;
For shelter'd places, bosoms, nooks, and bays,
And the pure mountains, and the gentle Tweed,
And the green silent pastures yet remain.'

The seventh Earl of Wemyss replanted the demesne, which now once more is beautifully wooded. The S or older part of the castle has tumbled in huge masses to the margin of the Tweed; the later, albeit ancient, portion has recently been refaced, and thereby not improved in aspect, as neither by a tall white chimney. On the keystone of the courtyard archway is the crest of the Hays of Yester, a goat's head over a coronet, with a bunch of strawberries (French *fraises*) beneath, symbolical of the name Fraser. Rooms on two floors are tenanted still by the keeper; and the top, which commands a magnificent prospect, is gained by a narrow corkscrew staircase.

The castle was anciently the chief residence of the powerful family of the Frasers—proprietors first of Oliver Castle in Tweedsmuir, and afterwards of great part of the lands from thence to Peebles,—sheriffs of the county, and progenitors of the families of Lovat and Saltoun. The last male of them in Tweeddale was the valiant Sir Simon Fraser, who thrice in one day defeated the English in the battle of Roslin Moor (1302), and by the marriage of whose elder daughter Neidpath Castle passed in 1312 to the Hays of Yester, ancestors of the Earls and Marquises of TWEEDDALE. By one of them, probably Sir William Hay, in the early part of the 15th century, the newer portion was added. In 1587 James VI. was at Neidpath, which in 1650 was garrisoned by the young Lord Yester for the King's service, and held out against Cromwell longer than any other place S of the Forth, but, being battered by shot on its southern or weakest side, was at last forced to surrender. In 1686 the Tweeddale estate was purchased by the first Duke of Queensberry for £23,333, and by him was settled on his second son, the Earl of March. During the first half of last century it was the summer home of the Earls of March, the third of whom in 1778 became by inheritance fourth Duke of Queensberry. At the latter's death without male issue in 1810, it was transmitted to the Earl of Wemyss, the descendant of a daughter of the Queensberry family. Towards the close of last century Neidpath was for some time occupied by Prof. Adam Ferguson the historian, and Sir Walter Scott speaks of cheerful days he spent then within its walls. And Ellen, Earl March's child, the 'Maid of Neidpath'—history tells nought of her, but the world knows her through the lyrics of Scott and Campbell.—*Ord. Sur.*, sh. 24, 1864.

Neilsland House, a mansion in Hamilton parish, Lanarkshire, 3 miles SW of Hamilton town. The estate, which belonged to a junior branch of the Hamilton family from 1549 to 1723, was sold in 1871 for £23,000.—*Ord. Sur.*, sh. 23, 1865.

Neilston, a town and a parish in the Upper Ward of Renfrewshire. The town lies 430 feet above sea-level, on the rivulet Levern, 2 miles SW of Barrhead, 5½ S of Paisley, and 10 SW of Glasgow. Occupying the brow of a gentle eminence, amid a delightful landscape, it presents an old-fashioned yet neat and compact appearance, and has a post office under Glasgow, a branch of the Clydesdale Bank, gas-works, and a station on the Glasgow, Barrhead, and Kilmarnock Joint railway. The parish church, dating from about the middle of the 15th century, retains a beautiful specimen of Gothic architecture in its N window, and has a spire, a clock, and 940 sittings. In a vault beneath it are buried William Mure, D.C.L. (1799-1860), Liberal-Conservative M.P. for Renfrewshire 1846-55, and author of a *Critical History of the Language and Literature of Ancient Greece*; his son, Lieut.-Col. William Mure (1830-80), Liberal M.P. for Renfrewshire 1874-80; and other members of the CALDWELL family. A Free church was built in 1873; and St Thomas Roman Catholic church, with 350 sittings, in 1861. Pop. (1836) 2506, (1861) 2357, (1871) 2125, (1881) 2920, of whom 609 were in Crofthead

suburb. Houses (1881) 579 inhabited, 10 vacant, 5 building.

The parish, containing also six-sevenths of BARRHEAD town, is bounded N by Abbey-Paisley, SE by Mearns, S by Stewarton, Dunlop, and Beith, and W by Lochwinnoch and Abbey-Paisley. Its utmost length, from NE to SW, is 6½ miles; its breadth varies between 1½ and 4½ miles; and its area is 20 square miles or 12,862 acres, of which 381 are water. On the Mearns boundary are seven sheets of water—Long Loch, Harelaw Dam, Walton Dam, Glanderston Dam, Balgray Reservoir, Ryat Linn Reservoir, and Waulkmill Glen Reservoir; two more lie on the northern and north-western border; and in the interior are five—Commore Dam, Craighall Dam, Snypes Dam, Kirkton Dam, and Loch Libo (¾ × 1 furl; 395 feet). This last, by the side of the railway, 2½ miles SW of the town, by Dr Fleming was pronounced superior, in picturesque scenery, to Rydal Water in Cumberland. 'Loch Libo,' he says, 'presents a scene of unparalleled beauty. Its lofty hills, on both sides, are wooded with fine old trees to the water's edge. Its oblong or oval figure pleases the eye; while its smooth and glassy surface is disturbed only by the heron and wild-duck, swimming and fishing upon it. Standing at the turn of the road, as you ascend northward, and looking W when the sun, in a fine summer evening, is pouring its rays upon it, the effect is enchanting.' The artificial collections of water, in the form of reservoirs or dams, for economical purposes, are all of great volume, and springs of the purest water abound. One of them, issuing from the solid rock, at a place called Aboon-the-brae, is so copious as to discharge 42 imperial gallons every minute. By LEVERN WATER the drainage is mainly carried north-north-eastward, by LUGTON WATER partly south-south-westward. The surface is exceedingly irregular and uneven. At the north-eastern border it sinks to 120 feet above sea-level, thence rising to 725 feet at the Ference Hills, 848 at Corkindale Law or Lochlibo-side Hill, 854 at Neilston Pad, 734 at Howraigs Hill, and 863 near Long Loch. Of these Corkindale Law commands one of the widest and most magnificent views in Scotland. On one side are seen Dumbarton Castle, the vale of the Leven, Loch Lomond, Ben Lomond, and a vast sweep of the Grampians; on another the vale of the Clyde from Bowling Bay to Hamilton, the Kilpatrick and Campsie Hills, the city of Glasgow, a summit or two of the Ochils, the Lomonds of Fife, the Bathgate Hills, the Pentlands, Tinto, and the Lowthers; on another the hills of Kyle, of upper Nithsdale, and of Kirkcubrightshire, and sometimes, in the far distance, the tops of the Cumberland mountains; and on another the great plain of Ayrshire, Brown-Carrick Hill, the flanks of Loch Ryan, the mountains of Mourne in Ireland, the whole sweep of sea from Donaghadee to the Cumbraes, with Ailsa Craig in the centre, and the lofty mountain masses of Arran on the W side. The predominant rock is trap; but both at the eastern and western extremities of the parish, rocks of the coal formation, including limestone and ironstone, abound. Rare or curious minerals are sufficiently plentiful to draw the attention of mineralogical collectors. The soil of the flat eastern district is of a dry loamy nature, occasionally mixed with gravel, and generally resting on clay or till; that of the middle district is the *debris* of trap rock, irretentive of water, and well fitted for dairy pasture; whilst that of the western district is largely moorish or mossy. Two-thirds of the entire area are regularly or occasionally in tillage; fully 500 acres are under wood; and the rest is either pastoral or waste. The appliances of manufacture, in the form of printfields, bleachfields, and cotton spinning-mills, are great and many, serving, along with the mansions, villas, towns, and villages, to give much of the lower part of the parish a character intermediate between the urban and the rural. The printing of calicoes and the bleaching of cloth were commenced here in 1773; the spinning of cotton was introduced in 1780; and so rapid was the progress of these departments of industry, as well as of others related to them, that Sir John Sinclair, in connection with the making up of the

Old Statistical Account in 1792, selected Neilston as one of three parishes to show to the French Chamber of Commerce the status which manufactures had reached in the best rural districts of Scotland. The manufacturing prosperity so soon attained in Neilston has been continued till the present day, receiving stimulus from the formation of the Glasgow, Barrhead, and Kilmarnock railway, and keeping up a rivalry, proportionally to its population, with the prosperity of Paisley and Glasgow. The lands of Neilston, Crookston, Darnley, and others in Renfrewshire belonged in the 12th century to the family of Croc, from whom they passed in the succeeding century to a branch of the illustrious house of Stewart by marriage with the heiress, Marion Croc. This branch became Earls and Dukes of Lennox; and one of its members was Henry Lord Darnley, husband of Queen Mary, and father of James VI. of Scotland. In process of time the estate of Neilston passed from them, and was divided amongst a number of proprietors. In the *New Statistical Account*, Crawford is represented as saying, in his *History of Renfrewshire*, that, 'passing from the house of Stewart, the lordship of Neilston came by marriage into that of Cunningham of Craighs;' whereas Crawford makes that statement with regard merely to a portion called ARTHURLEE, which had belonged to a branch of the Darnley family, and which now belongs to various proprietors. The transmission of the estates since Crawford's time is given by his continuator, Robertson. None of the castles of the ancient proprietors remain; but mansions belonging to some of the present landowners, as well as villas belonging to other gentlemen, are numerous and elegant. Seventeen proprietors hold each an annual value of £500 and upwards, 33 of between £100 and £500, 56 of from £50 to £100, and 115 of from £20 to £50. Giving off the *quoad sacra* parish of Barrhead, Neilston is in the presbytery of Paisley and the synod of Glasgow and Ayr; the living is worth £470. The Rev. Alexander Fleming, D.D. (1770-1845), a leading spirit of the Church Extension Scheme, was minister from 1804; and his *Life* (1883) contains much of interest relating to Neilston. Eight schools, with total accommodation for 2073 children, had (1883) an average attendance of 1597, and grants amounting to £1318, 3s. 1d. Valuation (1860) £33,893, (1884) £53,872, 11s. Pop. (1801) 3796, (1831) 8046, (1861) 11,013, (1871) 11,136, (1881) 11,359, of whom 4631 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 22, 30, 1865-66.

Neish Island, a wooded artificial islet of Comrie parish, Perthshire, in the middle of the lower part of Loch Earn, opposite St Fillans village. In the early part of the 17th century the small remnant of the clan Neish, that had survived the battle of GLENBOLTAHAN, subsisted on this isle by plundering, till, one winter night, they were surprised and slain—all save one man and a boy—by their ancient foes, the Macnabs.—*Ord. Sur.*, sh. 47, 1869.

Neldricken, Loch, an isletted lake ($5\frac{1}{2} \times 2\frac{1}{2}$ furl.; 1175 feet) in the NE of Minnigaff parish, Kirkcudbrightshire, 16 $\frac{1}{2}$ miles NNE of Newton-Stewart. It lies among wild uplands; is almost cut in two by a peninsula; contains both pike and 2 lb. trout; and sends off a stream 1 $\frac{1}{2}$ furlong south-south-westward to Loch Valley ($8 \times 1\frac{1}{2}$ furl.; 1070 feet), out of which Gairland Burn goes 1 $\frac{1}{2}$ mile south-westward to Loch Trool.—*Ord. Sur.*, sh. 8, 1863.

Nell, Loch, a fresh-water lake in Kilmore and Kilbride parish, Lorn, Argyllshire, 2 $\frac{1}{2}$ miles SE of Oban. Lying 48 feet above sea-level, it extends 1 $\frac{1}{2}$ mile south-westward; has a varying width of 1 $\frac{1}{2}$ and 3 furlongs; contains good trout; at its head receives the LONAN rivulet; and from its foot sends off the Nell, 2 miles south-south-westward to the head of salt-water Loch Feachan. See KILMORE AND KILBRIDE.—*Ord. Sur.*, sh. 45, 1876.

Nemphlar, a village in Lanark parish, Lanarkshire, on the high grounds (605 feet) above the right bank of the Clyde, 2 miles WNW of Lanark town. It lies among beautiful braes, straggling along them for a con-

siderable distance; covers the site of an ancient chapel of the Knights Templars; and has a public school.—*Ord. Sur.*, sh. 23, 1865.

Nenthorn, a parish of SW Berwickshire, whose church stands 4 miles NW of the post-town, Kelso. With an irregular outline, rudely resembling an hour-glass, it is bounded W by Earlston, N by Hume, and on all other sides by Roxburghshire, viz., NE by Stichel, SE by Kelso, and S by Kelso and Smallholm. Its utmost length, from WNW to ESE, is 4 $\frac{1}{2}$ miles; its breadth varies between 2 $\frac{1}{2}$ furlongs and 2 $\frac{1}{2}$ miles; and its area is 3478 $\frac{1}{2}$ acres, of which 24 $\frac{1}{2}$ are water. EDEN WATER winds 2 $\frac{1}{2}$ miles south-south-westward along all the Earlston boundary, then 5 $\frac{1}{2}$ miles east-by-southward—for 3 furlongs, near Burnbrae, across the neck of the hour-glass, and elsewhere along or near to the Smallholm and Stichel boundaries. It thus has a total course here of 8 $\frac{1}{2}$ miles, though the point where it first touches and that where it quits the parish are but 4 $\frac{1}{2}$ miles distant as the crow flies. At Mellerstain it broadens to a lake; and near Newton-Don forms a fine waterfall, 40 feet high, Stichel Linn. In the extreme E the surface declines to 165 feet above sea-level; and thence it rises with gentle undulations, till it reaches a maximum height of 665 feet at Blinkbonny. Trap rocks, incumbent on coarse red sandstone, include some basaltic columns, like Samson's Ribs at Edinburgh; and marl, both shell and clay, has been found in considerable quantity. The soil at the W end is improved vegetable mould on cold till; and everywhere else is a rich and fertile clayey loam. Upwards of 300 acres are under wood; and all the rest of the area is enclosed and cultivated. The parish appears to have been established during the 13th century, and was formed of the manors of Naithansthirn and Newton, lying respectively W and E of the line where the Eden passes from the southern to the northern boundary. The chapel of Naithansthirn became the parish church, whilst that of Newton continued a chapel. Both, previous to the parochial erection, were subordinate to the church of Ednam; and both were given in 1316-17 by the Bishop of St Andrews to the Abbot of Kelso, in exchange for the church of Cranston in Midlothian. The manors belonged in the 12th century to the Morvilles, the hereditary constables of Scotland, and followed the fortunes of their other possessions till the downfall and forfeiture of John Baliol. Nenthorn House, near the left bank of the Eden, 4 $\frac{1}{2}$ miles NW of Kelso, is the seat of Frederick Lewis Roy, Esq. (b. 1836; suc. 1868), who holds 1826 acres in Berwick and Roxburgh shires, valued at £3035 per annum. Newton-Don, near the Eden's right bank, 3 miles NNW of Kelso, is a fine mansion of 1816, with grounds of singular loveliness, and a wide and beautiful view. It was originally the property of the Dons, who held a baronetcy from 1667 till 1862, and are now represented by Sir John Don-Wauchope, Bart. of EDMONSTONE; but in 1847 it was purchased for £80,000 by the late Charles Balfour, Esq. of BALGONIE, whose son, Charles Barrington Balfour, Esq. (b. 1862; suc. 1872), owns 907 acres in Berwickshire, 318 in Roxburghshire, and 2500 in Fife, valued at £5500 per annum. Lesser proprietors are the Duke of Roxburgh and the Earl of Haddington. Nenthorn is in the presbytery of Kelso and the synod of Merse and Teviotdale; the living is worth £246. The parish church, built in 1802, contains 200 sittings. A Free church, dating from Disruption times, contains 300 sittings; and a public school, with accommodation for 106 children, had (1883) an average attendance of 53, and a grant of £49, 15s. 6d. Valuation (1865) £5641, 3s. 10d., (1884) £5620, 5s. Pop. (1801) 395, (1831) 380, (1861) 461, (1871) 434, (1881) 454.—*Ord. Sur.*, sh. 25, 1865.

Neptune's Staircase. See CALEDONIAN CANAL.

Nerston, a village in East Kilbride parish, Lanarkshire, 1 $\frac{1}{2}$ mile N by E of East Kilbride town. Its name is a contraction of North-East-Town.

Nesbet. See NISBET.

Ness, an estate in the parishes of Dore and Inverness, with a mansion called Ness Castle, near the right bank

of the river Ness, 3 miles SSW of the town of Inverness. Formerly in the possession of Lord Saltoun, it is now the property of Sir John Ramsden, by whom it was bought for £90,000 in 1871.—*Ord. Sur.*, sh. 83, 1881.

Ness, a river carrying off the surplus water of the drainage basin of Loch Ness. As noticed below, it issues from the NE end of Loch Dochfour over a weir, constructed to keep the water of the loch at a proper height for the Caledonian Canal, and has from this a course of about 7 miles, nearly parallel to the line of the Canal, till it reaches the Moray Firth below Inverness. The channel has a regular inclination over a gravelly bottom, and the stream is about 180 feet wide, with a mean depth in summer of about 3 feet, and in winter of often double that amount. The lower part of its course is noticed in the article on INVERNESS. It is an excellent salmon river, and the fishing season lasts from 10 Feb. to 15 Oct.

Ness or Cross. See BAEVAS.

Ness or Whiting Ness, a small precipitous headland (98 feet), pierced with a great cavern, in St Vigean's parish, Forfarshire, 1 mile ENE of Arbroath. The cavern was laid open by the removal of some rocks in the course of quarrying stones for the harbour of Arbroath; and it comprises two compartments, an outer and an inner. The outer compartment measures 300 feet in length, 16 in extreme width, and from 6 to 30 in height; and, over its roof and its sides, makes a splendid display of stalactites. The inner compartment lies directly beyond the outer one; is neither so high nor so wide; and measures only 100 feet in length.—*Ord. Sur.*, sh. 49, 1865.

Ness Castle. See NESS.

Ness Glen, a ravine in Dalmellington parish, Ayrshire, traversed by the river Doon from Loch Doon to near Dalmellington town. It is one of the finest examples in Britain of a true rock gorge, the stream having worn down a channel little more than its own width, with perpendicular sides, into the rock to a depth of from 100 to 200 feet. The heights along the sides are beautifully wooded, and a walk formed alongside the river leads through the hollow.

Ness, Loch, a large lake in Inverness-shire, occupying a considerable portion of the bottom of the Great Glen of Scotland, $6\frac{1}{2}$ miles SW of Inverness. It is a long narrow sheet of water extending from NE to SW, with a length of $2\frac{1}{2}$ miles, from Bona Ferry on the NE to near Fort Augustus on the SW, and an average breadth of about 1 mile, while the surface is 50 feet above sea-level. The bottom slopes very rapidly, and reaches a depth of 40 to 60 fathoms at no great distance from the shore, while the depth in the centre is from 106 to 130 fathoms. The sides are very straight and even, that to the SE being broken only by the mouths of the inflowing streams; while that to the NW has, 6 miles from the NE end of the loch, Urquhart Bay, measuring 1 mile across the mouth, and $\frac{1}{2}$ mile deep at the mouths of the Enrick and Coiltie, and, $10\frac{1}{2}$ miles farther to the SW, Invermoriston Bay, at the mouth of the river Moriston. Both sides are formed by lofty heights, which, on the SE, have an average height of 800 to 1000 feet, and on the NW of from 1200 to 1500 feet, while at many points both rise higher. The principal heights along the former side, beginning at the N end, are Tom Bailleann (1514 feet), Carn an Fheadain (1445), both opposite Urquhart Bay; Meall an Targaid (1016), opposite Invermoriston Bay; Beinn a' Bhacaidh (1812), Birlum Hill (1000), and Creag Ardochy (1417). On the NW side, beginning at the N end, the principal heights are Carn a' Bhoadaich (1642 feet), Carn an Leitire (1424), Meall na h-Eilach (1525), Sron Dubh (1436), Meall Fuar-mhonaidh (Mealfourvonnie, 2284), and Burach, S of the river Moriston (1886). The loch receives the drainage of an area of 670 square miles, the principal streams that flow into it being the Oich and Tarff, on either side of Fort Augustus at the SW end; the Moriston, Coiltie, Enrick, and a number of smaller burns, all on the NW side; and the Doe, Foyers, and Farigaig, with a number of smaller burns, all on the SE side. At

the lower end it communicates by the narrow strait at Bona Ferry with Loch Dochfour, which is in reality only a continuation of it, and from which the surplus water is carried off by the river Ness. The Caledonian Canal, which links it at the SW end with Loch Oich, and at the NE end with the sea, is separately noticed. At the SW end the loch is in the parish of Boleskine and Abertarf, and the south-eastern half the rest of the way is in the parishes of Dores and Daviot, and the north-western half in Urquhart and Glenmoriston and Inverness, all those meeting along the centre line. There is an excellent road—originally military roads formed by the soldiers under the command of General Wade—along each bank. At the NE end there is a ferry at Bona, and another 12 miles farther to the SW from Foyers to Ruskich Inn. From the great depth the waters never freeze. It is well known that there is a fault along the line of the Great Glen, and this seems to mark a line of permanent weakness in the crust of the earth, for at the time of the great earthquake at Lisbon, on 1 Nov. 1755, the waters of Loch Ness became violently agitated, a series of waves rolling along the loch towards the upper end, and dashing for 200 yards up the course of the Oich, 5 feet above the usual level of that stream. The pulsation of the water lasted for about an hour, and after a huge wave had been dashed against the NW bank, the surface resumed its wonted calm.

Except at a narrow part at the NE end of the loch, where, on the E, there is a fine belt of low ground about Aldourie, the mountain ranges that flank the glen slope from 1000 feet steeply down to the water's edge, giving the narrow valley an unnaturally contracted appearance, and greatly heightening the effect of its length. Along considerable stretches these steep banks are finely wooded, and this, with the red colour of much of the rock, makes the scenery, whether from the water or from the banks, very beautiful. 'The profuse admixture,' say the Messrs Anderson, with particular reference to the tract between Glen Urquhart and Glen Moriston, 'of oak with birch and alder, adds much to the richness and tone of colouring. Dark and dense masses of pine are frequently seen crowning the craggy heights above, while beneath, the rowan and hawthorn trees mingle their snowy blossoms or coral berries with the foliage of the more gigantic natives of the forest. The road is overhung by the fantastic branches of the yet youthful oak, while the stately ash, rooted in the steep declivities below, shoots up its tall, straight, and perpendicular stem, and with its scattered terminal foliage slightly screens the glassy lake or purple ground-colour of the opposite hills; and the airy birch droops its pensive twigs round its silvery trunk, "like the dishevelled tresses of some regal fair." Fringing rows of hazel bushes line the road; and in autumn their clustering bunches of nuts invite the reaching arm.' Of the opposite side, between Inverfarigaig and Dores, Dr Macculloch speaks in equally high terms. 'It is,' he says, 'a green road of shaven turf holding its bowery course for miles through close groves of birch and alder, with occasional glimpses of Loch Ness and of the open country. I passed it at early dawn, when the branches were still spangled with drops of dew; while the sun, shooting its beams through the leaves, exhaled the sweet perfume of the birch, and filled the whole air with fragrance.' The many points of interest and beautifully placed mansions around the shores come naturally under the different parishes, and will be found noticed there. Except with the net, the fishing is poor, though the loch abounds in trout; and, though salmon pass through on their way to the Oich and other rivers, yet they are never taken with the rod.—*Ord. Sur.*, shs. 73, 83, 1878-81.

Nessock. See PORTNESSOCK.

Ness Side House, a mansion in Inverness parish, near the right bank of the river Ness, $2\frac{3}{4}$ miles SSW of the town.

Nesting, a parish of Shetland, whose church stands on the NW side of South Nesting Bay, 8 miles N of

the post-town, Lerwick. It comprises the ancient parishes of Nesting, Lunnasting, and Whalsay; and includes a district of the eastern mainland, the inhabited islands of Whalsay and Bound, Brurie, Gruna, and Housie Skerries, and a number of uninhabited islets. The mainland district, extending from Lunnanes to Gletness, is bounded N by Yell Sound, E and SE by the North Sea, and W by Tingwall and Delting. Its utmost length, in a direct line from NNE to SSW, is 15 miles; its breadth varies between 1 mile and $\frac{3}{4}$ miles; and the area of the whole parish is $48\frac{1}{2}$ square miles or 30,982 acres. The islands form the two groups of Whalsay and Out-Skerries, and lie mostly at distances of from 2 to 8 miles E of the nearest points of the mainland. They constitute the *quoad sacra* parish of Whalsay and Skerries, and will be separately noticed. The coast of the mainland district projects the bold headlands of Lunn Ness, Lunning Head, Stava Ness, Eswick, and Ralsbrough, and is deeply indented by the voes or bays of Swining, Viillin, Dury, South Nesting, and Cat Firth. The interior in its physical features and agricultural character differs little or nothing from those of the other parts of the mainland. It contains a score of little fresh-water lakes, and attains a maximum altitude of 423 feet above sea-level at Laxowater Hill. Gneiss is the predominant rock; but granite, syenite, mica slate, and crystalline limestone also occur. About 1000 acres are in tillage; and most of the rest of the land is either pastoral or waste. The inhabitants give but secondary attention to agriculture, being mainly employed in the fisheries. Nearly all the property is divided among six. Nesting is in the presbytery of Olnafirth and the synod of Shetland; the living is worth £157. The parish church, built in 1794, is amply commodious. An Established chapel of ease is at Lunnna in Lunnasting; and the six schools of Lunnasting, North Nesting, South Nesting, Whalsay, Livister, and Skerries—all of them public but the last—with total accommodation for 425 children, had (1883) an average attendance of 203, and grants amounting to £191, 4s. 9d. Valuation (1860) £1565, (1884) £2695, 18s. 2d. Pop. (1801) 1941, (1831) 2103, (1861) 2583, (1871) 2679, (1881) 2626, of whom 1599 were in the ecclesiastical parish.

Nethan, a stream of Lesmahagow parish, Lanarkshire, rising close to the Ayrshire border, at an altitude of 1550 feet above sea-level, and running 13 miles north-north-eastward, till, after a total descent of 1355 feet, it falls into the Clyde at Crossford, $4\frac{1}{2}$ miles NW by W of Lanark. It receives in its progress Logan water and a number of burns; traverses, in the first $3\frac{1}{2}$ miles of its course, a bare, moorish upland tract; and thereafter runs along a picturesque narrow vale, well-adorned with natural wood, and embellished with mansions and parks, into a deep ravine. At a point $1\frac{1}{2}$ mile SSW of Crossford it is spanned by a viaduct of the Lesmahagow railway, one of the grandest structures of its kind in Scotland, loftier from foundation to parapet than either the great viaduct at Newcastle-on-Tyne, or the Britannia Bridge across the Menai Strait; and midway between the viaduct and Crossford it is overhung by the ruin of CRAIGNETHAN Castle, the prototype of Sir Walter Scott's 'Tillietudlem.'—*Ord. Sur.*, sh. 23, 1865.

Nether Ancrum. See ANCRUM.

Nether Buckie. See BUCKIE.

Netherburn, a station in Dalsef parish, Lanarkshire, on the Lesmahagow railway, $3\frac{1}{2}$ miles SSE of Larkhall.

Netherbyres. See AYTON.

Nethercleuch. See APPLGARTH.

Netherdale House, a mansion in Marnoch parish, Banffshire, near the left bank of the Deveron, $3\frac{1}{2}$ miles SE of Aberchirder. Its owner, Thomas Gilzean Rose-Innes, Esq. (b. 1831), holds 3771 acres in Banffshire and 2291 in Inverness-shire, valued at £2690 and £285 per annum.—*Ord. Sur.*, sh. 86, 1876.

Netherfield House, a mansion in Avondale parish, Lanarkshire, $1\frac{1}{2}$ mile ENE of Strathaven.

Netherhall, a mansion in Largs parish, $1\frac{1}{2}$ mile N of the town. It is the seat of the great natural philosopher,

Sir William Thomson, Knt., LL.D., D.C.L. (b. 1824)—*Ord. Sur.*, sh. 29, 1873.

Nether Kilrenny. See KILRENNY.

Netherlaw, a seat of Sir Robert J. Abercromby, Bart., in Lerwick parish, Kirkcudbrightshire, on the right bank of Abbey Burn, 5 furlongs W of Port Mary, and 7 miles SE of Kirkcudbright. The estate—1339 acres, of £1858 annual value—came to the Abercromby family through the marriage (1816) of the fifth Baronet with Miss Elizabeth Douglas.—*Ord. Sur.*, sh. 5, 1857. See FORGLEN.

Netherley, an estate, with a mansion and a public school, in Fetteresso parish, Kincardineshire, 6 miles NNW of Stonehaven, under which it has a post office.

Nethermill, a village, with a public school, in Kirk-michael parish, Dumfriesshire, $9\frac{1}{2}$ miles NNE of Dumfries.

Nethermuir House, an old mansion in New Deer parish, Aberdeenshire, $1\frac{1}{2}$ mile NNW of Auchnagatt station. Its late owner, William Leslie, Esq. (d. 1879), held 3960 acres in the shire, valued at £4486 per annum.—*Ord. Sur.*, sh. 87, 1876.

Nether-Oliver. See OLIVER.

Netherplace, a mansion in Mauchline parish, Ayrshire, immediately W of the town. Its owner, Charles Vereker Hamilton-Campbell, Esq. (b. 1819; suc. 1848), holds 1627 acres in the shire, valued at £2654 per annum.—*Ord. Sur.*, sh. 14, 1864.

Nether Pollok. See POLLOK.

Nether Rankellour. See RANKELOUR.

Netherton. See HAMILTON.

Netherton or **Netherton Quarry**, a village in New Kilpatrick parish, Dumbartonshire, on Garscube estate, near the river Kelvin, 5 miles NW of Glasgow. It adjoins a quarry of very fine buff-coloured sandstone; and has a Church of Scotland mission station and a public school.

Netherurd House, a plain three-story mansion, with well-wooded grounds, in Kirkurd parish, W Peebleshire, $2\frac{1}{2}$ miles SSE of Dolphinton station and $7\frac{1}{2}$ NE of Biggar. The estate was purchased in 1834 for £18,000 by the late John White, Esq. (1808-80), who held 6376 acres in Peebles and Lanark shires, valued at £2255 per annum.—*Ord. Sur.*, sh. 24, 1864.

Nethy. See ABERNETHY, Inverness-shire.

Nethybridge. See ABERNETHY, Inverness-shire.

Nendos. See EDZELL.

Nevay. See EASSIE.

Nevis, Ben. See BEN NEVIS.

Nevis, Bridge of, a hamlet in Kilmonivaig parish, SW Inverness-shire, on the right bank of the Water of Nevis, 1 mile ENE of Fort William.

Nevis, Loch, a beautiful arm of the sea in Glenelg parish, Inverness-shire, on the mutual border of Knoydart and Morar districts. Opening from the Sound of Sleat, it strikes $1\frac{1}{2}$ miles south-eastward and east-by-northward; contracts in width from 4 miles to 2 furlongs; is screened by mountains rising suddenly from its shores, and clothed far up, in many parts, with wood; and receives, at its head and on its sides, a number of mountain torrents. Loch Nevis is said to mean the 'lake of heaven,' whilst Loch Hourn, to the N, means the 'lake of hell.' Steamers touch occasionally at INVERIE.

Nevis, Water of. See GLENNEVIS.

Newabhey, a village and a parish of E Kirkcudbrightshire. The village stands on the right bank of Newabhey Pow, at the northern base of Criffel (1867 feet), 6 miles ESE of Killywhan station and $7\frac{1}{2}$ S of Dumfries, under which it has a post office. Here also are two inns, a public school, the parish church, a Free church, and St Mary's Roman Catholic church (1824; 150 sittings). The old parish church of 1731, on the S side of the abbey ruins, has been demolished; and a new one was built of granite in 1876-77 on the lands of Friars' Yard at a cost of £2400. A Latin cross in plan, 13th century Gothic in style, it has an open timber roof, 400 sittings, and a belfry 40 feet high.

Sweetheart or New Abhey, after which the parish is

named, lies just to the E. of the village. It took the latter designation, 'New,' to distinguish it from Dundrennan Abbey in Kerwick parish, which was founded 130 years earlier, and came to be popularly called the Old Abbey. New Abbey itself, which, like all Cistercian abbeys, was dedicated to the Virgin, was founded in 1275 by Devergoil, who also founded Baliol College, Oxford, and built the old bridge at Dumfries. She was third daughter of Allan, lord of Galloway, a great-great-granddaughter of David I., and mother of the vassal king, John Baliol. Her husband, John de Baliol, had died in 1269 at Barnard Castle. There he was buried, all but his heart, which Devergoil caused to be embalmed and casketed in a 'coffyne of ivory'—

'And always when she gaed tye mat,
That coffyne she gart by her set;
And till her lord, as in presens,
Ay to that she dyd reverens.'

When in 1289 she died at the age of eighty, her body, according to her directions, was brought from Barnard Castle to New Abbey, and buried in a rich tomb before the High Altar, the heart of her much-loved lord being laid on hers. Hence the name *Dulce Cor* or *Sweetheart Abbey*. Hugh de Burgh, prior of Lanercost, according to the manuscript chronicle of that house, composed an elegy for Devergoil, which was inscribed on her tomb:—

'In Dervorgil, a sybil sage dothe dye, as
Mary contemplative, as Martha pious;
To her, oh deign, high King! rest to impart,
Whom this stone covers, with her husband's heart.'

The abbey was colonised by Cistercian monks, and appears to have been richly endowed. Grose assigns to it possessions, which seem, from the charter of the bishopric of Edinburgh, to have belonged to the Abbey of Holyrood. But irrespective of these, it owned the churches of Newabbey, Kirkpatrick-Durham, Cross-michael, Buittle, and Kirkcolm, the baronies of Loch-kinderloch and Lochpatrick, and much other property. In 1513 the monks placed themselves and their tenants under the protection of Lord Maxwell; in 1544 they feued to his family at a low rate, in compensation for services done them, their barony of Lochpatrick; and in 1548 they gave him the five-mark lands of Loch-Arthur, and constituted him heritable bailie of the whole jurisdiction over all their lands. The property was in 1587 vested in the Crown by the annexation act; granted in 1624 to Sir Robert Spottiswood and Sir John Hay; resigned by them in 1633, to be given to the bishop of Edinburgh; given back, soon after the suppression of Episcopacy, to Sir Robert Spottiswood; and sold by his heir to the family of Copeland. Part of it, however—consisting of the lands of Drum in Newabbey—was burdened with a mortification by Queen Anne, in favour of the second minister of Dumfries. John, the last abbot but one, sat in the parliament of August 1560, which approved the Confession of Faith; and the last and most noted abbot was Gilbert Brown, who had a written controversy, on the doctrines of Romanism, with the famous John Welsh of Ayr (then of Kirkcudbright). The prototype of Scott's 'Abbot,' he was denounced in 1596 by the commissioners of the General Assembly to the king as a Jesuit and excommunicated papist, and recommended to be seized and punished. Ten years later he was with difficulty apprehended by Lord Cranston, captain of the Border guard, and, after brief imprisonment, banished the kingdom. He died at Paris in 1612. The exquisite ruins of Sweetheart Abbey rise from the middle of a fine level field of 25 acres, the Precinct, round which ran a boundary wall of granite boulders, 8 or 10 feet high. The ruins served as a quarry till 1779, when £42 was subscribed by the parish minister and some of the neighbouring gentry to purchase their preservation; and since 1862 several hundreds have been spent on repairs, the removal of disfigurements, etc. The godly chapter-house suffered most from ruthless dilapidation; and little remains now but the ruined conventual church—a cruciform structure, mainly late First Pointed in

style. With an extreme length of 203 feet, it consisted of a six-bayed nave (110 × 66 feet), a transept (115 feet long), an aisleless choir (28 feet wide), and a central saddle-back tower (92 feet high). In the roof of the S transept is an escutcheon, charged with 2 pastoral staves in *saivre*; over them a heart, and beneath them 3 mullets of 5 points, 2 and 1; said to be the arms of the abbey. An inscription over the escutcheon was taken on report by Grose to be '*Christus Maritus meus*;' but since has been found to run, '*Chius tim o' nid*—'Choose time of need.' The beautiful W rose window, the E window, and those of choir, clerestory, and N transept are fairly entire, but elsewhere mullions and tracery are wanting; and the whole of the roof is gone. 'The predominating forms,' to quote from Billings, 'have all the graceful solemn dignity of the Early English style in its best day; and the Second Pointed or Decorated style has just come in to give richness and variety to the tracery of the windows. Some features, such as the depression of the upper window of the transept, are instances of the independent eccentricity of some of the Gothic artists.' The Abbot's Tower, $\frac{1}{2}$ mile NE, is a strong square ruin, 40 to 50 feet high.

The parish, containing also Drumburn village, 3 miles SSE of Newabbey, in 1633 was also known as Loch-Kinderloch, from its ancient church having stood on the larger islet in Loch Kindar. It is bounded NW by Lochrutton, NE by Troqueer, E by the estuary of the river Nith, S by Kirkbean, SW by Colvend, and W by Kirkgunzeon. Its utmost length, from NW to SE, is $7\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and 4 miles; and its area is $15,424\frac{1}{2}$ acres, of which 1709 are foreshore and $464\frac{1}{2}$ water. Loch Arthur or Lochend Loch ($4\frac{1}{2} \times 2\frac{1}{2}$ furl.; 250 feet) lies on the Kirkgunzeon border, and sends off Kirkgunzeon Lane. Glensone Burn or Newabbey Pow, which rises near this, winds $7\frac{1}{2}$ miles east-south-eastward to the estuary (for the last $\frac{1}{2}$ mile along the Troqueer boundary), and is joined by Kinharvie Burn, running $2\frac{1}{2}$ miles northward, by Glen Burn, running $3\frac{1}{2}$ miles north-north-eastward, and by a third, running 7 furlongs north-by-eastward from Loch Kindar ($6\frac{1}{2} \times 2\frac{1}{2}$ furl.; 100 feet). Triangular Lochaber Loch ($4\frac{1}{2} \times 3$ furl.; 300 feet) lies on the Troqueer border. The shore, 3 miles in extent, is low; inland, the surface rises to 1867 feet at CRIFFEL, 593 at Glen Hill, with its Waterloo Monument (a round granite tower of 1816, 60 feet high), 1335 at *Meikle Hard Hill, 1350 at *Cuil Hill, 1050 at *Lotus Hill, and 705 at Lochbank Hill, where asterisks mark those summits that culminate on the Colvend and Kirkgunzeon border. The predominant rocks are Plutonic; the Criffel group, which occupies all the southern and south-western district, being a mass of granite, intruding on the Lower Silurian. Coarse limestone, of little value, occurs in the SE. The soil of the arable land in the N is clay or moss incumbent on till; on the slopes at the skirts of the uplands is principally a mixture of loam and gravel; and on the cause lands is alluvial clay. About two-fifths of the entire area are regularly or occasionally in tillage; one-thirtieth is under wood; and the rest of the land is either pastoral or waste. A rocking stone, 15 tons in weight, lies on the eastern base of Lochbank Hill. Old coins have been turned up in the vicinity of the abbey; and in 1875 an oak canoe, 45 feet long and 5 wide, was found in Loch Arthur, its forward half being now in the Edinburgh Antiquarian Museum. At Ingleston is a moat, and in Loch Kindar an artificial cranage. An establishment for the hatching and breeding of fish has been recently set up and carried on with great success on the property of Lord Herries, under the name of the Solway Fishery. Mansions, noticed separately, are KINHARVIE and SHAMPELLIE; and 2 proprietors hold each an annual value of more than £500, 8 of between £100 and £500, 4 of from £50 to £100, and 5 of from £20 to £50. Newabbey is in the presbytery and synod of Dumfries; the living is worth £335. Lochend and Newabbey public schools, with respective accommodation for 95 and 130 children, had (1883) an average attendance of 47 and 102, and grants of £53, 18s. and

£75, 19s. Valuation (1860) £5927, (1884) £8165, 18s. 3d. Pop. (1801) 832, (1831) 1060, (1861) 1063, (1871) 931, (1881) 906.—*Ord. Sur.*, shs. 5, 6, 9, 1857-63. See vol. iv. of *Billings' Baronial and Ecclesiastical Antiquities* (Edinb. 1852), and chap. xxvi. of *Harper's Rumbles in Galloway* (Edinb. 1876).

New Aberdour. See ABERDOUR, Aberdeenshire.

New Ardrossan. See ARDROSSAN.

Newark, a small *quoad sacra* parish in the town of Port Glasgow, Renfrewshire. Constituted by the Court of Teinds in 1855, it is in the presbytery of Greenock and synod of Glasgow and Ayr. Its church was built in 1774 as a chapel of ease, and contains 1600 sittings. The ancient barony of Newark, which in 1373 belonged to Sir Robert Danyelstoun, knight, and passed by marriage to the Maxwells in 1402, lay partly in the parish of Port Glasgow, but chiefly in that of Kilmacolm. But the ancient baronial residence, which still is fairly entire, stands in Port Glasgow parish, on a spit of land projecting into the Clyde, in the eastern vicinity of the town of Port Glasgow, and forms a prominent feature in the landscape, whilst itself commanding a splendid view of the surrounding scenery. Forming three sides of a square, the fourth side being open towards the S, it bears over its main door the monogram of Patrick Maxwell, with this inscription beneath: 'The Blessings of God be heirin, Anno 1597;' but the two blocks forming the southern extremities of its eastern and western wings were probably built in the second half of the preceding century. It ceased to be inhabited by its owners in the beginning of the 18th century, but still is maintained in weather-tight condition by the present owner, Sir Michael Shaw-Stewart, Bart. The site of the town of Port Glasgow originally bore the name of Newark; and the bay, which was converted into a spacious wet dock at a cost of £35,000, with large quays and bond warehouses, together with extensive enclosed spaces for timber, still bears the name of Newark Bay. Pop. of *q. s.* parish (1871) 3359, (1881) 3287.—*Ord. Sur.*, sh. 30, 1866. See 'Notes on Newark Castle,' by G. Washington Browne, in vol. xvi. of *Proc. Soc. Ants. Scotl.* (Edinb. 1882).

Newark, an old baronial fortalice in Maybole parish, Ayrshire, on the N slope of Brown Carrick Hill, $\frac{1}{2}$ mile S by E of the mouth of the river Doon, and 3 miles S by W of Ayr. It belongs to the Marquis of Ailsa; and, not very long ago restored and almost renovated, is now inhabited.

Newark. See ABERCROMBIE.

Newark, an ancient chapelry on the SE coast of Lady parish, Sanday island, Orkney. Its church measured only 12 feet by 10, and can still be traced. A Scandinavian round tower stood contiguous to the church; and, by diggings about the year 1835, was found to have had two concentric walls, the inner one fully 6 feet thick, and enclosing a space of 12 feet in diameter.

Newark Castle, a ruinous Border stronghold in the parish and county of Selkirk, on the right bank of Yarrow Water, $\frac{1}{2}$ miles WNW of Selkirk town. It stands, 520 feet above sea-level, on a gentle eminence, half encircled by the stream, and backed by Newark Hill (1450 feet) and Fastough Hill (1645), whose lower slopes are richly clothed with wood. A massive square tower, four stories high, with windows high up and small, it was built some time before 1423, when a charter of Archibald, Earl of Douglas, styles it the 'New Werk,' in contradistinction to the neighbouring Auldward, no trace of which now remains. It was a royal hunting seat in Ettrick Forest; and the royal arms are carved on a stone in the W gable. It was taken by the English under Lord Grey (1548); a hundred prisoners from the battle of Philiphaugh were shot in its courtyard (1645); and after the battle of Dunbar it was occupied by Cromwell's invading army (1650). The barons of Buccleuch were captains of Newark Castle at an early date; and it now belongs to the Duke of Buccleuch, whose seat of 'sweet Bowhill' stands a little lower down the river. In the years of her widowhood, it was the residence of Anna, Duchess of Buccleuch and Monmouth, whose husband, James, Duke of Mon-

month, was beheaded for insurrection in the reign of James VII., but it was not her birthplace, as often falsely asserted. At Newark the 'Last Minstrel' is made to sing his 'lay' to the sorrowing Duchess:

'He pass'd where Newark's stately tower
Looks out from Yarrow's birchen bow:
The Minstrel gazed with wishful eye—
No humbler resting-place was nigh.
With hesitating step, at last,
The embattled portal arch he pass'd,
Whose ponderous grate and massy bar
Had oft roll'd back the tide of war,
But never closed the iron door,
Against the desolate and poor,
The Duchess mark'd his weary pace,
His timid mien, and reverend face,
And bade her page the menials tell
That they should tend the old man well
For she had known adversity,
Though born in such a high degree;
In pride of power, in beauty's bloom,
Had wept o'er Monmouth's bloody tomb.'

The appearance of Newark and of the landscape round is finely noticed by Wordsworth, who twice was here, in 1814 and 1831, on the last occasion with Sir Walter Scott:—

'That region left, the vale unfolds
Rich groves of lofty stature,
With Yarrow winding through the pomp
Of cultivated nature;
And, rising from these lofty groves,
Behold a ruin hoary!
The shatter'd front of Newark's Towers,
Renowned in Border story.'

Mary Scott, the flower of Yarrow, is supposed by many to have been born in Newark Castle; but she was really a native of the neighbouring parish, a daughter of the Scotts of DRYHOPE. The scene of the fine old ballad, *The Song of the Outlaw Murray*, though also belonging to Yarrow parish, is almost universally identified by the country folk with Newark Castle.—*Ord. Sur.*, sh. 25, 1865. See James F. Hunnewell's *Lands of Scott* (Edinb. 1871), and Dr William Fraser's *Scotts of Buccleuch* (2 vols., Edinb. 1878).

Newarthill, a mining village in Bothwell parish, Lanarkshire, $\frac{1}{2}$ mile E by S of Holytown, and 3 miles ENE of Motherwell. Standing amid a rich mineral tract, it has a post office under Motherwell, a U.P. church (1810; 600 sittings), and a public school. Pop. (1841) 968, (1861) 1382, (1871) 1530, (1881) 1355.—*Ord. Sur.*, sh. 31, 1867.

Newbattle (anc. *Neubottle*, 'new dwelling'), a village and a parish in the E of Edinburghshire. The village stands, 150 feet above sea-level, on the left side of the river South Esk, $\frac{3}{4}$ mile NNE of Dalhousie station, $\frac{1}{4}$ SE of Eskbank station, and 1 S by W of the post-town, Dalkeith. Of high antiquity, in spite of its name, it has dwindled to a mere hamlet, which, lying low, among orchards and gardens, is sheltered nearly all round by rising grounds.

The parish, containing also Newton Grange and East-houses villages, with small portions of Dalkeith, Gore-bridge, and Hunterfield, comprises the ancient parishes of Newbattle and Maisterton. It is bounded NW by Lasswade and Dalkeith, N by Dalkeith and Cranston, E by Cranston, SE by Borthwick, S by Borthwick and the Gorebridge section of Temple, and W by Cockpen. Its utmost length, from NNW to SSE, is $3\frac{3}{4}$ miles; its width varies between 2 and $4\frac{1}{2}$ miles; and its area is 5224 $\frac{3}{4}$ acres. The beautiful South Esk flows 2 $\frac{1}{2}$ miles north-north-eastward, mainly across the north-western interior, but partly along the Cockpen and Dalkeith boundaries; and GORE WATER, its affluent, flows 5 $\frac{1}{2}$ furlongs west-north-westward along the southern boundary. Just above Dalhousie station the vale of the Esk is crossed by the Waverley section of the North British railway, on a viaduct 400 yards long, comprising 24 arches of brick, supported by massive abutments of masonry, and rising 70 feet above the bed of the stream. The ends of this stupendous viaduct are prolonged by high embankments, which are secured by retaining walls

of vast thickness. In the N, along the South Esk, the surface declines to 135 feet above sea-level; and thence it rises south-south-eastward, until it attains a maximum altitude of 876 feet. A slight summit here on the hilly ridge was anciently a post for observing the country around, and was crowned by a quadrangular enclosure, about 3 acres in area, believed to have been a Roman camp, and now covered with dense plantation. Great part of the ridge was, at no distant period, in a waste condition—some of it marshy or moorish; but all, excepting some trivial pendicles, is now in a productive state, some of it wooded, and mostly good arable land. Some 300 acres are under wood, and nearly all the rest of the parish is in tillage. The soil in the valley of the Esk is a rich deep loam, lying on sharp gravel; that on the N and W sides of the hill is first a loam, next a strong clay, and next a whitish sandy earth; whilst that on the south-eastern slope of the hill is fertile vegetable mould. Gardens and orchards at Fordel Dean are so extensive as to yield an annual produce for the market worth upwards of £400. The rocks belong to the Carboniferous Limestone series; and the valley of the Esk is part of the true coal measures of Dalkeith and Dalhousie. Limestone and sandstone are obtained in plenty from surface quarries; and coal can be mined in upwards of twenty seams, from 1½ to 8 feet thick. Employment is also afforded by a paper-mill and a brickyard. The road from Edinburgh to Kelso, by way of Lauder, bisects the NE wing of the parish; and that from Edinburgh to Galashiels runs closely parallel to the western boundary, and is connected with roads to the E and to the W.

The prime object of historical interest in the parish of Newbattle is Newbattle Abbey. This was anciently, as its name imports, a monastery, and is now the seat of the Marquess of Lothian. David I. founded the monastery in 1140 for a colony of Cistercian monks from Melrose. He bestowed on them the district of Morthwaite, now called Moorfoot; the lands of Balnebuch on the Esk; some lands, a salt-work, and rights of pasturage and wood-cutting in the carse of Callendar in Stirlingshire; a salt-work at Blakeland in Lothian; the right of pannage, and the privilege of cutting wood in his forests; and the patronage of several churches, with a right to some of their revenues. David's example was followed by Malcolm IV.; by the Countess Ada, the widow of Earl Henry; by William the Lion, who gave the monks the lands of Mount Lothian, and, with some special services, confirmed the grants of David and Malcolm; and even by Alwyn, the first abbot of Holyrood, who relinquished to the inmates of the new abbey the lands of Pettendreich on the Esk. Various other persons also gave them lands in the country, tofts in the town, and churches in the several shires. Alexander II.—who delighted to reside at Newbattle—obtained a grave there for his consort, Mary; and, deeply moved by so affecting a circumstance, gave the owners of the place various donations and rights for the salvation of her, of himself, and of his predecessors. The monks likewise acquired much property and many privileges by purchase; in particular, they obtained the lands of MONKLAND in Lanarkshire, and secured the right of cutting a road to them for their own proper use. In 1203 Pope Innocent, by a bull, confirmed all their possessions and privileges; and, by another bull, he prohibited all persons from levying tithes from lands which they either held or cultivated. David II. gave the monks a charter, enabling them to hold their lands within the valley of Lothian in free forestry, with the various privileges which belonged to a forestry. But the monks, though figuring chiefly as accumulators of worldly property, incidentally conferred great advantages on the occupations of husbandry, of mining, and of commerce; for they incited and directed agricultural operations, they discovered, and perhaps were the first to discover, Scottish coal, and brought it from the mine, and they constructed a sea-port, and gave Scotland a specimen of the arts of traffic. See HADDINGTONSHIRE and MORISON'S HAVEN.

The first abbot of Newbattle was Ralph, who, in 1140, accompanied the colony from Melrose. John, the eighteenth abbot, had to act a part in the difficult transactions respecting the succession to the Crown after the demise of Alexander III. In March 1290, he sat in the great parliament at Brigham; in July 1291, he swore fealty to Edward I. in the chapel of Edinburgh Castle; and in 1296 he again, with his monks, swore fealty to Edward, and, in return, obtained writs to several sheriffs for the restoration of his property. In Jan. 1297, Edward directed his treasurer, Cressingham, to settle with the abbot for the 'form' due by the abbey of Newbattle for his lands of Bothkennar. Whether Abbot John witnessed the accession of Robert Bruce is uncertain. In 1335 the abbey was burned during the inroad of Richard II.; and the forty succeeding years saw the monks employed in the work of its restoration. Patrick Madour, who was abbot in April 1462, collected the documents which at present form the Charters of Newbattle; and in Oct. 1466 he instituted a suit in parliament against James, Lord Hamilton, 'for the spoliation of a stone of lead-ore,' taken from the abbot's lands of Fremure in Clydesdale, and triumphantly compelled the coronet to make compensation, and do obeisance, to the cowl. Andrew, who was abbot in May 1499, granted his lands of Kinnaird in Stirlingshire to Edward Bruce, 'his well-deserving armiger,' for the yearly payment of 16 merks; and in Dec. 1500, he gave to Robert Bruce of Binning and his wife, the monastery's lands of West Binning in Lidlithgowshire, for the yearly compensation of four shillings. During James Hasmall's abbacy, in 1544, the abbey was burned by the Earl of Hertford. The last abbot, Mark Ker, second son of Sir Andrew Ker of Cessford, turning Protestant in 1560, obtained the vicarage of Linton; and, in 1564, was made the first commendator of Newbattle. In 1581 he obtained a ratification by parliament of his commendatorship; and he appears to have annually drawn from the abbey property £1413, 1s. 2d. Scots, besides 99 bolls of wheat, 53 bolls 2 pecks of bere, and 250 bolls 2 firlots of oats—subject, however, to several disbursements, and particularly to the remarkable one of £240 Scots for six aged, decrepit, and recanted monks. He died in 1584, an extraordinary lord of the court of session. Mark, his son, who had a reversion of the commendatorship, on succeeding, had it formally confirmed; and, in 1587, he obtained from the facile James VI. a grant of the whole estates of the monastery as a temporal barony, and afterwards, in the same year, got the grant ratified by parliament. In Oct. 1591 he was dignified with the title of Lord Newbattle, and had his barony converted into a temporal lordship; and in the parliament of next year he saw his title and its basis finally recognised. In 1606 he was created Earl of Lothian; and Anne, his granddaughter, conveyed that title to her husband, Sir William Kerr, Knight, whose father, Sir Robert Kerr of the FERNIEHERST line, was created Earl of Ancrum in 1633. Robert, their son, the fourth Earl of Lothian and third of Ancrum, in 1701 was raised to the higher dignity of Marquess of Lothian; and his seventh descendant, Schomberg-Henry Kerr, is present and ninth Marquess (b. 1833; suc. 1870). He holds 4547 acres in Edinburghshire and 19,740 in Roxburghshire, valued at £18,194 and £26,684 per annum. See MONTEVIOT.

The crypt of the abbey, coeval doubtless with its foundation, forms part of the ground-floor of the present mansion, and was restored in 1878, when, too, was discovered the well-preserved basement of a cruciform chapel (239 × 113 feet), with numerous pillars and elaborately sculptured stones. Otherwise, in the words of Sir John Scot of Scotstret, the Commendator and his eldest son 'did so metamorphose the building that it cannot be known that ever it did belong to the Church, by reason of the fair new fabric and stately edifices built thereon.' Further extensive alterations were made in 1650 and subsequent years; and Newbattle Abbey to-day is simply a large and commodious building, with a castel-

lated front. In the library are several illuminated MSS. in folio, which formerly belonged to the monks, and are written on vellum, in black letter, on every page being adorned with pictorial illustrations of the subjects of which they treat. Many valuable paintings and portraits enrich the gallery, particularly a Titian, a Murillo, several Vandykes, and some family portraits. Around the mansion is a level lawn of upwards of 30 acres. On one side it is watered by the South Esk, which, after brawling among the rocks of Cockpen, here flows in a quiet stream, and is overhung with plantations; on the other side it is skirted by a waving line of woods, which, complying with the ascents and undulations of the banks, stretches upward in a many-curved surface, and exhibits a beautiful variety of shades. The belts of wood which flank the two sides of the lawn approach each other at the ends, and, embowering the mansion and its park, exclude them from outer view. At the lower end of the lawn, which now stretches to the eastward of Newbattle Abbey, the river is spanned by an antique bridge of one circular arch, with plain square ribs, usually called the Maiden Bridge. From the SW a fine old entrance, 'King David's Gate,' opens on to the stately avenue 520 yards long; and the Newbattle Beech, behind the house, is the finest and largest tree in Scotland, being 95 feet high, and 37½ in girth at 1 foot, and 21½ at 5 feet, from the ground. The spread of its branches is 350 feet in circumference; and it is still growing, and making more wood year by year. The Queen saw this tree on 4 Sept. 1842; and George IV. also was at Newbattle in Aug. 1822.

Woodburn is another mansion, lately purchased by the Marquess of Lothian; and a third, considerably larger, called Newtongrange House, was built not long ago by John Romans, Esq. The Marquess of Lothian owns three-fourths of the parish; and 2 lesser proprietors, the Earl of Stair and Robert Dundas, Esq. of Arniston, hold each an annual value of more than £500. Giving off a portion to Stobhill *quoad sacra* parish, Newbattle is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £250, while, in addition the minerals under the glebe are fened in perpetuity to the minister for a sum which gives £120 a year. The saintly Robert Leighton (1613-84) was minister from 1641 to 1653; and his request to be allowed to preach, not 'to the times,' but 'for eternity,' is entered in the records of the presbytery of Dalkeith and of the Newbattle kirk-session, which have been published in vol. iv. of *Procs. Soc. Ants. Scotl.* The parish church is a quaint edifice of 1727, with 550 sittings and a spire 70 feet high. Three schools—Newbattle public, Collierie, and Easthouses—with respective accommodation for 130, 314, and 61 children, had (1883) an average attendance of 124, 304, and 58, and grants of £98, 11s., £271, 8s. 6d., and £46, 10s. The children living in the S and E ends of the parish attend schools in Cranston and Dalkeith parishes; and at Newtongrange, in addition to the existing accommodation for 314 children, new schools for 120 infants and 60 girls were opened in 1884. Valuation (1860) £12,789, (1864) £18,627, plus £811 for railway and waterworks. Pop. (1801) 1328, (1831) 1882, (1861) 2837, (1871) 2902, (1881) 3346, of whom 2771 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 32, 1857. See *Cosmo Innes' Registrum S. Marie de Newbolle* (Bannatyne Club, Edinb. 1849), and *John Small's Castles and Mansions of the Lothians* (Edinb. 1883).

Newbigging, a hamlet in Newtyle parish, Forfarshire, 1 mile NW of Newtyle railway station, 2 miles S by E of Meigle, and 4½ ENE of Compar-Angus.

Newbigging, a village in Monikie parish, Forfarshire, 7½ miles ENE of Dundee, under which it has a post office. Here also is a U.P. church.

Newbigging. See AUCHTERTOOL and LETHNOT.

Newbigging, a village in Carnwath parish, Lanarkshire, ¾ mile NNW of Newbigging station on the Carstairs and Dolphinton branch of the Caledonian railway, this being 4½ miles E of Carstairs Junction. It has a post office under Lanark and a public school.

Newbigging. See MUSSELBURGH.

Newbridge, a hamlet, with an inn, in the Edinburghshire portion of Kirkliston parish, on the right bank of Almond Water, 8 miles W by S of Edinburgh. It suffered great devastation by cholera in 1832.

Newburgh, a seaport village in Forvarn parish, Aberdeenshire, on the right side of the river Ythan, 7 furlongs from the sea, 5 miles SE of Ellon station, and 13½ NNE of Aberdeen, under which it has a post and telegraph office, and with which it communicates daily by 'bus. Pleasantly situated, and greatly improved of recent years, it contains several substantial and commodious houses; possesses important facilities both for manufacture and for fishing; ranks as a support of Aberdeen; and carries on commerce chiefly in exporting grain, and in importing coal, timber, lime, and bones. Pop. (1841) 393, (1861) 541, (1871) 570, (1881) 645.—*Ord. Sur.*, sh. 77, 1873.

Newburgh, a town and a parish in the extreme NW of Fife. A royal and police burgh and a seaport, the town has a station on the Edinburgh, Perth, and Dundee section of the North British railway, 11½ miles ESE of Perth, 7½ NW of Ladybank, and 35½ N of Edinburgh. It mainly consists of the well-built High Street, running ½ mile E and W within 300 yards of the Firth of Tay, but includes some lanes leading down to the shore, and the southern suburb of Mount Pleasant, in Abdie parish. Great part of it is of recent erection; and even the oldest existing portions have nearly all been rebuilt within the last hundred years. Both its shops and its principal dwelling-houses are of a character indicating taste and prosperity. Its situation near the firth is exceedingly pleasant; and both from its own appearance, with gardens and numerous fruit trees among its houses, and from the charming aspect of its environs, Newburgh presents a fine picture either to observers going up or down the river, or to observers on neighbouring vantage-grounds. The views, too, from itself and its vicinity are fine. Even to a traveller on the railway, coming up from Ladybank to Perth, the prospects at Newburgh are remarkably striking and diversified, comprising first a sudden revelation of the whole basin of the lower Tay, and next a close view of Newburgh itself, its upper terrace rising on the S, and the main body nestling below on the N, and projecting into the lake-like expanse of the firth. The principal public building is the town-house, with a spire, erected in 1808; and attached to this is a building of considerable size, built about 1830, for the accommodation of the dealers in the stock market. The parish church, St Catherine's, is an elegant Gothic structure, erected in 1833 from designs by William Burn, and containing 1000 sittings. In 1882 it was adorned with a stained-glass window by Messrs Ballantine, representing scenes in the life of Christ. Other places of worship are Free, U.P., Evangelical Union, and Baptist churches.

Newburgh has a post office, with money order, savings' bank, insurance, and telegraph departments, a branch of the Commercial Bank, a savings' bank, agencies of 7 insurance companies, 4 hotels, a gas company (1836), waterworks (1877), a cemetery, a public library (1861), a reading-room and coffee-house (1881), 2 bowling clubs, a gardening society, a natural history and archaeological society, a lawn tennis club, and a young men's religious institute. A weekly corn-market on Thursday was started in 1830; and a fair is held on the third Friday of June.

In the 17th century, Newburgh was so devoid of trade as to be described in Cunningham's essay on Cross Macduff as 'a poor country village;' and till pretty far in last century, although gradually improving, it remained much the same. Until within a few years of the publication of the *Old Statistical Account*—1793—its inhabitants had been chiefly employed in husbandry; but the linen-trade had occupied them to a certain extent, and when that Account was published the greater portion of them were engaged in that manufacture. At that time, however, there were only two persons who employed workmen; the greater

part of the linen manufactured being woven by individual weavers on their own account, who sold their webs, when finished, at Perth, Dundee, Cupar, Auchtermuchty, and Glasgow. But the trade went on and prospered; and numerous manufacturers arose, not only to employ all the weavers in Newburgh, but also to furnish work for considerable numbers in Aberargie, Abernethy, Strathmiglo, Auchtermuchty, Dunshelt, Cupar, Springfield, Pitlessie, Kettle, Markinch, Falkland, and other places. The principal branch is the weaving of sheetings, partly for the home markets, and partly also for exportation. Malting, quarrying, and the timber trade also afford employment. The harbour consists of a long pier parallel to the river, and five projecting piers at right angles to it. There is always considerable bustle, and not a little real business. The principal exports are linen, grain, and potatoes; and the principal imports are timber, coals, and miscellaneous small goods. The Perth and Dundee steamer touches daily in summer.

Newburgh, in spite of its name, is a town of considerable antiquity; and it probably took that name from burghs being few and new at the time of its erection, there being few older. The present town, or rather its remote nucleus, originated with the abbey of Lindores. In 1266 Alexander III. erected it into a burgh of barony in favour of the abbot with all the usual privileges of such burghs. In the charter it is called 'novus burgus juxta monasterium de Lindores.' In 1457 John, Abbot of Lindores, confirmed by charter the ancient privileges of the burgesses of Newburgh; and on the 4th of July of the same year he granted them the lands of Vodrufe (Wodrifre) and the hill to the S of it—about 400 acres in all—for which they were to pay to the abbot homage and common service used and wont, with 40 bolls of barley. These acres originally belonged to burgess proprietors, but are now, with a few exceptions, the property of E. P. B. Hay, Esq. of Mugdrum. In 1593 James VI. and in 1631 Charles I. confirmed the ancient charter, and conferred all the privileges of a royal burgh; but Newburgh never exercised its right of sending a member to the Scottish parliament, and consequently at the Union was not included in any of those sets of burghs which were invested with the right of sending members

to the British parliament. The town is governed by a provost, a senior and a junior bailie, a treasurer, and thirteen councillors, with a town clerk. The magistrates and council act also as commissioners of police; and hold courts at regular periods for the decision of questions which are brought before them. The royalty extends $1\frac{1}{2}$ mile to the S and W beyond the town, but excludes the harbour and extensive suburbs. A sheriff

Seal of Newburgh.

circuit court, for small debt causes, is held on the Wednesday after the second Monday of Jan., April, and July, and on the Friday after the first Monday of Oct. Burgh valuation (1874) £4250, 11s. 1d., (1884) £4597, 15s. 7d. Pop. of burgh (1831) 2453, (1851) 2638, (1861) 2281, (1871) 2182, (1881) 1852; of town (1861) 2733, (1871) 2777, (1881) 2374, of whom 1267 were females, and 299 in Mount Pleasant. Houses in town (1881) 417 inhabited, 15 vacant.

The parish of Newburgh, disjoined from Abdie in 1632, and subsequently enlarged by an annexation from Abernethy, is bounded N by the Firth of Tay, E by Abdie, SE by Collesie, and W by Abdie (detached) and Abernethy in Perthshire. Its utmost length, from N to S, is $3\frac{1}{2}$ miles; its utmost breadth, from E to W, is $2\frac{1}{2}$ miles; and its area is 1399 acres, of which 23 are foreshore. The coast-line, $1\frac{1}{2}$ mile in extent, is low; and the firth, with a width here of $1\frac{1}{2}$ mile, is divided by Mugdrum island ($7\frac{1}{2} \times 1\frac{1}{2}$ furl.) into the North and the South Deep. The northern part of the parish is a beautiful and finely wooded level; the southern, crossed

by the ridge of the Ochils, is an alternate series of hills and valleys, rising to 777 feet at Ormiston or Blackcairn Hill, and 640 near Easter Lumbenny. The predominant rocks of the low level tract in the N are Devonian; whilst those of the hills are eruptive—chiefly greenstone masses, with boulders of granite, gneiss, quartz, and mica-slate. The soil in the eastern part of the low grounds is rich coarse clay, in the western is gravelly, and on the hills is either a loose black loam or a more compact ferruginous mould, generally shallow yet very fertile. Nearly two-thirds of the entire area are in tillage; rather more than one-ninth is under fruit-trees or wood; and the rest of the land is either pastoral or waste.

About a mile from the Tay, on the slope of the Ochils, in a pass leading up from the N of Fifeshire to Strathern, is a small cairn of stones, known by the name of Sir Robert's Prap. This marks the place where a fatal duel occurred towards the close of the 17th century, between Sir Robert Balfour of Denmiln and Sir James Macgill of Lindores. A little way W of the town stands a curious antiquity, called Mugdrum Cross, which, together with Mugdrum House and Mugdrum island, is noticed in the article MUGDRUM. In the pass leading to Strathern, 200 yards E of Sir Robert's Prap, on high ground, overlooking Strathern westward to the Grampians, stands another antiquity, similar to Mugdrum Cross, but far ruder, and greatly more celebrated. This is Cross Macduff, mentioned by Wyntoun in his *Cronykil* (circa 1426), and anciently bearing an inscription which, though preserved in record, has greatly puzzled philologists. The cross itself is said to have been broken in pieces by the Reformers, on their way from Perth to Cupar (1559); and nothing now remains but the large square block of freestone which formed the pedestal. This is $3\frac{1}{2}$ feet high, and $4\frac{1}{2}$ in length by $3\frac{1}{2}$ in breadth at the base. There are several holes or indentations on its different faces, which really have been formed by nodules of iron pyrites falling out, but which a comparatively recent tradition says were nine in number, and at one time contained nine rings. There is no appearance of any socket in which the cross had been fixed; so that it must have been placed upon the surface of the stone, without any other support than that of its own base. The cross formed the girth or sanctuary for any of the clan Macduff, or any related to the chief within the ninth degree, who had been guilty of 'suddand chaudmelle,' or unpremeditated slaughter. Any person entitled to this privilege, and requiring it, fled to the cross, and laid hold of one of the rings, when punishment was remitted on his washing nine times at the stone, and paying nine cows and a colpendach or young cow. The washing was done at a spring still called the Nine Wells, emitting a stream so copious as now to be employed in the operations of a bleachfield; and the oblation of the nine cows was made by fastening them to the cross's nine rings. Such is the current account, repeated time after time; but the nine rings and the nine washings have not the slightest support in record. In every instance, we are further told, the person claiming sanctuary required to give proof of belonging to the clan Macduff, or of possessing consanguinity to the chief within the given degree; and whenever any claimant failed to produce this evidence, he was instantly put to death, and buried near the stone. There were formerly several artificial cairns and tumuli around the cross, and one rather larger than the rest about 50 yards to the N, which were all popularly regarded as the graves of those who had been slain here in consequence of failing to prove themselves entitled to the sanctuary, but which have all been obliterated by the levelling operations of the ploughshare. 'Superstition,' says Cant, 'forbids the opening of any of them; no person in the neighbourhood will assist for any consideration, nor will any person in or about Newburgh travel that way when dark, for they affirm that spectres and bogles, as they call them, haunt that place.' With the removal of the traces of the graves, superstitious fears attached to the spot have died away. Sir

Walter Scott has made the traditions and antiquities of this place the subject of a short dramatic poem, entitled *Macduff's Cross*, in the course of which he has very accurately described both the cross itself and its accidents. Says he,—

* Mark that fragment,

I mean that rough-hewn block of massive stone,
Placed on the summit of this mountain-pass,
Commanding prospect wide o'er field and fell,
And peopled village and extended moorland,
And the wide ocean and majestic Tay,
To the far distant Grampians. Do not deem it
A loose and portion of the neighbouring rock,
Detached by storm and thunder. 'Twas the pedestal
On which, in ancient times, a cross was rear'd,
Carved with words which foil'd philologists;
And the events it did commemorate
Were dark, remote, and undistinguishable,
As were the mystic characters it bore.*

LINDORES Abbey and the mansion of PITCAIRLIE are noticed separately. Two proprietors hold each an annual value of more than £500, and three of between £100 and £500. Newburgh is in the presbytery of Cupar and the synod of Fife; the living is worth £494. The public and the Madras female school, with respective accommodation for 309 and 155 children, had (1853) an average attendance of 179 and 139, and grants of £171, 5s. 6d. and £121, 12s. 6d. Landward valuation (1860) £3142, 17s. 2d., (1884) £3155, 17s. 4d. Pop. of entire parish (1801) 1936, (1841) 2597, (1861) 2693, (1871) 2529, (1881) 2191.—*Ord. Sur.*, sh. 43, 1863. See Alex. Laing, LL.D., *Lindores Abbey and the Burgh of Newburgh* (Edinb. 1876).

Newburn (anc. *Drumeldrie*), a coast parish of SE Fife, containing Drumeldrie village, $1\frac{1}{4}$ mile E by S of Upper Largo. It is bounded NE and E by Kilmacquhar, SE by Elie (detached), S by the Firth of Forth, and W and NW by Largo. Its utmost length, from N by W to S by E, is $3\frac{1}{2}$ miles; its breadth varies between $\frac{1}{2}$ and $1\frac{1}{2}$ mile; and its area is 3222 $\frac{1}{2}$ acres, of which 178 $\frac{3}{4}$ are foreshore. The shore, extending $1\frac{3}{4}$ mile along the eastern curve of Largo Bay, is flat and sandy; and from it the surface rises northward, until at the western border it attains a maximum altitude of 785 feet on the eastern slope of green conical LARGO LAW (965 feet). The general landscape, at once within itself and in views beyond, is a brilliant assemblage of hill and dale, of wood and water. The rocks are partly carboniferous, but chiefly eruptive; and the soil, though various, is generally fertile. About five-sixths of the entire area are in tillage; nearly 140 acres are under wood; and the rest of the land is pastoral. Gilston House, $3\frac{3}{4}$ miles NNE of Largo, and Lahill, $1\frac{1}{2}$ mile ENE, are the seats of John Heury Baxter, Esq., and Major Robert Rintoul, who hold respectively 1094 and 754 acres, valued at £1960 and £1666 per annum. Another estate, noticed separately, is BALCHRISTIE; and, in all, 6 proprietors hold each an annual value of £500 and upwards, 6 of between £100 and £500, and 7 of from £20 to £50. Newburn is in the presbytery of St Andrews and the synod of Fife; the living is worth £250. The parish church, a little way ENE of Drumeldrie, was built in 1815, and is amply commodious. The public school, with accommodation for 75 children, had (1853) an average attendance of 58, and a grant of £53, 14s. Valuation (1865) £5443, 1s. 5d., (1884) £5248, 10s. 6d. Pop. (1801) 412, (1841) 419, (1861) 374, (1871) 362, (1881) 344.—*Ord. Sur.*, sh. 41, 1857.

Newbyres. See GOREBRIDGE.

Newbyth, a village in the SE of King-Edward parish, N Aberdeenshire, 3 miles NNE of Cuminstown and S ENE of Turriff, under which it has a post office. Founded in 1764 by James Urquhart, Esq., on his estate of Byth, it stands 350 feet above sea-level, and consists of two streets, crossing each other nearly at right angles. Most of the villagers rent small lots of ground, in addition to their fee-holdings of about $\frac{1}{2}$ acre; and neighbouring peat-mosses still yield a good supply of fuel, though their area has been greatly reduced by advancing cultivation. An Established church, containing 500 sittings, and successor to one of 1793, was built as a

chapel of ease in 1851, and in 1867 was raised to *quoad sacra* status. The parish is in the presbytery of Turriff and the synod of Aberdeen; its minister's stipend is £120. There are also a Free Church preaching station and a public school, enlarged in 1875. This and two others, Crudie and Upper Brae, with respective accommodation for 216, 160, and 90 children, had (1853) an average attendance of 153, 107, and 86, and grants of £115, 13s., £76, 17s. 4d., and £61, 8s. Pop. of village (1831) 302, (1861) 454, (1871) 609, (1881) 491; of *quoad sacra* parish (1871) 2216, (1881) 1932, of whom 28 were in Aberdeen.—*Ord. Sur.*, sh. 56, 1876.

Newbyth, a mansion, with finely-wooded grounds, in Whitekirk parish, Haddingtonshire, on Peffer Burn, $1\frac{1}{2}$ mile ENE of East Fortune station, and 3 miles NNW of East Linton. Standing amid beautiful scenery, it is a castellated edifice, erected from designs by William Adam towards the close of last century. Since the early part of the 17th century the estate has been held by a younger branch of the Bairs of Auchmedden, members of which were John Baird (1620-95), created a lord of session as Lord Newbyth, and General Sir David Baird, K.C.B. (1757-1829), the captor of Seringapatam, created a baronet in 1809. His grand-nephew, Sir David Baird, third Bart. (b. 1832; suc. 1852), holds 2021 acres in East, and 751 in Mid, Lothian, valued at £5098 and £3857 per annum. See GILMERTON and FERN-TOWER.—*Ord. Sur.*, sh. 33, 1863. See vol. ii. of John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Newcastleton. See CASTLETON.

New Craighall. See CRAIGHALL, etc.

Newe. See CASTLE-NEWE.

Newfield, an estate, with a mansion, in Dundonald parish, Ayrshire, $1\frac{3}{4}$ mile SE of Drybridge station. Its owner, William Finnie, Esq. (b. 1828; suc. 1846), Liberal M.P. for North Ayrshire 1868-74, holds 677 acres in the shire, valued at £1351 per annum.—*Ord. Sur.*, sh. 22, 1865.

New Galloway. See GALLOWAY, NEW.

Newhalles, a mansion in Inveresk parish, Edinburghshire, $1\frac{1}{2}$ mile W by S of Musselburgh, and $\frac{1}{2}$ N by E of Newhalles station on the North British railway, this being $4\frac{1}{2}$ miles E by S of Edinburgh. It was built by Sir David Dalrymple, Bart. (1726-92), the eminent lawyer, antiquary, and historian, who took the title of Lord Hailes on his elevation to the bench in 1766, and whose great-grandson, Charles Dalrymple, Esq. (b. 1839; suc. 1849), Conservative M.P. for Buteshire since 1868, holds 175 acres in Edinburghshire, 1698 in Haddingtonshire, and 33 in Buteshire, valued at £5410 per annum.—*Ord. Sur.*, sh. 32, 1857.

Newhall, an estate, with a mansion, in Penicuik parish, Edinburghshire. The mansion, on the North Esk's left bank, within a curvature of the stream, $4\frac{1}{2}$ miles SW of Penicuik town, during the 16th century and an unknown period preceding, belonged to a family of the name of Crichton. In 1646 Dr Penicuik became its proprietor; and here was born his son, Dr Alexander Penicuik (1652-1722), poet and physician. (See ROMANNO.) In 1703 Newhall was acquired by Sir David Forbes, under whose son and successor, John, it became a favourite resort of some of the most eminent literati of last century. While inhabited by the Crichtons it was an irregular castle, and with its appendages covered the whole breadth of the point on which it stands, formed by a strip or low spur from the base of the Pentlands, cloven down on each side by a deep ravine, and terminating in the glen of the Esk. It was mainly rebuilt soon after 1703, and enlarged in 1785; but the ground-floor in the front of the present modernised mansion, which was part of one of the towers, is vaulted in the roof, and has on every side slits for defence; and it is so strong as, in one place, to have a closet cut out of the thickness of the wall. The eastern ravine, overhung by remains of a small round tower, is densely wooded; and a dark and romantic rill leaps along it in several beautiful cascades, and flings up its spray amid the deep shades

of the woods. The western ravine is overhung by a point on which stood anciently a religious establishment of some note, and a prison; and though this ravine is dry, it vies with the other in romance, and, like it, is shaded with thick foliage. A walk, which goes round the site of the chapel and prison, forms a noble terrace from the W end of the house, looking up the glen and over to a mineral well among copsewood and pines on the other side. A farm in the immediate neighbourhood bears the name of Spital, and probably formed an endowment for supporting, under the management of the religious foundation of Newhall, a hospice for the refreshment and shelter of travellers. George Meikle Kemp (1794-1844), the designer of the Edinburgh Scott Monument, was the son of a shepherd on the Newhall estate. Purchased from the Hays for £14,000 in 1783, the Newhall and CARLOPS property belongs now to Horatio Robert Forbes Brown (b. 1854; suc. 1866), whose grandfather edited Pennieuk's Works, and did much to beautify the grounds of Newhall, which he identified with the scenery of the *Gentle Shepherd*. (See HABBIE'S HOWE.) He holds 3398 acres in Edinburgh and Peebles shires, valued at £1895 per annum.—*Ord. Sur.*, shs. 32, 24, 1857-64. See vol. ii. of John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Newhall House, an elegant modern mansion in Resolis parish, Ross-shire, near the southern shore of the Cromarty Firth, 2 miles S by W of Invergordon.

Newhalls, a village in Dalmeny parish, Linlithgowshire, on the coast of the Firth of Forth, in the eastern vicinity of Queensferry.

Newharthill. See NEWARTHILL.

Newhaven, a fishing town in North Leith parish, Edinburghshire, on the southern shore of the Firth of Forth, $1\frac{1}{2}$ mile E of Granton, 1 mile WNW of the centre of Leith, and $2\frac{1}{2}$ miles N by W of Edinburgh Post Office. It communicates with the city both by tram and by the Leith branches of the Caledonian and North British railways, Newhaven station on the former lying 3 furlongs S by W, and Trinity station on the latter $3\frac{1}{2}$ furlongs W by S. 'Our Lady's Port of Grace'—as Newhaven was called of old—originated in the general impetus given to trade and commerce during the prosperous reign of James IV. (1488-1513). Owing to the depth of water, a yard and dock were erected for shipbuilding, and a harbour constructed for the reception of vessels, whence it received the name of Newhaven. Here, in 1511, was built 'ane varie monstrous great ship called the *Michael*, which required such a mass of timber for her construction 'that she waisted all the woodis in Fyfe, except Falkland Wood, besides the timber that came out of Norway.' And here it was, on 1 May 1544, that the English force landed under the Earl of Hertford, of which Hill Burton says that 'unless we may find some parallel in Tartar or African history, it will scarce be possible to point to any expedition so thoroughly destitute of all features of heroism or chivalry.' Ere this, however, the rising haven had been strangled in its birth by the jealousy of the citizens of Edinburgh, who purchased the superiority from James V. Its chapel of Our Lady and St James—a dependency seemingly of St Anthony's preceptory at Leith—was suppressed at the Reformation; and Newhaven sank into the mere fishing village it still remains. Signs of antiquity there are none, except that a house near the W end of the town exhibits a large pediment sculptured with a pair of globes, a quadrant, an anchor, and an antique war-galley, and bearing inscription, 'In the neam of God, 1588.' Still, the place has an old-fashioned air; and the red-tiled, two-story houses, with outside stairs, the strings of bladders, and the big boats, hauled up on the shore, or roeking in the harbour, all give it a picturesque look, which is lacking in modern watering-places. Then the people themselves, belike of Scandinavian origin—the stalwart, weather-beaten fishermen, 'like blue sea puff-balls'; and the Amazonian fishwives, whom the late Charles Reade has drawn so well in *Christie Johnstone* (1853): 'On their heads they wear caps of Dutch or Flemish origin, with a

broad lace border, stiffened and arched over the forehead, about three inches high, leaving the brow and cheeks unnumbered. They have cotton jackets, bright red and yellow, mixed in patterns, confined at the waist by the apron-strings, but bobbled below the waist; short woollen petticoats, with broad vertical stripes, red and white, most vivid in colour; white worsted stockings, and neat, though high-quartered shoes. Under their jackets they wear a thick spotted cotton handkerchief, about one inch of which is visible round the lower part of the throat. Of their petticoats, the outer one is kilted, or gathered up towards the front, and the second, of the same colour, hangs in the usual way. Their short petticoats reveal a neat ancle, and a leg with a noble swell; for Nature, when she is in earnest, builds beauty on the ideas of ancient sculptors and poets, not of modern poetasters, who fight their airy-like sylphs and their smoke-like verses high for want of flesh in women and want of fact in poetry as parallel beauties. These women have a grand corporeal tract; they have never known a corset! so they are straight as javelins; they can lift their hands above their heads!—aetually! Their supple persons move as Nature intended; every gesture is ease, grace, and freedom.' Such—plus the heavy ereels—are the fishwives, of whom, driving through Newhaven on 16 Aug. 1872, the Queen saw 'many, very enthusiastic, but not in their smartest dress.' In their smartest dress assuredly were those who, on occasion of the London Fisheries Exhibition (1883), were hospitably entertained by the Prince and Princess of Wales at Marlborough House, on Sunday, 20 May, and who afterwards visited Windsor at the invitation of the Queen.

The Main Street extends for 350 yards E and W along the old sea-margin of the Firth, 33 to 80 yards wide, and 14 to 26 feet above sea-level. Behind, the ground rises southward to a bank 72 feet high, which is crowned by a row of villas. In front is the tidal harbour, reconstructed in 1876-77 at a cost of £10,000 and measuring 500 by 300 yards, with a free-way 70 feet wide. The curving W breakwater of concrete, 540 feet long, in 1881 was surmounted by a sea-wall 6 feet high; and a lighthouse stands at the end of the E pier, which, with its westward return-head, has a total length of 750 feet. According to the latest returns, Newhaven has 33 first-class and 170 second-class boats, manned by 425 fisher men and boys. The *quoad sacra* parish church is a plain Perpendicular building of 1838; and the Gothic Free church was greatly improved in 1883 by the addition of a spire 120 feet high, as also of a vestry with a hall above. The Peacock and Philpott's Hotels have long been famed for their fish-dinners; and Newhaven besides has a post office, with money order, savings' bank, and telegraph departments, a branch of the Royal Bank, a Free Fishermen's Hall, and two schools—the Victoria public and the Madras—which, with respective accommodation for 248 and 304 children, had (1883) an average attendance of 226 and 203, and grants of £173, 14s. and £164, 12s. 6d. Pop. of *quoad sacra* parish (1841) 2103, (1871) 3977, (1881) 4694.—*Ord. Sur.*, sh. 32, 1857.

Newhills, a parish of SE Aberdeenshire, containing AUCHMILL and STONEYWOOD villages, with BUXBURN station on the Great North of Scotland railway, 4 miles NW of the post-town, Aberdeen. It anciently formed the SE corner of the extensive parish of Old Machar, but having acquired a chapel in 1663 on the lands of Keppelhills, with mortification of those lands for maintaining a minister, it was constituted a parish in 1666, and took the name of Newhills in allusion to the changed status of Keppelhills. It is bounded N by Dyce, E by Old Machar and Woodside, S by Banchory-Devenick, SW by Peterculter, and W by Skene and Kinnellar. Its length, from N to S, varies between $2\frac{1}{2}$ and 5 miles; its utmost breadth, from E to W, is $4\frac{1}{2}$ miles; and its area is 10,321 $\frac{1}{2}$ acres, of which 39 are water. The river DON winds $2\frac{1}{2}$ miles south-south-eastward along the Old Machar boundary; and six burns drain the interior, either to the Don or towards

the Dee. The surface, in the vicinity of the Don, is low and flat, sinking to 50 feet above sea-level; elsewhere it rises westward to 403 feet near Craibstone House, 604 near Kingswells manse, 578 at Cloghill, and 870 at Brimmond Hill. Granite is the prevailing rock, and is extensively quarried, both for home use and for exportation. The soil, in the low level tract, is a deep rich mould; elsewhere is mostly black, light, shallow, and spongy. Nearly one-ninth of the entire area is pastoral or waste; 400 acres are under wood; and the rest of the land is in tillage. Antiquities are a large cairn, several tumuli, remains of a Caledonian stone circle, and vestiges of an old chapel; whilst a chief curiosity is a cavern in a ravine of Elickhill, supposed by the vulgar to penetrate for miles under ground, and celebrated in legend as the retreat of a noted robber and his gang. The granite quarries and extensive paper works employ a large number of the population. Oldmill Reformatory (1857), near the eastern border, 2½ miles W of Aberdeen, is a large building, occupied by about 100 boys. A cottage home for convalescents, with accommodation for from 12 to 15 patients, was opened in July 1882, the work having been started eight years before by Mrs Smith of the Manse. Mansions are Cloghill, Craibstone, Fairley, Hazlehead, Kingswells, Springhill, Stoneywood, and Waterton; and 7 proprietors hold each an annual value of £500 and upwards, 19 of between £100 and £500, 10 of from £50 to £100, and 24 of from £20 to £50. Newhills is in the presbytery and synod of Aberdeen; the living is worth £709. The parish church, 1¼ mile W by S of Auchmill, is a good building of 1830, with 1100 sittings. Other places of worship are Stoneywood Established chapel of ease (1879; 800 sittings), Newhills Free church at Auchmill, Kingswells Free church (4 miles W of Aberdeen), and St Machar's Episcopal church (1880) at Buxburn. Six public schools—Blackburn, Buxburn, Keppelhills, Kingswells, Stoneywood, and Stoneywood infant—with respective accommodation for 87, 480, 96, 141, 411, and 120 children, had (1883) an average attendance of 83, 395, 51, 101, 174, and 85, and grants of £69, 8s., £349, 9s. 6d., £44, 14s. 6d., £95, 0s. 6d., £156, 15s., and £73, 4s. 6d. Valuation (1860) £14,789, (1884) £24,453, plus £677 for railway. Pop. (1801) 1305, (1831) 2552, (1861) 3463, (1871) 4210, (1881) 5480.—*Ord. Sur.*, sh. 77, 1873.

Newholme, an estate, with a mansion, in Dolphinton parish, Lanarkshire, on the left bank of South Medwin Water, 5 furlongs SE of Dunsyre station. It was the property and death-place of the distinguished Covenanter, Major Learmont (1595-1683), who commanded the Covenanter horsemen at the battle of Rullion Green. For upwards of twenty years the estate has belonged to the Lockharts of LEE.—*Ord. Sur.*, sh. 24, 1864.

Newington. See EDINBURGH.
Newington, a village in Holywood parish, Dumfriesshire, 3¼ miles NNW of Dumfries.

Newington, a mansion in Kilmany parish, Fife, 4 miles NNW of Cupar.

New Keith. See KEITH.

New Kilpatrick. See KILPATRICK, NEW.

New Lanark. See LANARK, NEW.

Newlands, a village in St Ninians parish, Stirlingshire, near Bannockburn.

Newlands, a parish of N Peebleshire, containing the hamlet of ROMANNO Bridge, 3½ miles SSE of Linton, 4½ SW of Lamancha station, and 19½ SSW of Edinburgh. Within it also are LAMANCHA station and Noblehouse post office, with money order, savings' bank, and telegraph departments, whilst LEADBURN and MACBIE HILL stations lie just beyond its northern and north-western borders. It is bounded N by Penicuik in Edinburghshire, E by Edleston, SE by Lyne, S by Stobo, SW by Kirkurd, and NW by Linton. Its utmost length, from NNE to SSW, is 9½ miles; its breadth varies between ¼ mile (at Leadburn) and 5½ miles; and its area is 12,560½ acres, of which 42½ are water. The drainage of the northern extremity is

carried by Lead Burn to the North Esk, but elsewhere belongs to the Tweed, as LYNE WATER winds 6½ miles south-by-eastward, partly along the Linton and Stobo boundaries, but mainly through the interior. During this course it is joined by DEAD BURN, flowing 3 miles south-south-westward; FLEMINGTON Burn, 4½ miles south-westward; and TARTH WATER, 2½ miles south-eastward along the Kirkurd and Stobo boundary. In the extreme S the surface sinks to 670 feet above sea-level, thence rising to 1234 feet at Drochil Hill, 1221 at Woodhill, 1453 at Drum Maw, and 1570 at Wether Law, from which again it gradually declines to 862 feet at Leadburn station. The rocks in the hills are mainly eruptive; in the upper part of the vale are carboniferous. Sandstone of excellent quality has been largely worked to the W of Lyne Water, as also has limestone on Macbie Hill estate. Common black bituminous coal exists in the upper part of the vale, and fairly rich iron ore occurs in fissures of the higher grounds. There are several chalybeate springs; and artificial ponds are at Whim, Lamancha, and Macbie Hill. The soil of the arable lands is chiefly a clayey loam, incumbent on close stiff till. Nearly one-third of the entire area is regularly or occasionally in tillage; some 350 acres are under wood; and the rest of the land is chiefly disposed in pasture. Antiquities other than DROCHIL CASTLE are the ROMANNO Terrace and remains of circumvallations, popularly called 'Rings,' on Henderland, Borelands, Drochil, Whiteside, and Pendreich Hills. The poet, Dr Alexander Pennicuik (1652-1722), was proprietor of Romanno; the Rev. Charles Findlater (1758-1838), author of the *View of the Agriculture of Peebleshire*, was 48 years minister; and Lord Chief Baron Montgomery (1721-1803) was born at Macbie Hill. Mansions, noticed separately, are BORELANDS, CALLANDS, HALMYRE, LAMANCHA, MACBIE HILL, ROMANNO, and WHIM; and 9 proprietors hold each an annual value of more, 4 of less, than £500. Newlands is in the presbytery of Peebles and the synod of Lothian and Tweeddale; the living is worth £330. The parish church, near the left bank of Lyne Water, 7 furlongs S of Romanno Bridge, is an ugly edifice of 1838. A little way lower down is the beautiful ruin of its ancient predecessor, roofless and ivy-clad, with First Pointed E window and round-headed S doorway. The old graveyard is still in use, and contains a headstone to R. Howeiston (1767-1870). Near Borelands, close to the Linton border, is a U.P. church; and two public schools, Lamancha and Newlands, with respective accommodation for 67 and 90 children, had (1883) an average attendance of 47 and 53, and grants of £33, 13s. 2d. and £46, 13s. 6d. Valuation (1860) £7500, (1884) £9983, 3s. 9d. Pop. (1801) 950, (1831) 1078, (1861) 987, (1871) 851, (1881) 819.—*Ord. Sur.*, sh. 24, 1864.

Newlaw, a hill in Rerwick parish, Kirkcudbrightshire, 1¼ mile NW of Dundrennan, and 3½ miles ESE of Kirkcudbright. It has an altitude of 599 feet above sea-level, and commands a very extensive and magnificent view of the Kirkcudbrightshire seaboard and the Irish Sea, horizoned by the Isle of Man and the Irish Mountains of Mourne.—*Ord. Sur.*, sh. 5, 1857.

Newlston, an estate, with a mansion, in Kirkliston parish, Linlithgowshire, 1¼ mile SW of Kirkliston station. It was the property and favourite residence of the celebrated soldier, John, second Earl of Stair (1679-1747); and the plantations in its grounds are said to have so been planted as to represent the British array on the eve of the battle of Dettingen. The present mansion, built about 1794 from designs by William Adam, is the seat of Thomas Alexander Hog, Esq. (b. 1835; suc. 1858), who holds 1092 acres in the shire, valued at £2765 per annum, his ancestor having bought the estate about the middle of last century.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

New Luce. See LUCE, NEW.

New Machar. See MACHAR, NEW.

Newmains, a small town in Cambusnethan parish,

Lanarkshire, on the cross-railway from Morningside to Holytown, adjacent to the Coltness Ironworks, 2 miles ENE of Wishaw, and 6 by railway SE of Holytown. Standing amid a rich mineral tract, and inhabited chiefly by miners and ironworkers, it has a post office, with money order, savings' bank, and telegraph departments, a railway station, the Coltness memorial *quoad sacra* church (1878), St Bridget's Roman Catholic church (1871; 300 sittings), a Roman Catholic school, and an elegant edifice, erected by the Coltness Ironworks Company at a cost of £3000, to serve as both a school and a chapel of ease. The school affords regular instruction, under a full staff of teachers, to over 600 children, and is maintained by the Ironworks Company. Pop., jointly with Coltness Ironworks, (1861) 2020, (1871) 2545, (1881) 2632, of whom 1445 were males. Houses (1881) 478 occupied, 35 vacant.—*Ord. Sur.*, sh. 23, 1865.

New Maud. See MAUD.

Newmill. See KEITH.

Newmilns, a town in Loudoun parish, Ayrshire. Lying, 250 feet above sea-level, on the right bank of the river Irvine, which divides it from Greenholm suburb in Galston parish, it has beautiful environs ('Loudoun's bonny woods and braes'), serves as a seat of retail trade for a considerable extent of surrounding country, and presents a tolerably well-built, pleasant appearance. Its station, the terminus of a branch of the Glasgow and South-Western railway, is 2 miles E by N of Galston and $7\frac{1}{2}$ E by S of Kilmarnock. In the middle of the town is an old tower, whose early history is unknown, but which about 1681 was Captain Inglis' headquarters and the prison of seven Covenanters, captured near Kilmarnock, and presently set free by the daring of friends outside. Newmilns has a post office under Kilmarnock, with money order, savings' bank, and telegraph departments, branches of the Clydesdale and Royal Banks, 8 insurance agencies, 4 hotels, 2 gas companies, a police station, a town-hall, a temperance hall, a working-men's institute, and a fair on the Thursday in July of Glasgow fair week. Places of worship are Loudoun parish church (1845; 1200 sittings), a Free church, and a U.P. church (1833; 780 sittings); and the schools are two, public and Lady Flora's. The staple industry is muslin weaving. Newmilns was made a burgh of barony by a royal charter of 1490, and is governed by 3 bailies, a treasurer, a fiscal, and 9 councillors. Pop. (1841) 1988, (1861) 2810, (1871) 3028, (1881) 2860, of whom 1515 were females, and 741 were in Greenholm.—*Ord. Sur.*, sh. 22, 1865.

New Monkland. See MONKLAND, NEW.

Newmore, an estate, with a mansion, in Rosskeen parish, Ross-shire, $3\frac{1}{2}$ miles NNW of Invergordon. Its owner, George Inglis, Esq. (b. 1843), holds 2918 acres in the shire, valued at £1778 per annum.—*Ord. Sur.*, sh. 94, 1878.

Newpark, a station in West Calder parish, Edinburghshire, on the Cleland section of the Caledonian railway, 2 miles SW of West Calder village.

Newport, a small seaport town in Forgan parish, Fife, on the Firth of Tay, 11 miles NNE of Cupar by road, and $1\frac{1}{2}$ mile SSE of Dundee by water, with a station on the Tayport and Newport section of the North British railway, $2\frac{1}{2}$ miles W by S of Tayport, and $2\frac{1}{2}$ NE of the southern end of the new Tay Bridge. Consisting of two parts, Easter and Wester Newport, it was constituted, in 1822, by act of parliament, the ferry-station from Fife to Dundee; and presents a pleasant, well-built appearance, with many elegant villas and other private residences, arranged in terraces on the slopes descending to the firth. It commands a brilliant view of Dundee and a great extent of the Tay's basin; and is a favourite summer resort of families from Dundee and other places, having at the same time become the permanent abode of not a few professional and business men. As a creek of Dundee, it carries on some commerce, in exporting agricultural produce, and importing lime and coal; and has a post office under Dundee, with money order, savings' bank,

and telegraph departments, an hotel, a fine ferry harbour, a gaswork, an Established church, a Free church, a U.P. church, a Congregational church, a public school, a Young Men's Christian Association, and the Blyth Memorial Public Hall, erected at a cost of £4000. Formed immediately subsequent to 1822, after designs by Telford, the ferry harbour is a splendid structure, 350 feet long and 60 wide. It projects into a depth of 5 feet at low water of spring tides; has on each side a carriage-way; possesses most convenient adaptations for the use of double or twin steamboats; and, from the time of its completion, has served for punctual communication with Dundee many times a day. The Established church was built as a chapel of ease in 1871 at a cost of £1350. It contains 450 sittings; and in 1878 was raised to *quoad sacra* status. The U.P. church, built in 1881 at a cost of over £2000, is a cruciform Gothic edifice, with 400 sittings and a spire 80 feet high. Pop. of *q. s.* parish (1881) 1775; of town (1841) 260, (1871) 1507, (1881) 2311, of whom 1439 were females. Houses (1881) 452 inhabited, 61 vacant, 7 building.—*Ord. Sur.*, sh. 49, 1865.

Newseat, a station, near the W border of Peterhead parish, Aberdeenshire, on the Peterhead branch of the Buchan and Formartine railway, $3\frac{1}{2}$ miles W by N of Peterhead town.

Newshot Island, a low and marshy islet ($1 \times \frac{1}{2}$ mile) of Inchinnan parish, Renfrewshire, in the river Clyde, 2 miles NNW of SLAINS.

New Slains. See SLAINS, NEW.

Newstead, a village in Melrose parish, Roxburghshire, on the right bank of the Tweed, 1 mile E of Melrose town, under which it has a post office. It is thought by some antiquaries to occupy the site of the Roman town Trimontium, which Skene, however, places on BRUNSWARK Hill; and it probably owes its present name to the erection, in its vicinity, of an ancient ecclesiastical edifice, intermediate in date and character between the Columban monastery of Old Melrose and the Cistercian Abbey of Melrose. Roman coins, a Roman altar, a stone slab with a boar in relief (the badge of the Tenth Legion), and other Roman relics have been found adjacent to it; some ancient substructions, with marks which might relegate them to the Roman times, have been discovered in its neighbourhood; and a series of ancient pits, one of them containing a Roman spear and some pieces of Roman pottery, was laid open in 1846 at the forming of an adjacent reach of the Waverley section of the North British railway. A field, called the Red Abbey Stead, was found, not many years ago, to contain hewn blocks of red sandstone; and is supposed to have been the site of the ancient ecclesiastical edifice. The viaduct of the Berwickshire railway, which crosses the Tweed $\frac{3}{4}$ mile ENE of Newstead, was erected in 1866, and, rising 133 feet above the water-level, is a most imposing structure.—Pop. of village (1831) 230, (1871) 315, (1881) 301.—*Ord. Sur.*, sh. 25, 1865.

Newton, a parish of NE Edinburghshire, containing the post-office village of Millerhill, with a station on the Waverley section of the North British railway, 2 miles NNW of the post-town, Dalkeith, and $6\frac{1}{2}$ SE of Edinburgh. Since the Reformation it has comprehended the ancient parishes of Newton (to the SE) and Wymet or Woolmet (to the NW). Bounded SW and NW by Liberton, NE by Inveresk, and SE by Dalkeith, it has an utmost length from NW to SE of $2\frac{1}{2}$ miles, a varying width of $1\frac{1}{2}$ and 2 miles, and an area of 2034 acres, of which $1\frac{1}{2}$ are water. BURDIEHOUSE Burn runs $2\frac{1}{2}$ miles east-north-eastward along or close to all the north-western boundary; the south-eastern is traced for $1\frac{1}{4}$ mile by Park Burn, next for 3 furlongs by the North Esk, and for the last furlong by the united Esk. Between, the surface rises very gently, at no point much exceeding, and at none sinking much below, 200 feet above sea-level. In the NW the rocks belong to the Carboniferous Limestone series, but elsewhere they are part of the true coal-measures; and coal has been largely worked for high three centuries. During the

forty years between 1831 and 1871 mining greatly fell off; but a fresh start has since been made by the Benhar Coal Co., with the result that the yearly valuation of minerals rose from £645 to £4565 during 1871-81. The soil along Burdiehouse Burn is strong argillaceous carse land; towards the centre is rich loam; and towards the SE is stiff clay or light and sandy. Save for Edmonstone Park and a narrow strip of Dalkeith Park, both of which are well wooded, nearly all the parish is in a state of high cultivation. Woolmet, $2\frac{1}{2}$ miles NW of Dalkeith, though now but a farmhouse on the Wemyss estate, is a fine old building of the Scottish Baronial type; and Woolmet church, hard by, has been converted into the mausoleum of the Wauchope family. From 1240 to the Reformation it was held by Dunfermline Abbey, as from 1158 was the old church of Newton, which, standing near the North Esk's left bank, $\frac{3}{4}$ mile SE of Millerhill, is now represented only by its tower. EDMONSTONE HOUSE, noticed separately, is the principal residence; and Sir John Don-Wauchope, Bart., the Earl of Wemyss, and the Duke of Buccleuch are chief proprietors. Newton is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £354. The parish church, $\frac{3}{4}$ mile WSW of Millerhill, was built in 1742, and contains 430 sittings. Two public schools, Dalkeith and Edmonstone, with respective accommodation for 196 and 66 children, had (1883) an average attendance of 164 and 39, and grants of £141, 19s. and £24, 19s. 11d. Valuation (1860) £9670, (1884) £11,874, 9s. 6d., plus £2420 for railways. Pop. (1801) 1060, (1831) 2274, (1861) 1553, (1871) 1181, (1881) 1307, of whom 335 were in Millerhill.—*Ord. Sur.*, sh. 32, 1857.

Newton, a village in Renfrew parish, Renfrewshire, 7 furlongs SW of the town. Pop. (1881) 631.

Newton, a collier village in Pencaitland parish, Haddingtonshire, 3 miles SE of Tranent. It has a reading-room (1880) and a proprietary school.

Newton, a village in Cambuslang parish, Lanarkshire, with a station on the Caledonian railway, $5\frac{1}{2}$ miles SE of Glasgow. It has a post office under Glasgow, with money order and savings' bank departments, a public school, and St Columba's Episcopal church (1874; 200 sittings). Near it is Newton House. Pop. (1871) 306, (1881) 730.—*Ord. Sur.*, sh. 31, 1867.

Newton, a village in Wick parish, Caithness, 1 mile SW of Wick town.

Newton, an old but commodious mansion, with well-wooded grounds, in CULSALMOND parish, Aberdeenshire, $2\frac{1}{2}$ miles NE of Insh. Its owner, Alexander Morison Gordon, Esq. (b. 1846; suc. 1868), holds 3369 acres in the shire, valued at £2989 per annum.—*Ord. Sur.*, sh. 86, 1876.

Newton, a hamlet in Strachur parish, Argyllshire, on the E shore of Loch Fyne, 4 miles SW of Strachur village.

Newtonnards, a stately mansion, surrounded by thriving plantations, in Holywood parish, Dumfriesshire, near the left bank of Cairn Water, 7 miles WNW of Dumfries.

Newton Castle, an old mansion in Blairgowrie parish, Perthshire, on elevated ground, $\frac{1}{2}$ mile W by N of the town. A good specimen of the domestic castellated style of the latter part of the 17th century, it figures picturesquely in both near and distant views, and commands a brilliant and most extensive prospect along Strathmore.—*Ord. Sur.*, sh. 56, 1870.

Newton-Don. See NENTHORN.

Newton-Douglas. See NEWTON-STEWART.

Newton-Grange, a village in Newbattle parish, Edinburghshire, 5 furlongs ESE of Dalhousie station, and 2 miles S of Dalkeith. Founded about 1830, it has made such progress as to become the chief seat of population in the parish, and has a post office under Dalkeith; a costly school, erected by the Marquess of Lothian; infants' and girls' schools of 1884; and a suite of gas-works (1873) for the supply of all the Newbattle estate. Pop. (1861) 787, (1871) 677, (1881) 1010.—*Ord. Sur.*, sh. 32, 1857.

Newton Hall, an estate, with a mansion, in Yester

parish, Haddingtonshire, 2 miles SSW of Gifford. Held since the time of James VI. by a family of the name of Newton, supposed to have been related to Sir Isaac Newton, it is now the property of William Drummond Ogilvy Hay-Newton, Esq. (b. 1832; suc. 1863), who owns 2557 acres in the shire, valued at £2818 per annum.—*Ord. Sur.*, sh. 33, 1863.

Newton Hall, a modern mansion in Kennoway parish, Fife, $1\frac{1}{2}$ mile NW of Windygates station.

Newtonhill, a railway station near the coast of Fetteresso parish, Kincardineshire, on the Scottish North-Eastern section of the Caledonian railway, $5\frac{1}{2}$ miles NNE of Stonehaven, and $10\frac{1}{2}$ S by W of Aberdeen.

Newton House, a mansion in ALVES parish, Elginshire, $3\frac{1}{2}$ miles W by N of Elgin. Erected in 1793, and enlarged and remodelled in 1852, it is a fine Baronial edifice, whose park stretches southward to the wooded Knock (335 feet), on which a three-story octagonal tower was built in 1827 to the memory of the Duke of York. The estate was purchased from the Hon. Arthur Duff in 1793 by George Forteach, Esq.; and his grand-nephew, Frederick Prescott Forteach, Esq. (b. 1833; suc. 1866), holds 243 acres in the shire, valued at £477 per annum.—*Ord. Sur.*, sh. 95, 1876.

Newton House, a mansion in Crawford parish, Lanarkshire, near the right bank of the Clyde, opposite Elvaunfoot station, with which it is connected by an elegant three-arch bridge (1824). It was built by Alexander Irving, Lord Newton (1760-1832), a senator of the college of justice, and was the residence of the antiquary, George Vere Irving, Esq., who died in 1869.—*Ord. Sur.*, sh. 15, 1864.

Newton House, a mansion in Kirkhill parish, Invernessshire, near the head of the Beaulieu Firth, $1\frac{1}{2}$ mile W by S of Lenran station.

Newton, Long. See LONGNEWTON.

Newton-Mearns. See MEARNS.

Newtonmore, a village in Kingussie parish, Invernessshire, near the left bank of the Spey, and $\frac{1}{2}$ mile NNW of Newtonmore station on the Highland railway, this being $27\frac{1}{2}$ miles SW of Grantown. It has a post and railway telegraph office under Kingussie, a public school, and fairs on the Tuesdays of April and October after Beaulieu. Pop. (1871) 305, (1881) 306.—*Ord. Sur.*, sh. 64, 1874.

Newton of Ferintosh, a hamlet in the Nairnshire section of Urquhart and Logie-Wester parish, $1\frac{1}{2}$ mile SE of Conon Bridge. It has a post office under Dingwall.

Newton of Panbride, a north-eastern suburb of CARNOUSTIE, in Panbride parish, Forfarshire, on the coast, adjacent to Westhaven, and including Gallalaw. Pop., jointly with that of Westhaven, (1871) 573, (1881) 593.

Newton of Pitcairns, a southern suburb of DUNNING village, in Dunning parish, Perthshire. Pop. (1861) 333, (1871) 270, (1881) 235.

Newton-on-Ayr. See NEWTON-UFON-AYR.

Newton-Stewart, a town in Penninghame parish, E Wigtownshire, on the right bank of the river Cree, which here is spanned by a five-arch granite bridge, erected in 1813, at a cost of £6000, in place of an earlier bridge of 1745, and leading to the suburb of Creebridge in Minnigaff parish, Kirkcubrightshire. Its station on the Portpatrick railway is $23\frac{1}{2}$ miles E by N of Stranraer, 7 N by W of Wigtown, and $49\frac{3}{4}$ W by S of Dumfries. Owing its origin to a ford across the river, Newton-Stewart derives its name from William Stewart, the second Earl of Galloway's third son, who here built several houses, and in 1677 obtained a charter from Charles II., erecting it into a burgh of barony; but the earliest fen-contract is dated 1701. The idle—those who hung loose upon society—were the first to flock to the incipient town. The advantages of the feus invited to it peasants who had accumulated a few pounds. Smuggling did something to promote its advancement. A decent inn or two, a few shops, and some workrooms for ordinary artisans, were soon called for by its being a convenient stage between Creetown and Glenluce, and a suitable depot and resort for an extensive tract of circumjacent country, so that by 1792 the

population had risen to 900. About 1778 Sir William Douglas, the founder of Castle-Douglas, purchased the estate of Castle-Stewart, and, changing the name of the village to Newton-Douglas, obtained for it under this name a second charter, erecting it into a burgh of barony, and commenced vigorous efforts to make it a seat of important manufacture. A company, with him at its head, erected, at an expense of upwards of £20,000, a large factory for spinning cotton, and connected it with the introduction and support of cotton-weaving. A Mr Tannahill, under Sir William Douglas's patronage, commenced a small manufacture of coarse carpets; and a tannery of long standing received now stimulating encouragement, and was managed with judgment and success. These and other circumstances concurred to promise that the village would, under its new lord, rapidly rise to be a place of no small consequence; but they promised incomparably more than they performed. The new name of Newton-Douglas soon fell into disuse, and gave place to the former name of Newton-Stewart. The carpet factory proved an utter failure. The cotton-factory worked well for a few years, declined, was abandoned, stood for years unoccupied, and, in 1826, was purchased by Lord Garies for a twentieth part of the original cost, and converted into a quarry for the building of cottages and farmhouses. Even the weaving of cotton for the manufacturers of Glasgow, though it had formed a ready resource for the town's weavers, went rapidly into decline, inasmuch that the number of hand-looms, during the ten years following 1828, decreased from 311 to 100. Of former industries, tanning and currying alone continues to prosper; and the purchase of wool for the Lancashire markets, partly on commission and partly on personal risk, is at present the staple trade; whilst Erskine's patent cartridge-loaders have more than a local repute. Some commerce is carried on through the small harbour of Carty (a creek of Wigtown), a little below the town, principally in the exportation of rural produce, and in the importation of lime, sandstone, coals, and general merchandise. A weekly market is held on Friday, a cattle market on the second Friday of every month, and a lamb fair on the Wednesday in August before Moniaive.

Newton-Stewart, unlike most other modern towns, was not founded on any regular plan; and, in consequence, long bore the appearance of a straggling village—builders raising their houses high or low, small or great, on a line with others or in recesses or projections, as caprice, accident, or convenience suggested. Irregularity has been so far corrected that the place now consists chiefly of a long principal street, with the town-house in the centre. At the close of last century all the houses were thatched, and most of them had only one story; but now more than half of them are slated and two-storied. Of late years, too, a number of fine villas have been built above the town, many respectable families having been attracted to the place by its excellent schools. The general building material is trap throughout the body of the walls, and either granite or sandstone in the lintels and other conspicuous parts. The town-hall is a plain oblong building, with a cupola-roofed clock-tower. Penninghame parish church, a handsome Gothic edifice of 1840, with a graceful spire, was built from designs by William Burn at a cost of £5000, and contains 1200 sittings; in 1881 a mission hall was added behind it at a cost of £500. Princes Street Free church till 1876 was Reformed Presbyterian; that of Creebridge dates from Disruption times. In 1873 was built a fine new U.P. church, in 1876 the new Roman Catholic church of Our Lady and St Ninian; and at Chalcho, 2 miles NW of the town, is All Saints' Episcopal church (1872), a beautiful specimen of Early English, with organ, stained glass, three bells, &c. The Ewart Institute, erected in 1864 at a cost of £5000 from funds bequeathed by James and John Ewart, merchants, is a handsome edifice, with a schoolroom at either end, and the principal's house and boarding-school in the middle. Containing five class-rooms, with accommodation for

310 scholars, and rooms and dormitories for 20 boarders it is divided into a middle-class or high school, conducted by a principal, two masters, a lady superintendent, and assistants; and a free school, conducted by a master and a mistress. With a recent bequest of £10,000, a new town-hall was commenced in 1884. It is to be called the McMillan Hall, after the testator, and will, when completed, prove a great convenience and ornament to Newton-Stewart. Other institutions are the Douglas Academy, the Galloway Girls' Industrial Home, a mechanics' institute, &c. In 1875 a monument, 57 feet high, was erected at a cost of £1000 to Randolph, ninth Earl of Galloway (1800-73).

Newton-Stewart has a post office, with money order, savings' bank, insurance, and telegraph departments, branches of the British Linen, Clydesdale, and National Banks, offices or agencies of 15 insurance companies, 4 hotels, waterworks (1882), 2 gas companies, a handsome police station (1870), and a Saturday Conservative newspaper, the *Galloway Gazette* (1870). The town is governed by a senior and 2 junior magistrates, a treasurer, and 6 councillors, who also serve as police commissioners under the General Police and Improvement (Scotland) Act of 1862. The municipal voters within the police burgh, which excludes the Creebridge suburb, numbered 462 in 1884, when the annual value of real property amounted to £7932, whilst the revenue, including assessments, was £506. Pop. (1841) 2432, (1851) 2599, (1861) 2535, (1871) 2873, (1881) 3070, of whom 1708 were females, and 425 were in Creebridge. Houses (1881) 608 inhabited, 17 vacant, 2 building.—*Ord. Sur.*, sh. 4, 1857.

Newton-upon-Ayr, a suburban town and a small parish on the coast of Kyle, Ayrshire. The town, lying on the right bank of the river Ayr, is separated only by that river from Ayr royal burgh, and forms part of Ayr parliamentary burgh. On its W side is the Firth of Clyde, on its E the suburb of Wallace-town, within St Quivox parish, and so closely contiguous is it to Wallace-town, that a stranger would fail to discover the line of demarcation. It seems to have sprung from a hamlet in or about the time of Robert Bruce; and, constituted a burgh of barony somewhere between 1208 and 1446, it got new charters, confirming all previous privileges, from James VI. in 1595 and 1600—charters which assume it to have been a burgh beyond the memory of man. Newton Castle, here, long the seat of the Wallaces of Craigie, was a strong baronial fortalice, situated among gardens and groves, and demolished in 1701; for fifty years after which date the place almost wholly consisted of thatched, one-story houses. Then, but especially towards the commencement of the present century, it began to undergo much improvement and extension, and now comprises three or four dingy old small streets, a main street 2100 feet long and 80 wide, and three or four modern and regular streets between the main one and the firth. For sixty years prior to 1832 it mainly depended on the working of coal seams which underlay all the parish; but, these becoming exhausted, it now shares in the commerce and industries of Ayr, under which also are noticed its schools, station, and general features. The parish church, built in 1777 and enlarged in 1832, contains 830 sittings. There are also Free and U.P. churches; and a new Established church, of North parish, was erected in 1884 at a cost of £3200. The town council consists of 2 bailies, a treasurer, and 6 councillors. Pop. (1831) 3763, (1861) 4807, (1871) 4686, (1881) 6174, of whom 3114 were females. Houses (1881) 1279 inhabited, 82 vacant, 12 building.

The parish, disjoined in 1779 from that of Monkton and Prestwick, is bounded N by Monkton and Prestwick, E by St Quivox, S by the last $\frac{3}{4}$ mile of the river Ayr, which separates it from Ayr, and W by the Firth of Clyde. Its utmost length, from N by E to S by W, is $1\frac{1}{2}$ mile; its utmost breadth is $7\frac{1}{4}$ furlongs; and its area is 696 acres, of which $99\frac{1}{2}$ are for-
shore and 12 water. The coast includes a small rocky

point at the northern extremity, but elsewhere is flat and sandy. The interior is very nearly a dead level, with an elevation very little above high-water mark. The rocks belong to the Carboniferous formation, much disturbed by upheavals of trap. Coal was formerly plentiful, but was mined to exhaustion in all its workable seams. Sandstone of good quality abounds in the N, and has been largely quarried. The soil was naturally a barren sand, but underwent great improvement by intermixture with blue shale, fetched up from the coal mines. One proprietor holds an annual value of more than £500, and 9 hold each between £100 and £500, 14 from £50 to £100, and 99 from £20 to £50. This parish is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £280. Landward valuation (1884) £1216, 15s. 4d., plus £584 for railway. Pop. of entire parish (1801) 1724, (1831) 4020, (1861) 5124, (1871) 4877, (1881) 6511.—*Ord. Sur.*, sh. 14, 1863.

Newtown. See FINTRY.

Newtown or Newtown St Boswells, a village in Melrose and St Boswells parishes, Roxburghshire, with a station (St Boswells) on the North British railway, at the forking of the lines to Hawick and Kelso, and at the junction of the Berwickshire railway, $3\frac{1}{4}$ miles SE of Melrose and $4\frac{1}{2}$ SE of Edinburgh. Lying 370 feet above sea-level, at the eastern base of the Eildons, and within 5 furlongs of the Tweed's right bank, it contains some commodious houses, and presents a pleasant appearance. Its waterworks, formed in 1876 at a cost of more than £400, draw their supplies from the Eildon Hills; and it has a post office, with money order, savings' bank, and telegraph departments, branches of the Royal and British Linen Co.'s Banks, an hotel, a U.P. church (1870), a public school, a stock sale every alternate Monday, and hiring fairs on the first Mondays of March, May, and November. Pop. (1871) 302, (1881) 444.—*Ord. Sur.*, sh. 25, 1865.

Newtown, a village in Borrowstounness parish, Linlithgowshire, $\frac{1}{2}$ mile S of the town. Pop. (1861) 816, (1871) 827, (1881) 671.

New-Trows, a small village in Lesmahagow parish, Lanarkshire, $1\frac{1}{2}$ mile S of Abbeygreen.

Newtyle, a village and a parish of SW Forfarshire. The village, standing on a north-westward slope, 250 feet above sea-level, has a station on the Newtyle and Blairgowrie railway, $1\frac{1}{2}$ mile SSE of Alyth Junction, and $16\frac{1}{2}$ miles (by road 11) NW of Dundee. Founded in 1832 in connection with the projected railway, it had assigned for its site an arable field of 15 acres, belonging to Lord Wharnclyffe, and was aligned on a regular plan, in building lots, on 99 years' lease. It offers a neat and cleanly appearance, and has a post office under Compar-Angus, with money order, savings' bank, and railway telegraph departments, a branch of the Commercial Bank, gas-works, a police station (1870), a public library, a curling club, an artificial manure factory, a Free church, and the parish church. The last is a handsome Gothic edifice, erected in 1872 on the site of its predecessor at a cost of £3000. It contains 560 sittings, and has a tower 85 feet high, with a two-dial clock. A U.P. church of 1835 towards the close of 1883 was converted into the Wharnclyffe Public Hall, under the management of trustees. Pop. of village (1841) 505, (1861) 619, (1871) 542, (1881) 443.

The parish, containing also the hamlet of NEWBIGGING, is bounded NW by Meikle in Perthshire, NE by Essie and Glamis, SE by Auchterhouse, S by Lundie, and SW by Kettins. Its utmost length, from E to W, is $4\frac{1}{2}$ miles; its utmost breadth, from N to S, is $3\frac{1}{2}$ miles; and its area is $5194\frac{1}{2}$ acres, of which $2\frac{1}{2}$ are water. The north-western part of the parish, with a mean breadth of $1\frac{1}{2}$ mile, forms part of the level ground of Strathmore, and sinks to less than 200 feet above sea-level. Thence the surface rises south-eastward to the Sidlaw Hills, attaining 1134 feet at Kinpurnie Hill, 870 at Hutton Hill, and 881 at Newtyle Hill. The two last flank an opening or pass through the Sidlaws, the

Glack of Newtyle, which pass was always regarded in the old unsettled times as a strong natural military fastness. It now is traversed both by the Newtyle and Blairgowrie railway and by the high road from Dundee to Alyth; and it reveals at its western outlet a sudden and very grand view of Strathmore. Trap rock is plentiful, and has been quarried for road metal; a heavy grey slate in the hills was formerly used for roofing; and sandstone of excellent quality for building is quarried in several places. The soil of the higher grounds is light, sharp, and productive, mostly a mixture of sand or gravel with black earth or clay; that of the level tract within Strathmore is of similar quality, but sometimes richer, and lies on better substrata. The hills are profitable to the very summit, even the least valuable parts of them being clothed with verdure and forming excellent sheep-walks. Since 1850 great improvements have been effected on the Belmont or Earl of Wharnclyffe's estate in the way of reclaiming, planting, draining, fencing, etc. About five-eighths of the entire area are in tillage; nearly 300 acres are under wood; and the rest consists of natural pasture. The ruins of HATTON Castle and the scanty vestiges of BALCRAIG have both been separately noticed. A small square camp near Auchtertyre is said to have been occupied for some nights by the Marquis of Montrose's army, and has left some traces. Two spots in the NW, called Graham's Knowe and King's Well, are said to have got their names from lying on the route of Macbeth northward from his fortress on Dunsinane. A high-lying field near Keillar, that bears the name of Chester Park, is supposed to have been the site of a Roman camp; and a tumulus, seemingly of the ancient Caledonian times, a little way to the W, has a large standing-stone marked with rude hieroglyphics. The Earl of Wharnclyffe owns nine-tenths of all the parish, 1 lesser proprietor holding an annual value of £693, and 1 of £214. Newtyle is in the presbytery of Meikle and the synod of Angus and Mearns; the living is worth £200. The public school, with accommodation for 200 children, had (1883) an average attendance of 149, and a grant of £109, 7s. Valuation (1857) £5604, (1884) £9323, 8s., plus £4719 for railway. Pop. (1801) 718, (1831) 904, (1861) 1139, (1871) 931, (1881) 911.—*Ord. Sur.*, shs. 48, 56, 1868-70.

Newtyle Hill, a wooded eminence (996 feet) in Caputh parish, Perthshire, on the left side of the river Tay, $1\frac{1}{2}$ mile E by S of Dunkeld. Its summit commands a brilliant near view of Dunkeld, Birnam, and Murtly, and fine distant views northward to the Grampians, southward to Perth. Newtyle farm around it contains two ancient standing-stones and the site of a cross erected by one of the Deans of Dunkeld to mark the spot at which pilgrims caught their first view of Dunkeld Cathedral.—*Ord. Sur.*, sh. 48, 1868.

Niddrie-Marischall, a mansion in Liberton parish, Edinburghshire, on the left bank of Burdiehouse Burn, 2 miles S by W of Portobello and $3\frac{1}{2}$ ESE of Edinburgh. The park is entered by an ivy-clad archway; and the house itself is a fine old baronial building, bearing date 1636, but modernised towards the close of last century by William Adam. Lord Cockburn tells in his *Memoirs* how for many years almost all his 'Saturdays, Sundays, and holidays were passed at Niddrie. I sighed over every holiday as lost that was not. Part of the house is very old, but it never had any architectural or much historical interest. But the garden! the garden! unseen and unseeing, it was a world of its own. That unvalled flat space of only four or five acres contained absolutely everything that a garden could supply for "man's delightful use;" peaches and oaks, gravel walks, and a wilderness "grotesque and wild," a burn and a bowling-green, shade and sun, covert and lawn, vegetables and glorious holly hedges—everything delightful either to the young or the old. Eden was not more varied. And Eden is well worthy of its reputation if it was the scene of greater happiness. After a long and unbroken course of domestic security and pleasure, death began, about 1815, to extinguish, and

circumstances to scatter, the gay and amiable family of which I was virtually a member; and I have since seldom revisited the generally silent walls. But the days of Niddry are among the last I can forget.' Hugh Miller, too, worked as a mason for ten months here in 1823, and lodged in a one-roomed cottage near the village of Niddry Mill. In *My Schools and Schoolmasters* he describes his rambles in the Niddry woods, his introduction to the Carboniferous System, the lately unannounced collier slaves, his comrades' debauchery, and their unsuccessful strike. Near the W end of the house stood St Mary's chapel, founded by Robert Wauchope in 1387, and demolished by a mob from Edinburgh in 1688. This Robert was probably the first of the Wauchopes of Niddry-Marischall, illustrious members of which family were Gilbert, who sat in the Reformation parliament of 1560, and John, a distinguished Covenanter, who was knighted by Charles I. in 1633. William John Wauchope, Esq. (1841-82), the late proprietor, held 670 acres in the shire, valued at £2894 per annum. A fire in Niddry colliery cost seven lives, 24 May 1884.—*Ord. Sur.*, sh. 32, 1857.

Niddry Castle, a ruined baronial fortalice in Kirkliston parish, Linlithgowshire, near the Union Canal and the Edinburgh and Glasgow line of the North British railway, 1 mile SSE of Winchburgh. A strong square tower, roofless, but otherwise fairly entire, it was hither that Lord SERON conducted Queen Mary on the night of her escape from Lochleven Castle, 2 May 1568. From Niddry she sent a messenger to ask assistance of the Court of England, and next day she rode on to HAMILTON. Niddry now is the property of the Earl of HOFFINGTON, and gives him the title of Baron Niddry.—*Ord. Sur.*, sh. 32, 1857.

Nigg (Gael. 'a nook'), a parish in the extreme NE of Kincardineshire. It is bounded N by the Dee and by Aberdeen Bay, E by the North Sea, on the S and W by Banchoy-Devenick parish, and NW by the Dee which separates it from Aberdeenshire. The boundaries are thus natural on all sides except the S and W. The greatest length, from the Dee at Torry Point on the N to the point where the boundary reaches the sea on the S, is 4 miles; the greatest breadth, from the Dee at Poll-down Mills on the W to the sea-coast on the E, is 2½ miles; and the area is 4606·584 acres, including 132·434 of foreshore and 42·283 of water. From the N and NW the ground slopes upwards to a height of 267 feet on the road W of Loirston Loch, and 275 on the road E of it. Along the coast on the E there are cliffs of from 60 to 80 feet high. The portions to the NNW and along the E are cultivated, but throughout the S there is a barren ridge covered with stony moss and heath. About half the parish is arable or under wood, and the soil of the cultivated portions varies from good black loam to clay, the former being the more plentiful. The underlying rock is mostly granite. The drainage is effected by a number of small rills flowing either to the Dee or to the sea. In the SW of the parish is Loirston Loch (2 by 1 furl.), covering about 20 acres. The northern portion of the parish is formed by the promontory of Girdleness with portions of the works of Aberdeen Harbour, Girdleness Lighthouse, and Torry Point battery. The two former are noticed in connection with Aberdeen and Girdleness. The latter was erected in 1831-33 to protect the mouth of the Dee. To the N of Girdleness Lighthouse is Greyhope Bay, which was, in 1813, the scene of the wreck of the whaler *Oscar*. To the S of the lighthouse is Nigg Bay, ½ mile wide across the mouth and ¾ mile deep. It has also the names of Fiack, Fittack, or Sandy Bay. Further S the coast is rocky and irregular, with long narrow creeks; and at several places there are caves, though none of them are of any great size. To the W of the Bay of Nigg is the old church of St Fittack, with a belfry bearing date 1704. The main building is older, but only the ruined and roofless walls now remain. Some distance S of the church, a spring dedicated to St Fittack was long held in high veneration, and was the scene of superstitious observances which, in the early part of the 17th century,

seem to have caused much tribulation of spirit to the kirk-session of Aberdeen. Frequent ordinances forbid the inhabitants to resort to it, and in 1630 'Margrat Davidson, spous to Andro Adam, was adjudged in an unlay of fyve poundis to be payed to the collector for directing hir nowriss with hir bairne to Sanct Fiackres well, and wessing the bairne thairin for recovrie of hir health; and the said Margrat and her nowriss were ordanit to acknowledge thair offence before the session for thair fault, and for leavinge ane offering in the well. The said day it was ordanit be the hail session in ane voce That quhatsumever inhabitar within this burgh beis fund going to St Fiackres well in ane superstitious maner for seiking health to thameselfis or bairnes, shall be censured in penaltie and repentance in such degree as fornicatoris ar efter tryall and conviction.' All penalties seem, however, to have been ineffectual, for pilgrimages were made to it by the Aberdeen citizens down to the beginning of the present century. 'In the month of May,' says the then minister of the parish, writing in the *Old Statistical Account* in 1793, 'many of the lower ranks from around the adjucent city come to drink of a well in the bay of Nigg, called the Downy-well; and, proceeding a little farther, go over a narrow pass, *The Brig of ae Hair*, to Downy-hill; the latter being an eminence rising to a height of 214 feet above sea-level and about ¼ mile S of Nigg Bay. Of St Fiackre—the Celtic form of whose name was Ma Futac, whence the ordinary form St Fittack—but little is known. The ordinary accounts make him the son of Eugenius IV., king of Scotland, and place him in the first half of the 7th century. Adopting a religious life, he went to France and had a hermitage at Breuil in Brie. The French word *fiackre*, meaning a hackney-coach, is said to be taken from his name, either because such vehicles were first introduced for the convenience of pilgrims going from Paris to visit his shrine, or, according to another account, because the first person to hire out coaches was one Nicolas Sauvage, whose house in the *Rue Saint-Martin*, in Paris, was marked by an image of St Fiackre. Mention of the church of Nigg occurs onwards from the time of William the Lyon, who granted it to the Abbey of Arbroath. Alexander II. followed up the grant by another of the whole lands of Nigg, and with the Abbey of Arbroath they remained till the Reformation, when the superiority passed to the Panmure family, with whom it remained till 1786, when part of it passed to the town of Aberdeen and Menzies of Pitfoddes. Names connected with the ecclesiastical possession of the parish still remain at Abbot's Walls, near the centre of the W side of the parish, and at Spital Burn. The former used to be known as Abbot's Hall, and near it was one of the residences of the Abbot of Arbroath. The *Old Statistical Account* mentions the ruins of it as having been recently removed. The burn probably takes its name from having had near it a hospital or hospice for pilgrims and travellers. The villages in the parish are Torry, Cove, Burnbank, and Charlestown. At Torry there was formerly a chapel dedicated to St Fotinus, and in 1495 James IV., on account of the great reverence he had 'beato martiri Sancto Thome ac Sancto Fotino patrono ville de Torry,' erected the village into a free burgh of barony, a privilege which has, however, been allowed to lapse, and as the place seems now destined to become merely a suburb of Aberdeen, it will probably never be revived. The inhabitants of Torry are mostly fishermen, and in 1882 they possessed 28 first-class, 48 second-class, and 5 third-class boats, with 160 resident fisher men and boys. There is a Free church, and access is had to Aberdeen by a handsome granite bridge over the Dee, erected in 1876-77. There is a branch post office under Aberdeen, and not far off is a large brickwork Cove, which is separately noticed, had, in 1882, 13 first-class, 12 second-class, and 5 third-class boats, and 98 resident fisher men and boys. Burnbank is on the coast about a mile N of Cove. In 1882 it had 6 first-class, 4 second-class, and 1 third-class boat, and 24 resident fisher men and boys. Charlestown is inland, 1 mile WSW of Cove. The

parish is traversed by the great coast road from Aberdeen to Dundee, which, crossing the Dee by the bridge at Torry, or by the Wellington Suspension Bridge farther up the river, passes S through the centre; while another branch, which crosses the Dee at Bridge of Dee SW of Aberdeen, runs along the western border. The Caledonian railway passes northward along the coast till close to Nigg Bay, whence it curves westward across the Dee to Aberdeen, the total length of the Nigg portion being 5 miles. There is a station at Cove. The only mansion is Loirston House.

The parish is in the presbytery and synod of Aberdeen, and the living is worth £256 a year. The present church, near the centre of the parish, is a good granite building, erected in 1829 at a cost of £1800, and containing 900 sittings. It has a high square tower, which is seen for a long distance all round. Cove public, Torry public, and Cove Episcopalian schools, with respective accommodation for 111, 313, and 104 pupils, had (1883) an average attendance of 65, 214, and 59, and grants of £38, 8s. 3d., £183, 9s., and £34, 7s. 6d. Nine proprietors hold each an annual value of £500 and upwards, 3 hold each between £500 and £100, and 2 hold each between £50 and £20. Valuation (1856) £8559, (1884) £14,390, 14s., plus £2884 for railway. Pop. (1801) 1148, (1831) 1684, (1861) 2074, (1871) 2348, (1881) 2935. — *Ord. Sur.*, sb. 77, 1873.

Nigg, a parish in the NE of Ross-shire, on the N side of the entrance to the Cromarty Firth. It contains a village of the same name. The parish is bounded NNW, N, and NE by Fearn, E and ESE by the Moray Firth, N by the entrance to the Cromarty Firth, W by Cromartyshire, and NW by Logie-Easter. Except on the NNW, N, and NE the boundary is natural, that along the NW and W being formed by the burn that passes Shandwick House (Logie-Easter) and the channel called 'the Pot,' formed by the course of this burn over the Sands of Easter Ross or the Sands of Nigg at low water. The greatest length of the parish, from Shandwick village on the NE to the ferry at the entrance to the Cromarty Firth on the SW, is $5\frac{1}{2}$ miles; the greatest breadth, from the boundary with Logie-Easter parish SE to the Moray Firth, is 3 miles; and the area is about 9000 acres. The indentation of the Cromarty Firth to the W of the parish, 4 miles across the mouth and 2 miles deep, is known as the Bay of Nigg. At high tide the depth of water is from 4 to 8 feet, but at low water the whole area is laid bare and becomes dry, except where the burns continue their courses over the sand to the main firth. It is frequented by ships of small burden bringing coals, lime, and slates, and exporting timber and potatoes. It abounds in shells and shallow-water fish, and supplies bait for a very large proportion of the cod and haddock fishers along the shores of the Moray Firth. Along the Bay of Nigg, to the W and NW, the ground is flat and low, and from this it slopes gradually south-eastward to the Hill of Nigg, whence it again slopes, at first ruggedly and then precipitously, downward to the shore of the Moray Firth. The Hill of Nigg is a tract of high ground extending through the whole parish, along the shore of the Moray Firth, and about 5 miles in length and $1\frac{1}{2}$ mile in breadth, with a height of from 300 to 600 feet above sea-level. It is partly covered with straggling plantations, and has on the side next the Moray Firth a front of lofty precipices, over 200 feet high. At the S end it terminates in the Northern Sutor of Cromarty, overhanging the entrance to the Firth of the same name. It belonged in ancient times to the Bishops of Ross, who had a residence in the parish, and was then called 'the Bishop's forest.' Of the whole parish about 3500 acres are under cultivation or wooded, and the rest of the area is either pasture land or waste. The soil of the arable portions is a good black loam, becoming lighter near the coast, and from 1 foot to 4 feet deep. Along the Hill of Nigg the soil is thin and cold. The underlying rocks are granitic gneiss, Old Red Sandstone, and on the coast at the NE corner, at Shandwick, are patches of liassic shales and limestones. There is a fine section

of the Old Red Sandstone exposed along the Northern Sutor containing two beds with fossil fishes, which were, like all those in the Cromarty district, discovered by Hugh Miller:—'Selecting,' he says in the *Cruise of the Betsy*, 'as a hopeful scene of inquiry into the splendid section under the Northern Sutor, I set myself doggedly to determine whether the Old Red Sandstone in this part of the country has not at least its two storeys of organic remains, each of which had been equally a scene of sudden mortality. I was entirely successful. The lower ichthyolite bed occurs exactly one hundred and fourteen feet over the great conglomerate, and three hundred and eighteen feet higher up I found a second ichthyolite bed, as rich in fossils as the first, with its thorny Acanthodians twisted half round, as if still in the agony of dissolution, and its Pterichthyes still extending their spear-like arms in the attitude of defence. The discovery enabled me to assign to their true places the various ichthyolite beds of the district. Those in the immediate neighbourhood of the town [of Cromarty], and a bed which abuts on the lias at Eathie, belong to the upper platform; while those that appear in Eathie Burn, and along the shores at Navity, belong to the lower. The chief interest of the discovery, however, arises from the light which it throws upon the condition of the ancient ocean of the Lower Old Red, and on the extreme precariousness of the tenure on which the existence of its numerous denizens was held. In a section of little more than a hundred yards there occur at least two platforms of violent death—platforms inscribed with unequivocal evidence of two great catastrophes, which, over wide areas, depopulated the seas.' The liassic shales of Shandwick are also richly fossiliferous. The Hill of Nigg was one of the hunting-grounds of the Fions, who used to leap across the Cromarty Firth on their hunting-spears, but whose race became extinct in consequence of all their women and children having been burned to death in Glen Garry, while the men were here engaged in hunting. Two miles along the shore, northward from the Northern Sutor, is the King's Cave; while a path above, leading to the top of the precipice, is called the King's Path. It is said to take its name from the shipwreck near it of a traditional king of Denmark. His three sons, who accompanied him, were drowned, and one was buried at Nigg, another at Shandwick, and another at Hillton of Cadholl in Fearn parish, and it was at their graves that the sculptured stones at these places were erected. The Nigg stone originally stood near the gate of the parish burying-ground, but having been blown down in 1725 was afterwards fixed to the eastern end of the church. One side has a cross, with the usual knotted sculpturing and various figures of men and animals. That at Shandwick stood on the brow of an eminence, behind the village, but was blown down during a violent gale in 1847, and broken into three pieces. This also bears on one side a cross, and is very similar in style to the Nigg stone. A mile and a quarter SW of Shandwick village is a green mound, with a so-called Danish camp on the top. Near the brow of the Northern Sutor is a little green knoll called Dunskaith, on which it is said that a fort was erected by William the Lyon in 1179. The view from this point is very fine, the entire Firth of Cromarty and the rich country around lying spread out as if on a map. From other points also, along the summit, the view of the Moray Firth and its shores is equally good.

The drainage of the parish is carried off by a number of small streams. The principal mansion is Bayfield House. Besides Nigg village, at the church, the parish contains, on the extreme NE, the fishing village of Shandwick, and on the extreme SW the fishing villages of Balnabradich and Balnapaling. In 1882 Shandwick had 10 first-class, 6 second-class, and 2 third-class boats, with 45 resident fisher men and boys, while the last two had 2 first-class, 3 second-class, and 3 third-class boats, with 25 resident fisher men and boys. There is a ferry 1 mile wide connecting the S of the parish with Cromarty, and a road passes from the landing-place northward

towards Tain. Nigg station, on the Highland railway, is in the parish of Logie-Easter, and 4 miles N of the village of Nigg, which is by the ferry about 3 miles N by E of Cromarty. The parish is in the presbytery of Tain and synod of Ross; and the living is worth £380 a year. The parish church, which was built in 1626, and has since been several times repaired, contains 425 sittings. One of the Episcopal ministers of the 17th century figures in the *Answer to Scotch Presbyterian Eloquence Displayed*, as telling his parishioners that in eternity 'they would be immortalised, so that nothing could hurt them: a slash of a broadsword could not hurt you, saith he; nay, a cannon-ball would play but *buff* on you.' In 1756 the parishioners had a three years' struggle against an obnoxious presentee to the church, and when at last he had gained his cause, and four members of presbytery arrived to carry out his induction, the church was found empty. 'Not a single member of the congregation was to be seen. While in a state of perplexity what to do in such a strange condition, one man appeared who had it in charge to tell them, "That the blood of the people of Nigg would be required of them if they should settle a man to the walls of the kirk,"' after which message he departed, leaving the members of presbytery so much disturbed that they referred the whole matter back to the General Assembly, which, however, ordered the induction to be carried out. The people, after struggling on for ten years by themselves, at length left the national church and became seceders. The bold messenger was Donald Roy, an ancestor of Hugh Miller, whose gifts of prayer and even prophecy or second sight are still remembered in the north. The Free church, erected soon after the Disruption, is $\frac{3}{4}$ mile N of the Established church. One of its ministers was John Swanson, the early and intimate friend of Hugh Miller. A U.P. church, $\frac{1}{4}$ mile to the NE, built in 1871, is a Norman structure, with a square tower, and contains 500 sittings. It superseded an older and slightly larger church, built in 1803. The public schools of Nigg and Pitcalme, with respective accommodation for 100 and 85 pupils, had (1883) an average attendance of 50 and 43, and grants of £48, 13s. and £37, 17s. 6d. Six proprietors hold each an annual value of £500 or upwards. Valuation (1860) £4971, (1884) £6502, 5s. Pop. (1801) 1443, (1831) 1404, (1861) 1253, (1871) 1201, (1881) 1000.—*Ord. Sur.*, sh. 94, 1878.

Ninemileburn, a village, with a public school, in Penicuik parish, Edinburghshire, on Monks Burn, near Habbie's Howe, 4 miles SW by W of Penicuik town.

Ninewells, a mansion in Chirnside parish, Berwickshire, on the left bank of Whitadder Water, $\frac{3}{4}$ mile S by W of Chirnside village. Embosomed in woods, it is a handsome Tudor edifice of 1840-41, successor to an older mansion, which was the boyish home, though not the birthplace, of the historian and philosopher, David Hume (1711-76), and his occasional residence after his fame was won. It was the seat, too, of his nephew and namesake, Baron Hume (1756-1838), the eminent writer on criminal jurisprudence. The present proprietor, James Alexander Ross-Hume, Esq. (b. 1851; suc. 1864), holds 1024 acres in the shire, valued at £2162 per annum.—*Ord. Sur.*, sh. 34, 1864.

Nine-Weils. See **NEWEURCH**.

Nisbet, a small village in Crailling parish, Roxburghshire, near the left bank of the river Teviot, with a station on the Jedburgh branch of the North British railway, 3 miles NNE of Jedburgh station. See **CRAILLING**.

Nisbet, a fine old castellated mansion, belonging to Lord Sinclair, in Edrom parish, Berwickshire, near the left bank of Blackadder Water, 2½ miles SSE of Duns.—*Ord. Sur.*, sh. 26, 1864. See **HERDMANSTON**.

Nith (*Novius* of Ptolemy), a river mainly of Dumfriesshire, but partly also of Ayrshire and Kirkcubrightshire. It rises at an altitude of 1400 feet above sea-level, between Enoch Hill (1365 feet) and Prickeny Hill (1676), 9 miles S of the town of Cunnock. Thence it flows 70½ miles with a general south-south-easterly course, till, after for

10½ miles expanding into an estuary with a channel 70 to 500 yards wide, it falls into the Solway Firth, 14½ miles S by E of Dumfries, and 6 WNW of Silloth in Cumberland. As the crow flies the distance from source to mouth is only 42½ miles. The first 15½ miles of its course belong to Ayrshire; the last 16½ divide Dumfriesshire from Kirkcubrightshire. It bounds or traverses the parishes of New Cunnock, Kirkcounel, Sanquhar, Durisdeer, Penpont, Morton, Closeburn, Keir, Dunscore, Kirkmahoe, Holywood, Dumfries, Terregles, Troqueer, Caerlaverock, Newabbey, and Kirkebean; and in our articles on these seventeen parishes full details are given as to the towns, villages, mansions, ruins, and other features of its course. Its principal affluents are Afton Water, Kello Water, Crawick Water, Euchar Water, Minnick Water, Enterkin Burn, Carron Water, Cample Water, Scar Water, Dunceow Burn, Cluden Water, Cargen Pow, and Newabbey Pow, all thirteen of which are noticed separately. The Nith contains salmon, sea-trout, trout, herling, and grayling, but is not so good a fishing stream as the Esk, the Liddel, or the Annan. Like these it has been affected by the salmon disease, 222 salmon having been found dead and 58 destroyed between 1 Jan. 1881 and 31 March 1882. The Nith, till after it gets away from Ayrshire, is one of the most cheerless of streams, sluggish and shallow, seldom more than 15 feet wide, deeply fringed with moss, and rarely graced with plantation, greensward, or even a bold bank, to relieve the dreary monotony of its moorland landscape. Its banks, till below Sanquhar, though quite redeemed from the dreariness which characterises them in Ayrshire, are simply agreeable, consisting chiefly of a verdant vale overlooked by uplands of varied contour but little grandeur; lower down, they are exquisitely rich in many varieties of landscape, now exhibiting a narrow acclivitous pass, diversified with wood, escarpment, and rock, now bursting into an expanse of valley, blooming as a garden, and screened with warm-coloured and finely outlined mountain-heights, and now presenting such rapid alterations of slope, undulation, haugh, and hill, as charm and surprise the eye, by the mingled wealth and number of the transitions. For 3½ miles after receiving the Scar, the river runs between the beautiful grounds of Keir, slowly rising like a green and softly wooded gallery on the one hand, and the fine expanse of the luxuriant plain of Closeburn, darkly overhung by the Queensberry heights, on the other. It now becomes pent up for about 2 miles by the low and diversified terminations of spurs from the mountain-ranges on the background; and, while traversing this space, it is decked with mansion, park, wood, and lawn, amidst nooks and recesses, hilly abutments and diversified slopes, till picturesqueness becomes profuse and almost excessive. On its clearing this sort of gorgeous pass—in the course of which the great Nithsdale road crosses it by the well-known 'Auldgrith Brig,' which Carlyle's father helped to build—the hills recede from it in sweeps, describing the arc of a circle; and while they form soft and finely-featured screens which terminate on the one side in the low green heights of Mouswald, and on the other in the bold grand form of Criffell, they enclose an oval plain of from 6 to 8 miles in breadth. Along the middle of this, the joyous and pebbly Nith runs, amidst constant verdure, multitudinous gardens, and other elements of lovely landscape, to the sea. Nowhere is the magnificence, or at least the rare and romantic character, of the famous Solway 'bore' displayed with finer effect than in the estuary of the Nith. Owing principally to the tide's impetuosity, the navigation of the river is difficult to seamen unacquainted with its peculiarities; but it has been greatly improved. (See **DUMFRIES**.) The valley, all down from New Cunnock to Dumfries, principally along its W side, and generally very close to the stream, is traversed by the **GLASGOW AND SOUTH-WESTERN RAILWAY**.—*Ord. Sur.*, shs. 14, 15, 9, 10, 6, 1863-64.

Nithsdale, the western one of the three great divisions of Dumfriesshire, takes name from its being drained

and traversed by the river Nith. It anciently comprehended the whole basin of the Nith, together with some tracts beyond that basin; and it was then, for some time at least, called Strathnith or Stranith. Its limits varied at different times, and seem never to have been exactly defined. At present it excludes all the parts of the Nith basin within Ayrshire and Kirkcudbrightshire, yet is understood to include tracts in Dumfriesshire exterior to that basin, and drained by Loch Water. But it is not a political division of territory, and does not require to be precisely defined. Its chief features, from the boundary of Dumfriesshire with Ayrshire down to the influx of the Nith into the Solway Firth, have already been noticed in our account of the river Nith. The soil of the greater part of its arable lands is light and dry; capable, except in frost and snow, of being ploughed at any period during winter; and well-fitted for an early reception of seed. In most of the other two divisions of the county the soil is wet, and, when ploughed early in winter, is so apt to run into grass, and to have corn sown on it choked, that it cannot, without imprudence on the part of the husbandman, receive the seed till spring. One plough on a farm in Nithsdale will, in consequence, turn up nearly as much ground as two will in the wet parts of the other districts. Owing to so important a difference, the Nithsdale farms are, in general, much larger than those of Annandale and Eskdale.

In the reign of David I., Nithsdale, then called Stranith, was held by a Celtic chief of the name of Dunegal, from whom genealogists trace the descent of the celebrated Randolph, Earl of Moray. Four sons of Dunegal seem, after his death, to have shared his extensive possessions of Stranith; only two of whom—Randolph and Duvenald—can now be traced. Randolph, the eldest son, obtained the largest share, and, as head of the family, was superior of the whole, transmitting the designation of Lord of Stranith to his posterity. He married Bethoc, the heiress of lands in Teviotdale, and gave his name Randolph as a surname to his descendants. Thomas Randolph, his grandson, who was sheriff of Roxburgh in 1266 and chamberlain of Scotland from 1267 to 1278, married Isabel, eldest daughter of Robert Bruce, Earl of Carrick, and sister of Robert Bruce, the restorer of the monarchy. Their son was the famous Sir Thomas Randolph of Stranith, who, for his eminent services, obtained from his uncle the earldom of Moray, the lordship of Annandale, and other estates. Duvenald, the younger son of Dunegal of Stranith, appears to have obtained the barony of Sanquhar, the lands of Morton, and some other possessions in Upper Nithsdale; and he was probably the Duvenald who, along with Ulrich, led the men of Galloway at the Battle of the Standard in 1138, and fell in the conflict. His descendants assumed, in the 13th century, the surname of Edgar from the name of his son; and they continued in the 14th century to hold various lands in Dumfriesshire. Richard Edgar, during the reign of Robert Bruce, possessed the castle and half the barony of Sanquhar, with some adjacent lands; and Donald Edgar obtained from David II. the captainship of the clan Macgowan in Nithsdale.

Other considerable families were possessed at an early period of lands in the district. Sir John Comyn held the manors of Dalswinton and Duncow; whilst the progenitors of the Lords Maxwell possessed Caerlaverock, and held out its ancient castle against many a stout siege. Under Robert II. Nithsdale obtained new superiors. Sir William Douglas, natural son of Sir Archibald Douglas, Lord of Galloway, wedding Giles, the daughter of the king, received with her a grant of Nithsdale, and was constituted sheriff of Dumfries. His only child, his daughter Giles—called 'the Fair Maid of Nithsdale,' who inherited her father's lordship and sheriffdom—married, first, Henry Sinclair, Earl of Orkney, and next, in 1418, Alexander Stewart, the son of James, who was the brother of Robert II., and had obtained from Robert Bruce the lands of Durisdeer. Her son, by her first marriage, was William, Earl of

Orkney, who inherited Nithsdale and the sheriffship of Dumfries, but who, in 1455, was induced to resign them to James II. for the earldom of Caithness. Sir Robert Crichton of Sanquhar in 1457 is styled Vicecomes de Nithsdale, and again in 1459 sheriff of Nithsdale; and his son Robert obtained in 1464 from James III. a confirmation of the sheriffship, and in 1468 a grant of the office of coroner of Nithsdale. The two offices of sheriff and coroner, between the Restoration and the Revolution, passed into the possession of the Douglasses of Drumlanrig. This family—whose eventual identification with the Scotts of Buccleuch has placed under the shadow of the united ducal coronets of Buccleuch and Queensferry such magnificent portions of Nithsdale, Eskdale, Teviotdale, Ettrick-forest, and other districts in the Border counties—continued to hold the offices till the abolition of hereditary jurisdictions. In 1620, Robert, eighth Lord Maxwell, was created Earl of Nithsdale. William, fifth Earl, taking part with the Pretender in 1715, was attainted, and condemned to be beheaded; but, through the address and courage of his Countess, the Lady Winifred Herbert, a daughter of the Marquis of Powys, he made an extraordinary escape from the Tower.

Nithhill, a village in the SE corner of Abbey-Paisley parish, Renfrewshire, near the right bank of Levern Water, with a station on the Glasgow, Barrhead, and Kilmarnock Joint railway, 2 miles NE of Barrhead, and $4\frac{1}{2}$ WSW of Glasgow. It has a Free church, a Roman Catholic school, and chemical works (1807); and it is largely inhabited by workers in neighbouring coal-mines and quarries. Pop. (1841) 821, (1861) 1029, (1871) 986, (1881) 1001.—*Ord. Sur.*, sh. 30, 1866.

Nivingston, an estate, with a mansion, in Cleish parish, Kinross-shire, 3 miles SSW of Kinross.

Noblehill, a village in Dumfries parish, Dumfriesshire, 1 mile E of the town.

Noblehouse, a farm in Newlands parish, Peeblesshire, 3 miles ESE of Linton, and 17 S by W of Edinburgh. Once a famous posting establishment and inn, it now has a post office, with money order, savings' bank, and telegraph departments.

Nochty Water, of a rivulet in Strathdon parish, SW Aberdeenshire, formed by two head-streams at an altitude of 1263 feet, and running $4\frac{1}{2}$ miles south-eastward to the Don at Invernochty, opposite Strathdon church.—*Ord. Sur.*, sh. 75, 1876.

Noddle Burn. See LARGES.

Noe. See GLENNOE.

Notland Castle, a ruin near the northern coast of Westray island, Orkney, 20 miles N of Kirkwall. By some conjectured to have been built by Sir Gilbert Balfour, as a refuge for the Earl of Bothwell in the time of Queen Mary, it much more likely was built by the governor, bishop, or princely prelate Thomas de Tulloch in 1420, towards the close of which century it was besieged by Sir William Sinclair of Warseter. It was besieged again and captured by Earl Patrick Stewart, and gave refuge to the last surviving officers of the Marquis of Montrose's army, when it became a ruin, periodically illuminated in celebration of the births and marriages of the Balfours. Offering the mingled character of palace and fortress, but seemingly never completed, it now presents the appearance of a huge grey oblong pile, with ranges of embrasures resembling tiers of port-holes, and with attached dismantled masses of masonry. Its open quadrangle is entered by an ornamental arched port; and it includes, on the ground flat, a great hall 62 feet long and 24 wide, overarched with a strong stone roof about 20 feet high.

Noness, a coast village in Dunrossness parish, Shetland, 2 miles SSE of Sandwick.

Noop or Noup, a small bay and a headland on the NW coast of Westray island, Orkney. With a breadth across the entrance of $4\frac{1}{2}$ miles, and a depth thence to its inmost recess of $1\frac{1}{2}$ mile, the bay looks northward so as to be fully exposed to the fury of the Atlantic, and is crossed by a reef, the Bow of Rackwick, which has

proved fatal to many a vessel. Noop Head, flanking the W side of the bay, projects north-westward from an eminence called Noop Hill, has a bold beetling character, and is sometimes designated the Stack of Noop.

Noop or Noup of Noss. See NOSS.

Noraside, an elegant mansion in Fearn parish, Forfarshire, 3 furlongs from the left bank of Noran Water, and 7 miles W by N of Brechin.

Noran Water, a Forfarshire stream, of Tannadice parish mainly, but partly also of Fearn and Caralidon. It is formed, at an altitude of 890 feet above sea-level, by the confluence of two rivulets, the longer of which, Trusty Burn, rising at 2160 feet, runs 3 miles south-eastward. Noran Water itself flows 10½ miles south-south-eastward and east-south-eastward, till, at a point 4½ miles WSW of Brechin and 140 feet above the sea, it falls into the river South Esk. It traverses picturesque scenery, and its clear rapid waters yield capital trout-fishing.—*Ord. Sur.*, sh. 57, 1868.

Norby, a village in Walls parish, Shetland, near Sandness, and 32 miles WNW of Lerwick.

Nornandykes, a military antiquity in the SW corner of Peterculter parish, Aberdeenshire, crowning a gentle eminence on the N side of the river Dee, opposite several fords of the river, 7 miles WSW of Aberdeen. It seems to have been a Roman camp, 938 yards in length and 453 in breadth; is wrongly believed by some antiquaries to occupy or indicate the site of the ancient town of Devana; and has been so obliterated, as now to be represented by only a small reach of dyke and ditch, forming part of the fence of an adjoining field.—*Ord. Sur.*, sh. 77, 1873.

Norman's Law. See ABBIE.

Norries Law. See LARGO.

Norrison, a *quoad sacra* parish in Monteith district, S Perthshire, containing THORNHILL village, 4 miles WSW of Doune, and 9¼ WNW of Stirling. Constituted in 1877, it is in the presbytery of Dunblane and the synod of Perth and Stirling. Its church, which originated in an endowment by Gabriel Norrie about the year 1670, was rebuilt in 1812, and contains 870 sittings. There is also a Free church of Norrison. Pop. (1881) 1032, of whom 635 were in the detached section of Kincardine, 270 in Kilmadock, and 127 in Port of Monteith.—*Ord. Sur.*, sh. 39, 1869.

North-Barr, Renfrewshire. See INCHINNAH.

North Berwick. See BERWICK, NORTH.

North British Railway, a railway whose name was first applied only to the line from Edinburgh to Berwick, and now forming the largest railway organisation, as regards mileage, in Scotland. The earliest sections of the North British railway, as now consolidated, were the Monkland and Kirkintilloch, the second railway in Scotland, opened in 1826, and the Ballochney, opened in 1828, which, with the Slamannan, opened in 1840, were amalgamated as one line in 1848, were afterwards amalgamated with the Edinburgh and Glasgow, and came to the North British in 1865, as subsequently noticed. A more direct portion of the original North British was the Edinburgh and Dalkeith, which ranks as the fifth railway in point of time in Scotland, and which was opened in 1831. This line obtained some celebrity under its title of the 'Innocent Railway,' given to it by Dr Robert Chambers in one of his essays, indicating its safety and slow-going character as com-

pared with lines on which locomotives were used. 'In the very contemplation of the innocence of the railway you find your heart rejoiced. Only think of a railway having a board at all the stations forbidding the drivers to stop by the way to feed their horses!' This railway, running from Edinburgh to Dalkeith and Dalhousie, with branches to Leith and Fisherrow, was 17½ miles in length. Prior to its absorption by the North British in 1845, it was used chiefly for the conveyance of coals and farm products, but had also a regular service of passenger omnibuses, drawn by horses. The branch to Leith, and a part of the branch to Fisherrow, have been put out of use, and form wooded mounds that may some day puzzle the antiquary. The next portion of the system was the Edinburgh and Glasgow, opened in 1841, and amalgamated with the North British in 1865, having previously absorbed the Edinburgh and Bathgate line (authorised in 1846) and the three early railways previously named. In 1842 the Edinburgh, Leith, and Granton railway was opened, and this was amalgamated with the Edinburgh and Northern on the opening of that line from Burntisland in Fife to Perth and Tayport (for Dundee) in 1847, the latter being absorbed in the North British in 1862, and being known as the Edinburgh, Perth, and Dundee for the intervening fifteen years. The railway which gives its title to the system was opened in 1846, and consisted of the main line, 58 miles in length, and the branch to Haddington, 5 miles. In the previous year the powers of the Edinburgh and Hawick Company had been acquired before any steps at construction were taken, and this line (of which the utilised section of the 'Innocent Railway' formed a part) was opened as an integral portion of the North British. By the formation of the Border Union railway, Hawick to Carlisle and the Border Counties, Hexham in Northumberland to Riccarton (forming a junction there with the preceding), and by the construction of many branches, and the absorption of many lines independently constructed, the North British became the large organisation embraced under that name.

The company, as consolidated, serves the whole of the SE of Scotland from the Tay to the Tweed, and stretches to several westerly points, besides holding in the N a half share of the Dundee and Arbroath railway, the lines by the coast to Montrose and Bervie, and running powers to Aberdeen. Its southern termini are Berwick, Hexham, Carlisle, and Silloth, and the other terminal points to which it reaches are Airdrie, Wishaw, Hamilton, Glasgow, Helensburgh, Larbert, Perth, and Bervie. Besides this there are a number of branch and cross lines that fill up the scheme, such as the branches to Kelso (where the Berwick branch of the North-Eastern railway is joined), to Langholm, Jedburgh, and Selkirk; the line from Newtown St Boswells to Earlston and Duns, through Berwickshire to Reston on the main line; the branches to Gretna, Port Carlisle, and Silloth; and the line running from Galashiels to Innerleithen and Peebles, with branch to Dolphinton, and returning to main line at Eskbank. There are also short lines to Penicuik, Roslin, and Polton; to North Berwick, Haddington, Macmerry, Musselburgh, and Fisherrow harbour; and the connecting link between South Leith and Portobello. Those branches are all S of the Forth, in connection with the main and Carlisle lines. Edinburgh forms a central point in the system, at which all the main lines converge. Westward, the lines are to Glasgow, to South Queensferry (soon to form a part of the main route N on the completion of the Forth Bridge); branches from the main Glasgow line to Bo'ness, Grangemouth, and Larbert, from the last of which the Company holds running powers to Perth; and the southern route to Glasgow (formed out of the Bathgate railway and late westward continuations), with lines through the coal districts of Airdrie and Slamannan. The company possesses a half share of the City of Glasgow Union railway, and is now (1884) constructing a suburban connection in Glasgow, largely underground, the object of the latter being both to promote local city traffic and to obtain a quicker route from Helensburgh, etc., to the chief station in

Seal of North Berwick.

the city. The lines running immediately out of Glasgow are those to Helensburgh, Maryhill, Strathblane, Killearn, etc. The latest addition here is the line to Aberfoyle, through the 'Reh Roy' country. A branch runs from Dumbarton to Balloch (Jamestown) on the shore of Loch Lomond, and there joins the Forth and Clyde line, from Balloch through the Buchanan country to Stirling, made in 1854, and leased to the North British in 1871. The company owns the line from Stirling to Dunfermline and Thornton (with branch to Canbus and Alva), also from Alloa by Dollar and Kinross to Ladybank, the main route from Burntisland to Perth and Tayport (for Dundee), the East of Fife line from Thornton to Anstruther, a branch from Leuchars to St Andrews, a branch from the same junction to Newport to join the Tay Bridge, and a line between Newport and Tayport. The Anstruther and St Andrews railway, when complete, will give railway communication to Crail and the East Neuk of Fife. From the scattered nature of the numerous branches, the working of the line is of an involved and intricate nature, and although the mileage of line is the largest in Scotland, the revenue of the railway is less than that of the Caledonian railway. The railway, at the beginning of 1884, consisted of 425½ miles of double line, 570 miles of single line, 32 miles of the Union Canal (which had been purchased by the Edinburgh and Glasgow in 1848), and ferries over the Forth at Queensferry and Burntisland, and over the Tay from Tayport to Broughty Ferry, about 8 miles in all. In addition to this the company work other lines of 57½ miles, and run trains over 122½ miles of 'foreign' railways, making a total of over 1200 miles of public communications directly or partly in the control of the company. At January 1884 the capital expenditure of the company amounted to £32,533,313, consisting of shares £24,456,525, debenture stocks £6,145,933, loans £1,686,691, premiums received on issue of stock £231,040, and balance due £13,122. The remarks made on the capital of the Caledonian Railway Company (vol. i., p. 219) apply equally to this account of capital, and need not be repeated. The actual money spent on the North British railway probably does not amount to thirty millions.

In the half-year last reported the company carried 827,804 first class, 354,525 second class, and 5,085,066 third class passengers, making, with 7988 season tickets, a total of 9,275,383 passengers, yielding, with mails and parcels, a revenue of £489,697. The goods and mineral traffic, with live stock, yielded a revenue of £835,801, giving a total revenue of 1½ million of money for the half-year. This traffic required the services of 573 locomotive engines, 1754 passenger vehicles, 32,062 waggons of various kinds, besides steamers at Burntisland, Queensferry, and Tayport, to conduct the ferry traffic. Including the steamer passages, this plant traversed, in the passenger department, 2,407,293 train miles, and in goods service, 3,273,276 train miles, being a total of 5,901,177 miles. The revenue earned amounted to 54-94d. per train mile, the rate being 45-99d. in the passenger traffic and 61-99d. in the goods traffic. The affairs of the company are administered by a board of thirteen directors.

The outline of the railway given in the foregoing brief narrative of its origin and extent shows that the company commands a large and important district. As a local line it has entire control of the counties of Berwick, Roxburgh, Haddington, Edinburgh, and Fife, and it competes with the Caledonian for through or local traffic at the principal places in Scotland. Owing the shortest and most level route between Edinburgh and Glasgow, as well as a subsidiary route by Bathgate and Coatbridge, it offers the best means of communication between these cities, but under an arrangement made when the Tay Bridge was projected, the traffic between these places is divided between the companies in fixed proportions without reference to the actual number carried by each. As regards London, the North British forms an integral part of the East Coast route by York, Newcastle, and Berwick, completed in 1850 when the Queen opened the

Victoria bridge at Berwick; and the 'Flying Scotsman' between Edinburgh and London, performing the distance between the cities in 9½ hours, is one of the fastest trains in the world. Through the line *via* Hawick to Carlisle, the North British also forms a part of the Midland route to England; the trains northward from London, etc., forking at Carlisle, westward by the Glasgow and South-Western, and eastward by the North British. Through Fife, besides a monopoly of local service, the company maintains trains to Perth and the north, the ferry, however, rendering this route but little favoured by through travellers. A better competition with the north is maintained by a special service of trains to Perth *via* Stirling, under the running powers conferred on the company when the Scottish Central, the neck of the railway system of Scotland, was absorbed in the Caledonian. In the same way, a rival service is maintained to Aberdeen over the Dundee and Arbroath and Arbroath and Montrose lines, with running powers beyond, the last secured to the company on the absorption of the Scottish North-Eastern by the Caledonian. The rivalry of the two companies is, in brief, the principal feature of Scottish railway organisation, the public reaping the benefit in numerous and rapid trains, and keen competition for goods and mineral traffic—a rivalry not always beneficial to the shareholders, but of late years having been modified to their manifest advantage.

In the construction of the North British, there have been many considerable engineering works, including the great bridges over the Tay and the Forth to be subsequently noticed. The original line, Berwick to Edinburgh, presents no extensive works, though offering to the traveller some highly picturesque glimpses as it touches the sea near Berwick and at Dunbar, and passes the defile of Peasebeg. The Border Counties line, from Hexham in Northumberland to Riccarton (with branch to Rothbury and Morpeth), takes the traveller through a district of great interest, and climbing over the Cheviot Hills crosses the Border at a high elevation. From Carlisle northward to Hawick the line is not important in any engineering sense, but in the ascent and descent of the watersheds and the passage of Whitrope tunnel the line shows gradients and curves which rendered the use of 'bogies' engines a matter of necessity in working the fast express trains. The summit-level at Falahill is frequently in winter the scene of obstructions from snow drifts. As this line passes through the Scott country and the scenes of Border story, it attracts large numbers of visitors annually, especially to Melrose (for Melrose and Dryburgh Abbeys and Abbotford), Kelso, Jedburgh, etc., also to Selkirk, Innerleithen, and Peebles for angling in St Mary's Loch and the many fine streams throughout the district, and on the local lines to Roslin Chapel, etc. Between Edinburgh and Glasgow, the main line is a notable and costly engineering work, it having been made before the power of locomotives to overcome gradients and curves was properly understood. It includes two extensive stone viaducts over the Almond and Avon, and the cuttings and tunnel near Winchburgh were made at immense cost. The trains suffer from delay in entering Glasgow by a very long tunnel with an incline so steep that it must be worked by a rope and stationary engine. To overcome this delay as regards the Dumbartonshire and local Stirlingshire traffic, the suburban route in Glasgow already described was projected. The Edinburgh and Glasgow line passes close to Linlithgow, a favourite resort to visit the royal palace there, but in too many places, particularly at Falkirk, the line avoids the towns, partly from the desire to make straight as well as level runs on the railway, and partly from the idea in those early times that the vicinity of a railway was not desirable. The town of Falkirk is best reached by the Grahamston station on the Larbert junction line, the station being actually in the town, while that on the main Glasgow line is about 2 miles distant. At Cowlands the company maintains large engineering and carriage building works, where about 2000 persons are employed. The Fifeshire section of the system is devoid of engineering importance,

but at the ferry between Granton and Burntisland there is an ingenious contrivance perfected by Sir Thomas Bouch in 1851, under which goods trains are shipped and unshipped at any state of the tide on large steamers built for the purpose. A movable platform, level above and diagonal below, is raised or lowered on a sloping face to the necessary level, and from it flying booms in pairs carry the rails forward to meet the stern of the vessel. The steamers used are large and broad, and are built with separate engines for each paddle, so as to leave the centre of the deck free to receive waggons on several lines of rails over its whole length. The movable platform is raised or lowered by steam, and the waggons, in trains of five or six, are run on and off by chains worked by the stationary engine. The first vessel, the *Leviathan*, built by Napier of Glasgow, is still in use, but other and larger 'floating railways' have since been built. With the exception of such slight accidents as are perhaps inevitable in working such a system, it has been used daily in all weathers, and with unqualified success during the whole period since it was constructed. A project to adapt the same system at Queensferry was made in 1861 by Bouch, but was not carried out, and then efforts were directed towards bridging the two rivers. Those works are so intimately associated with the engineer who first devised them that their story may best be told in the words of the memoir of that distinguished engineer, published by the Institution of Civil Engineers after his death in 1880:—

'After the floating railway, already described, had come into operation, Mr Bouch's attention was drawn to the desirability of having a more direct connection between the north and south of Scotland, by carrying uninterrupted railway communication across the two estuaries of the Forth and the Tay. Taking the Forth first, besides laying out the scheme for a railway ferry at Queensferry, he projected the Glasgow and North British railway, plans for which were lodged in 1864, and in which it was proposed to cross the estuary by a fixed bridge. This was proposed to be 3 miles long, and was to extend from the south side to a point called the Stacks, about a mile above Charleston on the Fife shore, the piers consisting of wrought-iron cylinders supported on a wide base on the silt bottom of the river. An experimental pier for this bridge was prepared and partly sunk to its place, attracting much attention amongst professional men at the time. The bridge was to have been 125 feet above high-water level, and five of its spans were to have been 500 feet each, to cross the fairway of the river. After considerable progress had been made with the experimental pier, the project was abandoned, on the failure of Mr Hodgson's policy as chairman of the North British railway. The question of bridging the Forth was, however, not lost sight of by Mr Bouch, who in 1873, after the Tay Bridge had been begun, projected a design of a much bolder character. He removed the point of crossing to Queensferry, where the width was much reduced, but the depth much increased. Taking advantage of the island of Inchgarvie, in the middle of the estuary, as a foundation for a central pier, he proposed to cross the deep-water channels on each side by two spans of 1600 feet each, elevated 150 feet above high-water line. Each span was to be supported by suspension chains, having a deflection of 375 feet, the stiffening necessary for railway traffic being provided by tie-rods and strong lattice girders. The piers were formed of cast-iron columns, strongly braced, and their total height from the foundation was upwards of 600 feet. The advantages promised by this scheme were so great that the several railway companies, both English and Scotch, who were interested in the traffic on the eastern side of the kingdom, eagerly professed their willingness to support it, if it were practicable: but on account of the unexampled boldness of the design, they stipulated that it should be submitted to the opinion of some of the highest engineering authorities in the kingdom. Accordingly a committee of four eminent engineers, Sir John Hawkshaw, Messrs W. H.

Barlow, G. P. Bidder, and T. E. Harrison, was appointed for the purpose; and at their suggestion an elaborate investigation of the proposed design, in full theoretical and practical detail, was undertaken by Mr W. H. Barlow and Dr Wm. Pole, assisted on some points by the Astronomer Royal, Sir G. B. Airy. Their report was given on the 30th June 1873, and it was so favourable that the four referees pronounced an unqualified approval of the plan. They said: "It affords us great satisfaction to be able to give our sanction to a work of so imposing a character, and to express our high approval of the skill, scientific research, and practical knowledge which have been brought to bear upon the elaboration of this interesting work."

Some years elapsed, in consequence of financial difficulties, before the scheme took a practical shape, but in 1875 a company was formed, the contracts for the Forth Bridge were let, and on the 30th September in that year the works were formally begun.

'Although Mr Bouch had, as early as 1849, expressed his determination to bridge both estuaries, it was not till 1863 that the first proposal for a Tay Bridge was made public, and not till July 1870 that the bill for this purpose received the royal assent. As originally designed, the Tay Bridge differed in some of its details from the scheme ultimately carried out. As eventually built, the bridge was within a few yards of 2 miles long: it consisted of eighty-five spans, namely, seventy-two in the shallow water on the north and south sides varying from 29 to 145 feet; and thirteen larger spans over the fairway channel, two of these being 227 feet, and eleven 245 feet wide. The rails rested on the upper members of the girders generally, but on the lower members of the thirteen large spans. The system of wrought-iron lattice girders was adopted throughout, Mr Bouch adhering to the form of construction which had been successfully employed in other works designed by him. The piers were originally intended to be of brickwork, but after the fourteen nearest the south shore had been thus erected, the fifteenth showed a failure of the anticipated foundation, which led to the abandonment of brick and the introduction of iron. In the lesser piers the group of pillars consisted of four of 12 inches diameter, and for the larger spans six pillars were used, disposed in two triangular groups of three each, and stiffened with cross bracing. After many vicissitudes and delays caused by unexpected difficulties in carrying out the work, the line was completed continuously from shore to shore on the 22nd of September 1877, after which date there was a heavy ballast traffic across the river, testing the carrying power of the bridge in a satisfactory way. The inspection of the work by Major-General Hutchinson, R.E., on behalf of the Board of Trade occupied three days, and on the 31st of May 1878, the bridge was opened with much ceremony and rejoicing, the engineer being presented with the freedom of the town of Dundee. Traffic on the bridge was at once begun, and a direct service of trains from Edinburgh and Glasgow to Aberdeen was organised, saving much time and inconvenience by the abandonment of the ferry crossing and the double change of conveyance it involved. The improvement was fully appreciated by the public, and in June 1879 the Queen crossed the bridge on her journey southwards from Balmoral. As a mark of royal approval of the striking achievement of the engineer, the Queen commanded the attendance of Mr Bouch at Windsor, and on the 26th of June 1879, he received the honour of knighthood.

'The traffic was continued uninterruptedly till the evening of Sunday the 28th of December 1879, when a violent hurricane arose, and during the passage of a train from Edinburgh across the bridge, the central portion fell into the river, carrying with it the entire train and its load of about seventy passengers, all of whom lost their lives. An inquiry was instituted by the Board of Trade into the circumstances of the accident, the evidence showing much conflict of opinion as to its cause. There could be no doubt, however, of the

almost unprecedented violence of the gale, and Sir Thomas Bouch strongly held the opinion that under this force some part of the train had left the rails, which he considered would amply account for the disaster. He had for some time not been well, and under the shock and distress of mind caused by the casualty his health more rapidly gave way, and he died at Moffat on the 30th of October 1886. In his death the profession has to lament one who, though perhaps carrying his works nearer to the margin of safety than many others would have done, displayed boldness, originality, and resource in a high degree, and bore a distinguished part in the later development of the railway system.

'One unfortunate effect of the disaster was to paralyse the operations that had been favourably going on towards the larger project of crossing the estuary of the Forth. The public had, for the moment, lost faith in large iron bridges; the Board of Trade made larger demands of security, and the Forth Bridge Company, rather than persevere in so bold a scheme in the face of a temporarily unfavourable phase of public opinion, resolved to abandon the undertaking, or at least to wait till a more convenient season for its further prosecution.'

Within two years of the fall of the Tay Bridge the North British Railway Company obtained an act authorising the construction of a new viaduct, differing in many points of detail from the original structure. Starting from nearly the same points N and S, the new bridge stands about 50 yards W of the old. In the number and arrangement of spans it is identical, and in the method of sinking the foundations and bringing up the structure above high-water mark the process is the same. It differs (1st) in being a double instead of a single line, by which the lateral stability and carrying capacity are increased; (2d) in the upper structure being in solid plates of malleable iron, instead of groups of cast iron columns; and (3d) in being less in elevation above high water o.s.t. The reduction in the height caused an obligation to be imposed on the company to tow all vessels proceeding to Perth or elsewhere above bridge. The engineer of this bridge is Mr Barlow, and its estimated cost £800,000.

Although under the Act of 1878 the Forth Bridge was formally begun as already stated, no steps were taken to carry on the work, and the destruction of the Tay Bridge caused the scheme as designed by Sir Thomas Bouch to be abandoned, and a new design to be prepared. This was done by Mr Fowler, who made several very important alterations, although, as before, the two spans of 1600 feet crossing the fairways of the river, remain necessary features of the design. As in the case of the Tay Bridge, the structure provides a double line, and in the wider spans these are built independently and separated by a distance of 100 feet, with lateral bracings connecting them, so that additional stability is thus secured. The bridge is approached by a long viaduct of 30 spans on the lattice girder principle, and in the two main spans the suspension principle has been abandoned, those spans being instead constructed in a semi-circular form below on the cantilever principle. In this case also a reduction in height was authorised by the Act, and from the careful tests taken, and the determination of the board to make a structure immovable by any hurricane within experience, the bridge possesses high elements of stability. Although this structure has been noticed under the North British Railway, it does not belong to that company, being independently promoted under a guarantee for traffic and dividend to which the Great Northern, Midland, North-Eastern, and North British Railways are parties. The North British is charged with the duty of working the bridge and its connecting lines at 50 per cent. of the gross traffic, while the various companies, besides a guarantee for the dividend, are bound to direct a stated amount of traffic to the bridge.

Another work of engineering importance is the bridge over the Esk at Montrose. This bridge as designed by

Bouch failed, owing to the bad foundation furnished by the 'back-sands,' and considerable expense was incurred in erecting a new lattice girder bridge, which was opened in 1882. A fine iron bridge, designed by Bouch, crosses the Dryden burn on the Edinburgh and Rosslyn line, and the bridge crossing the Tweed below Melrose, carrying the railway to Earliston, is an imposing stone structure, and as it carries a single line only it appears very slender owing to its great height, and having shown some indications of yielding at one end, the piers have been strongly re-inforced there.

The character of the traffic borne by the North British railway is much diversified. As a passenger line it ranks first in Scotland, a larger proportion of its revenue being derived from this source than is the case with its great rival line the Caledonian. It is the sole means of railway communication over a very large district, and in the denser parts of the country it maintains a lively competition with the other lines. In mineral traffic it has connection with docks or harbours at Leith (by two lines), Bo'ness, Burntisland, Charleston, Glasgow (by the Stobcross docks), Silloth, etc. It has considerable fish traffic from Dunbar, Eyemouth (to which a railway is about to be made), Granton, Anstruther, etc. Its tourist district embraces the Scott country, and such interesting historical places as Lochleven, Dunfermline, Falkland, St Andrews, and Linnithgow. Its importance as a part of the shortest and swiftest route from Edinburgh to London, and as the best line from Edinburgh to Glasgow, has already been adverted to, and over both those lines it conducts an important part of the postal service. The history of the North British has been one of many vicissitudes. In Mr Richard Hodgson it possessed a man of great energy and foresight, and his endeavours to realise a gigantic and well-compacted system plunged the company into serious financial difficulties, which formed the subject of a special investigation in 1867. It is one of the features of the later history of the company, that most of Mr Hodgson's ideas have since been carried out. By great boldness he secured the access to Carlisle from Hawick, which, had it fallen into the hands of the Caledonian, would have made the now picturesque and favourite 'Waverley Route' a *cul de sac*. On Mr Hodgson's downfall the company secured a man of no less ability and courage in Mr Stirling of Kippendavie, who, for fifteen years, ruled the destinies of the railway. It was under his direction that the company pushed into the great Lanarkshire coalfield by the 'Coatbridge undertaking,' which made the Edinburgh and Bathgate railway a through line, and by special lines running to Hamilton, etc. The Glasgow connection was strengthened by the construction of the Stobcross docks and connecting lines, while northward the construction of the Forth and Tay Bridges, the acquisition of one-half of the Dundee and Arbroath, the new railway to Montrose, and the purchase of the Bervie line indicate a policy pointing to a direct route to Aberdeen and the north, entirely independent of those 'running powers' from Larbert to Perth, and from Arbroath to Aberdeen, already held as the fruits of keen parliamentary strife. At the beginning of 1879 the company seemed to be approaching an end of its difficulties, but the fall of the Tay Bridge, and the consequent loss of traffic and money, caused the fortunes of the company again to droop. A revival speedily followed, however, and in the spring of 1883 the 'ordinary' stock obtained a dividend of 5 per cent., a rate which had not been paid since 1848, and which was in 1884 increased to 5½ per cent. During thirteen of the intervening years no dividend was paid on that stock, although as a rule all the 'preference' dividends have been fully paid. In 1848, it may be stated, the entire capital receiving dividend was £1,080,000, while in 1884 the capital was over thirty-two millions, the 'ordinary' capital above referred to as then receiving 5½ per cent. being over four millions and a half. A part of the recent policy of the company has been to encourage the formation of local lines, and after their

execution and working have been tested, to absorb them into the system under terms more or less favourable. Under various heads throughout this work (**BORDER COUNTIES RAILWAY**, **BERWICKSHIRE RAILWAY**, etc., etc.) will be found particulars of a number of railways which have been in this way amalgamated with the North British.

North Bute. See **BUTE**, **NORTH**.

Northesk. See **MUSSELBURGH**.

Northfield, an estate, with an elegant mansion, in Annan parish, Dumfriesshire, on the left bank of the river Annan, 1 mile N of the town.

North Isles, the northern one of the three presbyteries of Orkney, comprehending the *quoad civilia* parishes of Shapinsay, Rousay and Egilshay, Stronsay, Cross and Burness, Lady, and Westray and Papa, with the *quoad sacra* parishes of Eday and North Ronaldshay. Pop. (1871) 9312, (1881) 9373, of whom 860 were communicants of the Church of Scotland in 1878.

Northmaveu, a parish of Shetland, comprehending the northernmost part of Mainland, with a number of neighbouring islets, and containing Hollswick village, on the W side of Ura Firth, 17 miles NNW of Voe, and 36 NNW of Lerwick, under which it has a post office. In shape resembling an isosceles triangle with north-north-eastward apex, it is connected at its southern corner with the rest of Mainland by an isthmus only 100 yards wide; and even this is nearly all submerged by spring tides. Its utmost length, from N by E to S by W, is 17 miles; its utmost breadth is 11 miles; and its land area is 76½ square miles, or 49,037 acres. The principal islets are Nibon, Uyea, and Lamba; and most of them afford good pasture, but all are uninhabited. The Mainland district, except at the isthmus connecting it with Delting parish, is completely surrounded by the sea. Deeply indented by Ura Firth, Ronas Voe, Burra Voe, Colla Firth, Gluss Voe, and other bays or voes, it has nearly everywhere a bold and rock-bound coast, so engirdled by skerries, towering islets, and fantastically-outlined rocks as at all times, but especially in a storm, to present grandly picturesque and romantic scenery. Portions of the W coast, in particular, consist of stupendous crags, rising rapidly to a height of 300 and 500 feet above sea-level, and seeming to have been rather rent by storm and billow than torn by volcano or upheaved by earthquake. Islets or other objects of still more remarkable appearance bear the names of Drongs, Scraada, Doreholm, Ossa-Skerry, and Maiden-Skerry. Fethaland Point in the extreme N, and Esha Ness in the extreme SW, are the principal headlands; and the former terminates a small peninsula, enclosed by a stone fence. Numerous fresh-water lakes of no great size are scattered over the moors, whose general surface is hilly, broken, and rough, attaining 389 feet at the Skuirds, 567 near White Grunafirth, and 1475 at precipitous **RONAS HILL**—the highest summit in Shetland. The rocks, from Ronas Voe to Ura Firth, are chiefly Old Red sandstone and limestone, of coarse description; elsewhere they include granite, syenite, gneiss, syenitic greenstone, diallage, and porphyry. Chromate of iron occurs in places, but not of the best quality; and agates and garnets are found. The soil in some spots along the coast is light and sandy, in others is loamy or clayey; and over most of the interior is moss immediately incumbent on solid rock. Almost everywhere it is very thin. The arable lands are chiefly scattered pendicles around the bays or elsewhere near the shore, and probably not more than one-tenth of the entire area is under cultivation. The crofters, indeed, pay more attention to fishing than to agriculture. The chief antiquities are a chain of rude watch-towers, remains of Picts' houses, and ruins of two pre-Reformation churches at Ollaberry and North Roe. Four proprietors hold each an annual value of more, and 2 of less, than £100. Northmaveu is in the presbytery of Olnafirth and the synod of Shetland; the living is worth £233. The parish church, at Hillswick, was built in 1733, and, as reseat in 1825, contains 600 sittings. Other places of worship are an Established

chapel of ease and a U.P. church at Ollaberry, a Congregational chapel at Sullam (1828; 160 sittings), and a Wesleyan chapel at North Roe (1828; 208 sittings). Five public schools—North Roe, Ollaberry, Sullam, Tangwick, and Urafrith, with respective accommodation for 80, 72, 45, 60, and 60 children, had (1883) an average attendance of 48, 42, 19, 41, and 37, and grants of £51, 16s., £43, 9s., £28, 8s., £34, 16s., and £47, 12s. 6d. Valuation (1860) £1715, (1884) £2352, 12s. 9d. Pop. (1801) 2045, (1831) 2336, (1861) 2535, (1871) 2602, (1881) 2269.

North Medwin. See **MEDWIN**.

Northmuir, a village in Kirriemuir parish, Forfarshire, 1 mile N by W of the town. Pop. (1861) 319, (1871) 337, (1881) 315.

North of Scotland Railway, Great. See **GREAT NORTH OF SCOTLAND RAILWAY**.

North Queensferry. See **QUEENSFERRY**.

North-Water-Bridge, a hamlet near the mouth of North Esk river, at the boundary between Forfar and Kincardine shires, with a station on the Bervie branch of the North British railway, 3½ miles N of Moutrose, and with a post office under Laurencekirk.

North-West Castle. See **STRANAER**.

North Yell. See **YELL**, **NORTH**.

Norton, an estate, with a modern mansion, in Ratho parish, Edinburghshire, 1 mile N by W of Ratho village.

Noss, an island of Bressay parish, Shetland, 1 furlong E of Bressay island, from which it is separated by a narrow and dangerous sound. Triangular in shape, it has an utmost length and breadth of 1½ mile, and is reckoned one of the most fertile and pleasant islands in Shetland. A promontory on its E side is called Noss Head. But the most interesting object connected with it, and one of the greatest curiosities in Shetland, is a holm or islet on its SE side, called the Holm of Noss. This islet, only 500 feet long, 170 broad, and 160 high, is perfectly mural, rising sheer up to its greatest altitude on all sides from the sea, and possessing a level and richly-swarded surface. The opposite rock on Noss island is also mural, and of the same height as the Holm; and is separated from it by a channel 240 feet wide. In former years a wooden trough or cradle suspended to ropes and made to acquire a sliding motion, with sufficient capacity to convey a man and one sheep at a time, served to keep the Holm in command as a valuable piece of sheep pasture. Off the E coast a rock called the Noup of Noss towers up like a stupendous tower, and attains, on one side, a precipitous and almost perpendicular height above sea-level of 592 feet. Pop. (1841) 24, (1861) 14, (1871) 24, (1881) 3.

Noss Head, a bold rocky promontory on the S side of Keiss or Sinclair's Bay, 3¼ miles NNE of Wick, Caithness. A little W of it stand the ruins of **CASTLE-GIRNIGOE AND SINCLAIR**, the ancient stronghold of the Earls of Caithness. From the cove or small bay of Mursligoe, frequented by seals, a dry passage leads through a rock into a vast cave under Noss Head. A lighthouse, built in 1849 at a cost of £12,149, stands on Noss Head, with its lantern elevated 175 feet above the level of the sea. Its light is a revolving light, attaining its brightest state once in every half-minute, visible at a distance of 18 nautical miles, and red from NE ¾ N to WNW in a N direction, but of the natural appearance from other quarters. The lighthouse is in N latitude 58° 28' 38", and in W longitude 3° 3' 5".—*Ord. Sur.*, sh. 116, 1878.

Notland Castle. See **NOLTAND**.

Noth, Tap o'. See **RHYNE**.

Noup Bay. See **NOOP**.

Noup of Noss. See **NOSS**.

Novar, an estate, with a mansion, in ALNESS parish, Ross-shire, near the NW shore of the Cromarty Firth, and 1½ mile N of Novar station on the Highland railway, this being 6½ miles NE of Dingwall. Backed by wooded heights, the mansion is a handsome edifice, with a large collection of valuable works of art, and with charming grounds, which were much improved and adorned by Sir Hector Munro, K.C.B., whose victory of

Buxar (1764) placed Hindustan at the feet of the English. The estate belongs now to his great-grandson, R. C. Munro-Ferguson, Esq., of RAITH. — *Ord. Sur.*, sh. 93, 1881.

Nungate. See HADDINGTON.

Nunlands House, a mansion in Foulden parish, Berwickshire, $3\frac{1}{2}$ miles S by E of Aytoun. Anciently held by the abbey of Dryburgh, the estate was purchased in 1870 by Mr Wilkie of FOULDEN for £3550. — *Ord. Sur.*, sh. 34, 1864.

Nunraw Castle, a mansion at the NE border of Garvaid parish, Haddingtonshire, $\frac{1}{2}$ mile ESE of Garvaid village, $3\frac{1}{2}$ miles ENE of Gifford, and 7 S by E of East Linton. Standing on the western edge of a deep and precipitous glen, it was built about the middle of the 15th century as a peelhouse or fortalice on lands belonging to the Cistercian nunnery of ABBEY, near Hadding-

ton. Although it has been modernised, it still is a fine old building. The work of renovation laid bare the painted ceiling of its old refectory, bearing date 1461, and emblazoned with the arms of the kings of Arragon, Navarre, Egypt, etc. The estate was purchased from R. J. A. Hay, Esq. of Linplum, in 1880, by Walter Wingate Hay, Esq. (b. 1856). — *Ord. Sur.*, sh. 33, 1863. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Nunton, a village on Benbecula island, South Uist parish, Outer Hebrides, Inverness-shire, 18 miles SSW of Lochmaddy. It takes its name from an ancient nunnery, which was demolished to furnish building material for the mansion and offices of the principal landowner of the parish; and it has a post office under Lochmaddy, and a branch of the Commercial Bank.

Nybster, a coast village in Wick parish, Caithness, 10 miles N of Wick town.

OA, a headland and a *quoad sacra* parish in Kildalton parish, Islay island, Argyllshire. The headland, flanking the S side of Laggan Bay, $3\frac{1}{2}$ miles NW of Port Ellen and $7\frac{1}{2}$ S of Bowmore, overlooks the E side of the entrance of Loch Indal; has a beetling, lofty, imposing character; is crowned with the ruins of DUNAIDH Castle; was originally called Keannoath; is now called the Mull of Oa; and often gives its name of Oa to much or all of the entire south-eastern peninsula of Islay. The *quoad sacra* parish, which comprises the southern part of that peninsula, and which has for its post-town either Port Ellen or Bowmore under Greenock, was constituted first by the ecclesiastical authorities, next in 1849 by the court of teinds. It is in the presbytery of Islay and Jura and the synod of Argyll; its minister's stipend is £120, with a manse and a glebe worth £12 and £6 a year. The church was built at the expense of government in the first half of the present century. Pop. (1871) 367, (1881) 247, of whom 240 were Gaelic-speaking.

Oakbank, a village, with oil-works, in Kirknewton parish, Edinburghshire, close to Midcalder Junction. Pop. (1871) 355, (1881) 506.

Oakfield. See BEATH.

Oakley, a village at the mutual border of Carnock parish, Fife, and Culross parish, Perthshire, with a station on the Stirling and Dunfermline branch of the North British railway, $4\frac{3}{4}$ miles W by N of Dunfermline. Built in connection with the Forth and Oakley Iron-works (1846), it chiefly consists of stone, one-story, slated dwelling-houses, disposed in rows, with intervening spaces more than double the breadth of the streets of the New Town of Edinburgh; and has a post office under Dunfermline, St Margaret's Roman Catholic church (1843), and a public school. The iron-works, now stopped, had six furnaces, with stalks 180 feet high; and the engine-house was built of a very beautiful sandstone, with walls so deeply founded and so massive as to comprise 60,000 cubic feet of stone below the surface of the ground. Pop. (1861) 1817, (1871) 1127, (1881) 312, of whom 92 were in Culross. — *Ord. Sur.*, sh. 40, 1867.

Oakshawhead. See PAISLEY.

Oakwood Tower, a ruined baronial fortalice in Selkirk parish, Selkirkshire, on the right bank of Ettrick Water, $4\frac{1}{2}$ miles SW of Selkirk town. It belonged in the 13th century to the famous wizard, Sir Michael Scott of BALWEARIE, in the 16th to Wat Scott of HARDEN; and is now the property of Lord Polwarth. — *Ord. Sur.*, sh. 17, 1864.

Oathlaw, a parish in the centre of Forfarshire, whose church stands $4\frac{1}{2}$ miles NNE of the post-town, Forfar. It includes part of the ancient parish of Finhaven, and on into the present century was oftener known by

that name than its own. It is bounded N by Tannadice, E and SE by Aberlemno, S by Rescobie, and SW, W, and NW by Kirriemuir. Its utmost length, from E to W, is $5\frac{5}{8}$ miles; its breadth varies between $5\frac{1}{4}$ furlongs and 2 miles; and its area is $5317\frac{3}{8}$ acres, of which $43\frac{3}{8}$ are water. The river South Esk first flows $\frac{3}{4}$ mile along the westernmost part of the northern boundary, then lower down meanders 2 $\frac{1}{2}$ miles eastward along two other parts of the Tannadice border and across the north-eastern interior; and Lemno Burn runs to it east-north-eastward, first 7 furlongs on the Rescobie boundary, next $3\frac{1}{2}$ miles through the interior. In the W a very powerful spring of excellent water rises from a bore 160 feet deep, which was sunk in an unsuccessful search for coal; and, being situated in the midst of a corn field, was covered over from view, and caused to send off its superfluency in a drain. Along the South Esk the surface declines to 143 feet above sea-level; and the highest point in the parish is the Hill of Finhaven (751 feet), which extends along the south-eastern boundary. A gentle slope descends thence to Strathmore; an expanse of plain occupies nearly all the centre and the N; and a tract along the South Esk towards the E lies so little above the level of that river's bed, and was formerly so subject to inundation by freshets, that it had to be protected by costly embankments. The predominant rocks are Old Red Sandstone and conglomerate; and the soil is mostly of a clayey retentive character, incumbent on 'pan.' Nearly 1200 acres are under wood; and all the rest of the land, except a very few acres, is in tillage. The chief antiquities are noticed in our articles on FINHAVEN and BATTLE-DYKES. Mansions are Finhaven and Newbarns; and the property is divided among seven. Oathlaw is in the presbytery of Forfar and the synod of Angus and Mearns; the living is worth £210. The parish church, built in 1815, is a neat edifice with a tower, and 189 sittings. The public school, with accommodation for 63 children, had (1883) an average attendance of 49, and a grant of £55, 12s. 6d. Valuation (1857) £3683, (1884) £5559, 5s. Pop. (1801) 384, (1831) 533, (1861) 399, (1871) 452, (1881) 440. — *Ord. Sur.*, sh. 57, 1868.

Oban, a parliamentary burgh in the united parish of Kilmore and Kilbride, Argyllshire. A post and market town and seaport, and capital of the district of Lorn, it stands on the coast of Mid-Lorn, opposite the northern end of the island of Kerrera, curving round the head of a deep and beautiful semicircular bay, 24 miles N of the W end of the Crinan Canal, 33 NW by W of Inverary, 92 NW by N of Glasgow, and 136 WNW of Edinburgh. The site of Oban is one of the most beautiful in Scotland, and one of the most healthy. The island of Kerrera, stretching from the northern horn of the semicircular bay to a considerable distance past

the southern horn, completely guards the bay, and makes it a tranquil and spacious haven, entered only by channels on the N and S. The southern entrance, called Kerrera Sound, bends so far inward from the bay as to become lost to view; while the northern entrance, though all seen from the town, appears to be blocked up by the island of Lismore, 5 miles off; so that the bay and adjoining channels have all the appearance of a land-locked lake. Its shores are chiefly low and gravelly, although immediately behind the town the ground rises into a protecting row of heights overhanging the town. On the N and E side especially the cliffs are bold, and are picturesquely covered with pine trees and ivy, while a grey conglomerate cliff stands at the southern promontory of the bay. The view commanded from the heights behind Oban, on which many houses and villas have been built, is extensive and magnificent. To the S is the Sound of Kerrera; westward, beyond Kerrera, rise the mountains of Mull; while away beyond Lismore to the NW, and past the entrance to the Sound of Mull, tower the peaks of misty Morven: still further NE lies Glencoe with its dark mountains, seen across the Braes of Appin; while nearly due E Ben Cruachan lifts its double peaks. Situated thus, in the midst of such romantic scenery, Oban is surrounded with places of interest, and has become the headquarters of all who desire to visit the West Highlands. Its natural situation, its accessibility, and its safe and commodious bay have splendidly fitted it to become the capital of the West Highlands and 'the Charing Cross of the Hebrides.' Oban is the focus of steam communication, by land and sea, between the south and the north western parts of Scotland. It is the terminus of an important railway line, affording direct communication with Edinburgh and Glasgow; it is the final point of the so-called 'royal route' from Glasgow *via* the Crinan Canal, carried on in the splendid steamers *Columba* and *Iona*; it is an important port of call for the larger steamers *Claymore* and *Clansman*, after they have 'rounded the Mull' of Kintyre on their voyage from Glasgow to Stornoway; it is the starting place for numerous steamer-routes throughout all the western coast and islands, and for coach-journeys to numberless places and points of interest on the mainland; and it is the headquarters of the Royal Highland Yacht Club. These facts give Oban its character. During the winter the town is quiet and dull, but by the end of June it awakens to a hurried, brisk, active existence, which lasts for the rest of the summer and autumn. When the tourist season once begins, Oban is bustling and gay. Train and steamer and coach pour streams of eager pleasure-seekers into the town—all countries of the world are represented, all ages and ranks in its hotels and streets. The shriek of the engines, the clear tones of the steamer-bells, and the rumble of wheels are heard more frequently; the hotels hoist their flags; bands play on the promenade; graceful white-sailed yachts glide into the bay and drop anchor; tourists and canvas-shoed yachtsmen throng the streets and shops; and there is a general air of bustle and of coming and going. For Oban is a place of passage and not of rest. Tourists go to Oban simply for the purpose of getting to somewhere else. Beautiful as the situation of the town is, its chief attraction to visitors is the ease with which, from Oban, they can reach other parts of the Highlands. Thus it is that although the appearance of Oban in the season is always the same, the individuals who make up the scene are always changing. Though the number of families who spend a month or two here in the summer is yearly increasing, comparatively few people, except the proprietors of the villas on the outskirts of the town and the heights behind, visit Oban for more than a week at a time. The prosperity of the town depends on this annual stream of tourists; and the character of its trade, its municipal policy, and its later history have been determined by this consideration.

The main street of Oban is a broad thoroughfare, curving round the bay, and flanked upon one side by the quays, on the other by substantial and handsome

shops and hotels. As it leaves the town at the N end, this street assumes the character of an esplanade, and the shops give way to magnificent hotels and pretty villas. Towards the S end of this street another extends at right angles to it, directly back from the sea, while there are various side and back streets. Although much has recently been done in the way of improving the appearance of the town, its beauty and convenience has been sadly interfered with by the careless and injudicious way in which the original streets and lanes were laid out. In 1859 the fashionable northern quarter of Oban, known as the 'Corran,' was feued from the proprietor of Dunolly, and in the two following years the northern esplanade and Columba Terrace, including the Great Western Hotel, were built. Since then the town has been steadily growing, numerous villas being built, especially on the surrounding heights, though admirers of Oban have not thought that all the tenements erected there contribute to the beauty of the burgh. The neighbouring proprietors have done a great deal to beautify the place by planting the environs with fir, larch, oak, spruce, etc., one especially planting 768 acres within eight years. The main body of the town is cut into two parts by a small stream. Over 200 yards of the frontage of the town on the shore is occupied by the large quay and sea-wall, built by the Callander and Oban Railway Company. The construction of this work was begun in February 1880, and during the summer of that year a staff of divers were employed 16 hours daily in laying the foundations. The superstructure is of concrete, and the total length of the sea-wall is 670 feet. Handsome waiting-rooms are provided for the convenience of the passenger traffic, while travelling cranes and lines of rails assist the loading and unloading of cargo. Besides this railway quay there are other two older piers, one of which was improved and enlarged in 1836 by the joint efforts of certain townsmen and the late Marquis of Breadalbane, although the latter managed to obtain control of the whole. The anchorage in the bay is good and safe, and every summer is crowded with yachts of all sizes, and other craft.

With the exception of the court-house and the churches, the most imposing buildings in Oban are all connected with its tourist traffic; they are the quays, the hotels, and the railway station. The court-house was built in 1863 with the aid of a government grant of £1199; and includes a court-room, police-station, and police-cells. The parish church, built as a chapel of ease in 1821 at a cost of £1143, is a neat edifice in the eastern part of the town. It is seated for 500. St Columba's Established church was built in 1875 from designs by David Thomson, of Glasgow, at a cost of about £5000; and is seated for between 500 and 600. It is a handsome Gothic edifice, with a spire 120 feet high and stained-glass windows. On the face of the rising-ground behind the town stands conspicuously a Free church, of light early Gothic architecture, with a low Norman tower and pointed spire, built in 1846 from a design by Mr Pugin. The other churches are a U.P., built in 1867; Congregational, built in 1820, and rebuilt in 1880; St Columba's Roman Catholic pro-cathedral, a temporary wooden structure (1879; 300 sittings); and the Scottish Episcopal church of St John the Evangelist, a late Gothic edifice of 1863, with a new nave of 1882, and 400 sittings. It was consecrated by the late Archbishop Tait, then Bishop of London, in 1864. Three schools—the High, Roman Catholic, and Episcopalian—with respective accommodation for 420, 110, and 203 children, had (1883) an average attendance of 268, 24, and 88, and grants of £223, 1s., £5, 1s. 4d., and £71, 17s. 6d. There are also several private adventure schools. The Lorn Combination Poorhouse, with accommodation for 234 inmates, was opened in 1862. The railway station, erected in an open and commanding site near the quay, is one of the prettiest and most graceful buildings in the town. It is a single-storied building of varnished white and pitch pine, iron, and glass; and has a delightfully airy and elegant appearance. It was opened on 1 July 1880. Oban has even

more hotels in proportion to its size than Edinburgh, there being no less than 16, besides several temperance hotels and numerous lodging-houses. Several of the hotels are of the most palatial dimensions and appointments, and their charges are quite in keeping with their grandeur and the traditions of the Highlands. Even so long ago as 1773 Boswell remarked with approval the accommodation which he and Dr Johnson received in the little clachan at Oban; and the hotel-keepers of the town have not lost their reputation. The chief hotels (in order northward along George Street from the railway terminus) are the Station hotel, opened in 1881; Queen's, King's Arms, Caledonian, and the Imperial. The Argyll and the Oban Hotels are close to the head of the pier. Overlooking the N end of the bay are the Great Western, built in 1863, but now the largest hotel in Oban, owing to the incorporation with it of two adjoining villas and the building in 1880, at a cost of over £2000, of a dining-hall to hold 200 people; and the Alexandra, which has acquired a kind of extra-professional fame for the large and fine collection of modern paintings, ancient furniture, and *bric-à-brac* which it contains. On the heights above the town are the Craig-Ard and the Grand Hotels. Also overlooking the town and bay, and forming a prominent and somewhat melancholy object in the view, rise the unfinished walls of a proposed Hydropathic establishment. The Oban Hills Hydropathic Sanatorium Company, with a nominal capital of £75,000, acquired ground and began to build in 1880 an establishment estimated to cost in all some £61,000. But in a comparatively short time it got into difficulties, and the bare unroofed walls were left unfinished.

Oban has a post office, with money order, savings' bank, insurance, and telegraph departments, branches of the Bank of Scotland and the Clydesdale, Commercial, National, and North of Scotland Banks, and offices or agencies of 23 insurance companies. Most of the banks are handsome buildings. Other institutions in Oban are a library and public reading-room, opened 19 June 1880 in connection with Oban Scientific and Literary Association, the members of which meet weekly during the winter; a circulating library, an agricultural society, a masonic lodge, formed in 1791; and the Volunteer Improvement Association. The object of this last body is to increase the amenity and attractiveness of the town; and in the summer nearly 100 seats are placed along the esplanade and other popular walks in the neighbourhood and on the various commanding heights about the town. There is a corps of artillery volunteers, formed in 1859 at the very beginning of the volunteer movement. The Royal Highland Yacht Club was instituted in Oct. 1881, and has its headquarters at Oban. The club-house is in a villa near the Great Western Hotel. Its members fly the blue ensign of the navy and a blue badge bearing a crown on a St Andrew's cross. Two weekly newspapers are published in Oban; the *Oban Times* (1866) appears on Saturdays, and is independent in politics; the *Oban Telegraph* (1876) is published on Fridays, and is Liberal. Cattle markets are held in Oban on the Monday before the last Wednesday of May, and on the Friday before the last Wednesday in October; horse markets are held on the Tuesday before the first Thursday of March, and on the first Tuesday of September, and on the Tuesday before the fourth Thursday of November; a sheep and wool market is held on the Wednesday after the second Thursday of July; and hiring markets are held on the second Tuesday of April and the first Friday of November.

The construction of the Callander and Oban railway was begun in 1867; in 1870 the line was open to Killin; in 1873 to Tyndrum; and in 1877 to Dalnally. The remaining 24 miles took three years to complete, but on 11 June 1880 the first goods engine steamed into Oban. On 30 June of the same year the line was formally opened with much ceremony and public rejoicing. The station and quay, which formed an essential part of the railway company's design, have been already referred to.

The prosperity of the town has been much enhanced by this perfecting of its communications with the south, which brings it within five or six hours of Edinburgh or Glasgow. Before the town pier was extended, steamers were unable to touch at Oban except at high water; since then the communication by sea has been enormously developed. In summer there are countless routes open to the tourist by steamer: to Glasgow and the Clyde *via* the Crinan Canal in the fine steamers *Iona* and *Columba*; to Skye and Lewis; to Mull, Staffa, and Iona, and the Hebrides; and up the Caledonian Canal to Inverness and intermediate places. There is a steady communication by sea between Oban and many places during winter as well. There are two sailings in the week from Glasgow to Stornoway by powerful sea-going steamers which sail round the Mull of Cantyre and call at Oban; goods steamers which carry passengers sail from Oban to Islay and Colonsay three times a week; and there is also a goods steamer to Tobermory and other points in the Hebrides. In winter there are also two sailings weekly from Glasgow to Oban, Ballachulish, Fort William, and Inverness. On 1 April 1881 a daily mail steamer service began between Oban and Fort William, and Oban and Tobermory, the former packet-boat from Oban to Grasspoint in Mull, and the land-carrier thence to Tobermory being thus superseded. In summer public coaches run to various points of interest in the neighbourhood.

The first industry attempted to be established at Oban was fishing; and in 1786 the Government Fishery Board appointed it a fishing-station. The industry, however, languished, probably on account of the distance from markets and the poverty of the fishers' gear; and the station was abandoned. So long before as 1713, however, a store-house had been erected by a Renfrew trading company at Oban; and a humble commerce had gradually grown up. In 1773 two brothers named Stevenson started a business uniting shipbuilding with commerce, which lasted for 30 years. As merchants they dealt in wool, oak-bark, fish, and other produce of the neighbourhood; and their success attracted others to the little town. With the development of steam communication Oban gradually grew larger, though the character of its chief industries changed. An attempt to revive the shipbuilding trade in 1867 failed; and so did later efforts to start a brewery and a farina mill. At present the manufactures of Oban are limited to the distillation of whisky. Its shops are good, and its supply of merchandise excellent. Besides supplying the wants of the summer tourists, on whom the town mainly subsists, Oban purveys for a considerable district around. It has also large sawmills.

Oban was raised to a burgh of barony in 1811 by a royal charter in favour of the Duke of Argyll; but this was set aside by the Court of Session; and in 1820 a new charter was granted in favour jointly of the Duke and Mr Campbell of Combie. Under this charter the burgh was governed by a provost and council until the Reform Act of 1832, by which it was formed into a parliamentary burgh, when, however, the title of provost merged in that of senior bailie. The area of the parliamentary burgh was defined as 'the space on the mainland included within a circle described with a radius of one-half mile from the point as centre, where the street leading to the old Inverary road meets the street along the shore.' In 1862 Oban adopted the Lindsay Act of that year, and was erected into a police burgh. In 1881 the town council successfully applied to parliament for powers to extend the municipal and police boundaries of the burgh, by an area which at last census had 344 inhabitants. At the same time powers were acquired to increase the number of councillors, to regulate the maintenance of the roads, and to introduce a new water supply. The dearth of water in 1880 was so great that it had to be carted from house to house. The former supply was derived from Loch Glencluiten and Loch Mossfield, capable of storing 6,000,000 and 5,000,000 gallons respectively. The new supply will be derived from Loch-na-Glenna Bheathrack, which can hold 90,000,000 gallons.

giving 30 gallons a head per diem to a population of 10,000. The estimated cost is £10,000. The town council now consists of a provost, 2 bailies, and 6 councillors. The municipal constituency (1854) was 677. Sheriff small debt courts are held in March, July, September, and December. Oban unites with Ayr, Irvine, Campbeltown, and Inveraray in returning a member to parliament. Parliamentary constituency (1884) 536. Annual valuation (1883-84) in original burgh

Seal of Oban.

£24,540, railway £2037; in extended part of burgh £2573—total £29,150. In 1847 the rental was only £2830; in 1859, £4616; in 1873, £11,138; and in 1881, in the extended burgh £24,012, of which £2207 was in the extended portion. Pop. (1791) 586, (1821) 1359, (1841) 1398, (1851) 1742, (1861) 1940, (1871) 2413, (1881) 3991, of whom 2005 were females, and 2042 Gaelic-speaking. Houses (1881) 808 occupied, 42 vacant, 7 building.

History.—About the middle of last century the site of Oban was occupied by a few thatched hovels, whose inmates supported life by fishing and farming. In 1773 Mrs Grant of Laggan visited it and mentioned it in the first of her *Letters from the Mountains*. In the same year Dr Johnson and Boswell were ferried over from Mull to Oban, and spent a night there. In 1786 the Government Fishery Board erected Oban into a fishing-station; but the fishing proved unproductive, and the station was abandoned. Its subsequent commercial progress has been already described in connection with its industries. In 1809 Oban became the headquarters of a militia regiment, 1200 strong, raised in the district of Lorn, and disbanded about 1813. Sir Walter Scott visited the burgh in 1814, the year in which he published his *Lord of the Isles*. The interest which this poem awoke in the scenes in which its action is laid, brought many visitors to Oban, in a gradually increasing stream; and the influence of Scott has always been regarded as one of the first causes of Oban's present prosperity. The first feus at Oban had been given off in 1803; but only in 1820 good substantial houses began to be built, in consequence of the growing fortunes of the place. The parish church and the Caledonian Hotel were among the earlier buildings of any note. For some time the headquarters of the Hebridean Survey were at the burgh; and from 1866 to 1870 a corps of ordnance surveyors had their headquarters at Oban during the survey of most of Argyllshire. In August 1847 the town was illuminated in honour of a visit from the Queen ('one of the finest spots we have seen,' says her *Journal*); and in 1863 royalty again visited it in the person of Prince Alfred, then a lieutenant on board the *Raceon*. During the Crimean War the town was the headquarters of the Argyll and Bute regiment of rifles, which had been called out under the Marquis of Breadalbane by royal warrant. In 1861 the regiment was changed to an artillery force; and in 1863, when the Duke of Argyll became lord-lieutenant of the county, its headquarters were changed to Campbeltown, in spite of a petition from the magistrates of Oban. The chief landed proprietors in and near Oban are, to the S, Robert Macfie of Airds, and to the N, Col. McDougall of DUNOLLY. Mr Macfie's predecessors were the Campbells of Sonachan, who inherited from the Duke of Argyll, before whom the McDougalls of Dunolly held large estates in Lorn. Lord Breadalbane and his trustees were the successive proprietors from 1837 to 1866 of North Oban; the former having purchased the lands from Campbell of Combie.—*Ord. Sur.*,

shs. 45, 44, 1876-84. See T. Gray's *Week at Oban* (Edinh. 1881).

Obney Hills. See AUCHTERGAVERN.

Ocheltree. See OCHILTREE.

Ochil Hills, a range of high hills extending from the conjunction of the counties of Stirling, Perth, and Clackmannan, in the vicinity of the town of Stirling, 2 miles from the left bank of the Forth, in an north-easterly direction, to Parton Craigs, on the right bank of the Tay, below the city of Perth. The range runs parallel to the Grampians or mountain-rampart of the Highlands; it forms the screen on the Lowland side of Strathallan and Lower Strathearn—component parts in the large sense of Strathmore; and it lies across the head of the whole peninsula of Fife, defending it and the low ground of Clackmannan, Culross, and Kinross from the scourge of the storms which come down the glens and gorges of the Grampians. Its length is about 24 miles, its average breadth 12. Its SE side, especially toward the Forth, is steep, and in places almost perpendicular; and its NW side rises with a greater abruptness than belongs to most of the Scottish ranges. Its summits are highest at its SW end, and might, especially there, as well as in other parts of the range, be termed mountainous, but for the vicinity of the Highland alps. Three of the summits overlooking the Forth are BENCLEUCH (2363 feet), in the parish of Tillicoultry, the loftiest of the range; DUNMYAT (1375), in the parish of Logie, advancing a little from the contiguous range, breaking almost sheer down in stupendous rocky cliffs into the plain, and commanding a prospect over the basin of the Forth and its tributaries, which, for united gorgeousness and extent, is probably unsurpassed by any other in Britain; and King's Seat (2111), 2 miles NW of Dollar. The prospect from King's Seat, while very extensive and brilliant in itself, fully reveals the relative position of the Ochils. An intelligent observer has thus described it:—'I had now under my eye a circular space of 100 miles in diameter, comprising nearly one-third of the surface of Scotland, and probably two-thirds of its wealth. On the N were the rugged Grampians, rising ridge behind ridge. In the outer line—which is low and uniform—the Pass of Killiecrankie is distinctly seen as a great natural chasm. Below is the well-wooded plain of Perthshire, a part of which is concealed by the spurs or branches of the hills on which you stand. On the W the higher parts of the chain of the Ochils confine the view; but you easily distinguish the summits of Benmore, Ben Ledi, Ben Lomond, and various hills towards the Atlantic. On the S the eye roams over a vast and fertile region, extending from the Campsie Hills to the Lammermuirs, with Edinburgh, Arthur's Seat, the Bass, the Pentlands, and part of Stirlingshire. The Devon is seen immediately below, winding through the valley like a silver thread. Beyond it is the Firth of Forth, clear, luminous, and tranquil like a mirror, and enshrined in the heart of a richly cultivated country. The windings of its upper part, with the islets, capes, and peninsulas which they form, are seen to more advantage here than from Stirling Castle. The small hills between the Ochils and Kincairdine do not present the slightest inequality of surface, but seem sunk and confounded with the valley of the Devon; while the fields, that cover the whole space, with their hedgerows and strips of planting look like the diminutive plots of a nursery. On the SE is seen Kinross, with Loch Leven and its two islets, and beyond these the black mural front of the Lomonds, variegated with streaks of red. On the other side of the Firth are the undulating and well-wooded district of West Lothian and the fertile Carse of Falkirk, in the middle of which an opaque cloud marks the site of Carron. The lower part of the firth is specked with little vessels, and perhaps right before you is a steam-boat, which, when seen on a pretty large surface of water, with its long train of smoke, forms, in my humble opinion, a picturesque object in the landscape, in spite of all that poets have said in its disparagement.'

The Ochils everywhere, within their own limits,

present rich groupings of scenery and pleasing pictures of rural life—swelling hills, verdant to the top, and thickly dotted with sheep and cattle; rivulets rushing along the gorges and the vales, or falling in hoarse murmurs down from precipitous cliffs; and villages, hamlets, and farm-houses, skirted or enclosed with wood. The individual hills are generally long, round-backed, and either covered with verdure or under cultivation up to their summits; and, with some remarkable exceptions, their chief acclivities are rapid, and face the N. Defiles, glens, and valleys everywhere discover the range into small masses and single hills, and are generally of so rich a character in soil and culture as to blend brilliantly with the landscape of the acclivities. Offshoots of the range, but so low that they rarely exceed 500 feet above sea-level, run down the whole peninsula of Fife, and, along with the beautiful Lomond Hills, and some less considerable isolated heights, impart to it that undulated contour which so pleasingly characterises its appearance. These offshoots and the main range may be viewed as enclosing the outer edge or north-eastern extremity of the great coal-field of Scotland, which extends, though not without marked interruptions, from the river Girvan in Ayrshire to the banks of the Eden in Fife. The rocks are eruptive; and the main range is singularly rich in minerals; and, besides yielding up round its base large supplies of coal and of stratification superincumbent on the coal-measures, has furnished from its interior large quantities of various valuable metals. See ALVA.—*Ord. Sur.*, shs. 39, 40, 48, 1867-69.

Ochiltree, a village and a parish in Kyle district, Ayrshire. The village stands, 320 feet above sea-level, on the left bank of Lugar Water, at the influx of Burnock rivulet, $1\frac{1}{2}$ mile N of Ochiltree station, 4 miles W of Cumnock, $1\frac{1}{4}$ E of Ayr, and 13 SSE of Kilmarnock. It has lost its former employments of snuff-box-making, cotton-weaving, and the manufacture of reaping-hooks; but it still is a pleasant little place, and has a post office under Cumnock, with money order and savings' bank departments, gas-works, three inns, and a reading-room and library. John Knox here wedded his second wife, a daughter of the 'good Lord Ochiltree'; and here in Nov. 1666, between the rising at Dalry and the battle of Rullion Green, the Covenanters, who had mustered at the Bridge of Doon, were joined by three parties under Welsh, Guthrie, and Chalmers. At Ochiltree they heard sermon by one of their preachers, marshalled their army, appointed their officers, and held a council of war to examine their condition and prospects, at which they resolved that no further help could be looked for from the south or south-west, but that many adherents would join them in Clydesdale, and that therefore they should straightway march eastward. Pop. (1831) 642, (1861) 709, (1871) 699, (1881) 523.

The parish, containing also Sinclairston hamlet, $4\frac{1}{2}$ miles SW of Ochiltree village, till 1653 included the present parish of Stair. It is bounded NW by Stair, NE by Sorn and Auchinleck, E by Old and New Cumnock, S by Dalmellington, and W by Coylton and Stair (detached). Its utmost length, from N to S, is $8\frac{1}{2}$ miles; its breadth varies between $9\frac{1}{2}$ furlongs and $5\frac{1}{2}$ miles; and its area is 18,422 acres, of which $9\frac{1}{4}$ are water. Lugar Water winds $4\frac{1}{2}$ miles north-westward along all the north-eastern boundary; the Water of COYLE, at two different points, traces $5\frac{1}{2}$ miles and 9 furlongs of the western boundary; and several rivulets, rising in the interior, run to one or other of these two streams. Belston Loch ($2 \times 1\frac{1}{2}$ furl.), near Sinclairston, is the largest of four small lakes, two of them artificial. Along the Lugar the surface declines to 280, along the Coyle to 230, feet above sea-level, and thence it rises southward to 497 feet at Killoch, 935 at Auchlin Rig, 1019 at Auchingee Hill, and 1191 at Stannery Knowe. Sandstone is the predominant rock; two coal-pits have been recently opened; and ironstone exists. The soil is mostly a clayey loam, incumbent on stiff retentive clay; and two-thirds of

the entire area are in tillage. A thriving plantation of no great breadth stretches nearly across the parish parallel with the Ayr road; and this, with the plantations of Barskimming, Auchinleck, and Dumfries House, in the adjacent parishes, relieves the landscape from coldness of aspect. Moss of various depths covers a considerable area, both in the uplands and in the low grounds, and frequently expands into flow moss or wet bog. The ancient barony of Ochiltree belonged from the 14th century, or earlier, till the 16th century, to the family of Colville, several of whom figure in history as knights. In 1530 it was exchanged by Sir James Colville with Sir James Hamilton of Finnart, for the barony of East Wemyss in Fife; and in 1534 it was exchanged by its new possessor with Andrew Stewart, third Lord Avondale, for the barony of Avondale in Lanarkshire. In consequence of the latter exchange, Stewart, in 1543, was created Lord Stewart of Ochiltree, a title that became dormant in 1675. The barony, coming into the possession of the first Earl of Dundonald, was granted by him to his second son, Sir John Cochrane; was forfeited by Sir John in 1685, but re-acquired by his son from the Crown in 1686; was purchased from the Cochrane family about 1737 by Governor M'Rae, who left it to Miss Macquire, afterwards Countess of Glencairn; and was re-sold about 1817 in lots to different proprietors. The old castle of Ochiltree stood by the side of the Lugar, on the brow of a high rocky bank, whence arose the name Ochiltree, signifying 'the lofty dwelling-place'; but nothing of the castle now remains, the whole having been carried away piecemeal for building houses and dykes on the adjoining farms. Another old barony in the parish bears the name of Traboch, signifying 'the dwelling-place of the tribe,' and is now included in the Auchinleck property. A farm on this estate, called Hoodstone, was tenanted from the 13th till the present century by a family of the name of Hood, descendants, it is said, of the famous English outlaw, Robin Hood. At Auchencloich, in the upland district, are the ruins of an old castle, unknown to either record or tradition. An ancient camp occupied part of the site of the village of Ochiltree; but little or nothing is known respecting it. The Marquis of Bute and the two daughters of the late Lady Boswell of Auchinleck are chief proprietors, 2 others holding each an annual value of £500 and upwards, 7 of between £100 and £500, 3 of from £50 to £100, and 6 of from £20 to £50. Ochiltree is in the presbytery of Ayr and the synod of Glasgow and Ayr; the living is worth £355. The parish church, at the village, was built in 1759, and contains 630 sittings. There is also a Free church; and two public schools, Ochiltree and Sinclairston, with respective accommodation for 177 and 103 children, had (1883) an average attendance of 115 and 59, and grants of £117, 14s. and £66, 6s. Valuation (1860) £11,949, (1884) £16,343, 2s. 10d., plus £6180 for railway. Pop. (1801) 1308, (1831) 1562, (1861) 1676, (1871) 1656, (1881) 1492.—*Ord. Sur.*, sh. 14, 1863.

Ochiltree, a hamlet in Linlithgow parish, Linlithgowshire, 3 miles SE of Linlithgow town. An old castle stood adjacent to its N side, and traces of a Roman camp are on an eminence a little to the S.

Ochiltree. See PENNINGHAME.

Ochterlony, a mansion in Rescobie parish, Forfarshire, $1\frac{1}{2}$ mile WSW of Guthrie station. Erected in 1821 by Mr Stephens, the then proprietor of the estate of Balmadies or Ochterlony, it is now the seat of Sir Charles Metcalfe Ochterlony, second Bart. since 1823 (b. 1817; sc. 1825), who holds 1025 acres in the shire, valued at £1295, 8s. per annum.—*Ord. Sur.*, sh. 57, 1868.

Ochertyre, a mansion in Kincardine parish, Perthshire, near the right bank of the Teith, $4\frac{1}{2}$ miles NW of Stirling, and $4\frac{1}{4}$ SE of Doune. It was the residence of John Ramsay (d. 1814), the associate of Dr Blacklock, Robert Burns, and Sir Walter Scott; and later was the seat of the Right Hon. Sir David Dundas, Q.C. (1799-1877). Liberal M.P. for Sutherland 1840-52 and 1861-67. His nephew, Colin Mackenzie Dundas, Esq. (b. 1842; suc. 1879), holds 984 acres in the shire,

valued at £1231, 7s. per annum.—*Ord. Sur.*, sh. 39, 1869.

Ochertyre, a mansion in Monzievaired parish, Upper Strathern, Perthshire, 3 miles NW of Crieff. It stands on a skirt of the Grampians, sloping southward to Ochertyre Lake ($4\frac{1}{2} \times 1\frac{1}{2}$ furl.), and is a plain but commodious modern edifice, with a finely wooded park, which both contains and commands many views of exquisite beauty. Patrick Moray, the first of Ochertyre, who died in 1476, was the third son of Sir David Moray of Tullibardine; and William, his eighth descendant, was created a baronet in 1678. Sir Patrick Keith Murray, present and eighth Bart. (b. 1835; suc. 1861), is fifteenth in direct descent from the first laird of Ochertyre. He holds 17,876 acres in the shire, valued at £11,051 per annum.—*Ord. Sur.*, sh. 47, 1869. See **MONZIEVAIRED**, and chap. xxxvii. of Thomas Hunter's *Woods and Estates of Perthshire* (Perth, 1883).

Ockraquay, a village on the E coast of Dunrossness parish, Sutherland, 10 miles SSW of Lerwick.

Odin's or Lord Lovat's Cave, a cavern in Laggan Point, at the E side of Loch Bui, Mull island, Argyllshire, 17 miles WSW of Oban. It measures 300 feet in length, from 20 to 45 in width, and from 40 to 120 in height; and leads, by a narrow, difficult, descending passage, to another cave, 150 feet long, 12 wide, and 24 high.

Odmswick. See **OTTERS WICK**.

Ogilface, an ancient baronial fortalice in Torphichen parish, Linlithgow, $3\frac{1}{2}$ miles W of Bathgate. It belonged to the ancient family of De Bosco, Barons of Ogilface; passed to the Earls of Linlithgow; seems to have been a structure of some strength, but of no great size; and is now represented by only traces of the foundations.

Ogilvie. See **GLENGILVIE**.

Ogilvie, a ruined castle in Blackford parish, Perthshire, on a part of the Ochil Hills, called from it the Braes of Ogilvie, 1 mile SE of Blackford village. It appears to have been a place of great strength, both in structure and in position.

Ogle. See **GLENGOLE**.

Ogstoun. See **DRAINIE**.

Oich, a loch and a rivulet of Kilmonivaig and Boleskine parishes, in the Great Glen, Inverness-shire. Lying 105 feet above sea-level, between Lochs Ness and Lochy, the lake has a length from SSW to NNE of $3\frac{1}{2}$ miles, whilst its breadth varies between 1 and $2\frac{1}{2}$ furlongs. It forms the summit-level of the CALEDONIAN CANAL navigation; is gemmed with two wooded islets, and encircled by verdant banks and picturesque hills; receives, on its western side, the tribute of the GARRY; and at INVERGARRY commands a romantic vista view into Glengarry. Its waters are so stored with salmon, trout, and pike, as to afford prime sport to anglers. The rivulet, issuing from the foot of the lake, runs $6\frac{1}{2}$ miles north-north-eastward to Loch Ness (50 feet) at Fort Augustus. It is flanked by low rocky heath-clad hills, and yields capital salmon and trout fishing.—*Ord. Sur.*, shs. 63, 73, 1873-78.

Oikell, a river of Sutherland and Ross-shire, rising at an altitude of 1500 feet above sea-level, and running $35\frac{1}{2}$ miles south-south-westward and east-by-southward along the mutual border of Creich parish in Sutherland and Kincardine in Ross-shire, through Loch Ailsh ($7 \times 4\frac{1}{2}$ furl.; 498 feet) and the KYLE OF SUTHERLAND, till it falls at Bonar-Bridge into the head of the DORNOCH FIRTH, which, strictly speaking, is its estuary. The Oikell's principal tributaries are the CASSLEY and SHIN on its left bank, and the Einig and CARRON on its right. Several hundred yards above the inn of Oikell-Bridge, which is $18\frac{1}{2}$ miles WNW of Bonar-Bridge and 18 WSW of Lairg station, the Oikell, tumbling along a rugged and declivitous channel, makes a series of wild cataracts, which terminate in one bold and very formidable fall. The banks which overhang this multiplied inn are quite precipitous, and exhibit from their crevices, at spots where no soil can be detected by the eye, several large fir trees springing up from curiously

twisted roots. For several miles below this point, the vale of the stream, or Strathoikell, is flanked by heath-clad hills, whose dreariness is relieved only by occasional clumps of stunted birch and a few verdant meadows on the margin of the stream. Three miles above the influx of the Cassley, an impetuous burn tumbles head-long into the vale; and at a brief distance from its mouth rises an elevated grassy bank, which is crowned by a burying-ground. This part of the vale is called Tuitean-Tharbhach ('fertile fall of slaughter')—a name which alludes to a fierce onslaught, towards the close of the 14th century, on a freebooting party of the Macleods of Lewis by a body of the men of Sutherland. From Tuitean-Tharbhach to the Cassley the stream runs tortuously along a winding strath; and, while markedly Highland in its screens, has a profusion of birch and alder coppice upon its immediate banks, and, in one place, is overhung by a forest of firs. At the junction of the Cassley a fine view is obtained of Roseshall House, embosomed in extensive woods, near the foot of Glen-Cassley, and of the old walls of Castle-na-Coir, situated in a meadow on the left bank of the Oikell. The river is navigable by boats from the sea to Roseshall, and brings up the tide to a point only $\frac{1}{2}$ mile lower down. The united waters of the Oikell and the Cassley form a fine large river, and make a well-defined boundary-line between Ross and Sutherland. The strath, down to Bonar-Bridge at the head of the firth, is everywhere beautiful, and forms part of the ancient district of Ferrinbusklyne or Sleischillis, which the bishops of Caithness obtained in the 12th century as a gift from the Earls of Sutherland. From Roseshall to about 3 miles above the influx of the Shin, it forms on the one side a craggy barrier, and on the other a low expanse of continued forest, and winds perpetually in its progress; lower down are broad meadows along the edge of the stream, pretty clumps of coppices on the declivities, and groups and sprinklings of neat stone cottages picturesquely perched upon rocky heights. The Oikell yields capital salmon and trout fishing.—*Ord. Sur.*, sh. 102, 1881.

Oisinnach, Lochan. See **DOWALLY**.

Old Aberdeen. See **ABERDEEN, OLD**, etc.

Oldany. See **OLDNEY**.

Oldhamstock (anc. *Aldhamstoc*, 'old dwelling-place'), a village of E Haddingtonshire, and a parish partly also in Berwickshire. The village stands on the left bank of Oldhamstock Burn, 3 miles S of Innerwick station, $18\frac{1}{2}$ E by S of Haddington, and $3\frac{1}{2}$ W by S of Cockburnspath, under which it has a post office. It contains the parish church of Oldhamstock, an ancient edifice, the Free church of Cockburnspath, and a public school; and fairs are held here on the last Thursday of July and September.

The parish, containing also the village of BILSBEAN, consists of a main body, chiefly in Haddingtonshire, partly in Berwickshire, and a detached section entirely in Berwickshire. The main body is bounded NE by the German Ocean, E by Cockburnspath, S by Abbey St Bathans, and SW and NW by Innerwick. Its utmost length, from NE to SW, is $5\frac{1}{2}$ miles; its width varies between $7\frac{1}{2}$ furlongs and $2\frac{1}{2}$ miles; and its area is 7530 acres, of which $110\frac{1}{2}$ are foreshore, and $927\frac{1}{2}$ (in the extreme S) belong to Berwickshire. The detached section, containing Grant's Horse station, lies $1\frac{1}{2}$ mile E of the nearest point of the main body, and is bounded NW by Cockburnspath, NE and SE by Coldingham, and SW by Abbey St Bathans. Its utmost length, from E to W, is $2\frac{1}{2}$ miles; its utmost breadth is $1\frac{1}{2}$ mile; and its area is $1419\frac{1}{4}$ acres. Oldhamstock Burn, drawing head-streams from Innerwick, winds $2\frac{1}{2}$ miles east-by-northward across the interior to Berwick or DUNGLASS BURN, which runs $4\frac{1}{2}$ miles north-north-eastward along the Berwickshire border to the sea, through the deep wooded ravine of Dunglass Dean. MONYNET WATER, a tributary of the Whitadder, runs $2\frac{1}{2}$ miles south-eastward along the south-western boundary; and EYE WATER meanders $3\frac{1}{2}$ miles along all the south-western and south-eastern sides of the detached district.

The coast, only $1\frac{1}{2}$ mile long, trends south-eastward to the mouth of Dunglass Burn, and presents a bold rocky front to the German Ocean, rising rapidly to a height of over 100 feet. Thence onward the surface ascends to the Lammernuirs' watershed, chief elevations being *Cocklaw Hill (1046 feet), Wightman Hill (1153), Heart Law (1283), *Corse Law (1042), and *Langhing Law (1008), where asterisks mark those summits that culminate on the confines of the parish. In the detached district the altitude ranges from 390 to 672 feet. The rocks of the hills are Silurian, of the seaboard are carboniferous; and coal has been worked in a stratum lying near the surface, whilst sandstone, limestone, and ironstone are found. The soil is generally sharp and dry, very fertile towards the sea, but barren and heathy on the hills. Antiquities are Castledykes, close to Bilsdean, and the site of Kilsplindie Castle in the detached district. DUNGLASS, noticed separately, is the only mansion; but 3 proprietors hold each an annual value of more, 3 of less, than £500. Oldhamstoeck is in the presbytery of Dunbar and the synod of Lothian and Tweeddale; the living is worth £409. The public school, with accommodation for 109 children, had (1883) an average attendance of 64, and a grant of £65. Valuation (1860) £1618, (1884) £6895, of which £1659 was for the two Berwickshire portions. Pop. (1801) 575, (1831) 720, (1861) 615, (1871) 592, (1881) 568, of whom 449 were in Haddingtonshire.—*Ord. Sur.*, shs. 33, 34, 1863-64.

Oldney or Oldany, a triangular island of Assynt parish, W Sutherland, on the S side of the entrance to Kylesku, within 80 yards of the mainland, and 7 miles N of Lochinver. With an utmost length and breadth of $1\frac{1}{2}$ and 1 mile, it rises to a height of 336 feet above sea-level; is covered with excellent sheep pasture; and belongs to a sheep farm of its own name on the neighbouring coast. Pop. (1881) 4.—*Ord. Sur.*, sh. 107, 1881.

Old Water of Cluden. See KIRKPATRICK-INGRGRAY.
Oliver Castle, an ancient baronial fortalice in Tweedmuir parish, SW Peeblesshire, on the left side of the river Tweed, nearly opposite Tweedmuir church, $13\frac{1}{2}$ miles SSE of Biggar. Crowning a rising-ground which now is tufted with a clump of trees, it was the original seat of the Frasers, ancestors of the noble families of Lovat and Saltoun, and passed from them to the Tweedies, who figure in the introduction to Sir Walter Scott's *Zetocroft*, and whose maternal descendant, Thomas Tweedie-Stodart, Esq. (b. 1838; suc. 1869) of Oliver House, a plain modern mansion hard by, holds 1144 acres in the shire, valued at £260 per annum. Oliver Castle was the remotest of a chain of strong ancient towers, situated each within view of the next all down the Tweed to Berwick, and serving both for defence and for beacon-fires in the times of the Border forays. It was eventually relinquished and razed to the ground.—*Ord. Sur.*, sh. 24, 1864.

Ollaberry, a village on the E coast of Northmaven parish, Shetland, at the head of a small bay, 17 miles NNW of Voe, and 36 NNW of Lerwick. It has a post office under Lerwick, a ruined church, an Established chapel of ease, a U.P. church, and a public school.

Ollagirth, a village in Tingwall parish, Shetland, 10 miles N W of Lerwick.

Olma Firth, a bay in Delting parish, Shetland, opening from the head of Roe Sound or the inner reach of St Magnus Bay, and penetrating 3 miles east-south-eastward to the village of Voe, which is 19 miles NNW of Lerwick. With a maximum width of $\frac{2}{3}$ mile, it has a serrated or tortuous outline; and is completely landlocked. The presbytery of Olmafirth, in the synod of Shetland, comprehends the *quoad civilia* parishes of Delting, Nesting, Northmaven, Sandsting, and Walls, the *quoad sacra* parish of Whalsay, and the chapelry of Olmafirth, Luuna, Ollaberry, and Sandness. Pop. (1871) 12,528, (1881) 11,513, of whom 2964 were communicants of the Church of Scotland in 1878.

Olrig, a coast parish of N Caithness, containing CASTLETOWN village, 5 miles E by S of the post-town, Thurso. It is bounded N by DUNNET Bay, NE by

Dunnet parish, SE and S by Bower, and W by Thurso. Its utmost length, from WNW to ESE, is $5\frac{1}{2}$ miles; its breadth varies between 2 $\frac{1}{2}$ furlongs and $4\frac{1}{2}$ miles; and its area is $15\frac{1}{2}$ square miles, or 10,336 $\frac{2}{3}$ acres, of which 32 $\frac{1}{2}$ are water and 289 $\frac{1}{2}$ foreshore. The coast, $3\frac{1}{2}$ miles in ext. ent, to the E comprises some sandy links; near Castletown has a small but commodious harbour; and in the W is indented by small Murkle Bay. The interior is partly flat and partly hilly; forms, for some distance from the coast, a continuous expanse of fertile cultivated land; and rises, towards the S, into gentle, verdant, finely-pastoral uplands. Olrig Hill (463 feet), 2 miles SW of Castletown, is crowned with vestiges of an ancient watch-tower, and commands a view of the southern Orkneys, great part of Caithness with the Sutherland hills beyond, and nearly all the Moray Firth away to the coasts of Elgin, Banff, and Aberdeen shires. Durran Hill (888 feet) is 2 $\frac{1}{2}$ miles S by W of Castletown; Durran Loch, to the NE of Durran Hill, has long been drained, rich meadow-land and pits of marl now occupying its former bed. The rocks are Devonian, and, including abundance of sandstone and limestone, supply vast quantities of pavement-flag for exportation. The soil of the cultivated lands is good, principally a deep clay, with occasional patches of sand or till. Great improvements in the way of draining, fencing, and reclaiming, have been effected on both the Ratter and Olrig estates—on the former by Sheriff Trail in the first half of this century. Fully three-fifths of the entire area is in tillage; some 20 acres are under wood; 500 are links or moss; and the rest is capital pasture. Antiquities are six Piets' houses, the watch-tower on Olrig Hill, and the sites of a nunnery on Murkle estate, of St Trothan's chapel to the S of Castletown, and of St Coomb's Kirk on the Links of Old Tain, which last is said to have been overwhelmed by sand. Olrig House, 1 mile SSW of Castletown, is the seat of James Smith, Esq. (b. 1832; suc. 1853), who holds 2734 acres in the shire, valued at £2325 per annum. Four proprietors hold each an annual value of £500 and upwards, 1 of from £50 to £100, and 12 of from £20 to £50. Olrig is in the presbytery of Caithness and the synod of Sutherland and Caithness; the living is worth £270. The parish church at Castletown is a handsome edifice of 1841, designed by Mr Cousin of Edinburgh. There are also Free and Original Secession churches; and four schools—Castletown public, Murkle public, Tain District public, and Olrig female—with respective accommodation for 200, 116, 60, and 168 children, had (1883) an average attendance of 87, 86, 22, and 88, and grants of £73, 18s., £102, 14s., £23, 8s., and £65, 15s. Valuation (1860) £7320, (1884) £8879, 17s. Pop. (1801) 1127, (1831) 1146, (1861) 2059, (1871) 2028, (1881) 2002.—*Ord. Sur.*, sh. 116, 1878.

Omoa. See CLELAND.

Onich, a village in Kilmallie parish, Inverness-shire, at the northern side of the entrance to Loch Leven, 2 $\frac{1}{2}$ miles WNW of Ballachulish ferry. It has a post office and a public school. Slate quarrying was begun here on the Lochiel estate in 1872.

Orangefield, an estate, with a mansion, in Monkton parish, Ayrshire, 1 mile NNE of Prestwick station.

Oransay, an island in Colonsay parish, Argyllshire, near the S end of Colonsay island, and $5\frac{1}{2}$ miles N by W of the nearest point of Islay. It is separated from Colonsay by a channel only from 100 yards to 1 mile wide, and dry at low water; measures 2 $\frac{1}{2}$ miles from E to W, by $1\frac{1}{2}$ mile from N to S; and has an indented, irregular outline, with a rugged, hilly, but not high surface. According to tradition, Columba and Oran, his colleague, the latter of whom gave name to the island, first landed here from Ireland in 563, when, finding he could see the Irish coast from Cairn-Cul-ri-Erinn, its highest hill, he durst not tarry, but proceeded northward to Iona. Long after, in the 14th century, an Austin priory was founded here by one of the Lords of the Isles as a cell of Holyrood Abbey. This priory has left remains more interesting than any in the Western Highlands and Islands, excepting those of

Iona. Transitional Early English in style, its roofless church measures 77½ feet in length and 18 in width, has a fine three-light Gothic E window, and adjoins a very peculiar cloister, forming a square of 40 feet without and 28½ within. In Pennant's time (1772) one of the sides of the cloister had five small round arches; whilst two other sides, confronting each other, showed seven low triangular-headed arches, with plain square columns. A side chapel contains a sculptured tomb of an abbot of 1539, and a stone with figures of dogs, a stag, and a ship under sail; and in the churchyard is a finely sculptured cross of 1510, resting on a graduated pedestal, and bearing on its head a sculpture of the crucifixion. Other antiquities, such as cairns and tumuli, are numerous. Pop. (1871) 48, (1881) 10. See an article by W. Stevenson in *Proc. Soc. Ants. Scotl.* (1881).

Oransay, a rocky island of Morvern parish, Argyllshire, in Loch Sunart, 2½ miles E of that loch's deflection from the NW end of the Sound of Mull. It groups with Carna islet, and is washed by impetuous tides from the W, rushing towards the land-locked upper reaches of the loch.

Oransay, Skye, Inverness-shire. See ISLE-ORNSAY.
Orchardton, a mansion, with beautiful grounds, in Renwick parish, Kirkeudbrightshire, near the head of Orchardton Bay, 6½ miles SSE of Castle-Douglas. Its owner, William Douglas Robinson-Douglas, Esq. (b. 1851; suc. 1878), holds 3495 acres in the shire, valued at £2021 per annum. Orchardton Tower, 1½ mile NNE, is the only round tower in Galloway. It was a seat of a branch of the Maxwells; and the strange story of its 'Wandering Heir' is told in Miss Goldie's *Family Recollections* (Edinb. 1841).—*Ord. Sur.*, sh. 5, 1857.

Orchil, an estate, with a mansion, in Ardoch parish, Perthshire, 3½ miles NW of Blackford station. See MUTHILL.

Orchy, a stream of Glenorchy parish, Argyllshire, rising, close to the Perthshire boundary, at an altitude of 2700 feet, and 5½ miles SSE of Loch Lydoch. Thence it winds 10½ miles north-north-westward and west-south-westward under the name of the Water of TULLA, until it expands into Loch Tulla (2½ miles × 5 furl; 555 feet), and receives there an important tributary from the mountains flanking the E side of the upper part of Loch Etive. It next runs 16½ miles south-westward to Loch Awe (118 feet) at KITCHURN Castle—rapidly and turbulently along the valley of Glenorchy proper, but tranquilly and sluggishly along the vale of Dalmailly. Its waters contain abundance of salmon, trout, perch, and pike, the last running up to 34 lbs.—*Ord. Sur.*, shs. 54, 46, 45, 1872-76.

Ord, a *quoad sacra* parish of N Banffshire, whose church, 3 miles SSE of Tillynaught station, was built as a chapel of ease in 1836. The parish, constituted in 1869, is in the presbytery of Fordyce and the synod of Aberdeen; its minister's stipend is £120. Pop. (1871) 884, (1881) 851, of whom 169 were in Alvah, 390 in Banff, 203 in Boyndie, and 89 in Marnoch.—*Ord. Sur.*, sh. 96, 1876.

Ord or Muir of Ord, the southern part of the Mullbuie, Ross-shire, near the boundary with Inverness-shire. It is traversed by the public road from Inverness to Tain, and by the Highland railway, with the station of Muir of Ord, 3 miles N of Beaulie; is the scene of great cattle, sheep, and horse markets, usually denominated the markets of BEAULIE; has a tabular or flat surface, and a sandy soil; contains two ancient standing-stones, said to commemorate a great clan fight; and adjoins a tract on the E containing a very large number of ancient Caledonian cairns and stone circles. Ord House, 1¼ mile W of the station, is the seat of Thomas Mackenzie, Esq. (b. 1797; suc. 1821), who holds 21,229 acres in the shire, valued at £2460 per annum.—*Ord. Sur.*, sh. 83, 1881.

Ord or Ord-of-Caithness, an abrupt, broad, lofty, granite mountain overhanging the sea, on the mutual border of Sutherland and Caithness, 4 miles by road NE of Helmsdale. The old road over it, formerly the only land ingress to Caithness, traversed the crest of

its stupendous seaward precipices at a height and in a manner most appalling to both man and beast; and even the present road, formed in 1811, rises to an elevation of 726 feet above sea-level, and has very stiff gradients. 'The Ord-of-Caithness,' says Miss Sinclair, 'was formerly pre-eminently for being the most dangerous bit of road in Scotland. . . . During the last century, whenever the late Earl of Caithness, my grandmother Lady Janet Sinclair, or any of the chief landed proprietors, entered that county, a troop of their tenants assembled on the border of Sutherland, and drew the carriage themselves over the hill, a distance of two miles, that nothing might be trusted in such a scene to the discretion of quadrupeds. . . . The mail-coach now rattles down the whole descent of the Ord, scarcely deigning even to use a drag!' According to an old-world superstition, no Sinclair may, without fearful foreboding of evil, cross the Ord on a Monday; forty Sinclairs, led by the Earl of Caithness, having on that day ventured over the barrier on their way to the field of Flodden, where—with the exception of the drummer, who was dismissed before the battle began—all were cut down by the sword.—*Ord. Sur.*, sh. 109, 1878.

Ordbain Hill. See LOCH-AN-EILEIN.
Ordhead, a place in Monymusk parish, Aberdeenshire, 3½ miles NNW of Monymusk station. It has a post office under Aberdeen, with money order and savings' bank departments.

Ord Hill. See KNOCKBAIN.
Ordie Burn, a Perthshire rivulet, rising in the extreme NW of Auchtergaven parish, and running 8½ miles east-south-eastward, chiefly within Auchtergaven parish, partly on the boundary between that parish and Moneydie and Redgorton. It receives, towards the end of its course, the large tribute of Shochie Burn; traverses, for ½ mile after the influx of that tributary, an artificial bed made for it by the Lunecarty Bleachfield Company; gives to the part of its basin within Auchtergaven the name of Strathord; is an excellent trouting stream; and passes through a steep bank into the Tay a little above Lunecarty. See AUCHTERGAVEN.—*Ord. Sur.*, shs. 47, 48, 1869-68.

Ordie, Loch, a lake in Dunkeld and Dowally parish, Perthshire, 6 miles N of Dunkeld. Lying 980 feet above sea-level, it has an utmost length and breadth of 5 and 3½ furlongs, sends off DOWALLY Burn to the Tay, and contains abundance of fine large trout. On 12 Oct. 1865 the Queen, with the Princess Helena and the Duchess of Athole, 'took a short row on Loch Ordie, which looked extremely pretty, wooded to the water's edge and skirted by distant hills.'—*Ord. Sur.*, sh. 56, 1870.

Ordiquhill, a parish of Banffshire, to the N containing CORNHILL village, ½ mile SSE of Cornhill station in Fordyce parish, this being 8½ miles SW by W of Banff, under which it has a post and railway telegraph office. It is bounded NW by Fordyce, NE by Boyndie, SE and S by Marnoch, and SW by Grange. Its utmost length, from NE to SW, is 4½ miles; its utmost breadth is 2½ miles; and its area is 4758 acres, of which 3¾ are water. The drainage is carried north-north-eastward by head-streams of the Burn of Boyne; and in the extreme N the surface declines to 240 feet above sea-level, thence rising to 410 feet near Rothen, 711 at Corn Hill, 865 at Culvie Hill, 890 at Wether Hill on the southern border, and 1409 at Knock Hill on the meeting-point with Grange and Fordyce, the summit of which last, Knock Hill, is covered by a stratified bed of moss 15 to 20 feet deep. The predominant rocks are mica slate and gneiss, with some granite; but they mostly lie under thick deposits of coarse, gritty, ferruginous clay. Trap boulders are everywhere plentiful; serpentine rock, prolonged from the famous beds and pits near Portsoy, occurs along the eastern base of Knock Hill; and specimens of garnet, tourmaline, asbestos, and rock-cork are found. The soil is in most parts deep, but lies on a cold retentive bottom. Till 1842 nearly half the entire area continued to be pastoral or waste; but the greater part of it has since been brought under the plough; and some 350

acres are under wood. Park House, $1\frac{1}{2}$ mile SSE of Cornhill station, is a good and commodious mansion, enlarged in 1829. Its owner, Major Lachlan Duff Gordon-Duff (b. 1817; suc. 1856), is sole proprietor. (See *БОТРИФИК*.) Ordiqubhill is in the presbytery of Fordyce and the synod of Aberdeen; the living is worth £272. The parish church, 2 miles SSW of Cornhill station, is a neat edifice of 1805, containing 490 sittings. There is also a Free church; and Park female and Ordiqubhill public schools, with respective accommodation for 74 and 120 children, had (1883) an average attendance of 73 and 66, and grants of £63, 17s. 6d. and £64, 9s. Valuation (1860) £3067, (1884) £3477. Pop. (1801) 510, (1831) 655, (1861) 764, (1871) 761, (1881) 714.—*Ord. Sur.*, shs. 86, 96, 1876.

Ord-of-Caithness. See *ORD*.

Ore, a sluggish rivulet of SW Fife, flowing 17 miles east-by-northward through or along the borders of Dunfermline, Beath, Cleish, BALLINGRY, AUCHTERBERRAN, Kinglassie, Dysart, and Markinch parishes, till it falls into the Leven at a point 7 furlongs W by N of Windygates station. Its banks are everywhere flat, though in places prettily wooded; its current is muddy; and the trout, pike, and perch of its waters afford but indifferent fishing. See *LOCHORE*.—*Ord. Sur.*, sh. 40, 1867.

Orkney, a group of islands and islets off the eastern part of the N coast of Scotland, and forming a division of the county of Orkney and Shetland. The group, which is separated from the mainland of Scotland by the Pentland Firth, contains 28 inhabited islands, 39 smaller islands used for grazing purposes, locally known as *holms*, and a large number of waste rocky islets or skerries. The island extends from N latitude $56^{\circ} 44'$ (Brough Ness at the S end of South Ronaldsay) to N latitude $59^{\circ} 23' 40''$ (Point of Sinoss in the N of North Ronaldsay), and from W latitude $2^{\circ} 22' 34''$ (Start Point in Sanday) to W latitude $3^{\circ} 26' 22''$ (Rora Head at the W end of Hoy). The distance in a straight line from Point of Sinoss SSW to Brough Ness in South Ronaldsay is 50 miles, or SSW by S to Tor Ness in Hoy is $53\frac{1}{2}$ miles, and the greatest width of the group is from Burgh Head in Stronsay on the E to Outshore Point midway between Marwick Head and Bay of Skail on the W side of Pomona on the W, a distance of $29\frac{1}{2}$ miles. The islands are divided into three groups. The first, nearest the mainland, is known as the South Isles, and comprises the large islands of Hoy (W) and South Ronaldsay (E) and the smaller ones that surround them. To the N of Hoy is Graemsay, NE is Risa, and E are Flotta and South Walls. To the N of South Ronaldsay and separated from it by Water Sound is Burray with the smaller islands of Glimps Holm and Hunda; on the S are the Pentland Skerries, and SE is Swona. The water space between Hoy and South Walls is the well-known anchorage of Long Hope. The passage between Fara and Flotta is Weddell Sound, and between Flotta and Switha is Switha Sound. The passage between Flotta and South Ronaldsay is the Sound of Hoxa. The South Isles are separated from the mainland by the Pentland Firth, the distance across which, from Dunnet Head to Tor Ness (Hoy), is $7\frac{1}{2}$ miles, from St John's Point to Tariff Tail (Swona) $6\frac{1}{2}$ miles, and from Duncansbay Head to Brough Ness (South Ronaldsay) $6\frac{1}{2}$ miles. The second group lies to the N of those just described, and consists of Pomona or the Mainland—the principal island in the Orkneys, containing nearly half the entire area and more than half the whole population—and the smaller islands to the NE. The deep sweep of Kirkwall Bay on the N and Scapa Bay on the S [see *KIRKWALL*] narrows Pomona at one point so that it is divided into two parts of unequal size, that to the W being the larger. Off the NE coast of this larger portion are the islands of Rousay—with the smaller islands of Egilsay (E), Viera (SE), and Eynhallow (SW)—and Gairsay with Sweyn Holm; off the S coast, but nearer Hoy, is the small

island of Cava. To the N of the smaller eastern portion is Shapinsay with Helliar Holm; to the SE is Copinsay with the Horse of Copinsay and Corn Holm; to the S is the small Lamb Holm. This the Mainland group is separated from the NE of Hoy by Hoy Sound; from the E of Hoy, and from Fara, Flotta, and the NW of South Ronaldsay, by Scapa Flow; and from Burray by Holm Sound. The third group lies NE of the Mainland islands, and consists of Westray, Eday, and Stronsay in a line from NW to SE, with Papa Westray to the NE of Westray; Sanday NE of Eday, and North Ronaldsay still farther to the NE. To the E of Papa Westray is the small Holm of Papa, NE of Eday is the Calf of Eday, SW of it are Muckle and Little Green Holms, and W of it are Fara and Holm of Fara. To the N of Stronsay is Holm of Huip, NE is Papa Stronsay, S is Auskerry, W is Linga Holm, and NW is Little Linga. This group is known as the North Isles, and sometimes Rousay and Shapinsay are included in it. Westray and Eday are separated from Rousay and Egilsay by the Westray Firth (varying from 4 to 8 miles wide), and the portion of sea E of Shapinsay and S of Stronsay is known as Stronsay Firth. Westray is separated from Papa Westray by Papa Sound ($1\frac{1}{2}$ mile), and from Holm of Fara by Rapness Sound ($1\frac{1}{2}$ mile) and Weatherness Sound (3 furl.). Eday is separated from Fara by Sound of Fara (varying from 1 to $1\frac{1}{2}$ mile), from Muckle Green Holm by Fall of Warness ($1\frac{1}{2}$ mile), from Calf of Eday by Calf Sound ($\frac{1}{2}$ mile), and from the SW of Sanday by Eday Sound ($1\frac{3}{4}$ mile) and Lashy Sound (at Calf of Eday, 1 mile). Stronsay is separated from Linga Holm by Linga Sound ($\frac{1}{2}$ mile), from Auskerry by Ingale Sound ($2\frac{1}{2}$ miles), from Papa Stronsay by Papa Sound ($\frac{1}{2}$ mile), from Holm of Huip by Huip Sound ($\frac{1}{2}$ mile); and between Holm of Huip and the SW end of Sanday is Spurness Sound ($1\frac{3}{4}$ mile). The sea N of Eday, between Westray and Sanday, is known as the North Sound; while along the S coast of Sanday, between that island and Stronsay, is Sanday Sound ($4\frac{1}{2}$ miles at narrowest point), and between Sanday and North Ronaldsay is the North Ronaldsay Firth (2 miles 3 furlongs at the narrowest part). Except along the cliffs of the southern and western sides the coast-line of all the islands is extremely irregular, there being everywhere numerous deep bays. Of these the chief are Long Hope, near the SE end of Hoy; Pan Hope in Flotta; Wilewall Bay on the W side, and St Margaret's Hope in the N end, of South Ronaldsay; Echnaloch Bay in the NW of Burray; Bay of Ireland and Scapa Bay on the S side of Pomona; Bay of Firth and Bay of Kirkwall opening off the Wide Firth, Bay of Meil and Inganess Bay opening off Shapinsay Sound, and Deer Sound farther E, all in Pomona; Veantrow Bay on the N side of Shapinsay; Saviskail Bay on the N side of Rousay; Bay of Pierowall on the E side of Westray, opposite the S end of Papa Westray; Bay of Tnjuoy on the S side of Westray; Fersness Bay on the W coast of Eday; St Catherine's Bay on the W coast, Bay of Holland on the S coast, Odin Bay and Mill Bay on the E coast, of Stronsay; North Bay on the W coast, Backaskail Bay, Kettletoft Bay, Cat-a-Sand, and Lopness Bay on the S coast, Scuthvie Bay on the E coast, and Otterswick Bay on the N coast, of Sanday; and Linklet Bay in North Ronaldsay. The surface of the islands lies low, and, except Hoy, none of them can be called hilly. The general rise is from NE to SW, a height of 333 feet being reached at the Ward Hill at the S end of Eday; 880 at the Ward Hill in the SW of the Mainland, midway between Bay of Ireland and Scapa Bay; and 1420 at Cullings, 1564 at the Ward Hill, and 1308 at Knap of Trewieglan, the three highest points in Hoy and in the whole group of islands. Except in the Pentland Firth, where the depth of the sea reaches 40 fathoms, the water in the straits between the islands and in their immediate neighbourhood is nowhere deeper than 20 fathoms. A rise of 120 feet in the sea-bottom would unite the whole group, except Swona and the Pentland Skerries, into one mass of land, which would be separated from the mainland of Scotland by a

* The Pentland Skerries, which are held to belong to Orkney, are still farther S, the latitude of the Little Skerry being $55^{\circ} 40' 30''$.

strait from 2 to 3 miles broad where the Pentland Firth is, with a long pointed projection passing by Swona through the Sound of Hoxa into Scapa Flow, a little beyond Roan Head, at the NE corner of Flotta; and from this a narrow strait, about a mile wide, would pass along the SW side of Hoy. If these sounds are, however, of moderate depth, their number and the broken and winding outline of the coast are evidences of the hard struggle that constantly takes place between the land and the Atlantic surge. 'The intricate indented coast-line, worn into creeks and coves, and overhanging cliffs; the crags and skerries, and sea stacks, once a part of the solid land, but now isolated among the breakers; the huge piles of fragments that lie on the beach, or have been heaped far up above the tide-mark, tell only too plainly how vain is the resistance, even of the hardest rocks, to the onward march of the ocean. The rate of waste along some parts of these islands is so rapid as to be distinctly appreciable within a human lifetime. Thus the Start Point of Sanday was found by Mr Stevenson, in 1816, to be an island every flood tide; yet even within the memory of some old people then alive, it had formed one continuous tract of firm ground. Nay, it appears that during the 10 years previous to 1816, the channel had been worn down at least 2 feet.' Through these narrow sounds the tidal wave, rushing along with a speed varying from 4 miles an hour at neap to 12 miles an hour at spring tides (the latter being the speed it is said to attain in the Pentland Firth), causes currents and eddies that everywhere require the greatest skill and care in their navigation, and that become in stormy weather, often for days and sometimes even for weeks, quite impassable. 'With such tideways, the slightest inequality in the bottom produces a ripple on the surface, increasing in places to the dangerous whirlpools called *riists* or roosts, which have, in the case of the Pentland Firth, so long given it a bad name amongst mariners. What those *riists* are, especially when a flood spring is met dead end by a gale from the opposite quarter, only those who have seen them or similar tidal-races can realise. . . . In August 1858, three fishermen named Hercus, whilst saith-fishing, were sucked into the Bore of Papa, as a dangerous roost to the north of Papa Westray is called, and drowned; and probably many instances could be cited of similar accidents, though, owing to the Orcadians being compelled to study the run and set of the tides, not so many as might be expected. Some few years back [in 1874], when the Channel Fleet were in the north, they attempted to pass to the westward through Westray Firth in the teeth of a strong spring flood, but all the Queen's horse-power, and all the Queen's men could not do it, and they had to turn tail.' Tradition accounts for at least one of those roosts in a highly satisfactory manner, but leaves it doubtful whether the others are mere sympathetic outbreaks, or are not worth accounting for. Off the north-western corner of the island of Stroma, in the Pentland Firth, on the coast of, and in the county of, Caithness, is a dangerous whirlpool called the Swelkie, and connected with it is the following story:—'A certain King Fródi possessed a magical quern or hand-mill, called "Grotti," which had been found in Denmark, and was the largest quern ever known. Grotti, which ground gold or peace for King Fródi, as he willed, was stolen by a sea-king called Mýsing, who set it to grind white salt for his ships. Whether Mýsing, like many another purloiner of magic-working implements, had only learned the spell to set it going, and did not know how to stop it, is not stated. Anyhow, his ships became so full of salt that they sank, and Grotti with them. Hence the Swelkie. As the water falls through the eye of the quern, the sea roars, and the quern goes on grinding the salt, which gives its saltness to the ocean.'

The scenery of the Orkneys is somewhat tame. 'The Orkney Islands,' says Dr Archibald Geikie, 'are as tame and as flat as Caithness. But in Hoy they certainly make amends for their generally featureless surface. Yet even there it is not the interior, hilly though it be,

but the western coast cliffs which redeem the whole of the far north of Scotland from the charge of failure in picturesque and impressive scenery. One looks across the Pentland Firth and marks how the flat islands of the Orkney group rise from its northern side as a long low line until westwards they mount into the rounded heights of Hoy, and how these again plunge in a range of precipices into the Atlantic. Yellow and red in hue, these marvellous cliffs gleam across the water as if the sunlight always bathed them. They brighten a grey day, and grey days are only too common in the northern summer; on a sunny forenoon, or still better on a clear evening, when the sun is sinking beneath the western waters, they glow and burn, yet behind such a dreamy sea-born haze that the onlooker can hardly believe himself to be in the far north, but recalls perhaps memories of Capri and Sorrento and the blue Mediterranean.' Luland from this coast-line is the highest ground in the islands, and there are hilly, though less rugged, districts in Rousay (sometimes called the Orcadian Highlands), and in the western parts of the Mainland and of Eday, but these grassy or heath-clad heights, with the rounded outlines and undulating character seemingly inseparably associated with the Old Red Sandstone formation, have but little of the picturesque, a want still further increased by the utter absence of wood. This last often altogether removes or at least conceals bareness of outline; but though trees of considerable size must once have existed all over the islands, none—except those mentioned at KIRKWALL and a few others in sheltered situations, and these of small size—are now able to withstand the force of the violent winter winds, which shake such as may be planted round and round, till the roots are slackened and fatally injured, and the plant dies. Although, however, the low-lying land and the green or brown softly-swelling heights, unrelieved by any wood, are apt to become somewhat monotonous—a monotony that also exists along the coasts, which generally lie low, except where, on the W and S, they present long lines of cliff to the sea—there are times that the islands present features of great beauty, a beauty which is, however, almost always associated with the constant presence of water, often of the sea, with all the sense of power which that presence gives. It is almost impossible to get out of sight of either lochs or the sea, from which, indeed, no place in Orkney is more than five miles distant, and most places very much less; and in calm bright weather, with strong sunlight casting a glow over the low rounded islands, shrouding them in a soft haze, and sparkling on the ripples that dance along the sounds or on the white waves that break on the beach of some quiet bay or at the foot of some lofty range of cliffs, the islands present views of soft and quiet beauty which is almost entirely their own. 'In calm weather the sea, landlocked by the islands, resembles a vast lake, clear and bright as a mirror, and without a ripple, save from the gentle impulse of the tide. Here a bluff headland stands out in bold relief against the horizon; there the more distant islet is lost in sea and sky; on one side a shelving rock sends out a black tongue-like point, sharp as a needle, losing itself in the water, where it forms one of those reefs so common among the islands, and so fatal to strangers, but which every Orkney boatman knows, as we do the streets of our native town; while on the other side a green holm, covered with cattle and ponies, slopes gently to the water's edge. Then there is the dove-tailing and intercrossing of one point with another, the purple tints of the islands, the deep blue of the sea, the indentations of the coast, the boats plying their oars or lingering lazily on the waters, the white sails or the pleasure yachts contrasting with the dark brown canvas of the fishing craft, and here and there a large merchant vessel entering or leaving the harbour;—all these combine to make a lovely picture, in which the additional ornament of trees is not missed. You feel that trees here would be out of their element. In calm weather they are not needed, in a storm they would seem out of place. Any one who has seen an Orkney sunset in June

or July tracing its diamond path across island, reef, and tideway, must confess that it is scarcely possible to suggest an addition to its beauty.' (See FERNIEHERST.) One has, however, to see the hilly districts in the midst of thick driving mists, or the narrow tideways during a storm, to be able to appreciate thoroughly all the grandeur which the district is capable of assuming, and the truth of the sailor-poet Vedder's description of his fatherland, when he speaks of it as a

'Land of the whirlpool,—torrent,—foam,
Where oceans meet in madd'ning shock;
The beetling cliff,—the shelvingholm,—
The dark insidious rock.
Land of the bleak,—the treeless moor,—
The sterile mountain, sere'd and riven,—
The shapeless cairn, the ruined tower,
Scathed by the bolts of heaven,—
The yawning gulf,—the treacherous sand,—
The roaring flood,—the rushing stream,—
The promontory wild and bare,—
The pyramid, where sea-birds scream,
Aloft in middle air.'

'If, however,' says Dr Clouston, of Sandwick, in Anderson's *Guide to the Highlands*, 'the tourist has the good fortune to be in Orkney during a storm, he will cease to regret the absence of some of the softer and more common beauties of landscape in the contemplation of the most sublime spectacle which he ever witnessed. By repairing at such a time to the weather shore, particularly if it be on the W side of the country, he will behold waves, of the magnitude and force of which he could not have previously formed any adequate conception, tumbling across the Atlantic like monsters of the deep, their heads erect, their manes streaming in the wind, roaring and foaming as with rage, till each discharges such a Niagara flood against the opposing precipices as makes the rocks tremble to their foundations, while the sheets of water that immediately ascend, as if from artillery, hundreds of feet above their summits, deluge the surrounding country, and fall like showers on the opposite side of the island. All the springs within a mile of the weather coast are rendered brackish for some days after such a storm. Those living half a mile from the precipice declare that the earthen floors of their cots are shaken by the concussion of the waves. Rocks that two or three men could not lift are washed about, even on the tops of cliffs which are between 60 and 100 feet above the surface of the sea when smooth, and detached masses of rock of an enormous size are well known to have been carried a considerable distance between low and high water mark. Having visited the west crags some days after a recent storm, the writer found sea insects abundant on the hills near them, though about 100 feet high; and a solitary limpet, which is proverbial for its strong attachment to its native rock, but which also seemed on this occasion to have been thrown up, was discovered adhering to the top of the cliff, 70 feet above its usual position.' Short storms of great violence are not the worst, being surpassed by the long continuance of an ordinary gale, and during great storms the devastation and ruin is very great. During a particularly severe storm in 1862, in Stroma (in Caithness), in the Pentland Firth, the sea swept right over the N end of the island, rose bodily up the vertical cliffs at the W end, lodged fragments of wreckage, stones, seaweed, etc., on the top, 200 feet above ordinary sea-level, and then rushed in torrents across the island, tearing up the ground and rocks in their course towards the opposite side.

As in Caithness and the Hebrides, one of the peculiar features of the Orkneys is the immense number of lochs scattered everywhere about, and some of them of considerable size. Of these the principal are the lochs of Stenness, Harris, Boardhouse, Swannay, Hundland, Isbister, Banks, Sabiston, Skail, Clumly, Bosquoy, and Kirbister in the western portion of the Mainland; Loch of Tankerness in the eastern part of the Mainland; Heddale Water and Hoglinns Water in Hoy; Muckle Water, Peerie Water, and Loch of Washbister in Rousay; Loch of St Tredwell in Papa Westray; Loch Saintear and

Swartmill Loch in Westray; Meikle Water in Stronsay; and Bea Loch, Longmay Loch, and North Loch in Sanday. The total loch area is probably nearly 20,000 acres. In most of the lochs the fishing is free, and even in those that are preserved, permission to fish is not very difficult to obtain. Formerly the fishing in most of the lochs and the streams connected with them was poor, and the number and size of the trout was small, as otters and other illegal methods of fishing were largely employed, but since Orkney was erected into a fishery district in 1881, matters have been much improved. The net season of the district is from 25 Feb. to 9 Sept., and the rod season from 25 Feb. to 31 Oct.

The land area of the islands is 375·7 square miles or 240,476 acres. Inclusive of skerries the total number of islands and islets is 90, but of these only 40 are of any size, and only 28 are inhabited all the year round, while a few others are temporarily inhabited during the summer months only. The inhabited islands, with their populations in 1871 and 1881, are as follows:—Auskerry (6; 8), Burray (661; 685), Cava (22; 25), Copinsay (6; 5), Eday (822; 730), Egilsay (163; 165), Fara (Eday 53; 68), Fara (Hoy 83; 72), Flotta (423; 425), Gairsay (34; 37), Graemsay (250; 236), Holm (6; 8), Hoy (1385; 1380), Hunda (5; 8), Kirkholm (7; 0) Lamb Holm (7; 8), Mainland (16,541; 17,165), Papa Stronsay (32; 23), Papa Westray (370; 345), Pentland Skerries (14; 17), North Ronaldsay (539; 547), South Ronaldsay (2501; 2557), Rousay (860; 873), Sanday (2053; 2082), Shapinsay (949; 947), Stronsay (1267; 1274), Swona (47; 47), Westray (2090; 2200) and Viera or Wire (78; 80).

Partly owing to their situation and partly owing to the influence of the Gulf Stream, the Orkneys have a much more equable temperature throughout the year than in most places on the mainland of Great Britain, the total average range of temperature being about 16°, while at Thurso the range is 20°, at Leith 22°, and at London 25°. In this respect the Islands resemble the SW coast of England and the W coast of Ireland. The influence exerted by the temperature of the sea is shown by the fact that the coldest month is not as in the other parts of the kingdom, January, but March, when the mean average temperature is about 38·5°. The warmest month is August, when the mean average temperature is 54·5°, and in this point again the agreement is with the SW of England and the W of Ireland, July being the warmest month elsewhere. The mean annual temperature is about 45°, and the average annual rainfall 34·3 inches, which is less than might be supposed. There is but little frost and less snow, and never any great continuance of either. The heaviest rains and the most prevalent and strongest winds are from the SW and SE. Winds between the NW and NE are cold but dry and healthy, and though they prevail during spring and sometimes till past the middle of June and check the progress of vegetation, they have not the piercing quality that is so often felt in the spring winds along the E coast of Scotland. Calms are of short duration, and changes of weather are very sudden. Fogs are somewhat frequent during summer and the early part of autumn, and come on and disperse quickly. The few thunder-storms that occur happen mostly in winter, during high winds and continued falls of rain or snow. The spring is cold and late; the summer, though short, is remarkable for the rapidity with which growth takes place; and the winter is in general a steady series of high winds, heavy rains, and ever-varying storms. Owing to the latitude the evenings in summer are long, and when fine, form the greatest charm of the season. At the longest day the sun rises at 2 minutes past 3, and sets at 23 minutes past 9, and even after he has sunk he leaves his glory behind in the bright glow that lies along the northern horizon, tinging the sky with hues of yellow and green that cannot be described but need to be seen. For a month at this time the light is so strong all night through that small print may be read without difficulty.

At the shortest day the sun rises at 10 minutes past 9 o'clock and sets at 17 minutes past 3, but the long nights are often lit up by brilliant displays of aurora borealis. Seals of different species abound, and the walrus has been seen about the coast on different occasions, but they were merely stray specimens that had wandered too far S. Herds of the ca'ing whale are numerous, and large numbers of them often run themselves ashore, while examples of almost all the other species of whales are from time to time seen and occasionally captured. The list of birds is long, including no fewer than 236 species. It includes all the British birds of prey, except the rough-legged buzzard, the bee hawk, and the orange-legged falcon. Rooks have settled in large numbers in recent years, and starlings are everywhere very numerous. Grouse are lighter in colour than those of the mainland, but are plump and well conditioned. Ptarmigan, which used to be found in Hoy, are now exterminated. There are nearly 400 species of native plants, including the rare variety of the adder's-tongue fern, *ophioglossum vulgatum* var. *ambiguum*, which is found only here and in the Scilly Islands; the horned pond-weed, *zannichellia polycarpa*, in the Loch of Kirbister in Orphir parish; *carex fulva* var. *sterilis*, also in Orphir; *ruppia spiralis*, in the Loch of Stenness; and *ruppia rosclata* var. *nana*, in Firth.

Geology.—The Orkney islands are composed of strata belonging mainly to the Old Red Sandstone formation. On the Mainland there is a small area occupied by ancient crystalline rocks on which the members of the Old Red Sandstone rest unconformably. They extend from Stromness W to Ingness, and they are prolonged S into the island of Graensay. Consisting of fine grained granite and grey micaceous flaggy gneiss, these rocks must evidently be grouped with the great series of metamorphic rocks of the Highlands of Scotland. They represent part of the old land surface, which rose above the sea-level at the beginning of the Lower Old Red Sandstone Period.

In the island of Hoy there is a remarkable development of the Upper Old Red Sandstone, but in all the other islands the strata belong to the lower division of that formation. Beginning with the representatives of the lower division, we find that a great synclinal fold traverses the Orcadian group from Scapa Flow N by Shapinsay to the island of Eday, the centre of which is occupied by a series of coarse siliceous sandstones and marls, with bands of conglomerate containing pebbles of quartzite, gneiss, and granite. In the island of Eday this arenaceous series rests conformably on the flagstones which cover such wide areas on the Mainland and the other islands, but when we pass S to the Mainland it is observable that the massive sandstones are brought into conjunction with the flagstones by two powerful faults.

A traverse across the N islands from Westray to Eday, and thence to Sanday, reveals the order of succession of the strata. The island of Westray is composed of well-bedded rusty flags, which along the W shore are gently inclined to the W, while on the cliffs in the SE part of the island they dip to the ESE. The hills display those characteristic terraced slopes which are so typical of the flagstones when they are inclined at gentle angles. The islands of Fara Holm and Fara, situated between Westray and Eday, consist also of flagstones with a similar ESE dip, and these beds are continued in Eday along the W coast, between Fara's Ness and Seal Skerry. It follows therefore that we have a gradual ascending series from the SE headlands of Westray to the W coast of Eday. The strata in the latter island form a syncline, the axis of which runs approximately N and S. Hence the same beds reappear on opposite shores, rising from underneath the massive siliceous sandstones, which form the smooth flowing hills in the centre of Eday. The gradual transition from the flagstones to the overlying arenaceous series is admirably displayed on the beach at Kirk of Skail and on the S side of Lonton Bay on the E coast. From the

grey calcareous flagstones at the base there is a gradual passage through hard white sandstone, red shales, and flagstones to the massive red and yellow sandstones. Similarly on the W coast, between Fara's Ness and the sandy bay lying to the E of that promontory, there is clear evidence of the alternation of the sandstones and flags at the base of the arenaceous series.

The members of the arenaceous series are repeated in the island of Sanday, partly by faults and partly by undulations of the strata. They occupy a strip of ground, about 1 mile broad, between Spur Ness and Quoy Ness. At the former locality they are abruptly truncated by a N and S fault, which brings them into conjunction with the underlying flagstones, while near the latter promontory they graduate downwards into the flagstones. Again in the SE portion of Shapinsay a small portion of the arenaceous series is met with, which to the S of Kirkton is separated from the flagstones by a small fault, but from the marked alternations of sandstones and flags exposed on the coast, there can be little doubt that the strata mark the base of the massive sandstones. This small patch of the arenaceous series is invested with considerable interest from the fact that they are associated with diabase lavas indicating contemporaneous volcanic action. At no other locality in Orkney have traces of bedded lavas or tufts been found in the Lower Old Red Sandstone. These diabase lavas are exposed on the coast between Haco's Ness and Foot, whence they can be followed for about half a mile, exhibiting the vesicular amygdaloidal characters of true lava flows. The microscopic examination of this rock reveals the presence of a considerable quantity of altered olivine associated with plagioclase feldspar, augite, and magnetite.

Attention has already been directed to the fact that, on the Mainland, the sandstones and marls which form the highest members of the Lower Old Red Sandstone in Orkney are separated from the flagstones by two powerful faults. The dislocation bounding the arenaceous series towards the NW can be traced from Orphir Kirk to Smoogra Bay, and thence by Scapa Bay to Ingness Head. The effect of this main fault is admirably seen near the quarry, on the W side of Scapa Bay, where it is accompanied by a minor dislocation. Again, the fault truncating the series on the E side runs nearly parallel with the coast from Howquoy Head by Scapa to Ingness Bay. From Kirkwall NW to the headlands of Birsá, the flagstones roll with gentle undulations, rising into terraced hills on the moory ground N of Loch Stenness. Similarly they spread over the E part of the island, between Ingness Bay and Deer Ness.

In the minor islands composing the S group, viz., Cava, Fara, Flotta, Burray, and South Ronaldsay, the strata consist of alternations of flagstones with red and yellow sandstones and red marls, resembling the beds at the base of the arenaceous series already described. From the manner in which the strata in these various islands are inclined towards Scapa Flow, it is obvious that the latter must occupy the centre of a synclinal trough, and that the synclinal fold is gradually dying out towards the S.

The Orcadian flagstones have yielded fish remains, crustaceans, and plants, but no fossils have been obtained from the arenaceous series, which occupies the centre of the great synclinal fold. From the flagstones near Stromness, Hugh Miller exhumed the specimen of *Asterolepis* referred to in *The Footprints of the Creator*. One of the best fossiliferous localities is on the shore of the Mainland near Skail, and still another occurs in Brakness Bay, W of Stromness.

The representatives of the Upper Old Red Sandstone are only to be found in Hoy, where they form one of the noblest cliffs in the British islands. This elevated tableland, rising in isolated peaks to a height of 1400 feet, has been carved into a series of narrow valleys, which, during the glacial period, nourished local glaciers. In some respects the Upper Old Red Sandstone of Hoy resembles lithologically the conformable arenaceous

series of the lower division. The beds have the same massive false-bedded character, and the sandstones are frequently interstratified with red marls and shales. But there is one important difference in the relations which they respectively bear to the underlying flagstones. In Hoy the sandstones of Upper Old Red Age are underlain by a platform of bedded lavas and ashes, which rest with a marked unconformity on the underlying flagstones, whereas the Eday sandstones, as already indicated, graduate downwards into the flagstones. The volcanic rocks lying at the base of the great pile of massive sandstones are admirably exposed on the cliff on the NW side of the island, from the Kaim of Hoy to the Old Man, and they are traceable round the slopes of the Hoy and Cuilgalls Hills. At the latter locality the volcanic rocks comprise three lava flows with interbedded tufts; but when they are traced S along the sea cliff towards the Old Man they gradually thin out till they are represented only by one bed of amygdaloidal porphyrite. It is evident, therefore, that some of the centres of eruption must have been situated in the NE part of the island from the increased thickness of the beds in that direction. There are some indications of the centres of eruption still to be found in that region. These 'necks,' which are filled with coarse volcanic agglomerate, are situated between the Kaim of Hoy and Quoy Bay.

The unconformable relation between the members of the upper and lower division may be studied along the sea cliff on the NW side of the island, but perhaps one of the most favourable localities is at the base of the Old Man. Owing to the flagstones being inclined at a higher angle than the members of the upper division, the sheet of amygdaloidal porphyrite spreads over the edges of the flagstones, while the porphyrite is overlaid by an enormous pile of red and yellow sandstones.

Several dykes of basalt traverse the Old Red Sandstone of Orkney. Some of the best examples occur on the shore of the Mainland between Brakness and Skail, while others are exposed on the beach near Orphir.

The glacial phenomena of Orkney are rather remarkable, partly on account of the presence of shells in the boulder clay at various localities, and partly owing to the variety of stones in the deposit which are foreign to the islands. From an examination of the striated surfaces throughout the group it would seem that, during the primary glaciation, the ice crossed the islands from the SE towards the NW. There are several examples showing some divergence from this trend, but the prevalent direction of the striae varies from WNW to NNW. Excellent examples of striated surfaces may be noted on the cliff tops near Noup Head, Westray, in the bay E of Fara's Ness in Eday, and on the slopes of the Stennie Hill in the same island. Again, in Kirkwall Bay, a short distance to the E of the Pier, an excellent example of striated flagstones is exposed on the beach where the boulder clay has been recently removed by the action of the sea.

The boulder clay occurs mainly round the bays, where fine sections are frequently seen, revealing the character of the deposit, as for instance in Kirkwall Bay, in Odin Bay in Stronsay, on the E and W shores of Shapinsay, in the bay E of Fara's Ness in Eday, and other localities. Consisting generally of a stiff gritty clay devoid of stratification, in which finely striated stones are very abundant, it resembles the ordinary boulder clay of Scotland. The blocks embedded in the clayey matrix are to a large extent local, being composed of flagstones, sandstones, and conglomeratic grits, while in the neighbourhood of Stromness fragments of granite and gneiss, derived from the ridge of crystalline rocks, are also present in the deposit. But in addition to these, the following rocks, which are foreign to the islands, are represented: chalk, chalk flints, oolitic limestone, oolitic breccia, oolitic fossil wood, dark limestone with *Lepidostrobus* of Calceiferous Sandstone Age, quartzite, schists, and pink, porphyritic felsite. These blocks were in all probability derived from the E of Scotland, and chiefly from the Moray Firth basin.

A careful search in the various boulder clay sections throughout the islands hardly fails to bring to light some of these foreign blocks. They have been found in South Ronaldsay, the Mainland, Shapinsay, Stronsay, Eday, and North Ronaldsay. From an examination of the evidence supplied by the dispersal of the stones in this deposit it is apparent that the ice-flow must have crossed the islands from the North Sea towards the Atlantic. This conclusion is supported alike by the distribution of the local blocks as well as by the presence of rocks derived from the basin of the Moray Firth. Equally interesting is the occurrence of fragments of marine shells in the clayey matrix which have been smoothed and striated like the stones in the deposit. It is difficult to determine many of the species owing to the fragmentary character of the remains, but the following have been obtained from different sections: *Saxicava arctica*, *Astarte*, *Cyprina islandica*, *Mytilus*, and *Mya truncata*. Various species of foraminifera have also been met with after washing the clay.

In Hoy and the Mainland the existence of local glaciers after the period of extensive glaciation is proved by the occurrence of moraines in the valleys and on the hill slopes. Though erratics are not very abundant in the Orkneys, there is one remarkable boulder of hornblende gneiss at Saville in Sanday measuring 90 cubic feet above ground.

Soils and Agriculture.—Though in some places sand, and in others clay or moss, is found of great depth, yet the general soil of Orkney is shallow, lying upon either till or rock within 2 feet of the surface, and often so near as to be touched by the plough. The greater part of it is peat or moss, forming, from the nature and nearness of the subsoil, often a wet, spongy, and almost irreclaimable moorland; but elsewhere the moss is benty, or what the Orcadians call yarta soil, which can be brought under cultivation with little difficulty. Loams of various qualities, and sometimes, though never to any great extent, approaching to clay, cover a considerable area; and there is also a considerable proportion of sandy soil, which in places, particularly in Westray, Stronsay, and Sanday, passes into beds of loose shifting sand, quite barren and overlying the real soil. Of the arable land the larger proportion is sandy—no disadvantage in such a damp climate—or good loam, while the remainder is dry benty moss. There is a considerable extent of peat, which is cut for fuel, but this has been done in many cases so injudiciously that the whole lower soil is washed away. The peat mosses contain stems and roots of birch and pine trees, sometimes measuring nearly 1 foot across, which show that, notwithstanding their present bare condition, the islands were once well covered with wood. At this time, too, the land must have stood at a higher level than now, as mosses extend—at Otterwick Bay in Sanday, at Deerness in the Mainland, and elsewhere—under the sea.

Nearly all the land in Orkney is freehold, but burdened with payments—originally in kind, but now commuted—to the Crown, or to the Earl of Zetland, as the Crown donatory. These payments, though of various origins, all bear the name of feu-duties, and are exigible on account either of the Crown's having come in the place of the King of Norway, to whom the islands paid tribute till 1468, or of its having acquired rights by purchase and forfeiture, or of its having acquired the claims of the Bishop of Orkney. The feu-duties are in some cases very heavy, but the ground held by small proprietors only pays as feu-duty about a tenth of what it would as rent. A considerable proportion of the land was originally held under udal, odal, or allodial tenure*—a system which required no written right;

* Under allodial tenure all male descendants of the original owner had rights over his possession that they were unable to divest themselves of. When an Odaller died his real estate became divisible equally among his sons, the only preference being that the eldest son could claim the chief farm. The sons thus in turn became odallers, and so the process went on. No owner could dispose of his land unless he could show that he was compelled to do so by poverty, and then the property had first to be

but, owing to the actings of Earls Robert and Patrick Stewart and to very numerous and frequent transferences by sale, it has come now, in the great majority of instances, to be held under charter and sasine, as in every other district of Scotland. The great proportion of the farms are small, and when very large they consist chiefly of extensive tracts of open grazing-grounds, or the uninhabited pasture islands called holms.

Under the old system of things, when only the strip along the coast was cultivated, and the interior of the islands was all common, the cultivated portions of farms were arranged in clusters called towns, and a proper Orcaidian town consisted of a portion of ground partly under crop and partly in pasture—the infield pasture—and always, except where there was a natural boundary, separated from ‘the hill’ or common moor by a strong fence. The town was provided with a number of houses corresponding to the number of farms, and severally occupied by the different tenants. The arable ground was held runrig, the patches being allotted from year to year—a most effectual bar to all efforts at improvement. Many of the farms were also let on ‘steel-bow;’ that is, the implements, stock, and seed belonged to the proprietor, and when the tenant moved he had to leave the same amount of each that he received. Each resident in a town had, besides his possessions within the dyke, the privilege of sending his live stock to ‘the hill’ or common moor, and liberty to cut turf on the mosses and sea-weed on the shore; indeed, both commonies and infield pastures were often much destroyed by the reckless manner in which the turf was stripped off. The farms varied in size from 10 to about 40 acres of arable land, which was thought to be as much as could be conveniently worked by one of the old Orcaidian wooden ploughs, which was one of the most primitive instruments imaginable. It was ‘still too much used’ when the *Agricultural Report of Orkney* was written in 1814, and kept its ground well into the present century; and, indeed, it is said to be even still used in some of the more out-of-the-way districts. This plough had only one still, resembling somewhat the left side of an ordinary plough. In place of the mould-board there were three or four pegs fastened in the side, and through or over which the mould had to pass. To keep it down the ploughman had to throw his weight against the opposite side, and he also carried a large staff for clearing the pegs of earth, etc., and to assist in steadying the whole implement. A good deal of the ploughing, however, was done by the pigs, which ran riot all over the land, and broke up the soil, sometimes to such an extent that the seed could be sown without further trouble. There were no carts, and the mode of portage—sometimes still used for carrying peats—for all articles was by means of the ‘clibber and mazy’ balanced across the backs of horses, and bearing at the ends, down the horses’ sides, strange-looking heather-baskets, called creels, or quite as strange straw ones called ‘cubbies’ and ‘cazzies;’ and this mode of conveyance was indeed rendered necessary by the almost entire absence of roads. Some of the proprietors and large farmers began, early in the century, to put their arable ground under regular rotation of crops, and to cultivate turnips and artificial grasses; but it was long ere the bulk of the small farmers and crofters could be induced to imitate them, and so up till 1840 they continued to torture their land

out of heart by alternate crops of oats and bere, with little or no other aid than doses of sea-weed, until, the returns hardly exceeding the seed corn, the land was left to recover its tone by the slow means of a long natural fallow. Since the beginning of improvement in 1840 by the abandonment of ‘runrig,’ progress has been rapid, and now, allowing for the climate and the soil, farming is as good in Orkney as in almost any county in Scotland. This was strikingly shown during the visit paid to the islands by the Crofters’ Commission of 1883, when but few grievances were brought forward at all, and those that were mentioned were shown to be mostly of a sentimental nature, as in the case of the man who told the commissioners that they were there ‘to remove every cause of irritation,’ and begged them ‘to abolish valuation schedules. The great proportion of the farms are small, and a curious feature all through the islands is the number of small proprietors found in every parish, and more particularly in that of Harray and Birsay in the Mainland, who work their own holdings. Of a total of 3319 holdings recorded in 1880, 2873 were of 50 acres or under, 279 between 50 and 100, 131 between 100 and 300, 29 between 300 and 500, and 7 over 500; and the average area of the smaller holdings was 16½ acres. The increase in the amount of ground under crop and permanent pasture rose from 23,990 acres in 1855 to 86,949 acres in 1870, and to 112,148 in 1883, but it is possible that a small proportion of the increase may be accounted for by the defective condition of the earlier returns.

The acreage under the various crops at different dates is given in the following tables:—

GRAIN CROPS.—ACRES.

| Year. | Wheat. | Barley or Bere. | Oats. | Total. |
|-------|--------|-----------------|--------|--------|
| 1855 | 15 | 3014 | 7,963 | 10,992 |
| 1866 | 33 | 6131 | 21,714 | 28,878 |
| 1874 | 1 | 5722 | 29,084 | 34,807 |
| 1882 | 0 | 6026 | 32,330 | 38,356 |
| 1883 | 0 | 5641 | 32,781 | 38,422 |

GRASS, ROOT CROPS, ETC.—ACRES.

| Year. | Hay, Grass, and Permanent Pasture. | Turnip. | Potatoes. |
|-------|------------------------------------|---------|-----------|
| 1855 | — | 3,017 | 1301 |
| 1867 | 25,061 | 9,559 | 2307 |
| 1874 | 40,654 | 11,955 | 3216 |
| 1882 | 53,332 | 14,164 | 3221 |
| 1883 | 54,806 | 14,357 | 3104 |

while there are about 40 to 50 acres annually under rye, beans, and peas, about 350 acres under other green crops than those mentioned, and about 1000 acres fallow. The usual rotation is the five shift, and the average yield of barley per acre is about 33 bushels, and of oats about 33 bushels, while turnips and potatoes are very variable, and run from 14 and 5 tons, respectively, upwards.

The agricultural live stock in the county at different dates is shown in the following table:—

| Year. | Cattle. | Horses. | Sheep. | Pigs. | Total. |
|-------|---------|---------|--------|-------|--------|
| 1855 | 8,128 | 1899 | 10,815 | 1567 | 22,179 |
| 1867 | 22,828 | — | 31,648 | 5432 | — |
| 1874 | 26,584 | 5733 | 34,062 | 4375 | 70,554 |
| 1882 | 25,883 | 6116 | 30,427 | 4862 | 67,288 |
| 1883 | 25,624 | 6092 | 31,554 | 4745 | 68,045 |

The cattle are small, but have been greatly improved in recent years by the introduction of shorthorn bulls, and on some of the larger farms the native breed has been replaced by polled cows from the mainland. The native sheep were the small short-tailed Norwegian sheep introduced here, as in the Hebrides, probably at the time of the Scandinavian conquest; but these have

offered to the next-of-kin. If they refused to buy, it might then be sold to any one; but the purchaser might at any moment, no matter what length of time had elapsed, be called on to restore it on repayment of the price by the original seller, or any of the descendants of the original owner; and if it were purchased or redeemed by any distant kinsman of the first possessor, any other kinsman nearer in blood might again have it given up to him. Tenure thus soon became so insecure, that it would have simply been waste for any one to expend money on improving land which might not be long his; and the system was, in consequence, so perfectly adapted to retard or even destroy the natural progress of the district, that it cannot be regretted that it has now become extinct, though the manner in which this was accomplished may be very much deprecated. The odallers were practically peasant nobles.

now been driven away to the distant North Ronaldsay and to the wilder parts of Hoy, and their places taken by Cheviots and crosses between Cheviots and Leicesters. The horses are small, and the pigs, probably from their free life, differ a good deal in shape and appearance from those of the mainland counties. Poultry of all kinds, particularly geese, are everywhere extensively reared, as may be imagined from the fact that in 1882 no fewer than 1,119,860 dozens of eggs, valued at £37,328, were exported from the islands. The exports of eggs in 1833 amounted to 100,000 dozens, valued at £2500; in 1861 they amounted to 500,000, valued at £12,500; and in 1882 to the total just stated. During the last one hundred years the total value of the Orcadian exports has risen from £23,000 to over £300,000, more than half of which is derived from the sale of live stock. In 1833 the animals exported numbered 1280, and their value was £5478; in 1848, after steamers began to ply to the islands, the number rose to 2500, the value being £12,625; in 1866 the number was 12,260, and the value £80,200; and in 1882 the number was 17,279, and the value was £157,183, exclusive of 3850 dead pigs, valued at £11,500; while the exports of grain and oatmeal were worth £14,258; or the total value of exports connected with farming alone amounted to £220,920.

Industries.—Fish of all sorts are very plentiful around the Orcadian shores, but it was long ere the people availed themselves of the riches of the sea. Herring-fishing seems to have begun in 1815, and for many years thereafter a large number of boats prosecuted this industry from Stronsay, but the demand for labourers, consequent on the great progress of agriculture, and a few seasons with bad fishing, combined to cause a falling off, and the number of boats is at present declining. Orkney forms one of the Scottish fishery districts, and there were, belonging to the islands in 1882, 178 first-class boats, 25 second-class boats, and 424 third-class boats, with 2534 resident fisher men and boys. The principal stations for first-class boats were Stronsay, with 13; Holm, on the eastern mainland district, with 16; Burray, with 21; Grimness, in South Ronaldsay, with 19; and St Margaret's Hope, with 24. For third-class boats, the principal stations are Stronsay, with 20; Eday, with 23; Westray and Papa Westray with 136; and Shapinsay with 23. These boats were valued at £13,124, the nets at £10,807, and the lines at £1923, while the total number of persons employed in connection with them inclusive of the fishermen was 3433. In the same year only 197 boats prosecuted the herring-fishing within the district, and these had a total catch of 20,046 barrels, of which over 11,000 were exported. Cod-fishing employed a considerable number of boats in the last quarter of last century, particularly about Stronsay, but was afterwards neglected. It revived again in the early years of the present century during the great European wars, as the fishing ground was less exposed than the Dogger Bank to annoyance from privateers. After that there was a temporary period of decline, but it now is an important and thriving industry, prosecuted by the natives of the North Isles in open boats, and from other places by well appointed smacks, which fish in the waters about Iceland and the Faroe Isles. In 1882 the smacks fitted out in Orkney for this fishing were 16 of 984 tons, and manned by 182 men, and the cod, ling, and hake captured numbered 116,020; in the same year 223,505 fish were taken by open boats, making a total of 339,525. Lobster-fishing was introduced by an English company in the beginning of the present century, and about 1814 the annual number sent to London reached 120,000, valued at £1500, and it has been vigorously prosecuted ever since, but the numbers caught have been, of late years, gradually diminishing—a result due to non-observance of a close-time and the capture of immature animals or of those laden with spawn. When the whale-fishing was prosecuted in the neighbourhood of Davis Strait the whalers used to ship a considerable number of men from the Orkneys, but the number of those that go is now very much diminished, especially since the shifting of the

fishing ground farther N. For many years subsequent to 1741 large numbers of the men in the employment of the Hudson Bay Company were Orcadians, and some of them, like Dr Rae, the well-known explorer, held positions of importance; but the life in the frozen North seems now to have lost its attractions, and but few of them find their way to the fur region.

The manufacture of linen-yarn and cloth, introduced in 1747 by Andrew Ross, chamberlain to the Earl of Morton, was long extensively carried on, and many of the tenants were compelled, not only to grow flax, but also to manufacture it into linen. The industry received, however, a severe check from the difficulty and uncertainty of obtaining flax during the great continental war in the beginning of the present century, and has since practically disappeared. As in the Hebrides, the staple industry was, at one time, the trade in kelp, and here, also, the sudden downfall of the trade proved very disastrous, although it had the good result of turning the attention of the proprietors to the improvement of the land that had been lying so long waste and neglected. The manufacture of kelp was first introduced in 1722, in Stronsay, by James Fea of Whitehall, and notwithstanding its subsequent importance made way at first but very slowly. According to the writer in the *Old Statistical Account* the people, 'averse to have any kind of labour but what they had been accustomed to see and hear of, represented how hurtful that new business was likely to be, for they could have no doubt of its driving the fish from the coast and ruining the fishing; they were certain it would destroy both the corn and the grass, and they were very much afraid that it might even prevent their women from having any children.' But by 1750 the annual manufacture had reached about 900 tons. This had increased in 1770 to 1500 tons, in 1780 to 2000 tons, in 1790 to almost 3000 tons, and in 1826 it reached its highest when 3500 tons were manufactured. The amount of labour involved may be estimated if we keep in mind that about 24 tons of sea-weed had to be burned to produce 1 ton of kelp. Leaving out of account a short period during the Peninsular War when the price reached £20 a ton, the annual value of the kelp exported from 1740 to 1760 was about £2000; in 1770 it was £6000; in 1780, £10,000, in 1790, £17,000; and in 1826, £24,500. The events which destroyed the trade elsewhere [see *HEBRIDES*] had the same effect here in 1832, and caused the same amount of suffering and disaster among workers and proprietors, but the industry is reviving in the North Isles, where the annual manufacture has again reached about 1500 tons; and as the Orkney kelp is of superior quality it finds a fairly good market. The making of straw plait for ladies' bonnets and gentlemen's hats was introduced about the beginning of the century, and developed so rapidly that in 15 years afterwards it afforded employment for from 6000 to 7000 women, and the value of what was exported was about £20,000. The material then employed was split ripened wheat straw, but the plait produced from this was very brittle and flimsy. On the introduction, by Messrs Muir of Greenock, of an imitation of Loughorn plait, the wheat straw was given up, and unripened, unsplit, boiled and bleached rye-straw substituted; and the manufacture of Tuscan-plait (as the imitation was called) flourished until the reduction of the duty on foreign straw-plait allowed foreign competition first to press it hard, and finally to put an end to it altogether. The commerce and one or two of the smaller industries are noticed under *KIRKWALL*, under which the means of communication between the mainland of Scotland and the islands are also noticed. Under the *Act* obtained in 1857 for the purpose, good district roads were formed throughout the islands. A telegraph cable was laid in 1876* from Scrabster through Hoy Sound to Stromness, and a cable was laid in 1871 from Orkney to Shetland.

Formerly the farm-buildings on nearly all the small

* This superseded a cable laid in 1869 from Erough in Caithness to Aith Hope in the S end of Hoy.

holdings were built of stones and clay, or stones and clod, thatched with straw, with the fire in the centre of the floor and the smoke finding its way out by a hole in the roof, just as it still is the case in the Hebrides. The door, less than five feet high, afforded ingress and egress to every inmate, whether quadruped or biped, with or without feathers. This is now greatly changed for the better, and in most districts an aspect of much greater care and regard for comfort are to be seen, and the houses contrast strongly with those of a similar class in the western islands and mainland. The walls are built of good dry stone rubble, pointed with lime both inside and out. Even the smallest have two apartments, well lighted, and the roof slated or well thatched. The older houses too were, as indeed some houses still are, at once dwelling-house, cow-house, and hen-roost. The cows for the most part occupy their own end of the buildings, though a few calves or a favourite cow may be seen in the end of honour in company with the family; and fowls and geese perch promiscuously on the balks of the rafters overhead. Attached to many of the cottages and connected with the barn is a small round antique-looking tower, used as a kiln for drying corn. All this must, however, be understood as applying only to the smaller holdings, as the buildings on the large farms are as good and well-appointed as anywhere in the N of Scotland.

The Orcadians, though sprung from the same Scandinavian stock as the Shetlanders, have, probably from their more extensive and ready intercourse with the mainland, fewer and less marked peculiarities of manner, and it is but seldom that you find a decidedly Scandinavian face. The men, a fine powerful race, have, too, lost much of the swinging walk that is to be found among the Shetlanders, and have more of the slow plodding step characteristic of the agricultural labourer. They are very genteel in their manner and in their style of speech, and yet cool and brave in the face of danger. From the nature of their country, many of them are first-rate boatmen, and during the season of egg-gathering the risks run and the escapes made lead to a habit of at least seeming indifference to danger and death. Many stories are told of the matter-of-fact way in which such things are treated. One is of a man whose son had descended a cliff while he himself, in case of accident, kept watch in his boat below. The rope by which the young man was partly supported having given way he fell into the sea and was almost drowned before his father reached him and dragged him into the boat, but all that the old man had to say was 'Eh! I'm thinking thou's wat, Tam.' On another occasion a cragsman working his way along a narrow shelf came to a corner which he had to turn, but found at the critical moment that he had the wrong foot first. Pausing for a moment he took off his broad bonnet, in which was his snuff-horn, refreshed himself with a pinch, and then making a spring got the proper foot to the front. When he had reached the top of the cliff safe, a friend said to him, 'Man, Johnnie, were ye no feared?' 'Eh man, if I had been feared I wudna be here.' 'I dare-say that,' was the answer, 'but what made you think of taking a snuff when you were in such danger?' 'Weel,' replied John, 'I thoct I was needin't.' Many of the old superstitions lingered long and lovingly about the whole group of islands, but they have now retreated into the more out-of-the-way district, where beliefs in fairies, in the right hand course and the left hand course, a dislike for turbot or even the mention of the name of turbot while at sea, and other ideas of a similar kind are still held, though they are now kept a good deal out of sight, as things not to be talked of to scoffers. The language is a variety of Scotch with a peculiar accent or intonation, the voice rising and falling in a sort of rough cadence, and the peculiarity varies from island to island, so that those acquainted with the whole district can distinguish the natives of the different islands. 'Thou' and 'thee' are used instead of 'you,' and there are many peculiar words which are

survivals of Norse. The place names in Orkney belong almost without exception to this dialect, and many Norse family names still survive among the common people, while some of the small crofter proprietors in the parish of Harray, in the western district of the mainland, are said to retain not only the old name, but also the very lands, held by their forefathers many centuries ago. This parish was the last stronghold of the Norse tongue in Orkney, and it is said to have been spoken here down to 1757.

The only royal burgh is Kirkwall; the only other town is Stromness, which is a burgh of barony—both on the Mainland; and the only village with more than 300 inhabitants is St Margaret's Hope, in South Ronaldsay. The islands are divided into eighteen entire *quoad civilia* parishes, Westray—which includes Westray, Papa Westray, Holm of Papa, Wart Holm, and Rusk Holm; Cross and Burness—which includes the W part of Sanday, Holms of Spurness, Holms of Ire and North Ronaldsay; Lady, including the E part of Sanday and Start Point; Stronsay and Eday—which includes Stronsay and Eday with the islands about them, with Muckle and Little Green Holms and Auskerry—Ronsay and Egilsay, including Rousay, Egilsay, Viera, Eynhallow, and the smaller islands about; Shapinsay, including Heliar Holm; Evie and Rendal, Harray and Birsay, Sandwick, Stromness, Firth and Stenness, and Orphir, all in the western portion of Pomona, and the first including Gairsay, Sweyn Holm, and some small holms in the Wide Firth, and the last including Cava in Scapa Flow; Kirkwall, at the narrow part of Pomona; St Andrews and Holm, in the eastern part of the Mainland, the former including Copinsay and the latter Lamb Holm; Hoy and Graemsay, and Walls and Flotta, both in Hoy, and the former including Graemsay, and the latter Risa, Fara, Flotta, Switha, and South Walls; and last, South Ronaldsay, including the island of the same name, Burray, Hunda, Glimps Holm, Swona, and the Pentland Skerries. The *quoad sacra* parishes of St Mary's (South Ronaldsay), Birsay (Harray and Birsay), Flotta (Walls and Flotta), Stenness (Firth and Stenness), Eday and Fara (Stronsay and Eday), North Ronaldsay (Cross and Burness), and the mission stations of Rendal (Evie and Rendal), Burray (South Ronaldsay), Graemsay, North Walls (both in Walls), and Rapness (Westray and Papa Westray) are also included.

There are Established churches within all the parishes and *quoad sacra* parishes, and there are also 15 places of worship in connection with the Free Church, 13 in connection with the U.P. Church, 1 in connection with the United Original Seceders, 2 Congregational churches, 1 in connection with the Evangelical Union, 3 Baptist churches, and 1 Episcopal church. In the year ending Sept. 1882 there were in Orkney and Shetland 120 schools (110 public), which, with accommodation for 11,051 children, had 8461 on the rolls, and an average attendance of 6310. Their staff consisted of 129 certificated, 4 assistant, and 87 pupil, teachers. Orkney, with a constituency of 1403 in 1882-83, unites with Shetland in returning a member to serve in parliament. It is governed by a lord-lieutenant, a vice-lieutenant, 13 deputy-lieutenants, and 60 justices of the peace; forms a division of the sheriffdom of Caithness, Orkney, and Shetland; and has a resident sheriff-substitute. Ordinary courts are held at Kirkwall every Tuesday throughout the session. Sheriff small-debt courts are also held at Kirkwall every Tuesday during the session; and circuit courts are held at Stromness on the third Thursdays of March, June, and September, and on the first Thursday of December, and at St Margaret's Hope on the second Thursdays of April, June, and September. Justice of peace courts are held at Kirkwall as required, and at Stromness on the last Thursday of every month. Quarter-sessions meet at Kirkwall on the first Tuesdays of March, May, and August, and on the last Tuesday of October. The average number of registered poor in 1883 was 707, with 245 dependents, and of casual poor 17, with 5 dependents; the receipts for poor-law purposes were £5755, 5s. 6d., and the expenditure £5589, 7s. 1d. There is a combination

poorhouse near Kirkwall. There is no assessment for poor-law purposes in the islands of Papa Westray, Eday, Rousay, Shapinsay, and Hoy, nor in the parish of Sandwick on the Mainland. The proportion of illegitimate births averages about 5.5 per cent., and the death-rate averages about 15 per thousand. The principal markets are at Dounby on the second Thursday of every month; Firth, on the third Monday of every month; Hosen, on the second Wednesday of February and June and the first Wednesday of November; Kirkwall, on the first Monday of every month and the first Tuesday after 11 August; Sanday, on the first Thursday before Kirkwall Lammas market and on the second Thursday of November; South Ronaldsay, on the first Wednesday after 11 November; Shapinsay, on the second Monday of March; Stromness, on the first Wednesday of every month, the Wednesday before Wasdale market, and the first Tuesday of September; Stenness, on the first Tuesday of March, the first Tuesday after the second Wednesday of June, and the Tuesday after the first Wednesday of November; Tankerness, on the last Thursday of each month; Wasdale, on the first Wednesdays of February and June and the last Wednesday of October; Walls, on the first Fridays of June and November; Westray, on the third Thursday of March and the first Thursday of August; and at Rousay, on the last Wednesday of March and the third Wednesday of July. The 1st Orkney Artillery Volunteer Corps, with headquarters at Kirkwall, have batteries at Kirkwall, Sanday, Shapinsay, Stromness, Stronsay, Holm, Evie, Rousay, and Birsay. Valuation (1653-71) £4672, (1815) £20,938, (1843) £22,558, (1861) £44,214, (1882-83) £69,950, (1883-84) £70,623, exclusive of the burgh of Kirkwall. The civil and registration counties are identical. Pop. (1801) 24,445, (1811) 23,238, (1821) 26,679, (1831) 25,847, (1841) 30,507, (1851) 31,455, (1861) 32,395, (1871) 31,274, (1881) 32,044, of whom 14,982 were males and 17,062 females. In the same year the number of persons to each square mile was 85, the number of families 7270, the number of houses 6358, and the number of rooms 18,184. Of the 32,044 inhabitants 453 males and 221 females were connected with the civil or military services or with professions, 24 men and 887 women were domestic servants, 417 men and 9 women were connected with commerce, 6031 men and 1264 women were connected with agriculture and fishing, and 2286 men and 1273 women were engaged in industrial handicrafts or were dealers in manufactured substances, while there were 5215 boys and 7434 girls of school age. Of those connected with farming and fishing 5165 men and 1264 women were concerned with farming alone, and 2810 farmers employed 966 men, 227 boys, 223 women, and 424 girls.

Ecclesiastically the whole of Orkney is embraced in the SYNOD OF ORKNEY, which contains the presbyteries of Kirkwall, Cairston, and North Isles. It meets at Kirkwall on the second Tuesday of September. The presbyteries of Kirkwall and Cairston are separately noticed; the presbytery of North Isles contains the parishes of Cross and Burness, Lady, Rousay and Egilsay, Shapinsay, Stronsay and Eday, and Westray and Papa Westray, and the *quoad sacra* parishes of Eday and Fara, and North Ronaldsay. The Free Church has also a synod of Orkney, which forms, however, only one presbytery, and includes the charges at Birsay, Deerness, Evie and Rendal, Firth, Harray and Sandwick, Holm, Kirkwall, North Ronaldsay, Orphir, Papa Westray, Rousay and Egilsay, Sanday, South Ronaldsay, Stromness and St Andrews. The U.P. Church has a presbytery of Orkney, with charges at Burray, Eday, Firth, Holm, Kirkwall, Rousay, Sanday, Sandwick, Shapinsay, South Ronaldsay, Stromness, Stronsay, Westray and Wick.

History.—The derivation of the name is uncertain. *Ore* is given in the Welsh Triads as one of the three principal isles of Britain, and it is also given as the modern Welsh name of the Orkneys. The present name is sometimes derived from the British *Orch*, which means 'on the edge or bordering,' and *yngs*, or *inis*, 'an

island,' in which case it would mean the bordering islands. Other derivations are the Scandinavian *Orkin*, 'a sea monster,' and *ey*, 'an island,' and *Ork*, or *Oerk*, 'a desert or uninhabited place,' and *ey*, 'an island'; but the whole matter must be left in the realms of conjecture. The first historical mention seems to be by Diodorus Siculus, who, in the year 57, mentions Cape Orcas as one of the extremities of Britain. In A.D. 86 Agricola's fleet passed northward, after the battle of Mons Graupius or Graupius, and must have reached these islands whence the sailors saw or fancied they saw the renowned Thule. Pomponius Mela mentions the islands about the middle of the second century, and states their number at 30. Pliny gives the number at 40, and Ptolemy at 30, while Solinus, writing in 240, and having heard probably only of the islands next the mainland, puts it at 3. From Claudian's account of the exploits of Theodosius in the end of the 4th century, we are able to infer that the Saxons had settlements among the islands, or visited them; and Nennius in his *Historia Britanica* says that in 449 the Saxon chiefs, Ocltha and Ebissa, 'with forty keels' laid waste the Orkneys. The next reference is in Adamnan's *Life of St Columba*, where it is stated that the Saint was, when he visited Brude, King of the Picts, A.D. 563, in some concern for Cormac, grandson of Lethan, 'who not less than three times went in search of a desert in the ocean, but did not find it,' and who, he knew, would 'after a few months arrive at the Orcaides'; so he 'recommended him in the following terms to King Brude in the presence of the ruler of the Orcaides: "Some of our brethren have lately set sail and are anxious to discover a desert in the pathless sea; should they happen, after many wanderings, to come to the Orcaidian islands, do thou carefully instruct this chief, whose hostages are in thy hand, that no evil befall them within his dominions;"' and we are further told that 'so it afterwards came to pass, and to this advice of the holy man Cormac owed his escape from impending death.' Who the people were who inhabited them, or what was their connection with Brude, is not clear, but it may be reasonably supposed that they were Picts, who, lying on the borders of the northern Pictish kingdom, were somewhat turbulent. Nennius, who wrote about the middle of the 9th century, says that the people were Picts in his day, and among the Scandinavians who afterwards peopled the islands, the traditions of an early race of 'Pights,' who were small men, have been very persistent. Before the death of Brude, which took place in 584, Eilan, king of Dalriada, had, according to the *Ulster Annals*, sent an expedition against the Orkneys, and from this time there is no further mention of them for almost a century; but probably the expedition had been successful, and the group had been under Dalriadic rule, for in 682 we find Brude mac Bile, the then king of the Northern Picts, undertaking an expedition against them, and adding them again to the Pictish domains. During this period Christian missionaries had spread all over the islands and reached as far as Iceland, as we know from the Irish Monk Dicuil, who wrote a treatise *De Mensura Orbis Terrarum* in or about 825. Though this early Christianity disappeared after the Norse occupation, traces of it still remain in the islands named Papa, that being a name given by the Norsemen to the early Christian missionaries, as well as in the islands of Ronaldsay, the Norse name of which was Rinanseoy or St Ninian's or Ringan's Isle, in the sculptured stones similar to the early Christian monuments of the mainland of Scotland, in the old square-shaped ecclesiastical bells that have been found at several places, and in the names of places where chapels had been dedicated to various of the early Irish and Columban saints.

The Norse rovers seem to have begun to visit Britain regularly in search of plunder about the close of the 8th century, and by the middle of the 9th, Olaf the White had established a powerful kingdom in Ireland. When Harald Harfagri therefore by his victory of Hafursford in 872 made himself master of Norway, and many of the large landowners and their followers

opposed to his usurpation or dispossessed of their territories were compelled to flee from his anger, one of the first districts in which they sought shelter and safety was among the Orkney Islands; and having settled permanently there, as well as in Iceland, the Færos, and the Hebrides, they 'turned their haven of refuge into a base of operations for retaliatory warfare, harrying the coasts of Norway during the summer months and living at leisure in the islands during winter on the plunder.' Harold was not, however, to be thus treated with impunity, so in 875 he fitted out a fleet and made a descent on both Orkneys and Hebrides, subduing them and bringing them under his government. As Ivar the son of Rognvald, Jarl of Moeri, one of his chief supporters, was killed, in Sanday probably, during the fighting, and probably also with an eye to a vigorous and powerful ruler who would be able to maintain the conquest, Harald appointed this Rognvald also Jarl of Orkney, but as the latter preferred to return to Norway, he was allowed to hand over the title and power to his brother Sigurd, who indulged the restless nature of himself and his followers by expeditions against the mainland of Scotland, in the course of which he conquered the greater portion of Caithness, Sutherland, Ross, and Moray, in the latter of which districts he finally died [see FORRES and MORAY]. He was succeeded by his son Gutorm, who, however, ruled only one year, when he died, and was succeeded by Hallad, son of Rognvald, for whom his father had obtained the earldom on the news of Sigurd's death reaching Norway. Contrary, however, to the spirit of the times, Hallad was a man of peace, and wearying of the struggle with his piratical subjects—if they may so be called—soon returned to Norway. He was succeeded by his brother Einar,* who proved a rigorous ruler. He is said to have been the first to teach the Orcadians to use turf for fuel, and so he came to be known as Torf-Einar. He was succeeded by his son, Thorfinn, who by his marriage with Grelauga, daughter of Duncan, Earl of Caithness, again united the mainland Norse districts to the Orkney Jarldom. He left five sons, who devoted their energies to murdering one another, till Hlodver, the last of them, was left in sole possession of power, which, however, he did not long enjoy. At his death in 980 his son, Sigurd the Stout, succeeded, and had to defend his mainland possessions, first against Finleikr, Mormaer of Moray, and father of Macbeth, and again, according to the *Njal Saga*, against Finleikr's successor, Melsnechtan, and another Scottish Mormaer, who is called Hundr. In both contests he was successful, and made himself master of the greater part of the North of Scotland, penetrating even S of the Moray Firth [see MORAY]. He was, however, afterwards reconciled to King Malcolm, and obtained his daughter as a second wife, after which his forays against the Scottish dominions ceased. This latter event came about as the *Orkneyinga Saga* tells in the following manner: 'Olaf, Tryggvi's son, returning from a viking expedition to the west, came to the Orkneys with his men and seized Earl Sigurd in Rërvaag [in Hoy, or according to *Olaf's Saga* at Asmundarvag, also in Hoy], as he lay there with a single ship. King Olaf offered the Earl to ransom his life on condition that he should embrace the true faith and be baptized; that he should become his man and proclaim Christianity over all the Orkneys. He took his son, Hundr or Hvelp, as a hostage, and left the Orkneys for Norway, where he became King; and Hundr stayed with him some years, and died there. After that, Earl Sigurd paid no allegiance to King Olaf. He married the daughter of Malcolm, King of Scots, and their son was Earl Thorfinn; his elder sons were Sumarliði, Brusi, and Einar.' Such was the second introduction of Christianity among the islanders. Sigurd's second marriage took place about 1006, and as Scotland was now shut against his enter-

prise, he soon began to look about for fresh fields of adventure. Thoroughly tired of the repose of his own shores, he started in 1014 to assist Brodir, a Viking Leader, against Brian Boroime, King of Munster. On Good Friday in that year, the great battle of Christianity against Paganism was fought, and the Pagans were defeated. Sigurd no sooner tried himself to carry forward his magic banner, which brought victory to him before whom it was borne, but death to him who bore it, than he fell pierced by a spear, and so died the ablest of all the early Norse Jarls. It was in connection with this battle that the weird sisters sang that ghastly song which Gray has paraphrased in the *Fatal Sisters*, and the Norse version of which was preserved in North Ronaldsay till the latter half of the 18th century. King Malcolm gave the Earldom of Caithness to Thorfinn, then only five years of age, and Sumarliði, Brusi, and Einar divided the Orkneys among them, but by the death of the first, and the murder of the last, Brusi obtained the whole of the islands. Thorfinn resembled his father in vigour and ambition; he commenced, at the age of fourteen, his career as a viking, and often, even during his grandfather's reign, kept the coast in fear by his daring and ruthless exploits. On the death of his two half-brothers and the succession of Brusi, he claimed a share, and ultimately got a third. When Duncan succeeded Malcolm, he claimed tribute from Thorfinn, who refused it, and hence the war in which Duncan lost his life at the hands of Macbeth [see MORAY], and after which Thorfinn took possession of a considerable portion of Scotland, and became the most powerful of the Jarls. On the death of Brusi, his son, Rognvald Brusson, came over from Norway and claimed his father's share of the islands, but he came to terms with Thorfinn, and there was no fighting for eight years, when the quarrel broke out afresh and Rognvald was defeated and fled, only, however, to return in a few years and try the fortune of war again. This time he was killed, and Thorfinn thereafter held undisputed sway. In 1047 he was reconciled to King Magnus of Norway, who recognised him as Jarl of Orkney. Thereafter he visited Rome to obtain pardon for his many misdeeds, and after his return devoted the larger part of his time to the government of his dominions, his old excursions being abandoned. He died in 1064, and was succeeded by his sons, Paul and Erlend, who ruled jointly till they were deposed by King Magnus, who made his own son, Sigurd, Jarl. On Sigurd's succession to the throne of Norway in 1103, Hakon, son of Paul, and Magnus, son of Erlend, succeeded and ruled jointly till 1115, when Magnus (the St Magnus to whom the cathedral at Kirkwall is dedicated) was murdered in Egilsay. Notwithstanding this foul deed, Hakon seems to have been a good ruler. His sons, Paul and Harald, succeeded, but Harald was accidentally put to death by his mother—by a poisoned shirt the *Saga* say, which was intended for Paul. Kali, son of Kol, who had married a sister of Magnus, now claimed half the islands, and had his claim allowed. He changed his name to Rognvald, and was the founder of the cathedral at Kirkwall, but there was for many years after this a conflict between different claimants, whose rights or supposed rights are too complex to be here minutely detailed. The Norse line finally became extinct in 1231, with the murder of the then Jarl John.

The earldom of Caithness was then given by Alexander II. to Magnus, second son of Gilbride, Earl of Angus, who seems to have also received the earldom of Orkney from the King of Norway, but little is known of him or of his successors. One of them, Magnus III., accompanied the great expedition which King Haec assembled in the Orkneys in 1263, and survived the battle of Largs, for his death is recorded in 1273. The return of the broken-hearted Haec is noticed under KIRKWALL. This Magnus was succeeded by his son Magnus IV., who is styled Earl of Orkney in the document by which Margaret Maid of Norway was declared next heir to the Scottish throne. John and Magnus V. succeeded, and with the latter the Angus line ended.

* Another brother, Rollo, is said to have desired the post, and when his brother was preferred, he started for France, where, taking possession of Normandy, he founded the line which was by-and-by to send a sovereign to England.

His daughter had married Malise, Earl of Strathene, who, about 1321, succeeded to the earldom in right of his wife, and his son Malise, who succeeded, was confirmed in the earldom of Orkney by the King of Norway, but he was afterwards deprived of it on suspicion of treason in 1357. In 1379 Henry St Clair or Sinclair and Malise Sparre preferred claims to it as heirs of this Malise of Strathene. How the former was descended from, or connected with, him seems to be involved in inextricable confusion, but his title to succeed must have been sufficiently clear at the time, for in the year mentioned he was formally recognised by King Hakon of Norway. The death of Hakon shortly afterwards enabled him to become semi-independent, and he seems to have acted very much like a small king. While William Sinclair, the third of the line, held the earldom, the young King of Scotland, James III., pressed by Christian I., King of Denmark, Norway, and Sweden, for payment of a long arrear of 'the annual of Norway' for the *HEBRIDES*, compromised the matter by marrying Margaret, princess of Denmark, and as only 2000 crowns of her dowry of 60,000 were forthcoming in ready money at the time, he received the Orkneys in pledge for 50,000 crowns and the Shetlands for 8000 more. As the islands were never ransomed, they became thenceforth attached to Scotland. In 1470-71 the earldom of Orkney and the lordship of Shetland were, as to their 'hail richt,' purchased by James III. from the Sinclairs and annexed to the Crown, not to be alienated except in favour of a lawful son of the king. But the royal rights were somewhat involved. The power of the Bishop of Orkney, which had, since Bishop William (see *KIRKWALL*), grown up from littleness to grandeur under the administration of the later earls, was, to a certain extent, co-ordinate with that of the king as lord of the islands. 'The old bishopric of Orkney was a great thing, and lay sparsim throughout the hail parochines of Orkney and Zetland. Beside his lands, he had ye teinds of aucteen kirks: his lands grew daily, as delinquencies increased in the country.' Many small proprietors, too—odaliers—had heritages mixed up everywhere with the lands of the quondam earls and with those of the bishop; and while they paid seat to the superior of the soil, they claimed to retain Norwegian customs and to be governed by Norwegian laws. Down to the death of James III. in 1485, the islands were almost entirely managed by the bishop, but in 1489 and in 1501, Henry, Lord Sinclair, obtained from James IV. leases of the earldom at the extremely low rent of £336, 13s. 4d. Scots, at which it had been leased to the bishops; and though he fell at Flodden in 1513, the property was given in successive leases to his widow, Lady Margaret, at the same rent. In 1529, the Earl of Caithness and Lord Sinclair, for what purpose is not very clear, but doubtless in some way to increase their own power and wealth, invaded Orkney at the head of an armed force, but were met by the Orkney men at Summerdale, in Stenness, and totally routed, the Earl being killed and Lord Sinclair taken prisoner. In 1530 a grant of the islands in feu was made—in defiance of the Act of annexation under James III., and also of Lady Margaret Sinclair's lease—to the Earl of Moray, the natural brother of James V., but it never yielded him any proceeds. About 1535 the islands were honoured by James V. with the only royal visit they have received from Scottish or British sovereigns. The king remained some time in the then bishop's palace, which stood on the W side of Victoria Street at Kirkwall, receiving homage and administering justice. In 1540 the favourable leases to Lady Margaret Sinclair were terminated, and Oliver Sinclair of Pitcairns—whose name is associated with the shameful Rout of Solway—became the last lessee of the Sinclair family, at, however, the advanced rent of £2000. The last of his two leases expired in 1548, and of the former greatness of the family in Orkney there now remains no trace.

The earldom of Orkney became part of the jointure of the widow of James V., and was by her placed under the administration of one Bonot, a Frenchman, and the

Earl of Huntly. How it was disposed of during the fourteen years following her death in 1560 is not known, the only records of the islands being respite and pardons for murder. In 1564 Lord Robert Stewart, a natural son of James V., received a charter granting him for an annual rent of £2000, 13s. 4d. Scots, not only the offices of Sheriff of Orkney and Fowd of Shetland, but the whole lands, whether held odally or otherwise. The grant does not seem to have been at first acted on, but Stewart, who was also commendator of Holyrood, had exchanged temporalities with the bishop, and thus united the crown and episcopal rights. In 1567, a little before Queen Mary's marriage, he had to give up his rights in favour of Bothwell, who was at the same time created Duke of Orkney, but did not long enjoy his title or domains. At the close of the same year it was debated in parliament 'quidher Orkney and Zetland sal be subject to the commune law of this realme or gif thai sal bruike thair awne lawis?—when it was found that thai ought to be subject to thair awne lawis.'

Lord Robert Stewart seems to have resumed possession after Bothwell's flight, but his heavy oppression of the people caused such an outcry, that at length he was deprived of his lordship, only, however, to receive it again in 1581, from which date he held the islands till 1587, when the grant was revoked, and they were leased to Sir John Maitland of Thirlstane and Sir Ludovick Ballantine for two years at a rent of £4000 Scots a year. In 1589 they were again granted to Lord Robert Stewart at a rent of £2073, 6s. 8d. Scots, and in 1591 they were given to him in hereditary and to his son Patrick in fee. Lord Robert died in 1591, and his son succeeded; but a fresh outcry arising against his exactions, there was a brief resumption by the Crown. Lord Patrick, however, obtained a new charter in 1600, which, while not granting him the 'whole' lands or the 'superiority,' and binding him to administer justice according to the old laws of the country, yet concentrated in him the rights of both Crown and bishop.

Earls Robert and Patrick both aimed at destroying the odal system, and as lands so held could not be alienated without the consent of all the heirs in the Fowdra court, they so summoned and adjourned this court and filled it up with creatures of their own, that it became a mere instrument in their hands; they silenced and overawed the refractory odallers by their men-at-arms, and they employed their rights over the temporalities of the bishopric as a pretext for levying fines from such landholders as incurred any censure of the church. They thus succeeded in wresting much landed property from the rightful owners, and terrified not a few of the odal proprietors into a surrender of their peculiar privileges, an acknowledgment of feudal vassalage, and an acceptance of tenure by charter. The rent of the earldom, too, being paid chiefly in kind, they increased it by increasing the value of the weights used; raising the mark from 8 ounces to 12, and the lispund from 12 pounds to 18. Earl Patrick even excelled his father in his despotism, compelling the people to work like slaves in carrying on buildings and other works for him, confiscating the lands of the inhabitants on the most trivial pretences, carrying off the movable goods of any one who dared to leave the islands without special permission from himself or his deputies, and—crowning display of his savage temper and avarice—ordaining that 'if any man tried to supply or give relief to ships, or any vessel distressed by tempest, the same shall be punished in his person and fined at the Earl's pleasure.' Bishop Law, however, interfered, more because the Earl's claims clashed with his than from any desire for justice, and Earl Patrick was summoned to Edinburgh in 1609 and kept in prison there and at Dumbarton till 1615. In 1614 his illegitimate son, Robert, had seized the Castle of Kirkwall and the steeple of the cathedral, and held them with an armed force, but the outbreak was put down by the Earl of Caithness, and both father and son were executed at Edinburgh in 1615 on a charge of treason.

Under the pretext that a forfeiture might injure those

proprietors who had resigned their odal tenures and accepted charters, the lands of the earldom were not immediately declared forfeited, and many of the proprietors were alarmed into the measure of asking and accepting charters from the Crown in the usual feudal form; while all, fearing another taskmaster akin in character to the two last, importuned the king to annex the islands inalienably to the Crown. James VI., after thus all but completing the ruin of the odal tenures, formally annexed 'the lands of Orkney and Zetland to the Crown to remain in all time coming,' and though he admonished the people by proclamation against all fear of the islands reverting 'to their former condition of misrule, trouble, and oppression,' he made no restoration of the lands which had been unlawfully seized by the last earls, and setting up the rental of Earl Patrick as the rule for future guidance, he immediately began to let the islands out to a series of farmers-general. The people thus oppressed without mercy petitioned the King that no man might 'be interposed between his Majesty and them, but that they might remain his Majesty's immediate vassals.' In response to this appeal the islands were for a few years closely annexed to the Crown, but were soon again leased out as before, and subjected to such oppression as was utterly incompatible with any prosperity.

In 1643 they were, with all the regalities belonging to them, granted by Charles I. in mortgage to the Earl of Morton, but were redeemable by the Crown on payment of an alleged debt of £30,000. They were confiscated by Cromwell, but after the Restoration, were again in 1662 given back to the Earl of Morton, under whose arbitrary control the Fowdra court was abolished. In 1669 they were again, by act of parliament, annexed 'for ever' to the Crown and leased out as before, but in 1707 were granted in mortgage—redeemable for £30,000, but with an annual feu-duty of £500—to James, Earl of Morton, who was appointed admiral and hereditary steward and justiciary. In 1742 the Earl, though his revenues from the islands amounted to £3000 a year, pretended that they did not yield a rental equal to the interest of the supposed mortgage, and contrived on this pretext to get an act of parliament declaring them irredeemable. On the abolition of the hereditary jurisdictions in 1747 he received compensation, but being harassed by lawsuits in connection with the weights and other matters, he sold the whole in 1766 to Sir Lawrence Dundas, afterwards Earl of Zetland, with whose descendants they still remain. The title of Earl of Orkney in the peerage of Scotland was granted in 1696, together with those of Viscount Kirkwall and Baron Dechmont to the Fitzmaurice family, who are, however, connected territorially with Wigtownshire. The bishopric lands are in possession of the Crown. The antiquities of the Orkneys are numerous and interesting, and the brochs or burghs, cairns, Picts' houses, castles, and old churches will be found noticed either under the islands or parishes in which they are. Some of the more important are treated separately.

Ormicate, a place in South Uist island, Outer Hebrides, Inverness-shire, 4 miles S of Howmore. Cattle fairs are held at it on the third Wednesday of July and the first Wednesday of September.

Ormidade, a mansion in Kilmodan parish, Argyllshire, on the W side of Glendaruel, 7 miles N by E of Tighnabraich. The steamers touch at a pier on Loch Riddon, a little to the S.

Ormiston, a village and a parish of W Haddingtonshire. The village stands, 274 feet above sea-level, near the left bank of the Tyne, $2\frac{3}{4}$ miles SSE of Tranent, 8 WSW of Haddington, 6 ENE of Dalkeith, and 12 ESE of Edinburgh. Sir Thomas Dick Lauder described it in 1848 as 'occupying the central point of the valley, and with the red-tiled roofs of its houses rising here and there over the trees in which it is embosomed. Its main street, running ENE, with a row of trees upon either side, has the width of an English village, and from its centre arises a rude old cross, near which at the close of last century stood a pre-Reformation chapel, then used as the parish school-house. The village has now a certain air of decay about it, but in our younger days we remember that some of its best houses were inhabited by respectable persons of *demifortune*, who came here to live cheap, so that it afforded a quiet, genteel, and innocent society.' John Cockburn of Ormiston (1685-1758), the pioneer of Scottish agriculture, here founded a farmers' club in 1736, the first it is thought of its kind in the kingdom. In the ten years before he had also established a brewery and distillery, a linen factory, and a bleachfield, the second most likely in Scotland. These all have been long extinct; but Ormiston has a post office, an inn, and a station on the Macmerry branch of the North British railway. Pop. (1791) 600, (1831) 335, (1861) 349, (1871) 349, (1881) 378.

The parish, which since 1648 has had the barony of Peaston annexed to it from Pencilaitland, is bounded NW by Tranent, E by Pencilaitland, SE by Humbie, and W by Cranston in Edinburghshire. In shape resembling an E, it has an utmost length from NNW to SSE of 4 miles, a varying breadth of 3 furlongs and 3 miles, and an area of 3443½ acres. The TYNE, here little more than a brook, runs $1\frac{1}{2}$ mile north-eastward across the northern district and along the Cranston and Pencilaitland boundaries; Bellyford Burn, its affluent, runs 2½ miles eastward, partly on the boundaries with Tranent and Pencilaitland, partly across the NE corner; and Kinchie Burn, its sub-affluent, traces two other parts of the Pencilaitland boundary. Sinking along the Tyne to 270 feet above sea-level, the surface thence rises gently till at Dodridge Law on the southern border it attains a height of 700 feet. The parish of Ormiston 'is English in appearance, the Tyne running slowly in a deep alluvial bed through meadows, and the fields being everywhere divided by hedgerow trees, whilst the extensive and united woods of Ormiston Hall, Woodhall, and Fountainhall form a sylvan district of so great magnitude as, when we consider the rich agricultural county in which it is situated, might almost be termed a forest.' The rocks belong to the Carboniferous Limestone series. Sandstone has been quarried, of poorish quality for building; limestone has been largely worked in the S; and coal exists in at least three workable seams, and appears to have been mined from early times; whilst ironstone also seems to exist. The soil along the Tyne is a light loam incumbent on gravel; in tracts further back is a stiff clay incumbent on till; on both the northern and southern borders is naturally moorish, but has been greatly improved by cultivation; and on a small tract in the W is an alluvium, producing good natural grass. About 180 acres are under wood; 140 are meadow and constant pasture; and nearly all the remainder is in tillage. From the Ormes, who bequeathed their name to the parish, the lands of Ormiston

passed to the Lindsays, and from them by marriage (1368) to the Cockburns, two of whom held the office of Lord Justice-Clerk in the 17th century. In 1743 John Cockburn, mentioned above, was obliged to sell the estate to the Earl of Hopetoun, with whose descendants it has since remained. Ormiston Hall, 9 furlongs S of the village, is a building of 1745, in the tea-canister style of architecture that then prevailed. By 1832 three additions had been made to it in a similar style, one canister added alongside of another; but as it has no external pretension, it gives no offence, and within is extremely comfortable. The older house, 200 yards to the W, forms part of a court of offices. Hitherto on a December night of 1545 the Reformer George Wishart 'passed upon foot, for it was a vehement frost. After supper he held comfortable purpose of the death of God's chosen children, and merely said, "Methink that I desire earnestly to sleep," and therewith he said, "Will we sing a psalm." Which being ended, he passed to chamber, and sooner than his common diet was passed to bed, with these words, "God grant quiet rest." Before midnight the place was beset about that none could escape to make advertisement. The Earl Bothwell came and called for the laird, and declared the purpose and said that it was but vain to make him to hold his house, for the Governor and the Cardinal with all their power were coming; but and if he would deliver the man to him, he would promise upon his honour that he should be safe, and that it should pass the power of the Cardinal to do him any harm or scath.

As thus promise made in the presence of God, and hands stretched out upon both the parties for observation of the promises, the said Master George was delivered to the hands of the said Earl Bothwell, who, immediately departing with him, came to ELPHINSTONE, where the Cardinal was.' So runs John Knox's narrative; and less than four months after Wishart was burnt at St Andrews. In the flower garden grows a spreading yew-tree, 18 feet in girth and 38 in height, which seems to have been a tree of mark so long ago as 1474, and still is in great vigour. An aisle of the ancient church, disused since 1696, still stands near the elder house; and on Dodridge Law are remains of a circular fort. Natives were Admiral Sir William Hope-Johnstone, K.C.B. (1798-1878), and the Rev. Robert Moffat, D.D. (1797-1883), the African missionary, who also has been falsely claimed by Inverkeithing. The Earl of Hopetoun is chief proprietor, 2 others holding each an annual value of £500 and upwards, 2 of from £50 to £500, and 9 of from £20 to £50. Ormiston is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £396. The parish church, built in 1856, is a handsome Early English edifice, containing 420 sittings. There is also a Free church; and a public school, with accommodation for 145 children, had (1883) an average attendance of 94, and a grant of £81, 17s. Valuation (1860) £5907, (1884) 47095, 17s. Pop. (1801) 766, (1831) 838, (1861) 915, (1871) 911, (1881) 1026.—*Ord. Sur.*, sh. 33, 1863. See Sir Thomas Dick Lauder's *Scottish Rivers* (1874), and John Small's *Castles and Mansions of the Lothians* (Edinh. 1883).

Ormiston. See ECKFORD.

Ormiston, a mansion in KIRKNEWTON parish, Edinburghshire, 5 furlongs WSW of Midealder Junction. Scottish Baronial in style, it was built in 1851 from designs by the late David Bryce, R.S.A. Its owner, William Wilkie, Esq., Capt. 3d Battalion Royal Scots (b. 1857; suc. 1883), holds 2000 acres in Edinburgh and Linlithgow shires, his grandfather having purchased the estate at the beginning of the century.—*Ord. Sur.*, sh. 32, 1857.

Ormsary, a mansion in South Knapdale parish, Argyllshire, near the E shore of Loch Caolisport, 13 miles SSW of Ardrishaig. Its owner, Farquhar Campbell, Esq. of Ormsay and Rum (b. 1859; suc. 1878-81), holds 57,000 acres in the shire, valued at £5172 per annum.

Ormsay or Ornsay. See ORNSAY and ISLE-ORNSAY.

Orphir (*yarpha*, 'fibrous peat'), a village and a parish

in the S of Orkney. The village stands on the southern coast of Pomona, near the W end of Scapa Flow, 9 miles WSW of Kirkwall, under which it has a post office.

The parish consists mainly of a section of Pomona, but includes the island of CAVA and the skerry called Barrel of Butter. The Pomona section is bounded N by Firth and Stennes, NE by Kirkwall, S by Scapa Flow, and SW and W by Hoy Sound. Its utmost length, from E to W, is 7 miles; its breadth varies between 2½ and 3¾ miles; and the area of the entire parish is 12,762 acres. CAVA island has been separately noticed. Barrel of Butter skerry, lying 1¼ mile SSE of the nearest point of the mainland, has a curious outline, and is well known to seamen. The bold and rocky coast of the Pomona section, 13½ miles in extent, on the S is finely indented by Houton, Myre, Swanbister, and Waulkmill Bays. Inland the surface rises gradually in a series of undulations and hills, with intersecting dales, chief elevations being Houton Head (195 feet), Venes Hill (206), and Roo Point (74) along the coast, with Gruf Hill (619) and Ward Hill (880) behind—heights that command a view of twenty-five islands and twenty-three parishes, or of most of Orkney and much of Caithness and Sutherland, besides a large expanse of the eastern and western oceans. The eastern district abounds in heathy rising ground and peat-mosses, which furnish fuel to both Orphir and Kirkwall; and everywhere are dales which were not brought under tillage till 1818 or later, but are now in a state of high cultivation. The Loch of Kirkbister (1½ × ½ mile; 49 feet above sea-level) contains plenty of sea and loch trout. Springs of pure water are very numerous and mostly copious; a few are chalybeate, and enjoy some local medicinal celebrity. Trap rock, suitable for building, is frequent; but sandstone of various kinds and quality predominates, and yields both pavement-flag and roofing slate. Fine white and blue clay, used for colouring hearthstones, is at Staurog; and bog iron ore is comparatively plentiful. The soil in a few places on the seaboard is a rich loam mixed with small boulders; elsewhere is mostly either clay or moss, separate or in mixture. The principal antiquities are three tumuli; remains at Swanbister of a circular tower, 180 feet in circumference, which was probably the residence of Sueno Boerstroep, who was killed at the house of Jarl Paul towards the close of the 11th century; and ruins or vestiges of several pre-Reformation chapels. Clastron House, near the W coast, 17 miles W by S of Kirkwall, was the birthplace of Sir William Honyman, Bart., Lord Armadale (1756-1825), a lord of session. Other mansions are Smozrow and Swanbister; and 6 proprietors hold each an annual value of more, 4 of less, than £100. Orphir is in the presbytery of Cairnston and synod of Orkney; the living is worth £182. The parish church was built in 1829, and contains 574 sittings. There is also a Free church; and Kirkbister and Orphir public schools, with respective accommodation for 60 and 85 children, had (1883) an average attendance of 40 and 62, and grants of £47, 16s. and £59. Valuation (1860) £1874, (1884) £1834. Pop. (1801) 864, (1831) 996, (1861) 1133, (1871) 1040, (1881) 1015, of whom 23 were on Cava.

Orr. See ORE.

Orrin, a stream of Urray parish, SE Ross-shire, rising at an altitude of 2450 feet above sea-level, and 2½ miles N of Loch Monar. Thence it flows 26 miles east-northeastward, till it falls into the Conan opposite Brahan Castle, 4 miles SSW of Dingwall. During the last 3½ miles of its course it expands into Loch na Caoidhe (8¼ × 1½ furl.) and An Fiar Loch (5 × ¾ furl.; 998 feet); and lower down it traces for 3½ miles the northern boundary of Kilmorack parish, Inverness-shire. A very fitful stream, subject to violent freshets, it chiefly traverses a mountain glen, called after it Glen Orrin, but eventually enters the low flat lands of Stratheonan, and here yields very good salmon fishing. A wooden bridge across it, behind Urray Manse, erected at the expense of Mr M'Kenzie of Seaforth, was swept away by the flood of 1839, when a stronger bridge was built at the cost of the county. A fertile tract around the con-

fluence of the Orrin and the Conan used sometimes, for weeks or even months, to be so flooded as to present the appearance of a lake; but now, by means of drainage-works constructed in 1869, is entirely free from overflow.—*Ord. Sur.*, shs. 82, 83, 1882-81.

Orsay or **Oversay**, an islet in Kilchoman parish, Argyllshire, at the point of the Rhynns of Islay, flanking the W side of the entrance to Loch Indal, and lying 12 miles NW of the Mull of Islay. It has a lighthouse, erected in 1825 at a cost of £8056, and showing a light which flashes once in every five seconds, and is visible at the distance of 17 nautical miles. Pop. (1871) 13, (1881) 15.

Orton House, a mansion in Rothes parish, Elginshire, near the left bank of the Spey, and 5 furlongs N by E of Orton Junction on the Highland railway, this being 8½ miles W by N of Keith, and 9½ SE of Elgin. It is a large and handsome modern four-story edifice, with a massive portico and finely wooded grounds. Purchased by her great-grandfather, the first Earl of Fife, about the middle of last century, the estate belongs now to Miss Wharton-Duff, who holds 3019 acres in the shire, valued at £1794 per annum. A beautiful Gothic mansoleum, 1¼ mile NNE of the mansion, was built in 1844. It occupies the site of St Mary's pre-Reformation chapel, connected with which was a holy well, whither multitudes flocked on the first Sunday in May.—*Ord. Sur.*, sh. 85, 1876.

Orwell, a parish of NW Kinross-shire, containing the post-town and station of MILNATHORT and the village of Middleton. It is bounded N by Dunning, Forteviot (detached) in Perthshire, and by the Kinross-shire sections of Forgandenny and Arngask, E by Strathmiglo in Fife and Portmako, S by Loch Leven and Kinross, and W by Fossoway. Its utmost length, from E to W, is 7½ miles; its breadth varies between 2¼ and 2½ miles; and its area is 13,132½ acres. LOCH LEVEN, of 1½ mile, forms the eastern part of the southern border; North Queich Water, draining all the western and south-western districts, runs 2 miles east-south-eastward along or near to the Kinross boundary to Loch Leven, and receives many little tributaries from the NW and N; and the river EDEN is formed at Burnside by head-streams from the north-eastern district. The surface of all the south-eastern district is level or diversified only with gentle swells and rising grounds, its altitude ranging between 353 and 500 feet; beyond it rises gradually, into hilly heights, the Braes of Orwell; and then, towards the northern and western borders, it suddenly shoots up into a frontier range of the Ochils, whose highest points are Warroch Hill (1133 feet), Slungie Hill (1354), Dochrie Hill (1194), and Tilliery Hill (1087). Eruptive rocks, comprising greenstone, clinkstone, amygdaloid, and porphyry, form most of the hills; and Devonian rocks, much intersected, disturbed, and contorted by trap, prevail throughout the low grounds. Red sandstone is the principal Devonian rock; grey sandstone and limestone occur near the eastern boundary; and calc spar, baryta, heulandite, laumontite, analcime, and iserine are found. The soil of the lower districts is partly loam, but principally a sandy clay, mixed here and there with till or gravel; that of the arable parts of the braes is generally a sharp good gravel, well suited for potatoes and turnips. About three-fifths of the entire area are in tillage; nearly 700 acres are under wood or in gardens; and the rest is either pastoral or waste. The chief antiquities are two standing stones on Orwell farm, remains of the vast cairn of CAIRNAVAIN among the Ochils, BURLEIGH Castle in the eastern vicinity of Milnathort, and the site of the ancient chapel of Orwell on the shore of Loch Leven, which Robert Bruce in 1315 gave to Dunfermline Abbey. Six proprietors hold each an annual value of £500 and upwards, 35 of between £100 and £500, 5 of from £50 to £100, and 27 of from £20 to £50. Orwell is in the presbytery of Kinross and the synod of Fife; in the living, including manse and glebe, is worth £250. The parish church, a Free church, and a U.P. church are noticed in our article on MILNATHORT. Brand's and the public school,

with respective accommodation for 151 and 190 children, had (1883) an average attendance of 141 and 102, and grants of £133, 4s. 2d. and £71, 8s. Valuation (1860) £17,199, (1882) £18,489, 4s. Pop. (1801) 2036, (1831) 3005, (1861) 2399, (1871) 2248, (1881) 2031.—*Ord. Sur.*, sh. 40, 1867.

Osnaburgh. See DAIRSIDE.

Ospisdale, an old mansion, with picturesque grounds, in Creich parish, Sutherland, 6 miles W of Dornoch. Its owner, Dugald Gilchrist, Esq. (b. 1843; suc. 1857), holds 3600 acres in the shire, valued at £500 per annum. By the roadside, at the foot of the fine avenue, stands a large monolith, 14 feet high.—*Ord. Sur.*, sh. 103, 1878.

Ossian or Ouchan, Loch. See GLENGULBIN.

Ossian's Grave. See CLACH-NA-OSSIAN.

Ossian's Hall, a summer-house in Little Dunkeld parish, Perthshire, on the left bank of the Bran, 1½ mile WSW of Dunkeld. Placed on the summit of a rock, 40 feet above a long, foaming cataract of the Bran, it is so constructed as to command a downward view of the falls from a bow window, yet entirely to hide it in the circuit of the walls. The window is fitted with a picture of Ossian on a sliding panel; and is so contrived that, while the picture engages a visitor's attention, the panel suddenly flies asunder, and discloses—

* One loud cascade in front, and lo!
A thousand like it, white as snow—
Streams on the walls, and torrent foam
As active round the hollow dome,
Illusive cataracts! of their terrors
Not stripped, nor voiceless in the mirrors,
That catch the pageant from the flood
Thundering adown a rocky wood.

Wordsworth—the poem is his—came hither with his sister Dorothy on 8 Sept. 1803. In 1869 the 'intrusive pile' was wantonly destroyed with gunpowder, but in 1879-80 it was restored to its former condition.—*Ord. Sur.*, sh. 47, 1869.

Otterburn. See LONGFORMACETS.

Otter House, a mansion in Kilfinan parish, Cowal, Argyllshire, near the E shore of Loch Fyne, 5½ miles NW of Tighnabruich. Its owner, Patrick Rankin, Esq. (b. 1844; suc. 1873), holds 4200 acres in the shire, valued at £1553 per annum. Otter Ferry, across Loch Fyne, 9½ miles NNW of Tighnabruich, is 1½ mile broad, and forms the communication with Lochgilphead.—*Ord. Sur.*, sh. 29, 1873.

Otterston. See DALGETY.

Otterswick, a bay on the NE side of Sanday island, Orkney. It was originally called Odinswic, and is traditionally believed to occupy the site of a wooded plain, which was overwhelmed by the sea. Opening from the NE, it looks across North Ronaldshay Firth to North Ronaldshay island; penetrates 5½ miles south-westward, in a manner to cut the northern part of Sanday into two peninsulas; measures 4 miles across the entrance; and tapers gradually towards a point. Its shores are low, and subject to inundation in easterly gales at spring tides; and it affords safe anchorage for vessels of any size, and contains a vast abundance of shell-fish.

Ouan or Uaine, Loch. See MONZIEVAIRD.

Ousie or Ussie, Loch. See FODDERTY.

Outer Hebrides. See HEBRIDES.

Out-Skerries. See HOUSEIE.

Over-Bervie. See GLENBERVIE.

Overbie. See CASTLE-O'ER.

Oversay. See ORSAY.

Overseag Hotel, an inn in Lairg parish, Sutherland, near the NE shore of Loch Shin, towards its head, 17 miles NW of Lairg village.

Overtoun, an estate, with a mansion, in Avondale parish, Lanarkshire, 5 furlongs N by E of Strathaven.

Overtoun, a village in Dregghorn parish, Ayrshire, adjacent to the Kilmarnock and Irvine railway, 3¼ miles E of Irvine. Pop. (1871) 308, (1881) 413.

Overtoun, an elegant modern Gothic mansion on the W border of Old Kilpatrick parish, Dumbartonshire, 2

miles ENE of Dumbarton. Its owner, John Campbell White, Esq. (b. 1843; suc. 1884), holds 910 acres in the shire, valued at £1032 per annum.—*Ord. Sur.*, sh. 30, 1866.

Overtown, a large village in Cambusnethan parish, Lanarkshire, near a station of its own name on the Caledonian railway, $\frac{1}{2}$ mile SE of Wishaw, and $\frac{3}{4}$ miles NW of Carlisle. Lying amid a rich mineral country, and inhabited chiefly by workers in the mineral field, it has a post office under Wishaw, a school of the Coltness Iron Co., a Roman Catholic school, St Patrick's Roman Catholic church (1873; 200 sittings), and an Established church. The last, built in 1874-75 at a cost of over £2000, is an Early English edifice, with a bold square tower 80 feet high, and 600 sittings. Pop. (1861) 364, (1871) 1517, (1881) 1293.—*Ord. Sur.*, sh. 23, 1865.

Oxenford Castle, a seat of the Earl of Stair, in Cranton parish, Edinburghshire, near the left bank of the river Tyne, $\frac{1}{2}$ mile N of Ford, and 4 miles ESE of Dalkeith. Remodelled towards the close of last century by Robert Adam, and subsequently much enlarged by William Burn, it is a magnificent edifice, with extensive and beautiful grounds. It contains a fine library, and portraits and paintings by Jameson, Angelica Kauffmann, Thomson of Duddingston, etc. The estate, called formerly Oxford, from 1661 till 1706 gave the title of Viscount Oxford, in the peerage of Scotland, to the family of Macgill, whose heiress, Elizabeth, in 1760 married her cousin, Sir John Dalrymple, Bart. of Conisland, a great-great-grandson of the first Viscount Stair. Their son, Sir John, in 1853 succeeded as eighth Earl of Stair.—*Ord. Sur.*, sh. 33, 1863. See LOCHINEN, and John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Oxenham. See OXNAM.

Oxford. See OXENFORD CASTLE.

Oxna, an island in Tingwall parish, Shetland, $\frac{3}{4}$ miles SW of Scalloway. It has an utmost length of $6\frac{1}{2}$ and $5\frac{3}{4}$ furlongs, and rises at Muckle Ward to 115 feet above sea-level. Pop. (1871) 29, (1881) 30.

Oxnam (anc. *Ovenham*), a hamlet and a parish of SE Roxburghshire. The hamlet lies upon Oxnam Water, $\frac{1}{2}$ miles SE of Jedburgh, under which it has a post office.

The parish is bounded NE by the main body of Jedburgh, E by Hounam, SE and S by Northumberland, and SW by the Edgerston or detached section of Jedburgh and by Southdean. Its utmost length, from NNW to SSE, is 10 $\frac{1}{2}$ miles; its utmost breadth is $5\frac{1}{2}$ miles; and its area is 33 square miles or 21,193 acres, of which 33 $\frac{1}{4}$ are water. Oxnam Water, rising at an altitude of 695 feet, runs $5\frac{1}{2}$ miles north-by-westward through the interior, then $6\frac{1}{2}$ furlongs along the Jedburgh boundary; and, after quitting this parish, it winds $3\frac{3}{4}$ miles north-by-westward through or along the borders of Jedburgh and CRAILING, till, after a total course of 9 $\frac{3}{4}$ miles and a total descent of 455 feet, it falls into the Teviot at a point $\frac{1}{2}$ mile NNE of Crailing village. From $\frac{1}{2}$ mile below its source, KALE WATER (here Long Burn) runs $5\frac{1}{2}$ miles north-north-eastward, mainly across the south-eastern interior, but partly along the Edgerston and Hounam boundaries. The COQUET, a stream belonging almost wholly to England, flows along the Northumberland border for the first $\frac{3}{4}$ mile of its course; a tributary of Jed Water traces 3 miles of the south-western border; and the JED itself, after receiving that tributary, runs $2\frac{3}{4}$ miles north-north-westward along the same boundary. The surface is hilly, sinking in the extreme N to 340 feet above sea-level, and rising southward thence to the rounded pastoral CHEVIOTS. Chief elevations, from N to S, are Blosylwys Hill (809 feet), Cunzierton (1100), Birken-side (763), Peg Law (932), Lawsuit Law (825), Dod Hill (977), Plenderleith (1198), Hindhope Hill (1349), Brownhart Law (1664), Grindstone Law (1535), and Hungry Law (1643), of which the three last rise on or close to the English Border. Several of these heights command a magnificent view of Teviotdale and the

Merse away to the German Ocean. The southern district, to the extent of one-third of all the area, is nearly filled with masses of the Cheviots, dome-like hills, smooth and green; the northern is much diversified in surface, including offshoots of the Cheviots, and abounding in ravines, picturesque defiles, and romantic dells; and the banks of Oxnam Water are beautifully undulated, and rise into various slopes of the adjoining heights. Limestone is found near the Jed, but cannot well be worked; and sandstone, hard, white, and thought to belong to the Carboniferous formation, abounds in the S, intersected by a thick dyke of trap. Transition rocks prevail throughout the N. The soil of the arable lands is loamy, clayey, or gravelly. Less than one-sixth of the entire area is in tillage; plantations cover some 600 acres; and the rest of the land is pastoral or waste. The Cheviot breed of sheep is in great favour, and has been brought to a condition of high excellence. A weak chalybeate spring near Fairloans enjoyed once some medicinal repute, but went eventually into neglect. The Roman Watling Street from Yorkshire to the Lothians, running $7\frac{1}{2}$ miles along the eastern and north-eastern boundary, remains throughout much of its length in good preservation; it is still used as a drove road; and once was a favourite camping-ground of Border Gypsies. Other antiquities are a fairly entire Caledonian stone circle, remains of another stone circle, several circular camps, vestiges of DOLPHISTON and two other mediæval fortresses, and remains of a pre-Reformation chapel. The Rev. Thomas Boston, one of the founders of the Relief Church, was minister for some time prior to 1757. Four proprietors hold each an annual value of more, and three of less, than £500. Giving off a portion to Edgerston *quoad sacra* parish, Oxnam is in the presbytery of Jedburgh and the synod of Merse and Teviotdale; the living is worth £350. The parish church, built in 1738, and enlarged and restored in 1880, contains 280 sittings. A specimen of the old jongs is fixed outside the S wall. Oxnam public and Towford Duke of Roxburgh's school, with respective accommodation for 110 and 56 children, had (1883) an average attendance of 69 and 32, and grants of £66, 4s. 6d. and £40, 8s. Valuation (1864) £10,526, 0s. 8d., (1884) £11,750, 19s. Pop. (1801) 688, (1831) 676, (1861) 627, (1871) 695, (1881) 683, of whom 638 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 17, 1864.

Ox Rocks. See AITRES.

Oxton or Agston, a post-office village in Channelkirk parish, Berwickshire, near the right bank of Leader Water, 5 miles NNW of Lauder.

Oykell. See OIKELL.

Oyne, a parish in Garioch district, central Aberdeen-shire, with a post office under Insh and a station on the Great North of Scotland railway, 4 miles W by N of Inveramsay Junction and 24 $\frac{1}{2}$ miles NW of Aberdeen. It is bounded N by Culsamond, NE by Rayne, E by Chapel of Garioch, S by Monymusk, W by Keig and Premnay, and NW by Insh. Its utmost length, from N to S, is $6\frac{1}{2}$ miles; its breadth varies between $1\frac{1}{2}$ and $3\frac{1}{2}$ miles; and its area is 10,151 $\frac{1}{2}$ acres, of which 10 $\frac{1}{2}$ are water. The DON flows $2\frac{1}{2}$ miles east-south-eastward along the southern, the URY 3 miles south-eastward along the north-eastern, boundary; and to the Ury run the Burn of Shevock along the Culsamond border, and GADIE Burn across the interior. The surface sinks along the Don to 300, along the Ury to 283, feet; and thence it rises to 415 feet at the parish church, 558 at Ardoyne, 1698 at the Mither Tap of BENNOCHIE, and 1340 at Millstone Hill. Bennochie, parting the Gadie's valley from the Don's, and occupying close upon half of the entire area, forms a stupendous barrier between the northern and the southern district, the former of which has the richest soil, and contains four-fifths of the population. Granite is the predominant rock, and has been quarried; trap of hard texture and a deep blue hue is used for dykes and ordinary masonry; and rock crystal, topaz, jasper, and shorl are found. The soil of the low grounds is mostly friable and fertile; on the slopes of

Bennochie is much mixed with granite *débris*; and on the higher parts of the mountain is heath or moss, which here and there gives place to deep bog, furnishing supplies of peat-fuel to several neighbouring parishes. Nearly 3000 acres are in tillage; about 1850 are under wood; and the rest of the surface is either pastoral or waste. Antiquities are three stones with Runic sculptures and the ruins of HARTHILL Castle. The historian, John Leslie (1526-96), who afterwards was Bishop of Ross, became parson of Oyne in 1559. PITMEDDEN, PITTOBRIE, TILLYFOUR, and WESTHALL are mansions; and 6 proprietors hold each an annual value of £500 and

upwards, 2 of from £50 to £500, and 4 of from £20 to £50. Oyne is in the presbytery of Garioch and the synod of Aberdeen; the living is worth £221. The parish church, built in 1807, stands conspicuously on an eminence $\frac{1}{2}$ mile E by S of the station. It has an harmonium (1881), and contains 475 sittings. There is also a Free church; and a public school, with accommodation for 150 children, had (1883) an average attendance of 118, and a grant of £113, 7s. Valuation (1860) £4840, (1884) £5791, 8s. 6d., plus £731 for railway. Pop. (1801) 518, (1831) 796, (1861) 1127, (1871) 1050, (1881) 962.—*Ord. Sur.*, sh. 76, 1874.

P

PABA or **Pabaidd**, an island of Uig parish, Outer Hebrides, Ross-shire, in West Loch Roag, $\frac{1}{2}$ mile from the nearest point of the W coast of Lewis.

With an utmost length and breadth of 1 mile and 5 furlongs, it rises to a height of 100 feet, and contains two fresh-water lakelets. Pop. (1861) 17, (1871) 0, (1881) 8.—*Ord. Sur.*, sh. 104, 1858.

Pabba, an islet of Strath parish, Skye island, Inverness-shire, at the entrance of Broadford Bay, $\frac{2}{3}$ miles SE of Scalpa. With a somewhat circular outline, about a mile in diameter, it is surrounded by low reefs encroaching on its shores, and forms a flat plateau scarcely 60 feet high, the ascent to which is abrupt and mural on the SE, but gentle on the NW. It consists chiefly of limestone, but partly of micaceous shale and partly of interspersed trap; and contains remains of a small chapel. Pop. (1871) 6, (1881) 10.

Pabbay, an island in Barra parish, Outer Hebrides, Inverness-shire, $1\frac{1}{2}$ mile NNE of Mingala, $2\frac{1}{2}$ miles SSW of Sandera, and $6\frac{1}{2}$ S of Barra island. With a length of nearly $1\frac{1}{2}$ mile and an utmost breadth of 1 mile, it chiefly consists of a gneiss hill, rising to a height of 800 feet above sea-level, and presents a somewhat precipitous face to the W. Pop. (1871) 24, (1881) 26.

Pabbay, an island in Harris parish, Outer Hebrides, Inverness-shire, $2\frac{1}{2}$ miles W of Cape Difficulty, and $3\frac{1}{2}$ N of Bernera. With a length of $2\frac{1}{2}$ miles from E to W, and a width of $1\frac{1}{2}$ mile from N to S, it rises to an altitude of 1000 feet above sea-level; and as seen from a distance presents a conical outline. It formerly grew very fine crops of corn, but it has in a great degree been rendered barren and desolate. Sand-drift has overwhelmed its SE side; the spray from the Atlantic almost totally prevents vegetation in the NW; and only on the SW, where it is sheltered by Bernera, does the island retain anything like its former noted fertility. Pop. (1841) 338, (1861) 21, (1871) 8, (1881) 2.

Padanaram, a village, with a public school, in Kirriemuir parish, Forfarshire, 2 miles W by N of Forfar, under which it has a post office.

Paisley, a large parliamentary burgh in the Upper Ward of Renfrewshire and in the NE part of the county. It is a seat of important manufactures, a river port, the political capital of the Upper Ward, and the sixth most populous town in Scotland. It stands on both banks of the river White Cart, about 3 miles from its junction with the Clyde, and is in the Abbey parish of Paisley, which has been already noticed. The town has a railway station, used by both the Caledonian and the Glasgow and South-Western railway companies, and by rail is 3 miles SSW of Renfrew, 3 E by N of Johnstone, 7 W by S of Glasgow, 16 ESE of Greenock, and $33\frac{1}{2}$ NNE of Ayr. There is another station to accommodate the district to the W; and on the line occupying the course of the Glasgow and Paisley Canal there is to be a station at Cansewaside. Part of the site is a gentle hilly ridge extending westward from the Cart; part is the N side of a similar ridge running parallel on the S, and the rest is partly low ground lying between and around these ridges on the W bank of the river, and partly an

expanse of level ground lying along the E bank. The height of the low ground is about 40 feet above sea-level. The town itself can hardly be said to be pretty or picturesque, but there is good scenery around, and from the rising grounds to the southward good views of the valley of the Clyde, the Kilpatrick Hills and some of the Grampians, of the valley of the Gryfe, and of Gleniffer Braes and many of the scenes of Tannahill's poems, may all be obtained.

The municipal and parliamentary boundary begins on the NW between Candren and East Candren, and passes southward along Candren Burn to North Braidland; from that ESE to Potterhill, thence NE to beyond Bathgo Hill (135 feet), and from that north-westward to Knock Hill* (84) on the extreme N, whence it strikes back to the starting point. The distance in a straight line from Bathgo Hill on the E to Braidland on the W is 3 miles, and from Knock Hill on the N to Potterhill on the S is $2\frac{3}{4}$ miles, but a considerable portion of the area is not built on, the latter part measuring about 2 miles from E to W and $1\frac{1}{2}$ mile from N to S. The town proper consists of the old town, the new town, and a number of suburbs. The old town occupies the chief ridge westward of the Cart, and covers an area of about a mile square. The new town, which stands on the E side of the river, includes the Abbey buildings, and occupies the ground formerly used as the Abbey gardens. It was founded in 1779 by the eighth Earl of Abercorn, and the streets are pretty regularly laid out. The suburbs of Charleston, Lylesland, and Dovesland form an addition to the S of the old town; Maxwellton, Ferguslie, and Millerston form a long straggling extension to the W. Williamsburgh forms a small extension to the E of the new town, and there are other suburbs at Carriagehill, Castle Head, Meikleriggs, and Mossvale. The streets at Wallneuk and Smithhills to the W of the new town were in existence before it, and Seedhills is so old as to have belonged to the original burgh. The straggling nature of the town causes it to occupy more ground than corresponds with the population. The main line of streets runs from E to W along the road from Glasgow by Johnstone to Ayrshire, and the line from E to W bears the names of Glasgow Road, Garthland Street, Gauze Street, Smithhills Street, The Cross, High Street, Well Meadow Street, and Broomlands Street; beyond which is Ferguslie, and further W Elderslie, Thorn, and Johnstone. From the Cross the old irregular Causewayside Street strikes south-south-westward, and from it a long straight street, George Street, passes westward to Broomlands Street. The main cross connection between George Street and Causewayside Street is Canal Street. Below the railway station is County Place, and to the N of the line oppo-

* Knock Hill is the traditional spot where Marjory Bruce, wife of Walter, the High Steward of Scotland, was thrown from her horse and killed (1316); and till 1779 there were remains of a pillar or cross, said to have been erected to mark the place, and known as Queen Blear's Cross, although Marjory never was Queen, and Blear-eye was the name given to her son, afterwards Robert II., and not to herself. The monument was destroyed in the year just mentioned by a farmer, who used the pillar as a door lintel and the stones of the supporting steps to repair a fence.

site the station is Old Sneddon Street, from the W end of which Back Sneddon Street (E), Love Street (centre), and St James Street and Caledonia Street along the Greenock Road (W) all branch off. Many of the streets of the new town are named from the fabrics used in the manufactures of the town. The streets of the old town are narrow, and still contain many of the old houses of the 17th and 18th centuries, but changes in this respect are rapidly taking place, as may be seen in the widening of High Street and the many new buildings recently erected or still being built along it. On the rising-ground to the S there are a number of detached villas. To the N of the main line of streets is the railway elevated above the level of the streets. The portion to the E of the station is used by both the Caledonian and Glasgow and South-Western companies, but at the station the lines branch off, the Caledonian passing north-westward towards Greenock, and the Glasgow and South-Western west-south-westward, till near Elderslie it sends off a branch north-westward to Greenock, while the main line passes on to Ayrshire. The Glasgow, Paisley, and Johnstone Canal, after having lost a large portion of its trade, has now been converted into a railway. In its palmy days it is said to have carried over 300,000 passengers a year in its light passenger boats. So late as 1814 the only carriage communication with Glasgow was by a coach, which conveyed the cotton-spinners and yarn merchants to town once a week on the mornings of market days, and brought them home in the evening.

History.—The derivation of the name is somewhat doubtful. The older forms are Passelet, Passeleth, and Passelay, for which the conjectural derivations have been given of 'the moist pasture-land' from the British *Pasgel-luith*, or 'the flat stone shoal' from the British *Bas-lech* or the Gaelic *Bas-leac*, the latter derivation having reference to the ledge of rock running across the channel of the White Cart near the town. In the 16th century the name was changed into Paslay and Paisley, and in the course of the 18th century it took its present form. Paisley was till very recently looked on as the site of the Roman station of Vanduara, properly Vandogara, mentioned by Ptolemy, the identification resting mainly on the resemblance of the name of the station to the British *Gwen-dwr* or 'white water,' which was supposed to have been the name then given to the White Cart. Principal Dunlop, writing in the end of the 17th century, and Crawford, who published his history of Renfrewshire in 1710, both describe Roman remains in the neighbourhood. Principal Dunlop says:—'At Paisley there is a large Roman Camp to be seen. The pretorium or innermost part of the camp is on the west end of a rising ground, or little hill, called Cap Shawhead, on the south-east descent of which hill standeth the town of Paisley. The pretorium is not very large, but hath been well fortified with three fosses and dykes of earth, which must have been large, when to this day their vestiges are so great that men on horseback will not see over them. The camp itself hath been great and large, it comprehending the whole hill. There are vestiges, on the north side, of the fosses and dyke, whereby it appears that the camp reached to the river Cart. On the north side the dyke goeth alongst the foot of the hill; and if we allow it to have gone so far on the other side, it hath enclosed all the space of ground on which the town of Paisley stands, and it may be guessed to be about a mile in compass. Its situation was both strong and pleasant, overlooking the whole country. I have not heard that any have been so curious as to dig the ground into this pretorium; but when they tread upon it it gives a sound as if it were hollow below, where belike there are some of their vaults. Near to this camp, about a quarter of a mile, stand two other rises or little hills, the one to the west, the other to the south, which with this make almost a triangular foru, where have been stations for the outer guards. The vestiges of these appear and make them little larger than the pretorium of the other camp of the same form, without any other forti-

fication than a fosse and a dyke.' The large camp must have been at Oakshawhead, and the outposts at Woodside and Castle Head, but the extension of the town has now obliterated the traces of them. Gordon, in 1725, traced a military road from the great Clydesdale Road at Glasgow, across the Clyde by a ford that remained till 1772, and on to Paisley. In his *Celtic Scotland*, published in 1876 (Vol. i., p. 73), Dr Skene combats the old view, objecting to the *Gwen-dwr* theory on the principle that rivers do not change their names, and also giving reasons for thinking that Vandogara was at LOUBON Hill, on the river Irvine in Ayrshire; and so the matter rests.

The first authentic reference to the present place must, therefore, be supposed to be in 1157, when King Malcolm IV. granted a charter in favour of Walter, the son of Alan, High Steward of Scotland, confirming a gift (not now extant) of certain extensive possessions, which King David had conferred on Walter. Lands called Passeleth formed part of those specified in the grant; and on these lands, on the E bank of the river, Walter founded the famous Abbey of Paisley. No village appears to have been on the lands when the monastery was founded, but the opposite bank was soon occupied by one inhabited by the retainers and 'kindly tenants' of the monks, to whom it belonged. Under the fostering care of the church, and belonging to an abbey specially favoured by the Bruces and Stewarts, it must have thriven, and towards the end of the 15th century it had an opportunity of thriving still more, for Abbot Shaw, who had sided with the rebellious nobles against James III., obtained from the new government in 1488 a charter creating the village of Paisley a free burgh of barony, with 'the full and free liberty of buying and selling in the said burgh, wire, wax, woollen and linen cloths, wholesale or retail, and all other goods and wares coming to it; with power and liberty of having and holding in the same place, bakers, brewers, butchers, and sellers both of flesh and fish, and workmen in the several crafts, . . . likewise to possess a cross and market for ever, every week, on Monday, and two public fairs yearly, for ever; namely one on the day of St Mirren, and the other on the day of St Marnock;' and in 1490 the abbot and chapter granted to the magistrates of the burgh in feu-farm the ground on which the old town stands, and certain other privileges. The neighbouring burgh of Renfrew, to which the Paisley people had formerly been subject, looked on all this as an invasion of its privileges, and entered into a series of quarrels with the new burgh, and even went the length of violently seizing goods exposed for sale in order to compel payment of customs. The result of a lawsuit was a decision in favour of the magistrates of Paisley, given, however, on the ground that that town lay within the regality of the abbey, and was not therefore included in the charter granted to Renfrew in 1396, as the regality grant to the abbey was of prior date to that given to the burgh. This settled the matter, and the town remained subject to the abbot, and after the Reformation to the commendator till 1658, when the magistrates purchased the superiority of the town and other privileges from William Lord Cochrane, who was then Lord of Paisley. In 1665 they obtained a royal charter confirming the burgh in its lands and privileges, and in 1690 an act of parliament to allow them to hold two additional fairs. From this time, Paisley, holding directly of the Crown, has had practically all the privileges of a royal burgh, except that down to the passing of the Reform Bill of 1832 it had no direct parliamentary representative. In 1489 King James IV. in the course of his military operations visited the town, and he was here again in 1504 and 1507. It was at Paisley that the Lords of the Congregation assembled in 1565, but on the appearance of the royal troops at Glasgow they moved off to Hamilton. In 1597 there was expectation of a visit from the Queen, and in 1617 James VI. himself made his appearance at the abbey, where he was hospitably entertained; but there is a local tradition that 'the bailies supplicated his Majesty not to enter into their bounds,

their common *bourse* being then so miserably reduced that they could not entertain him with that sumptuousness befitting their respective estates.' The next visit of a member of the royal family was that paid by the late Duke of Albany, when at Blythwood House, in 1875. In 1588 and again in 1602 the town suffered severely from the plague; and the gates, of which there were then five—one at the Bridge, one at the foot of St Miren Street, one in High Street, one in Moss Street, and one in the School Wynd—were guarded with great vigilance, while no person was allowed to admit any one into the town by the gardens behind the houses. There was another outbreak of plague in 1645. In 1649 the town seems to have furnished a troop of horse for service in the army that was defeated at Dunbar, and subsequently the magistrates again provided six troopers for service against the English—proceedings which procured for the inhabitants the presence of a garrison of Cromwellian soldiers, whose support seems to have been felt as a very heavy burden. Paisley does not seem to have suffered so much as other places in the west during the Covenanting troubles, but the Cross was the scene in 1685 of the death of two farmers named Algie and Park from the neighbouring parish of Eastwood, who were executed for refusing to take the oath of abjuration. They were buried at the Gallowgreen, near the foot of Maxwellton Street; but when it was to be built on in 1779 their remains were removed to Broomlands burying-ground, which now forms part of the cemetery, and an obelisk was there erected to their memory in 1835. Between 1677 and 1697 a considerable number of reputed witches were executed, but none of the cases except that afterwards alluded to are of any general note. With the rest of the west the district hailed the Revolution of 1688 with great eagerness, and furnished its quota to the Renfrewshire men who went to Edinburgh to support the Convention. There is no record of the behaviour of the burgh in connection with the Union in 1707, but in 1715 we find a number of the townsmen binding themselves to raise and maintain a body of men because 'considering the imminent danger we are in from the threatened invasion of the Pretender, and the danger from many within our own bosoms that are to join with him, . . . it lies upon all honest men as their indispensable duty to provid tynously for the defence of our Sovereign and our own sacred and civile interests.' In August of the same year a guard of 20 men was set every night, two flags were purchased, and a number of muskets, and 20 men were sent to the Duke of Argyll at Stirling, and one hundred and twenty Paisley Volunteers also joined the expedition against the Macgregors [see LOCH LOMOND]. During the rebellion of 1745 Paisley raised a company of militia to aid the Hanoverian forces, and was in consequence fined £1000 by Prince Charles Edward when he was at Glasgow, £500 of which was paid. From this time till 1819 the history of the town is connected with the development of trade, but in that year a body of Chartists from Glasgow, who had been attending a great reform meeting at Meiklerigs Moor, attempted to march through the town with flags contrary to an order of the magistrates. The police interfered, and serious rioting ensued, lasting for several days. The Paisley Chartists took an active part in the Unions and in the intended rising on 1 April 1820, and many of them had in consequence to flee to America. Except the outbreaks of cholera in 1832, 1834, and 1848, and the troubles thereby occasioned, the subsequent history of the place may be said to be trading and municipal.

The town is the 'Greysley' of Alexander Smith's story of *Alfred Hagart's Household*, where the town, as it appeared 50 years ago, and as in some respects it still appears, is thus described: 'Greysley had no variety of occupation. It was to all intents and purposes a weaving town. During the entire day, in the old-fashioned, crooked side-streets, the monotonous click of the loom and the sharp whir of the shuttle were continually heard. While trade was brisk, Greysley stuck to its work and lived well; when depressed it stood in groups

about the market-place and the corners of the streets, and in the evenings read and argued over the fiercest of political newspapers. Thirty years ago trade was good; and in the spring and summer evenings the weaver, having comfortably dined, bird-nested or botanised, and later still discussed European and local politics in cozy taverns, went to bed with the idea that he was the most intelligent of human beings, and that Greysley generally was the axis on which the world revolved. In the eastern extremity of the town was an old abbey with old gables about it, and at night the moon silvered very prettily the broken arches and the fine traceries of the main window. Past the abbey, across the bridge, through the market-place and away westward, ran the principal street, till it disappeared in a sort of open suburb of houses of one story, across whose window-panes festoons of birds' eggs were hanging, and on whose window-sills flowers were blowing in summer, and where loom and shuttle were constantly heard. In the market-place was an inn, a picture of a ferocious Saracen, with a crooked scimitar, stuck upon the front of it like a hatchment; and on market days, at the open windows, groups of rosy-faced farmers were continually smoking and drinking ale. Beside the inn was a tall steeple, with a dial with gilded hours; and on a parapet beneath the clock, Roman candles were displayed—the grown-up inhabitants could remember—on great occasions, when a prince was born, or when Lord Wellington gained another victory in Spain. Then Greysley had a river which came flowing into it very prettily from the moors; and at the entrance to the town, flanked on either side by flour-mills, where meal was continually flying about, said river tumbled with creditable noise and foam over a ridge of rocks. These rocks were regarded by the inhabitants with pride, and great was the uproar when the river came down after a day's rain, or better still, when a six weeks' frost broke up, and the boards of ice were wedged and jammed and crushed and broken there. The river came into Greysley with a bold look enough, but after its fall over the rocks it lost spirit, and sneaked through the town in a broad, shallow stream, which carters and their horses forled on occasion; at the further end of the town stood a small disconsolate quay, which seemed always waiting for vessels that never came. The scenery around Greysley was distinctly pretty. To the south rose a range of green hills, and one with a taste for the picturesque could hardly employ his time better than by walking to the summit, and sitting down there for an hour. There could he see Greysley at his feet, blurred with smoke, with church spires and one or two tall chimneys sticking out of it. Beyond, the Hawkhead [Glasgow] river on its way to the sea; in the other direction, to the north-east, the great smoky stain of Hawkhead; and if possessed of a glass, he could discern the canal that connected that city with Greysley, and perhaps on its way the long white passage-boat drawn by trotting horses, and the black caps and scarlet jackets of the riders. He would see also woods and an old castle or so, a score of gentlemen's seats, and farm-houses without number, with the yellow stacks of last year yet standing in the comfortable yards. And he would be touched by the silence and movelessness of the mighty landscape, for at the distance of a few miles man is invisible, the noise of his tools is unheard, his biggest cities become smoky ant-hills; and at the distance of a few years—!

Manufactures and Trade.—The grant of erection of Paisley as a burgh of barony is interesting, as giving us some knowledge of the commoner articles then bought and sold in the place, but we have little more indication of them till the close of the 17th century. In 1695 the population is given as 2200, and about the same time Principal Dunlop tells us in his *Description of Renfrewshire* that by the river 'boats came to Paisley with Highland timber and slates—6000 in a boat—fish of all sorts, and return with coal and lime.' There must too have been manufactures by this time, for Crawford, whose *History of Renfrewshire* was published in 1710,

says that 'This burgh has a weekly mercat on Thursday, where there is store of provisions. But that which renders this place considerable is its trade of linen and muslin, where there is a great weekly sale in its mercats of those sorts of cloth; many of their inhabitants being chiefly employed in that sort of manufactory.' About the same time Hamilton of Wishaw described Paisley as 'a very pleasant and well-built little town; plentifully provided with all sorts of grain, fruits, coals, peats, fishes, and what else is proper for the comfortable use of man, or can be expected in any other place of the kingdom.' The town then consisted of one principal street (High Street), about half a mile in length, with a few lanes branching off from it.

The free-trade with England opened up by the Union in 1707 tended to develop the manufactures, and considerable quantities of imitation striped muslin and linen checks called Bengals were made and disposed of, the latter, however, only in small quantities. By 1730, when the first disastrous effects of the Union had passed off, and the benefit of the free-trade with England and the Colonies had begun to be felt, the linen trade increased greatly, and the maker, instead of selling to wholesale merchants in Glasgow, began to make journeys into England on his own account; while the manufacture of handkerchiefs was mostly replaced by that of goods of lighter texture, some of them plain lawns, others striped with cotton, and others richly figured. This manufacture had, for 1786, a value of £165,000, but it is now extinct. The manufacture of white sewing thread made from linen yarn and known as 'ounce' or 'nuns thread' was introduced in 1722 by Christian Shaw, famous for her connection with the Renfrewshire witches [see BARGARRAN], and Paisley soon became the chief seat of its production. By 1744 there were 93 thread mills, and by 1791 137 mills turning out goods valued at £60,000 a year, a sum which was afterwards exceeded. Through the action of competition, however, and the introduction of cotton thread, it fell off almost as rapidly as it had risen, and by 1812, Paisley had only 12 mills fully at work making linen thread alone. As, however, the use of linen fell off, that of cotton grew, and the manufacture of cotton thread is now one of the staple industries of the place, giving employment to over 3000 persons, while the thread produced is valued at nearly half a million sterling. About the middle of the 18th century a considerable amount of linen gauze was manufactured, and in 1759, a beginning was made with silk gauze in imitation of that of Spitalfields. The success of this new departure exceeded all expectation, and being vigorously prosecuted, the whole silk-gauze trade was soon centred here, and considerable quantities of goods sent not only to England and Ireland, but also to the Continent. Within the next twenty years silk-gauzes had become the chief manufacture, not only in Paisley but also in Renfrewshire, and this state of matters lasted till 1784, when changes in fashion led to a rapid falling off, very soon ending in the total extinction of the trade for some time. It revived in 1819, but has again declined, and is almost extinct. During the decay of this trade after 1784 the manufacture of muslins was set going as a substitute for it, but after a short time of prosperity it too fell off by the removal to Glasgow of the principal manufacturers engaged in it. It is, however, still carried on, though not to a very large extent.

The manufacture of the shawls known as Paisley shawls, for which the town has long been celebrated, was introduced during the best period of the muslin trade, and though at first limited and confined to the manufacture of soft silk shawls, it at length outstripped the muslin, and, branching out in various lines, became for many years one of the leading industries of the town. In consequence, however, of the change of fashion, Paisley plaids have not now been worn for several years, and the trade is consequently not in its former thriving condition. Imitations of India shawls were made in soft silk, in spun silk, in cotton, and in mixtures of the

three. Ladies' dresses also were made of the same materials, in the same style of raised work on white grounds with small figured spots. Imitations, likewise, were made in silk of the striped scarfs and turbans worn by the natives of oriental countries, and called zebbras. Closer imitations of real India or Cashmere shawls were next produced from mixtures of fine wool and silk waste. Yet notwithstanding the energy and enterprise displayed, the Paisley manufacturers found to their great astonishment that France could produce shawls superior in quality to those of home manufacture, a result obtained by the use of genuine Cashmere wools. Thus set on their mettle, the home producers also imported their wool, much of it in the form of yarn, while the improved Jacquard loom enabled them to turn out better work. Much cloth, also, for Cashmere shawls and plaids was imported from France and from England merely to be filled up and finished in Paisley. The patterns of the Paisley shawls are contrived with reference to the best patterns of India and France, but with individually characteristic details. Besides these, there are several very extensive starch and corn-flour works, silk-throwing works, bleach works, machine works, chemical works, soap works, dye works, print works, brick works, three large wholesale houses dealing in preserves, and a small shipbuilding yard.

Between 1786 and 1791 the Cart was rendered navigable for ships drawing not more than five feet of water; and between 1835 and 1842 attempts were made to deepen and improve it still farther, at a cost of over £20,000, but not very successfully, a reef of rocks across the bed of the river preventing any great depth from being reached. A scheme for the further improvement of the river is at present (1884) under consideration. The engineers, Messrs Bell & Miller, propose to cut a new channel so as to get rid of the sharp bend near Porterfield; to widen the rest of the present course; to deepen it from 8 to 12 feet; and to construct docks and a graving dock a little below the present harbour. Between 1838 and 1844 ship-building was vigorously carried on, the swiftest river steamers then on the Clyde having been built at Paisley; and for the Cart must be claimed the honour of having definitely settled the advantage of iron over wood in the construction of ships.

As in all weaving towns, the fluctuations of trade and the consequent disastrous change in the condition of the working-people connected with the manufactures have been very great. The causes may be inferred from what has been said as to the changes in the industries. So many persons were thrown out of employment about 1840 that for a considerable time nearly one-third of the entire population became dependent on public charity, and the depression continued so long and looked so hopeless that many of the artisans emigrated. The number of inhabited houses in 1841 was 10,133, and in 1846 only 9694, showing a decrease of 432, which must have represented about 2000 persons, and in 1847 and 1849 the mortality rose from fever and cholera to nearly 1000 above the average. The whole state of the weavers and the weaving trade has too, since then, been almost totally changed by the introduction of steam power and of large factories. 'Previous to 1818,' says Mr David Gilmour, 'when the shawl branch of our local industry was in its infancy, so to speak, both weavers and their boy-helpers must have had comparatively easy lives; but onward for many years, so long, indeed, as the weavers remained masters—for latterly the boys ruled them—things assumed a very different aspect. As the shawl trade waxed, the trade in silk, gauze, and other fine fabrics waned; and the manners and general bearing of those engaged appeared to me then, and still appear to my mind, as different as the goods they manipulated. At the date just named the inhabitants numbered 34,800, of whom there were from 6000 to 7000 weavers, and of these not fewer than from 4000 to 5000 required the assistance of a drawboy; now [1874], when the population has reached 60,000, the weaving body is reduced to 1750,

only 750 of whom are on the electors' roll, and there is not one drawboy in town. New industries, steam-power, and the Jacquard machine have all contributed to the changed character of the people—in some respects for the better, and in others for the worse. In old times, every weaver being his own master, came and went at his convenience; when he took a day's pleasure—fishing, curling, bowling, or berrying, as the case may happen—he made up work for it before or after, as pleased him; the loom was his own property; and he was answerable to his employer only. The introduction of the Jacquard has changed that condition of the weaver entirely. With only 1750 looms in town, there are not, I presume, over 750 owners of looms, all the other hands being but "journeymen," who are not responsible to the manufacturers but only to the master weaver. With the loss of social standing, the old spirit of independence and much of the greedy intellectual research have vanished; what these have been replaced by I will leave others to name and designate. Hand-loom weaving factories have no doubt done much to destroy that peculiar individuality of character for which the class was noted, when the town was one huge weaving factory of master weavers, and the well-being and comfort of the whole population were directly or indirectly dependent on the produce of the "shuttle-e'e." The picture had its shade as well as its sun, however. When trade failed, which from its fancy nature and other causes it did frequently, want and its accompanying wail were all but universal; it was only the provident that escaped destitution. Many of these having saved some money were induced to feu a piece of ground, and had a house built for themselves, which, from ever-recurring stagnations of trade, fell into the hands of the superior. At this day not one of whole streets of houses built from the savings of weavers remain in the possession of the original feuars or their descendants.

Of a total population in 1881 of 55,638, no fewer than 12,838 males and 8263 females were engaged in industrial handicrafts, or were dealers in manufactured substances, and of these 2910 males and 6518 females were connected with work in textile fabrics. Of these, 627 men and 99 women were connected with the manufacture of wool, 74 men and 1 woman with that of silk, 598 men and 3590 women with the manufacture of cotton and linen (including muslin and thread, and those concerned in dyeing and bleaching), and of these totals, 276 men and 3201 women were connected with thread works alone; while 1572 men and 2805 women were undefined weavers, factory hands, scourers, dyers, etc., of whom 265 men and 2262 women were factory hands—and 467 men and 204 women were connected with the shawl manufacture.

Public Buildings, etc.—The County Buildings, which stand along the side of an open area in the centre of the town called County Place, were built in 1818 at a cost of about £28,000, and enlarged about 1850 at a cost of £10,000. They form a quadrangular castellated pile, with projecting hexagonal turrets on the front. One division of it contains the court house, the county hall, and a number of different offices for public business; and another division contains the jail for the Upper Ward of Renfrewshire first legalised in 1853; but disused since the passing of the Prisons' Act. A handsome new building in the Italian style is at present (1884) in course of erection in St James's Street for County Buildings and Sheriff Court-house, and new Municipal Buildings are about to be commenced at the corner of St Miren Street at the Cross. The Central (Gilmour Street) railway station, serving for both the Caledonian and the Glasgow and South-Western systems, is close to the County Buildings, and similar in style. The platform is, as has been already noticed, high above the level of the town streets. Till recently Paisley, notwithstanding its size, had no large public hall, but now that reproach has been wiped away in a most magnificent way by the erection of the George A. Clark Hall. Efforts made in 1864, 1869, and 1871, to form a joint-stock company for

the erection of a hall, having failed, a public subscription was set on foot in 1872, and early in 1873 the sum of £13,870 had been raised, when word reached this country that Mr George A. Clark of New Jersey, connected with the firm of J. & J. Clark, thread manufacturers, had bequeathed £20,000 for the erection of a new town-hall, with a reading-room and smoking-room for working men, which was to be open from 5 A.M. till 12 P.M. Competitive designs were obtained, but the great outlay involved shut some of the best of them out of the competition till Messrs Clark resolved to supplement their brother's bequest, and take the whole expense of a selected design on themselves. The design of Mr Lynn of Belfast was chosen, and the foundation stone of the building at the corner of Abbey Close and Smithhills Street was laid in October 1879. The main front to Abbey Close somewhat resembles St George's Hall, Liverpool, and shows a pediment with six Corinthian columns, each 30 feet high, over massive square piers, between which are the entrances. On the N side is a smaller portico with Ionic pillars. Rising above the side next the river are two square towers, of which that to the N contains a clock and bells, and that to the S is used as a ventilating shaft. The large hall indicated by the chief portico has floor space of 80 by 60 feet, and the total space is 130 by 60 feet. It is seated for 2000 persons, and has galleries, cloak-rooms, orchestra, etc. The organ in it—one of the finest in Scotland—was erected at a cost of £3500, and was the gift of Mrs Clark, sen. It is in a richly-carved oak case, designed in the Ionic style, and measuring 45 feet high, 32 wide, and 15 deep. There are 49 sounding stops and 11 couplers, and the instrument is remarkable for its balance of tone. The N portico indicates a smaller hall, with accommodation for 300 persons. The clock in the N tower is a very fine one, with a double gravity escapement, and the quarter-hours and hours are chimed and struck on a peal of 6 bells with the notes D, C, B flat, F flat, F, and E flat, the last weighing 20 cwt. and being used for striking the hours. There is also a carillon of bells, with the notes F, E flat, D, D flat, C, B flat, A flat, G, F, and E flat, which ring a different tune for each day of the month. They are played by keys, and are the finest in Scotland. The statues in the niches of the bell tower represent the seasons. They were executed by Mr James Young, Glasgow. The total cost of the building and furnishings was nearly £60,000. The halls were inaugurated on 30 Jan. 1882 amid great rejoicings, and the smoking and reading rooms, which are on the S side, were opened on 20 June of the same year. The Free Public Library and Museum, on the N side of High Street, was erected in 1869-71 at a cost of over £15,000, the whole expense of the building being defrayed by Sir Peter Coats, on condition that the town adopted the Free Libraries Act. In 1877 a large collection illustrative of the natural history and manufactures of India was presented to the museum by Mr R. M. Adam, of Agra, and a large addition had to be made to the museum, Sir Peter Coats giving the additional ground required, and also ultimately the sum needed for the new building; while his brother, Mr Thomas Coats of Ferguslie, undertook the erection of portions behind the main structure to be used as a picture gallery and observatory. The latter were opened in 1883, and the observatory contains an excellent transit instrument, a good telescope, and other appliances. It is under the management of the Philosophical Society, and is open to strangers on any day by ticket obtainable from a member of the Society, and to the people of Paisley thrice a week at a small charge. The structure is Ionic in style, with a tetrastyle portico and wings. The principal entrance in the centre is reached by a flight of steps leading to an entrance hall, and the other portions of the building contain a lecture hall (50 by 35 feet), a reading-room and library, a museum, a picture gallery, a reference library, and committee and cloak rooms. The reading-room and library contain about 15,000 volumes, of which over 7000 were received from the old Paisley library established in 1802, while

the reference library contains nearly 6000 volumes. The nucleus of the contents of the museum and over 5000 of the books in the valuable reference library were presented by the Paisley Philosophical Society, which was originally established in 1808. Other public buildings are the Baths, the Good Templars' Hall (1881), the Ma-onic Hall (1884), the Liberal Club, the Conservative Club (1880), the Oakshaw Memorial School, and the Drill Hall. The barracks in the suburb of Williamsburgh, to the E of the town, on the S side of the Glasgow road, erected in 1822, and with accommodation for a battalion of infantry, are now disused and empty. On the opposite side of the road are the militia barracks. The Coffee-room buildings at the Cross, erected in 1809, Ionic in style, contain a large reading-room, with Fillans' bust of Professor Wilson, and one of Lord Clyde. The Exchange buildings on the E side of Moss Street, erected in 1837, and occupying the site of a former flesh market, are now partly used as a theatre. The infirmary, in Bridge Street, dates from 1784, but the present building was erected about 1850. It has accommodation for 250 patients. About 1000 indoor patients and from 4000 to 5000 outdoor patients are treated annually. The dispensary attached is open every day from 11 to 12 o'clock, and medicine is dispensed between 4 and 5. The poorhouse for ABBEY parish, about a mile SSW of the town near Riccart-bar, is an Elizabethan structure (1850), with buildings disposed round two courts, and with accommodation for 555 inmates. Beside it is the parochial lunatic asylum, which has accommodation for 98 inmates; and further W is the burgh lunatic asylum, erected in 1876. This has a main building of T shape, with a large entrance-hall and kitchen, dining-hall, etc., in the central portion. The wards for male and female patients are on each side, and the engine-house, washing-house and laundry, are behind the main building. The cost, exclusive of site, was £12,500, and there is accommodation for 120 patients. The cemetery, laid out in 1845, is on Woodside ridge in the old town, and includes the old Broomlands churchyard, which was laid out about 1779. It is beautifully situated and laid out, and contains some good monuments, including that to Algie and Park already noticed; one erected by public subscription in 1867 in memory of the Chartists, Hardie, Baird, and Wilson, who were executed at Stirling and Glasgow in 1820; one to Fillans, with a fine figure of Rachel weeping for her children; one to the Rev. Patrick Brewster (1788-1859), long minister of the Abbey church; and one to Andrew Park (1807-63), a local poet. There are also burying-grounds at several of the churches.

Three bridges cross the river Cart (exclusive of the railway bridges), and connect the old and new towns. The old stone bridge at the end of High Street used to be very narrow and inconvenient, as were also the other two, but under the Improvement Act of 1877 they have all been greatly widened and improved, the old Sneddon* Bridge (now known as Abercorn Bridge) and Seedhill or Abbey Bridge having been reconstructed with iron girders, and the Old Bridge itself again farther improved in connection with the erection of the Clark Hall. When the first tolbooth was erected is not exactly known—seemingly by Abbot Tervas in the 15th century—but by the middle of the 18th century the existing one had become very insecure, and in 1756 the magistrates resolved to erect a new one at the Cross, on the same site, at a cost of £325. It had a steeple of considerable height, which remained till 1870. It was perfectly sound till 1868, but in that year a deep drain dug near it injured the foundation, which had already become somewhat insecure in consequence of the street level having been lowered, and it began to lean over in a dangerous manner. It was at first shored up, but was ordered to be taken down in 1869. An unsuccessful attempt was made to interdict the magistrates from removing it, and it disappeared completely in 1870. It

* Sneddon was acquired by the town in 1655 and feued in 1749. The name is supposed to be a corruption of Snowdon.

was at the Cross Steeple that public executions latterly took place, and the bats to which the gibbet was fastened are now in the museum. The Abbey grounds were first feued in 1757 by Lord Dundonald, and a considerable portion of the Abbey ruins were used as building material by the feuars in the erection of the houses adjoining the Abbey. Some of these were removed in 1874, including the town houses of Abercorn and Dundonald, but others still remain. A house in High Street in the old Scottish style, with the arms of the Sempills on its front, was erected in 1862 on the site of Lord Sempill's old town mansion. In 1618 the town council erected a Town's Hospital on the N side of High Street with materials taken from the old chapel of St Roque, and part of the building became subsequently a school. In 1723 the old building was taken down, and a new one erected, which contained a public hall and a clock steeple known as the 'Wee Steeple,' in which there was a bell which was rung when funerals were passing. On one part of it was the inscription—

'He that hath pitie on the poor
Of grace and mercie sall be sor;'

and on another—

'Quha gives the pair, to God he lends,
And God, again, naere grace him sends.'

The school was removed to a building in School Wynd in 1788, and in 1807 the whole buildings were disposed of, and the house No. 82 High Street erected on the site. The house in which Professor Wilson—Christopher North—was born, on the S side of High Street, and another house in which he spent his boyhood, also in High Street immediately to the W, both still remain directly opposite the Free Library, though the first has been altered. The position of the house in which the poet Tannahill was born, in Castle Street, is marked by a tablet placed on the house that now occupies the site; and the house in which he spent most of his life and wrote most of his songs—a cottage built by his father—still stands in Queen Street farther to the W. The house, in Seedhill, in which the poet and American ornithologist, Alexander Wilson, was born, was demolished in 1841, but the house by which it was replaced is marked by a marble tablet with the inscription—'This tablet was erected in 1841 by David Anderson, Perth, to mark the birthplace of Alexander Wilson, Paisley, poet and American ornithologist.' A statue of Wilson was erected within the Abbey grounds in 1874 at a cost of about £700. It consists of a bronze statue 7 feet 6 inches high, resting on a pedestal of grey granite 10 feet high. The figure, which was modelled by J. G. Mossman, Glasgow, shows the naturalist leaning against the stump of a tree with a bird in his hand, while his gun is behind him, his hat and portfolio at his feet, and his favourite blue parrot close at hand. Not far distant is the bronze statue erected in 1883 as a memorial of Tannahill the poet. The statue is 7 feet 6 inches high, and is set on a red granite pedestal. The motive is furnished by a bronze bas-relief affixed to the front of the pedestal. This shows three country girls, of whom the centre one is singing from a ballad which she holds in her hand, while her companions listen. There is a tradition that Tannahill during a solitary country walk once heard a group of girls thus intently occupied with one of his own songs, and the statue here represents the poet in the supposed attitude of an unseen listener. The statue and bas-relief were designed and executed by D. W. Stevenson, A.R.S.A., Edinburgh. The total cost was about £1200, and the funds were provided by a series of concerts which have been given for the last eight or nine years on the braes of GLENIFFER. It is proposed also to erect a bronze statue in memory of Mr Thomas Coats of Ferguslie; and thus the town is by degrees wiping away the old reproach laid to its charge that although Paisley had produced so many famous men, monuments in honour of them were less numerous than in some towns that had produced few or none. The Fountain Gardens, on the N side of the town between Love Street and Caledonia Street, and extending to over

7 acres, were acquired and laid out, at a cost of about £20,000, by Mr Thomas Coats of Ferguslie, and handed over by him to the town in 1868. The ground was originally laid out early in the present century by an old citizen Mr John Love, and was named Hope Temple Gardens. Before his death in 1827, Mr Love's affairs became embarrassed, and the ground was, by his trustees, let as an orchard, till it was acquired by Mr Coats in 1866. The site was then well laid out and belts and clumps of trees planted between the walks, which converge on a central fountain. One of the trees is an oak grown from an acorn taken from the celebrated Wallace Oak of Elderslie. In 1877 an additional place of recreation for the public was provided at Carriage Hill to the S of the town. This was the ground known as the Brodie Park, which was bequeathed for that purpose by Mr Robert Brodie in 1871. It covers about 22 acres, and, inclusive of the sum spent in laying it out, cost about £19,000. The central part of the racecourse to the NW of the town, about 40 acres in extent, is now also available for purposes of public recreation, and is sometimes spoken of as St James's Park.

Churches.—The most prominent of the churches is of course the part of the old Abbey of Paisley which is still used as the parish church for Abbey parish. The remains of the Abbey are on the E side of the Cart opposite the Clark Hall. It was founded about 1163 by Walter, High Steward of Scotland, for monks of the Cluniac order of reformed Benedictines, and its first inmates came from the Cluniac priory of Wenlock in Shropshire, the High Steward's native county. They were originally settled at Renfrew, but afterwards transferred their place of residence to Paisley, where, finding a church already dedicated to St Mirren or Mirinus, a confessor who is said to have spent a considerable part of his life at the place, and who, according to the Aberdeen Breviary, was buried there, they combined his name with those of St James and of their patron saint at Wenlock, St Milburga, grand-daughter of Penda, king of Mercia, and so dedicated the monastery church to St James, St Milburga, and St Mirren. The monastery was so richly endowed by the founder and his successors, as well as by the Lords of Lennox, that it soon became one of the most opulent houses in Scotland, none surpassing it except St Andrews, Kelso, Dunfermline, and Arbroath. Until 1219 it was only a priory, but it then received a bull from Pope Honorius constituting it an Abbey and separating it from the parent house at Wenlock, a privilege confirmed in 1334 by Pope Benedict, who declared the abbot entitled to wear a mitre and ring, and the other marks of his dignity. What may have been the nature of the original buildings it is impossible to tell, for they were burned by the English in 1307 during the war of independence, and seem to have been almost entirely destroyed, and, notwithstanding that the Stewarts had their residence at hand, and that the abbey was their family burial place before their accession, and even occasionally afterwards, for both the queens of Robert II. were buried here as well as Robert III., but little seems to have been done towards rebuilding or repair till the 15th century, although in 1380 a charter was obtained from Robert II. erecting the lands of the Abbey in Dumbartonshire into a jurisdiction of regality, and another from Robert III. in 1396 erecting the estates in Renfrew, Ayr, Roxburgh, and Peebles into a similar jurisdiction. The powers of the abbot were afterwards still farther extended in 1452 by James II., who granted to the regality court the power of trying the four crown pleas; and again in 1488 by James IV., who added the power of 'repleging' the tenants and inhabitants of the abbey estates from the king's courts. The greater part of the buildings now existing seem to have been erected by Abbot Thomas Tervas, who died in 1459, and Abbot George Shaw (1472-99). Of the former the *Auchinleck Chronicle* says that he 'was an richt gud man and helplyk to the place of ony that ever wes, for he did mony notable things and held ane nobil hous and was ay vele pruvait. He fand the place all out of gud reule

and destitute of leving and al the kirkis in Iordis handis and the kirk unbiggit. The body of the kirk fra the bucht stair up he biggit, and put on the ruf and theekit it with selats, and riggit it with stane, and biggit ane great porcioun of the steeple and ane staitlie yet hous, and brocht hame mony gud jowellis and clathis of gold, silver, and silk, and mony gud bukis, and made staitlie stallis and glassynnit mekle of al the kirk, and brocht hame the staitliest tabernakle that wes in al Skotland, and the maist costlie; and schortlie he brocht al the place to fredome and fra nocht till ane mighty place and left it out of al kind of det and al fredome, till dispone as them lykkit, and left ane of the best myteris that was in Skotland, and chandillaris of silver and ane letren of brass with mony uther gud jowellis.' Abbot George Shaw, a younger son of Shaw of Sauchie in Stirlingshire, besides adding to the buildings, surrounded the abbey gardens and grounds by a magnificent stone wall, which ran from the N transept along the line of Lawn Street to the Wall Neuk, where it turned and ran along the line of Inkle Street; it then turned to the S by the edge of Mill Road till it terminated at the Pigeon-house on the edge of the Cart, close to the waterfall at Seedhill mills. A stone with the inscription in old English characters—

'Thei callit ye Abbot Georg of Schawe,
About yis Abbay gart mak yis waw;
A thousande four hundredh zhey r
Aughty and fyve, the date but ueir.
Pray for his saluatioun
That made this nobil fundacioun'—

taken from the wall was formerly placed over the lintel of the door of a dwelling-house at the corner of Lawn Street and Inkle Street, but it is now fixed to the wall E of the door of the Public Library. The fifth line of the inscription was effaced by order, it is said, of one of the presbyterian ministers of the burgh, who thought it savoured too much of prayer for the dead. Grose says that in his time there was at one of the corners of the wall a statue of the Virgin with the motto below:—

'Hæc ne vadē via nisi dixeris Ave Maria
Sic semper sine vae, qui tibi dicit Ave.'

The wall remained nearly entire till 1781, when the Earl of Abercorn sold the stones to the feuars of the new town, who used them for building their houses, and a portion near Seedhill Bridge remained till after the middle of the present century. The first tower that was erected seems to have had insecure foundations, as it fell. The last abbot, John Hamilton (1525-45), rebuilt it at immense cost, but about the close of the century it again 'fell with its own weight, and with it the Quire of the church; 'at least so says Hamilton of Wisbaw, but another account states that it was struck by lightning. In 1557 a body of Reformers attacked the abbey, 'burnt all the ymages and ydols and popish stuff in the same,' and drove the monks out of the building, but owing to the somewhat unusual attachment of the people to the old faith, the abbey was 'stoyked' against the reforming preachers, and in 1563 the charge was brought against the abbot of 'in the town of Paislay, Kirkyard and Abbey place thereof, openlie, publiclie, and plainlie, taking anicular confession in the said kirk, toun, kirkyard, chalmeries, barns, middens, killogies thereof,' but he seems to have got off lightly. Although John Hamilton had properly ceased to be abbot in 1545, he retained the abbacy, by consent of the queen, in trust for his nephew, Lord Claud Hamilton. He adhered to the cause of Queen Mary, and was consequently in 1568 declared a traitor by Regent Murray, and in 1571 captured and hanged. Lord Claud, having been present at the battle of Langside in the Queen's interest, was forfeited, and the lands of the abbey were bestowed on Robert, son of William Lord Semjil, till 1585, when Lord Claud returned from England and was restored to his property and rights. Two years later the whole property which he had held hitherto merely as commendator, was erected into a temporal lordship,

and granted to him and his heirs and assigns in fee, while he himself was created Lord Paisley. In 1652, his grandson and successor, the second earl, sold his opulent lordship to the Earl of Angus, from whom next year the larger part of it was purchased by Lord Cochrane, afterwards Earl of Dundonald. Large portions were at different times sold by the Dundonald family, and in 1764 what remained was repurchased from Thomas, eighth Earl of Dundonald, by James, eighth Earl of Abercorn, to whose descendant, the Duke of Abercorn, it now belongs.

The church, when entire, appears to have consisted of a nave, choir, N transept, and a chapel known as the chapel of St Mirren and St Columba, which occupies the place where the S transept should have been. The total outside length of the building has been 265 feet. Internally the nave is 93 feet long and 59½ wide, including side aisles. The choir, which has no aisles, is 123½ feet long and 32 wide; and the transept is 35 feet wide, and the distance from the N wall to the wall of St Mirren's chapel is 92½ feet, all these measurements being internal. The walls of the choir only rise a foot or two above the level of the ground, but the piscina and sedilia still remain, as well as the foundations of the pillars on which rose the central tower. The N transept, with its magnificent and finely traceried window, 25 feet high and 18 wide, was saved from demolition with so much of the rest of the building, by being claimed about 1758 by the heirs as their property. The nave, the only part now roofed, is still used as the parish church of Abbey parish. The W front contains a doorway with an arcade on each side, and on one side is a turret with a staircase. Above the doorway are three windows. The present eastern gable of the church is in the centre merely a screen of modern masonry filling up the arch beneath the western wall of the centre tower. There is a porch at the W end of the N wall and at the E end of the S wall. On the wall of the former is a stone with the inscription in old English characters—

'Johes d. Lyhtgw abbas hujus monastii xx die mesis Januarii anno dñi mcccxxxiii elegit fieri sua sepultura.'

The interior of the nave is fine, and the style of the triforium is somewhat peculiar. On each side five massive clustered columns, 17 feet in height, divide the nave from the aisles, and the pillar on each side at the W end is much thicker than the others, as if they had been meant originally to support the weight of western towers. "From the imposts of the columns spring pointed arches with delicate and graceful mouldings. On the centre pillar to the south is sculptured in relief an antique coat of arms with grotesque supporters. From a floor formed above the first tier of arches spring those of the triforium. They are large and semicircular, springing from clustered columns." Within these arches are included two pointed ones, with a short colonn between, and the space between the heads of these minor arches and that of the principal arch is open and finely cusped. From the top of the spandrels between each pair of arches a semi-hexagonal projection stands out supported by a double row of blocked corbels, which in their turn are supported by grotesque figures that seem as if groaning under the weight. The breadth of the triforium arches, as compared with their height, gives this part of the building a somewhat squat, not to say ungraceful look. In the clerestory over each circular triforium arch are two windows, and the clerestory gallery, while passing through the wall over the keystone of each triforium arch, passes out round the semi-hexagonal projection already mentioned, no doubt to afford a perfectly solid wall over each of the nave pillars, so that there may be firmer support for the roof. The whole style is Decorated. On the SW pillar are the old colours carried by the Renfrewshire militia from 1803 to 1855; and built into the walls are some old monuments removed from the floor. The original roof was finely groined, but of this only a small portion near the W end of the S aisle now remains. The whole

nave underwent repair in 1788-89, but until about twenty years ago it remained in a very miserable condition. 'In 1859,' says Dr Cameron Lees, the historian of the Abbey, 'when I was inducted to the second charge, a more dreary place of worship it was impossible to conceive. It was like a charnel house. The burial-ground outside reached above the sill of the windows. The floor was earthen, and you were afraid if you stirred your foot you would rake up some old bones that lay uncomfortably near the surface.' Thanks to the exertions of the Rev. Mr Watson and of Dr Lees himself, several thousand pounds were collected and spent in remedying this state of things. The interior was cleared out and new pews put in. An organ was introduced, and many of the windows are now filled with stained glass, the principal being windows to the memory of Mr Thomas Coats of Ferguslie, the Speirs of Elderslie, the Earl of Glasgow, and the Whites of Overtoun. One, placed as a memorial of Sir William Wallace, was inserted by the St Andrew's Society of Glasgow. In the W end of the N aisle is a mural tablet, apparently erected to the memory of John Hamilton, the last abbot. The chapel of St Mirren and St Columba, better known as the Sounding Aisle, is on the S side on the site of the S transept. It is about 48 feet long by 24 wide, and the 15 feet of the floor at the E end is higher than the rest. This chapel was founded and endowed in 1499 by James Crawford of Kylwynnat, burgess of Paisley, and Elizabeth Galbraith his spouse, who were buried within the church, where their tombstone is still to be seen. The lands given for the support of the chaplain were those of Seedhill and Wellmeadow. Near the SE corner is the piscina, and beneath the great eastern window the altar had stood. Beneath the window is a frieze, with three carved compartments on the N side and seven on the S side. What the figures represent is doubtful, but probably the seven on the S represent the seven sacraments, viz., matrimony, communion, extreme unction, ordination, confirmation, penance, and baptism. The eastern window is now filled with stained glass, placed there by the Duke of Abercorn in 1879 in memory of those members of the Abercorn family who are here buried, the family vault being beneath. There are other two monuments connected with the Abercorn family, but the great object of interest is the altar tomb known as Queen Beary's tomb, and believed to have been erected in memory of Marjory Bruce, wife of Walter the high steward, and only daughter of Robert Bruce, who was killed by a fall from her horse at Knock, to the north of the town. According to Dr Boog, one of the ministers of the parish, who wrote an account of it in the *Transactions of Society of Antiquaries of Scotland* for 1831, this tomb has had rather a curious history. 'It retained,' he says, 'its original situation till John, Earl of Dundonald, who succeeded his brother William in 1704, having for his second lady married the Duchess-Dowager of Beaufort, her grace wishing, it is said, to have the chapel fitted up for the service of the Church of England; the tomb was then removed and placed in a corner of the Abbey Garden. This must have been prior to 1720, when Earl John died; his lady survived but a short time. The tomb, rebuilt in its original form, occupied this corner till the time that Thomas, Earl of Dundonald, resolving to feu off that part of the garden, found it in his way, and had it again removed or rather taken to pieces; and the stones of which it was composed were then laid aside and forgotten—so much forgotten that the writer of this, whose connection with Paisley took place in 1774, was above fourteen years in the place before knowing that such a monument had existed, or that its materials might possibly be discovered.' When the church was repaired, however, in 1788-89, the stones were found, and Dr Boog, with a care that does him the highest credit, had them carefully put together, though it was found that one side stone and one end stone were wanting. The figure itself had been left in the chapel, sunk in the pavement close by one of the walls. Whether it represents Lady

Marjory or not must remain doubtful, but the fine carvings show that the person to whose memory the tomb had been raised must have been of high rank. It is certainly peculiar that the figures on the sides should be those of ecclesiastics. From the presence of a shield charged with a lion rampant some have imagined that it is the tomb of Euphemia Ross, wife of Robert II., but the lion rampant is also the cognisance of the family of Stewart of Blackhall, lineally descended from Robert III. The elaborately carved canopy at the head is particularly noteworthy and uncommon. A suspicion might arise that it does not belong to the tomb, and may have originally been over a canopied figure, but a minute inspection does not bear this out, and the top of the canopy, which in such a case would not be seen, is here elaborately carved with a representation of the crucifixion.

The popular name of the 'Sounding Aisle' is applied to the chapel on account of the wonderful echo, which was first described by Pennant with a considerable amount of exaggeration. 'The echo,' he says in his *Tour*, 'is the finest in the world. When the end door, the only one it has, is gently shut, the noise is equal to a loud peal of thunder. If you strike a single note of music you hear the same gradually ascending with a countless number of repetitions. If a good voice sings, or a musical instrument is well played on, the effect is inexpressibly fascinating, and almost of a celestial character. When a musical instrument is sounded it has the effect of a number of instruments of a like size and kind played in concert. A single instrument sounding a particular note, and then instantly its fifth or any other concordant note, both sounds can be heard, as it were, running into and uniting with each other in a manner particularly agreeable. But the effect of a variety of instruments playing in concert is transcendently enchanting, and excites such emotions in the soul as to baffle the most vivid description,' and there is a good deal more to the same effect. Either, however, Pennant was particularly keen-eared when he was at Paisley, or in course of time, and as a result of many applications of whitewash to the walls, the echo has become seriously injured since his day, for although it is still strong, it can hardly now be described as dying away, 'as if at an immense distance,' or 'diffusing itself through the circumambient air,' with almost 'a celestial character.' To the N of the nave and the W of the Sounding Aisle was the cloister court, and the other buildings of the monastery seem to have stood to the SW, but of these no trace now remains. When the houses in Abbey Close were removed in 1874, an old foundation was found which was supposed to be that of the 'staitlie yett house' erected by Abbot Thomas Terras. St Roque's chapel, which stood at the top of Castle Street, was pulled down in 1618, the materials being used in the erection of the town's hospital.

The original Low or Leigh Church was built in 1736, but the congregation removed in 1819 to St George's church in George Street, which is a good Grecian building, erected in that year at a cost of £7000. The organ and organ chamber were added in 1874; there are 1850 sittings. The High Church at Oakshawhead was built in 1756, and the steeple was added in 1770; it contains 1890 sittings. The Middle Church, with 1553 sittings, was built in 1782; the Gaelic Church (St Columba), originally a chapel of ease, in High parish, with 1085 sittings, in 1793; and Martyrs' Church, also originally a chapel of ease, in High parish, with 1200 sittings, in 1855. The South Church, originally a chapel of ease, in Leigh parish; and the North Church, originally a chapel of ease, in Middle parish, do not call for particular notice. The Free High Church is a good building in the Norman style, with a massive square tower 100 feet high. The other Free churches are Martyrs', Middle, Oakshaw, South, and St George's. The United Presbyterian churches are those of Abbey Close (1827, with 1178 sittings), Canal Street (1783, with 1545 sittings), George Street (1822, with 1058

sittings), Oakshaw Street (1826, with 954 sittings), Thread Street (1808, with 1640 sittings), and St James Church at Underwood Road, which, built in 1880-84, and replacing a former church erected in 1820 and with 1212 sittings, is particularly worthy of note. Cruciform in plan, it has a deep polygonal apse, wide side aisles, and twin transepts on each side. The whole interior is finished with stone, with open woodwork roof. The floor is laid in tessellated mosaic work. Behind the church are halls, class-rooms, session room, and vestry, and in the apse is an organ. There is a fine peal of bells in the spire, which rises to a height of 180 feet. The style is Early French Gothic; the number of sittings is 1100; and the total cost, exclusive of special gifts—such as the bells, reading desks, organ and screen, etc.—and the cost of site, was about £19,000. The spire first erected had to be removed in consequence of the failure of its foundation, and the present one is founded on iron cylinders filled with cement and sunk about 40 feet into the underlying clay. There are also a Reformed Presbyterian church, a Congregational church at Old Sneddon, an Evangelical Union church in Gilmour Street, Baptist churches in Storie Street, George Street, and Victoria Place; a Unitarian church, a Primitive Methodist church, a New Jerusalem church, Trinity Episcopal church (1828; 400 sittings), and two Roman Catholic churches, St Mirren's (1808; 1000 sittings) and St Mary's (1871; 450 sittings); but none of them call for more particular notice.

Schools.—The Grammar School and Academy dates as an institution from 1576, and stood originally in School Wynd, on the site of the manse of the chaplain of St Ninian's chapel in Abbey Church. In 1756 it was removed to another building farther up the wynd; and in 1864 a new school, which is a handsome Tudor building, with accommodation for 580 scholars, was provided at a cost of about £3473. Up till 1873 it was managed by the town council and a committee of subscribers, but then in terms of the Education Act it passed into the hands of the school board. It is at present conducted by a rector, three masters, three junior masters, and a mistress. The Neilson Educational Institution on Oakshawhead was erected and endowed in 1851-52 from a bequest of £20,000 made by Mr John Neilson of Nethercommon. It is a handsome building in the form of a Greek cross with a central dome, and the work is carried on by nine masters and two mistresses. Under the burgh school board are thirteen public schools—East, West, North, South, Carbrook Street, Adelphi Hall, George Street Central, Stevenson Street, Stow, Queen Street, Graham Educational Institute, Mossvale, and West End Mission; and these, with total accommodation for 5049 pupils, had (1883) an average attendance of 5029, and grants amounting to £4334, 17s. 9d. Some of the buildings are poor and inconvenient, but others, and particularly the Ferguslie school on the NW, finished and opened in 1882, are handsome and well-designed. The other schools are an Infant Training school in Lawn Street, Hutcheson's Charity school, the Industrial school, Miss Kibble's Reformatory Institution (1859), an Episcopal school, and three Roman Catholic schools. The Government School of Art and Design, established in 1848, is in the centre of the town not far from the County Buildings. Though it performs good work, its own appearance is by no means compatible with its purposes. On an average about 88 pupils are trained in it every year.

Municipality, etc.—After the crown charter of 1665, Paisley was in all but the election of a member of parliament on the same footing as a royal burgh, and by the Reform Act of 1833 it was made a Parliamentary burgh. The municipal government is carried on by a provost, four bailies, a treasurer, and ten councillors, who also, under the General Police and Improvement Act of 1862, manage police affairs. The police force in their employment is 53 officers (1 to every 1099 of the population), and the superintendent's salary is £290. The number of persons tried at the instance of the

police in 1881 was 553, the number convicted 533, the number committed for trial 67, and the number not dealt with 1198. There is also a fire-brigade with thirteen firemen. The gasworks are at the NW of the town. They were originally established in 1823 by a joint-stock company with a capital of £16,000, and intending to make 'inflammable air for lighting the said Burgh and Abbey Parish of Paisley.'

Seal of Paisley.

In 1845 their management was transferred to the police commissioners, and they are now in the hands of the town council. The first water supply was introduced by a joint stock company in 1834-38 at a cost of about £32,000, the water being brought from Stanley Dam, about 2 miles to the SW. Since 1870 it has also been drawn through the Stanley filters from works at Nethertrees about 7 miles distant, constructed in 1869-70 at a cost of £77,000, under an Act of Parliament obtained in 1866, the receiving tank at Stanley being about 10 feet higher than the top of the High Church steeple, or nearly 300 feet above the level of the greater part of the town. Power for farther extension was obtained in 1875-76, and new works carried out between that and 1881 at a cost of £20,000. The new reservoir then constructed at Glenburn has storage accommodation for 80,000,000 gallons. The system is now under the management of the council. The sanitary condition and drainage of the town, though immensely improved between 1878 and 1883, is still in some points defective. The corporation property was in 1833 estimated to be worth £58,125, and the debts on it were £33,000, but the unsuccessful attempt to deepen the Cart proved such a heavy drain that in 1843, during a period of great commercial depression, the authorities had to suspend payment, and not till 1877 was the town again clear of debt. The corporation revenue in 1882-83 was £7816, exclusive of £77,336 from the water and other trusts; and the revenue of the Cart trust estate was £1190. The trade societies representing the old trade incorporations are the weavers, maltmen, wrights, hammermen, bakers, and grocers. The town has a head post office, with money order, savings' bank, and telegraph departments. The Paisley Bank was established in 1787, and the Paisley Union Bank a few years after, but the former was merged in the British Linen Company's bank in 1837, and the latter in the Union Bank of Scotland in 1838, while the Paisley Commercial Bank, established in 1839, was soon amalgamated with the Western Bank. The banks at present in Paisley are branches of the Bank of Scotland, British Linen Company, Clydesdale, Commercial, National, Royal, and Union banks. There is also a branch of the National Security Savings' Bank, offices or agencies of 55 insurance companies, and several good hotels. The newspapers are the *Liberal Daily Express* (1874), the *Liberal Paisley Gazette* (1864), and the independent *Paisley Herald* (1853), the last two being both published on Saturday, and the quarterly *Scottish Review*. There are two Masonic lodges—St Mirren's, No. 129, and County Kilwinning, No. 370; and among the miscellaneous institutions may be noticed the Paisley Philosophical Institution, a West-end Reading Room (1850), lodges of Good Templars (with a hall erected in 1881), Foresters and Oddfellows, a Young Men's Christian Association, a Female Benevolent Society, a Society for the Education of the Deaf and Dumb, a Sabbath School Union, an Art Institute, a branch of the Bible Society, a Tract Society, several curling, bowling, bicycle, cricket, and football clubs, a Horti-

cultural Society, a Florists' Society, a Burns' Club, a Philharmonic Society, and Rifle Volunteers. There is a weekly market on Thursday, and fairs on the third Thursdays of February and May, and the second Thursdays of August and November. At that in August there are general holidays, and Paisley races are held. Ordinary sheriff courts for the Upper Ward of Renfrewshire are held every Tuesday during session, sheriff small debt courts every Thursday during session, and justice of peace courts every Friday.

Paisley returns a member to serve in parliament—always a Liberal since 1837. Parliamentary constituency (1884) 5688, municipal constituency 6797, including 1109 females. Valuation (1874) £148,946, (1884) £223,366. Pop. (1783) 3396, (1753) 4195, (1801) 24,324, (1811) 29,541, (1821) 38,500, (1841) 48,125, (1851) 47,952, (1861) 47,406, (1871) 48,240 (1881), 55,627, of whom 25,827 were males, and 29,800 were females. Houses (1881) 11,533 inhabited, 462 uninhabited, and 55 building. Of the total population 679 males and 276 females were connected with the civil and military services, or with professions, 282 males and 1333 females were domestic servants, 1992 males and 106 females were engaged in commerce, 258 males and 139 females were connected with agriculture, 12,838 males and 8263 females were connected with industrial handicrafts or dealt in manufactured substances, and there were 9350 boys and 9226 girls under or at school age.

Paisley has produced many notable men, and indeed, a somewhat apocryphal story is told that at a gathering in town when the toast of 'the Poets of Paisley' was proposed, every man in the room rose to reply. Among the poets and distinguished men, natives of the place, may be mentioned George A. Clark (1823-73), donor of £20,000 for the Clark Hall; Thomas Coats of Ferguslie (1809-83), public benefactor; Alexander Dunlop, father of William Dunlop, Principal of Glasgow University from 1690 to 1700; James Fillans (1808-52), sculptor, who, though born at Wilsontown in Lanarkshire, was removed to Paisley so early that he may be claimed as a native; William Findlay (1792-1847), minor poet; John Henning (1771-1851), sculptor; William Kennedy (1799-1849), minor poet; John Love, D.D. (1756-1825), an eminent divine; Andrew Park (1807-63), minor poet; Andrew Picken (1788-1833), miscellaneous writer; Ebenezer Picken (1769-1816), minor poet and miscellaneous writer; David Semple (1808-78), author of *St Mirin* and other works on local history; Robert A. Smith (1780-1829), musical composer, who, although born in England, was the son of a Paisley 'boddy,' and was himself brought to the place at a very early age; Andrew Symington, D.D. (1785-1853), professor of theology in the Reformed Presbyterian Church; Tannahill (1774-1810), poet; Dr James Thomson, the first professor of divinity in the Relief Church; Alexander Wilson (1766-1813), minor poet, miscellaneous writer, and American ornithologist; Professor John Wilson, 'Christopher North' (1785-1854), poet and essayist; his brother, James Wilson (1795-1856), naturalist; and William Rae Wilson (1772-1849), the eminent traveller. Distinguished men connected with the place, but not natives, have been Patrick Adamson (1543-91), Archbishop of St Andrews; Rev. James Begg (1809-83), Free Church leader, who was minister of the Middle parish from 1832 to 1835; Robert Boyd of Trochrig (1578-1627), Principal of Edinburgh and Glasgow Universities, and finally minister of Paisley, but the people, headed by the Master of Paisley, brother of the Earl of Abercorn, and his mother offered such opposition to his ministry that he retired; Robert Brodie (1807-71), benefactor to the town; Rev. Robert Findlay (1721-1814), professor of theology in Glasgow University; Andrew Knox (d. 1632), minister of Paisley, afterwards Bishop of the Isles, and subsequently of Raphoe in Ireland; Rev. Robert Miller (d. 1752), author of the *History of the Propagation of Christianity*, who was minister from 1709; William Motherwell—who by education may almost be counted a Paisley man—(1797-1835), poet, antiquary, and journalist; Thomas Smeaton (1536-83), Principal of Glasgow University;

Alexander Smith (1829-67), poet and author, who here followed for some time his profession as a pattern designer; Dr Robert Watt (1774-1819), author of the *Bibliotheca Britannica*; and Dr John Witherspoon (1722-94), minister of the Laigh parish, afterwards president of the College of New Jersey, theological writer.

THE PARISHES OF PAISLEY are the High, Laigh, and Middle, all within the burgh, and all, till 1736, forming part of Abbey parish, which still includes a portion of the burgh. The livings are worth about £280. The area of High Church parish is 261·428 acres inclusive of 2·427 of water; of Laigh or Low Church parish, 97·868 acres, with 26·620 detached, 0·054 foreshore, and 4·155 water; and of Middle Church parish, 522·051 acres, with 1·973 foreshore and 3·553 water. The *quoad sacra* parish of Martyrs' is partly taken from Abbey parish and partly from High Church parish, that of North Church from Middle Church parish, that of St Columba from High Church parish, that of South Church from Abbey parish and Laigh Church parish. The populations in 1881 were 8889 in High Church parish, 6122 in Laigh Church parish, 5284 in Middle Church parish, 9464 in Martyrs', 7844 in North, 1981 in St Columba's, and 4146 in South, the rest being in Abbey parish.

THE PRESBYTERY OF PAISLEY comprehends the *quoad civilia* parishes of Abbey-Paisley, Eastwood, High Church Paisley, Houstone, Inchinnan, Kilbarchan, Laigh Parish Paisley, Lochwinnoch, Mearns, Middle Parish Paisley, Neilston, and Renfrew; the *quoad sacra* parishes of Barrhead, Elderslie, Johnstone, Lavern, Linwood, Martyrs' Paisley, North Paisley, South Paisley, St Columba's Paisley, and Pollokshaws; and the mission stations of Shawlands (Eastwood), Bridge of Weir (Kilbarchan), and How-wood (Lochwinnoch). It meets at Paisley on the first Wednesdays of February, May, July, September, and December, and on the third Wednesdays of March and October.—The Free Church has also a presbytery of Paisley with 7 churches in Paisley, 2 at Pollokshaws, and 9 at respectively Barrhead, Bridge of Weir, Houstone, Inchinnan, Johnstone, Lochwinnoch, Neilston, Nithhill, and Renfrew.—The U.P. presbytery of Paisley includes 6 churches at Paisley, 2 at Beith, 2 at Johnstone, and 6 at respectively Kilbarchan, Kilmacolm, Langbank, Lochwinnoch, Messvale, and Renfrew.

Palace, a mansion of 1882 in Crailing parish, Roxburghshire, 4 miles NNE of Jedburgh.

Palace-Brae. See BLAIRINGONE.

Palace-Craig and Faskine. See FASKINE.

Paldy or Palladius. See FORDUN.

Palnackie. See BUTTLE.

Palnure Burn, a rivulet of Minnigaff parish, W Kirkcudbrightshire, rising at an altitude of 612 feet above sea-level, and running 1½ miles south-south-westward—for the first 1½ mile along the boundary with Girthon, and for the last 1½ mile along that with Kirkmabreck—

till it falls into the Cree at a point 2½ miles NNW of Creetown. It is navigable to Palnure or Palnure Bridge, a village in Minnigaff parish, on the right bank of the stream, with a small quay for vessels of 60 tons, and a station on the Dumfries and Portpatrick section of the Caledonian, 3½ miles ESE of Newton-Stewart.—*Ord. Sur.*, sh. 4, 1857.

Pananch. See PANNANICH WELLS.

Panbride, a hamlet and a coast parish of SE Forfarshire. The hamlet lies 1½ mile NNE of the post-town, Carnoustie.

The parish, containing also Muirdrum village and the NEWTON OF PANBRIDESUBURB OF CARNOUSTIE, with the fishing villages of West Haven and East Haven, is bounded N by Carmyllie, NE by Arbrilot and St Vigeans (detached), SE by the German Ocean, SW by Barry, and W by Monikie. Its utmost length, from NW to SE, is 4½ miles; its breadth varies between 9 furlongs and 2½ miles; and its area is 5506 acres, of which 298½ are foreshore and 9 water. Monikie Burn, coming in from Monikie parish, runs 4½ miles south-eastward across the interior to the sea between East and West Haven. Its dell, called Battie's Den, is mostly flanked by steep or mural rocky banks, 20 to 50 feet high, and is spanned, at a romantic spot, by a bridge taking over the road from Dundee to Arbroath. Another rivulet, also coming in from Monikie, and traversing a similar dell, runs 2½ miles east-south-eastward across the northern interior, next 1½ mile south-south-eastward along the north-eastern boundary, and next 1½ mile through the interior, till it falls into Monikie Burn at a point ¼ mile NE of the parish church. The coast, closely followed for 2½ miles by the Dundee and Arbroath Joint railway, is low but very rocky, with a pebbly beach, and shows a series of ancient sea-margins some way from the present shore line. The interior presents for the most part a flat appearance, but is diversified by the dells of the rivulets, and rises gently to 300 feet at Pitlivié and 457 at the northern boundary. The predominant rocks are Devonian. Sandstone of excellent quality for masonry is quarried; sandstone, of the slaty kind which yields the Arbroath paving-stone, is comparatively plentiful; and limestone exists, but not abundantly nor of good quality. The soil on the seaboard is sandy; in the central district is clay or loam; and towards the W and N is moorish. Rather more than three-fourths of all the land is arable, and some 600 acres are under wood. The barony of Panbride belonged for several ages to the ancestors of the historian Hector Boece (1465-1536), who himself, however, appears to have been a native of Dundee; whilst the barony of Panmure passed by marriage about 1224 to Sir Peter de Maule, ancestor of the Earl of Dalhousie. PANMURE HOUSE, noticed separately, is the principal residence; and the Earl is sole proprietor. Panbride is in the presbytery of Arbroath and the synod of Angus and Mearns; the living is worth £335. The parish church, at Panbride hamlet, is a cruciform Gothic edifice of 1851, containing 600 sittings. At the E gable of it is the burial vault of the Earls of Panmure, erected by George, third Earl, in 1681. A Free church was built in 1856; and two public schools, Muirdrum and Panbride, with respective accommodation for 54 and 196 children, had (1883) an average attendance of 53 and 137, and grants of £38, 8s. and £129. Valuation (1857) £7698, (1884) £11,711, 13s., plus £1337 for railway. Pop. (1801) 1588, (1831) 1268, (1861) 1299, (1871) 1331, (1881) 1395, of whom 593 were in Newton of Panbride.—*Ord. Sur.*, sh. 49, 1865.

Panhope, a bay on the E side of Flotta island, Orkney. Looking towards Burray island, it enters from the SE of Scapa Flow; penetrates 1½ mile west-south-westward, with a mean breadth of from 7 to 2 furlongs; forms an excellent natural harbour or 'hope'; and took the prefix of its name from a salt-pan formerly worked on its shores.

Panmure House, a seat of the Earl of Dalhousie, in Panbride parish, Forfarshire, 4½ miles NW of Carnoustie. Standing 350 feet above sea-level, and surrounded by beautiful gardens and policies, 550 acres in

extent, it commands a fine prospect, especially to the S and the E. In 1852-55 it was almost rebuilt from designs by the late David Bryce, R.S.A., of Edinburgh, and now is a spacious and stately edifice in the French Renaissance style of architecture. Near it are the foundations of an ancient castle, long the seat of the Barons of Panmure. That barony was acquired by marriage about the year 1224 by Sir Peter de Maule, whose thirteenth descendant in 1646 was raised to the Scottish peerage as Baron Maule of Brechin and Navar and Earl of Panmure. Both titles were forfeited by the fourth Earl for his share in the '15; but that of Baron Panmure, in the peerage of the United Kingdom, was conferred in 1831 on his great-great-nephew, the second son of the eighth Earl of Dalhousie; and his son, Fox Maule Ramsay (1801-74), succeeded in 1860 to the earldom of Dalhousie. See BRECHIN, CAMBUSTANE, and DALHOUSIE CASTLE.—*Ord. Sur.*, sh. 49, 1865.

Pannanich Wells, an inland watering-place in Glenmuick parish, Aberdeenshire, near the right bank of the Dee, 2 miles ENE of Ballater. Its four chalybeate wells, all near one another, on the N side of Pannanich Hill (1896 feet), are said to have been discovered by an old woman about the year 1760, and soon began to attract notice for their medicinal virtue. They differ somewhat one from another in properties, but all contain carbonates of iron and lime, with small proportions of other ingredients; are chalybeate, stimulant, and tonic; and have been found beneficial for gravelly, scorbutic, and scrofulous complaints. Under date 3 Oct. 1870—the day of the Princess Louise's betrothal to the Marquis of Lorne—the Queen writes in *Morc Leaves from the Journal of a Life in the Highlands* (1884)—'I had driven with Beatrice to Pannanich Wells, where I had been many years ago. Unfortunately almost all the trees which covered the hills have been cut down. We got out and tasted the water, which is strongly impregnated with iron, and looked at the bath and at the humble but very clean accommodation in the curious little old inn, which used to be very much frequented. Brown formerly stayed here for a year as servant, and then quantities of horses and goats were there.' Mr Mackenzie of Glenmuick has greatly improved the accommodation for visitors to the wells.—*Ord. Sur.*, sh. 65, 1870.

Papa, an island in Bressay parish, Shetland, 5 furlongs N of the nearest point of Burra island, and 2½ miles SW of Sealloway. Pop. (1871) 20, (1881) 14.

Papa Sound, a strait between Stronsay and Papa Stronsay islands, in Orkney. Making a semicircular curve of 1½ mile, it has a breadth of from ¼ to 1 mile, and projects into Stronsay a bay that forms an excellent harbour, well sheltered by Papa Stronsay.

Papa, Sound of, a strait in the W of Shetland, between the Ness of Melby on the Mainland and Papa Stour island. It is 2½ miles long and 1 mile broad at the narrowest; and it is swept by a rapid, dangerous, tidal current.

Papa Stour, an island of Walls parish, Shetland. Lying on the S side of the entrance of St Magnus Bay, 34 miles NW of Lerwick, it is separated by the Sound of Papa, 1 mile broad at the narrowest, from the north-western extremity of the Mainland section of Walls, and measures 2½ miles in length west-north-westward, whilst its breadth varies between 4½ furlongs and 2½ miles. It is engirt, at near distances, by picturesque porphyritic stacks, shooting vertically from the sea like stupendous towers or castellated keeps; on its S side is pierced by several magnificent and very curious caves, the abodes of numerous seals; is indented by several small voes or creeks, which afford shelter to fishing-boats; and has excellent beaches for drying fish, which were used for that purpose in last century by a great fishing company. The surface rises at Hoo Field to 115, at Virda Field to 288, feet above sea-level; and is disposed partly in arable land, with a generally fertile soil, partly in common pasture, naturally good, but much injured by maltreatment. Papa Stour was a northern centre of the early Culdees, serving as a sort

of Iona to Shetland; and retained till a recent period the ancient Norwegian sword dance noticed in Sir Walter Scott's *Pirate*. It contains the Established church of Papa chapelry, a post office under Lerwick, and a public school. Pop. (1841) 382, (1861) 366, (1871) 351, (1881) 254.

Papa Stronaay, an island of Stronsay and Eday parish, Orkney, lying off the NE of Stronsay island, and separated from it by Papa Sound, ¼ mile broad at the narrowest. With a very irregular outline, it has an utmost length and breadth of ¼ mile; is low and flat; has so fertile a soil as might render it, under proper management, one continuous cornfield; and contains vestiges of two pre-Reformation chapels and the site of an ancient burying-ground. Pop. (1861) 18, (1871) 32, (1881) 23.

Papa Westray, an island of Westray parish, Orkney, 1¼ mile E of the northern part of Westray island, and 22½ miles in a direct line N by E of Kirkwall, but 25 by the shortest sea-route. Its utmost length, from N by E to S by W, is 4½ miles; and its breadth varies between ¼ and 1½ mile. The surface culminates in North Hill (156 feet), beyond which the northern extremity forms a bold and lofty headland, the Mull of Papa, well known to mariners, and pierced with a cavern, from 48 to 60 feet wide, and upwards of 70 feet high. The southern half is partly occupied by a freshwater lake, the Loch of St Tredwall (7 × ¾ furl.), on an islet in which are ruins of a pre-Reformation chapel. The soil, to the extent of some 1000 acres, is very fertile, and under regular cultivation. Midway along the E coast is a pastoral islet, the Holm of Papa, which is denizens by myriads of sea-fowl. The whole island of Papa Westray, with the exception of a small glebe, belongs to a single proprietor, Thomas Traill (b. 1822; suc. 1840), who holds 5780 acres, valued at £1629 per annum. His mansion, Holland, stands near the middle of the island, in which are also a remarkably large Picts' house and three vitrified cairns, and which was the scene of the death of Ronald, Earl of Orkney, by the hand of Thorfinn, Earl of Caithness. Anciently a separate and independent parish, Papa Westray, though now annexed to Westray, has still its own parish church, besides a Free church and a public school. Pop. (1838) 335, (1861) 392, (1871) 370, (1881) 345.

Papigoe, a coast village in Wick parish, Caithness, 1½ mile ENE of Wick town.

Paplay. See HOLM.

Paps of Jura. See JURA.

Park, an elegant Grecian mansion of 1822, with beautiful grounds, in Drumoak parish, Aberdeenshire, close to the Dee's left bank, and 1 mile SW of Park station on the Deeside section of the Great North of Scotland railway, this being 11 miles WSW of Aberdeen. The estate, which was anciently part of a royal chase, was given by David II. to Walter Moigne, but so early as 1348 was by John Moigne disposed of to Alexander Irvine of Drum. It was sold by the Irvine family in 1737 to Mr Duff of Culter; in 1807 to Thomas Burnett for £9000; in 1821 to William Moir; and in 1839 for £28,000 to Mr Kinloch, whose son, Alexander John Kinloch, Esq. (b. 1843; suc. 1883), holds 1681 acres in Aberdeen and 4532 in Kincardineshire, valued at £1119 and £2995 per annum.—*Ord. Sur.*, sh. 66, 1871.

Park, a mansion in Ordiqubill parish, Banffshire, 1½ mile SSE of Cornhill station, this being 8½ miles SW by W of Banff. It was enlarged in 1829, and is a spacious and handsome edifice. Its owner, Lachlan Duff Gordon-Duff, Esq. (b. 1817; suc. 1855), Liberal M.P. for Banffshire 1857-61, holds 13,053 acres in the shire, valued at £7418 per annum. See BOTRIFHNIE.—*Ord. Sur.*, sh. 86, 1876.

Park, Glenlee. See PARK PLACE.

Park. See LOCHS.

Park Burn. See MAAR.

Parkfoot. See LONGCROFT.

Parkgate, a hamlet in Kirkmichael parish, Dumfriesshire, 8 miles NNE of Dumfries, under which it has a post office.

Parkgate, a hamlet in Kirkcudbright parish, Kirkcudbrightshire, on the coast of the Dee estuary, 2½ miles S of Kirkcudbright town.

Park Hall, a mansion in Polmont parish, Stirlingshire, 1½ mile ESE of Polmont station.

Parkhill. See KILMUIR-EASTER.

Parkhill, a mansion in New MACHAR parish, Aberdeenshire, on the left side of the Don, ¾ mile ESE of Parkhill station upon the Formentine and Buchan branch of the Great North of Scotland railway, this being 7½ miles NNW of Aberdeen. A handsome and commodious edifice, it has extensive, well-wooded grounds of great beauty, and commands a superb view up the valley of the Don. Its owner, Alexander Gordon-Cuming-Skene, Esq. of Pitlurg (b. 1857; suc. 1882), holds 8992 acres in the shire, valued at £6362 per annum.—*Ord. Sur.*, sh. 77, 1873.

Parkhill, an estate, with a modern mansion, in St Vigeans parish, Forfarshire, 3 miles N of Arbroath.

Parkhill, an estate, with a modern mansion, in Polmont parish, Stirlingshire, 3 furlongs N of Polmont station.

Park House, a mansion in Inchinnan parish, Renfrewshire, 2½ miles NW of Renfrew. It was the residence and deathplace of the philanthropist John Henderson (1780-1867).

Parkhouses, a village in Wilton parish, Roxburghshire, 2½ miles NNE of Hawick.

Park, Loch. See BOTHPHENE.

Park Place, a castle in Old Luce parish, Wigtownshire, 5 furlongs WSW of Glenluce village. Crowning a flat-topped eminence in the midst of a little wood on the W side of the Water of Luce, and built by Thomas Hay in 1590, it is a lofty turreted edifice, with cross-stepped gables, itself conspicuous, and commanding a wide view. It was deserted for Dunragit more than half a century since, and now is only partially occupied by labourers.—*Ord. Sur.*, sh. 3, 1856.

Parney Burn. See AUCHTERARDEE.

Partick. See GOVAN.

Parton, a post-office hamlet and a parish of central Kirkcudbrightshire. The hamlet, lying near the northern shore of the lakelike expansion of the river Dee, has a station on the Dumfries and Portpatrick railway, 6¾ miles NW of Castle-Douglas.

The parish, containing also Corsock village, is bounded NW and N by Balmacelllan, E by Kirkpatrick-Durham, SE by Crossmichael, and SW by Balmaghie and Kells. Its utmost length, from E to W, is 6½ miles; its utmost breadth, from N to S, is 6½ miles; and its area is 16,248½ acres, of which 407½ are water. URK Water flows 4½ miles southward along all the eastern boundary; and two of its affluents, Crogo and Plan Burns, trace part of the northern and south-eastern boundaries. The KEN and the DEE, from the middle of Loch Ken to the middle of Loch Dee, a distance of 5½ miles, wind along all the south-western border, here widening to 700, then narrowing to 100, feet. Dullarg Burn runs to Loch Ken along the north-western boundary, and Barend Burn through the interior; whilst Boreland and Craichie Burns fall into Loch Dee. Of seven lakes and lakelets, much the largest is CORSOCK Loch (2½ by 1½ furl.; 550 feet), in the NE corner of the parish. A chalybeate spring of small note is on Little Mochrum Farm; and another on North Dullarg Farm, supposed to be similar to the old spa of Moffat, at one time drew considerable attention, but has been destroyed by draining operations. Sinking along Lochs Ken and Dee to 150, along UR Water to 250, feet above sea-level, the surface thence rises to 619 feet near Boghall, 737 near Shaw, 850 at Glenhead Hill, and 1038 at Mochrum Fell. The rocks are mainly Silurian; and slates of tolerable quality, though inferior to English, have been quarried in the northern vicinity of Parton hamlet. The soil of the arable lands is mostly light, incapable of yielding heavy crops. Nearly two-fifths of the entire area are heath or moss; and but a small proportion is under wood. From the middle of the 15th to the middle of the present century Parton barony was held by the Glendonwyn

family; now it belongs to Benjamin Rigby Murray, Esq. (b. 1822), who owns 1256 acres in the shire, valued at £1217, 6s. per annum. His seat, Parton House, is situated on a rising ground, with fine old trees, 1½ mile ESE of Parton station, and commands a fine view of Loch Dee. Other mansions, noticed separately, are CORSOCK and GLENLAIR. Antiquities are remains of Corsock Castle, an old causeway across the Dee below the influx of the Ken, two artificial circular mounds near Parton village, two cairns, and remains of the old parish church (1592), which now is used as a family burying-place, and whose carved oak pulpit of 1598 has found its way to the Edinburgh Antiquarian Museum. Six proprietors hold each an annual value of £500 and upwards, 6 of between £100 and £500, and 2 of less than £100. Giving off a portion to Corsock *quoad sacra* parish, Parton is in the presbytery of Kirkcudbright and the synod of Gallo-way; the living is worth £266. The present parish church, at Parton hamlet, was built in 1834, and contains 418 sittings. The public school, with accommodation for 118 children, had (1883) an attendance of 44, and a grant of £56, 9s. Valuation (1860) £6109, (1884) £9964, 11s. 2d. Pop. (1801) 426, (1831) 827, (1861) 764, (1871) 737, (1881) 716, of whom 459 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 9, 5, 1863-57.

Pataig. See LAGOAN.

Pathhead. See KIRKCALDY.

Pathhead, a village in the northern extremity of Crichton parish, Edinburghshire, on the right side of the river Tyne, in the eastern vicinity of the old decayed village of Ford, 5 miles ESE of Dalkeith, 3¼ N of Tynehead station, and 11 SE of Edinburgh. Standing 500 feet above sea-level on the slope and crown of an ascent from the Tyne, it takes its name from being at the head of this ascent or path; extends along both sides of the road from Edinburgh to Lauder; and has charmingly picturesque environs, including parts of the Oxenford and Vogrie estates, but chiefly consisting of fens from the Crichton property. Its main street, straight and airy, consists in great measure of neat and substantial one-story houses; a magnificent bridge over the Tyne, with five arches, each 80 feet high and 50 in span, connects it with FORD; and it has a police station and an inn. Pop. (1841) 843, (1861) 735, (1871) 667, (1881) 583.—*Ord. Sur.*, sh. 33, 1863.

Pathhead. See CUMNOCK, NEW.

Path of Condie or Pathstruie, a small village in Forgandenny parish, Perthshire, near the left bank of the Water of May, 5½ miles SSE of Forteviot station. It has a post office (Pathstruie) under Bridge of Earn, a U.P. church, and a public school.—*Ord. Sur.*, sh. 40, 1867.

Patie's Mill. See GALSTON.

Patiesmuir or Pettymuir, a village on the S border of Dunfermline parish, Fife, 2½ miles S of Dunfermline town.

Patna, a village in Straiton and Dalmellington parishes, Ayrshire, on the river Doon, with a station upon the Ayr and Dalmellington branch of the Glasgow and South-Western railway, 10 miles SE of Ayr. Situated in a bleak, confined, tumulated landscape, and forming part of a mineral field rich in coal and ironstone, it has chiefly been built since the commencement of the present century. Its Straiton section consists for the most part of one-story houses, arranged in a main street and a contiguous row; and the inhabitants are chiefly miners or otherwise connected with the mineral traffic. Patna has a post office under Ayr, with money order and savings' bank departments, a handsome granite fountain (1872), an Established church, a U.P. church (1838), and a public school. The Established church was built as a chapel of ease in 1837, and in 1877 was raised to *quoad sacra* status. Pop. of village (1841) 231, (1861) 470, (1871) 766, (1881) 603, of whom 424 were in Straiton; of *q. s.* parish (1881) 1179, of whom 213 were in Dalmellington, 412 in Dalrymple, 14 in Kirkmichael, and 540 in Straiton.—*Ord. Sur.*, sh. 14, 1863.

Pattack. See LAGGAN.

Pavilion. See ARROSSAN.

Pavilion, a mansion in Melrose parish, Roxburghshire, on the left bank of the Tweed, near the influx of Allan Water, 2½ miles NW of Melrose town. It was the Scottish seat of the Lords Somerville, the nineteenth and last of whom died in 1870; and it now belongs to the seventeenth Lord's daughter, the Hon. Mrs Henry, who holds 4746 acres in Roxburgh and Berwick shires, valued at £2531 per annum.—*Ord. Sur.*, sh. 25, 1865.

Paxton House, a mansion in HUTTON parish, Berwickshire, near the left bank of the Tweed, 4½ furlongs below the Union Bridge, and 5 miles W by S of Berwick. Built in the latter half of last century, after designs by the celebrated Adam, it is an imposing dark freestone edifice, with handsome massive front, a very fine picture gallery, and a large and beautiful park. Its owner, David Milne-Home, Esq. of Wedderburn (b. 1837), Conservative M.P. for Berwick since 1874, holds 9149 acres in the shire, valued at £15,396 per annum. George Home, his great-great-uncle, was a member of the Mirror Club, and at Paxton was visited by Henry Mackenzie ('The Man of Feeling'), Lord Craig, and other leading literati. Paxton village, ¾ mile to the N, has an inn, two schools, and a post office under Berwick. See MILNE-GRADEX.—*Ord. Sur.*, sh. 26, 1864.

Pearsie, an estate, with a mansion, in Kingoldrum parish, Forfarshire, near the right bank of Prosen Water, 4¼ miles NNW of Kirriemuir. Its owner, Mrs MacLagan Wedderburn, holds 3784 acres in the shire, valued at £1363 per annum.—*Ord. Sur.*, sh. 56, 1870.

Pease-Dean, a deep, thickly wooded ravine, traversed by a brook, in Cockburnspath parish, Berwickshire, extending 3 miles northward to the German Ocean at a point 1¼ mile E of Cockburnspath village. It is flanked by heights rising from 100 to 727 feet above sea-level; has steeply acclivitous sides; was regarded, in the old times, as a natural barrier against invasion of the east of Scotland by the English; and occasioned the line of the North British railway to deflect from a direct course south-eastward, and to run for 2½ miles south-by-eastward along the crest of its left bank. The old road from Berwick to the Lothians, which crossed it near the mouth, and went down and up its steep sides in a series of zigzags, was the only route by which an English army could proceed on the E past the Lanemuir; and, on Oliver Cromwell's arriving at it in 1650, was reported by him to his parliament to be a place 'where one man to hinder was better than twelve to make way.' A bridge of 1786, which crosses it on the line of the old road, measures 300 feet in length, 16 in breadth, and 127 in height; and was long regarded as one of the most wonderful structures in Scotland.—*Ord. Sur.*, sh. 34, 1864.

Peebles, a royal and police burgh, the county town of Peeblesshire, stands, 547 feet above sea-level, on the left bank of the Tweed, which here is joined from the N by Eddleston Water. It is 27 miles S of Edinburgh by the North British railway, 53¼ by the Caledonian, and 22 by road; 53¾ ESE of Glasgow by rail, and 47 by road; 15¾ E by N of Biggar by rail; 19 E by N of Symington Junction; 18¼ WNW of Galashiels by rail, and 17½ by road; 19 NW of Selkirk by road; and 54 NNE of Dumfries by road. Peebles has 2 railway stations, one of which is on the North British line from Edinburgh to Galashiels by Leadburn Junction, and the other of which is the terminus of the Peebles Branch of the Caledonian railway. The section of the former, between Edinburgh and Peebles, was opened for traffic in 1855, and the part between Peebles and Galashiels in 1864, at which date was also opened the Caledonian Branch from Symington Junction to Peebles. A short line of railway connects the two systems—the North British and the Caledonian. Starting from the station of the latter, it runs along the right bank of the river, which it crosses by an iron bridge at the foot of Tweed-Green, and then joins the North British line. Omnibuses await the principal trains to take visitors to the Hydropathic Establishment and to the Tontine Hotel; and in the season a conveyance runs between Peebles and Neidpath Castle.

Peebles is built mainly on a peninsula formed by the river Tweed and Eddleston Water. The situation of the town is very beautiful, and at the same time somewhat secluded owing to the lofty hills which entirely surround it. Near the river, and on either side of it, lie stretches of flat meadow-land, from which the ground slopes upwards. Upon the N ascent, the New Town, as it is called, is partly built. It contains the chief street of Peebles—the High Street—which is about 1000 feet long. The New Town dates from the 16th century, when it was erected on a more secure site than that occupied by the Old Town. It was surrounded by a wall and defended by bastle-houses, but both the wall and the houses have now almost wholly disappeared. The names Northgate, Eastgate, Portbrae, however, still preserve the recollection of Peebles as a walled town. Beyond the western extremity of the High Street, numerous villas have been erected of late years, and the ground on the S bank of the Tweed has also been built upon to such an extent, that the collection of houses there has been called by Chambers 'a species of third town which promises to exceed the others in dimensions.' The Old Town lies chiefly on the right bank of Eddleston Water. At one time it must have been of considerable size and importance, as it contained the church of St Andrew and that of the Holy Cross, as well as the abodes of the clergy. Of late years, it too has been greatly enlarged by the erection of new houses. The chief streets in Peebles are the High Street, the Northgate, and the Portbrae. In addition to these, there are numerous 'closets' (i.e., narrow passages diverging from the main street), as well as a few smaller streets and a large number of fine villas standing in their own grounds. The town of Peebles, says the author of *The Beauties of Scotland* (1805), 'is, upon the whole, well built; its principal street is spacious and well paved, and terminates on the W in a stately church of modern architecture.' 'The town of Peebles,' wrote Dorothy Wordsworth in 1803, 'looks very pretty from the Neidpath road; it is an old town, built of grey stone.' 'The climate of Peebles,' says a third account of 1881, 'is exceedingly healthy. Though the town is 550 feet above sea-level, the air is not so cold as might be expected. . . . The surrounding hills, which almost envelop the town, form a barrier to the winds, and the full force of a storm is thus seldom felt. Mists are rare. Few of the houses are much affected with damp, on account of the soil whereon they are built being principally composed of gravel and sand.' The Tweed, at Peebles, is crossed by a stone bridge of five arches, which seems to have been built about 1467. In 1834 it was widened, a change very necessary, since it was so narrow that foot passengers had to take refuge in recesses over the piers, when carriages, etc., were crossing over. There are several bridges over Eddleston Water and an iron bridge over the Tweed, by means of which the railway crosses the river.

The town of Peebles contains 6 places of worship. The parish church, built in 1779-83, and seating 750 worshippers, is a large but tasteless and heavy building, situated at the W end of High Street. Its steeple, with three bells and an illuminated clock, serves not only to intensify the inartistic character of the building, but is a source of actual discomfort, as it rises within the walls in a way that destroys the uniformity of the gallery. Three silver communion cups bear date 1684. In 1884 it was resolved to pull down this church, and erect another on the same site to hold 1200 people. The Free church, erected in 1871-72, is situated at the eastern extremity of the town. It is a handsome building in the Early Pointed style, with a spire 100 feet high. It contains sittings for 610 persons. The West U.P. church was erected about 1832. It was originally a Relief church. The East U.P. church, commonly known as the Leckie Memorial Church, was erected in 1875-76 from designs by Messrs Peddie & Kinnear. It is built in the Gothic style, in the form of a parallelogram, with a massive broach spire at

one angle. It has a very fine situation, as it is built on the slope which rises from Tweed-Green to High Street, and in consequence looks directly upon the river. St Peter's Episcopal church contains 126 sittings. A new chancel was added in 1883, and the interior much improved by the removal of the old organ-loft, formerly above the entrance to the church. At the time when the improvements were effected, a new organ was added to the church. The pulpit is of beautiful marble, the font of Caen stone; and the stained-glass window in the chancel was presented by Colin Mackenzie, Esq. of Portmore, in memory of his uncle, Bishop Mackenzie. The Roman Catholic church, St Joseph's, in Rosetta Road, replaced in 1858 a chapel of much smaller dimensions. The present one has accommodation for 300 persons.

So early as 1464 the bailies appointed Sir William Blaklok schoolmaster of the burgh; and in 1555 they agreed to provide the master with an 'honest chamber,' and also with the use of the tolbooth to teach his bairns reading and writing English. 'Latinists' are mentioned in 1569; and in 1563 the council ordained the master to wait on the bairns, and not to go to hunting or other pleasures in time coming without licence of the aldermen. Education was made compulsory in 1637; and in 1688 the magistrates ordered the master to teach all children *gratis* whose parents were unable to pay the fees. The two burgh schools, which passed to the local school board in 1873, were a grammar school and an English school, the latter rebuilt in 1861 at a cost of £541. A residence erected in 1805 for the headmaster of the grammar school furnishes accommodation for 30 boarders. The following table shows the position of the schools in 1882-83:

| Name. | Accommodation. | Average Attendance. | Grant. |
|----------------|----------------|---------------------|-----------|
| 1st English, . | 300 | 219 | £173, 0s. |
| 2d English, . | | | |
| Halyrude, . | 200 | 216 | £189 |
| St Joseph's, . | 74 | 27 | |

The school board consists of a chairman and 6 members. In addition to the above schools, there are the following: St Leonards and Beaunthorne for the board and education of young ladies, and a boys' school called Bonnington Park Academy. There is also an adventure school in School Brae.

There are in Peebles few public buildings, and these, for the most part, are of plain and unadorned appearance. The most striking are the Hydropathic Establishment and the Chambers Institution. The Town-Hall, which stands in High Street, was built in 1753; and behind it is the Corn Exchange (1860). The County Hall is also in High Street. It was erected in 1844, is in the Tudor style, and has inferior accommodation. The prison beside it was legalised in 1844, but closed in 1878. The building in High Street, which forms the front of the Chambers Institution, has an interesting history connected with it. At one time the property of the Cross Church, it fell in 1624 into the hands of the Hays, Lords Yester. It next passed to the Queensberry family (1687), and was sold by the fourth Duke of Queensberry to Dr James Reid in 1781. Dr Chambers obtained possession of it in 1857, and 'for purposes of social improvement, presented it as a free gift to his native town.' Dr Chambers made considerable alterations upon the building—chiefly inside—and erected on the S side of the quadrangle a large hall, which harmonises very well with the other buildings. In the centre of this quadrangle has been placed the old cross of Peebles, noticed below. The institution was opened 11 Aug. 1859. It embraces 'a public lending library with about 17,000 volumes, a large reference library, a public reading room, and several rooms for private study, a gallery of art, a county museum, and a hall. It is maintained partly by endowment and partly by small fees, payable by visitors and others.' The buildings were repaired in

1880 at a cost of £1000. The civic corporation act as trustees. The Museum contains some fine copies of famous Egyptian antiquities, as well as collections of fossils, birds, casts, etc. The reading-room is very comfortable, and in the hall there has been placed a portrait of Dr W. Chambers, by Gordon, painted in 1858.

Peebles has a post office, with money order, savings' bank, insurance, and telegraph departments, agencies of 21 insurance companies, and branches of the Bank of Scotland, the Commercial Bank, and the British Linen Co.'s Bank. The premises of all three are in High Street. Those of the Bank of Scotland and of the British Linen Co. are handsome buildings, the former erected in 1860, the latter in 1883. There are numerous hotels in the town, as well as a Hydropathic Establishment. The chief hotels are the Tontine, the Commercial, and the Cross Keys. The first, as the name implies, was built by subscription, under the agreement 'that any age might be entered, and the longest liver should have the whole.' It was erected in 1808 at a cost of £4030. The Cross Keys Hotel is interesting, because it and a former laudlady have been considered the originals of the 'Cleikum Inn' and 'Meg Dodds' in Scott's *St Roman's Well*. Above the doorway is written *The Original Cleikum Inn*, underneath which is the date 1653, and, indeed the building has an antiquated appearance. It is approached from the Northgate through an arch, which leads into a courtyard, at the end of which the house—once known as the 'Yett' (*i.e.*, gate)—is situated. At one time, it was the town-house of the Williamsons of Cardrona, who appear to have risen from burghesses of Peebles to county gentlemen. The Hydropathic Establishment lies a little way E of the town on the slope of Ven Law (1066 feet). It was erected in 1878-81, at a cost of £70,000, in the French Renaissance style. The building is extremely handsome, and the deep brown-red colour of the stone with which it has been built contrasts well with the dark green of the trees round about it. There are five floors and accommodation for 200 visitors. The public rooms are spacious and elaborately decorated; the bedrooms are more comfortably furnished than those of such establishments generally are; and the baths are of the most complete description. The grounds, 26 acres in extent, have been laid out with greens for lawn tennis, croquet, bowling; and there are ponds for curling and skating. Peebles has numerous clubs and societies. There are clubs for cricket, football, bowling, and curling, in addition to a Conservative Club, a Gutterbluid Club, an Incomers' Club, and a Leek Club. Among the societies are the Auxiliary to the National Bible Society, the Boys' and Girls' Religious Society, the Free Church Temperance and Band of Hope, the Parish Church Young Men's Union, the Peebleshire Colportage Society, a Temperance Association, a Young Men's Christian Association. Besides these there are a Hammermen's Incorporation, a Guildry Corporation, an Independent Order of Good Templars, the Court Neidpath Ancient Order of Foresters, the Peebles Kilwinning Lodge of Freemasons, 2 companies of the 2d Middlethian and Peebleshire Rifle Volunteers, and a Choral Union. A newspaper called the *Peebleshire Advertiser and County Newspaper* (1845) is published every Saturday. A hiring fair—*Fasten E'en Fair*—is held on the first Tuesday of March, *Beltane Fair* and *Siller Fair* on the second Wednesday in May and on the Tuesday before 12 Dec. respectively.

The only industry, prosecuted with vigour in the town, is the manufacture of woollen goods. There are in Peebles one spinning-mill and two tweed-mills. The largest of these, in which both weaving and spinning are carried on, employs nearly 400 hands. Coach-building, tanning, and brewing are also engaged in. In addition to these, there is a large warehouse, in which 'tweeds' are sold. About the beginning of the century the manufacture of cotton goods was introduced, but unsuccessfully, and this failure cannot but be contrasted with the success that has attended the woollen trade.

Although the business done at Peebles cannot contrast with that of Galashiels and other Border towns, still it is large enough to be remunerative. The town possesses numerous shops for all kinds of goods, and trade has been greatly benefited by the increasing number of people, who spend the summer at Peebles. The building trade alone must have derived great advantage from the many new villas erected of late years in the out-kirts of the burgh.

The town of Peebles is governed by a provost, 2 bailies, and 7 councillois, with a dean of guild, a treasurer, and a town clerk. The sheriff court sits every Tuesday and Thursday during session, and the sheriff small debt court every Friday. Quarter sessions of the justices of the peace are held on the first Tuesday of March, May, and August, and the last Tuesday of October. From the Union till 1832 Peebles, like Rothesay, had a parliamentary representation; but now it votes only in the election of the member for Peebles and Selkirk shires. Municipal constituency (1884) 419, including 78 females. Corporation revenue (1874) £538, (1888) £697. Valuation (1875) £7544, (1884) £10,112, plus £839 for railways. Pop. of royal burgh (1841) 1908, (1861) 2045, (1881) 2609; of town and police burgh (1861) 2045, (1871) 2631, (1881) 3495, of whom 1859 were females. Houses (1881) 677 inhabited, 60 uninhabited, 6 building.

In and about the town of Peebles there are several objects of antiquarian interest. Of the town wall, built about 1570, when the country was in a most distracted condition, only a few fragments now remain. To judge from the height and thickness of these, it could not have been, even at the best, a great defence. Beginning at the parish church—on whose site Peebles Castle formerly stood—it stretched along Tweed-green to its eastern boundary, then struck N to where the Free church now stands, and again E back to the parish church. The portions still extant are on the E side. In addition to the protection afforded by the town wall, the burgesses sought to defend themselves by erecting bastle-houses, which were three-storey buildings entered through a low doorway. The ground-floor, and occasionally the upper floors, were arched, and the roof covered with thatch, which, in an emergency, could be stripped off, set on fire, and thrown down upon the enemy outside. No vestiges now remain of the Castle of Peebles. Built, in all likelihood, in the reign of David I., it was inhabited from time to time by Scottish kings (see under History), and must have existed as late as 1655, when it is mentioned for the last time in the rental book of the Earl of Tweeddale's estates. Although its size is not certainly known, still it probably was not of much greater extent than the 'Peel Houses' of that period. Towards the close of the 17th or in the beginning of the 18th century, it had fallen into decay, and, doubtless, had come to be regarded, like many other ruins in Scotland, as nothing better than a quarry from which stones might be had for building with comparatively little trouble. When the prison was built, part of the foundations of the castle were laid bare. Neidpath Castle, situated 1 mile W of the town, and standing on the N bank of the Tweed, must have been one of the strongest fortresses in the district. It is separately described.

The ruins of the Cross Church and of the church of St Andrew are within the burgh. The former are situated in the old town, not far from the station of the North

British Railway Company. The way in which the name of this church arose is thus described by Fordoun (the account is condensed): 'Upon the 9th May 1261, a magnificent and venerable cross was found at Peeblis, which is supposed to have been buried at the time of Maximinian's persecution in Britain, about the year 296. Shortly afterwards, there was found about three or four paces distant from the spot where the glorious cross was discovered, a stone urn, containing the ashes and bones of a human body. These relics were thought by some to be the remains of the person whose name was engraven on the stone on which the cross lay; for on the upper side of the stone were these words, "The place of St Nicholas, the bishop." In this place, where the cross had been found, frequent miracles were wrought; on which account the King, by the advice of the Bishop of Glasgow, caused a stately church to be erected there, in honour of God and of the Holy Rood.' This church was 102 feet in length, 32 in width, and 24 in height. At the back of the church was a convent, also erected by the King. In the English invasion of 1548-49, when so many abbeys and churches were burned, the Cross Church escaped uninjured. In 1560, the request of the magistrates, that it might be given to them for a parish church, was granted, and it served as such until 1784, when the present parish church was built. At that date nearly all the walls were pulled down to furnish material with which to build the new church, and now the remains of this once extensive building are very inconsiderable. On its N side a mound, overgrown with grass, marks the burial-place of the Earls of March. The burial-place of the Hays of Haystoun is on the S side, where there is also a part railed off, said to have been formerly the property of the Earls of Morton. The parish church of St Andrew lies about ½ mile W of the Cross Church. It was founded, in 1195, by Bishop Jocelin of Glasgow, and, owing to the large endowments which it received, soon became important. In 1543 it was made a collegiate church; but in 1548 it was burned by the English, from which disaster it never recovered. When the Cross Church became the parish church at the Reformation, there was no object to be gained by restoring that of St Andrew, and accordingly it fell gradually into a ruin, the tower alone resisting successfully the action of wind and weather. In 1883 Dr William Chambers, for whom this old tower seems to have had an especial interest, restored it at his own expense; and his grave is beneath its shadow. The churchyard contains some curious old tombstones. The oldest bears the date 1699. Another, dated 1704 and erected to the memory of three members of a family called Hope, has the following verse upon it:

'Here lie three Hopes enclosed within,
Death's prisoners by Adam's sin;
Yet rest in Hope that they shall be
Set by the Second Adam free.'

Another has:

My glass is run, and yours is running;
Repeat in time, for judgment's coming.'

In the churchyard, a part set aside has been called the *Stranger's Nook*, and in it lie buried the remains of some French officers, who died at Peebles while living there on parole. Of the Chapel of the Virgin, which adjoined the Castle and stood across the head of High Street, no traces now remain. It is not known at what time it was erected, but of its extreme antiquity there can be no doubt. In appearance it was a long, narrow Gothic building. For years after the Reformation it was employed as the meeting-place of the kirk-session and presbytery, and was only removed to make way for the present parish church. The place where the Hospital of St Leonard once stood is marked by a single tree. The hospital (rather 'hospitium') was designed for the relief of the poor and the aged. It stood almost on the eastern boundary of the parish, on land which belongs now to the laird of Eshliss.

Other antiquities in the town and parish are the following. The ancient Cross of Peebles, first erected in

Seal of Peebles.

the Old Town, and afterwards removed to the High Street, was given to Sir John Hay, Bart., in 1807, and set up by him at Kingsmeadows. In 1859 it was restored to the town, and stands now in the court of the Chambers Institution. According to the writer of the *New Statistical Account* of the parish, 'the cross was a work of great antiquity, having been erected by one of the Frasers of Neidpath Castle before the time of Robert the Bruce, and bears the arms of the Frasers.' It consisted of an octagonal column, 12 feet in height and 3½ in circumference. A house in High Street, inhabited for generations by a family called Turnbull, bakers by business, bears a stone with implements used in baking carved upon it, and with the inscription, 'God provides a rich inheritans; 1717. W T.' A small one-storied shop in the High Street, a few doors E of the Chambers Institution, was used by Mungo Park (1771-1805), the famous African traveller, as a surgery. He practised in Peebles during 1801-2, and was well received, but doubtless found existence in a Scotch country town rather dull after a life of adventure in Africa. This may explain why he gave up his profession to enter upon his second and fatal expedition to the Niger. Some of the names of streets and localities in Peebles are interesting on account of their associations. Such, for example, are Borwick's Walls, Port-brae, Northgate, Eastgate, Bridgegate, which preserve the fact of Peebles having been at one time a walled town. Again, there are King's-honse and King's-orchards, which call to remembrance the not infrequent visits of royalty; and there is Dean's-gutter, which brings into recollection the old religious establishments, swept away at the Reformation. A house standing at the corner between High Street and Northgate bears the name 'Cunzie Neuk' or 'Cunye Neuk.' It is said that it derived its name from a house, erected as early as 1473, on the same site, and so called, according to some, because money was coined there. It is more likely, however, that it obtained its name from the fact of its being a corner house.

There are not fewer than seven hill forts in the parish, erected by the Britons as defences against their various foes. These forts are on Meldon Hill, Janet's Brae (2), Cardie Hill, Kittlegray Hill, Cademuir Hill (2), Camp-law. The extent of these and their history have been carefully treated in the chapter entitled 'Early History and Antiquities,' in Dr Chambers's *History of Peeblesshire*.

History.—When Peebles was first founded is not known, but that it must have been at a very early date is certain. Its name, which is spelt Peblis, Peeblis, Peebles, is derived, according to Chambers, from 'pebyll,' which means 'movable habitations, tents, or pavilions.' If this derivation is correct, the word meaning tents has been transferred, by a common figure of speech, to the place where they were pitched. The natural surroundings of the town, which is well sheltered and amply supplied with water, make this far from unlikely. A tradition of the 6th century connects Peebles with the patron saint of Glasgow—St Mungo. According to it, he visited the town and planted a church there, and 'Saint Mungo's Well' still calls to remembrance the visit of the bishop. It is not, however, before the 12th century that history takes the place of tradition. Although the view that Peebles was created a royal burgh by David I. is probably wrong, and that according to which it was created a royal burgh by David II. in 1367 correct, the town still had, even at the earlier date, a certain position in Scottish history. In the 12th century a rector of Peebles, afterwards Bishop of Glasgow, vindicated at Rome the resistance of the Church of Scotland to the claim of superiority over it, made by the Archbishop of York. At that time there were in the town a church, a mill, and a brewery.

Peebles stood in a country which then afforded good hunting, and, in consequence, its castle, which may have been built in the reign of David I., was used as a royal residence by various kings when residing in that part of the kingdom. David I. himself, Malcolm IV.,

his son, William the Lyon, Alexander II., and Alexander III. may be mentioned. During one of his invasions of Scotland, Edward I. spent some time at Peebles, from whose castle he dated more than one charter. In 1304, Peebles, with its mills, etc., was granted by him to Aymer de Valence, Warden of Scotland, and his heirs. The right to hold a fair was given to the town by King Robert the Bruce, but the charter which conveyed it has disappeared. In 1329 David II. visited Peebles, and in the Scottish Parliament, which met after the battle of Durham (1346) and during the King's captivity, to ratify the agreement entered into with England, two commissioners from Peebles took part. This, combined with the creation of Peebles into a royal burgh (1367), shows that, even at that early period, the town was regarded as important. In these unsettled times it suffered considerably, though not to the same extent as towns nearer the English border. In 1406, Sir Robert Umphrville, Vice-Admiral of England, made a raid upon Peebles, and, as Hardyng relates,

'Brent the town upon their market-day,
And mette their cloth with spears and bows sere
By his bidding without any nay.'

The next monarch whose name is connected with Peebles is James I. of Scotland. After his return from captivity in England, he visited the town on several occasions. There, it is almost certain, that he would see the sports of Beltane Day (May 1), which, in turn, might well suggest to him the idea of *Peblis to the Play*. According to Chambers, 'the festivities of Beltane originated in the ceremonial observances of the original British people, who lighted fires on the tops of hills and other places in honour of their deity Baal; hence Beltane or Beltien, signifying the fire of Baal. The superstitious usage disappeared, . . . but certain festive customs on the occasion were confirmed and amplified, and the rural sports of Beltane at Peebles, including archery and horse-racing, . . . drew crowds not only from the immediate neighbourhood, but from Edinburgh and other places at a distance.' Numerous local allusions and intimate acquaintance with the humours and customs of the age prove that the poem was written by one who had witnessed the rejoicings of Beltane Day; and all that is known of King James I. makes it very likely that he was the author of *Peblis to the Play*. The poem opens with the following lines:

'At Beltane, when ilk body bounds
To Peebles to the play,
To hear the singing and the sounds,
Their solace, south to say,
By firth and forest forth they found,
They graithit them full gay,
God wait that wald they do that stound,
For it was their feast day.
They said
Of Peebles to the play.'

In the poem of *Christ Kirk on the Green*, which has been ascribed both to James I. and James V., the sports at Peebles are also alluded to:

'Was ne'er in Scotland heard nor seen
Sic dancing, nor deray,
Neither at Falkland on the Green,
Or Peebles at the Play.'

Chambers points out as evidencing the popularity of James I. that, after he had been murdered at Perth (1437), money was subscribed by the inhabitants, sufficient to have a mass said daily for the King's soul.

The reign of James II. is interesting in connection with Peebles, because in it begin the burgh records. The 4th October 1456 is the earliest date to which it is possible to go back. To the reign of his successor, James III., a poem called *The Tales of the Thrie Priestis of Peebles* must be referred. It is constructed, to a certain extent, on the same lines as the satirical poems of Sir David Lindsay, especially as regards the parts in which the faults and failings of the clergy are severely criticised. From James IV. the town obtained

a charter of confirmation in 1506, and, during the greater part of his reign, was very prosperous. The quietness that had lasted during it served only to increase the disturbance and tumult that broke out after his death. The counties near the border were always liable to be attacked by the English, or to be ravaged in the destructive raid of some hostile clan, and hence the burgesses of Peebles did well to surround their town with a wall, even though that was not of the strongest. In 1547, an expedition set out from Peebles to besiege and recover the house of Langhup, held at that time by the English. In December 1565, Darnley visited Peebles. Different reasons are assigned for his sojourn in it. One account says that he was sent thither by the Queen; another, that he came seeking more congenial pleasures than those afforded by the capital; a third, that he came to it in order to have an interview with his father, the Earl of Lennox, unknown to the Queen. The next notice of interest with regard to the town occurs in 1604. In that year, there was, as Birrel relates in his *Diary of Events in Scotland*, 'ane grate fyre in Peebles town.' This destroyed a large part of what had been built again after 1545. In 1645, the plague, which had been causing terrible devastation elsewhere, reached Peebles, and created a panic among the inhabitants. One result was, that for a time, 'there was no meeting of the congregation for fear of the pestilence.' While terror was thus inspired by the plague, anxiety, almost as great in extent, though different in cause, was occasioned by the victorious progress of the Marquis of Montrose. After having been defeated at Philiphaugh (13 Sept. 1645), he fled to Peebles, where he sought to gain the assistance of some of the neighbouring lairds, in which attempt, however, he was far from being successful. Five years later, a division of Cromwell's army was stationed at Peebles. It is said that the soldiers found stabling for their horses in the Church of St Andrew, while they were attempting to reduce Neidpath Castle, held by Lord Yester. Twenty years after the former visitation, Peebles was again full of terror lest the plague should break out among them. The ravages of this—the Great Plague—were confined to England and Ireland, and Scotland escaped unharmed.

In the struggles of the Covenanters after a simpler worship and a purer faith Peebles took a conspicuous part, and, at the battle of Bothwell Brig, many from the parish were present. The rebellion of 1715 had not affected Peebles, but in 1745, it had to receive a division of the Pretender's army, which was marching into England by way of Moffat. According to R. Chambers's account in the *History of the Rebellion of 1745-6*, the Highlanders showed a quite unlooked-for aspect of character, behaving with moderation, such as they were never expected to display.

In his history of the burgh, Chambers gives a most minute account of the way in which, on one pretence or on another, the property in land belonging to Peebles was frittered away, chiefly in the 18th century. Such property consisted for the most part of extensive commons in different parts of the parish. Of these, Cailmuir, Kings Muir, Glentress, Hamildean Hill, Eshiels, Venlaw, may be mentioned. For long it clung to the fragments that were left—Heathpool Common, a small piece of Glentress and the farm of Shielgreen, but these, too, eventually had to be parted with.

When the 'scare,' caused by the anticipated invasion of Britain by Buonaparte, was at its height, Peebles showed much patriotism, and a large number of the able-bodied among the inhabitants enrolled themselves in the volunteers and yeomanry, as well as in the militia. Three regiments of militia occupied Peebles in turn until 1814, when peace was concluded. The burgh served for a time as the place of residence of officers of different nationalities fighting under the French flag, who were out on parole. They made themselves very agreeable, gave representations of stage-plays, acted as surgeons, etc., and, by their manners, made a favourable impression upon the inhabitants.

In 1846 great improvements were effected upon the town at the cost of £1000. 'The High Street was lowered two or three feet throughout its entire length; drains were built, unsightly projecting buildings and stairs were removed, and the side-ways, so cleared, were laid with pavement.' Since that date the history of the burgh has been uneventful. At the same time the town has gradually advanced to greater beauty than it once possessed, and now it is almost worthy of its nearly unique situation beside the waters of the 'silver Tweed.'

The following well-known Scotsmen have been connected by birth with Peebles. The fourth Duke of Queensberry (1725-1810) was born in the building now forming part of the Chambers Institution, but used at that time as a town house by the Queensberry family. His influence in all things pertaining to the burgh was immense, and was not always employed for the good of the town. Although most extravagant in his habits, 'Old Q,' as he was called, possessed at his death personal property to the amount of a million pounds. Sir John Elliot (d. 1786), after a life of adventure at sea, began to practise as a doctor in London. He quickly gained great fame, whose extent is shown by his being appointed physician to the Prince of Wales, and by his being created a baronet (1778). William Chambers (1800-1883) and Robert Chambers (1802-1871) may be taken together, as their success in life was the result of their united efforts. They were born in a house in Biggiesknowe, in the Old Town, erected by their father in 1796. In company the two brothers started as publishers, and brought out *Chambers's Journal* (1832), an educational course embracing works in many departments of science, literature, etc.; an encyclopædia in 10 volumes, etc., etc. Both have also been authors. The writings of William Chambers are chiefly books of travel and papers on various questions, which as a rule appeared in the Magazine, besides a memoir of his brother (1872; new ed. 1883). Those of his brother are more ambitious and varied. They include, among others, *Traditions of Edinburgh* (1824), *Popular Rhymes of Scotland* (1826), *Dictionary of Eminent Scotchmen* (1835), *Romantic Scottish Ballads* (1859), *Domestic Annals of Scotland* (1856-61), *Book of Days* (1862-63), and *Vestiges of Creation* (anon. 1844; acknowledged 1884). Robert Chambers also composed songs and ballads. William Chambers is chiefly remembered for his gifts to Peebles and to Edinburgh, of which city he was Lord Provost in 1865. The Chambers Institution in his native town has been already described, and his restoration of St Andrews Tower referred to. During his tenure of office the capital underwent many improvements, of which the opening up of the spacious thoroughfare between the South Bridge and George IV. Bridge, called Chambers Street, was not the least important. In 1879 he offered to restore St Giles' Cathedral at his own cost if certain conditions were complied with. These were arranged, and St Giles' was reopened on 23 May 1883, just three days after his death. John Veitch, LL.D. (b. 1829), was educated at the Grammar School, Peebles, from which he passed to Edinburgh University. He was appointed Professor of Logic, Rhetoric, and Metaphysics in St Andrews University (1860), and four years later was invited to Glasgow University to lecture on the same subjects as Professor of Logic, etc. Dr Veitch has written and translated several philosophical works, and is the composer of numerous pieces of poetry, collected into two volumes called *Hillside Rhymes* (1872) and *The Tweed and Other Poems* (1875). Henry Calderwood, LL.D. (b. 1830), received his education at the High School, the Institution, and the University of Edinburgh, to the chair of Moral Philosophy in which he was appointed in 1868. His principal works are *The Philosophy of the Infinite* (1854), *Handbook of Moral Philosophy* (1872), and *The Relations of Mind and Brain* (1879).

The parish of Peebles is chiefly in Peebleshire, only a small part of it being in Selkirkshire. It is bounded N by Edlleston, E by Innerleithen and Tra-

quair (detached), S by Yarrow (detached), Traquair, and Yarrow, SW by Manor, and W by Manor, Stobo, and Lyne. Its utmost length, from N to S, is 9 miles; its utmost breadth, from E to W, is 5½ miles; and its area is 16,686½ acres, of which 13,513½ are in Peeblesshire and 3172½ in Selkirkshire, whilst 89 are water. The Tweed divides the parish into two parts, of which the northern is the larger. Entering it on its W side, the river winds 1½ mile east-by-southward along the Manor boundary, next 3¼ miles eastward through the heart of the parish, and afterwards for ¾ mile on the boundary with Traquair. Thus if one follows its windings, the Tweed has a total course line of 5½ miles, though a straight line, drawn between the points at which it enters and leaves the parish, does not measure more than 4½ miles. On the N bank it receives the tribute of Lyne Water, Eddleston Water, and Soonhope Burn. Meldon Burn runs 2½ miles south-by-westward along the boundary with part of Eddleston and the whole of Lyne parish, and falls into LYNE WATER, which itself runs 3 furlongs south-south-eastward along all the Stobo boundary. EDDLESTON WATER, flowing at right angles to the Tweed, divides the northern part into two sections, of which the eastern is the larger. It has a course of 2½ miles within the parish, before it joins the Tweed at Peebles. Soonhope Burn, rising at an altitude of 1750 feet in the NE corner of the parish, flows 4½ miles south-south-westward, and falls into the Tweed at Kerfield, ½ mile below the town. On the S bank the Tweed receives MANOR WATER, which flows for the last 5½ furlongs on the boundary with Manor, and GLENSAX Burn, rising at an altitude of 2100 feet in the southern extremity of the parish, and running 6½ miles north-north-eastward—for the last 1¼ furlong along the Traquair boundary. Besides these, there are numerous small streams, tributaries of the above; and both great and small afford good fishing. The vale of Tweed, in the neighbourhood of Peebles especially, expands to a considerable breadth, and contains scenery of great beauty. It has an altitude near the river of from 550 to 495 feet.

The following are the highest hills:—*Dunslair Heights (1975 feet), *Cardon Law (1928), *Makeness Kippis (1839), *Whiteside Edge (1763), Meldon Hill (1401), Collie Law (1380), Heathpool Common (1516), and South Hill Head (1239), in the division N of the Tweed; Cadenuir (1359), Preston Law (1863), *Hundleshope Heights (2249), and *Dun Rig (2433), in the part S of the Tweed, where asterisks mark those summits that culminate on the confines of the parish. These hills, generally speaking, are lowland in character, though those of the Selkirkshire portion are somewhat rugged and covered with heather.

Greywacke is the predominant rock, and has been largely employed for building purposes. A quarry of coarse limestone, on the Edinburgh road, 2 miles from the town, has long since been abandoned. In the bottom of the valleys the soil is clay mixed with sand; on the lower ascents it is loam on gravel; and on the sides of the hills it is rich earth. The parish is mainly pastoral, there being good feeding for sheep. About one-sixth of the entire area is in tillage; and nearly one-tenth is under wood. The chief proprietors are the Earl of Wemyss and Sir Robert Hay of Haystone, Bart., 6 others holding each an annual value of £500 and upwards. Mansions, noticed separately, are Kingsmeadows, Kerfield, Venlaw House, and Rosetta. The parish is traversed by two railway lines, of the North British and Caledonian, and by excellent roads which branch out from the town of Peebles in all directions. The former line approaches the town down the valley of Eddleston Water, and the latter that of Tweed. Antiquities are described under the town, and in the articles CADENUIR and NEIDPATH CASTLE.

Peebles is the seat of a presbytery in the synod of Lothian and Tweeddale. The living is worth £489, 17s. 10d., made up of stipend £424, 11s. 2d., communion elements £8, 6s. 8d., manse £35, globe £22.

Landward valuation (1855) £7299, 13s., (1884) £13,817, 9s. 10d., plus £2581 for the North British railway, and £1779 for the Caledonian railway. Pop. of entire parish (1801) 2088, (1831) 2750, (1861) 2850, (1871) 3172, (1881) 4059, of whom 4 were in the Selkirkshire portion.—*Oral. Sur.*, sh. 24, 1864.

The presbytery of Peebles comprises the *quoad civilia* parishes of Drummelzier, Eddleston, Innerleithen, Kirkurd, West Linton, Lyne, Manor, Newlands, Peebles, Stobo, Traquair, and Tweedsmuir, with the *quoad sacra* parish of Walkerburn. Pop. (1871) 11,164, (1881) 12,749, of whom 3189 were communicants of the Church of Scotland in 1878. See BIGGAR.

Peeblesshire or Tweeddale, an inland county in the S of Scotland, is bounded on the N and NE by Edinburghshire, E and SE by Selkirkshire, S by Dumfriesshire, and on the SW and W by Lanarkshire. It derives its former name from its chief town, Peebles; the latter from the fact that the source, and nearly half of the course, of the river Tweed lies within its borders. The boundary runs on the N and NE in a jagged line from the Pentland Hills by Carlops and Leadburn to Kingside Edge; thence S to the Moorfoot Hills, and by Windlestraw Law and Garthope Burn to the Tweed, whose course it crosses at Holyce; thence westwards along the S bank of the Tweed to the Haystown Burn, though with four bold and irregular loops running almost due S into Selkirkshire, and including the basins of the Bold Burn, Fingland Burn, and Quair Water; and so S by the line of Waddinshope Burn, Glenrath Heights, Blackhouse Heights, and Brenderland to St Mary's Loch, a reach of which forms a small part of the S boundary of the shire. From St Mary's the boundary next runs along a line of heights by Loch Skene and Hart Fell to Tweed's Cross, where it turns N to form the W limit of the shire by Clyde Law, Black Dod, Culler Fell, Hartree, Skirling, Netherurd, and Medwin Water to the Pentland Hills, which form the NW boundary. The outline thus traced presents the appearance of an irregular triangle, facing W, SE, and NE, with rounded angles, and most broken by indentations on the SE base line where there are projections into Selkirkshire. The lengths of the sides are—along the W face, from N to S, 26 miles; along the SE face, 30 miles; and along the NE, 23 miles. The extreme length of the county, from N to S, is 29 miles; its extreme breadth, from E to W, is 21 miles; and its total area is 354 square miles or 226,899 acres (of which 970 are water); lying between 50° 24' and 55° 50' N latitude, and between 2° 45' and 3° 23' W longitude. It is the twenty-third county of Scotland in point of size, and the thirtieth in population.

The surface of Peeblesshire attains a higher average level than that of any other of the southern Scottish counties. The lowest ground is in the narrow vale of the Tweed, just where it enters Selkirkshire, and lies between 400 and 500 feet above sea-level. The highest ground in the county is on the S border, where the summits of the Hartfell group rise. The highest peak is, however, Broad Law (2751 feet), in Tweedsmuir parish, 4 miles from the S border. At a general view the county seems to be an assemblage of hills, more or less high, and more or less closely grouped; but these are intersected in all directions by pleasant and fertile valleys or deep gorges, each with its stream flowing through it. Professor Veitch thus describes the view from the top of Broad Law: "On all sides, but particularly to the east of us, innumerable rounded broad hill-tops run in a series of parallel bowing ridges, chiefly from the south-west to the north-east, and between the ridges we note that there is enclosed in each a scooped-out glen, in which we know that a burn or water flows. These hill-tops follow each other in wavy outline. One rises, falls, passes softly into another. This again rises, falls, and passes into another beyond itself; and thus the eye reposes on the long soft lines of a sea of hills, whose tops move and yet do not move, for they carry our vision along their undulating flow, themselves motionless, lying like an earth-ocean in the deep, quiet calm

of their statuesque beauty.' The character of the country is distinctly pastoral. The hills, 'too plain to be grand, too ample and beautiful to be commonplace,' are for the most part softly rounded, and have gentle slopes, clothed with rich verdure and hanging woods; while the numerous streams, the private demesnes, and the highly cultivated farms, combine to make the scenery beautiful and pleasing without being romantic or wild. The lofty grounds in the S, however, and the ridge running WSW from Minchmoor on the E, are much more rugged and desolate. The main river-valley is that of the Tweed, which stretches in a semicircle from the extreme SW corner, through the heart of the county, and on to the E angle; forming a main artery, into which nearly all the water-courses flow. Over a great proportion of its length this central basin is little more than a series of gorges, affording space for nothing except the river and the public road; it nowhere expands into vales of more than 3 miles in breadth, and seldom into haughs of more than a few furlongs; while its banks are oftener heights or abrupt risings than plains or gentle slopes. From this central line of river-course the county everywhere rises in a series of irregularly shelving ascents towards the boundaries.

Mountains.—A glance at the map shows that a great part of the boundary of Peeblesshire is mountainous, and that the ranges on the borders are among the highest in the county. Thus shut in by a natural barrier, and in ancient times having the thick forest of Ettrick on its eastern frontier, Peebleshire has had a more secluded history than its neighbourhood to the metropolitan county might have suggested. On the NW lies a section of the Pentland Hills, extending over an area $5\frac{1}{2}$ miles long by 3 broad. The chief summits there in order from E to W are Craigengar (1700 feet), Faldon Hill (1526), Byrehope Mount (1752), Kingseat (1521), Mount Man (1753), West Cairn Hill (1844), and East Cairn Hill (1839). The N and NE border, from the sources of the North Esk to those of the Caddon, is occupied by the Moorfoot Hills; the principal summits of that range within Peeblesshire, from the NW to NE and thence S, are Carlups Hill (1490 feet), Kingside Edge (891), Lochhill (1560), Jeffries Corse (2004), Dundreich (2040), Powbeat (2049), Blackhope Scars (2136), Middle Hill (1978), East Side Height (1944), and Whitehope Law (2038). Windlestraw Law (2161 feet), still on the NE border, is about 4 miles N of the Tweed. To the S of the Tweed the chief summits are less regularly near the border of the county. In the irregularly outlined section which forms the NE part of the SE border, the chief summits, in order from N to S, are Flora Rig (1567 feet), Kirkhope Law (1758), Bold Rig (1280), Orchard Rig (1463), Pipers Knowe (1444), Minchmoor (1856), Hare Law (1676), Stake Law (two peaks, 2229 and 1784), Dun Rig (2433), and Duchaw Law (1779); while in the irregularly disposed ranges that run from Haystoun southwards through the parishes of Manor and Lyne and Megget to St Mary's Loch, the principal border mountains are Cademuir (1359), Preston Law (1863), Scawd Law, Hundleshope (2249), Glenrath Hill (2049), and Heights (2205), Horsehope Hill (1938), Blackhouse Heights (2213), Black Law (2285), Deer Law (2065), and Watch Law (1710), overlooking St Mary's Loch. In the mountain-covered parish of Tweedsmuir, which forms the southern extremity of the shire, the chief summits are Locheraig Head (2625 feet), overlooking Loch Skene, Cape Law (2364), Hartfell (2651), and Barry Grain Rig (2012), all on the S border; and Clyde Law (1789) and Black Dod (1787) on its W border. Continuing in order towards the N along the W boundary of the county, the chief summits are Coomb Dod (2082 feet), Coomb Hill (2096), Culter Fell (2454), Cardon Hill (2218), Langlaw Hill (1208), between Skirling and Broughton, Broomy Hill (1899), Shaw Hill (1121), and Mendick Hill (1480), a beautifully rounded summit, lying to the S of the Pentlands and W of Linton. In the interior of the country there are several summits and groups that are noteworthy. The Cloich Hills in the N of Eddleston

parish attain the height of 1570 feet in Wether Law. Further S, between Eddleston Water and the Leithen, are Cardon Law (1928 feet), Whiteside Edge (1763), Lamb Law (1804), and Makeness Kipps (1839); and between the Leithen and Tweed, Dunslair Heights (1975), Sherra Law (1844), Black Law (1762), and Lea Pen (1647). South of the Tweed a range of high hills runs from near Cademuir southwards along the W side of the Manor Water valley, with Hunt Law (1591 feet), Breach Law (1884), Scrape (2347), Pykestone Hill (2414), Long Grain Knowe (2306), and Dollar Law (2680), as chief summits. Other hills, still to the SE of the Tweed, and in the parishes of Drummelzier, Lyne and Megget, and Tweedsmuir, are, from N to S, Drummelzier Law (2191 feet), Glenstyon Dod (2256), Taheron Law (2088), Polmood Hill (1548), Lairdside Knowe (1635), Birkside Law (1951), Crاملat Craig (2723), Broad Law (2754), Clockmore (2100), Cairn Law (2352), Eric Hill (2259), Molls Clench Dod (2571), and Garetel Dod (2263); and N of the Tweed and Biggar Water are Broughton Heights, with Wether Law (1872) and Flint Hill (1756); to the S and E of these Trahemma Hill (1792) and Penvalia (1764); and Meldon Hill, NW of the town of Peebles (1401), known as 'the hill of fire,' was a place of worship of the ancient Britons.

Rivers and Lakes.—With the exception of the Medwin Water in the NW, which flows into the Clyde, a few streamlets which join the head-waters of the North and South Esks in the N, and some smaller rivulets, all the streams of Peeblesshire are tributary to the Tweed, which has already been indicated as the chief river of the county. Even the waters of the Megget in the S, which flows directly into St Mary's Loch, ultimately join it by way of the Yarrow, which flows out of that lake and falls into the Tweed in Selkirkshire. The source of the Tweed is identified in a small fountain, called Tweed's Well, at the base of the hill Tweed's Cross, in the south-western part of Tweedsmuir parish. Thence it flows in a semicircular course through the heart of the county, traversing first the parish of Tweedsmuir and part of Drummelzier, then dividing Drummelzier from Glenholm and Stobo, cutting next a section of the last-named parish and touching the N boundary of Manor, and thence flowing through Peebles to become the boundary between Innerleithen and Traquair, until it finally leaves the county at Holylee, after a course of 41 miles. On the further side of the range which gives birth to the Tweed, rise the Annan and the Clyde, a fact commemorated in the popular rhyme:

'Annan, Tweed, and Clyde,
Rise a'out o' ae hill-side.'

The valley of the Tweed in Peeblesshire has already been described. Until the practice of draining became common, the lands on the banks of the river used to suffer from floods in times of heavy rains or snow, though at ordinary times the depth of the stream varies from about 2 to 4 feet. There are several fords within the limits of the county; though for a very long period there was but one bridge, viz., that at the county town. The waters of the Tweed abound in salmon, trout, and other fresh-water fishes. The mountain and hill mosses which flank either side of this main river are intersected by a perfect network of smaller tributary streamlets, few of any great length and confined mostly to narrow ravines and gorges. The chief affluents of the Tweed, from its source to the point at which it quits Peeblesshire, are, on the right bank, Core Water, Glencraigie Burn, Fingland Burn, Hlawkshaw Burn, Fruit Water, Menzion Burn, Talla Water, with its feeder, Gameshope Burn, issuing from Gameshope Loch, and Harestanes Burn—all in Tweedsmuir parish; Polmood Burn, between that parish and Drummelzier; Stanhope Burn, Powsail Burn, with its feeders, Drummelzier and Scrape Burns, in Drummelzier parish; Manor Water, with its feeders, in Manor parish; Haystoun or Glensax Burn, joined by Waddinshope and Crookston Burns, in

Peebles parish; and Kirkburn, Quair Water, with its feeders, and Bold Burn, in Traquair parish. On its left bank the chief affluents of the Tweed are Baillien Burn and Glenwhappen Burn, in Tweedsmuir parish; Kingledoors Burn, in Drummelzier; Biggar Water, in the united parish of Broughton, Glenholm, and Kilbucho; Hopstead or Stobo Burn, in Stobo; the river Lyne, between Stobo and Peebles; Eddleston or Peebles Water and Soonhope Burn, in Peebles parish; and Horsburgh Burn, Leithen Water, Walker Burn, and Gatehope Burn (the boundary of the county), in Innerleithen. Several of these affluents have noteworthy tributaries. The Manor Water in its 10½ miles' course receives, on the right, Linghope, Glenrath, and Huddleshope Burns; and on the left, Newholm Hope and Hall-Manor Burns. The Quair in its 7 miles' course receives, on the right, Glenlode or Newhall Burn, Carley or Shillinglaw Burn, Glengaber or Fingland Burn, and Tinniel Burn; and on the left, the Killburn. Biggar Water receives, on the right, Kilbucho Water and Holmes Water; and on the left, Spittal, Kirklaw, and Broughton Burns. Lyne Water, the largest affluent of the Tweed in Peebleshire, has a course of 18½ miles through the NW part of the county, which is therefore sometimes called Lyncedale. It receives, on the right, Baddinsgill Burn, Polinlarf or West Water, Medwin or Tarth Water, with its feeder, the Deauburn, and Haprew Burn; and on the left, Cairn, Dead, Flemington, and Harchope or Meldon Burns. Eddleston Water in its course of 9 miles receives, on the right, Early, Barnhall, and Wormiston Burns; and on the left, Langcote, Windylaws, and Winkston Burns. Leithen Water, in its 9½ miles' course receives, on the left, Craighope, Williamslee, Glentrees, and Colquhar Burns. The Megget has a course of 7½ miles E, through part of Lyne and Megget, before it falls into St Mary's Loch in the S, and receives, on the right, Winterhope and Shielhope Burns; and on the left, Wyles, Linghope, Cramalt, Craigier, and Glengaber Burns. The only other independent streams of Peebleshire are the North and South Esks. The former, rising in the extreme N, forms for 5 miles the boundary with Edinburghshire, and receives from Peebleshire the Doit, Fairleyhope, Carlops, Deepsyke, and Coaly or Harbourraig Burns. The only Peebleshire tributary of the South Esk, which rises in Portmore Loch and flows N, is the Tweeddale Burn, which forms some miles of the E boundary with Edinburghshire. Many of the streams abound in trout or other fish; and the angling waters of the shire attract very many visitors every year. The lakes of this county are neither large nor numerous. Portmore or Eddleston (now a reservoir of the Edinburgh Water Company) Loch is about 2 miles in circuit, and is situated towards the NE, in Eddleston parish; Slipperfield, ½ mile less, lies towards the NW, in Linton parish; Gameshope Loch, a still smaller expanse of water, lies in the far S, in Tweedsmuir parish. All are stocked with such fresh-water fish as perch, pike, or trout. Though St Mary's Loch furnishes 7 furlongs of the SE boundary of the most southerly part of the parish of Lyne and Megget, it belongs properly to Selkirkshire. The chief medicinal springs are those of Heaven-Aqua Well in Linton, and celebrated Spa of INNERLEITHEN.

Geology.—The various geological formations represented in this county may be readily grasped from the accompanying table:—

| | | |
|---------------------------|---|--|
| Recent and Post-Tertiary. | { | Peat, alluvium. |
| | | Morainic gravels in river terraces and kames, moraines and boulder clay. |
| Carboniferous. | { | Millstone Grit. Reddish sandstones. |
| | | Upper group of limestones, sandstones, and coals. |
| | | Middle group of coals and ironstones. |
| | | Lower group of limestones and coals. |
| Carboniferous. | { | Upper group of white sandstones, shales, and cementstones. |
| | | Lower group of red sandstones and marls. |

| | | | |
|--------------------|---|--------------------------|---|
| Old Red Sandstone. | { | Lower Old Red Sandstone. | Upper group of conglomerates and sandstones. |
| | | | Middle group composed of contemporaneous volcanic rocks. |
| Silurian. | { | Upper Division. | Lower group of chocolate-coloured sandstones and marls. |
| | | | Sandy shales, sandstones, and grits, with characteristic Ludlow and Wenlock fossils. |
| | | Lower Division. | Upper black shale group. |
| | | | Lowther and Dalveen groups, containing the Wrae Limestone charged with Caradoc fossils. |
| | | Queensberry grits. | |
| | | | Lower black shale groups. |

The oldest members of the Lower Silurian formation are exposed along the crest of a sharp anticlinal axis on the hill slope overlooking Megget Water, near the farm of Cramalt. Consisting of black shales, which are overlaid by barren mudstones, they are grouped in virtue of the embedded graptolites with the Hartfell zone of the Moffat black shale series. Additional exposures of the Moffat series are met with near the county boundary, just above Loch Skene, but in these instances only the highest or Birkhill zones are represented. Resting on the black shales just described are found certain finely leaved shales, with occasional pebbly or conglomeratic bands, which are known as the Grieston beds. They are typically developed in this part of the county. Though their thickness is limited, they cover a considerable area, owing to the numerous sharp folds occurring in the series. Among the shales a dark band is met with, which is crowded with the characteristic *Graptolithus Griestonensis*, which takes its name from this locality. The massive grits following the Grieston shales in regular succession, which have been termed the Queensberry grits by the Geological Survey, are met with to the N of Manor Head. The members of this series form some of the highest ground in the south of Scotland. Broad Law and Cramalt, reaching 2754 feet and 2723 feet respectively, are composed of the massive grits of this subdivision. Owing to the amount of decomposed rock, an extensive covering of peat is met with on the surface of this broad tableland, but along the sides of the glens lines of *debris* occur, and especially towards the comb-shaped hollows at the head of the valleys. The features characteristic of this series may be studied on the hills lying to the S of the Tweed at Peebles. The great elevation of the Hartfell range, which exposes the black shales of the Moffat series along the crest of an anticline, is also due to the presence of the grits; the intervening Grieston shales having thinned away to a few feet of strata. A line drawn in an ENE direction across the Tweed at Peebles marks the upper limit of the Queensberry group. To the N of this boundary-line they pass underneath greywackes and shales, with occasional bands of grit and fine conglomerate containing casts of *Petraia* and encrinurids, and these beds are overlaid in turn by a thick group of shales, which are typically developed in the Lowther Hills in Dumfriesshire. These Lowther shales are also well represented at Wrae and Stobo in this county; at the latter locality they have been quarried for slates, and were formerly much used for this purpose in the Vale of the Tweed, but they have been entirely superseded by the Welsh slates. The Wrae shales are dark and finely leaved, possessing a silky lustre when freshly fractured. From the recent researches of the Geological Survey it would appear that the Wrae Limestone, which occurs in nodules and lenticular bands, is regularly interbedded with the shales. The perfect conformity between the two zones is well seen when the shales are followed to the WSW in Lanarkshire. It is important to observe also that the Winkstone beds, which are often highly calcareous, consist of decomposed pebbly grits, occupying the same general horizon as the Wrae Limestone. There are several bands of fossiliferous pebbly grit associated with the Lowther shales both in this county and in Lanarkshire, of which the band at Kilbucho is an example. The fossils from the Wrae Lime-

stone, and the Kilbucho and Winkstone conglomerates, have long been recognised as presenting a Caradoc facies. Among these may be mentioned *Orthis calygramma*, *Leptania tenuistriata*, *Spirifer bifuratus*, *Lituites cornuarietis*, *Asaphus tyrannus*, etc. It is evident, therefore, that the shales associated with these lenticular bands of limestone are of Llandeilo-Caradoc Age.

Lying in synclines of the Lowther shales are to be found certain bands of black shale, which are overlaid by a zone of dark and light coloured chert. One of the outcrops of the black shale is to be found in the Howe's Water, whence it may be traced to the sources of the Leithen Water and the boundary of the county near Blackhope Scar. From this point N to the edge of the Silurian rocks, several minor undulations are met with; but as the strata are arranged mainly in a great synclinal fold, only the Lowther shales and the underlying greywackes and shales are represented in this area.

In the Pentland Hills the Upper Silurian rocks occur in several isolated areas in the midst of the Old Red Sandstone, partly in Edinburghshire and partly in this county. Of these the largest and most important development extends from the head of the Lyne Water to the county boundary at the North Esk Reservoir, and E as far as the Greenlaw Hill. Excellent sections are exposed in the stream courses, and especially in the North Esk, where the strata are highly inclined and show various minor foldings. But on the whole there is a general ascending series towards the NW. At the base, grey, green, and red shales are met with, passing upwards through grits and sandstones into brown sandy shales and sandstones, weathering with a concretionary structure, which are overlaid by soft red shale and red sandy conglomerate, forming the basement beds of the Lower Old Red Sandstone. From the fossils obtained from these beds it would appear that they represent the Ludlow and portion of the Wenlock rocks of Wales. These isolated patches of Upper Silurian strata are the oldest rocks of the Pentland chain; indeed, they are of special importance on account of the perfect gradation which exists between them and the earliest deposits of Old Red Sandstone age.

Of the intrusive igneous rocks associated with the Silurian formation of this county, the oldest consist of quartz-felsites. A group of dykes is well seen in the Leithen Water, and in the neighbourhood of Grieston, where they generally coincide with the line of strike of the sedimentary rocks. The large basalt dykes of Tertiary age, so abundantly represented in Lanarkshire, are also met with in this county, though to a limited extent. A few examples occur near the county boundary at the head waters of the Tweed.

The Lower Old Red Sandstone of Peeblesshire is divisible into three groups like the representatives of the same formation in Lanarkshire. The lower division, consisting of red sandstones and marls, rest conformably on the Upper Silurian rocks of the Pentland Hills as already indicated, and have shared in the convolutions which have affected the latter. The members of the middle group are composed of porphyrites, melaphyres, and tuffs, which are merely a prolongation to the ENE of the volcanic series occurring to the S of Douglas and Tinto in Lanarkshire. An important feature connected with this middle division is the relation which it bears to the lower group. In the Pentland Hills the volcanic rocks of the middle group rest unconformably on the lower series, as is the case on the slopes of Tinto in Lanarkshire, but when they are traced still farther to the SW in the latter county they are found to be perfectly conformable with each other. The upper group consists of conglomerates, the pebbles of which have been derived from the volcanic series, and these are overlaid by sandstones. Occasional beds of porphyrite and tuff are intercalated with these conglomerates and sandstones.

In the Esk section, where the perfect conformity between the members of the lower group and the Upper Silurian rocks is visible, the Lower Old Red strata consist of soft marls and sandstones, with red felspathic

conglomerates containing pebbles of granite, felstone, quartz, and arenaceous rocks. It is interesting to note the occurrence of Ludlow fossils in these strata for some distance upwards from the base of the series. The area occupied by the lower group, however, is very limited compared with the other subdivisions. The latter form a belt of ground stretching across the county in an ENE direction from Skirling to Linton, near which locality they are unconformably overlaid by the Carboniferous formation. Throughout this tract the strata are arranged in a great synclinal fold, the centre of which is occupied by the conglomerates and sandstones of the upper group, while the contemporaneous volcanic rocks rise from underneath them on either side of the trough. It ought to be borne in mind, however, that the volcanic series is not traceable continuously along the SE side of the trough, owing to the existence of a great dislocation which brings different members of the Lower Old Red Sandstone into conjunction with the Silurian rocks. Sometimes only a portion of the volcanic series is exposed on the N side of the fault, sometimes no trace of them is to be found, and the conglomerates and sandstones of the upper division are found in position with the Silurian strata. A glance at the Geological Survey Map of the district (sheet 24, 1 inch) shows how the great trough just referred to gradually becomes shallower towards the SW, and hence at the county boundary near Skirling the porphyrites of the volcanic series curve round the conglomerates at the base of the upper group. The deepest part of the basin occurs to the NW of Romanno Bridge, where the highest members of the Lower Old Red Sandstone of this county are to be found.

There is only a small development of the Carboniferous formation within the county. The red sandstones and conglomerates forming the base of the system are exposed in the basin of the Medwin Water at the NW boundary of the county, where they lap round the Lower Old Red strata and stretch E to the Cairn Hills. They are well exposed in the stream courses, and on the slopes of Craigenar, and the hills lying to the S, where they have a gentle inclination towards the W. The most important development of the Carboniferous rocks in Peeblesshire occurs in the neighbourhood of Carlops and Leadburn, where the SW termination of the Edinburgh coalfield is met with. This portion of the basin is bounded on the N and S by two great faults running nearly parallel with each other; that on the S side brings the Carboniferous rocks into conjunction with the Silurian strata and an outlier of Old Red conglomerate; while the fault on the N side throws them against the Lower Old Red Sandstone. The former of these two faults has been traced across the country from the neighbourhood of Leadburn in this county to the valley of the Stinchar in Ayrshire—a distance of 70 miles, and throughout the greater part of its course it throws different members of the Old Red Sandstone against the Silurian rocks. It is of importance to observe, however, that it is not traceable at the surface along the boundary line of the Carboniferous formation to the NE of Leadburn in Midlothian. The members of the Carboniferous Limestone series and the Calciferous Sandstones overlie its position without any apparent dislocation, and at this part of its course it may be older than the Carboniferous Limestone. It is probable, therefore, that this fault may have formed a line of weakness during successive geological periods. It is only along the SW side of the basin that the unconformity between the Carboniferous rocks and the Old Red Sandstone is traceable for any distance. In this area the red sandstones and conglomerates which usually form the basal beds of the Carboniferous system are hardly, if at all, represented. The beds are more nearly allied to the Upper or Cementstone group, consisting of green and grey sandstones and shales, with occasional thin seams of limestone. At Hartside a thin limestone exposed at the roadside probably represents the Burdichouse Limestone of Midlothian.

The members of the lowest division of the Carboniferous Limestone series overlie the strata just described.

There are two prominent seams of limestone which are traceable round the margin of the basin from Carlops by Whitefield to Leadburn. These are succeeded by the representatives of the middle division, which in this area contain few workable coal seams. Of these, the Corby Craig seam has been chiefly mined, but along with this bed occur the Beattie, Stony, and Rumbles seams. The Flaiks Limestone, representing one of the bands which overlie this coal-bearing series, is exposed in the burn below Mitchellhill. An important outlier of the Carboniferous Limestone series occurs near Spittalhaugh to the S of Linton, within the area occupied by the Lower Old Red Sandstone. A band of limestone forms the lowest member of the series, which is succeeded by false-bedded sandstones and shales containing a thin seam of coal. Like the outliers of similar strata occurring in the Old Red Sandstone area S of Tinto, the existence of this fragment of Carboniferous Limestone resting unconformably on Old Red strata points to a gradual subsidence of the land barrier, and the overlap of higher members of the Carboniferous system.

In the neighbourhood of Auchincorth Moss the Millstone Grit is believed to exist, though the ground is much obscured with peat and glacial deposits.

During the great extension of the ice, the general direction of the ice movement was towards the E. Striae and *roches moutonnées* are not very abundant, but in the valleys of the Silurian table-land, as well as over the lower grounds, there is a great development of boulder clay. An interesting feature connected with the boulder clay of Peeblesshire is the occurrence of stratified sands, gravels, and clays in the deposit. Professor James Geikie has described some examples which were exposed during the cutting of the tunnel at Neidpath, where the stratified beds were inclosed in boulder clay. The sands, gravels, and clays were in all probability more extensive when originally deposited, but had been denuded by the ice sheet which accumulated the upper boulder clay. Along the valley of the Tweed and all its chief tributaries there are high level gravels, probably of glacial origin, which are frequently arranged in the form of kames. Still more interesting is the great development of moraines in the valleys draining the high grounds of the county. Indeed, nearly all the valleys in the White Comb and Broad Law area contain traces of the later glaciers. Perhaps the best examples are to be met with in the Winterhope Burn and along the banks of the Megget Water. The glacier which gave birth to the Winterhope moraines took its rise on the height above Loch Skene; at the loch it divided in two portions, one branch descended by the Grey Mare's Tail into Moffatdale, while the other crossed the watershed into the Winterhope Valley and joined the trunk glacier which followed the course of the Megget Water. No finer examples of lateral and terminal moraines are to be found in the S of Scotland. Moraines are to be met with also in various tributaries of the Megget Water, such as the Cramalt, Longhope, and Wylies Burns, and also in some of the tributaries of the Tweed, as in the Talla and Fruid valleys. (See Geological Survey Map, sheet 24, and memoir descriptive of the sheet.)

Minerals and Soil.—Blue clay slate is found in Traquair and Stobo parishes, and has long been extensively worked. Coal is found in the NE extremity of the county, and there are mines at Carlops, Coalburn, and Harlawmuir, and white sandstone abounds in the same district. Red sandstone of a firm texture and useful for building forms the hilly ridge of Broomyles, on the mutual border of Newlands and Linton. Limestone also abounds in the carboniferous district, and is extensively quarried and calcined for manure at Carlops, Whitefield, and Macbiehill. A bed of ironstone and some iron ore lie in the coal-field section, but are not rich enough to be remuneratively worked. Lead used to be worked in the vale of Leithen and on the Medwin estate; and silver has been found mixed with the galena in the latter quarter. Galena was also found in the glens of some of the tributaries of Quar Water; and

gold used to be discovered on the Glengaber Burn in Meggetdale. A great variety of clays lies over a considerable part of the Carboniferous formation, including a very thick bed of fire-clay, like that of Stourbridge, and a small seam of fuller's earth. Alum-slate is also found; and red and yellow ochres, with veins of manganese, occur. Much of the soil of Peeblesshire must remain unturned by the plough; and there is very great diversity in the character of the arable land. Among the hills every hollow or level patch is occupied with moss of various depths, generally yielding supplies of peat. Moss of another kind, found on the higher slopes, though in its natural state moist, forms under the influence of ploughing and manuring a more or less fertile character. The skirts of the heath-clad hills and the high dry-lying flats, especially in Linton, are covered generally with a sandy moorish soil; and sand and clay, often mingled with gravel, extend over most of the other high-lying lands. The river-plains or haughs have generally a prevailing light and sandy soil, though sometimes there is a more or less strong admixture of clay. Loam, whether clayey, sandy, gravelly, or stony, occurs only in the old croft lands, which have been blackened and mellowed by long and constant manuring and cultivation.

Climate.—'With its rounded grassy hills,' says Chambers, 'offering the finest sheep pasture, its alluvial vales, and clear streams, the county is free of any properties detrimental to general salubrity. With the absence of stagnant pools or unwholesome marshes is now to be remarked a high degree of improvement by the reclamation of waste lands and subsoil drainage, resulting in a singular lightness and dryness of atmosphere.' It may be added that the numerous plantations throughout the county aid this effect. The average annual rainfall is 29 inches, less than that of the adjoining counties.

The flora and fauna of Peeblesshire have been described in Chambers's *History of Peeblesshire* as somewhat limited. The same authority mentions as the chief indigenous trees and shrubs, the Scotch fir, ash, oak, elm, aspen, rowan or mountain ash, birch, alder, willow, hazel, hawthorn, elder, wild cherry, hagberry, sloe, juniper, whin or furze, dog rose, Scots rose, honeysuckle, ivy, common bilberry, whortleberry or blaeberry, red bilberry, cranberry, and three species of heath. Among trees not indigenous are the sycamore or plane, larch, spruce, silver and other firs, and yew. Alpine plants are scarce, but ferns are abundant in many parts. The most abundant kind of heath is the common ling or heather; but bell-heather and cross-leaved heath also abound; but many, even of the high hills, are covered with grass and not heath. Wild flowers are numerous and varied. Among the rarer plants that have been found in Peeblesshire are the flowering rush, spindle-tree, bird's-eye primrose, filmy fern, and the moss *Euxaetia aphylla*. Red deer and roe-deer are now extinct in this county, though Meggetland, formerly called Rodonna, was a royal deer-forest; and in 1530 James V. and his nobles killed eighteen score of deer in one day there. The chief mammals now are the fox, otter, weasel, stoat, hedgehog, common and water shrew, mole, squirrel, brown and water rat, common and field mouse, field vole, common and Alpine hare, rabbit, and the common and long-eared bat. The badger and polecat are now rare. The white eagle used to build in some parts of this county, but has long ceased to do so. The peregrine falcon is now rare, though at one time Posso Craigs were famous for its falcons of this breed. Other hawks and a great variety of smaller birds are indigenous to the shire. Black and red grouse, partridge, and pheasant (the latter artificially introduced) afford good sport in the season. The quail, golden plover, and dotterel are sometimes seen. The adder or viper is common, but very irregularly distributed. The chief fishes are the salmon, salmon-trout, common trout, pike, perch, and eel.

Industries.—The industries of Peeblesshire are agriculture, sheep-farming, and manufacturing, and a little

mining. According to the returns for 1881, 20 per cent. of the male population were engaged in agriculture, 32½ per cent. in industrial employments, 3 per cent. in commerce; 37 per cent. unproductive, and the remainder variously employed. Of the women 73 per cent. were unproductive, 9 per cent. were in domestic service, and the rest variously employed. The ancient forests of Leithen, Traquair and Etrick, and a vast extent of copses in the centre, W and N, formerly adorned and sheltered nearly all Tweeddale, protecting the pasturage and encouraging agriculture. So early as the reign of David I. this woodland district was dotted with the parks of manors of princes and barons, and the granges and churches of monks, and with mills and kilns and brew houses. Farming and grazing flourished, corn was raised in abundance, dairies and orchards were numerous. This time of prosperity lasted for about two centuries from 1097; but it was followed by 400 years of retrogression and wretchedness, in which the demolition of the natural protection of the woods was one of the first and most fatal steps. Dr Pennicuk, who published his well-known *Description of Tweeddale* in 1715, saw the work of renovation commence; and he praised the young landowners for beginning to form plantations, which, as he foresaw, have enriched as well as embellished the country to the present day. The rural population, though industrious enough, were 'yet something artful, stubborn, and tenacious of old customs. There are,' Pennicuk goes on, 'amongst them that will not suffer the wrack to be taken out of their land, because (say they) it keeps the corn warm, nor sow their bear-seed, be the season wet or dry, till the first week of May be over, which they call *Rauchie* week, nor plant trees nor hedges, for wronging the undergrowth, and sheltering the birds of the air to destroy their corn; neither will they trench and ditch a piece of useless boggy ground, for fear of the loss of 5 or 6 feet of grass, for a far greater increase; which, however, with a custom they have of overlaying [overstocking] the ground, which they term *fall blenshing*, makes their cattle generally lean, little, and give a mean price in a market.' In 1830, Archibald, Earl of Islay, afterwards third Duke of Argyll, began his famous attempt to reclaim a piece of boggy ground (which he appropriately rechristened as Whim) by draining and planting; and about the same time Sir Alexander Murray of Stanhope raised his plantations and wrote his tracts on agricultural matters; while the desire for improvements gradually spread among other proprietors in the county. The agricultural history of Peeblesshire has been written by Rev. Charles Findlater in 1802, who chronicles the successive steps in the advance. About 1763 or 1764 Mr George Dalziel, innkeeper, first at Linton and then at Noblehouse, was the first who sowed turnip in the open fields; while Mr James Macdougall, a small farmer of Linton, originally from the neighbourhood of Kelso, was, in 1778, the first person to introduce the rotation of cropping, the cultivation of turnips for the use of sheep, the growing of potatoes in the open fields, and some other reforms. Till 1750 grain used to be winnowed by the wind on hill tops; but about that date farmers were introduced. The tail had almost disappeared by 1832, its place being taken by thrashing-mills, worked by water or horse-power. A very considerable impetus was given to agriculture in 1788, by the security of tenure introduced by the Earl of March, who gave long leases of 57 years. The tenants were encouraged to erect better farm buildings, and to lay out more labour and capital in clearing, enclosing, and improving the land; and although, ultimately in 1821, the leases were reduced by the House of Lords as incompetent on an entailed estate, the advantages were not wholly allowed to disappear. During the present century the farmers and landowners of Peeblesshire have made steady progress; and in proportion to its natural capacities, Tweeddale rivals even Haddingtonshire itself in the enlightened methods and skill of its agriculturists. The introduction of guano and other light fertilizers has enabled cultivation to be

extended to much land to which previously the steepness of the hills had prevented the carting of dung; much hill-pasture has, in this way, been converted into productive arable land. So early as 1775 observers had begun to notice the diminution in the number of small farms and peasant proprietors in Peeblesshire; and the process has gone on since then, although even yet there are small holdings in all parts of the shire. According to the returns of 1881, there were 31 farms of 1000 acres or more; 26 between 500 and 1000; 65 between 100 and 500; and 15 between 5 and 100 acres. Chambers, writing in 1861, says that rents are generally from £250 to £800, though in some instances upwards of £1000 is paid. The general average per acre he puts at 32s. or 33s. per acre, except in the neighbourhood of towns or villages, where as much as £4 per acre is paid. Leases are generally for 19 years, rarely for 21 or any other number of years, except in the case of sheep-farms, which are let on leases of from 9 to 15 years. The most common rotation, according to the same authority, is a five years' one:—(1) Oats after lea; (2) potatoes, turnips, or other green crops; (3) barley, oats, or wheat; (4) grass, for hay or pasture; (5) grass, as pasture. Hinds or married ploughmen receive from £13 to £15 in money, together with various perquisites, such as a cow's keep, 65 stones of oatmeal, a month's food during harvest, etc. A grieve receives about £24 in money. Young men living with the farmer receive £18 to £20; boys, up to £8 a year; female servants, from £8 to £10. The botby system of lodging farm labourers is unknown in the county; but the bondlager system prevails to a certain extent. The following table indicates the principal crops, and the acreage under each in various years:—

| | 1867. | 1873. | 1874. | 1880. | 1882. |
|-------------------------------------|--------|-------|--------|--------|--------|
| Barley, | 1,415 | 1764 | 1,881 | 1,318 | 1,183 |
| Oats, | 9,060 | 9561 | 9,319 | 9,057 | 9,263 |
| Pease, | 146 | 26 | 28 | 6 | 73 |
| Turnips, | 5,297 | 5775 | 5,144 | 4,820 | 4,748 |
| Potatoes, | 616 | 480 | 626 | 1,006 | 671 |
| Cabbage, etc., | 94 | 246 | 380 | 268 | 333 |
| Other Green Crops, | 159 | 127 | 134 | 151 | 135 |
| Bare Fallow, | .. | .. | 137 | 91 | 4 |
| Grass, Permanent Pasture, | 13,516 | .. | 10,371 | 11,297 | 13,977 |
| Grass in Rotation, | 11,733 | .. | 13,001 | 13,965 | 12,044 |

In 1874 there were 9041 acres under plantation; in 1882, 10,177. Market gardens and nursery grounds occupied only 7 acres in 1882.

The following table shows the quantity of farm stock at various dates:

| | 1867. | 1874. | 1880. | 1882. |
|-------------------|---------|---------|---------|---------|
| Horses, | .. | 916 | 1,184 | 892 |
| Cattle, | 4,903 | 6,553 | 5,934 | 5,643 |
| Sheep, | 189,796 | 201,250 | 199,512 | 189,753 |
| Pigs, | 1,174 | 955 | 719 | 872 |

In Peeblesshire, as may be inferred from the preceding statistics, as well as from the nature of the surface, sheep-farming is a highly important industry. In many cases, arable farming is combined with it by the same farmer, but the hills in Tweedsmuir near the upper course of the Tweed, and those flanking the valleys of the Leithen, Manor, and Megget, are too high for agriculture, and are entirely devoted to sheep-pasturing. This industry had already begun to be of importance in Peeblesshire in the beginning of the 17th century. In the short account of the county which appeared in 1654, along with Timothy Pont's Map in Blaeu's *Atlas*, mention is made of the good and wholesome pasturage for sheep to be found, especially in the S next Selkirkshire; and Pennicuk, in 1715, mentions that the county is 'stored with such numbers of sheep that in the Lintoun mercats, which are kept every Wednesday during the months of June and July, there have frequently been seen 9000 in the customer's

roll, and most of all these sold and vented in one day.' The introduction of turnip growing on a large scale doubtless encouraged the keeping of sheep, during the 18th century, which has very much developed in the present century. The Cheviot breed predominates generally; but in the more exposed and inclement lands the Black-faced breed is found to be hardier. In some parts a cross between one of these breeds and the Leicester breed is found suitable. Linton market ceased to be held in 1856; Melrose, Lanark, and Lockerbie are now the chief marts for the Peebleshire flock-masters. Sheep-farms are let on leases generally from 9 to 15 years; the rent is usually calculated according to the number of sheep a farm can support, and the kind of sheep is also taken into account, with their estimated value and productiveness. Rents thus vary from 5s. to 10s. and even 12s. per sheep. Shepherds are sometimes paid in the same manner as hinds, receiving about £20 in money, besides perquisites; but in most cases he receives no money, but is entitled to the proceeds from a certain number of sheep, known as the 'shepherd's pack,' which feed along with his master's flock. The Teeswater or other short-horn black cattle are kept for grazing and stock purposes; while the Ayrshire breed is preferred for dairy purposes, to which most attention is given in the northern parishes. The horses are chiefly of the Clydesdale breed. Pigs and poultry are tolerably ubiquitous; and bees are kept, chiefly in the lower parts of the county.

The manufacturing industries of Peebleshire are wholly centred in a few towns and villages, in spite of the abundant water power and other natural advantages of the county. The woollen manufacture, carried on chiefly at INNERLEITHEN, WALKERBURN, and PEBBLES, is the chief staple, and employed 1459 hands in 1881. Other industries are referred to in our articles on these places, and BRIGHTON, CARLOPS, and LINTON. The commerce of the county restricts itself to the export of the produce of the sheep, arable, and dairy farms; and import and retail of the small amount of goods required for local consumption. There is some coal mining in the northern parishes, chiefly near Carlops; slate and other quarries have been already referred to.

Railways and Roads.—The county is very well provided with means of communication. A branch of the North British railway enters it at Leadburn Junction in the N, passes Eddleston station before reaching Peebles, where it turns eastwards along the Tweed, passing Cardrona and Innerleithen stations before it enters Selkirkshire, where it joins the main line at Galashiels. Another line from the Caledonian station at Symington crosses the W boundary about the middle, and follows the course of the Biggar Water and Tweed to Peebles, passing Broughton, Lyne, and Stobo stations. A shorter reach of the North British railway branches off at Leadburn towards the W, and runs through the northern part of the county, past the stations of Lamancha, Macbie Hill, and Broomlee, and joins the Caledonian line at Carstairs. In spite of the hilly nature of the county, good roads are tolerably plentiful, except in the mountainous and rough districts to the S of the Tweed, where there are only rough tracks. The high road from Edinburgh enters Peebleshire at Leadburn, and runs directly S alongside the railway and Eddleston Water to Peebles; thence a road runs down Tweeddale, through Innerleithen and Walkerburn, into Selkirkshire; while a second proceeds up the valleys of the Tweed and Biggar Water, through Broughton, and thence to Glasgow *via* Biggar, throwing off, near Lyne church, another branch, which runs up part of the Lyne and Tarth Waters and through Kirkurd parish, and thence also to Glasgow. A third road from Peebles runs S along the course of the Manor Water to Megget and St Mary's Loch. A road from Edinburgh to Dumfries enters the county at Leadburn, runs SW to Kirkurd, where it is joined by another road entering the county at Carlops, and thence proceeds through the western part of the shire parallel to the head waters of the Tweed, till it leaves Peebleshire in

the extreme S of Tweedsmuir parish. Another branch of the Carlops road turns more to the W at Linton, and enters Lanarkshire at Kippis, whence it proceeds to Dumfries *via* Biggar and Moffat. Most of the larger river-valleys, as those of the Lyne, Leithen, Quair, etc., are traversed by shorter roads connecting with one or more of these main arteries of traffic. A turnpike road runs along the S bank of the Tweed to Traquair, and thence on into Selkirkshire. A mountain track, which strikes off near Traquair, and passes over the summit of Minchmoor, was at one time an important thoroughfare between Peebles and Selkirk, and was the route by which the Marquis of Montrose fled after the battle of Philiphaugh. Another mountain track in the S, traceable from the neighbourhood of Drummelzier over the left shoulder of Dollar Law, and along part of Craigie Burn, is called 'The Thief's Road,' from having been a common route of the Border forayers. It is sometimes also called the 'King's Road,' because James V. is said to have gone by it to execute justice on the notorious Cockburn of Henderland.

The only towns are Peebles and Innerleithen; the only villages with more than 400 inhabitants are Walkerburn (1026) and Linton (434). The remaining chief villages are, in order roughly from N to S, Carlops, Eddleston, Skirling, Broughton, and Drummelzier. The chief seats are Traquair House, The Glen, Cardrona House, Kailzie House, Glenormiston, Holylye, Venlaw, Kerfield House, Kingsmeadows, Portmore, Darnhall, Cringletie, Medwyn House, Garvaid House, Spitalhaugh, Boriland House, Callands, Scotston, Romano House, Castle Craig, Netherhall, Kachan House, Mossfennan, Glenotho, Stobo Castle, Barns, Hallyards, Drummelzier House, Dawick House, Whim, Polmood, Quarter, Cairnmuir, Lamancha, Macbie Hill, Firm, Hartree, Badlieu, Leithen Lodge, Logan, Braxfield, Fingland, Winkston, and Halmyre. According to *Miscellaneous Statistics of the United Kingdom* (1879) 232,410 acres, with a total gross estimated rental of £142,614, were divided among 699 proprietors; one holding 41,247 acres (rental £14,316), five together 68,586 (£22,190), six 45,388 (£21,102), sixteen 50,848 (£24,337), twelve 16,633 (£8945), seven 5140 (£4091), etc. Peebleshire is governed by a lord-lieutenant, a vice-lieutenant, a convener, 14 deputy-lieutenants, a sheriff, a sheriff-substitute, and 52 justices of the peace. The meetings of the sheriff court are noted in our article PEBBLES. The police force in 1884 consisted of 10 men, and a chief constable with a salary of £200. Peebleshire and Selkirkshire together have one representative in parliament. The county constituency in 1883-84 was 980. Heritable property in the county has advanced very much in value along with the advance in the general prosperity. According to the valuation made in the reign of Alexander III., and known as the Old Extent, the annual rental of lands in Peebleshire was £1274, but by the destructive wars of succession that was reduced to £863 in 1368. In 1657 the assessed annual rental had again risen to £4328; in 1802 it was estimated at £26,000; and in 1863 (exclusive of burghs and railways) it was £90,927; in 1876 (also exclusive) it was £115,162; and in 1883-84 £118,260; railways £24,718; Edinburgh District Water Works, £1139. Peebles is one of the least densely populated of Scottish counties, having only 39 persons to the square mile; the average for the entire country being 125. Ross and Cromarty, Argyll, Inverness, and Sutherland, alone have a scantier population. Pop. (1801) 8735, (1811) 9935, (1821) 10,046, (1831) 10,578, (1841) 10,499, (1851) 10,738, (1861) 11,408, (1871) 12,330, and (1881) 13,822, of whom 7196 were females, 108·6 to every 100 males. Only 3 persons, or '02 of the population, were Gaelic-speaking. Separate families 2953. Houses (1881) occupied 2696, vacant 247, building 45.

There are sixteen *quoad civilia* parishes in Peebleshire, viz., Linton, Newlands, Lyne with Megget, Eddleston, Peebles, Innerleithen, Traquair, Manor, Stobo, Kirkurd, Skirling, Broughton, Kilbucho, Glenholm, Drummelzier, and Tweedsmuir. The two former

parishes of Dawick and Kailzie have been suppressed. Of the existing sixteen, Broughton, Glenholm, and part of Kilbucho are treated as one parish *quoad sacra*; while the remainder of Kilbucho is united with Culter parish in Lanarkshire. Lyne and Megget, though there are some 8 miles between their respective nearest points, are treated as a single parish *quoad omnia*. Tweeddale and Lothian give name to a synod in the Established Church of Scotland, and to one in the Free Church also. Twelve of the fourteen parochial charges in Peeblesshire belong to the presbytery of Peebles; the other two, Skirling and the united parish of Broughton, Glenholm, and Kilbucho, belong to the presbytery of Biggar in the same synod. A small part included in Yarrow parish is in the presbytery of Selkirk and the synod of Merse and Teviotdale. The Established Church has 15 places of worship in the county; the Free Church, 5; U.P. Church, 4; Scottish Episcopalian, 2; Roman Catholic, 2; Congregational, 1. There are in the shire 23 schools (20 of them public), which, with total accommodation for 2489 children, had (1882) 1973 on the registers, and an average attendance of 1611. The staff included 30 certificated and 14 pupil teachers. All the parishes, save four, are assessed for the poor. There were, in 1882-83, 177 registered and 157 casual poor, on whom was spent a total of £2766. The only poorhouse is that of Peebles Union at Peebles. There is no hospital in the county. There is a joint lunacy board for Midlothian and Peeblesshire, with an asylum at Rossllynce in the former county. The percentage of the illegitimate births was 8.9 in 1871, 9.1 in 1873, 6.5 in 1876, 10.3 in 1880, and 8.6 in 1882. The 2d Midlothian and Peebleshire Rifle Volunteer Corps has its headquarters at Penicuik in Midlothian, and the Haddington, Berwick, Linlithgow, and Peebles Artillery Militia (2d Brigade) at Dunbar. The registration county gives off parts to Selkirkshire and Lanarkshire, and includes parts of Selkirkshire; its population is 13,688.

Tweeddale gives the title of Marquis to the family of Hay, whose family seat is Yester House in Haddingtonshire. The creations are Baron Hay of Yester, 1488; Earl of Tweeddale, 1646; and Marquis of Tweeddale, Earl of Gifford, and Viscount of Walden in 1694. Other noblemen and baronets connected with the county are Lord Elibank of Darnhall; the Earl of Wemyss and March, Viscount of Peebles, Baron Douglas of Neidpath, Lyne, and Minan, with his seat at Barns; the Rev. Sir William Henry Gibson-Carmichael, thirteenth baronet of Durie and Skirling, with his seat at Castle Craig; Sir Robert Hay, eighth baronet of Smithfield and Haystoune, with seat at Kingsmeadows; Sir Graham Graham Montgomery, third baronet of Stanhope, with seat at Stobo Castle; and Sir James Naesmyth, fifth baronet of Posso, with seats at Dawick and Stobo.

Antiquities.—Peeblesshire abounds in relics of its early British inhabitants and their Teutonic invaders, and not the least interesting of these is the topographical nomenclature, which, though very largely Celtic, also affords examples of the blending of the two races of languages. There are remains of what are called Druid circles at Sheriffmuir in Stobo, near Tweedmuir church, and at Gatehope in Innerleithen. Tombs and tumuli with stone coffins and human remains have been found in nearly every parish, chiefly in the W, and especially along the valley of the Lyne. A tumulus near the junction of the Powsail and Tweed is pointed out as the burial-place of the great enchanter Merlin. Standing stones, whatever they serve to mark, are found at Bellanrig in Manor, Sheriffmuir in Stobo, Cademuir in Peebles, and on the Tweed in Traquair and Innerleithen, and at Harestanes. On very many of the tops of the lower hills and knolls are found relics of ancient hill-forts, oval and round, of various sizes and probably of various ages. They seem to have been placed so as to command the routes and passages through the county. Chambers enumerates over 50 of these—5 in Eddleston parish, 8 in Peebles, 3 in Innerleithen, 6 in Traquair, 4 in Manor, 3 in Stobo, 1 in Drummelzier, 1 in Tweeds-

muir, 1 in Lyne, 2 in Skirling, 10 in Broughton, Glenholm, and Kilbucho, 3 in Kirkurd, 2 in Linton, and 5 in Newlands. The largest is Milkieston Rings in Eddleston. Large artificial earthen terraces, like gigantic flights of steps, are seen on some of the steep hill-sides. They are probably connected with ancient methods of agriculture. The chief are at Purvis Hill in Innerleithen, on Noldchall farm in Newlands, Roger's Crag in Halmyre, Torwood near Kailzie, on a hill below Venlaw House, and at Kilbucho. There are the remains of a large and interesting Roman camp at Lyne, of a smaller one at Linton near Whitefield, and doubtful traces of a third in Manor. Castles and peel-towers, consisting for the most part of a single tower, are very abundant in the county, and are to be referred to feudal times. Their number and their relative position are a tacit testimony to the wildness of the times that built them, for they are generally built so that one might signal by fire to its neighbour the approach of the hostile invader. Chambers enumerates the chief as follows:—Thence [Holye, at the issue of the Tweed into Selkirkshire] communication through Peeblesshire was kept up, generally zigzagging across the river, to Scrogbank, Caberstone, Bold, Flora, Purvis Hill, Pirn, Traquair, Grieston, Ormiston, Cardrona, Nether Horsburgh, Horsburgh, Peebles, and Neidpath. At Peebles signals went northwards to Smithfield, Hutchinfield, Shielfgreen, Foulage, Cringletie, Blackbarony, and the high grounds on the borders of Midlothian. Southwards Peebles communicated with Haystoune. Pursuing the course of the river Neidpath was seen at Caverhill, which sent signals up Manor Water, and also to Barns, whence there were communications with Lyne, Easter Haprew, Dawick, Stobo, Dreva, Tinnis, Drummelzier, Stanhope, Quarter, Wrae, Mosfennan, Kingledoors, Oliver Castle, Polmood, and Hawkshaw. Ascending the Lyne there were towers to be communicated with at Wester Haprew, Stevenston, Callands, Kirkurd, and Skirling; also at Romanno, Halmyre, Carlops, Colcoast, Briglands, Whiteford, and probably some other places. The more interesting and important towers and castles are mentioned in separate articles; and additional antiquities are noted in the articles on PEEBLES and the various parishes and villages.

History.—When the Romans penetrated to the south of Scotland the district that is now Peeblesshire was inhabited by a tribe to whom the invaders gave the name of Gadeni. The Roman occupation of the region was probably neither very intimate nor very long, and traces of their camps, etc., are few; while their northern thoroughfare, known as Watling Street, passes half a mile outside the nearest point of Tweeddale. After the departure of the Romans the county became exposed to the successive attacks of the Scots-Irish and the Angles and Frisians; and though it formed for some time part of the Cymric kingdom of Strathclyde or Cumbria, it was afterwards included in the Saxon kingdom of Northumbria; and finally, when the whole south of Scotland was handed over to Malcolm, King of Scots, in 1088, became amalgamated with the Scottish kingdom. Peeblesshire shared in the benefits which Scotland received from the influx of the more civilised Saxons who fled before the Norman invasion of England in 1066; and after Henry II.'s edict in 1155 banishing all foreigners from England a number of industrious and skillful Flemings are said to have settled at Peebles, and possibly to have planted and fostered the woollen industry there. In the reign of David I. (1124-53) Peebleshire advanced in importance; there were royal castles at Peebles and at Traquair; and the town of Peebles began to be visited and privileged by the successive Scottish monarchs. It is probably to the 12th century that the older castles in the county should be referred. Early in that century the deanery of Peebles—answering tolerably closely to the present shire—was erected and placed in the archdeaconry of Teviotdale, in the new diocese of Glasgow. There were, however, no large abbeys or important religious houses ever founded in Peebleshire, the chief ecclesiastical building being the

Church of the Holy Rood, founded at Peebles by Alexander III. Before 1286 the shire had already been recognised; and two sheriffs—one at each of the royal seats—exercised jurisdiction. These, however, were superseded by a single sheriff in 1304, while Edward I. held the district. Carlops and Crossryne Hill were the northern limits of the region surrendered in 1334 by Edward Baliol to Edward III. In the wars of the succession Peebleshire suffered severely, and was several times harried by the English in spite of its mountain barriers; while the turbulent and lawless Border barons distracted this along with the other southern counties with their feuds and forays. This state of disturbance continued more or less violently down to the time of Charles I. and Cromwell. In 1650 Cromwell's troops besieged and took Neidpath; and the justice of peace records of the county, which begin in 1656, contain in the first volume a series of instructions from the council of the Protector. Peebleshire was not one of the centres of the Covenanters; nor did the rebellion of 1715-45 affect it very much, though in the latter year a division of the Chevalier's army marched through the county on their way to England. The high sheriffship of Peebles had become almost hereditary in the family of the ancestors of the Earl of Tweeddale, who in 1686 sold his lands, etc., to the second Duke of Queensberry. The latter gave them to his son, the Earl of March, and the representatives of the last, in 1747, claimed £4000, but received only £3200, for the sheriffdom of Peebles on the abolition of hereditary jurisdictions. The first sheriff-depute under the new order was James Montgomery, who afterwards rose to be Chief Baron of the Exchequer and first baronet of Stanhope. From the union of the Scottish and English parliaments in 1707 till 1832 Peebleshire returned one member; while the burgh of Peebles united with Selkirk, Linlithgow, and Lanark in returning a second. In 1832, however, the burgh and county were made a united constituency with one member, and this continued till 1868 when the present division was made.

Eminent Men.—There are few old families in Peebleshire, for lands and houses there have changed hands repeatedly; and even the nobleman who derives his title of Marquis from the shire is not in possession of his ancestral lands. The Horsburghs of Horsburgh boast the longest unbroken line of descent in the shire. Among the old historical families most frequently heard of in connection with some feud or raid are the Tweedies of Drummelzier and the Veitchs of Dawick, the Hays of Yester, Geddeses of Rachan, Hunter of Polmood, Murrays of Blackbarony and Elibank, and the Frasers of Neidpath. The mighty wizard Merlin is said to have lived, died, and been buried in Peebleshire; and some authorities identify Caercoit Celedon, the site of King Arthur's seventh battle, with Cademuir. St Ninian, otherwise Ringan, is said to have introduced Christianity to the district; and St Kentigern, called also St Mungo, is said to have preached here in the middle of the 6th century. Among less mythical personages we note Sir John Stewart of Traquair, who became Lord High Treasurer of Scotland, and in 1633 was created Earl of Traquair; the lords of session Cringletie, Murray, and Henderland; Sir David Murray, fourth baronet of Stanhope, who was the Chevalier's secretary in the '45; and James Geddes, younger of Rachan (1710-48), author of *An Essay on the Composition and Manner of the Ancients, particularly Plato*. Alexander Pennicuk, author of the *Description of Tweeddale*, was, though he spent his life in Peebleshire, probably a native of Midlothian. Other noteworthy natives of Peebleshire are noted under PEEBLES and the various parishes.

The literary associations of Peebleshire are both numerous and interesting. Very frequent reference is made to Tweeddale person and place in the minstrelsy of the Scottish border, whether ballad or simple song, and the Tweed has given rise to more poetry than any river in Scotland. One of the most pathetic ballads in the language is *The Lament of the Border Widow*,

placed in the mouth of the wife of the notorious Cockburn of Henderland, whom James V. 'justified' in 1529. Among the poems which have rendered various spots in the county famous are *Tweedside*, by John, Earl of Tweeddale (1645-1713); the old ballad of the *Logan Lee*, a place about 14 miles from Tweed's-Well; Robert Crawford's (1695-1732) *Bush aboon Traquair*, and Principal Shairp's new version under the same name; and William Laidlaw's tender ballad *Lucy's Flittin'*, which has immortalised the Glen. A graphic, if somewhat burlesque, picture of Scottish lowland life in the early 15th century is given in *Pebbis to the Play*, usually ascribed to James I.; and a more satirical account of clerical vices towards the end of the same century, in the anonymous *Thrie Priestis of Peebles*. Alexander Geddes (1737-1802), formerly tutor in the Earl of Traquair's family, wrote about 1781, *Linton; a Tweeddale Pastoral*, in honour of the birth of the eighth Earl of Traquair. Scotston House in Newlands parish was for a time the residence of Smollett the novelist, whose sister had married Mr Telfer, the proprietor. The banks of a small rivulet flowing into the North Esk near Carlops are popularly identified as the scene of Allan Ramsay's famous pastoral *The Gentle Shepherd*; four trees near the Tweed, on the farm of Patervan in Drummelzier, mark the former site of the hamlet referred to by Burns in his song,

'Willie Wastle dwelt on Tweed,
The spot they ca'd it Linkumoddie;'

and several of James Hogg's songs have their scenes in Peebleshire, as *Over the Hills to Traquair*, *The Bridal of Polmood*, *The Brownie of Boodieck*. Sir Walter Scott has many allusions to Peebleshire in his works—prose and poetry; thus, e.g., *St Ronan's Well* is identified with Innerneath Spa; and the old house of Traquair is one of the prototypes of 'Tullyveolan' in *Waverley*. In Manor parish, also, stood the cottage of David Ritchie, 'The Black Dwarf,' whom Scott visited in 1797, while staying with the aged Professor Adam Ferguson at the neighbouring mansion of Hallyards. The conduct of the fourth Duke of Queensberry in ruthlessly denuding the banks of the Tweed at Neidpath of their beautiful timber, called forth an indignant sonnet from Wordsworth. More modern poets are the Rev. James Nicol (1793-1819), native of Inverkeithen, and minister of Traquair, who wrote *Where Quair rins sweet among the Flowers*; Thomas Smibert (1810-45), born at Peebles, whose *Lo anche! Poems chiefly Lyric*, contains some local pieces; and Professor Veitch of Glasgow, who, besides his *Tweedside and Hillside Rhymes*, has written a sympathetic account of Border history and poetry.

See Dr Alexander Pennicuk's *Description of Tweeddale* (1715; reissued with notes 1815; 3d ed. 1875); Captain Armstrong's *Companion to the Map of Tweeddale* (1775); Rev. Charles Findlater's *General View of the Agriculture of the County of Peebles* (1802); Dr William Chambers' *History of Peebleshire* (1864); an article on the 'Topography and Agriculture of Peebleshire,' by Lawrence Anderson, in *Trans. Highl. and Ag. Soc.* (1872); Professor John Veitch's *History and Poetry of the Scottish Border* (1878); and Watson's *Guide to Peebleshire* (2d ed., Peebles, 1881). A small annual almanac is published at the office of the *Peebleshire Advertiser*.

Peel Fell. See CASTLETON, Roxburghshire.

Peelwalls. See AYTON.

Peffer or Peffery, a picturesque stream of Fodderty and Dingwall parishes, Ross-shire, rising at an altitude of 1750 feet above sea-level, and winding 9½ miles south-south-eastward and east-by-northward, till it falls into the Cromarty Firth, near its head, and just below the town of DINGWALL. See STRATPEFFER.—*Ord. Sur.*, shs. 93, 83, 1881.

Peffer Mill. See LIBERTON.

Peffers, The, two streamlets in the N of Haddingtonshire, rising within a brief distance of each other in a meadow in Athelstaneford parish, and flowing the one

westward to Aberlady Bay, the other eastward and north-eastward to a creek $1\frac{1}{2}$ mile N of Tynninghame House. West Peffer Burn has $6\frac{1}{2}$ or 7 miles of course; and, except for the $\frac{2}{3}$ mile immediately below its source, flows the whole way between Drilton on its right bank, and Athelstaneford and Aberlady on its left. East Peffer Burn has 6 miles of course, though, measured along its nominal tributary but real head-water of Cog-tal Burn, it has at least 8; and it flows, over most of the distance, through Prestonkirk and Whitekirk parishes. Each stream has a fall, from source to mouth, of not more than 25 or 30 feet, and is, consequently, sluggish in its motion, looking like a large drain, and corresponding in character to the import of its name, 'the slowly running river.' The entire strath, traversed by both streams, though now a rich alluvial mould, was anciently a morass, bristling with forest, and tenanted by wild boars and beasts of prey. Large oaks have often been found inhumed in moss on the banks, their tops generally lying towards the S. At the widening and deepening of the bed of the streams a number of years ago, for preventing an overflow and stagnation of water during winter, several stag-horns were dug up very near the surface of the former bed.—*Ord. Sur.*, sh. 33, 1863.

Peircecton. See PERCECTON.

Pencaitland (Cymric *pen-caeth-llan*, 'head of the narrow enclosure'), a village and a parish in the W of Haddingtonshire. The village, lying 271 feet above sea-level, is $3\frac{1}{2}$ miles SE of Tranent, $5\frac{1}{2}$ SW of Haddington, and $1\frac{1}{2}$ mile SE of Winton station on the Macmerry branch of the North British, this being 13 miles E by S of Edinburgh. 'The Tyne,' wrote Sir Thomas Dick Lauder in 1847, 'divides it into two parts, called Easter and Wester Pencaitland. Wester Pencaitland contains an ancient market-cross; but the most interesting and picturesque feature of the village is the old church, with its small octagonal belfry, in Easter Pencaitland, embosomed in a grove of tall and stately trees. We have long been in the habit of considering the manse as a gem amongst clergymen's residences of the same kind. Situated on the sunny slope, amid shrubberies and garden stretching down the river, it seems to be the very nest of human content' (*Scottish Rivers*, Edinb. 1874). Everard de Pencaitland granted the church to Kelso Abbey for the salvation of his lord, King William the Lyon (1165-1214); but John de Maxwell in the first half of the 14th century conveyed the advowson to the monks of Dryburgh, and with them it continued till the Reformation. The Pencaitland aisle is of pre-Reformation date; but the body of the church was built towards the close of the 16th century, the tower in 1631. As restored in 1882, at a cost of £275, it contains 480 sittings. At the W end is a quaint epitaph 'to the memorie of un^{de} Ka. Forbes, spouse to M. Io. Oswald, Anno dom. 1639; and in the churchyard is an Iona cross to James, sixth Lord Ruthven (1777-1853). David Calderwood (1575-1650), the historian, and Robert Douglas (c. 1600-73), were ministers here. Pencaitland has also a Free church and a post office, with money order and savings' bank departments. An elegant public hall has been lately built in Wester Pencaitland by Mrs Trevelyan of Tyneholm at a cost of over £1200, in memory of her husband, Arthur Trevelyan, Esq., who died in 1880.

The parish, containing also Newtown village, is bounded N by Gladsmuir, SE by Salton, S and W by Ormiston, and NW by Tranent. Its utmost length, from ENE to WSW, is $4\frac{1}{2}$ miles; its breadth varies between $4\frac{1}{2}$ furlongs and 4 miles; and its area is $5075\frac{1}{2}$ acres. The TYNE meanders 5 miles east-north-eastward—for $2\frac{1}{2}$ miles across the middle of the parish, and elsewhere along or close to the Ormiston and Salton boundaries; Birns, Keith, or Salton Water flows to it $1\frac{1}{2}$ mile northward along the boundary with Salton; and Kinchie Burn, a feeder of Birns Water, runs $2\frac{1}{2}$ miles east-by-northward across the southern interior and along the southern boundary. Beside the Tyne the surface sinks to 200 feet above sea-level; and thence it rises gently northward to 400 feet at Winton Hill, and southward

to 479 near Fountainhall. Thus while it offers no marked natural feature, this parish wears a pleasant English aspect, its well-enclosed, well-cultivated farm being prettily diversified with meadows and woods. The rocks belong mainly to the Carboniferous Limestone series. Coal, though lying on the outer margin of the Lothian coalfield, abounds, and is mined for the supply of the southern and south-eastern district of the county and of part of Lauderdale. Carboniferous limestone, enclosing numerous fossils of the kinds usual to this rock, is also found and worked to a small extent. Sandstone has been worked in several quarries; and that of the Jerusalem quarry has long been celebrated, being of laminated texture, of a uniform grayish-white hue, and yielding blocks of from 20 to 30 feet in length. The soil is naturally wet and clayey, but has been greatly improved. About one-thirteenth of the entire area is covered with wood, partly plantation and partly natural oak and birch; nearly 200 acres are laid out in artificial pasture; and all the rest are regularly tilled. Pencaitland House, now a ruin, in the immediate vicinity of Wester Pencaitland, was the seat of James Hamilton (1660-1729), who on his elevation to the bench assumed the title of Lord Pencaitland. The estate of Pencaitland belongs now to his descendant, the Dowager Lady Ruthven, whose seat, WINTON CASTLE, is noticed separately, as also is a third mansion, FOUNTAINHALL. Her Ladyship is chief proprietor, 3 others holding each an annual value of £500 and upwards, 2 of between £100 and £500, and 2 of from £20 to £50. Pencaitland is in the presbytery of Haddington and the synod of Lothian and Tweeddale; the living is worth £350. Pencaitland public, Newtown, and New Winton schools, with respective accommodation for 135, 74, and 101 children, had (1883) an average attendance of 46, 49, and 37, and grants of £35, £42, 14s. 6d., and £26, 2s. Valuation (1860) £8628, (1884) £7891, 13s. Pop. (1801) 925, (1831) 1166, (1861) 1187, (1871) 1320, (1881) 1107.—*Ord. Sur.*, sh. 33, 1863.

Penersax. See MIDDLEBIE.

Penicuik (Cymric *pen-y-og*, 'hill of the cuckoo'), a town and a parish in the S of Edinburghshire. A burgh of barony and a police burgh, the town, which stands, 600 feet above sea-level, on the left bank of the river North Esk, by road is 12 miles N by W of Peebles and 10 S of Edinburgh; whilst its station at the terminus of a branch line (1872) of the North British railway is $15\frac{1}{2}$ miles distant from the latter city. It is also easily reached from GLENGORSE and POMATHORN stations. From its wide main street, running NE and SW, two streets diverge north-north-westward and south-south-eastward; the Valleyfield suburb lies close beside the river; and KIRKHILL, $\frac{1}{2}$ mile to the NE, though treated in the Census as a separate village, is likely in time to become absorbed into Penicuik. The place wears a well-built airy appearance, superior to that of most towns of its size; contains some good shops and spacious well-to-do dwellings; and has a post office, with money order, savings' bank, insurance, and telegraph departments, a branch of the Clydesdale Bank, 2 hotels, a gas company, a drinking fountain (1864), angling, bowling, cricket, and curling clubs, horticultural and ornithological societies, a reading club (1841), Liberal and Conservative associations, hiring fairs on the third Friday of March and the first Friday of October, etc. In the churchyard, at the NE end of the main street, stands the Romanesque tower of the old parish church, St Kentigern's, whose nave has been converted into three mausoleums. In front is the present church, a plain edifice of 1771, with a tetrastyle Doric portico, a clock, and a stone cross. It was enlarged in 1837, and greatly improved in 1880, being now sufficiently commodious. The Free church, built in 1862-63 at a cost of £2050, is a Gothic structure, with a large four-light window, 600 sittings, and an unfinished spire. Designed by Mr F. T. Pilkington, it is not so unlike his Barclay Church at Edinburgh. Other places of worship are a U.P. church (1867), a

Roman Catholic chapel school (1833), and St James's Episcopal church (1882), the last an Early English edifice, with nave and apsidal chancel, a marble altar, and over 200 sittings.

Messrs Alexander Cowan & Sons—we abridge from Bremmer's *Industries of Scotland*—are among the oldest, best-known, and most extensive manufacturers of paper in Scotland. They have three mills at Penicuik; but as these stand within a few hundred yards of each other, they are worked as one establishment. The central position is occupied by the Valleyfield Mill, which is by far the largest of the three. Its nucleus was built in 1709* by Mr Anderson, printer to Queen Anne, or by his widow. In 1779 Mr Charles Cowan bought the mill; and, with the exception of the years 1810-14, when it was fitted up by Government for the reception of 6000 French prisoners of war,† the premises have since continued in the family. As time wore on, the accommodation in the Valleyfield Mill became unequal to the requirements of an increased trade, and a neighbouring corn-mill was acquired in 1803 and converted into a paper manufactory. This mill is now known as Bank Mill, because it was at first devoted to making paper for bank-notes. In 1815 the operations of the firm were further extended by the purchase of a paper-mill belonging to Mr Nimmo of Edinburgh, and now known as the Low Mill. A few years after the close of the French war the Valleyfield Mill was repurchased from Government, fitted out with the most improved appliances, and started afresh in 1821. The late Mr Alexander Cowan was among the first in Britain to appreciate the value of the paper-making machine, and to introduce it into the trade; and both he and his successors have ever shown a readiness to seek out and adopt whatever appliances or arrangements gave promise of improving or facilitating the manufacture of paper. Besides their three mills at Penicuik, Messrs Cowan have a fourth at MUSSELBURGH. At Penicuik they have in operation five machines of the most perfect construction; and these of themselves occupy several large buildings. The machine most recently set up is one of the largest and finest in Britain. Including the drying apparatus, it is 250 feet in length, and is capable of turning out 2500 square yards of paper in an hour. Between 2000 and 3000 tons of paper are made annually, all being the finer kinds of writing and printing papers. The quantity made daily is probably equal to a web 20 miles long and above 5 feet wide. The water-wheels and steam-engines employed in the mills are equal to over 200 horse-power. About 600 persons are engaged in the various departments, and these are treated with great consideration and liberality by Messrs Cowan. There are also two saw-mills and an iron-foundry; but, next to paper-making, the most important industry is the raising of coal, shale, and ironstone. To its recent development is chiefly due the marked increase of population in the course of the last few years, though the mines are mainly situated in the adjacent parishes of Glencorse and Lasswade.

Under the General Police and Improvement (Scotland) Act of 1862, Penicuik is governed by a senior and two junior magistrates, with 5 police commissioners, a town-clerk, and a treasurer. The municipal voters numbered 619 in 1884, when the annual value of real property amounted to £9765, whilst the revenue, including

* Among several curious old tombstones in the churchyard is one to 'Annabell Millar, spouse to Thomas Rutherford, paper-maker at Penicuik, who died 1 April 1735.'

† Eskmill Paper Mill (James Brown & Co.), which then was a cotton factory, was at the same time converted into barracks for 1500 soldiers. Penicuik became active and stirring, and was considerably enriched, but suffered damage in the moral tone of its people. The reversion of the mills, at the close of the war, from their warlike occupancy to the manufacture of paper, was felt to be an event of general joy, and was celebrated by a general illumination. On a spot in the grounds of Valleyfield, where upwards of 300 of the prisoners of war were interred, stands a neat chaste monument, from a design from Hamilton, with the inscriptions, 'Grata quies patriæ, sed et omnis terra sepulchrum,' and 'Certain inhabitants of this parish, desiring to remember that all men are brethren, caused this monument to be erected.'

assessments, was £297. Pop. of town (1841) 907, (1861) 1570, (1871) 2157, (1881) 3793, of whom 3051 were in the police burgh, 46 were in Lasswade parish, and 2016 were females. Houses (1881) 755 inhabited, 32 vacant, 9 building.

The parish, containing also HOWGATE village, was anciently called St Mungo. In 1616 it gave off a portion of its territory to form with Pentland the parish of Glencorse, and since 1635 it has included the quondam parishes of Mount Lothian and St Catherine. It is bounded NW by Currie, NE by Colinton, Glencorse, Lasswade, and Carrington, E by Temple, S by Eddlestone and Newlands in Peebleshire, SW by Linton in Peebleshire, and W by Kirkliston (detached). Its utmost length, from WNW to ESE, is $9\frac{1}{2}$ miles; its breadth varies between 5 furlongs and $5\frac{1}{2}$ miles; and its area is $29\frac{1}{2}$ square miles or 15,966 $\frac{2}{3}$ acres, of which 86 $\frac{1}{2}$ are water. The beautiful river North Esk flows 5 miles south-south-eastward and east-by-northward along the Peebleshire border, and not far below its source expands into the North Esk reservoir ($\frac{1}{4} \times \frac{1}{2}$ mile). It next goes $4\frac{1}{2}$ miles north-eastward through the interior, and lastly, $1\frac{1}{2}$ mile north-north-eastward along the Lasswade boundary. During this course it is joined from Penicuik parish by MONKS BURN, Black Burn, and Cuiken Burn, the two last tracing parts of the Lasswade and Glencorse boundaries. Another of its affluents, Logan or Glencorse Burn, has been fully described in our article on GLENCORSE parish. Fullarton Water runs north-north-eastward along the Temple boundary on its way to the South Esk; and Bavelaw Burn, a feeder of the Water of Leith, traces part of the Currie border. Copious springs of excellent water afford abundant supplies to every district; and some are known to have petrifying or chalybeate qualities. At Cuiken Burn's influx to the North Esk the surface declines to 496 feet above sea-level; and the highest point in the south-eastern division of the parish is Auchencoth Moss (976 feet) at the Linton boundary. The north-western is very much hillier, occupied as it is by the slopes and summits of the PENTLAND HILLS—Paties Hill (1500), West Kip (1806), Scald Law (1898), Carnethy Hill (1890), Hare Hill (1470), and Black Hill (1623), of which Scald Law, or the Sisters, is the highest point in the range. Including some lesser summits and a number of intersecting glens and hollows, the parish of Penicuik presents a grand western background to a great expanse of rich lowland landscape, and embosoms a variety of charming scenes, of which the most famous are noticed under HABBIE'S HOWE. The rocks of the hills are eruptive, for the most part porphyry; whilst those of the south-eastern district are variously Silurian, Devonian, and carboniferous, thickly overlaid in places with diluvium. Sandstone, of various qualities, is plentiful; limestone has been largely quarried; coal abounds, but is so much intersected by trap dykes, that it has not been very much worked; iron ores occur in beds, veins, and small masses; and a few garnets and pieces of heavy spar have been found. The soil of the arable lands is exceedingly various, and comprises clay, sand, gravel, moss, and numerous combinations of two or more of these. About two-fifths of the entire area are in tillage; one-twentieth is under wood; and the rest of the land is either pastoral or waste. Penicuik House, near the North Esk's left bank, $1\frac{1}{2}$ mile WSW of the town, was built in 1761 by Sir James Clerk from his own designs, and is a large oblong Grecian edifice, with an octostyle Ionic portico. The lofty entrance-hall is adorned with statuary and with Roman antiquities from Cramond and Middlebie; and the roof of the great drawing-room or 'Ossian's Hall' is painted with twelve life-size figures, by Runciman, of characters in the poems of Ossian. The grounds, 1000 acres in extent, are of great beauty, the house itself standing on a level holm in a bend of the river, with a picturesque glen behind carrying up the view to the ruins of BRUNSTANE Castle and the western extremity of the Pentlands—a little plain in front, gemmed with pond and garden, and overhung by

wooded ascents, by swells and eminences on either side, discovered by ravines, and moulded into many curves of beauty. In front of the house is an artificial lake, and westward is another large piece of water well-stocked with fish. These ponds are notable as the scene of the boyish boatings which kindled the enthusiasm of John Clerk of Eldin (1736-1812), the brother of Sir James, for nautical studies, and remotely led to the production of his *Essay on Naval Tactics*. The offices, 280 feet distant, form a large square, with a rustic portico and an elegant spire and clock; and, behind them, serving as a pigeon-house, is an excellent model of the quondam celebrated Roman Temple on the Carron, called by Buchanan 'Templum Termini,' but popularly denominated ARTHUR'S OVEN. On the opposite side of the river, at the end of an avenue on the top of the bank, and $\frac{1}{2}$ mile from the house, stands an obelisk, raised by Sir James Clerk to the memory of his own and his father's friend and frequent visitor, Allan Ramsay (1686-1758). On a conical eminence directly in front of the house, and 3 furlongs distant stands the round Flag Tower (1750), which is seen at a great distance. On another eminence close on the Esk, and midway between the house and the town, stands another tower, formerly called Terregles, the original seat of the ancient proprietor of the parish; and onward from it to the termination of the grounds at the village is a profusion of pleasant and striking scenes. About a furlong above the garden, on the margin of the Esk, is Hurlycove, a subterranean passage 147 feet long, 7 high, and 6 broad, with a dark cell in the middle in which are seats for 6 or 8 persons, the whole cut out of the solid rock in 1742. Directly opposite this is another artificial sheet of water, stored with perch and trout. John Clerk (1611-74), the son of a Montrose merchant, having made a fortune in Paris, in 1646 purchased the lands and barony of Penicuik from Dr Alexander Penicuik; and John, his son, was created a baronet in 1679. His sixth descendant, Sir George Douglas Clerk, present and eighth Bart. (b. 1852; suc. 1870), holds 13,196 acres in Edinburgh and Peebles shires, valued at £11,415 per annum. (See J. Small's *Castles and Mansions of the Lothians*, Edinb. 1883.) Other mansions, noticed separately, are NEWHALL and LOGAN HOUSE; and six lesser proprietors hold each an annual value of £500 and upwards, eleven of between £100 and £500. Penicuik is in the presbytery of Dalkeith and the synod of Lothian and Tweeddale; the living is worth £200. In 1883 the following were the six schools under the school-board, with accommodation, average attendance, and grant:—Howgate public (100, 66, £62, 5s.), Kirkhill public (256, 247, £211, 19s.), Nine Mile Burn public (100, 36, £26, 11s.), Penicuik public (463, 346, £310, 7s.), Penicuik female (126, 66, £49, 4s.), and Valleyfield infant and industrial (192, 156, £118, 14s.). The Wellington Reformatory Farm School (1857), 2 miles from the town, had an average of 109 inmates in 1882, when its total receipts were £1889. Valuation (1871) £19,143, Os. 6d., (1884) £27,464, 13s. 5d., of which £2499 was for railways and water-works. Pop. (1801) 1705, (1831) 2255, (1861), 3492, (1871) 3765, (1881) 5309.—*Ord. Sur.*, shs. 32, 24, 1857-64.

Penielheugh. See CRAILING.

Penkell Burn. See MINNIGAFF.

Penkell Castle, a mansion in DAILLY parish, Ayrshire, 3 miles E by N of Girvan.

Penkiln. See KIRKMAEDINE.

Pennan, a fishing village in Aberdeur parish, Aberdeenshire, on a small bay adjacent to the boundary with Banffshire, 4 miles ENE of Gardenstown. It nestles snugly at the foot of steep acclivities flanking the shore, and owns 37 fishing boats. Pennan Head is a slight projection, 1 mile ENE of the village, and, rising rapidly inland to a height of 562 feet, commands an imposing view of the seaboard westward to the Bin of Cullen, and eastward to Kinnairds Head. The fourth and last Lord Fraser, who was hiding after the '15, lost his life through a fall from the cliff here, 12 Oct. 1720.—*Ord. Sur.*, sh. 97, 1876.

Pennick, a small village in Auldearn parish, Nairnshire, 4 miles E by S of Nairn. An old house stood here till about 1835, the former residence of the Deans of Moray.

Penninghame, a parish of NE Wigtownshire, containing the post-town and station of NEWTON-STEWART, 7 miles N by W of Wigtown and 49 $\frac{1}{2}$ W by S of Dumfries. It is bounded N by Colmonell in Ayrshire and Minnigaff in Kirkcubrightshire, E by Minnigaff and Kirkmabreck in Kirkcubrightshire, S by Wigtown, and W by Kirkcovan. Its utmost length, from NW to SE, is 14 $\frac{1}{2}$ miles; its breadth varies between 9 furlongs and 5 $\frac{1}{2}$ miles; and its area is 54 $\frac{1}{2}$ square miles or 34,762 acres, of which 851 are foreshore and 262 $\frac{1}{2}$ water. The 'crystal CREE' winds 18 miles south-south-eastward along part of the northern and all the eastern boundary to the head of WIGTOWN BAY; and the BLADENOCH, issuing from LOCH MAEBERY (1 $\frac{1}{2}$ mile \times 3 furl.; 405 feet), at the meeting-point with Colmonell and Kirkcovan, winds 17 miles south-south-eastward along all the western and $\frac{1}{4}$ mile of the southern boundary till it passes off into Wigtown parish. Bishop Burn, rising near Merton Hall, runs 6 $\frac{1}{2}$ miles south-eastward—for the last 4 along the Wigtown border—to the upper part of Wigtown Bay; and seven burns or rills rise in the interior and run to the Cree, ten to the Bladenoch. Of twelve other lakes and lakelets the largest are LOCH DORNAL (5 \times 4 $\frac{1}{2}$ furl.; 380 feet), on the Ayrshire boundary; LOCH OCHILTREE (7 \times 4 $\frac{1}{2}$ furl.; 390 feet), 1 $\frac{1}{2}$ mile ESE of Loch Dornal; and triangular LOCH ELDRIG (2 $\frac{1}{2}$ \times 1 furl.; 180 feet), 3 $\frac{1}{2}$ miles W of Newton-Stewart. Springs of pure water are numerous; and one is chalybeate and medicinal. Cree Moss, occupying the SE corner, along the Cree to Wigtown Bay, is a flat tract of nearly 2000 acres, which seems to have been successively submarine, forest, and moss; and has, to a considerable extent, undergone reclamation into productive corn land. The rest of the surface, in a general view, is a long, broken swell, inclining to the rivers, and, from S to N, attaining 401 feet at Barraer Fell, 322 at Eldrig Hill, 451 at Glenhapple Fell, 493 at Glasloch Fell, and 604 at a point $\frac{1}{4}$ mile E by S of Loch Ochiltree. It presents, for the most part, a tumulated moorish aspect; and, though somewhat embellished in portions of the southern district, is everywhere else prevailingly bleak. Many beautiful and agreeable spots lie among the moorlands, especially along the Cree; and much of the moorlands themselves is capable of reclamation into arable land. Greywacke of several varieties is the predominant rock, and in one place has been quarried for building; whilst granite, abounding in boulders from a few pounds to many tons in weight, is sometimes mixed with red or green syenite, and is much used for both rubble and polished masonry. The soil in Cree Moss is a heavy clayey loam; on the higher arable lands is dry, and suitable for various crops, particularly barley; and in the northern district, ranges from marsh to a quality similar to that on the higher arable lands. Rather less than one-third of the entire area is regularly or occasionally in tillage; some 1450 acres are meadow, and 570 under wood; and the rest of the parish is either pastoral or waste. The old military road ran from Newton-Stewart towards Glenluce; and near Loch Ochiltree are traces of the DEIL'S DYKE. Other antiquities are CASTLE-STEWART, 3 miles NNW of Newton-Stewart; ruins of the old parish church at the decayed hamlet of Penninghame, 3 miles S of Newton-Stewart; the site of Penninghame Hall, a little further S; ruins of St Ninian's chapel (1508), 1 $\frac{1}{2}$ mile N of Castle-Stewart; and the site of Kery or Keir chapel, of earlier erection, 2 $\frac{1}{2}$ miles further N. The bishops of Galloway resided at Penninghame Hall; and the Rev. Dr William M'Gill (1731-1807), a minister of Ayr, whose *Practical Essay on the Death of Jesus Christ* occasioned a strong sensation in the latter part of last century, was born at Carsenestock. Penninghame House, on the right bank of the Cree, 4 miles NNW of Newton-Stewart, is a fine building, with very beautiful grounds. Its owner, Edward James Stopford-Blair,

Esq. (b. 1826; suc. 1863), holds 37,268 acres in the shire, valued at £9036 per annum. Other mansions are Corsbie, Corvisel, and Merton Hall; and 4 other proprietors hold each an annual value of £500 and upwards, 7 of between £100 and £500, 14 of from £50 to £100, and 54 of from £20 to £50. Giving off its northern portion to BARGRENSAN *quoad sacra* parish, Penninghame is in the presbytery of Wigtown and synod of Galloway; the living is worth £490. Its five churches have all been noticed under NEWTON-STEWART. In 1883 seven schools, with accommodation, average attendance, and grant, were:—Corsbie infant (121, 118, £76, 11s.), Grange (100, 50, £56, 11s.), Loudon (54, 38, £43, 6s.), Newton-Stewart (150, 89, £78, 16s.), Challoch Episcopal (30, 31, £26, 10s. 6d.), Douglas Academy (187, 62, £61, 19s.), and Roman Catholic (180, 43, £37, 18s. 6d.). Valuation (1860) £15,490, (1884) £22,248, 8s. 8d. Pop. (1801) 2569, (1831) 3461, (1861) 4061, (1871) 3940, (1881) 3940, of whom 2645 were in Newton-Stewart and 3777 in the ecclesiastical parish.—*Ord. Sur.*, shs. 4, 8, 1857-63.

Pennon. See PENNAN.

Pennycross, a modern mansion in Kilfinichen and Kilvieken parish, Mull island, Argyllshire, near the NW shore of Loch Bui, 4 miles SSE of Pennyghael.

Pennycaick. See PENICUIK.

Pennyghael, a modern mansion in Kilfinichen and Kilvieken parish, Mullisland, Argyllshire, near the southern shore of Loch Scridain, 16½ miles WSW of Auchnacraig. Here is a post and telegraph office under Oban.

Penpont (Cymric *pen-y-pont*, 'head of the bridge'), a village and a parish of Upper Nithsdale, NW Dumfriesshire. The village stands 200 feet above sea-level, near the left bank of Scar Water, 15 miles NNW of Dumfries, 3 WSW of Thornhill station, and 2 W by S of Thornhill town, under which it has a post office, with money order, savings' bank, and telegraph departments. A pleasant little place, it is lighted with gas, and well supplied with water. Pop. (1861) 494, (1871) 632, (1881) 437.

The parish is bounded N by Sanquhar, NE by Durisdeer, E by Morton, SE by Closeburn, S by Keir, and SW by Tynron and the Kirkcudbrightshire parish of Dalry. Its utmost length, from WNW to ESE, is 13 miles; its utmost breadth is 4 miles; and its area is 34½ square miles or 22,099½ acres, of which 138½ are water. SCAR WATER, rising in the extreme NW at an altitude of 1600 feet above sea-level, winds 17 miles east-south-eastward—for the last 5½ miles along the Tynron and Keir boundary—until, at a point 1½ mile above its influx to the Nith, it passes off into Keir. During this course it is joined by GLENMANNO, CHANLOCK, and eighteen other burns. The NITH curves 2¾ miles east-by-southward along the eastern border; and MAAR or Park Burn, its affluent, traces much of the Durisdeer boundary. The surface is hilly, sinking at the south-eastern extremity to 190 feet above sea-level, and rising thence to 717 feet near Auchenaig, 996 at Auchenhainzie Hill, 1211 at Merkladh Hill, 1813 at CAIRNKINNA Hill, 1441 at Craigdasher, 1581 at Glenwhargen Craig, 1640 at Countam, 1658 at Rough Hill, and 1902 at Corse Hill, of which the three last culminate right on the confines of the parish. The scenery in the NW is wildly but romantically upland, sending up summits which compete in all the elements of mountain landscape with any S of the Grampians; in the central district it is still upland, but of softer feature and lessened elevation; and in the SW it passes through the gradations of towering hill, considerable eminence, and gentle swell, till it finally subsides into a belt of alluvial plain. Two-thirds or more of the whole area are arranged lengthwise into four steep ridges and three deep narrow glens, each of the latter watered by a very pure and plentiful stream. Scar Water's hill-screens over great part of its course are so steep and high, tufted with copes below, and dotted over with sheep in the ascent, and its basin is so narrow and rocky, so rapid in gradient, and so embellished with trees and cultivation, as to be rife with picturesqueness and romance. The ridge between it and Chanlock Burn comes boldly and steeply down in the form of a mountain-wedge, to their

point of confluence, there being feathered all over with trees, and confronting hill-screens on the opposite sides of the glens, arrayed in the richest green, with which it forms, as seen a little down the course of the united stream, one of the finest landscapes. In the bosom of the Scar's left mountain flank, 2½ miles above this point, rises almost sheer from the glen the stupendous crag of Glenwhargen, a mountain mass of nearly naked stone, amidst highlands where all else is green or russet—one of the greatest curiosities in the South of Scotland. About 1¼ mile SE of it appears the summit of Cairnkinn, crowning a gradual ascent and commanding a view of large parts of Nithsdale and Annandale, considerable portions of Ayrshire, Kirkcudbrightshire, and Clydesdale, and some blue and hazy summits in Cumberland. Park Burn runs cheerily through the pleasure-grounds of DRUMLANRIG Castle, and on the Durisdeer side is overlooked by that stately ducal pile. The prospect down both the Nith and the lower Scar is extensive and enchanting, and presents a foreground of highly cultivated haughs and hanging plains, diversified by swells and gentle eminences, thriving woods, and pretty villas, with a singularly varied back-ground, now boldly and abruptly mountainous, and now retreating slowly upward from lowland to soaring summit. From a plain, the site of the church and manse, on the Scar's left bank 1 mile from the nearest reach of the Nith, both rivers are distinctly seen for about 8 miles, first separate, and then united, their pools appearing at intervals as smooth sheets of water, and their haugh-ground converted, on occasion of a heavy freshet, into a little island sea a mile in breadth. Not far from this point a modern bridge spans the Scar between two steep rocks, on the site of an antique so-called Roman bridge, whose one large semicircular arch, completely mantled with ivy and woodbine, was removed in 1801. The banks of the stream here are high and skirted with wood, the channel rocky and obstructed with loose blocks; and, at GLENMARTIN Pool a little way above, the stream forms a series of foaming cataracts.

Barely one-eighth of the entire area is capable of cultivation; but improvements of every sort on the land have been conducted, and still are carried forward, with the greatest energy and success. The woods of Drumlanrig are very extensive; and its magnificent gardens (1830-36), which, together with the elegant cottage for the gardener, from a design by Mr Burn, cost upwards of £11,000, fling enchantment over the district along the Park Burn. Orchards and small gardens are objects of general care. The soil in the many arable spots among the hills is light, early, easily improvable, and very fertile. The herbage on the uplands is excellent. White and red sandstone abounds in the lower district; trap has been quarried for building material from among the hills; lead ore exists, and is thought to be plentiful; and coal is said to have been accidentally stumbled upon, but has never been formally searched for. Dow or Dulh Loch was famed, in the days of superstition, for its alleged power of healing all sorts of diseases, and had its water-spirit, to whom devotees left some part of their dress as an offering. Glenmanno Burn, an early and wild little tributary of the Scar, through a bleak sheep-walk among the hills, is associated with curious and stirring anecdotes of a sheep farmer, John M'Caul or 'Strong Glenmanno' (1621-1705), an account of whose strange feats of physical strength is still preserved in the Session Records. At the confluence of Park Burn with the Nith are vestiges of Tibbers' Castle, supposed to have been of Roman origin, and to have got its name in honour of Tiberius Cæsar. This castle was garrisoned by the English in the early part of the wars of the succession, and was taken by surprise by Sir William Wallace. The barony on which the castle stands, and a hill in its vicinity, also bear the name of Tibbers. A Roman causeway is traceable up the Scar and into Tynron; and there are vestiges of a Roman encampment. An ancient obelisk or Kunic cross, 10 feet high, fixed in a socket of two steps, stands on the Boatford estate. Its sculptures or inscriptions are almost defaced; nor does it figure in

either record or any distinct tradition. There are likewise in the parish two motes, and four very large cairns. For $4\frac{1}{2}$ miles at the upper end, the parish has no road; for $5\frac{1}{2}$ more it has only one along the Scar, but elsewhere it is tolerably well provided. Its southern margin is traversed by the road from Thornhill to Moniaive; and all its south-eastern district has near access to the Thornhill and Carronbridge stations of the Glasgow and South-Western railway. The Duke of Buccleuch owns six-sevenths of all the parish, 3 other proprietors holding each an annual value of between £100 and £500, 2 of from £50 to £100, and 12 of from £20 to £50. Penpont is the seat of a presbytery in the synod of Dumfries; the living is worth £461. The parish church, built in 1867 at a cost of £3000 from plans by the late Charles Howitt, architect to His Grace, is a handsome Gothic edifice, said to be one of the finest parish churches in Scotland, with 500 sittings, an organ, and a spire 120 feet high. The East Free church dates from Disruption times; the West (1791; 500 sittings) till 1876 was Reformed Presbyterian; and the present Reformed Presbyterian church was built in 1875, and contains 300 sittings. At BURNHEAD is a U.P. church (1800; 700 sittings); and two public schools, Penpont and Woodside, with respective accommodation for 210 and 41 children, had (1883) an average attendance of 121 and 37, and grants of £120, 8s. 6d. and £40, 13s. Valuation (1860) £7123, (1884) £8738. Pop. (1801) 966, (1831) 1232, (1861) 1326, (1871) 1323, (1881) 1176.—*Ord. Sur.*, shs. 9, 15, 1863-64.

The presbytery of Penpont, meeting at Thornhill, comprises the *quoad civilia* parishes of Closeburn, Durisdeer, Glencairn, Keir, Kirkconnel, Mornon, Penpont, Sanquhar, and Tynron, and the *quoad sacra* parish of Wanlockhead. Pop. (1871) 13,171, (1881) 12,932, of whom 1379 were communicants of the Church of Scotland in 1878.—The Free Church also has a presbytery of Penpont, with churches of Closeburn, Glencairn, Penpont, Sanquhar, and Wanlockhead, which six churches together had 1636 members in 1883.

Penshel. See WHITTINGHAM.

Penston, a collier village in Gladsmuir parish, Haddingtonshire, 3 miles S of Longniddry station, and $2\frac{1}{2}$ E by S of Tranent. The barony of Penston, lying around the village, belonged towards the close of the 13th century to William de Baliol, nephew of John Baliol of Barnard Castle, the father of King John Baliol; and passed to his descendants, the Baillies of LAMINGTON. It had, near the village, a strong old mansion, now represented by only the garden; has been famous, since the 14th century, for excellent coal; yielded coal, in the time of Oliver Cromwell, under a yearly rental of £400; and, in 1834, when its old mines seemed to be near exhaustion, had a new pit sunk in another quarter.—*Ord. Sur.*, sh. 33, 1863.

Pentland, an ancient but suppressed parish near the centre of the county of Edinburgh, and containing the hamlets of Pentland and New Pentland, which stand on or near the road from Edinburgh to Peebles by Liberton, and $4\frac{1}{2}$ miles S of Edinburgh. The name has, probably, notwithstanding the author of *Caledonia* to the contrary, been taken from the adjoining hills, the old name of which, as well as of the Firth, seems to have been Petland or Pictland. This title they are now supposed to have acquired from having formed the debatable ground or boundaries to the S and the N of the Pictish territories. The parish church, which stood at the village of Pentland, seems to have been granted to the monks of Holyrood at the founding of that abbey, and was confirmed to them in 1240, but before the death of Alexander III. it was an independent rectory, which in the 14th and two following centuries was under the patronage of the earls of Orkney and barons of Roslin. The parish was suppressed after the Reformation, and the northern part annexed to Lasswade, while the southern, comprehending the barony of Falford, was united to the parish of St Catherine, now Glencorse.

Pentland Firth, a strait along the E portion of the N

coast of Caithness, separating the Orkney islands from the mainland of Scotland. Its length, from a line drawn on the E from Duncansbay Head to Old Head at the SE point of South Ronaldsay, to a line drawn on the W from Dunnet Head to The Barry in Hoy, is 14 miles. The width from Duncansbay Head to Brough Ness in South Ronaldsay is $6\frac{1}{2}$ miles, and the width from Dunnet Head to Tor Ness in Hoy is $7\frac{3}{4}$ miles. In the centre the width is greater, as a triangular projection, measuring 10 miles along the base from E to W and 4 deep, is sent off to the N between the islands of South Ronaldsay and Flotta and Walls, and passes by the Sond of Hoxa into Scapa Flow. Three and a half miles WNW of Duncansbay Head is the island of Stroma, included in the county of Caithness, and separated from the mainland by the Inner Sound ($1\frac{1}{2}$ mile). Six and a half miles N by W of Duncansbay Head is the island of Swona, included among the Orkneys and belonging to the parish of South Ronaldsay, and $4\frac{1}{2}$ miles NE of Duncansbay Head; and at the eastern entrance to the Firth are the PENTLAND SKERRIES, consisting of Muckle Skerry, with Little Skerry $\frac{3}{4}$ mile S by E, Louthier Skerry $\frac{3}{4}$ mile SE, and Clettack Skerry 1 mile E by S. The two last are tidal, and as the whole group lies right in the middle of this much frequented passage, and at a point where approach to either shore is dangerous from the strength of the current, it early became necessary to mark them by night, for which purpose a lighthouse was erected on the Muckle Skerry in 1794. The rocks are at present marked by two fixed lights placed in towers, one of which is 170 feet, and the other 140 feet, high. These are 100 feet apart from SSW to NNE, and are visible at a distance of 18 and 19 nautical miles. The only inhabitants of the Skerries are the lighthouse keepers and their families, who numbered 19 in 1861, 14 in 1871, and 17 in 1881.

Though the Pentland Firth is the most dangerous passage in the British seas, it must be traversed by all vessels passing from the E of Scotland to the Atlantic, or from the W to the North Sea, except those small enough to be accommodated by the Caledonian Canal, and hence over 5000 vessels pass through every year in spite of the danger and difficulty of the navigation. This danger and difficulty arises from the extreme rapidity with which the tidal current here runs—from 6 to 12 miles an hour—and from the eddies by which it is in many cases accompanied. The chief of these latter, which are caused either by turns of the tide-race or by sunk reefs forming obstructions along the bottom, are the line of breakers off Duncansbay Head known as the 'Boars' or 'Bores of Duncansbay;' the line of breakers off St John's Point midway between Duncansbay Head and Dunnet Head, known as the 'Merry Men of Mey;' the whirlpool at the N corner of Stroma, known as the 'Swelkie' (see ORKNEY); and the whirlpool near Swona called the 'Wells of Swona.' The current during flood flows from W to E, and during ebb from E to W, and ships have to wait at either end till the set of the stream is in the direction in which they wish to pass, as it is utterly useless to attempt to push on against the flow. The stream along the coasts flows in a direction opposite to that of the central or main current. 'The flood tide,' says the writer of the account of the parish of Dunnet in the *New Statistical Account*, 'runs from west to east at the rate of ten miles an hour, with new and full moon. It is then high-water at Scarfskerry [midway between Dunnet Head and St John's Point] at nine o'clock. Immediately as the water begins to fall on the shore, the current turns to the west; but the strength of the flood is so great in the middle of the firth that it continues to run east till about twelve. With a gentle breeze of westerly wind, about eight o'clock in the morning, the whole firth seems as smooth as a sheet of glass, from Dunnet Head to Hoy Head in Orkney. About nine the sea begins to rage for about 100 yards off the Head, while all without continues smooth as before. This appearance gradually advances towards the firth and along the shore towards the east, though the effects are not much felt upon the shore till it

PENTLAND HILLS

reaches Scarfskerry Head, as the land between these points forms a considerable bay. By two o'clock the whole firth seems to rage. About three in the afternoon it is low-water on the shore, when all the former phenomena are reversed—the smooth water beginning to appear next the land and advancing gradually till it reaches the middle of the firth.' These opposite currents are perplexing to those unacquainted with the Firth, but the boatmen of the adjacent coast know them well, and invariably make use of them when sailing about. In a calm, more particularly during a fog, the danger is increased rather than diminished, for ships drift along while the crew believe them to be stationary. At full spring tides the rise of the sea is 8 feet, and on extraordinary occasions 14 feet, while at neap the rise is from 3½ to 6 feet, and the firth is most stormy when a spring flood-tide is running against a gale blowing from the opposite direction. The islands and the adjoining coast suffer most severely when gale and flow act together. 'The great storm of December 1862,' says Mr C. W. Peach, 'in particular distinguished itself by the havoc which it wrought along these shores. It swept the sea over the north end of the island of Stroma, which lies in the Pentland Firth, and redistributed the ruin-heaps there. The waves ran bodily up and over the vertical cliffs on the west side, 200 feet in height, lodging portions of the wrecked boats, stones, seaweeds, etc., on the top. They rushed in torrents across the island, tearing up the ground and rocks in their course towards the old mill at Nethertown on the opposite side. This mill had often before been worked by water collected from spray thrown over these cliffs, but never had such a supply been furnished as by this gale. One curious phenomenon was noticed at the south end of Stroma: the sea there came in such a body between the island and the Caithness coast, that at intervals it rose up like a wall, as if the passage was too narrow for the mass of water which, forced onwards from the Atlantic between Holburn Head on the Caithness shore and the Old Man of Hoy on the Orkney side, passed bodily over the cliffs of Stroma.' Even in summer the effects of a gale is often grand and almost sublime. 'Nowhere else,' says Dr Archibald Geikie, 'round the British islands can the tourist look down on such a sea. It seems to rush and roar past him like a vast river, but with a flow some three times swifter than our most rapid rivers. Such a broad breast of rolling, eddying, foaming water! Even when there is no wind the tide ebbs and flows in this way, pouring now eastwards now westwards, as the tidal wave rises and falls. But if he should be lucky enough to come in for a gale of wind (and they are not unknown there in summer, as he will probably learn), let him by no means fail to take up his station on Duncansbay Head or at the Point of Mey. He will choose if he can a time when the tide is coming up against the wind. The water no longer looks like the eddying current of a mighty river. It rather resembles the surging of rocky rapids. Its surface is one vast sheet of foam and green yeasty waves. Every now and then a huge billow rears itself impatiently above the rest, tossing its sheets of spray in the face of the wind which scatters them back into the boiling flood. Here and there, owing to the configuration of the bottom, this turmoil waxes so furious that a constant dance of towering breakers is kept up. . . . solid sheets of water rush up the face of the cliffs [of Duncansbay Head] for more than 100 feet, and pour over the top in such volume, that it is said they have actually been intercepted on the landward side by a dam across a little valley, and have been used to turn a mill.'

Pentland Hills, a group of hills commencing in Edinburghshire, 3 miles SW of Edinburgh, and extending thence south-westward for 16 miles through the counties of Edinburgh, Peebles, and Lanark, to near Carnwath, where they slope into Clydesdale. The average breadth is from 4 to 6 miles. They nowhere form a continuous chain or ridge, but are broken up by many intersecting ravines and hollows, the principal being the valley occupied by the Glencorse Burn near the NE end,

PERSIE

and the Cauldstane Slap between East and West Cairn Hills near the centre. Through the latter there is a rough cross-road from the Edinburgh and Lanark road up the valley of the Water of Leith, to the Edinburgh and Dumfries road, by Penicuik and Biggar, at Linton; and at many points the hills are traversed by foot-paths, over the attempted shutting up of which, against public use, a good deal of feeling has recently been excited. Along the NW the rocks belong to the Calciferous Sandstone series of the Carboniferous System, while along the SE they belong to the Lower Old Red Sandstone System, and have to the N a thick series of interbedded porphyrites of the same age. At several points there are patches of Upper Silurian rocks, which are above North Esk reservoir and elsewhere very richly fossiliferous. These must have been, at one time, wholly covered to a depth of from 6000 to 7000 feet by carboniferous rocks, all of which have been removed by denudation. Ice action has been traced over 1600 feet above sea-level, and erratics that must have come from the NW are found over 1000 feet up. There are numerous springs and streams, those near the N end providing the water supply of Edinburgh, Leith, and Portobello, the principal reservoirs being Torduff, Clubbidean, and Bonaly, on the N near Bonaly Tower; Glencorse and Loganlee reservoirs, in the basin of Glencorse Burn or Logan Water; and Listonshields and Bavelaw (Threipmuir and Harelaw) reservoirs, in the basins of the Water of Leith and its tributary, Bavelaw Burn. Other reservoirs are North Esk reservoir, for regulating the supply to the mills along that stream, and Cobinshaw and Crosswood reservoirs on Mureston and Linhouse Waters, and connected with the supply of the Union Canal. Besides the streams already mentioned, there is Lyne Water on the SW, flowing by Linton to the Tweed near Lyne church. The appearance of the hills varies considerably, but is everywhere more or less rounded. In some districts they are bleak and heathy, but in others they are green and covered with excellent pasture. The scenery along their skirts and in some of the glens of the interesting streams is very pretty; and near the centre of the SE side along the North Esk at Carlops, on the borders of the counties of Edinburgh and Peebles, are Habbie's Howe, and the rest of the scenery rendered classic in Ramsay's *Gentle Shepherd*; while ½ mile N by W of Penicuik, on the shoulder of Carnethy, is the scene of the battle of RULLION GREEN. The principal summits from NE to SW are Allermuir Hill (1617 feet), Castlelaw Hill (1595), Bells Hill (1330), Black Hill (1628), Carnethy (1890), Hare Hill (1470), Scald Law (the highest, 1898), West Kip (1806), East Cairn (1839), West Cairn (1844), Mount Maw (1753), Craigengar (1700), Byrehow Mount (1752), Faw Mount (1356), King's Seat (1521), Fadden Hill (1526), Millstone Rig (1439), White Craig (1425), Catstone Hill (1470), Black Law (1336), Harrows Law (1360), Black Birn (1213), Bleak Law (1460), Mid Hill (1347), and Left Law (1210). From Catstone Hill a scattered series of hills pass southward by Mendick Hill (1480 feet), Blyth Hill (1007), and Broughton Heights (1872), and connect the Pentlands with the Southern Uplands. In 1883-84 there was much correspondence and some litigation with regard to the right of way over the Pentlands. The Pentlands, of which Lord Cockburn wrote about 1825 that 'there is not a recess in their valleys, nor an eminence on their summits, that is not familiar to my solitude. One summer I read every word of Tacitus in the sheltered crevice of a rock (called 'My Seat') about 800 feet above the level of the sea, with the most magnificent of scenes stretched out before me.'—*Ord. Sur.*, shs. 32, 24, 1857-64.

Perceton, an estate, with a mansion, in DREGHORN parish, Ayrshire, on the right bank of Annick Water, 2½ miles NE of Irvine. Its owner, Mrs Mure-Macredie (suc. 1834), holds 451 acres in the shire, valued at £1599, 15s. per annum.—*Ord. Sur.*, sh. 22, 1865.

Persie, a *quoad sacra* parish of NE Perthshire. Its church, near the right bank of the Black Water, 9 miles

NNW of Blairgowrie, was built as a chapel of ease about 1785 at a cost of £150, and contains 400 sittings. Persie is in the presbytery of Meigle and the synod of Angus and Mearns; its minister's stipend is £120. Three schools—Blacklunans, Strone of Cally, and Drimmie Burn—with respective accommodation for 49, 87, and 58 children, had (1883) an average attendance of 39, 41, and 27, and grants of £53, 6s. 6d., £53, 15s. 6d., and £35, 10s. Pop. (1871) 820, (1881) 715, of whom 149 were in Alyth, 216 in Bendochoy, 226 in Blairgowrie, 33 in Caputh, 55 in Kirkmichael, 3 in Lethendy, and 33 in Rattray.—*Ord. Sur.*—*sh.* 56, 1870.

Pert. See LOGIE-PERT.

Perth (perhaps from Gaelic *Bar-tatha*, 'height of Tay'), formerly also St Johnstown, is the name of an ancient city, four parishes, and a district in the SE of Perthshire. The city is a royal and parliamentary burgh, a river-port, a post and market town, the seat of a presbytery and synod, the capital of its county, and one of the assize towns of Scotland. It is situated on the river Tay, at the junction of several important railways, 15½ miles SSE of Dunkeld, 21½ WSW of Dundee, 89½ SW by S of Aberdeen, 47 NNW of Edinburgh, 33 NE of Stirling, and 62½ NE of Glasgow. Its bounds include three cognominal parishes and part of St Paul's a fourth, besides portions of Kinnoull, Scone, and Tibbermuir parishes. The main part of the town, including all the ancient quarters, is on the right bank of the Tay; but the chief suburb, named Bridgend, is situated on the left bank immediately opposite. The site of the whole is a flat-bottomed hollow or plain bisected by the river Tay and environed with rising ground, and overlooked from a little distance by an amphitheatre of well-wooded hills, whose skirts are thickly dotted with villas. The situation of Perth, and its beautiful environments, its fine buildings, and its magnificent view, amply justify its old title of 'The Fair City.' The more prominent natural features in the vicinity are the broad river, with Moncreiffe island, to the SE of the city; Moncreiffe Hill to the S, and Kinnoull Hill to the N, of the Tay; the Wicks of Baigle to the S; and the two public parks. The views from points of vantage in these hills are very extensive and beautiful. According to an anecdote, repeated in every description of the city, when the Roman legionaries, in their march of invasion, came in view of the city's site as seen from the Wicks of Baigle, they cried out '*Ecce Tiber!* *Ecce Campus Martius!*' But Sir Walter Scott, looking at the comparison from a Scotsman's point of view, wrote the retort long after—

'Behold the Tiber! the vain Roman cried,
Viewing the ample Tay from Baigle's side.
But where's the Scot that would the vaunt repay,
And hail the puny Tiber for the Tay?'

The two public meadows or parks of Perth are called Inches (*i.e.*, islands), from the fact that they used at one time to be insulated by the Tay, along the right bank of which they still extend. Separated from each other by the main body of the city, they add very greatly to its beauty and airiness, and serve as spacious grounds for the recreation of the inhabitants. They are said to have been exchanged by the Mercer family (their original possessors) for a vault under St John's church, and this gave rise to the couplet—

'Folks say the Mercers tried the town to cheat,
When for twa Inches they did win six feet.'

The North Inch, which has received considerable additions at comparatively modern dates, begins near the main bridge, and extends northwards beyond the town, forming an oblong measuring about 1400 yards by 330, and containing an area of 98 acres. Previous to about 1790, when the present road was formed considerably to the W, this Inch was traversed through the middle by the road to Dunkeld and Inverness. A racecourse, curving at the extremities, and measuring about 950 yards from end to end, is laid out upon it parallel to the river bank. The Perthshire Hunt races are held

here annually, and those of the Caledonian Hunt once every four years. The Inch is used now for military reviews, golf, and other games; and in ancient times it seems to have been the favourite arena for judicial combats. Here a combat took place under Robert Bruce between Hugh Harding and William de Saintlowe; and in the reign of Robert III. it was the scene of the deadly encounter between the clans Chattan and Kay or Quhele, so graphically described by Scott in his *Fair Maid of Perth*. The South Inch stretches southwards from a point opposite Moncreiffe island, about 130 yards S of the Central Station, and forms a square of about 680 yards each way, with an area of 72 acres. An avenue of stately trees surrounds it on three sides; and the Edinburgh Road, opened about 1760, which traverses its centre, is also similarly shaded. The trees on the N side were removed in 1801, when the handsome houses of Marshall Place were begun. King's Place also overlooks its N side; and on the W is a line of ornate villas called St Leonard's Bank, and the buildings of the railway station. The South Inch had formerly a racecourse, and was anciently the place for witch-burnings, military displays, and archery-practisings; and stones were set up on it at the distance of 500 fathoms from each other, to mark the proper flight of an arrow.

Streets.—The old part of Perth, or what existed prior to the extensions begun towards the end of last century, forms the central division of the present town, and occupies less than one-half of the entire area. The course of the Tay at Perth is pretty nearly due S; and the city lies on its right or W bank, chiefly between the North and South Inches, though it extends in breadth further to the W than either of the parks, and a considerable section lies to the NW behind, or to the W of, the North Inch. The plan of the city is very regular, the chief streets being parallel to each other, while most of the other and connecting streets run at right angles to them. In the older part of the city, between the Inches, two wide streets, about 160 yards from each other—High Street and South Street or Shoegate—run parallel from E to W, through the entire breadth of the town. The latter, which is the more southerly, used to be called the Southgate and 'the Shoegate,' and at its western extremity are County Place and York Place. Parallel to these, in order as we proceed northwards from High Street, are Mill Street, Murray Street, Foundry Lane, Union Lane, and the broad Atholl Street, from the E end of which Charlotte Street runs SE to the bridge along the S margin of the North Inch. These parallel streets are short; and the triangular region betwixt their E ends and the river is less regularly disposed on the rectangular system than the rest of the old town. Proceeding southwards from South Street, we come upon the following parallel streets: Canal Street, Victoria Street (continued W as Paradise Place), South William Street, and Marshall Place (continued W as King's Place). At right angles to these, and extending along the river bank from Inch to Inch, is a comparatively modern and very handsome promenade called Tay Street, in which are some of the finest buildings in the city. In order, towards the W, the following streets run parallel to Tay Street for more or less of its length: Speygate and Watergate, between Canal Street and High Street; Princes Street, which continues the road from Edinburgh from the N margin of the South Inch to South Street, whence St John Street, a few yards to the E, leads to High Street, between which and the bridge George Street runs; Meal Vennel, between South and High Streets; Scott Street, between King's Place and South Street; the broad thoroughfare, known successively as King Street, South Methven Street, and Methven Street, and running due N and S the entire way from King's Place to the S to Atholl Street in the N. Still further W Pomarium and Leonard Street, the latter leading from the General Railway Terminus, converge at the SW end of Hospital Street, and are carried N in New Row to High Street. Caledonian Road also runs N from the terminus, and continues past the Perth

PERTH

Auction Mart under the name of Elibank Place. The more historic part of the town is that lying E of King and Methven Streets and N of and including Canal Street. The numerous connecting short streets in that quarter are of all characters, new, old, and renovated. All the streets at one time lay on so low a level as to be constantly liable to inundations from the river; but a long process of improvement has raised them to their present level. The buildings were not a whit better than those of other Scottish towns; and the streets of Perth were just as neglected and filthy; but very great improvements have been successfully carried through; and the 'Fair City' is by no means behind its neighbours in cleanliness and healthiness. High Street is spacious, and contains some fine buildings, and abounds in historic association. St John Street was opened in 1801, and has some of the best shops. George Street was laid out about 1770, and the northern part of Princes Street about the same time. The southern half of Princes Street, together with the entire S of the town, between Canal Street and the South Inch, has been built on the site of the Spey Gardens since 1801, and is supposed to resemble the New Town of Edinburgh in its design and the style of its houses. The north-western wing of the town, lying W of the North Inch, N of and including Atholl Street, and NE of Barrack Street, which runs NW from the W end of Atholl Street, along the Dunkeld Road, is a yet more modern suburb, consisting for the most part of handsome rows of villas and mansions. The suburb of Bridgend lies stretched along the left bank of the Tay, N and S from the eastern end of the bridge. Its chief streets run parallel with the river, under the names Commercial Street (to the S), Main Street, and Strathmore Street. It lies in Kinnoull parish.

Bridges.—A large timber bridge is said, but on no good authority, to have been thrown across the Tay at Perth by Agricola. In October 1210 an ancient bridge of stone was swept away by a great inundation of the river. Another bridge was built, which is spoken of as having been repaired in 1329. This, or a new bridge, was much damaged by floods in 1573, 1582, and 1589. After being temporarily repaired with timber, it was between 1599 and 1617 entirely rebuilt of stone; but in 1621, just four years after its completion, it was finally demolished by a flood. 'The people,' says Calderwood, 'ascribed this wrack to iniquity committed in the town; for there was held the last General Assembly, and another in 1596, when the schism in the Kirk began; and in 1606 here was held that parliament at which bishops were erected, and the lords rode first in their scarlett gowns.' In spite of the aid of subscriptions from James VI., Charles I., Charles II., and other powerful patrons, all attempts to replace the bridge were long abortive; and from 1622 till 1772 communication between the banks was carried on solely by a ferry. The present handsome bridge was founded in 1766 and opened in February 1772, at the N end of George Street, considerably to the N of the site of the old bridge. It was built after designs by Smeaton at a cost of £26,631, and has nine arches and a total length of 840 feet. It was widened and improved in 1871 at a cost of £3061; before that date its width from parapet to parapet was 22 feet, of which 18 were carriage way. From this bridge, itself a noble and elegant structure, one of the favourite views of the city and of Strathtay is obtained. Of the original cost the city subscribed £2000; government gave £4000, and £700 a year for 14 years; whilst the Earl of Kinnoull gave £500, besides strenuously exerting himself to obtain the rest of the money. The large and fine viaduct of the Dundee and Perth section of the Caledonian railway crosses the Tay below this bridge, its centre portion resting on Moncreiffe island. This structure, constructed of a combination of stone, iron, and timber, describes the segment of a circle, and was completed in 1864 at a cost of over £24,000; and has a total length of 1180 feet. It is constructed to open on the Perth or N side so as not to hinder the navigation of the Tay, and a footpath runs along its N

PERTH

side. The reach of the Tay between the E side of Moncreiffe island and the E bank is called the Willow Gate.

Chief Buildings.—The new Municipal Buildings occupy the site of the former town-hall and police office, and have a frontage of 72 feet to Tay Street and of 57 to High Street. They form a handsome edifice in the old Tudor style, including a reproduction of the old tower of St Mary, which was a feature of the former building, and were built at a cost of about £12,000 from designs by Mr Heiton. The memorial stone was laid on 10 June 1877, and the new Council Chamber was opened on 7 Nov. 1879. This chamber, a spacious hall 41 feet by 25, has three handsome stained-glass windows facing High Street, representing subjects from Sir Walter Scott's *Fair Maid of Perth*; a fourth, also facing High Street, representing Queen Victoria and the late Prince Consort; and a fifth, facing Tay Street, representing the capture of Perth by King Robert Bruce in 1311. The new Burgh Court in the same building measures 30 feet by 22. The police office is on the ground floor. The old buildings which this pile has superseded consisted partly of remains of a very ancient chapel dedicated to St Mary, and partly of an edifice dating from 1696. Immediately opposite the Municipal Buildings is the Post Office, built in 1861 in the Italian style after designs by Mr Matheson, of Edinburgh, at a cost of about £2400. Further S, and also in Tay Street, between South and Canal Streets, stand the handsome County Buildings, erected in 1819 on the site of Gowrie House, from a design by Mr Smirke, at a cost of £32,000. The main building, confronting the Tay, is constructed of fine polished sandstone, somewhat in the style of the Parthenon at Athens, and has an elegant portico, whose pediment is supported by twelve massive fluted columns. It contains a spacious entrance hall, a judiciary hall in the form of the segment of a circle, with a gallery capable of holding 1000 people; the sheriff's courtroom, the sheriff clerk's office, and other official apartments. The county hall, measuring 68 feet by 40, occupies the south wing of the principal building, and contains portraits of the fourth Duke of Athole, of Lord Lynedoch by Sir Thomas Lawrence, and of Sir George Murray by Pickersgill. A committee-room to the right of the county hall measures 30 feet by 30; and an apartment in the upper story, described as a tea or card room, measures 44½ feet by 30, and contains a portrait of Neil Gow by Sir Henry Raeburn. Considerable alterations were made in the interior of the County Buildings in 1866-67, and a new courthouse and other offices were erected on the N side with the aid of £13,273 granted by Government. A bronze tablet, bearing a representation of Gowrie House by Sir John Steel, occupies a blank window of the edifice, and commemorates the historic building which once occupied the site. Behind and extending to the Speygate are the City and County Prisons, erected at the same time as the County Buildings, with which they communicate by a subterranean passage. They are surrounded by a high wall, have undergone considerable improvement since their erection, and were legalised in their present form in 1845. They comprise a governor's house, and two prison blocks to the N and S respectively; and over the five years 1870-1882 have had a daily average of 49 prisoners. The General Prison for Scotland is noted below. Further S along Tay Street is the Volunteer Drill Hall, with a frontage of 80 feet, and consisting of a main portion with two stories and two wings of a single story each; and just beyond the railway line is the Water-house, at the foot of Marshall Place. This building, and the ingenious hydraulic and other machinery connected with it, were planned by Dr Anderson, then rector of the Perth Academy, and elected in 1837 to the chair of Natural Philosophy in St Andrews University. Erected in 1830 at a cost of £13,610, it presents the appearance of a Roman temple with a detached column, and as an edifice is an ornament to the town. Though it appears to be constructed wholly of solid stonework, in reality the upper part, beyond the balustrade, decorated with

carved pilasters and surmounted by a leaden cupola, is a cast-iron tank. A filtering bed, 300 feet long, is constructed on the N end of Moncreiffe island, whence a powerful suction pipe, laid under the bed of the river, conducts the purified water to a tank under the reservoir. Two steam-engines then throw the water up 55 feet into this reservoir, which, with the assistance of a smaller reservoir in the W of the town, long supplied Perth with an ample quantity of water. An extension of the water-works was, however, completed on 23 June 1880 at a cost of £30,000. These new works are merely an extension of the former system, and consist of two additional reservoirs—one at Burghmuir and the other at Viewlands. The former, which is 300 feet above the river, and uncovered, supplies the upper parts of Bridgend and grounds over 180 feet level. The latter at 200 feet above the river is covered in, and supplies the W side of the town lying below 150 feet level and the lower part of Bridgend. The former reservoir at Wellshill is retained to supply the district lying between South Street and Marshall Place. Two engines, each of 40 horse power, have been erected to pump the water out the new reservoirs; and two separate sets of pumps are also provided. About 17 miles of piping from 3 to 15 inches in diameter have been laid; and hydrants for fire and cleansing purposes have been placed on the distributing pipes at distances of from 80 to 100 yards. The gasworks of the Perth Gaslight Company stand near Canal Street, and were erected in 1824 at a cost of £19,000 from plans also by Dr Anderson, and from the first made use of a simple but ingenious and effective system of gas-purification invented by the same gentleman. The City Hall, in West St John Street, was built in 1844, measures 98 feet by 66, and can accommodate 2000 people. It contains some interesting paintings, among which are *The Battle of the Amazons* (16 feet by 8), by the Chevalier Tarilla and Lucas Giordano; *Prometheus*, by Michael Angelo Cassavaggio; *The Magdalene*, by Andria Vaccari; *Esau Selling his Birthright*, by Lucas Giordano; *The Forum Romanum*, by Vanvitelli; *St Andrew*, by Ribra (Lo Spagnoletto); and a group of *Early Reformers* from an unknown hand. The Guild Hall stands on the S side of High Street, W of the site of the ancient cross; and the Freemasons' Hall or Royal Arch Mason Lodge stands in Parliament Close, on the N side of High Street, and occupies the site of the old parliament house removed in 1818. The Exchange Hall stands in George Street. The New Public Hall, opened in 1881, and built at a cost of £8000 in the Scottish Baronial style, to hold from 1200 to 1400, forms the S corner of Canal Street and Tay Street; and, with the Natural History Museum, and the Working Boys' and Girls' Hall, built in the same style at a cost of £3200 to hold between 600 and 700, form one block of buildings. The City and County Infirmary and Dispensary, between York Place and Kinnoull Causeway, was erected in 1837, after designs by W. M. Mackenzie, at a cost of about £6000; but large wings were added on the E and W in 1869 at a cost of upwards of £5000. It is an elegant and spacious building, and the extensions are built on the pavilion system, connected with the main body by enclosed corridors, and serve respectively as fever and convalescent wards. The management is in the hands of a large body of directors from the county and city, holding office, some *ex officio* and some by election. A dispensary was commenced in 1819; and in 1834, when it adopted the self-supporting system, a second was started on the former lines. King James VI.'s Hospital, between Hospital Street and King Street, is a large, stately, and well-arranged three-storied structure, built in the shape of the letter H. Originally founded in 1569 by James VI., or rather by the Regent Moray, 'to provide by all honest ways and means an hospital for the poor maimed distressed persons, orphans, and fatherless bairns within our burgh of Perth,' it was endowed with the confiscated property of three suppressed monasteries; and has now a revenue of £800 per annum. The first erected hospital was destroyed in 1652 by Cromwell to

provide materials for his fort (see below); and the present building was erected in 1750 at a cost of £1614, partly defrayed by public subscription. Till about 1812 it served as an almshouse for the residence of the recipients of the charity; but in that year the managers determined to administer a system of outdoor relief only, which is still enjoyed by a number of poor, who must reside within the limits of the burgh. The building is let for various purposes. It stands on the site of the old Carthusian Monastery. In the NW of the city are the barracks with spacious yards. Originally built in 1793 to accommodate 200 cavalry, they were afterwards transformed into infantry barracks, and latterly have been adapted for both branches of the service. The open square in front is large enough for the parade and inspection of 1000 men under arms. The militia barracks are in Victoria Street, and the militia store in Canal Street. At the junction of Mill and Methven Streets a small bridge spans the 'Town's lade' or aqueduct from the river Almond; to the W are seen the Perth mills, which until transferred to the city by a charter of Robert III. were called the King's Mills; and to the E Perth public baths, built in 1846 by public subscription at cost of about £1300. Adjoining the baths is a public wash-house. Immediately to the N of the Municipal Buildings is a club-house; and immediately to the N of the County Buildings is a handsome tenement, built in 1872, and known as Victoria Buildings. Both of these are in Tay Street, as are also the customs house and the office of inland revenue, and the Moncreiffe Memorial Museum, built in the Scottish Baronial style. The last was erected by subscription under the auspices of the Perthshire Society of Natural Science, in which the late Sir Thomas Moncreiffe took much interest. The Museum of the Literary and Antiquarian Society of Perthshire is deposited in the elegant building erected by subscription in 1822-24 to commemorate the public services of Provost Marshall. This Marshall's Monument is built somewhat after the style of the Pantheon at Rome; it is circular in form, and is surmounted by a dome; but it has an Ionic portico. The lower part is occupied by the public library and reading-room; the upper story by the museum. Other monuments are statues of Scott and Prince Albert. The first consists of a statue and pedestal in the South Inch, at the foot of King Street, and is the work of a local artist. It was erected, of course, with special reference to Scott's *Fair Maid of Perth*. The statue of Prince Albert stands on a pedestal at the S end of the North Inch, and is by Brodie. It was unveiled by Her Majesty, Queen Victoria, on 30 Aug. 1864. The quondam Theatre Royal, built in 1820 for £2625, stands at the junction of Atholl and Kinnoull Streets; but for many years has been occupied as a manufactory. In Stormont Street, which runs N from Atholl Street, there is a nunnery; and in Melville Street, which runs NW, a Roman Catholic convent. Melville Street is continued by Balhousie Street, which leads to the Castle of Balhousie. Perth Poorhouse, in the SW of the city, cost £12,000. Several of the bank offices are handsome buildings. The Bank of Scotland occupies a three-storied edifice with balcony and ornamented front, built in 1847, and formerly the head office of the Central Bank. The Union Bank has an ornate building in George Street; and the Commercial in South Street. The Savings' Bank adjoins the post office, and fronts the Tay in Tay Street. There are still some important buildings on the outskirts or outer margin of the city, which deserve notice. In the W and near the railway line is the large and convenient Perth Auction Mart, opened in 1875, and said to be one of the largest cattle markets in this country. It includes covered and open pens capable of accommodating 15,000 sheep and 1500 cattle; besides a spacious hotel, lodgings for servants, stabling for 40 horses, and shelter for shepherd's dogs. South of the market, and in the SW of the town, about 290 yards W of NW corner of the South Inch, is the General Railway terminus, which claims to be the finest

terminus in Scotland. It is the common terminus and meeting-point of the North British, Caledonian, and Highland railways; and it is very completely furnished with waiting-rooms and offices. Its refreshment rooms are large and well fitted; and the Queen has made use of them repeatedly in her journeys to and from Balmoral. There is a special 'bay' for the Dundee traffic, which enters the station from the W over the large viaduct across the Tay, at right angles to the main lines. Princes Street station is another station on the Dundee line, at the S end of the thoroughfare indicated. At the S end of the tree-shaded avenue across the South Inch stands the General Prison for Scotland, a large and sombre mass of buildings covering about 18 acres. The original portion was erected in 1812 at a cost of £130,000 to serve as a depot for the French prisoners of war. It was capable of holding 7000 such prisoners, over whom a daily guard of 300 soldiers were mounted, supplied by 3 regiments stationed in the barracks and town. It was used as a military prison, however, only for about two years; and in 1841 it was remodelled for its present purpose at a cost of £28,000. It was opened on 30 March 1842 in two wings, with accommodation for 535 prisoners. A third wing was added in 1853, and a fourth in 1859. In 1859 a new prison was built to accommodate 58 juveniles on the associated system of Parkhurst; but this was afterwards adapted for the reception of 58 male criminal lunatics. A new hospital for the accommodation of 30 female lunatics was opened on 1 June 1881. The prison has now accommodation for a total of 884 prisoners, *i.e.*, separate accommodation for 734, and associated for 150, thus divided:—in the male department, hospitals for 10 sick, for 20 epileptic and imbecile, and for 58 lunatic prisoners; on the female side, hospitals for 32 sick, epileptic, and imbecile, and for 30 lunatic prisoners. Male and female prisoners under sentence of imprisonment, and female convicts under sentence of penal servitude, are received at Perth for their whole sentence; and except in the case of female convicts the separate system prevails. The prison is under the direction of four commissioners under the Prisons (Scotland) Act, 1877, who have also to superintend all prisons in Scotland; and the expenses of the prison are paid out of the public funds. It is under the immediate direction of a governor and deputy governor; and is supplied with a staff of 8 teachers, besides Scripture readers, chaplain, and visiting clergymen, etc. At the SE corner of the South Inch, and next the river, is the slaughter-house. Across the river, and occupying a site on the W slope of Kinnon Hill, is Murray's Royal Asylum, incorporated by royal charter, and managed by a body of directors, some acting *ex officio*, some for life, and some as annually elected directors. The institution had its origin in funds left by Mr James Murray of Tarsappie, a native of Perth; and cost from first to last about £40,000. It was opened for the reception of patients in 1827, and was much enlarged in 1834 and 1865. It is built in the Doric style, after designs by Mr Burn of Edinburgh. The county district asylum is at MURRLY. Other interesting buildings are referred to under the head of antiquities later; and the churches, educational institutions, and hotels are subsequently noted. The site of the Old Cross is indicated by an octagonal figure in the causeway of High Street between the Kirkgate and Skinner-gate.

Churches.—The most curious public edifice of Perth, the most ancient and the most largely connected with historical events, is the Church of St John, originally called the Kirk of the Holy Cross of St John the Baptist, which stands in a large open area, on the W side of St John Street. Tradition ascribes its foundation to the Picts; but there seems to be little doubt that it was one of the earliest stone churches built in Scotland; and historical documents, as well as portions of the edifice itself, indicate that in the 12th and 13th centuries it was both magnificent and extensive. In 1227 it was granted to the monks of Dunfermline, and in their possession it was suffered to fall into disrepair.

Robert the Bruce ordered it to be restored, but after his death in 1329 the restorations ceased. It was afterwards largely repaired in the first half of the 15th century; and at the time of the Reformation the whole structure was in complete repair, and contained a great number of altars. But in 1559 its whole interior ornaments, altarpieces, and images were completely demolished on the memorable day when John Knox first denounced the corruptions of Popery, in a sermon that led to the demolition of the monasteries in Scotland. 'The manner whereof was this,' to quote the Reformer's own narrative, 'The preachers before had declared how odious was idolatry in God's presence; what commandment He had given for the destruction of the monuments thereof; what idolatry and what abomination was in the mass. It chanced that the next day, which was the 11th of May, after that the preachers were exiled, that after the sermon, which was vehement against idolatry, that a priest in contempt would go to the mass; and to declare his malapert presumption, he would open up ane glorious tabernacle which stood upon the high altar. There stood beside certain godly men, and amongst others a young boy, who cried with a loud voice, "This is intolerable, that when God by His Word hath plainly damned idolatry, we shall stand and see it used in despite." The priest, hereat offended, gave the child a great blow, who in anger took up a stone, and, casting at the priest, did hit the tabernacle, and broke down ane image; and immediately the whole multitude that were about cast stones, and put hands to the said tabernacle, and to all other monuments of idolatry, which they despatched before the tentmen in the town were advertised (for the most part were gone to dinner), which noised abroad, the whole multitude convened, not of the gentlemen, neither of them that were earnest professors, but of the rascal multitude, who, finding nothing to do in that church, did run without deliberation to the Grey and Black Friars', and notwithstanding that they had within them very strong guards kept for their defence, yet were their gates incontinent burst up. The first invasion was upon the idolatry, and thereafter the common people began to seek some spoil; and in very deed the Grey Friars' was a place so well provided, that unless honest men had seen the same, we would have feared to have reported what provision they had. Their sheets, blankets, beds, and coverlets were such as no earl in Scotland hath the better; their napery was fine. There were but eight persons in convent, yet had eight punchcons of salt beef (consider the time of the year, the 11th day of May), wine, beer, and ale, besides store of victuals effeiring thereto. The like abundance was not in the Black Friars', and yet there was more than became men professing poverty. The spoil was permitted to the poor; for so had the preachers before threatened all men, that for covetousness' sake none should put their hand to such a reformation, that no honest man was enriched thereby the value of a groat. Their conscience so moved them that they suffered those hypocrites take away what they could of that which was in their places. The Prior of Charterhouse was permitted to take away with him even so much gold and silver as he was well able to carry. So was men's consciences before beaten with the Word that they had no respect to their own particular profit, but only to abolish idolatry, the places and monuments thereof, in which they were so busy and so laborious that within two days these three great places, monuments of idolatry—to wit, the Grey and Black thieves, and Charterhouse monks (a building of a wondrous cost and greatness)—was so destroyed that the walls only did remain of all these great edifications.' The N transept was entirely renewed in 1823. As it now stands, the church is of various dates. Its total length is 207 feet; it is cruciform in shape; and the central square tower, 155 feet high, is the chief relic of the original structure. The tower is surmounted by a tall octagonal spire of oaken beams, covered with lead; and it contains several bells, of which the oldest are one

dated 1400, and St John the Baptist's Bell, now called the ten o'clock bell, because it is rung every evening at that hour, dated 1506. A third is supposed to be the old curfew bell, which was cast in 1526. Outside of the spire are placed a set of small musical bells, which chime certain airs at the half-hours, being connected by machinery for that purpose with the public clock on the tower below. In 1336 Edward III. is stated by Fordun to have stabbed his brother, John, Earl of Cornwall, before the high altar, for ravaging the western counties of Scotland; but English historians merely record that the Earl died in the October of that year at Perth. In Scott's novel the church is the scene of the trial by bier-right to discover the slayer of Proudfoot. Below it is the burial vault of the Mercers, which they are said to have obtained in exchange for the two Inches; though another story, founding on the Mercer arms, declares that this family gave three mills in the town for their vault. The interior of the church is divided into the three parish churches—Middle, East, and West. The East Church contains the burial-place of the Gowrie family, a blue marble tombstone with figures believed to represent James I. and his Queen, both buried in the Carthusian Monastery, a monument erected by the officers of the 90th regiment or Perthshire Volunteers to their comrades who fell in the Crimea, and a beautiful eastern window of stained glass. It has 1314 sittings; and the stipend averages £250. The Middle Church is situated to a great extent below the tower; and four massive pillars in the centre support that superstructure. It has 1203 sittings; and the stipend averages £250. The West Church was partly rebuilt in 1828 from plans by Gillespie. It has 800 sittings; and the stipend is £200. The other Established churches are St Paul's, an octagonal building of no architectural excellence and surmounted with a tall steeple, built in 1807 at a cost of £7000, with accommodation for 1000 people, and a stipend of £209; St Leonard's, a handsome edifice, built in 1835 at a cost of £2450 from designs by Mr Mackenzie, on the E side of King Street, opposite the head of Canal Street, with 991 sittings, and a stipend of £200, formerly a chapel of ease, but now a *quoad sacra* parish church; and St Stephen's Gaelic church, which, built in 1768, contains 650 sittings, and ranks as a chapel of ease. KINNOULL parish church is on the E bank of the Tay. The West Free church, in Tay Street, was erected in 1870-71, after designs by J. Honeyman of Glasgow, at a cost of about £8000, in the Continental Pointed style of the middle of the 13th century. Exclusive of the vestry and presbytery hall it measures 114 feet by 63; it has a buttressed tower and spire rising to the height of 212 feet, and forming a conspicuous object in views of the town; and it contains 950 sittings. The Free Middle Church contains 830 sittings. St Leonard's Free church, built in Marshall Place in 1883, at a cost of £7500, in Scottish Gothic style, has accommodation for 1000 people. St Stephen's Free church, in Paradise Place, is a Gaelic charge, and has 850 sittings. Knox's Free church, in South Street, has 600 sittings; as has also New Row (late mission) Free church. The North U.P. church was opened on 7 Nov. 1880 on the site of a former church dating from 1791. Erected at a cost of over £7000, it is Romanesque in style, and contains 1205 sittings. The South or Wilson U.P. church, on the S side of High Street, was built in 1740, and was one of the four structures occupied by the founders of the Secession body; and it has 831 sittings. The East U.P. church, in South Street, has 672 sittings; and York Place U.P. church has 800 sittings. St John's Episcopal church, in Princes Street, was built in 1851 in Early English style, on the site of a former plain edifice, and is seated for 600; it has a tower and spire 150 feet high. St Andrew's Episcopalian church, schools, and parsonage occupy a fine position near the railway terminus. They embrace two almost contiguous edifices in Early English; the church being cruciform, and surmounted by a broad, buttressed, gable-roofed tower. St Ninian's Episcopal cathedral, not yet

complete, was built in 1850 in Early Middle Pointed style, from designs by Butterfield, to serve as a cathedral for the united diocese of St Andrews, Dunkeld, and Dunblane. When completed it will be entirely cruciform, but at present only the choir, transepts, and one bay of the nave are finished; it stands in Atholl Street. St John's Roman Catholic church, in Melville Street, was built in 1832, and contains 500 sittings; and the Church of St Mary or Our Lady of Perpetual Succour was built on Kinnoull Hill in 1870 in Early English style, and adjoins previously existing collegiate buildings of Redemptorist Fathers. The Original Secession Chapel, in South Street, was built in 1821, and contains 390 sittings; the Independent Chapel, in Mill Street, was built in 1824, and contains 700 sittings; the Evangelical Union, in High Street, contains 420 sittings; and the Methodist Chapel, in Scott Street, contains 400 sittings. There is also a Glasite meeting-house in High Street. The first public burying-place was round St John's Church; but in 1580 the cemetery of the demolished Greyfriars' monastery took its place, and continued to be the only burial-place in the city until about 1844, when a new cemetery was opened at Wellshill in the W part of the town.

Schools, etc.—The Public Seminaries, a fine edifice ornamented with Doric pillars and balustrades, stands in Rose Terrace overlooking the W side of the North Inch. The building was erected in 1807, from designs by Mr Burn, at a cost of about £7000—voluntarily subscribed, the city giving £1050—to accommodate the Grammar School and Academy, which had, till then, been taught in separate buildings. Perth Grammar School is said to date as an institution from the middle of the 12th century; and it long enjoyed the reputation of being one of the best classical schools in Scotland. In 1550 it was attended by 300 boys, some of them sons of the nobility and gentry; and it had then for its rector Andrew Simpson, whose Latin grammar was used in burgh schools till superseded by Ruddiman's *Rudiments* in 1714. Among its scholars were the Admirable Crichton and the great Earl of Mansfield. Several of its other rectors have distinguished themselves for scholarship; among them was John Row, from 1632 to 1641, later minister in Aberdeen, and author of *Institutes of the Hebrew Language*. Previous to 1807 the school occupied a building, afterwards used as a theatre, near the site of the present City Hotel. The Academy was established in 1760, and had a prosperous career in a separate condition, which it still continues. The two institutions are now united under the name of Perth Academy, and are placed under the burgh school board, which consists of a chairman and 8 members. It has a staff of 6 rectors, 5 other masters, and 4 assistants, and one mistress and female assistant. In 1883 the following were the twelve schools under the burgh school-board, the first seven of them public, with accommodation, average attendance, and government grant:—Central District (370, 238, £191, 4s.); King Street (264, 238, £187, 15s.); Kinnoull (350, 311, £296, 2s.); Northern District (580, 507, £443, 12s. 6d.); North Port (399, 316, £246, 18s.); Southern District (419, 344, £300, 12s.); Watergate (196, 202, £171, 3s.); St Andrews Episcopalian (316, 296, £263, 1s.); St Ninian's Episcopalian (291, 136, £102, 8s.); St John's Roman Catholic (317, 198, £163, 7s.); Seymour Munro Free (165, 166, £173, 16s.); and Stewart's Free Trades (181, 103, £93, 11s.). The School of Art and Science, dating from 1863, is also under the management of the school-board. Sharp's Educational Institution was erected in South Methven Street by bequest of Mr John Sharp, late baker in Perth. The large and commodious building was opened 10 Sept. 1860, and accommodates 450 children. It comprises, besides infant, junior, and senior departments, an industrial school for girls, and a recently-erected technical school (for boys), with a well-appointed lecture-room, laboratory, and work-room. The testator left instructions that special provision should be made for branches of education peculiar to girls. The institution is under

6 directors, and has a staff of 5 masters, 2 mistresses, and assistants. Stewart's Free School, in Mill Street, is under the patronage of the deacons of the trades incorporations. The Seymour Munro Free School, in Caledonian Road, is managed by two life trustees, and 9 others, acting *ex officio*. There is an Industrial school for girls at Wellshill; while the Feehney Industrial School, in the same neighbourhood, instituted in 1864 with a bequest by Mrs Feehney, is for boys.

Perth has a head post office with all the usual departments; offices of the Bank of Scotland, the Union, British Linen Co., Royal, National, Commercial, Clydesdale, and Aberdeen Town and County banks. It is also the headquarters of the Savings' Banks of the County and City of Perth, established in 1838 and certified under the Act of 1863, 'for the safe custody and increase of small savings belonging to the industrious classes' of the neighbourhood. Sums of from 1s. to £150 are received from individual depositors, and may be withdrawn whenever required. On 21 Feb. 1883, there were 19,239 individual depositors, having a capital of £499,074, which with £9476 belonging to charitable institutions and societies, gave a total deposited in the bank of £508,550. This sum includes the capital inserted for the district banks at Alyth, Blairgowrie, Crieff, Coupar-Angus, Caputh, Dunkeld, Dunning, and Melville. Forty-three insurance companies are represented in Perth by agents or offices. There are 4 principal hotels, viz., the British, Royal George, Salutation, Queen's, besides the Temperance Hotel. Among the charitable institutions are the Infirmary and dispensary, destitute sick society for Perth and Bridgend, societies for indigent old men and women, Perth Ladies' Clothing Society, James VI.'s Hospital, Perth Ladies' House of Refuge for Destitute Girls, 2 schools of industry, a society for relief of incurables in Perth and Perthshire, with Hillside Home in Perth, Perth soup kitchen (17,526 portions issued in 1882-83), Murray's Royal Asylum, the Lethendy mortifications. Among the sporting clubs are Perth Curling Club (with curling pond off Balhousie Street), Friarton and St John's (of Perth) curling clubs, Perth hawking club (with green on the W of the North Inch), New Club in Tay Street, Perth Hunt, Royal Perth Golfing Society and County and City Club, James VI.'s Golf Club, Perth Anglers' Club, instituted 1858, Perth Fishing Club, instituted 1880, and Perthshire Coursing Club. Other institutions are the Literary and Antiquarian Society, with a museum in Marshall's Monument; Perthshire Society of Natural History, established in 1867, with a natural history museum and lecture-hall in Tay Street; Perthshire Medical Association, a branch of the Educational Institute of Scotland, the Mechanics' library, instituted 1823, the People's Club and Institute, formed to 'combine the advantages of a commercial exchange with those of a place for instruction and amusement'; a literary society, public baths and washing-house, a model lodging-house, horticultural and temperance societies, a city mission, branch of the Scottish Girls' Friendly Society, and a Perth women's educational association. Four local lodges of Freemasons meet in the masonic hall at stated intervals. Perth is the depot for the 1st, 2d, and 3d battalions of the Royal Highlanders, and of the 42nd regimental district, and it is the headquarters of the 1st Perthshire Rifle Volunteers. *The Perthshire Courier, Farmers' Journal, and Scottish General Advertiser*, established in 1809, is published every Tuesday afternoon; the *Perthshire Advertiser and Strathmore Journal*, established in 1829, every Monday, Thursday, and Friday; and the *Perthshire Constitutional and Journal*, established 1835, every Monday and Wednesday afternoon. The two first are Liberal, the last Conservative, in politics. Each of the *Dundee Advertiser* and *Dundee Courier and Argus* has a branch office in Perth.

Manufactures, Commerce, Harbour, etc.—The manufactures of Perth were at an early period extensive; and although they have undergone many fluctuations, they are still tolerably important and diversified.

Gloves were early and long a staple product, and between 2000 and 3000 pairs were annually made, chiefly for home consumption. Side by side with this manufacture flourished the dressing of sheep and lamb skins to provide the materials for the gloves; and these industries were formerly so important as to give name to Skinner-gate, one of the oldest streets in the town. Both are now quite extinct, although tanning is, of course, carried on to an average extent. But the former importance of the Glovers is indicated by the fact that to the present day the deacon of the Incorporation of Glovers of Perth is, *ex officio*, a commissioner of supply for the county. The linen trade of Perth rose to great importance in the 18th century, and fostered intercourse between the merchants of the city and the inhabitants of Germany and Flanders. A report in 1794 stated that this was the staple trade of the town; and that linen and cotton goods to the value of £100,000 were annually produced by about 1500 looms in the city and suburbs. The manufacture of cotton fabrics superseded that of linen during the wars with France; but about 1812-15 received a severe check. Similarly the manufactures of umbrella-ginghams, checks, pullicates, and imitation Indian shawls and scarfs have all been introduced into the town, flourished awhile, and sunk into insignificance. The spinning of flax and tow yarns was commenced about 1830 in a mill with 1250 spindles; and the manufacture of a mixed cotton and woollen fabric in 1844. Ship-building began to be carried on in 1830; and in 1837 the first iron steam vessel built on the E side of Scotland came from a Perth yard, but the industry has now dwindled, only one sailing-ship of 110 tons having been built since 1877. Among the other shrunken industries of the place publishing should be mentioned. In the latter part of last century a printing press in the town was remarkable for the number and excellence of its publications, among which was the *Encyclopaedia Perthensis*, said to have been at the time the largest work produced in Scotland out of Edinburgh. At present the chief industries of Perth are dyeing, and the manufacture of ink and gauge-glasses—the last the most recent. There are four dyeworks at Perth, the largest of which was erected mainly in 1865 in the N part of the town, and is the largest establishment of the kind in Scotland. It has agencies in all parts of the country, and dyes goods from even remote parts of England and Ireland. It draws a plentiful supply of water from the Tay by means of 18-inch pipes; and employs many hundreds of hands. The making of gauge-glasses is carried on by two firms; and of ink by two houses. There are, besides, three manufactures of linen, table-napery, etc.; and others of winceys, floor-cloth, ropes and twine, bricks and tiles, chemicals, etc. One of the linen factories was built in 1868 at a cost of £20,000, and employs about 600 hands. There are also iron-works, several foundries, four breweries, and two mills.

Perth was early a commercial centre of importance and reputation. Alexander Neckam, who died Abbot of Cirencester in 1217, noticed the town in a Latin distich, quoted in Camden's *Britannia*, and thus Englished by Bishop Gibson, translator of Camden's work:—

Great Tay through Perth, through towns, through country flies,
Perth the whole kingdom with her wealth supplies.

Perth merchants carried on trade with the Netherlands before 1286 and long after, and visited the Hanse towns in their own ships. Germans and Flemings very early frequented the city in turn; many settled in it; and had it not been for the usual short-sighted restrictive policy adopted towards foreigners, would have developed its trade and manufactures even more rapidly and more extensively than they did. The rebellion of 1745 demonstrated the convenience of Perth as a focus of trade for the N part of Scotland; and after that date the commerce of the city once more revived, but it has never again assumed anything like a leading position among the commercial towns of Scotland. In 1840 it was

PERTH

made a head port, and as such it has jurisdiction down the Tay as far as Carnace Burn on the right, and Powgavie on the left; over the subports of Newburgh, Port-Allen, Carpow, Pittour, and Powgavie.

The original harbour adjoined the old bridge at the foot of High Street, at the place called Old Shore, but in consequence of the gradual accumulation of gravel in it, was removed, first to the South Shore, opposite the Greyfriars' burying-place, and next to the Lime Shore, opposite the S end of the South Inch, and quite away from the town. The channel, even below this point, became also greatly impeded with sand-banks, so that sloops of 60 tons were the largest craft that could make Perth, and even these had to be lightened. The trade of Perth was thus seriously affected, and accordingly in 1830 and 1834 acts of parliament were obtained to authorise the deepening of the channel, and the construction of larger quays and a wet dock. These with other changes were estimated to cost £54,315, and were to be finished before June 1854, under the direction of thirty commissioners. But owing partly to the want of funds and partly to the diversion of trade on the construction of the railways, they remained unfinished for a long time after that date. The commissioners becoming bankrupt in 1854 procured an act of parliament, transferring all their liabilities (then about £86,000) to the city; and the harbour debt at present is thus a mere matter of figures between the harbour and city. The following table shows the state of harbour revenues and debt at various dates—

| Date. | Income. | Expenditure. | Excess of Expenditure. | Debt due to City. |
|---------|---------|--------------|------------------------|-------------------|
| 1857-58 | £1874 | £3556 | £1682 | £87,631 |
| 1867-68 | 1310 | 4307 | 2997 | 110,194 |
| 1877-78 | 892 | 5574 | 4481 | 148,796 |
| 1882-83 | 1300 | 6189 | 4888 | 171,296 |

These figures show a steadily declining income and a steadily rising expenditure. The excess of the latter is annually borrowed from the city and added to the total amount of the debt. A new item in the revenue of the port was that known as the Tay Bridge compensation. A short branch railway, now forming part of the Caledonian system, was formed in 1852 between the harbour and the general terminus. The quay frontage is at present 1300 feet. The following table gives the tonnage of vessels that entered and cleared from and to foreign countries and coastwise with cargoes and in ballast:—

| | ENTERED. | | | CLEARED. | | |
|------|----------|----------|--------|----------|----------|--------|
| | British. | Foreign. | Total. | British. | Foreign. | Total. |
| 1853 | .. | .. | 21,689 | .. | .. | 19,092 |
| 1867 | 8617 | 3787 | 12,404 | 8515 | 532 | 9,047 |
| 1873 | 6155 | 2034 | 8,189 | 6661 | 2255 | 8,816 |
| 1882 | 6395 | 4245 | 11,143 | 6972 | 3798 | 10,770 |
| 1883 | 6033 | 2829 | 9,767 | 6900 | 2531 | 9,731 |

Of the total, 124 vessels of 9767 tons that entered in 1883, 29 of 2315 tons were in ballast, and 103 of 7138 tons were coasters; whilst the total, 124 of 9731 tons of those that cleared included 55 ships in ballast of 4896 tons, and 123 coasters of 9505 tons. The total tonnage of vessels registered as belonging to the port was 9654 in 1841-44, 4945 in 1861, 3429 in 1873, 2064 in 1878, and 803 in 1884, viz.—16 vessels, from one steamer of 18, to a sailing ship of 135, tons. Much of the trade of the city is carried on in bottoms of other ports of registry, especially of Dundee. The principal imports are Baltic timber, coals, cement, slates, oil-cake, and artificial manure; and the principal exports are potatoes, grain, and timber. But the whole trade of Perth has been affected by the development of railways, which has attracted most of the shipping that

PERTH

enters the Tay to Dundee, whence their cargoes are distributed by rail. The customs revenue of Perth in 1837 was £6270; in 1864, £16,308; in 1874, £17,104; and in 1882, £20,776.

As may be inferred from the size of its auction mart, Perth is an important centre for the sale of sheep and cattle, and very large numbers of these animals change hands here annually. Besides the sales of the local dealers, there are still several fairs held at Perth. The First of Luke, Palm-sune'en, and Midsummer fairs, all for cattle and horses, are held respectively on the first Fridays of March, April, and July. The sheep and wool fair is held in July, on the first Tuesday after Inverness wool fair; St John's Day Fair, for cattle, horses, and sheep, takes place on the first Friday in September; Little Dunning Fair, for cattle, butter, and cheese; a hiring fair on the Friday after Martinmas (o.s.); and Andrews's fair, for cattle and horses, on the second Friday in December.

Municipal History.—In David I.'s confirmation charter to Dunfermline Abbey (1127) is mentioned the 'burgh of Perth'; and by David Perth claims to have been made a royal burgh, although its oldest royal charter is dated 1210, and attributed to William the Lion. There are numerous minor charters by Robert I., David II., Robert III. (one conferring the right of choosing a sheriff), and James VI.; but the governing and most important charter in the possession of the city is dated 1600, under the hand of James VI., confirming all previous charters and the whole rights and privileges of the burgh. Till 1432, in the reign of James III., Perth was generally regarded as the capital or seat of government of the country, and even at present takes precedence of all royal burghs except Edinburgh. The burgh records are of great antiquity, and supply an uninterrupted list of magistrates from 1465. It is interesting to note that among the list of chief magistrates, there appear very often the names of some of the neighbouring nobility, as, e.g., the Earl of Gowrie, Earl of Montrose, Earl of Athole, Lord Ruthven, Viscount Stormont, Threipland of Fingask, etc. The burgh is now governed by a lord

Seal of Perth.

provost, 4 bailies, a treasurer, and nineteen councillors, who are also commissioners of police, gas, and water. The burgh is divided into four wards for the election of the council; the number of voters in 1883-84 was 5334, of whom 1322 were females. The burgh possessed a seal as early as the first half of the 13th century; but at the beginning of the 15th century it used a different seal, representing on one side the beheading of John the Baptist, and on the other his enshrinement. The present seal is said to have taken its two-headed eagle from the tradition of the Roman origin of the town. The number of the police force in 1884 was 33, including a superintendent, who is also procurator-fiscal for the city, with a salary of £220. Burgh, police, and guildry courts are held in the town. A sheriff court is

held every Tuesday and Friday during session, and at least once in each vacation. The convener court, acting as trustees for Stewart's Free School, consists of the deacons of the various trade-guilds, viz., the hammermen, bakers, glovers, wrights, tailors, fleshers, shoemakers, and weavers; but the ancient rigidly maintained privileges of these incorporations no longer exist. The entire corporation revenue in 1883-84 was £6557. The following table shows the sources and amount of the revenues of the city of Perth at different dates; and the income which it derives from the harbour being excluded:

| | 1857-58. | 1867-68. | 1877-78. | 1882- 3. |
|------------------------------|----------|----------|----------|----------|
| Customs, | £678 | £590 | £644 | £771 |
| Inches—Grazing, etc., . . . | 398 | 505 | 405 | 452 |
| Feu-duties, | 1256 | 1544 | 1468 | 1457 |
| Houses, etc., | 762 | 290 | 301 | 303 |
| Mills and Waterfalls, . . . | 601 | 618 | 429 | 450 |
| Arable Lands, | .. | 375 | 321 | 374 |
| Fishings, | 870 | 1265 | 1320 | 612 |
| Seats in the Churches, . . . | 465 | 414 | 430 | 415 |
| Cemeteries, | .. | 248 | 133 | 226 |
| Shore-dues, | 1574 | 106 | 73 | 106 |
| Miscellaneous, | 608 | 361 | 364 | 208 |
| Total, | £7512 | £9216 | £5888 | £5374 |

Perth returns one member to parliament (always a Liberal since 1837), the parliamentary constituency numbering 4126, and the municipal 5334, in 1884. Valuation (1876) £90,148, (1884) £113,960, plus £10,840 for railways. Pop. of royal burgh (1871) 22,274, (1881) 27,207; of parliamentary burgh (1831) 19,238, (1841) 20,407, (1851) 23,835, (1861) 25,250, (1871) 25,585, (1881) 28,949, of whom 15,496 were females, and 391 Gaelic-speaking. Houses (1881) occupied 5515, vacant 136, building 28.

Antiquities.—With the exception of St John's Church already described, there are no extant ancient buildings of interest in Perth, though it has the memory of many now vanished. Military walls, of sufficient strength to resist vigorous sieges, surrounded the town from a very early date till far into last century. Their builder and the date of their origin is unknown, although Adamson, in the *Muses Threnodie*, boldly ascribes them to Agricola. They often underwent partial demolitions and changes, but now have completely disappeared, with the exception of a small fragment still to be seen in an entry off George Street. The walls seem at one time to have been strengthened with forts, of which the Spey Tower was one. This, the last remnant of the fortifications, stood near the site of the County Buildings, and contained a strong prison, in which Cardinal Beaton imprisoned certain Protestants whom he caused to be put to death. From its walls also he witnessed their execution. The tower was demolished in 1766. The Monk's Tower, demolished in 1806, formed the former south-eastern angle of the old city-wall, and had a ceiling curiously decorated with allegorical and symbolical paintings at the command of the first Earl of Gowrie. A fosse or aqueduct, supplied with water from the Almond, went round the outside of the walls, but this has very largely been built over or narrowed. The old castle of Perth stood without the walls at the end of the Skinner-gate, and, before the erection of the Blackfriars' monastery, was the usual Perth residence of the Scottish kings. A very large and strong citadel, built by Cromwell's army in 1652 on the South Inch, was one of the four erected after the battle of Dunbar to overawe Scotland. It was a solid and stately work, 266 feet square, with earthen ramparts and deep moat filled with water, and it had a bastion at each corner, and an iron gate on the side next the town; a pier was built beside it. Many buildings, including the hospital, the schoolhouse, and parts of the bridge, were demolished to supply the materials for this work; and the gravestones and walls were taken from the Greyfriars' churchyard for the same purpose. Soon after the Restoration the citadel was given by Charles II. to the town, and almost immediately was used as a quarry; in 1666 it was sold for 4702 marks, but under

conditions which made the wreck of it again public property, when it was finally removed piece-meal. During some years before the building of the barracks a remnant of it was used as a cavalry stable for 200 horses, a riding school, etc.; but now the trenches have been filled up, and all traces of its existence have disappeared from the spot, across which the Edinburgh road now passes. The old Parliament House, which has left its name in Parliament Close off High Street, lingered as a humble tenement, inhabited by the poor, yet with a few tarnished relics of its former grandeur, till 1818, when it was taken down to make room for the Freemasons' Hall. A stone in the causeway of the High Street marks the site of the former pillory; and between Skinner-gate and Kirkgate, in the same street, others define the site of the market cross. In 1668 Robert Mylne of Balfargie, the King's master-mason in Scotland, built, for £200, a new cross (in room of that demolished by Cromwell), which was 12 feet high, had a flight of steps within, and terminated in a terrace, and was emblazoned with both the royal and the city arms. In 1765 this fine structure was decreed by the town council to be a mere worthless obstruction to the thoroughfare, and it was accordingly sold by auction for £5 to a mason, who immediately removed it. Earl Gowrie's palace, scene of the Gowrie conspiracy in 1600, stood on the site now occupied by the County Buildings; was surrounded by a garden; and in the prosperous days of the city was known as the Whitehall of Perth. Built in 1520 by the Countess of Huntly, and afterwards purchased by Lord Ruthven, it passed, after the murder of the Earl of Gowrie, into the possession of the city, which presented it in 1746 to the Duke of Cumberland. For some time it had been possessed by the Earl of Kinnoull, who received it to Charles II. in 1663. The Duke of Cumberland sold it to Government, by whom it was used for many years as artillery barracks; and finally resold to the city in 1805, when it was demolished, and its materials sold for about £600, to make room for the present County Buildings. The last fragment disappeared in 1865. Lord Chancellor Hay, the Earl of Erol, the Earl of Athole, the Bishop of Dnked, Lord Crichton of Sanquhar, Lord John Murray, and other nobles had mansions in the city, but all have now disappeared. In Curfew Row there is an old tenement, formerly the Glovers' Hall, and now pointed out as the house of Simon Glover, father of the 'Fair Maid;' while the Skinners' or Glovers' yard in front (now covered with buildings) was the supposed scene of the conflict between Hal o' the Wynd and Bonthron. Old Perth abounded in ecclesiastical buildings and establishments. The Blackfriars' or Dominican Monastery, on the N side of the town, was founded in 1231 by Alexander II. It was a frequent residence of the kings, on which account it is sometimes spoken of as a palace; and it had a church attached to it, in which some parliaments were held. From the Gilten Arbour in its garden Robert III. witnessed the combat of the clans, already alluded to. In 1437 the monastery was the scene of the murder of James I. The Carthusian Monastery or Charter-house, the only house of the order in Scotland, stood on the present site of James VI.'s hospital, and was founded in 1429 by James I. or his Queen for thirteen monks and their servants. Its church contained the tombs of James I., his Queen, and of Margaret, mother of James V. The sumptuous building was a great ornament to the city, but was completely destroyed by the mob in 1559. The same fate befell the Greyfriars' or Franciscan Monastery, founded in 1460, in the SE of the town, by Lord Oliphant. The Whitefriars' Monastery, known as the 'Prior and Convent of the Carmelite Friars of Tulilum, near Perth,' dated from the reign of Alexander III. St Leonard's Nunnery stood a little S of the town, and was founded in the 13th century. Along with the other nunnery of St Mary Magdalene, it was suppressed on the erection of the Carthusian Monastery, to which the revenues of both were assigned. Our Lady's Chapel, or the Chapel of St Mary, already an old building (1210), was destroyed

then by a flood; and was afterwards built farther from the river, and eventually became part of the old town buildings, taken down in 1876. St Ann's Chapel, dedicated to the mother of the Virgin, had attached to it a hospital for the poor, and stood on the S side of St John's Church. The chapel of Our Lady of Loretto or Allarcit stood near the head of South Street, on the N side. The Rood Chapel, or Chapel of the Holy Cross, stood at the N side of the South Street port. St Paul's Chapel, founded in 1434 by Sir John Spens of Glen Douglas, had an hospital for strangers and poor, and stood at the NW corner of the New Row. SS. James' and Thomas' Chapel stood on the S side of St John's Church. St Catherine's was founded in 1523 by Sir John Tyrie, provost of the collegiate church of Methven, and had an hospice for poor travellers; it stood at Claypots, in the W of the town. St Laurence's Chapel was founded before 1405, and was granted by Robert III. to the Dominicans, who suffered it to go to ruin. At the junction of the Watergate and High Street, a marble tablet on the front of a house notes that 'Here stood the Castle of the Green,' an ancient house in which golfers used to keep their clubs and balls. The house now occupying the site was built in 1788, and on clearing the site for its erection, two underground chambers were found, each 26 feet by 14, covered with a flat arch, and with strongly cemented walls of masonry $3\frac{1}{2}$ feet thick. Some local antiquaries have not scrupled to recognise in these the remains of an ancient British temple, said by Holinshed to have been founded at Perth by a grandson of King Lear, and traditionally reported to have preceded the Castle of the Green on its site. Other remains and relics have been exhumed in the course of excavations, going to prove that the level of the streets has been considerably raised in the course of time.

History.—Both the etymology of the name and the earliest site and date of the city of Perth have been keenly discussed by antiquaries. Some are for identifying it with the 'Victoria,' some with the 'Orrea,' of Ptolemy (2d c. A.D.); but Victoria Skene places at Loch Orr in Fife, whilst 'Orrea must have been situated near the junction of the Earn with the Tay, perhaps at Abernethy.' Others, again, assert that the present city was only founded by William the Lyon after the destruction by the Tay of 'Bertha' or Old Perth in 1210; and Bertha they place at the mouth of the Almond, $2\frac{1}{2}$ miles higher up the Tay. All that is certain is that Perth is of very high antiquity; and that for some time it was known as St John's town or St Johnstoun. The latter name, though it occurs in some ballads and other old writings, is said never to have been generally adopted by the people. It survives in the phrase a 'St Johnstoun's tippet,' meaning a hempen halter, from the fact or statement that each of the 300 burgesses, who marched to oppose the Queen-Regent, Mary of Guise (1559), wore a rope round his neck, as a symbol of the punishment he would deserve if he deserted his colours. The vicinity of SCONE, where the Scottish kings were crowned, and the magnificence of the ecclesiastical buildings at Perth gave it the character of capital of the kingdom till 1482, in the reign of James II. Fourteen parliaments are said to have been held in it between 1201 and 1459; and sixteen out of thirty-seven ecclesiastical councils held in Scotland between 1201 and 1405 took place at Perth. In the history of Scotland, Perth figures very prominently. In 1298 Edward I. of England fortified it as the capital, and his deputy, Aymer de Valence, took up his residence in it. In 1311 Robert Bruce took the city by storm, razed the walls, and filled up the moat. After the battle of Dupplin in 1332, Perth came into the hands of Edward Balliol, and three years later was skillfully fortified and strongly garrisoned by Edward III. But in 1339, Robert, Lord High Steward, regent of the kingdom, laid siege to the fortress, and compelled it to surrender. Perth, in the reign of Robert III., is well described by Sir Walter Scott in his *Fair Maid of Perth*; and the novel contains a graphic account of the chief outstand-

ing historical event of the time, viz., the judicial combat between the clans Quhele or Chattan and Kay, which took place on the North Inch, in 1396, before the king and his nobles. The following is Dr Hill Burton's more prosaic account of the same interesting event: 'On the 23d of October 1396, on the beautiful diluvial meadow by the Tay called the North Inch of Perth, lists were staked off as for a great tournament, and benches and stands were erected for spectators. A vast crowd gathered there of all ranks, from the king himself downwards. The spectacle which drew them together was a battle between two bodies of the wild Highlanders, thirty on each side. They were to fight in their native fashion with axes, swords, or bows, having no defensive armour. The chronicles mention an odd incident in the arrangements. A combatant on one side losing heart swam the Tay and made off. The question then came how the equality of numbers was to be made up. A common artificer of Perth—a little man, but strong and able at his weapon—agreed to fill the empty place for a small fee, and a life provision should he survive after having done his work well; and the bargain was accepted. Though but briefly noted as a piece of eccentric courage in a person of humble condition, this incident has come up so often and in so many shapes in literature and tradition that the story of the Gow-chrom, or Crooked Smith as he is sometimes called, is as familiar as many leading events in history. Such a contest would make a lively variation in the monotony of the tournament, with its stately etiquettes and regulated restraints. It was the nature of the beings brought together to fly at each other like wild-cats, and kill in any way they could. The affair was as bloody as heart could desire. Of one side but ten remained, all wounded; of the other but one.' The object of this extraordinary conflict is quite uncertain, and even the families to which the leaders in the fight belonged, are not definitely known. The earliest account of the affair is given by Wyntoun (about 1422):

'They thre score ware clannyt twa,
Clahynne Qheweyl, and Clachynha,
Of thir twa kynnyt were thay men
Thretty again thretty then,
And thare thai had than chiftanyt twa—
Scha Ferqwharis some we ane of thay,
The tother Cristy Johnesone.'

Wyntoun makes no mention of the volunteer, who is introduced, first by Bower, who wrote about 1445. See also pp. 310-318 of vol. iii. of Skene's *Celtic Scotland* (1880). In 1437 Perth was the scene of the assassination of James I., who was murdered in the Blackfriars' Monastery. The king had spent his Christmas at the monastery, and still lingered as the guest of the monks. Various portents are related, which warned the king of his approaching death. But James jested and disregarded all superstitious warnings. On the evening of 20 Feb., the arch-conspirator Sir Robert Graham, followed by a large body of retainers, overcame the king's guards and broke into the royal apartments. The king was chatting with the queen and her ladies in the reception-room, having laid aside his robes and his weapons. On the first alarm he rushed to fasten the door, but found that treachery had removed the bar. The windows were too securely fastened to admit of escape; but recollecting a vault underneath the room, the king prized up some planks of the floor, and leapt down. The ladies could do but little to resist the conspirators; but one is said to have dared the courageous deed thus described by D. G. Rossetti in his fine ballad on this *King's Tragedy*,

'Like iron felt my arm, as through
The staple I made it pass—
Alack it was flesh and bone—no more!
'Twas Catherine Douglas sprang to the door,
But I fell back Kate Barriass.'

The conspirators burst into the room, discovered the king's hiding-place after a little delay, and beheld their victim standing at bay. Till a few days before there had been an opening into the court-yard from the vault

by which the king might have escaped, but James had ordered it to be built up, because the balls at tennis were apt to fall into it. The first two conspirators who leapt into the vault were seized by the king with his naked hands, and their throats bore the mark of his fingers for long afterwards; but with their daggers they overcame his resistance; and others of the accomplices came to their assistance, and the poet-king fell with 16 wounds in his breast. But his murder was fully avenged by his widow, who relentlessly tracked out his assassins and put them to death with the cruellest tortures. In the early history of the Reformation in Scotland Perth made a considerable figure. In 1544 it was the scene of the martyrdom of five Protestants, who were burned at the instance of Cardinal Beaton. But a few years later it saw the first blow struck in the wholesale destruction and disfigurement by the mob of the Roman Catholic churches and monasteries in Scotland; the first impetus having been given by a sermon preached in St John's church by John Knox on 11 May 1559, and celebrated for two centuries after by a weekly service. This demonstration of popular feeling, though unpremeditated and condemned by the leaders of the Reforming party, was a true indication of the disposition of the town; and although the Queen Regent immediately obtained possession of the city and reintroduced the old worship under the guard of a French garrison, the citizens rose in revolt as soon as she had departed. In 1600 Gowrie House in Perth was the scene of the mysterious occurrence known as the Gowrie conspiracy, which resulted in the assassination of the Earl of Gowrie, then provost of the city, and his brother, on the pretext that they had attempted to murder the king, James VI. King James had been prevailed upon by Alexander Ruthven, brother of the Earl of Gowrie, to visit Gowrie House, the pretext being a story of a mysterious captive with a large store of foreign gold. James, who was hunting at Falkland at the time, rode to Perth, accompanied by about twenty attendants, among whom were the Duke of Lennox and the Earl of Mar. After dinner, the king was led aside by Alexander Ruthven, and when his attendants missed him, they were told he had left Gowrie House by a back way. For what had really happened we are chiefly dependent on what is practically the king's own account. Ruthven conducted him by the great staircase, and through several apartments, the doors of which he carefully locked after him, to a small turret at the SW corner of the southern wing of the house, and overhanging the wall. More direct access to this turret was obtained by the 'black turnpike' stair, which led into the larger apartment, off which the turret opened. In this chamber—one window of which looked into the courtyard, and the other into the Speygate—James found no captive, but an armed man; and an excited and threatening colloquy ensued between the king and Ruthven. The latter retired to bring his brother the Earl, but returning almost immediately attempted to seize and bind the king's hands. A desperate struggle then followed, during which the armed man, according to his own account, stood entirely neutral, except only that he first opened the window over the Speygate, and then the other over the courtyard. In the struggle James was thrust near this latter window, and putting his head out he called lustily for help. One of his attendants, Sir John Ramsay, hearing the alarm, hastened up the 'black turnpike,' burst into the turret, and stabbed the king's assailant, whose dead body the king himself hurled down the stair. Meanwhile the alarm had spread, and the Earl of Gowrie, eluding the efforts made to seize him, rushed up the turnpike stair, followed by five friends. These were met by the king, Ramsay, and another; and after a brief contest, Gowrie fell dead under Ramsay's sword. The other attendants of the king, hearing the alarm, hastened to his assistance by the great staircase, but they were retarded by the massive doors, which they had to break down with hammers; and when at last they made their way to the turret, the tragic event had

been accomplished. The alarm quickly spread among the townspeople, who crowded about the palace, threatening vengeance for the death of their beloved provost; but the magistrates succeeded in quieting them, and the king stole away at night by boat across the Tay. The object of this affair has never been satisfactorily cleared up. Burton says that 'the theory that the whole was a plot by the Court to ruin the powerful house of Gowrie must at once, after a calm weighing of the evidence, be dismissed as beyond the range of sane conclusions.' He leans to the belief that it was a genuine conspiracy, not to murder but to kidnap the king, with the view of acquiring political influence. In Perth, however, the former view is still cherished, and three books have been produced there in the present century in support of it. On 2 Sept. 1644, the day after his victory of TIBBERMUIR, Perth was taken possession of by the Marquis of Montrose; and in 1651, when besieged by Oliver Cromwell, the citizens, by a deceptive appearance of military bustle and alertness, secured good terms of surrender. In 1689, Claverhouse, with 80 horse, seized the city. In 1715 the city was occupied by Mar for the Pretender, and James VIII. was proclaimed king at the cross; and in January of the following year he visited Perth in person. Again in 1745 Perth became a centre of the Jacobite rising; and from 4 till 11 Sept. Prince Charles and his army remained within its walls. On both occasions the burghesses were subjected to a tax of several hundred pounds. Though after 1482 Perth was no longer a frequent residence of the kings, it has received many royal visits. James VI. visited it in 1601 and 1617, and Charles I. in 1633; and both monarchs were received with pageants and rejoicings. Queen Victoria visited Perth on 6 Sept. 1842; and, on 29 Sept. 1848, she spent a night at the Royal George Hotel. Perth has suffered a good deal from inundations and plague; and it is still liable to the former. There were great floods in 1210, 1621, 1740, 1773, 1814, 1847, and 1849. There is an old Gaelic prophecy to the effect that 'Great Tay of the waves will sweep Perth bare;' and there is a Lowland rhyme, equally threatening, concerning two streams which fall into the Tay, about 5 miles from the town—

' Says the Shochie to the Ordie
Where shall we meet?
At the Cross of Perth
When men are a' asleep.'

It is said that this prophecy was harmlessly fulfilled by building the stones of an old cross into the bridge across the Tay. Plagues visited Perth in 1512, 1585-87, 1608, and 1645, and cholera in 1832. Allan Ramsay's poem on *Bessie Bell and Mary Gray* describes the fate of two young ladies, who, though they had retired into the country for fear of the plague, yet caught the infection from a young gentleman of Perth who visited them, and is said to have been in love with both. The real event is said to have happened in 1645.

James, fourth Lord Drummond, was created Earl of Perth in 1605; and the fourth Earl, who embraced the Jacobite cause, received the title of Duke of Perth from James II. at St Germain in 1695. The earldoms of Perth and Melfort, attained in 1695 and 1715, were restored by Act of Parliament in 1853 to George Drummond, sixth Duc de Melfort, Comte de Lussan, and Baron de Valrose (France), the fifth descendant of the third Earl of Perth. See DRUMMOND CASTLE.

Among the natives of Perth are Henry Adamson (1581-1639), poet, author of *The Muses Threnodie*; Patrick Adamson or Constantine (1543-92), tulchan Archbishop of St Andrews and Latinist, who was educated at Perth grammar school; the Rev. William Row (1563-1634), anti-episcopal divine; and his brother, the Rev. John Row (1568-1646), author of *Historie of the Kirk of Scotland, 1558-1637*, printed for the Wodrow Society in 1842; William Murray (1705-93), Lord Chief Justice and first Earl of Mansfield; Robert Sandeman (1723-71), founder of the religious sect of the Glasites or Sandemanians; James Bisset (1742-1832), artist and author of rhyming

directories, etc.; David Octavious Hill, R.S.A. (1802-70); Charles Mackay, LL.D. (b. 1814), journalist and poet; and the Rev. George Clark Hutton, D.D. (b. 1825), a prominent U.P. divine. The Reformer, John Row (1625-80), whose two sons have been noticed above, was minister of Perth from 1560. John Ruskin, as a child, spent every alternate summer at Perth. His father's sister, he tells us, 'lived at Bridgend, and had a garden full of gooseberry bushes, sloping down to the Tay, with a door opening to the water, which ran past it clear-brown over the pebbles, 3 or 4 feet deep, an infinite thing for a child to look down into.'

The parishes of Perth are the East, Middle, West, and St Paul's, and until 1807 formed only one parish, as in some respects they are still treated. They are bounded N by Tibbermuir and Redgorton parishes, E by Scone, Kinnoull, and Kinfauns, SE by Rhynd, S by Dunbarney and a detached portion of Forteviot, and W by Aberdalgie and Tibbermuir. The greatest length, from NNW to SSE, is 4½ miles, and their greatest breadth 2 miles. The West Kirk, Middle Kirk, and St Paul's lie almost entirely within the town; but the East Kirk parish includes the landward portion, with the villages of Dovecotland, Tulloch, Craigie, Cherrybank, Pitheavlis, Craigen, and Friarton; and it measures 4½ miles long, though its breadth is variable and slight. The landward district has various hills of a ridgy character, but soft in outline in the S and W; the highest is MONCKEFFE Hill, and the others vary from 300 to 600 feet. The rest of the surface gradually slopes down into the fertile plain which extends along the Tay, and is largely covered with highly cultivated arable land and wood. Among the beautiful woods which adorn the neighbourhood of Perth are Craigie Wood and St Magdalene Wood. The famous Perth nurseries are on the E bank of the Tay, adjoining the richly wooded Kinnoull Hill. The Almond divides the parish from Redgorton, and the Tay forms the entire eastern boundary. Greenstone, basalt, and other trap rocks form the higher hills; there is a large bed of conglomerate, chiefly porphyritic trap, in the SW; and Old Red Sandstone, dipping towards the NW, lies beneath most of the rest of the area. The soil on the higher grounds is mostly a rich loam; on the lower, a clayey alluvium upon gravel. The chief proprietors are the Earls of Mansfield and Kinnoull, Lord Gray, Lord Elbank, and the city of Perth. The valuation for the parish of Perth, beyond the burgh, in 1883-84 was £7067. Pop. (1881) Middle parish, 4902; West, 6223; St Paul's, 4902; and East, 12,102, of whom 520 were landward.

These parishes are in the presbytery of Perth and the synod of Perth and Stirling; St Leonard's *quoad sacra* parish comprises parts of the East and West Kirk parishes. The details of the parishes have been already noted. The presbytery of Perth comprehends the *quoad civilia* parishes of Aberdalgie, Abernethy, Collace, Dron, Dunbarney, Errol, Forgandenny, Forteviot, Kilspondie, Kinfauns, Kinnoull, St Madocs, St Martins, Methven, Moneydie, the four Perth parishes, Redgorton, Rhynd, Scone, and Tibbermuir; the *quoad sacra* parishes of Logiealmond and St Leonard's in Perth; and the chaperies of St Stephen in Perth and Stanley. The Free Church and the U.P. Church have also presbyteries of Perth. The synod of Perth and Stirling comprehends the presbyteries of Dunkeld, Weem, Perth, Auchterarder, Stirling, and Dunblane. The Free Church has also a synod of Perth and Stirling.

See *Perth Memorabilia* (1806); J. Maidment's *Chronicle of Perth* from 1210 to 1668 (Edinb., Maitland Club, 1831); George Penney's *Traditions of Perth* (Perth, 1836); David Peacock's *Perth: its Annals and its Archives* (Perth 1849); John P. Lawson's *Book of Perth* (Edinb. 1847); John Wilson's *Presbytery of Perth* (Perth, 1860); R. S. Fittis's *Ecclesiastical Annals of Perth to the Period of the Reformation*; and other works cited under PERTHSHIRE.—*Ord. Sur.*, sh. 48, 1868.

Perth, District of, is one of the districts into which Perthshire was divided by Act of Parliament in 1795

for the statutory jurisdiction of justices of peace in small debts. It includes the parishes of Aberdalgie, Abernethy, Arngask, Dunbarney, Dron, Forgandenny, Forteviot, Findo-Gask, Kinnoull (excluding the lands of Inchyra and Balthayock), Methven (excluding the lands of Tullybeagles), Moneydie, Perth, Redgorton, Rhynd, Scone (excluding the lands of Kinlochtry), Tibbermuir, the lands of Cleavage and Inverdunning in Dunning, the lands of Logiealmond in Monzie, and the lands of Friarton in St Martins. Perth district, one of two into which the sheriffdom of Perthshire is divided, comprehends all the above parishes (Aberdalgie to Tibbermuir), besides those of Abernethy, Alyth, Auchterarder, Auchtergavren, Bendocho, Blackford, Blair Athole, Blairgowrie, Caputh, Cargill, Cluny, Collace, Comrie, Crieff, Coupar-Angus, Dull, Dunkeld, Dunning, Errol, Fortingall, Fowlis-Easter, Fowlis-Wester, Glendevon, Inchture, part of Kenmore, Kilspondie, Kinclaven, Kinfauns, Kinloch, Kinaird, Kirkmichael, Lethendy, Little Dunkeld, Logierath, Longforgan, Madderty, Meigle, Moneydie, Monzie, Monzievaird, Moulin, Muthill, Rattray, St Madocs, St Martins, Trinity-Gask, and part of Weem.

Perthshire is a large inland county in the centre of Scotland, consisting of a main body and a small detached portion. The latter comprises the parishes of Culross and Tulliallan, and is separated from the former by a belt of Clackmannanshire and Fife, which is only 1½ mile wide at its narrowest part; it is 6½ miles long from E to W, and 4½ miles broad from N to S, and contains an area of 11,170 acres. There is also a minute detached portion of Kippen lying S of the Forth. The main body of the county is bounded NW by Inverness-shire, N by Inverness-shire and Aberdeenshire, E by Forfarshire, SW by Fifeshire and Kinross-shire, S by Clackmannanshire and Stirlingshire, SW by Stirlingshire and Dumbartonsire, and W by Argylshire. The boundary is in great part natural and well-defined, but in some places it is quite artificial. From a point on the SW within about 3 miles of the head of Loch Fyne to a point at the base of Mount Blair between GlenShee and Glenisla in the E, a distance of 117 miles at least, the boundary line along the W, N, and most of the E of the county, follows the watershed or summit-lines of some of the loftiest and most elongated mountain-chains in Scotland. The only exceptions to this are at the points where the Moor of Rannoch places Loch Lydoch and the little Lochanachly on the W border, and where the S half of Loch Erich forms part of the NW boundary. From Mount Blair the boundary follows southwards for 2 miles the river Shee, then for 12 miles runs along secondary watersheds and watercourses W to the course of the Isla, which it follows to the confluence with the Dean. After turning NW for 3½ miles along the Dean, the boundary again bends S, and making a considerable loop westwards, strikes the Firth of Tay at Invergowrie, 3 miles above Dundee, after an irregular course of 27 or 28 miles. Thence it continues along the N bank of the Tay for 11 miles, crosses to the S bank at Mugdrum island, and runs 36 miles to the SE in a sinuous and irregular line along the ridges and streamlets of the Ochils to a point upon the South Devon, ¾ mile S of Solsgrith. Thence it recedes for nearly 5 miles up the South Devon, 17 miles W and SW across the Ochils and Strathallan, till it falls upon the river Forth just at its confluence with the Teith. Thence, except for cutting off a few farms in Kippen parish S of the Forth, the boundary follows the Forth and its head-stream, the Duchray, for 30 miles to a point within 3¾ miles of Ben Lomond; thence NW by Lochs Arklet and Katrine, along Glengyle Water and the heights round the N end of Loch Lomond; and so up a tributary of the Falloch, through Lochanlarig to Crochrechan, the point whence the boundary was first traced. The outline thus traced presents the appearance of an irregular circle, described with a radius of about 32 miles from a centre near the head of Glenalmond. The extreme length of the county, from E to W, is 77 miles; its extreme breadth, from N to S, is 68 miles; and its total area is 2601 square miles or

1,604,690 acres, of which 46,882 are water and foreshore, lying between 56° 4' and 56° 57' N lat., and between 3° 4' and 4° 50' W long. It is the fourth county of Scotland in point of size, and the eighth in population.

'Amid all the provinces in Scotland,' writes Scott in *The Fair Maid of Perth*, 'if an intelligent stranger were asked to describe the most varied and the most beautiful, it is probable he would name the county of Perth. A native, also, of any other district of Caledonia, though his partialities might lead him to prefer his native county in the first instance, would certainly class that of Perth in the second, and thus give its inhabitants a fair right to plead that—prejudice apart—Perthshire forms the fairest portion of the northern kingdom.' Its scenery includes some of the loveliest as well as some of the most romantic and grandest scenes in Scotland, and all kinds of landscape are represented within its borders. Its mountains, lochs, and rivers, its wild moors and smiling fertile plains, its passes and glens, its waterfalls and its forests, have all in turn justly been the subjects of admiration and praise. Hardly less interesting has been the romantic course of its history and the wild character of its people, for it is in Perthshire that the division between the Lowlands and the Highlands of Scotland may be located. A line drawn irregularly NE from Loch Katrine through Crieff and Dunkeld and thence eastwards to Strathardle would, in general, have the Highlands to the N and the Lowlands to the S, though of course there are many tracts which are of an intermediate character throughout the shire. Thus no general description of the aspect of the county would fit all or nearly all its diverse characteristics. In a general view Perthshire has a south-eastern slope. Though about the region of the moor of Rannoch in the NW it receives one or two inconsiderable streams from the W, it nowhere sends even a burn in return; and all along the rest of the W and all along the N it is walled in by a stupendous mountain barrier which effectually shuts off intercommunication except at a few passes, such as those at the head of the rivers Shee, Bruar, and Garry. Mountain ridges stretch far into the interior southward from the northern barrier, south-eastward from the inner edge of Rannoch Moor, and eastward from the western range; these generally spring from the higher ranges in lofty broad-based masses, and vary in breadth while they diminish in height as they advance towards the interior of the county; and they are separated from each other by wild, deep, narrow glens, which sometimes, however, expand into stretches of valley or mountain plain. Eventually they die away or several ridges or ranges merge into one; while almost everywhere they send off spurs and irregular massy projections and sub-ranges, so that the county, from a bird's-eye view, would seem to be covered with a confused assemblage of peaks, and ranges, and mountain groups. A few isolated mountains, as for example Schiehallion, stand in the wider spaces between the mutual recessions of the ridges. Towards the S of the Highland line the county is much less rugged, its hills are lower; while across the whole county, at the base of the Highland hills, runs from SW to NE the valley known as STRATHMORE; while the northern part of the valley of the Forth which lies in Perthshire is even more level and lowland in its character. But the lie of the mountains, the position of the chief valleys or straths, and the general river system of the county are described more particularly below.

It will be convenient here to note the ancient divisions of Perthshire, which still have a local significance, though no longer a judicial or civil existence. Menteith comprehended all the territory W of the Ochils and drained by the Forth and its tributaries except the parish of Balquhider. Breadalbane included the western division of the county from the NW boundary to the S screen of Glendochart; its north-western corner was termed Rannoch. Strathearn included Balquhider and all the country drained by the Earn and tributaries and the country N of Menteith. Methven compre-

hended a small territory round the present village, NW of the city of Perth. Athole was a very large territory embracing the whole north and north-western parts of the county down to the heights overlooking Dunkeld and Blairgowrie. Strathardle and Glenshee, along the rivers Ardlie and Shee in the E, were subdivisions of Athole. Stormont stretched in a zone 7 miles broad from the Erich and Isla to near Dunkeld, immediately S of Athole; Gowrie was a district on the eastern frontier between Stormont and the Tay; and Perth was a district embracing Strathray between Stormont and the point at which the Carse of Gowrie met Strathearn. Constant reference to these divisions is made in the geography of Perthshire.

Mountains.—The chief mountains of Perthshire are grouped under the names GRAMPIANS, SIDLAWS, and OCHILS, each the subject of a separate article, to which reference is made for detailed description. The Ochils occupy the S, the Sidlaw Hills the SW, and generally speaking the Grampians occupy the remainder of the country, their immense mass being intersected by numerous glens and straths, of which the three chief—Rannoch with Strathummel, Strathray with Loch Tay, and Strathearn—run from W to E to join the longer and narrower valley which conducts the Garry and the lower waters of Tay from NW to SE through the county. The chief summits of the Grampians in the three northern parishes of Forthingall, Blair Athole, and Kirkmichael, embracing Rannoch and most of the Forest of Athole, are, round Loch Lyon, about the middle of the W border of the county, BEN CREACHAN (3540 feet), BEN ACHALLADER (3399), BEN VANNOC (3125), Creag Mhor (3305), and Ben Heagsarnich (3530); S of the Lyon, Meall Ghaordie (3407); between the Lyon and Loch Rannoch, Carn Gorm (3370), CARN MAIRE (3419), and SCHIEHALION (3547); N of Lochs Lydoch and Rannoch, from W to E, Carn Dearg (3084), Sgur Gaibhre (3128), BEN PHARLAGAIN (2836), and BEN MHOLOCH (2758). Thence eastwards along the northern boundary of Athole the chief peaks are BEN UDLAMAN (3306 feet), Bruach nan Iombran (3175), Glas Mheall Mor (3037), Carn na Cairn (3087), Leathad an Taobhain (2994); Beinn Bhreac (2992), BEN DEARG (3304), Carn an Fhìdler (3726); An Sgarsoch or Scarsach Hill (3300), BENGLO, with the highest of its five peaks, Carn Gabhar (3671), CARN LIATH (3193), Carn an Rìgh (3377), Carn Bhac (3014), Beinn Iutharn Mhor (3424), Beinn Iutharn Bheag (3011), Glas Thulaichan (3445), Ben Vuroch (2961); Carn Bhinnein (3006), Carn Geoidh (3194); Cairn Well (3059), Craig Leacach (3238), and Cairn Aighe (2824). In the district N of the Tay and between the southern ends of Forthingall and Kirkmichael the chief mountains are Beinn Eagach (5259 feet) and FARRAGON HILL (2559) in Dull parish, and BEN VRACKIE (2757) in Moulin. In the S parts of Breadalbane, occupied by the scattered parish of Kenmore and by Little Dunkeld, the chief summits are Beinn Dheiceach (3074 feet), Beinn Chalunn (3354), Creag Mohr (3305); rising S from Loch Tay are Creag Charbh (2084), Meall Gleann a' Chloidh (2238), Creag Uigeach (2840), Beinn Bhreac (2341), and Creagan na Beinn (2909); and northwards, Meall nan Tarmachan (3421) and BEN LAWERS (4004), the loftiest summit in Perthshire. Meall Dearg (2258 feet) is the highest point in Little Dunkeld. In the four parishes forming the SW corner of the shire the chief mountains are, in Killin, CRAIGCHALLIACH (2990 feet), BEN ODBAR (2948), BENLOY (3078), BENMORE (3843), AN BINNEIN (3827), BEN-A-CHROIN (3101), and Ben Duh-chraige (3204); in Balquhider, Beinn Tulachan (3099), Stob Garbh (3148), Stob Coire an Lochan (3497), and Stuc-a-Chroin (3189); in Callander, Parlan Hill (2001), Meall Mor (2451), An Garadh (2347), Meall Cala (2203), BEN VANE (2655), BEN LEDI (2875), and Beinn Each (2660); and in Aberfoyle, Beinn Bhreac (2295), BEN VENUE (2393), and Beinn an Fhogharaidh (2000). In the remaining parts of Strathearn the highest mountains are, in Courie parish, N of the Earn river and Loch, Creag nan Eun (2990 feet) and

BEN CHONZIE (3048); and to the S, Ben VOIRLICH (3224) and Meall na Fearnà (2479), in Crieff parish, Beinn na Gainmh (2367), in Glenalmond; in Kilmadock, Uamh Bheag (2179) and Uamh Mhor or Uamvar (2168), N of the Braes of Doune. The summits as we advance towards the E are less elevated. Stormont district, though in many places showing wild Highland scenery, does not attain any very high summit; among its mountains are BENSACHALLY (1594 feet), between Clunie and Caputh; Ashmore Hill (1277), in Blairgowrie; and Drumdearg (1383) and Mount BLAIR (2441), in Alyth parish. The OCHILS lie entirely in the S of the shire, and stretch north-eastwards along the S border from the Forth near Stirling to the neighbourhood of Perth. Among the chief summits in Perthshire, in irregular order, from SW to NE, are DUNMYAT (1375 feet), Mickle Corum (1955), Little Corum (1683), Blairdenon Hill (2072), Tambeth (1279), Core Hill (1780), Wether Hill (1574), East Bow Hill (1562), Carlowrie Hill (1552), Steele's Knowe (1594), Sim's Hill (1582), Muckle Law (1306), Craig Rossie (1250), Rossie Law (1064), John's Hill (1500), Corb Law (1558), Skymore Hill (1302), Cock Law (1337), and Castle Law (1028). The SIDLAW Hills occupy the part of the county to the E of the Tay and N of the Carse of Gowrie, and stretch far beyond the limits of Perthshire into Forfarshire. The chief summits in the former county, in order roughly from the S towards the N, are Kinfauns Hill (555 feet), Kinnoull Hill (729), Evelick or Pole Hill (944), Beal Hill (849), Black Hill (1182), Dunsinane Hill (1012), King's Seat (1235), Blacklaw Hill (929), and Ballo Hill (1029). The Obney Hills are a small detached group of the Grampians lying immediately to the S of Dunkeld, and including Birnam Hill (1324 feet), Meikle Crochan (1915), and Craig Liath (1399). Amongst the hills of Perthshire noted for other reasons than mere height are the Braes of Balquhiddy, stretching E and W to the N of Loch Voil, and the Braes of Donne, to the N of the Teith, between Donne and Callander, while many of the so-called 'forests' are wide regions of mountain-land, nearly destitute of trees, and covered chiefly with heather. Such, for example, are the famous Forest of Athole in the N, Forest of Cluny in Stormont, Rannoch Forest in Rannoch, and the Forest of Glenfinlas in the SW.

Rivers and Lakes.—The Tay, with its tributaries, drains almost the entire county of Perth, except a tract 45 miles long and from $3\frac{1}{2}$ to 18 broad in the extreme S. Its course lies in a rough parabolic curve through the centre of the shire from its source in the W to its mouth in the E. Although it is not called the Tay until it issues from Loch Tay, this great river draws its origin from the two head-waters, the Lochy and the DOCHART, which rise on the Argyllshire border and flow into the SW end of Loch Tay. The latter of these is $13\frac{1}{2}$ miles long; and reckoning that as part of the Tay, it gives the total length of the Tay as about 140 miles, draining an area of about 2000 square miles. From its ultimate source on Benbuie, 1000 feet above sea-level, the Tay or Dochart flows through the centre of Killin parish to Loch Tay, whence, emerging at the NE end, it flows generally towards the NE, till it is joined at Ballinluig by the Tummel, when the united streams turn SE and then S till they reach the Firth of Tay. Just before entering Loch Tay the Dochart receives from the left the Lochay. The chief affluents on the right bank of the Tay, from Loch Tay downwards, are Urilar or Moness Burn at Aberfeldy, Balnaguard Burn from Grandtully Hill, the BRAN, the Ordie and Shochie, the ALMOND, and the EARN. On the left bank the chief affluents are the LYON, DERGULICH BURN, Tullypowie Burn, the TUMMEL, Allt Ringh an Lagain, DOWALLY BURN, the ISLA, and St Martin's Burn. Into the estuary of the Tay there flow from Perthshire from the N the Pow of Errol and other small streams.

Many of these streams have themselves considerable affluents. The BRAN receives in its 19 miles' course from Glen Quaich and through Loch Freuchie, on the left

the FENDER, Cochill Burn, Tomhane Burn, and the united Ballinloan and Pitleoch Burn, and various less important streamlets from the S. The ALMOND has a course of 30 miles, and receives on the right bank the Fendoch Burn, and on the left the Glenshervie and Milton Burns. The EARN, flowing from Loch Earn, has a course of 46 miles; and receives on the right bank the Ruchill, Machany, Ruthven, May, and FARG; and on the left the LEDNOCK and the Turret. The LYON receives on the right bank the Invervane Burn and the Allt Da Ghob; and from the left the Allt Coire Eachainn, Allt Odhar, and the KELTNEY BURN from Schiehallion. By means of the Tummel the drainage of the large north-eastern district of the county finds its way into the Tay. From Loch Lydoch on the western border the GAVER flows eastwards into Loch Rannoch, and only receives the name Tummel on issuing thence at the eastern end. This chain of water-way receives from the right or S the Inverhadden Burn, the Allt Strath Fronan or Allt Kynachan from the northern slopes of Schiehallion, the Kinnardochy Burn, the French and other burns flowing into Loch Tummel; on the left the ERICHT, from LOCH ERICHT, flowing into Loch Rannoch, which also receives the ANNET BURN, the Allt na Moine Buidhe, the FINCASTLE BURN, and the GARRY. This last descends 1000 feet in its course of 22 miles from Loch Garry in the NW corner of the shire; and it receives on its right bank the ERICHDIE at Struan, and on the left the EDENDON, Allt Geallaidh, and Ender, uniting the waters of the Allt Glas Choire, Allt a Mhuillinn and Allt a Chireachain, the BRUAR, the TILT, and the Allt Girnaig. The Tilt, flowing down from the northern mountain rampart, receives on the right the Tarff and the united stream of the Allt Mhaire and Allt Diridh; and on the left the Glen More Water and the FENDER. The ISLA, flowing from the Forfarshire Grampians, drains the NE of Perthshire; and within the borders of that county receives on the right bank ALYTH BURN, the ERICHT Water, and the LUNAN. The ERICHT Water is formed by the union of the AIRDLE and BLACKWATER, and receives on its right bank the LORNTY (7 miles) from Loch Benachally; while the Airdle itself is formed by the union of the Briarichan and the Fearnach. The Blackwater flows from the Spittal of Glenshee, where the Allt Bheag, the Lochy, and Tatnich unite to form its stream, but for some miles the united stream is called the Shee. The south-western portion of Perthshire is drained by the river FORTH, which forms for a considerable distance the southern border. The Duchray and AVONDEU, the two head-waters of the Forth, rise on Ben Lomond and in Aberfoyle parish respectively and flow parallel, the former chiefly on the border between Perthshire and Stirlingshire, and the latter through Lochs CHON and ARD in Aberfoyle to their junction at a point 1 mile W of the hamlet of Aberfoyle. West of this point the Forth receives on its left or Perthshire bank the GOODIE, the TEITH, with its affluents the Keltie and Rednock, the ALLAN, with its affluents the Danny, KNAIK, Bullie, Millstane, Muckle, Lodge and Wharry Burns, and the DEVON. The Teith is formed of two confluent streams, each about 20 miles long, the one flowing from the S slopes of BEN-A-CHEOIN through Loch Voil and Loch Luhaig, and bearing successively the names BALVAIG, Ire, and LENY; while the other flows from Loch KATRINE through Loch ACHRAY and Loch Vennachar to join the Leny and form the Teith at Callander. The FALCOH, in the W of the county, falls into the N end of Loch Lomond after a course of $10\frac{1}{2}$ miles from its source on BEN-A-CHEOIN. The FILLAN, flowing from the N slopes of Benloy into Loch Dochart, is sometimes regarded as the remotest head-stream of the river Tay.

The courses of many of these rivers lie through scenery of the most beautiful and grandest description, which, for the most part, will be found noted in the separate articles on the chief streams. A prominent feature of Perthshire river-scenery is that afforded by the waterfalls and rapids, among which are those of BRUAR and FENDER, near Blair Athole; the Falls of Tummel, and

the BLACK SROUT at Pitlochry; the Falls of Moness at Aberfeldy; of the Lochay, near its junction with the Dochart; the Falls of Acharn, on the ACHARN BURN, flowing into the eastern end of Loch Tay; CAMPSIE LINN, on the Tay near Stanley; the Falls of the Bran, near Dunkeld; Muckersie Linn and Humble-Bumble on the May; the DEVIL'S MILL on the LEDNOCK, near Crieff; and CALDRON LINN, on the Devon near Rumbling Bridge. The lakes of Perthshire are very numerous, but as all those that are either renowned for their natural beauty or interesting from historical or literary associations, are separately noticed, no more than a catalogue of them is given here. The largest lochs in Perthshire are LOCH TAY, LOCH EARN, LOCH RANNOCH in Breadalbane, LOCH ERICHT or EROCHD on the boundary with Inverness-shire, and LOCH KATRINE in the W of Menteith. Next in size comes LOCHS LUYDON or Lydcho, on the boundary with Argyllshire; GARRY, between Rannoch and Athole; TUMMEL, in Athole; LUBNAIG, on the mutual border of Balquhider and Menteith; VOIL, in Balquhider; and VENACHAR and Lake of Menteith in Menteith. For convenience in indicating the position of the still smaller lochs, we regard Perthshire as divided into four parts—NW, NE, SW, and SE—by a line running N and S from Ben Dearg to Dunblane, and a line running NE and SW from Glenfalloch along the S of Loch Tay to Mount Blair. In the NW are Loch-a-Vealoch, Loch-a-Breacalich, Loch-a-Londonich, Lochan-a-Chlaidh, LOCHS CHON, Dhu, Eaigh, Essan, Kinnardochy, Larig-eelie, Lyon, Maragan, Loch-na-Lairig, Loch Sron-Smeair, Loch Tubhair, and the Lochs of Roro, viz., Loch-a-Chait, Loch Girre, and Loch Damh. In the NE are BOAR'S Loch, LOCHS BROOM, Duin, Eun, GLASSIE, Loch, Mharich, Moraig, Na-Nean, Oishnie, and Schechernich or Bainie. In the SW are LOCHS ACHRAY, ARD, BOLACHAN, CHON, DOINE, Drimnagowran or Bencraigh, Dhu, DRUNKIE, Machaich, Ruskie, and TUNET. In the SE are LOCHS BENACHALLY, BALLACH, CLUNIE, CRAIGLUSH, Dowally, DRUMMOND, DUPPLIN, FREUCHIE or Fraochie, FENDER, Kennard, Lowes, Muir Dam Loch and Peppermill Loch, LOCHS Monzievaird, Na-Craig, Ordie, Oyl, Skiach, Tilt, Valigan, Vach, Voulin, and the Stormont Lochs, viz., LOCHS Monksmyre and Haremyre, Saints Loch, BLACK, White, Fergus, Rae, Marie, or DRUMMELLIE, and CLUNIE Lochs. Spring water in all the hilly districts is both plentiful and exceedingly good; but in the CARSE of GOWRIE, in the low lying parts of Menteith, and a few other low level spots it is scarce or of inferior quality. There is an allusion to this in the proverb, quoted by Pennant, to the effect that the people of the Carse of Gowrie 'want water in the summer, fire in winter, and the grace of God all the year round.' The chief mineral springs are those at Píckethley at the BRIDGE of EARN; and of AIRTHREY, which, however, are more properly considered in STIRLINGSHIRE. The chief glens and passes of Perthshire are perhaps the following: the TROSSAGHS, between Loch Achray and Loch Katrine, GLENALMOND, GLENDEVON, GLENDOCHART, GLENFALLOCH, GLENLOCHY, GLENLYON, GLENOGIE, GLENSHEE, and GLENTILT, each on the river indicated in its name; and the passes of ABERFOYLE, LENY, and KILLIECRANKIE. Glendevon and Gleneagles are both said to have been the route by which the Romans crossed the Ochils. The plains and valleys of this county are numerous, and some of them are very extensive. In addition to those that are named from the river flowing through them, as Glentilt, Strathguy, etc., we may mention Strathmore, stretching north-eastward from Perth into Forfarshire, and forming part of the great plain from Dumbarton to Brechin. To the S of it lies the fertile CARSE of GOWRIE, stretching for 15 miles between the Sidlaw Hills and the estuary of the Tay.

Geology.—By far the larger portion of this county is occupied by a great series of metamorphic rocks, which, according to the classification laid down by Sir Roderick Murchison, are regarded as of Silurian age. They are arranged in parallel zones, the long

axes running approximately in an ENE and WSW direction. Along the Highland border they are bounded for a considerable distance by the great fault crossing the country from Stonehaven to the Firth of Clyde; while to the N of Crieff and E by Dunkeld they are unconformably overlaid by the members of the Lower Old Red Sandstone. From the researches of the Geological Survey, it would appear that there is a definite order of succession in the metamorphic series in this county. Close to the great fault, the strata, which are comparatively unaltered in the neighbourhood of Callander and Comrie, consist of greywackes and shales, with some bands of black shale indistinguishable from some of the beds in the Moffat series of the S of Scotland. They are overlaid by the Aberfoyle slates, graduating upwards through schistose flags, pebbly grits, and sericite schists into a great mass of grits capping Ben Voirlich. From the fault W to Ben Voirlich the general inclination of the strata is towards the NW, and hence we have a gradually ascending series from the Highland border as far as the grits of Ben Voirlich. The latter are succeeded by the limestone series of Loch Earn and Loch Tay, and the limestones are overlaid in turn by a group of mica schists, which are splendidly developed on Ben Lawers. Indeed, the highest beds in the metamorphic series of Perthshire occur on the summit of this hill as the limestones reappear to the N with a SE inclination. Both in Glen Lyon and Glen Garry the calcareous series is underlain by the representatives of the Ben Voirlich grits, which, on Schichallion and in the upper reaches of Glen Garry, are more nearly allied to quartzites. From the foregoing description it is evident that the beds are more highly altered as we recede from the great fault and ascend the Highland glens.

The geological structure of the Old Red Sandstone area in Perthshire resembles that of Forfarshire (see *Ord. Gaz.*, vol. iii., p. 40). The anticlinal fold in the volcanic series of the Sidlaws is continued in the Ochils, while the strata overlying the ancient lavas and tuffs occupy the syncline between the chain of the Ochils and the fault along the Highland border. In Perthshire, however, there is no trace of the succession of sandstones, flags, and shales underlying the volcanic series in Kincardineshire. The group of strata occurring to the N of the fault and resting unconformably on the metamorphic rocks probably occupy a position at the base of the volcanic series. These beds of lava and agglomerate are met with to the N of the fault E of Dunkeld, and we may justly infer that they represent the volcanic rocks of the Sidlaws and the Ochils in an attenuated form. On the S side of the great syncline the lowest beds are exposed along the crest of the arch of the Ochils, near the Yetts of Muckhart, where they consist of very coarse agglomerates and occasional lava flows. These are succeeded by a considerable thickness of porphyrites, with some intercalations of agglomerate. Again, the beds of tuff predominate, till eventually the volcanic ejections become so intermittent that sedimentary strata are mainly represented. The total thickness of the volcanic series in the N limb of the anticline of the Ochils is upwards of 6000 feet. It is probable, however, that, though this enormous accumulation of volcanic materials was deposited over a gradually sinking area, a good many of the cones ultimately raised their peaks above the level of the water, and became subaerial. The highest beds of this series in the vicinity of Bridge of Allan, Auchterarder, and other localities, consist of coarse conglomerates of well-rounded fragments of the porphyrites of the Ochils, and where this horizon reappears to the N of the great syncline vast beds of conglomerate occur, composed of the same materials. Near the top of the zone they alternate with sandstones and marls, but eventually they pass underneath a group of grey and chocolate-coloured sandstones with plant remains which are well seen in the Allan between Bridge of Allan and Dunblane and onwards by Auchterarder and Perth to the county boundary. On the estate of Westerton, near Bridge of

Allan, a specimen of *Eucephalaspis Lyellii* was found in a sandstone quarry, where the sandstones underlie a bed of lava, marking the close of the contemporaneous volcanic activity of the Ochils. This fossiliferous zone is probably on the same horizon as the fish-bed on Turin Hill in Forfarshire. The beds just described are succeeded by red sandy clays and marls, occupying the greater part of the low lying ground traversed by the Teith down to its point of junction with the Forth. They are traceable along Strathallan and over the low ground between that valley and the Earn, while further to the E splendid sections of the same beds may be seen in the Tay between Murthly and Perth. As described in the article on the geology of Forfarshire, Strathmore is paved with these strata, which in that area form the highest beds in the centre of the syncline. In Perthshire, however, the red sandy clays and marls are overlaid by an immense thickness of conglomerates, which are splendidly developed on Uam Var, forming the highest members of the Lower Old Red Sandstone in this county. As we approach the fault the inclination of the beds increases till it is almost vertical, and in some cases the strata are actually inverted. It is interesting to note that as we approach the Highland border the sedimentary strata gradually become coarser, the sandstones are more pebbly, and the boulders in the conglomerates are larger. From the occurrence of metamorphic rocks in the Uam Var conglomerates, which have been derived from areas lying far to the N of the great fault, it is evident that the crest of the Grampian chain at least must have been exposed to denudation during the deposition of the highest beds of the Lower Old Red Sandstone.

The strata which now fall to be described have been grouped with the Upper Old Red Sandstone. They are prominently developed near Bridge of Earn, and extend underneath the estuary of the Tay and the Carse of Gowrie to near Dundee. Bounded on the N and S by two parallel faults, the strata are brought into conjunction with the Lower Old Red volcanic rocks on both sides of the estuary of the Tay. It is only to the W of this area, between Forgandenny and Bridge of Earn, that the basement beds are found resting unconformably on the denuded volcanic rocks. Though some fragments of the latter occur in the breccias, yet the pebbles consist mainly of quartzite or vein quartz derived in many cases from the Lower Old Red conglomerates. The Upper Old Red Sandstone of Perthshire consists mainly of marls and brick red sandstones generally much honeycombed and very friable. In the neighbourhood of Errol they have yielded excellent specimens of the genera of fishes which are characteristic of this formation.

To the N of the Ochils the only rocks of Carboniferous age are contained in a small outlier covering a few acres of ground about half a mile to the S of Bridge of Earn. The strata consist of blue clays with sandstones and calcareous bands belonging to the Cementstone series; the blue clays having yielded *Estheria* and plant remains. Though this outlier is insignificant in extent, it is of the utmost importance in proving the extension of the Carboniferous system over a part of Scotland, from which it has been removed by denudation. It further shows that during the early part of that period the Ochils must have formed a barrier between the Tay and the Howe of Fife, for these strata do not resemble the Calciferous Sandstones as developed in the E of Fife. They are like the type of strata known as the Ballagan series, underlying the volcanic rocks of the Campsie Fells. At a later stage, however, this barrier must have been submerged and buried underneath the deposits belonging to higher divisions of that formation.

On the S side of the Ochils there is an isolated portion of Perthshire, which is wholly occupied by Carboniferous strata. These may be grouped with the Clackmannan Coalfield, to which no reference has been made in the description of the latter county. In this area all the subdivisions of the Carboniferous system in central Scotland are represented. The lowest beds, consisting

of red marls and sandstones, are seen on the Gairney, a tributary of the Devon, near the Caldron Linn, where they pass underneath the Cementstone series. It is probable that these beds represent the W extension of the red sandstone group of the Howe of Fife. The Cementstone group, comprising green and grey clays and shales, with occasional bands and nodules of cementstone and calcareous sandstone, are well exposed in the Devon, above and below the Caldron Linn. The Carboniferous Limestone series, with its three typical subdivisions, forms the E boundary of the Clackmannan Coalfield, extending from a point near Dollar to the shore at Culross. The middle division, rich in coals and ironstones, forms the Oakley Coalfield, and beds occupying the same horizon were formerly extensively wrought beneath the Forth at Preston Island. Resting on this subdivision come the members of the upper group, comprising the Index, the Janet Peat, and Castleary Limestones. Associated with the Janet Peat Limestone is a thick seam of ordinary coal, and a thin bed of gas coal, which was wrought at Culross in the olden time, and some of the workings extended for a considerable distance under the bed of the Forth.

Intermediate between the beds just described and the Coal-measures come the sandstones of the Millstone Grit division, which are extensively quarried. When the Devon Ironworks were in operation, some nodular clay-band ironstones occurring among the fireclays were mined. To these succeed the representatives of the Coal-measures forming the Clackmannan Coalfield, and comprising several valuable seams of coal and ironstone, which are here given in ascending order: Slaty Band Ironstone, Coalsnaughton Main Coal, Cherry and Splint Coals, Nine-feet Coal and Upper Five-feet Coal. By a series of parallel faults running in an E and W direction, the coal seams are repeated several times to the S. The red sandstones overlying the Coal-measures occur at the Devon Ironworks near Tillicoultry, which is consequently the deepest part of the coalfield.

The metamorphic rocks of this county are pierced by masses of granite, quartz-felsite, and diorite. Examples of granitic intrusions are to be found in the vicinity of Loch Erich and Loch Rannoch, and in Glen Tilt. Quartz-felsite occurs in the form of dykes, as for instance along the Highland border between Crieff and Callander, and in the form of sheets between Loch Earn and Loch Tay. Diorite also occurs in the form of dykes and sheets, and these in turn have been intersected by basalt dykes probably of Tertiary age. In like manner the basalt rocks are met with in this double form; the sheets being mainly confined to the Carboniferous strata. The Abbey Craig, near Stirling, is a continuation of a great mass of dolerite intruded more or less along the bedding of the lower limestones. Truncated like the Carboniferous rocks by the great fault skirting the Ochils, it appears to underlie the Clackmannan Coalfield, for, where these limestones emerge in the Cleish Hills in Fife, a similar sheet accompanies them. That these sheets are not confined, however, to the Carboniferous rocks is evident from the occurrence of a remnant of such an intrusive mass on the top of Ben Buck in the Ochils. Numerous examples of basalt dykes are traceable throughout the county. Two or three of these parallel dykes after traversing the volcanic rocks of the Ochils, and the Old Red Sandstone area to the W, obliquely cut across the great fault, running W by Loch Lubnaig and Loch Katrine to Loch Lomond.

This county presents ample evidence of glaciation belonging partly to the general and partly to the later ice-movement. The ice-worn surfaces of the Ochils, Kin-noull Hill, and the Sidlaws, are excellent examples of the former, while the *roches moutonnées* of the Highland glens, and notably of the Trossachs, attest the influence of the later glaciers. Even the peaks of some of the mountains within the Highland border are beautifully glaciated, and are strewn with boulders foreign to them. The general trend of the ice-movement along the margin of the Highlands is from NW to SE, with certain local variations. Where the county joins with Stirling and

Dumbarton, the trend of the ice-markings is N and S, near Callander about SSE, and in the Comrie district about SE. When the ice reached the low ground it veered still more towards the E, and after traversing the plain the course of the ice-flow was slightly deflected by the chain of the Ochils. Where the ice crossed the range the direction of the movement changed to a little N of E.

In favourable situations the boulder clay is invariably met with. It is worthy of note, however, that the Highland glens have been denuded to a large extent of this deposit by the action of the later glaciers. Where the latter were only partially developed, or where they did not exist, it fills the valleys to a great depth. The later glaciers were splendidly developed in many of the Highland glens, as is abundantly shown from the distribution of moraines. Excellent examples of these are to be met with along the banks of Loch Katrine, between Strone-a-Chlachar and Loch Lomond, and along the railway from Callander to the head of the Dochart. But perhaps the finest group in the county occurs at the head of Glen Garry and on the col between the Garry and Glen Truim.

Numerous examples of boulders which have travelled far from their parent source are to be met with. The Ben Voirlich grits and certain diorites and hornblende schists among the Highland rocks, along with the massive Old Red conglomerates, supplied large boulders, which have been widely distributed by the ice. This dispersion was chiefly accomplished during the primary glaciation, and the direction of the movement of the boulders coincides with that of the ice-markings. But not only are large masses of the Highland rocks distributed over the low grounds, many of them have been carried over the highest cols in the Ochils. The observer may frequently note the occurrence of these foreign blocks which have been washed out of the boulder clay along the stream courses on the S side of the Ochils. "Samson's putting-stone" is the name given to a well-known boulder of Highland schist situated on a knoll of Old Red conglomerate overlooking the Trossachs road near Coilantogie Ford.

The 100-foot beach forms the upper terrace at Bridge of Allan, and skirts the Carse of Stirling, stretching as far as Dollar, and forming some outlying patches in Clackmannanshire. It is also traceable up the valleys of the Tay and the Earn. The deposits consist of sands, gravels, and brick-clays, which frequently show crumpling of the beds. From this fact, as well as from the occurrence of boulders in the brick-clays, it is evident that floating ice must have existed in the sea during their deposition. The Carse of Stirling, as well as the Carse of Gowrie, mark the level of the 50-foot sea-beach. The clays of this terrace sometimes alternate with beds containing hazel-nuts, along with oyster and other shells, which are the same as are now to be found on our shores, though of a larger size. Kitchen middens occur on the bluffs above the 50-foot beach, indicating the presence of neolithic man where the sea washed the base of these cliffs.

Where the Highland glens debouche on the plains along the Highland border great masses of gravel are met with, which are arranged sometimes in the form of kames, sometimes in irregular sheets. The Tay, Allan, Almond, Earn, Teith, and other streams spread these deposits over the low grounds. Some of the kamiform ridges may have been accumulated in channels underneath the ice, some may have been formed along the sides of the glaciers where they extended beyond the mouths of the valleys, and spread in a fan-shaped manner over the plains; each successive ridge being laid down as the glacier retreated step by step. When the glacier shrunk back into the glens the materials were deposited as ordinary lateral and terminal moraines.

Along the foot of the S slope of the Ochils, both the 100 and 50 feet beaches merge into cones of gravel and sand, which slope gently upwards to the mouths of the glens. The accumulation of this detritus is still in progress, owing to the denudation of the volcanic rocks

forming the chain. The gravel, sand, and detritus borne down the steep slopes are, for the most part, deposited where the glens debouche on the plains in low fan-shaped cones, the features of which are dependent on the angles of inclination of the two slopes. On these cones are built various towns and villages, such as Blairlogie, Menstrie, Alva, Tillicoultry, and Dollar. Though the material forms a dry subsoil, yet the towns built in such situations are more or less subject to disastrous floods from the shifting of the stream courses.

Extensive alluvial flats or terraces occur along the banks of some of the chief rivers, such as the Tay, the Earn, and Teith, which have been formed by river action in the usual manner. That the sea has had nothing to do with the formation of these terraces is evident from the fact that the slope of each successive terrace corresponds with the slope of the stream. Where tributaries form cones of detritus at the points of junction with the main streams, these alluvial deposits are terraced in a similar manner.

Economic Minerals.—Those of the greatest value are the coals and ironstones of the Carboniferous formation. The Alloa coalfield is particularly rich in good household coals. Several seams at Culross and Oakley were formerly worked, but this has been discontinued, as better coals are to be found in the neighbourhood. Both clayband and blackband ironstones occur at Alloa, Dollar, Oakley, and Culross, which are not wrought at present. The beds of limestone occurring in the Carboniferous formation at Vickar's Bridge near Dollar and at Culross were formerly quarried. The other seams are of minor importance. In the metamorphic rocks of the Highlands massive limestones occur in Glen Tilt, where they have been worked for marble; at Blair Athole, Pitlochry, Loch Tay, Glen Lyon, Loch Earnhead, Loch Rannoch, and Callander. A calcareous breccia occurs along the great fault bounding the Highlands, which at several places has been worked as a limestone. Fire-clay occurs throughout the Carboniferous strata on the S side of the Ochils. Silver, copper, lead, and cobalt occur among the volcanic rocks of the Ochils, and were formerly wrought. The matrix of the metalliferous deposits is usually barytes. The Spa Water of Bridge of Allan issues from the workings of an old copper mine. Near Alva a vein of silver and cobalt ores was wrought, and has given the name to the glen in which it occurs. The ore is reported to have been rich. On one of the tributary streams which form the Castle-Campbell glen at Dollar malachite has been mined; the matrix of the vein being barytes. At Tyndrum, argentiferous galena has been worked; zinc blende, copper pyrites, and small quantities of a cobalt ore are also found there. At Tomnaclachan, S of Loch Tay, grey copper with copper and iron pyrites and molybdenite occur; while at Corrie Bui rich argentiferous galena and two pieces of gold have been found. Roofing slate is met with along the Highland border, and has been wrought chiefly at Aberfoyle, Comrie, and Dunkeld.

Soils.—The soils in a county so large and so diversified in character are naturally of the most varied description. A deep stiff clay forms the flat tract for 18 miles along the Forth from Cartmore Bridge to the Bridge of Allan; and by far the larger part of the Carse of Gowrie has a deep rich clay also, loam appearing only on the eminences in that fertile region. A pale brown clay extends along the Earn from Forteviot Bridge to the Tay; and clayey soils occur elsewhere in the county. Haugh soil of fine alluvium occurs in the Allan, Goodie, and Devon; around Killin and in parts of Glendochart, Glenfillan, and other glens in various regions. Loam or fertile vegetable mould forms a fine bank from Rednock House to Blair Drummond, and extends over part of Strathearn; over most of the Tay valley below Dunkeld; over a large area in Strathmore; and over nearly all the SE slopes of the Sidlaws. Till is very widely diffused; a poor kind of it covers the NW face of the Ochils from Dunblane to Abernethy; other qualities skirt the moor between the Teith and Forth, and occupy areas round the Lake of Menteith

PERTSHIRE

and on the NW point of the Sidlaws; and on many of the other hills. A light sandy or gravelly soil appears in most of the valleys N of Dunkeld and Alyth, and W of Crieff and Callander, and is found in very abundant quantity all over the county. Moorish and alluvial soils interrupt its continuity in many parts. Moorland, or a thin stratum of moss upon sand or gravel, has given name to Orchimmoor, Sheriffmuir, Methven, Alyth, Dunsinane, and other moors; but much of these have now been reclaimed for agriculture.

Climate.—The climate is affected partly by the prevailing inclination of the general surface to the SW, but chiefly by the special configuration of the various parts. The temperature corresponds to the position of the county between Highlands and Lowlands; and strikes the medium between the northern and southern counties; but is, of course, exposed to great local variations. Easterly winds bring rain and unsettled weather on Gowrie, Stormont, Glenshee, and Strathardle, while the weather is dry and serene in Breadalbane. Westerly winds on the other hand bring up rain from the Atlantic over Menteith, Breadalbane, and Rannoch; while they leave the eastern regions quite unaffected. Neither class of winds can advance very far into the interior without being in great part disburdened of their moisture by the mountain-ranges. Northerly winds have their power much broken by the rampart of mountains in the N. According to observations made some time ago over a series of five years, west winds prevail from 165 to 220 days in the year; fair weather from 189 to 250 days; rain from 95 to 141; and frost from 11 to 66 days. The mean height of the barometer was found during three consecutive years to be from 29.59 to 29.71; and of the thermometer from 41 to 42.4. The annual rainfall over five years varied between 31.45 inches and 38.4.

Animals.—The deer forests of Perthshire contain large herds of red-deer; fallow-deer, though not native, are found near some of the residences of the nobility; and roe-deer are also common in some places. The fox, otter, stoat, weasel, squirrel, and water-rat are among the common wild animals of Perthshire; and the wild-cat and badger among those that are almost extinct. Eagles still have their eyries among the mountains of this county; and several kinds of hawks and owls are also reckoned among its birds, in addition to a very large number of the commoner kinds. Game birds are very numerous; and the grouse-moors of Perthshire afford some of the best sport to be obtained in that way in the world. Ptarmigan is found only on the loftier mountains; and capercaillie, originally a native, but reintroduced from Norway after its extinction in Scotland, is abundant in many parts. The woodcock also breeds regularly. Perthshire abounds in excellent salmon and trout streams; while the salmon-fishing in the river Tay and in its estuary is of a very valuable description. Scottish pearls are found in the Tay, in the shells of a fresh-water mussel, tolerably common in that river and its tributaries. The county has some reputation among entomologists for the number of rare insects to be found in it.

Industries.—The industrial sources of wealth of Perthshire include agriculture, sheep-farming, the letting of lands and waters for sport, and a small proportion of manufactures and commerce. According to the returns in 1881, 16,522 persons were engaged in agricultural employments, 6794 in domestic, 3801 in professional, 3257 in commercial, and 27,694 in industrial; of the last, 1474 were employed in woollen industries, 2524 in cotton and flax, 917 in hemp and jute, 60 in coal and shale mining, 6 in ironstone mining, and 69 in ship-building. Of the whole, 82,214 were returned as without specified occupation, of whom 49,227 were females, and 41,808 children.

Only about one-fifth of the entire surface of the county is under tillage, the rest being taken up by pasture, woods, and deer-forests. The methods and conditions of agriculture naturally vary very much in

PERTSHIRE

the different parts of so large a region, but on the whole, although in the remoter quarters some antiquated and benighted practices still linger, the agricultural condition of the shire may be pronounced to be excellent. Nearly all the lowlands and many of the glens are in a high state of cultivation. Large tracts of moorland and moss have been reclaimed; others have been enriched; and draining, special manuring, and careful rotation have all lent their aid to improve the soil. According to the returns of 1881 there were 108 farms of 1000 acres or more; 90, between 500 and 1000; 988, between 100 and 500; 865, between 5 and 100; and 124 below 5 acres. The most common term for a farm lease is 19 years, at rents which run from £1 to £4, 10s. per Scottish acre. But sheep-farms bring only about 2s. 6d. per acre, or from 12 to 17 bushels of grain per acre, the money value being determined by the fiars prices for the year. During the last 20 years the lowest fiars price for the quarter of best wheat was 31s. 11d.; ditto best oats, 16s. 2d.; ditto per boll of 140 lbs. of oatmeal, 12s. 8d. The highest prices were respectively 64s. 4d. in 1867, 28s. 11d. in 1868, and 22s. 9d. in 1867. In 1882 the prices were 36s. 1d., 21s. 6d., and 17s. 3d. Ploughmen receive money and kind to the annual value of from £43 to £49. The boty system prevails to a considerable extent. The following table indicates the principal crops and the acreage under each in various years:

| | 1867. | 1873. | 1874. | 1882. |
|-------------------------------------|--------|--------|--------|---------|
| Wheat, | 14,060 | 13,915 | 14,803 | 7,498 |
| Barley, | 20,881 | 22,345 | 22,572 | 24,454 |
| Oats, | 63,233 | 66,494 | 65,511 | 71,136 |
| Rye, | 252 | 295 | 337 | 385 |
| Pease, | 226 | 152 | 108 | 118 |
| Potatoes, | 15,606 | 16,616 | 17,362 | 17,723 |
| Turnips, etc., | 31,628 | 33,623 | 32,614 | 31,837 |
| Cabbages, etc., | 115 | 188 | 205 | 166 |
| Other Green Crops, | 1,269 | 962 | 1,055 | 947 |
| Bare Fallow, | | | 1,941 | 2,461 |
| Grass, Permanent Pasture, | | | 96,288 | 84,239 |
| Grass, in Rotation, | | | 92,943 | 101,731 |

The following table shows the amount of farm-stock at various dates:

| | 1868. | 1873. | 1874. | 1881. | 1882. |
|-------------------|---------|---------|---------|---------|---------|
| Horses, | | 12,885 | 10,181 | 10,997 | 10,856 |
| Cattle, | 78,023 | 89,342 | 83,327 | 76,634 | 74,955 |
| Sheep, | 680,267 | 684,841 | 703,959 | 675,081 | 684,920 |
| Pigs, | 9,155 | 9,838 | 9,911 | 7,741 | 9,465 |

The pastures of Perthshire are exceedingly varied, and are thus adapted to the rearing of a very great diversity of stock. The Angus and Fife breeds of cattle prevail in the Carse of Gowrie, and about Perth and the Bridge of Earn; the Argyllshire in Rannoch, Glenlyon, Glenloch, Strathfillan, and other places in the west; the Lanarkshire, or those from the lower ward of that county, much akin to the Galloway breed, in Menteith; and the Ayrshire and Galloway in various parts. Breeds of black cattle have been introduced from Devonshire, Lancashire, Guernsey, and even from the East Indies; but these have become quite blended with each other and the former existing breeds. The stock of sheep has, as well as the cattle, undergone much improvement. The old stock was the whitefaced, which in the Highlands required to be housed in cots every night during winter and spring; but about 1770 the blackfaced breed was introduced, and has now, both in the pure breed and in numerous crosses, almost entirely ousted the former. Goats were formerly numerous, but have given way to sheep and tillage. Poultry is, of course, like swine, ubiquitous. Dovecots are rare in the Highlands, but abound about Perth and Cupar, the Carse of Gowrie, and in Menteith. Game has already been alluded to.

Woods.—Perthshire in early times was densely covered with forests, whose remains are still seen in such de-

tached portions as the Black Forest of Rannoch, and in the tree-trunks that are occasionally even yet dug up. In feudal times the woods were sadly diminished, and the county gradually assumed a naked and treeless aspect. In more modern times, however, the proprietors in Perthshire, to whom the fourth Duke of Athole, 'the planting duke,' first gave the example, set themselves to remedy this great defect; and at present the county, aided by its peculiar configuration, its diversity of soil, and its climate, may be described as the great tree-growing county of Scotland. In 1812 Perth had 203,880 acres under wood, thus showing the largest acreage of any county in Scotland, the next return being Aberdeen with 148,800. In 1871 Perthshire had only 83,525, or 179,205 acres less than 60 years earlier. According to returns made in 1881, Perthshire had fallen to the third place among the counties, with 94,563 acres, Inverness having 162,201, and Aberdeen 103,156. It has been estimated by Mr Hunter in his *Woods, Forests, and Estates of Perthshire* (1883), in which full details of the whole subject are given, that the value of the woods in the county is about three and a half million pounds sterling. The following table shows the acreage under various forms of forestry in various years :

| | 1872. | 1880. | 1881. | 1882. |
|------------------------|--------|--------|--------|--------|
| Orchards, etc., . . . | 1,938 | 327 | 398 | 394 |
| Nursery Grounds, . . . | 239 | 92 | 105 | 99 |
| Woods, | 83,525 | 91,333 | 94,563 | 94,563 |

There was no change in the acreage under woods between 1871 and 1879.

As indicated before, the number of deer and the extent of deer forests in Perthshire is very great. The rent obtained for deer forests is very much above the ordinary agricultural or pastoral rent of a tract in the Highland districts; and the tendency of late years has been rather to increase than to diminish the amount of land occupied by deer forests. According to statistics drawn up for the Royal Commission on the state of Highland crofters, the chief deer-forests in Perthshire in 1884, with their extent, owners, and highest and lowest points in feet above sea-level, were—

| Deer-Forest. | Owner. | Acrea. | Highest point in feet | Lowest point in feet. |
|---------------------|-------------------------------|--------|-----------------------|-----------------------|
| Athole, | Duke of Athole | 85,540 | 3671 | 620 |
| Fealar, | Do. | 14,100 | 3424 | 1200 |
| Glenbruar, | Do. | 8,570 | 3250 | 1400 |
| Drummond Hill, . . | Earl of Breadalbane | 2,400 | 1500 | 380 |
| Glenartney, | Baroness Willoughby de Eresby | 19,310 | 3244 | 500 |
| Rannoch, | Sir Robert Menzies | 12,740 | 3128 | 1153 |

Besides these there are 390 different grouse-shootings in the county, partly occupied by the proprietors, and partly let at rents varying from £30 to £1850 per annum; while the shootings under £20 yearly rent represent an annual aggregate of £700. About 73 different fishings are also reckoned, those not occupied by their proprietors bringing in rents varying from £5 to £400. The net fishings not included in these represent about £10,642 annually. The total sum paid to proprietors of lands in Perthshire as sporting rent is the largest paid in any county of Scotland; but, of course, only a small part of it can be regarded as income flowing into the county. The wants, however, of a large shooting tenancy, with their households and attendants, support a considerable amount of trade in Perthshire; while direct employment is given to many of the native inhabitants as gamekeepers, gillies, boatmen, etc. According to the *Sportsman's and Tourist's Guide* for June 1884, the amount paid as rent for shootings and deer-forests in Perthshire was £61,169, for

rod-fishings £1160, and for net-fishings for salmon £10,642. The large number of tourists, also, who annually pour into the county to visit its beautiful and celebrated spots, must not be forgotten among the sources of wealth of Perthshire.

Perthshire cannot be called in any comprehensive sense a manufacturing or a commercial county. It contains no great centre of trade, and is the seat of no special industry of importance. The busiest commercial city is the county town, but even that has a steady rather than a flourishing business. Particulars of the main industries of the county will be found in the special articles on PERTH and the other towns and parishes. The linen trade, though long established, has not attained any very striking importance, and is quite subordinate to that of Forfarshire. Its main seats in Perthshire are PERTH, COUPAR-ANGUS, and BLAIR-GOWRIE. The cotton industry, once flourishing, has now much declined, but there are mills at Deanston, founded in 1785, Stanley, and Cromwellpark. Woollen manufactures are represented by factories for tweeds at Killin, Pitlochry, etc.; for tartans and galas at Auchterarder, and by mills at Crieff, Dunblane, Kin-cardine, and Burnfoot in Glendevon, and several other places. There are bleaching-fields at Lunarcy and Cromwellpark, and elsewhere in the neighbourhood of Perth. The attempt to establish paper-mills has only been very partially successful. Dye-works, especially at PERTH, breweries, linseed-oil mills, distilleries, as well as a considerable miscellany of less important manufactories and industrial institutions, are also included in the resources of the county. A very considerable trade in cattle, sheep, and agricultural produce is carried on; and centres, along with all other trade, mainly in PERTH. Some of the small ports along the N side of the estuary of the Tay, as Port Allen and Kincardine, carry on a tolerably active commerce. The mineral wealth of Perthshire is inconsiderable, or at least has been worked to an inconsiderable extent. Coal has been found chiefly in the Culross district; and quarrying for various sorts of building stone is carried on in many of the parishes. Fairs are held at stated times in forty places, besides the county town; and weekly markets are kept in the principal towns and villages.

Railways and Roads.—Perthshire contains portions of four chief railway systems—CALEDONIAN, NORTH BRITISH, CALLANDER AND OBAN, and HIGHLAND RAILWAYS. The Caledonian line enters the county from the S, a little N of Bridge of Allan, and runs north-eastwards to Perth by Dunblane and Crieff Junction. From the latter junction, near Auchterarder, a branch runs up to Crieff (9 miles), whence another line also connects with Perth by Methven Junction. From Perth the Caledonian railway has two exits, one across the river Tay by viaduct and through the Carse of Gowrie to Dundee (20½ miles), leaving Perthshire and entering Forfarshire just before Invergowrie station. The second exit runs north-eastwards from Perth by Stanley Junction, entering Forfarshire at Coupar-Angus, and throwing off branches to Blairgowrie (5 miles) at Coupar-Angus, and to Alyth (5½) at Meigle. From Dunblane the Dunblane, Doune, and Callander branch runs off NW, and is continued from Callander up Strathrye, Glen Ogle, and Glen Dochart, to Tyndrum on the W boundary, and thence on to Oban in Argyllshire by the lately completed CALLANDER AND OBAN line, which is worked by the Caledonian Company. The North British line extends from a point between Abernethy and Newburgh in Fife, up past the Bridge of Earn to Perth, a distance within 9 miles. The Highland railway branches off NW from the Caledonian line at Stanley Junction, and proceeds up the valley of the Tay by Dunkeld to Ballinluig, and thence up Glengarry by Pitlochry, Blair Athole, etc., to Drumochter Pass on the NW boundary, where at the highest point (1500 feet) reached by any railway in the country, it enters Inverness-shire. Its length from Perth is about 53 miles. At Ballinluig a branch proceeds westwards to

Aberfeldy, a distance of 9 miles. The roads in Perthshire are substantially made and well kept. From the S the main Edinburgh road enters the county a few miles SE of Perth, and arrives at that city across the South Inch; and the Glasgow road to Perth passes through Stirling, Dunblane, and Auchterarder. From Dundee the road approaches from the E through the Carse of Gowrie; and a fourth road enters the county town from Comrie, Crieff, and Methven. From Perth the great Highland road runs northwards alongside the Highland railway during its entire course in the shire. Another thoroughfare runs north-westwards to Coupar-Angus, where it forks, sending one branch W into Forfar, and another northwards by Blairgowrie through Glen Shee, and thence on to Braemar in Aberdeenshire. Besides, there are numerous and convenient connecting roads, especially in the S and SE. Further N the means of communication, except along the larger river valleys, are much less carefully constructed and much less numerous.

The cities in Perthshire are Perth, Dunkeld, and Dunblane; the royal burghs are Perth and Culross; the burghs of barony Abernethy, Alyth, Auchterarder, Blairgowrie, Craig of Madderty, Crieff, Kincardine, and Longforgan; the police burghs are Perth, Callander, part of Coupar-Angus, Crieff, and Dunblane. The towns with more than 2000 inhabitants are Perth, Auchterarder, Blairgowrie, part of Bridge of Allan, part of Coupar-Angus, Crieff, and part of Dollar. Towns with between 1000 and 2000 inhabitants are Aberfeldy, Callander, Comrie, Dunblane, Dunning, Kincardine, Lornly, Muthill, part of Oakley Ironworks, Rattray, and Scone. The villages with between 300 and 1000 inhabitants are Abernethy, Abernethan, Almondbank, Bankfoot, Birnam, Blackford, Blair Athole, Braes, Bridge of Earn, Burrelton, Culross, Deanston, Doune, Dunning, Errol, Huntingtower, Killin, Longforgan, Methven, Pitcairn Green, Pitlochry, Stanley, Thornhill, parts of Kippen, Mylnefield, Low Torry. Other principal villages are Aberbar, Aberdargie, Aberfoyle, Acharn, Amulree, Arntully, Arnprior, Balbeggie, Balbrogie, Balbunnoch, Balhaddie, Balledgarno or Ballerno, Ballendean, Ballinluig, Balnasuin, Balwansaid, Bankfoot, Belyclochan, Blairburn, Blairingone, Blairlogie, Blairmore, Borelandpark, Bridgend, South Bridgend, Bridge of Earn, Bridge of Teith, Bridgeton, Buchanty, Buchany, Butergask, Butterstone, Cairnbeddie, Cairniehill, Caolvalloch, Caputh-Western, Caroline Place, Cauldham, Chapelhill, Cherrybank, Clathy, Clifton, Collice, Cottown, Craggadilly, Cragganaster, Craggantoul, Craigmend, Craigie (in Perth parish), Craigie (in Caputh), Cromwellpark, Dalginross, Dargie, Dovecotland, Drums, Drumvaich, Dull, Floweraig, Forgardenny, Forteviot, Fowlis-Easter and Fowlis-Western, Friarton, Fungarth, Gartmore, Gartwhinean, Gilmerston, Grange, Greenloaning, Guildtown, Hawkstone, Heriotfield, Hillyland, Inchture, Inver, Kenmore, Kepp, Kilmahog, Kilspindie, Kinbuck, Kincairney, Kingoodie, Kinnaird (in Gowrie), Kinnaird (in Moulin parish), Kinrossie, Kintulloch, Kirlane, Kirkmichael, Lecetown, Lochearnhead, Logierait, Longleys, Low Valleyfield, Mains-of-Errol, Meigle, Meikleour, Methven, Monzie, Moulin, Nethermans, New Rattray, Norriston, Pitheavlis, Pilmiddie, Pitrodie, Pool, Rait, Ross, Rottearn, Ruskie, Ruthvenfield, St Davids, St Fillans, Sancher, Srogehill, Shirgarton, Smithyhaugh, Spittalfield, Stonfornan, Strathrye, Strowan, Thornhill, Tomacher, Tombreck, Tulloch, Tyndrum, Washington, Waterloo, Weem, Westown, Wolfhill, Woodlane, and Woodsides. The mansions and private seats in the county are very numerous, but the following are the chief: Blair Castle and Dunkeld House (Duke of Athole), Doune Lodge (Earl of Mar and Kellie), Dupplin Castle and Balhousie Castle (Earl of Kinnoull), Elcho Castle (Earl of Wemyss), Cluny Castle and Loyal House (Earl of Airlie), Taymouth Castle, Auchmore House, and Glenfallach (Earl of Breadalbane), Scone Palace and Logiealmond (Earl of Mansfield), Gleneagles, (Earl of Camperdown), Belmont Castle (Earl of Wharnclyffe), Strathallan Castle

(Viscount Strathallan), Pitheavlis (Lord Elibank), Dundur Park (Lord Rollo and Baron Dunning), Rossie Priory (Lord Kinnaird), Ferntower (Lord Abercromby), Drummond Castle (Baroness Willoughby de Eresby), Meikleour House and Aldie Castle (Baroness Nairne), Aberuchill Castle and Kilbride Castle (Sir James Campbell), Pittfour Castle (Sir J. T. S. Richardson), Castle-Menzies, Foss House, and Rannoch Lodge (Sir Robert Menzies), Moncreiffe House (Sir Robert Drummond Moncreiffe), Delvine (Sir Alexander Muir Mackenzie), Dunira House and Comrie House (Sir Sidney J. Dundas), Kinloch House (Sir J. G. S. Kinloch), Keir (Sir John Maxwell Stirling-Maxwell), Bamf House (Sir J. H. Ramsay), Grantully Castle (deserted) and Murtly Castle (Sir A. D. Drummond Stewart), Ochertyre House (Sir Patrick Keith Murray). Other houses belonging chiefly to untitled owners are Abercairney Abbey, Aberuchill House, Airvoich, Ardarie, Ardoch, Atholl Bank, Auchleeks, Auchterarder, Balbrogie, Baledmund, Balhaddie, Ballechin, Balmyle, Balnakeilly, Balruddery, Barclayhill, Barnhill, Bellwood, Birnam College, Birnam Lodge, Blairdrummond, Blairhill, Bolfracks, Bonhard, Bonsel, Boquhan, Braco Castle, Broich, Cambusmore, Cardean, Cardross, Carey, Carpour, Carse-Grange, Clathick, Cluny, Colquhalzie, Condie, Coralbank, Craighall, Cultoquhey, Dalchosnie, Dalguise, Dalhousie, Dunalastair, Derulich, Dirnanean, Dolerie, Donavoud, Drumearn, Drumfark, Dunbarney, Dunsinane, Eastertyre, Edinample Castle, Edinchip, Edradyne, Errol Park, Evleick, Faskally, Findynate, Fonab, Fornech, Gartincaber, Gartmore, Gask, Glenawe, Glenuckie, Glencarse, Glendelvine, Glendoick, Glenierich, Glenfecchan, Glenlyon, Gorthy, Hill of Ruthven, Huntingtower, Castle Huntly, Inchbrackie, Inchmartin, Inchyra, Invermay, Invertrosachs, Jordanstone, Keithick, Kilgraston, Killiechassie, Kindrogan, Kincairney, Kinfauns Castle, Kinnaird, Kippendavie, Laurick Castle, Lawers, Leny, Lintrose, Lude, Lynedoch, Megginch, Meigle, Methven, Millearn, Millhead, Moness, Monzie, Murrayshall, Murie, Mylnefield, Newhouse, Newmill, Orchill, Pitcairns, Pitnacree, Rednock, Rottearns, Ruthven-Field, Ruthven, Seggieden, Snaigow, Stanley, Stenton, Stobhall, Strowan, Tullybelton, Tullymet, Urrard, Valleyfield, and Woodend. According to *Miscellaneous Statistics of the United Kingdom (1879)*, 1,612,840 acres, with a total gross estimated rental of £1,048,427, are divided amongst 7644 proprietors, two together holding 388,144 acres (rental £269,554), one 76,837 (£28,955), fourteen 422,599 (£111,424), nineteen 248,053 (£88,506), twenty-one 142,818 (£77,932), thirty-one 159,154 (£150,819), fifty 72,623 (£70,999), seventy-five 53,093 (£160,063), etc.

Perthshire is governed by a lord-lieutenant, a vice-lieutenant, 45 deputy-lieutenants, a sheriff, two sheriff-substitutes, and nearly 300 justices of the peace. The deputy-lieutenants and justices are classed in ten divisions corresponding to the ten administrative districts into which the county was divided by act of parliament in 1795 for extending the jurisdiction of justices of peace in small debt causes. These districts are those of Perth, Auchterarder, Blairgowrie, Carse, Coupar-Angus, Crieff, Culross, Dunblane, Dunkeld, and Weem. But this division of the county refers only to the statutory duties; the ordinary jurisdiction of justices extends over the entire county. The sheriffdom is divided into the two districts of Perth and Dunblane, with a sheriff-substitute for each division. The meetings of the Perth sheriff court are noted under PERTH; the Dunblane court meets there every Wednesday during session. Circuit courts for small debt causes are held at regular intervals at Blairgowrie, Coupar-Angus, Crieff, Dunkeld, Aberfeldy, Auchterarder, Kincardine, and Callander. The county police force, exclusive of the members of Perth city police, in 1884 numbered 66 men, with a superintendent with a salary of £330. There are prisons at Perth and Dunblane; and cells are attached to the police station-house in 26 other localities. The county returns one member to parliament, its parlia-

mentary constituency in 1833-84 being 6032. The annual value of real property in 1674 was £28,330; in 1815 it was £555,532; in 1849, £706,878; in 1876, £966,461; and in 1884, £889,658, exclusive of £109,115 for railways and waterworks, which brings up the total to £998,773. The parish with the lowest assessed rental was Arngask with £2481; the parish with the highest was Crieff with £31,530. The railways, &c., were assessed as follows:—Caledonian, £67,382; North British, £7967; Highland, £15,532; Callander and Oban, £6469; Aberfoyle, £206; Forth and Clyde, £987; Glasgow Corporation Waterworks, £8591; Dunfermline Waterworks, £1881. Perthshire is one of the least densely populated counties of Scotland, having only 51 to the square mile, while the average for the whole country is 125. Only Kirkcubright, Peebles, Ross and Cromarty, Argyll, Inverness, and Sutherland have a sparser population. Pop. (1801) 125,583, (1811) 134,390, (1821) 138,247, (1831) 142,166, (1841) 137,457, (1851) 138,660, (1861) 133,500, (1871) 127,768 (1881) 129,007, of whom 67,455 were females, *i.e.*, 109.59 to every hundred males; while 14,505 or 11.24 of the population were Gaelic-speaking. Separate families 30,292. Houses (1881) occupied 26,722, vacant 1690, building 150.

The civil county previous to the Reformation and during the time of Protestant Episcopacy in Scotland contained the seats and most of the territory of the dioceses of Dunkeld and Dunblane, and some parishes of the archdiocese of St Andrews. Since the final establishment of Presbyterianism very many changes in the constitution of its presbyteries and the distribution of its parishes have occurred which it would be useless to trace. At present the county contains 78 *quoad civilia* parishes, of which 1—PERTH—is divided into 4 *quoad sacra* parishes, making 81 entire *quoad sacra* parishes in the county. Besides these it shares 5 others with Forfarshire, 2 with Kinross-shire, 2 with Stirlingshire, and 1 each with Fife, with Clackmannan, with Fife and Kinross, and with Clackmannan and Stirling; and it also contains 5 chapels of ease. The parishes of Perthshire are Aberdalgie, Aberfoyle, Abernethy, Abernyte, Alyth, Arngask, Auchterarder, Auchtergavon, Balquhider, Bendocho, Blackford, Blair Athole, Blairgowrie, Callander, Caputh, Cargill, Clunie, Collace, Comrie, Coupar-Angus, Crieff, Culross, Dron, Dull, Dunbarney, Dunblane, Dunkeld and Dowally, Dunning, Errol, Findo-Gask, Forgandenny, Forteviot, Fortingall, Fossaway, Fowlis-Easter, Fowlis-Wester, Glendevon, Inchtute, Kenmore, Killin, Kilnadock, Kilspindie, Kincardine, Kinclaven, Kinfauns, Kinloch, Kinnaird, Kinnoull, Kippen, Kirkmichael, Lecropt, Lethendy, LittleDunkeld, Logie, Logierait, Longforang, Madderty, Meikle, Methven, Moneydie, Monzie, Monzievaird and Strowan, Moulin, Muckart, Muthill, Perth, Port of Menteith, Rattray, Redgorton, Rhynie, St Madocs, St Martins, Scone, Tibbermuir, Trinity-Gask, Tulliallan, Weem. These are variously divided among the presbyteries of Dunkeld, Weem, Perth, Auchterarder, and Dunblane, in the synod of Perth and Stirling; the presbyteries of Meikle and Dundee in the synod of Angus and Mearns; and the presbytery of Kinross in the synod of Fife. The Established Church has 88 places of worship in the county, the Free Church 60, U.P. 25, Scottish Episcopalian 26, Roman Catholic 7, Baptist 4, Congregational 4, and other denominations 4. There are in the shire 193 elementary day schools (152 of them public), which, with total accommodation for 26,113 children, had (1882) 20,610 on the registers, and an average attendance of 15,591. The staff included 266 certificated, 16 assistant, and 145 pupil teachers. The registration county gives off parts of Arngask to Fife, of Fossaway and Tullihole to Kinross, of Kippen to Stirling, of Liff, Benvie, and Invergowrie, of Coupar-Angus, and of Scone to Forfarshire; and includes part of Alyth from Forfar, of Abernethy from Fife, and of Forgandenny from Kinross, of Lecropt from Stirling, and of Logie from Stirling and Clackmannan. The pop. in 1881 was 130,382. All the parishes save six are assessed

for the poor. There were in 1882-83 2999 registered and 2391 casual poor, on whom was spent a total of £35,243. Fifteen parishes form the poor-law combination of Upper Strathearn, and eleven that of Athole and Breadalbane. The county asylum is at Murthly. In 1881-82 there were 435 pauper lunatics maintained in the county at a total expense of £10,827. In 1882 the percentage of illegitimate births was 9.0. Perthshire contains the 42d regimental district, and the depot for the 1st, 2d, and 3d battalions of the Royal Highlanders. Perth is the headquarters for the 1st Perth Rifle Volunteers, and Birnam for the 2d Perthshire Highland Rifle Volunteers.

Antiquities.—The antiquities of Perthshire are both numerous and interesting, but for anything beyond a brief mention of the most important, reference must be made to the articles on the various parishes and towns. Caledonian cairns, standing stones, cromlechs, and stone circles are found scattered over the entire county; and there are famous rocking-stones at Abernethy, Dron, and Kirkmichael. There is a vitrified fort on Craig Rossie, one of the Ochils; and on Castle Law there are the remains of what is said to be a Scandinavian camp, 500 feet in diameter. But by far the most important military antiquity is the famous Roman camp at ARDOCH, the largest of the kind in the kingdom. There are other Roman camps at Fendoch, Dalginross, Fortingall, and Dunkeld; and there are various stretches of Roman road more or less distinctly traceable in different regions. In this connection should be mentioned the roads made by General Wade, about which a well-known distich remarks—

'Had you seen these roads before they were made,
You would lift up your hands and bless General Wade.'

The curious high-pitched bridge across the Tay at Aberfeldy is an interesting specimen of the General's engineering. The cylindrical tower at Abernethy is the most interesting of the old watch-towers. There are localities and objects traditionally associated with King Arthur at Meikle, with Fingal at Glenalmond, and at Monzie and Killin, and with Ossian at Monzie and in Glen Beg. The quondam town of BERTHA is separately noted. At SCONE is the historic palace, and also the Boot-hill. Among the interesting castles, some now in ruins, are Macbeth's at Dundinane Hill, Huntingtower or Ruthven, Castle-Campbell, Garth, Doune, Elcho, Drummond, Blair Athole, Kinclaven, Moulin, and Glasclune. The cathedrals at DUNBLANE and DUNKELD are described under those towns; other ecclesiastical and religious institutions were the collegiate churches of Methven and Tullybardine; and abbeys or priories, *etc.*, at Scone, Inchaffray, Inchmahome, Abernethy, Culross, Coupar-Angus, Strathfillan, Elcho in Rhynie, and Loch Tay.

History.—The ancient inhabitants of Perthshire were known as the Daranii, Horestil, *etc.*, and the names of the Caledonian 'towns' of Alaunea on the Allan, Lindun near Ardoch, Victoria on the Ruchill, and Orrea on the Tay, have been recited by antiquarians. The county was traversed by the Romans under Agricola and Severus, and on their retirement became chief centre of a Pictish kingdom with capitals at Abernethy and Forteviot. A subsequent Scotto-Saxon monarchy held its seat at Perth and Scone; and the former of these places became, as we have seen, the capital of modern Scotland, and remained so till 1482. Most of the history of the county centres in PERTH, with the exception of the obscure fiefs of the Highland clans. The chief battles fought within the limits of the shire are Mons Grampius in A.D. 86 (see CAFUTH), where Agricola won a victory; Luncairy, where the Danes were defeated by Kenneth III. in 990; Methven, 1306; Dupplin, 1332; defeat of the Covenanters by Montrose at Tibbermuir, 1645; Killiecrankie, 1689; and Sheriffmuir, 1715; while in 1745-46 the county was deeply involved in the proceedings of the rebellion. The ancient jurisdictions have already been mentioned; it only remains to say that Menteith was a stewartry,

Breadalbane a bailiary or separate jurisdiction of its earls, Strathearn a stewardry, Methven a separate regality, and Atholl a regality of very large extent. Since the abolition of hereditary jurisdictions in 1747, the sheriff, with his two substitutes, has exercised jurisdiction over the county, and in 1795 the present ten divisions, already referred to, were defined by Act of Parliament.

Literary Associations.—The romantic character of Perthshire scenery has attracted much attention from poets and novelists. Shakespeare's play of *Macbeth* has immortalised Birnam and Dunsinane. Sir Walter Scott lays the scene of *The Lady of the Lake* at Loch Katrine and the Trossachs; and much of *Rob Roy* is transacted in the same SW corner of the shire. Many of the scenes of *Waverley* are also laid in Perthshire; and Craighall claims to be the chief prototype of 'Tully-veolan' in that novel. Some of Burns's most beautiful lyrics have had a Perthshire inspiration; and the *Birks o' Aberfeldy*, *The Humble Petition of Bruar Water*, *Allan Water*, *On Scaring some Waterfowl in Loch Turrit*, are among the best known. The *Braes o' Doune* and *Braes o' Balquhiddier* have also been celebrated in poetry; and Mallet has sung *The Birks o' Invermay*. Many Jacobite songs have reference to Perthshire, not the least noticeable being James Hogg's *Cam' ye by Athole*. The Baroness Nairne's beautiful ballad *The Auld House* was written of the old House of Gask. The incident which gave rise to Wordsworth's poem *Stepping Westward* occurred at Loch Katrine.

Highl. and Ag. Soc.* (Edinb. 1868); J. C. Guthrie, *The Vale of Strathmore* (Edinb. 1875); P. D. Drummond, *Perthshire in Bygone Days* (Lond. 1879); W. Marshall, *Historic Scenes in Perthshire* (Edinb. 1880); T. Hunter, *Woods, Forests, and Estates of Perthshire* (Perth, 1883); R. S. Fittis, *Illustrations of the History and Antiquities of Perthshire* (Perth, 1874), *Perthshire Antiquarian Miscellany* (1875), *Historical and Traditional Gleanings Concerning Perthshire* (1876), *Chronicles of Perthshire* (1877), *Sketches of the Olden Times in Perthshire* (1878), *Book of Perthshire Memorabilia* (1879), and *Recreations of an Antiquary in Perthshire History and Genealogy* (1880); besides works cited under GRIEFF, CULROSS, DUNFELD, FINGASK CASTLE, GASK, GRANTULLY, INCHAFFRAY, INCHMAHOMIE, KEIR, MONTEITH, PERTH, and SCONE.

Peterculter, a parish of SE Aberdeenshire, containing Murtle, Milltimber, and Culter stations on the Deeside branch (1853) of the Great North of Scotland railway, 5½, 6½, and 7½ miles WSW of Aberdeen, under which there is a post and telegraph office of Peterculter. It is bounded N by Skene and Newhills, E by Newhills and Banchory-Devenick, S by Maryculter, SW by Drumoak, and W by Echt. Its utmost length, from ENE to WSW, is 6½ miles; its utmost breadth is 5 miles; and its area is 16 square miles, or 10,288½ acres, of which 100-70 are water, and 267½ belong to the small Bieldside detached portion almost surrounded by Banchory-Devenick.* The DEE, curving 4½ miles east-north-eastward along or near to all the Maryculter boundary, is joined at the parish church by LEUCHEAR BURN, which flows 6½ miles south-eastward along the Skene border and across the interior. The Leuchar itself is fed by Gormack Burn, tracing 3 miles of the Drumoak boundary, and below its influx is often known as the Burn of Culter. The surface declines along the Dee to 50 feet above sea-level, and rises thence to 322 feet at Eddieston Hill, 450 at Beins Hill or the Weather Craig, and 706 at Kingshill Wood. Gneiss is the predominant rock in the eastern and northern portions of the parish, granite in the western; and the latter has been largely quarried at Angustan.

* According, however, to a decision of 1867, the Deebank detached portion of Banchory-Devenick belongs now to Peterculter, which thus has a total land area of 10,547 acres.

In the E the soil is sandy or gravelly, with a mixture of vegetable earth; whilst in the arable parts of the other districts it is variously a red earth or clay, a thin sandy soil on gravel and rock, and a mixture of black earth or reclaimed moss and clay. Nearly one-sixth of the entire area is under wood, plantations chiefly of larch and Scotch firs; and about two-thirds are in tillage, a good deal of swampy and moorish land having been reclaimed in the course of the last half century. Employment, other than agriculture, is furnished by the Culter Paper Mill (1751) and by a flock factory (1831). NORMANDYKES, the chief antiquity, is noticed separately, as also are the mansions of BINGHILL, COUNTESSWELLS, CULTER, and MURLE. Five proprietors hold each an annual value of £500 and upwards, and five of between £100 and £500. Peterculter is in the presbytery and synod of Aberdeen; the living is worth £241, 11s. The parish church, originally dedicated to St Peter, stands close to the Dee's left bank, near Culter station. It was built in 1779, and contains 550 sittings. Nearly 2 miles to the N is Peterculter Free church; and two public schools, Countesswells and Craighton, with respective accommodation for 57 and 180 children, had (1883) an average attendance of 37 and 127, and grants of £32, 11s. and £117, 9s. 6d. Valuation (1860) £7879, (1884) £12,312, 15s. 7d., plus £956 for the railway, and £500 for the aqueduct. Pop. (1801) 871, (1831) 1223, (1861) 1410, (1871) 1668, (1881) 1908.—*Ord. Sur.*, shs. 77, 76, 67, 1871-74.

Peterhead, a parish containing a town of the same name in the NE of Aberdeenshire, and in the extreme E of the Buchan district of that county. The old name was Petergrie, which was exchanged for the present one about the end of the 16th century. It is bounded NE by a detached portion of Banffshire (St Fergus), E by the North Sea, SSW by Cruden parish, and W by the parish of Longside. The boundary along the NE is formed for 4½ miles by the river Ugie—whence the old name of the parish—and here, as well as to the E, the boundary is natural; on the SSW and W it is artificial. The shape of the parish may be roughly described as a parallelogram with very irregular sides except on the SSW, where it is almost straight. The greatest length, from NW, at the point where the boundary line of the detached portion of Banffshire quits the Ugie NW of Roundhillock, to Cave o' Meachie on the coast on the SE, is 6½ miles; the greatest breadth, a line at right angles to this, from North Head at the town of Peterhead to Mill of Dens on the SW, is 4½ miles; and the area is 9449-267 acres, inclusive of 235-620 foreshore and 44-055 water. The height of the surface rises from sea-level along the eastern border westward with irregular undulations to Cowsrieve (229 feet) and Black Hill (350), and another rising ground turns eastward to the shore at Sterling Hill (209), in the extreme SE of the parish. Near the centre of the sea-coast is the conical Meetbill (181 feet). The coast following the larger windings measures about 7½ miles, and from it the promontories of Peterhead, Salthouse Head, and Buchan Ness project, the latter being the most easterly point of Scotland, though the promontory on which the town stands is not far behind, and the heads to the E of the harbour are still farther E. Between the point occupied by the town and Salthouse Head is Peterhead or Brickwork Bay, fully ½ mile wide across the mouth, and ⅓ mile deep, with rocky and shingly shores. Between Salthouse Head and Buchan Ness is Sandford Bay, 1 mile wide across the mouth, and ¼ mile deep, and with a considerable portion of its shore formed by a fine sandy beach. Near the south-eastern point, however, a line of cliffs pierced by numerous chasms and caves begins and continues round by Buchan Ness till the southern boundary of the parish is reached. Only a small portion of the area is under wood, and there are about 100 acres of bare rock and 400 of moory and mossy ground, but the rest is all under cultivation, the soil varying from sand to rich black loam and stiff clay. The underlying rocks are granite or granitic, and are extensively quarried, the red varieties so well known commercially

as 'Peterhead Granite' being largely used for ornamental purposes and for monuments. The drainage is carried off by a few rivulets flowing to the Ugie or directly to the sea. Old Craig or Ravenscraig Castle, a fine old ruin with great thickness of wall, is on the bank of the Ugie. It was the seat of a branch of the Marischal family, James IV. having, in 1491, granted to Sir Gilbert Keith of Invergie the superiority of the lands of Tortastoun, Buthla, the 'Scottis Myln,' and the rock commonly called the Ravinniscraig, and farther given him permission to erect on the last a castle or fortalice, with battlements, machicoling, portcullis, and drawbridge, and all other defences that might be found necessary. Boddam Castle, on the coast near Buchan Ness, was the seat of another branch of the same family, the Keiths of Ludqharne, Baronets of Nova Scotia, and the Earls-Marischal, who had their castle at Invergie in the parish of St Fergus to the N, $\frac{1}{2}$ mile E of Ravenscraig, were the founders and original superiors of the town. After their forfeiture part of the property was purchased by a fishing company, whose affairs having become embarrassed, it was again sold in 1728 to the Governors of the Merchant Maiden Hospital in Edinburgh. This institution, having purchased another portion of the Marischal estate from the York Buildings Company in 1783, is now superior of the town and proprietor of the adjacent estates. The annual rental of these properties is now probably about half the total amount originally paid for them. There are traces of Picts' houses near Boddam, and the Meet-hill seems, from its name, to have been latterly the Moat-hill or seat of baronial jurisdiction. At an earlier period it must have been a sepulchral mound, for when the foundation of the tower on the top was being dug, an urn and some human remains were found. The tower by which the hill is surmounted was erected in honour of Earl Grey after the passing of the Reform Bill. The landward industries are farming, brickworks, 1 mile S of the town at Invernettie, and $2\frac{1}{2}$ miles W near Berryhill, a distillery at Invernettie, granite working, and several mills. The parish is traversed by the coast road which passes from the town of Peterhead southward by Boddam to Ellon, and thence to Aberdeen, and northward by Fraserburgh to Banff; and by another main road which passes from the town westwards to New Deer. During the period of railway speculation a line was projected to pass from Aberdeen to Peterhead, and thence along the whole S coast of the Moray Firth, but the scheme fell to the ground like so many others in the crash that followed the railway mania. The line subsequently formed northward from Aberdeen passed inland by Inverurie and Huntly, and the parish had no railway communication till 1862, when the Formartine and Buchan section of the Great North of Scotland system was extended through the northern portion to the town of Peterhead. There are also stations at Newseat and Invergie, the former $40\frac{1}{2}$ and the latter $42\frac{1}{2}$ miles from Aberdeen. There are a number of small properties, and the chief residences are Sandford Lodge, Invernettie Lodge, Dens, Meethill House, Blackhouse, Balmoor, Richmond, Cocklaw, Berryhill, and Ellishill House. Besides the town of Peterhead the parish contains the fishing villages of Boddam, Burnhaven, and Buchanhaven, which are all separately noticed, as are also Buchan Ness and the lighthouse there. The parish was first known as Invergie of St Peter to distinguish it from Invergie of St Fergus on the opposite bank of the Ugie, then as Petergie, and finally as Peterhead. Up to 1641 it included Longside, but that parish was then disjoined on account of 'the wydnes of the said parochine [of Peterhead] and of the many communicants within the samen.' It is in the presbytery of Deer and the synd of Aberdeen, and the living is worth £480 a year. It includes the *quoad sacra* parishes of Blackhill, Boddam, and East Church, the latter connected with the town where the churches are noticed. The landward school board has under its charge the four public schools of Blackhills, Boddam, Burnhaven, and Tortorston, which,

with respective accommodation for 80, 270, 130, and 70 children, had (1883) an average attendance of 68, 232, 145, and 63, and grants of £50, 14s., £203, 1s., £118, 5s., and £56, 12s. Ten proprietors hold each an annual value of £500 or upwards, 28 hold between £500 and £100, 38 hold each between £100 and £50, and there are a considerable number of smaller amount. Valuation (1884) £17,467, 7s., exclusive of the burgh, but inclusive of £781 for the railway. Pop. of parish, inclusive of the burgh and the villages, (1801) 4491, (1831) 6695, (1861) 9796, (1871) 11,506, (1881) 14,257, of whom 6798 were males and 7459 were females. Of the whole population 8171 were in the ecclesiastical parish proper, 3926 were in East Church *q. s.*, 394 were in Blackhill *q. s.*, and 1766 in Boddam *q. s.*—*Ord. Sur.*, sh. 87, 1876.

Peterhead, a parliamentary burgh, a head-port, and the chief town in the Buchan district of Aberdeenshire, occupying a peninsula in the NE of the parish just described. It is one of the terminal stations (the other being Fraserburgh) on the Formartine and Buchan section of the Great North of Scotland railway system, and is by rail $44\frac{1}{2}$ miles NNE of Aberdeen, but by road only 32. The peninsula which shares with Buchan Ness the distinction of being the most easterly land in Scotland, is about 7 furlongs from E to W and 6 furlongs from N to S, and the portion occupied by the town about $\frac{2}{3}$ by 5 furlongs. Up to the latter part of the 16th century the only portion of the town existing was the fishing village of Keith-Inch, which stands on the extremity of the peninsula, and is separated from the rest of the place by the harbour, the isthmus that at one time formed the connection having been pierced in the course of harbour improvements. Immediately W of the harbours and along the N shore of Peterhead Bay is Peterhead proper, which passes farther W still into the suburbs of Ronheads (N) and Kirrton (W), and the parliamentary boundary also includes the village of Buchanhaven on the NW. The principal street in Keith-Inch extends from NE to SW, and is called Castle Street. The principal streets in the rest of the town are Broad Street and Marischal Street, running westward from the harbour and at right angles to it; and Long-gate Street crossing these from NNW to SSE; but there are many other well-edificed thoroughfares. The appearance of the buildings is somewhat peculiar, the houses being built of the granite found in the neighbourhood, pick or axe dressed and close-jointed.

Somewhat isolated by its position the town has but little history. Prior to the Reformation the land on which the town stands, together with a considerable extent of adjoining country, belonged to the abbey of Deer, but in 1560 it was granted by Queen Mary to Robert Keith, son of the fourth Earl Marischal, and passed to the Earl's nephew and successor, George, by whom in 1593 the modern Peterhead was founded, the village being created a burgh of barony. At this time the inhabitants of Keith-Inch are estimated to have numbered only 56, and the fears to whom the town's charter was granted were only 14, most of them seemingly fishermen. Some of the older houses still remain. During the troublous times in the first half of the 17th century the people, as was necessary, took the same side as the Keiths, and indeed in 1642 the place was highly favoured as being the scene of a supernatural hint of troubles to come, for 'About the 5th of November, in an seamanis house of Peterheid there was hard, upon the night, beating of drums, uther tymes sounding of trumpets, playing on pifferis, and ringing of bellis, to the astonishment of the heiteris. Tribles follonit.' In 1715 the people again followed the Marischal fortunes, and the Chevalier St George, after finding himself unable to land at Montrose, thought Peterhead a fit place for his purpose and came ashore here, but did not make himself known; and 'he and his five companions having lodged one night in the habit of sea-officers at Peterhead and another at Newburgh, a house of the Earl Marischal, on the twenty-fourth [of December] they passed *incognito* through Aberdeen with two

baggage horses, and at night came to Fetteresso, the principal seat of the Earl of Marischal.' In 1720, with the other forfeited estates of the Earl Marischal, the town was sold to the York Buildings Company, on whose break-up six years afterwards it was purchased for £3000 by the governors of the Edinburgh Merchant Maiden Hospital, who are still the superiors. At one time Peterhead had some reputation as a watering-place, with both baths and mineral wells, but the reputation is now considerably gone. The mineral waters of Peterhead were reckoned about 1680 as one of the six notable things in Buchan; and previously, in 1636, Andrew More, professor of physic in King's College, Aberdeen, had written in their favour. The most famous of the wells is the Wine-well, on the S of the town, where the water is very strongly impregnated with carbonic acid, muriate of iron, muriate of lime, and muriate of soda. There are two very good baths. A vivid description of Peterhead at the beginning of the present century is given in John Skelton's *Crookit Meg: A Story of the Year One* (Lond. 1880).

Public Buildings, etc.—The town-hall, at the W end of Broad Street, was built in 1788, and has a spire 125 feet high; the chief public hall was founded with masonic hours and in presence of a deputation from the governors of the Merchant Maiden Hospital, in 1872; and there is also a music hall. The courthouse, a handsome building in Queen Street, was built in 1869-70, at a cost of £2600, from designs by Messrs Peddie & Kinnear. In the centre of Broad Street is the Market Cross, which was erected after the town was made a parliamentary burgh by the Reform Bill of 1832. It is a granite pillar, Tuscan in style, and surmounted by the arms of the Earls Marischal. A monument to Field-Marshal Keith, younger brother of the Earl, who was forfeited in 1715, and who afterwards rose to eminence in the Prussian army under Frederick the Great, was erected in 1869, the statue being presented by the King of Prussia. It is a copy in bronze of that erected to the memory of the Marshal in Prussia. On the pedestal, which is 8 feet high, is the inscription: 'Field-Marshal Keith, born at Inverurie, 1696; killed at the battle of Hochkirchen, 14th October 1758. The gift of William L., King of Prussia, to the town of Peterhead, August 1868. *Probus vixit, fortis obiit.*' A cemetery, laid out in 1868-69, contains a Runic cross of polished granite, 14 feet high. The parish church, at the W end of the Kirktown, was built in 1803, and has a tower, lantern, and spire rising to a height of 118 feet. It contains 1800 sittings; whilst the East *quoad sacra* church (1834) contains 700. St Peter's Free church, in St Peter Street, was built soon after the Disruption, and is a substantial building with Tudor features containing 1146 sittings. There is also another Free church—South Church—erected in 1872. The U.P. church in Charlotte Street, built in 1858 and First Pointed in style, contains 500 sittings. It superseded a former church erected in 1800. The Congregational church (1870) is a plain building with 450 sittings. The Methodist church, in Queen Street (1857), superseded an old church, and has about 200 sittings. The Episcopal church (St Peter) in Merchant Street, built in 1814 and containing 800 sittings, is a 'Churchwarden Gothic' building, with a nave and an apsidal sanctuary. The organ was erected in 1867. The Roman Catholic church (St Mary), in St Peter Street, is a good Early Pointed edifice of 1851, containing 200 sittings. In 1883 the following were the eight schools under the burgh school board, the first six of them public, with accommodation, average attendance, and Government grants:—Academy (469, 273, £250, 14s.), Buchanhaven (175, 101, £85, 0s. 6d.), North (468, 267, £210, 6s.), Female (406, 209, £204, 5s. 6d.), Infant (196, 155, £122, 5s. 6d.), Prince Street (291, 0, £0), Free Church female (453, 421, £368, 7s. 6d.), and Episcopal (161, 110, £75, 16s.). Of these the Academy was founded on 15 June 1846, 'for affording the means of a liberal education to all classes of the inhabitants.'

Harbour and Trade, etc.—The port of Peterhead, with

its two harbours, is one of the most valuable on the E coast of Scotland, the peninsula at the extremity of which it is situated being often the first land reached by vessels arriving from the northern parts of continental Europe, or when overtaken by storm in the North Sea. Its claims for foremost consideration in the question of the erection of a great harbour of refuge on the E coast of Scotland, are being, at present, actively pressed on the Government; and in 1883 a memorial, signed by 7882 'shipowners, shipmasters, mariners, fishermen, and others connected with, and frequenting the east coast of Scotland,' was presented to the Treasury in support of these claims. The signatures were obtained all along the Scottish coast and from many parts of the English coast, even as far S as London, 131 of those who signed being members of Lloyds. The chief points urged are, '1st, its position with regard to the two great natural harbours of the Forth and Cromarty; 2d, its position on a part of the coast where ships and boats are placed in circumstances of the greatest danger; 3d, its position as regards the great fishing industry of Scotland; 4th, its position as a place of easy access and departure in any wind; and lastly, its position as regards extent, depth of water, the kind and quality of the anchorage ground to be enclosed, and its proximity to an abundant supply of material for its construction. In these aspects,' the petition continues, 'the South Bay of Peterhead is the best, if not the only site for a National Harbour of Refuge on the East Coast of Scotland. It is situated midway between the Firth of Forth and Cromarty. The coast on either side of it is of an exposed and dangerous character; it is the centre of the great fishing industry on the East Coast; it is an easy point of access and departure, being the most prominent headland on the coast; it is so formed by nature as to afford all the physical advantages of ample space, depth of water, and anchorage of the best description; and it is in the vicinity of extensive granite quarries from which inexhaustible supplies of material can be obtained for the construction of the works.' Petitions to the same effect were also presented by 30 insurance associations, shipping companies, etc., as well as by the Harbour Trustees, who pointed out that for 200 years all the nautical authorities were agreed that Peterhead had exceptional advantages as a site for a harbour of refuge; that a Royal Commission following a Select Committee's report in 1857 had recommended a grant of £100,000 in aid of a local contribution of £200,000, but that the locality was too poor to raise such a sum, and that the port was connected with Norway by a submarine telegraph cable. In June 1884 the report was issued of the sub-committee appointed to investigate the question of the most suitable place for a harbour of refuge on the east coast of Scotland, to be constructed by convicts; and in it the sub-commissioners declare that they 'have no hesitation in recommending that the harbour should be at Peterhead.' From its natural advantages the harbour early attracted attention, and it is said that some of the engineers of Cromwell's army on visiting the place expressed great disappointment that they had not done so before fixing on Inverness as the site of their great northern fort, as they considered the situation of Peterhead very much better. But, however that may be, it is certain that the first parliament of Charles II. passed an Act 'for a contribution for repairing the harbours of Peterhead;' and later, we find one Henry Middleton, in Clerkhill, very diligent in harbour matters, and the port receiving in consequence the name of Port Henry. In 1805 there is an act of Scottish parliament authorising voluntary contributions from all the churches of the three Lothians, and bestow the Forth for further repairs, and in 1729, and again in 1739, the Convention of Royal Burghs authorised a contribution from all royal burghs for the same purpose. All these early harbours seem to have been to the N of those that now exist, but in 1778 the present South harbour was commenced after designs by Smeaton, and it was deepened and otherwise improved in 1807 under

an Act of parliament that was then obtained. The North Harbour was begun in 1818, after designs by Telford, and was improved in 1821, 1837, and 1855. From the nature of the place vessels in both harbours were often windbound for considerable periods, and the loss arising from this was so great, that in 1850 a canal was formed through the isthmus between the harbours, so that vessels could be warped from the one to the other. It is spanned by a cast iron swing bridge erected at a cost of £8000. In 1872-73, and 1875-76, fresh acts of parliament, authorising further improvements, were obtained and new works carried out, and a middle harbour formed. There are now three basins hewn out of solid rock and covering an area of 21½ acres, and the total expenditure for harbour purposes has been in all nearly £300,000, of which the sum of £200,000 has been expended since 1859. The depth of the basins varies from 12 to 18 feet at spring tides, but at medium low water is only 5 to 7½ feet. Off the North Harbour are two graving docks. The present amount of debt is £109,603, but the revenue has risen from £100 in 1800, and £4000 in 1849, to £8260 in 1883. About half the revenue is derived from fishing-boats and half from general trade. The management is vested in the preses of the governors of the Merchant Maiden Hospital in Edinburgh, the provost of Peterhead, and 13 elected trustees. Prior to 1715, and again during the Peninsular war, the harbour was protected by small forts at the entrance, but these have vanished.

Peterhead was made a head port in 1838, its limits extending southward to the mouth of the Ythan, and westward to the Powk Burn. It includes the sub-ports or creeks of Boddam, Fraserburgh, Pittullie, and Rosebearty. The number of vessels belonging to the port with their tonnage has been, at various dates, as follows:—

| Year. | Vessels. | Tonnage. |
|-------|----------|------------|
| 1795 | 28 | over 3,000 |
| 1837 | 82 | 11,022 |
| 1861 | 80 | 13,687 |
| 1875 | 70 | 9,916 |
| 1884 | 51 | 7,243 |

Of these, in 1875, 5 vessels of 1388 tons, and in 1884 6 of 1274 tons, were steamers. Of the ships owned in the port 6 sailing ships (of from 130 to 430 tons) and 3 steamers (295, 307, and 412 tons) are engaged in the Greenland seal and whale fishing, a trade that has been carried on since 1788, when the first whaler was fitted out. Though it has been more vigorously prosecuted from Peterhead than from any other British port the trade has had great fluctuations. From 1788 till 1803 only 1 ship went to the north every year; from 1804 to 1814 there were from 2 to 7 every year; from 1814 to 1830 the number was from 8 to 16, and by 1857 this had risen to 32. Since then, however, it has again declined, till in 1884 there were only 9 vessels. The following table shows the tonnage of vessels that entered from and to foreign and colonial ports and coastwise, with cargoes and ballast, at various dates:—

| Year. | ENTERED. | | | CLEARED. | | |
|-------|----------|----------|--------|----------|----------|--------|
| | British. | Foreign. | Total. | British. | Foreign. | Total. |
| 1866 | 42,504 | 3,894 | 46,398 | 34,783 | 880 | 35,163 |
| 1867 | 30,767 | 4,964 | 35,731 | 27,501 | 5,059 | 32,560 |
| 1874 | 67,944 | 11,808 | 79,152 | 70,454 | 10,815 | 81,269 |
| 1883 | 58,497 | 29,342 | 87,839 | 56,589 | 29,459 | 86,318 |

Of the total, 864 vessels of 87,839 tons, that entered in 1883, 186 of 27,432 tons were in ballast, and 670 of 61,681 tons were coasters; whilst the total, 840 of 86,318 tons, of those that cleared, included 388 ships in ballast of 34,398 tons and 580 coasters of 48,952 tons. The principal exports are agricultural produce, herring, and other fish, oil, and granite; and the principal imports are timber, lime, coal, wool, salt, flour, iron, and

soft goods. The amount of customs in 1861 was £2039, in 1872 £1724, in 1881 £1944, and in 1882 £1452.

Peterhead is also the centre of one of the twenty-six herring fishery districts into which Scotland is divided, and embraces all the villages lying between Buchan-haven and Newburgh, both inclusive. To the district there belonged, in 1882, 338 first-class boats, 211 second-class boats, and 176 third-class boats, employing 1692 fisher men and boys, and of these to Peterhead itself there belonged 118 first-class, 38 second-class, and 55 third-class boats, with 440 resident fisher men and boys. In the same year the total number of persons employed in connection with the herring fishery in the district was 7253, the value of the boats employed was £48,298, of the nets £59,150, and of the lines £10,088. The number of boats actually fishing in the district, most of them from Peterhead itself, whither they are drawn by the possibility of getting in and out of the harbour at low water, was 822, and the number of barrels of herring caught by them 185,704, 156,026½ of which were exported to the Continent, mostly to Libau, Königsberg, Danzig, Stettin, and Hamburg. The total number of cod, ling, and hake cured within the district in 1882 was 44,597. During the herring fishing season the population of the town is increased by from 3000 to 4000 individuals connected with this industry.

The manufacture of linen was once carried on, but is now extinct. A woollen manufactory was started in the Kirktown in the early part of the present century, and produced excellent superfine cloth. After languishing and disappearing for a time altogether, it was revived in 1854 by a company by whom the manufacture of woollens of different sorts is still vigorously prosecuted. The other industries, besides those mentioned in connection with the parish, are saw-mills, a foundry, boat building yards, a rope-work, granite polishing, and brewing.

Municipality, &c.—Under the superiority of the Governors of the Merchant Maiden Hospital the community acquired a separate government in 1774, and after the passing of the Reform Bill of 1832, and the subsequent Act of 1833, when the burgh became parliamentary, a keen dispute long existed whether the remaining portion of the moss-lands, commonage, and pasturage originally granted to the community by the Earl Marischal, fell to be managed by the baron-baillie and a committee of the feuars, or by the new magistrates; and the community of feuars still attends to certain matters. Municipal affairs are managed by a provost, 3 bailies, a treasurer, and 7 councillors. The council acts also as the police commission, and the police force is united with that of the county. Water is brought in pipes from a copious spring 2½ miles distant, and gas is supplied by a joint-stock company formed in 1833, and with their works in Long-gate Street. The town has a head post office

Seal of Peterhead.

with money order, savings' bank, insurance, and telegraph departments, branches of the Commercial, North of Scotland, Town and County, and Union banks, a branch of the National Security Savings' Bank, agencies of 21 insurance companies, consulates for Denmark, France, Germany, Norway and Sweden, and Russia, and several hotels. The newspapers are the Independent *East Aberdeenshire Observer* (1862), published every Tuesday and Friday, and the *Liberal Peterhead Sentinel* (1856), published every Wednesday. Among the miscellaneous institutions may be noticed two masonic lodges, the Peterhead Association for Science, Literature, and Arts (1835), with a museum, the nucleus of the collection in which was bequeathed by the late Mr Adam Arbuthnot; a reading society (1808), and a Mechanics' Institute (1836),

both of them with libraries; a merchants' society (1712), a trades' society (1728), a weavers' society (1778), a mutual improvement association, a golf club, an Eastern Club, and the usual religious and philanthropic associations. A weekly market is held on Friday, and there are fairs on the Fridays before 26 May and before 22 Nov. A sheriff court is held every Friday for the parishes of Peterhead, Cruden, Slains, Old Deer, New Deer, Rathen, Longside, Crimond, Strichen, Fraserburgh, Lomnay, Tyrie, Aberdeen, Pitsligo, St Fergus, and Logie-Buchan. Justice of peace courts are held as required.

Peterhead unites with ELGIN, Banff, Cullen, Inverurie, and Kintore in returning a member to serve in parliament, and it is also the returning burgh for East Aberdeenshire. Parliamentary constituency (1834) 1028, municipal constituency 1477, including 154 females. Valuation (1874) £25,138, (1884) £38,264, of which £585 was for the railway. Pop. (1801) 3264, (1831) 5112, (1841) 5158, (1851) 7298, (1861) 7541, (1871) 8621, (1881) 10,922, of whom 5131 were males and 5791 females. Houses, inhabited 1418, uninhabited 59, building 29. Of the total population 133 men and 107 women were connected with the civil and military services or with professions, 35 men and 569 women were employed as domestic servants, 545 men and 14 women were engaged in commerce, 336 men and 77 women were connected with agriculture and fishing, 1898 men and 403 women were connected with industrial handicrafts or were dealers in manufactured substances, and there were 2125 boys and 2142 girls at or under school age. See Peter Buchan's *Annals of Peterhead from its Foundation to the Present Time* (Peterhead, 1819).

Pettinain, a village and a parish in the Upper Ward of Lanarkshire. The village is 3 miles S by E of Carstairs Junction (only 1½ mile in a straight line), and 3½ miles NNW of Thankerton, under which it has a post office.

The parish is bounded N by Carstairs and Carnwath, E by Libberton, SE by Covington, SW by Carmichael, and W by Lanark. Its utmost length, from E to W, is 3½ miles; its utmost breadth, from N to S, is 2½ miles; and its area is 3997½ acres, of which 98 are water. The CLYDE winds 2½ miles north-north-westward along all the eastern, 4½ miles west-south-westward along all the northern, and 1½ mile southward along all the western, boundary. It thus has a total course here of 8½ miles, though the point where it first touches and that where it quits the parish are only 3½ miles distant as the crow flies. A result of various changes of its channel is that five little penicles of Pettinain parish are now situated on its right bank. A considerable tract of haugh land, about 615 feet above the sea, adjoins the river, so low and level as to be covered with water at the time of freshets, and then having the appearance of a lake. The ground rises by a gentle acclivity, and with unequal surface from the haugh; and a ridge of hills extends across the SW district, from the vicinity of the river into Covington, rising to an extreme altitude of 1131 feet, and having three summits called Cairn Grife, Westraw Hill, and Swaites Hill. The rocks of this hill-ridge are porphyry and sandstone, the former an excellent road-metal, but the latter ill-suited to building purposes. The soil of the low grounds is variously recent alluvium, rich loam, sharp gravel, and poor sand. That of the higher grounds is generally of a moorish character, incumbent on till. About 2435 acres are in tillage; 1107 are pastoral; and 366½ are under wood. Thirteen-fourteenths of the entire rental belong to Sir Windham Carmichael Anstruther, Bart. of CARMICHAEL, whose uncle in 1817 inherited the estate from the last Earl of Hyndford. His mansion, Westraw House, now a farmhouse, 5 furlongs W of the village, was that Earl's favourite residence, and was probably built by his ancestor, the first Lord Carmichael, towards the middle of the 17th century. A hundred years ago the ruins of a house were pointed out at Clowburn, in which tea is said to have first been introduced to Scotland. It was brought from Holland, according to tradition, by Sir Andrew Kennedy, whose

wife succeeded to the lands of Clowburn in 1677, and who, being 'Conservator of the Scotch Nation' at Campvere, had received it as a present from the Dutch East India Company. On the highest ground in the S of the parish are vestiges of an ancient British fort, Cairn Grife, whose two concentric ramparts, 5 to 7 yards apart, enclose an area of 100 square feet. Pettinain is in the presbytery of Lanark and the synod of Glasgow and Ayr; the living is worth £203. The chapel of 'Pedyance,' originally dependent on Lanark, was granted to Dryburgh Abbey by David I. about the year 1150. The parish church, on the site of the ancient chapel, has a belfry bearing date 1696, with the inscription, 'Holiness becomes God's House.' As repaired in 1820, it contains 234 sittings. The public school, with accommodation for 66 children, had (1883) an average attendance of 52, and a grant of £46, 7s. Valuation (1859) £3216, 3s. 6d., (1884) £4800, 10s. Pop. (1801) 430, (1821) 490, (1841) 416, (1861) 407, (1871) 366, (1881) 360.—*Ord. Sur.*, sh. 23, 1865.

Petty, a parish on the S side of the Moray Firth, in the extreme NE of the county of Inverness, and with a small part crossing the boundary into Nairnshire. It is bounded N by the parish of Ardersier, for ¼ mile at the NE corner by the parish of Nairn, E and SE by the parish of Croy, SW by the parish of Inverness and Bona, and NW by the Moray Firth. The boundary is artificial except along the Firth, and on the N, where it follows the course of a small stream. The greatest length, from the point on the NE between Lambhill and Blackcastle where the parish and county boundaries reach the coast road from Inverness to Nairn, to the point on the SW where the line crosses the same road near Culloden Brickworks, is 7½ miles; the average breadth is about 2 miles; and the area is 10,697·313 acres, inclusive of 877·734 of foreshore and 33·052 of water; of the total area 321·254 acres, including 0·121 acre of water, are in Nairnshire and the rest in Inverness-shire. A central hollow, from 30 to 40 feet above sea-level, passes along the whole parish from NE to SW, and from this the surface slopes to the SE to a height varying from 150 feet at the N end to over 300 near the S end, along the ridge above Culloden Moor. Between the central hollow and the sea in the N there is a strip of flat ground sloping gradually to the shore; in the centre and S the ground slopes up to a height of over 100 feet, and then down to a terrace along the 50-foot contour, from which there is a rapid fall to the shore. The coast is low and sandy and with a very gentle slope, so that a considerable amount of foreshore is uncovered at low water. At the W corner of the parish the triangular Alterlie Point projects nearly ½ mile beyond the ordinary coastline, and N of it is a small bay, sometimes called Petty Bay and sometimes Alterlie Bay. Almost the whole surface is under cultivation or woodland, but there is mossy and benty land extending probably to nearly 1000 acres. There are about 1800 acres under wood. The soil toward the sea is light loam and clayey sand, but along the hollow and on the south-eastern slope it is much stronger and very fertile. The underlying rock belongs to the upper Old Red Sandstone system. In the SE about half of Loch Flemington (4 by 1½ furl.) lies within the parish, and 1½ mile SW of it is the small Lochan Dinty. The drainage is carried off by a number of small streams, those in the S uniting and flowing into the sea at Petty Bay, and those in the centre and N uniting and flowing into the sea at the extreme N corner of the parish. The mansions are Castle Stuart (1½ mile WSW of Dalross station), Flemington (½ mile NE of Fort George station), and Gollanfield (7 furlongs ENE of Fort George station). The first is a seat of the Earl of Moray, and is a fine example of the castellated mansion of the early part of the 17th century. Traditionally the date of its erection is earlier, some making it a residence of James IV., others assigning it to the Regent Murray; but the building bears date 1625, and Sir Robert Gordon, in his *History of the Earldom of Sutherland*, says that in 1624 the Clan Chattan went 'to ane hous which he [the Earl]

hath now of late built in Pettie called Castell Stuart, they drive away his servants from thence, and doe possess themselves of all the Earl of Moray his rents in Pettie.' This date is also borne out by the style of the building, a large high-roofed structure of several stories, with the great hall and principal rooms in the upper part. In front there is a square projecting tower at each end. That to the W, which contains the main staircase, seems somewhat older than the rest of the building. Formerly the castle was surrounded by a fine park and an orchard noted for its greens; but the trees were all cut down about 1835, the park ploughed up, and the roof of the building removed, so that had not the proprietor's attention been called to it the whole would soon have been a ruin. It was then repaired, and is now used as a shooting-box. Lying close to the clan grounds and in possession of the Earls of Moray, whom the Highlanders looked on as foes, Petty was much exposed to inroads for plunder. One such attack has been already noticed, and other two that occurred early in the 16th century are known as the 'Herschips of Petty.' The first was in 1502, when Sir James Dunbar of Cumnock, and his brother, David Dunbar of Durriss, 'and thar complices spulyet the landis of Petty and Geddes,' as well as of 'Halhill, the Fischertone and Hurlehurst,' though for what reason does not seem certain. Elizabeth, the daughter of Sir James Dunbar, was married to John Ogilvie of Strathnairn, who resided at Halhill Castle (which is by some supposed to have stood on the site of the present Castle Stuart, but by others is placed, with more probability, on the rising ground near the centre of the sea coast of the parish, at the school), which was, in 1513, the scene of the second herschip of Petty, the leaders of the plunderers on this occasion being the captain of Clan Mackintosh and Rose of Kilravock. Behind Castle Stuart is the church of Petty, and on the bank to the W of it are two large tumuli or moat hills. In the churchyard many of the chiefs of Mackintosh lie buried, and the procession at the funeral of Lachlan Mackintosh, who died in 1731, reached from Dalross Castle to the churchyard, a distance by road of about 4 miles. In the Bay of Petty close at hand is the famous boulder known as 'the travelled stone of Petty.' It is from 6 to 7 feet long, from 5 to 6 feet wide, and about 6 feet high, and with a projecting ledge all round it near the lower side. It originally served as a march stone between the properties of the Earl of Moray and Forbes of Culloden, but was, during the month of February 1799, moved about 260 yards to the WNW. A severe frost during that month had caused an accumulation of about 18 inches of ice over most of the bay, and this, during the night of the 19th, was capable of lifting the mass of stone so as to allow it to be floated by the tide, aided by a powerful gale of wind, to its present position. (See a paper by Sir Thomas Dick Lauder in the *Memoirs of the Wernerian Society*, vol. iii.) Anciently in the possession of the powerful northern family of De Moravia, the barony of Petty passed into the possession of the Earls of Moray till Archibald Douglas was forfeited in 1455, when it fell into the hands of the Crown. It was granted to Ogilvie of Findlater, who again disposed his interest to the Earl of Moray. The parish is traversed by the main road from Inverness to Nairn with a branch passing off at Newton near the SW end, and leading through the village of Campbeltown to the ferry at Fort George. The cross road from the SW end of Flemington Loch to Fort George is a portion of one of General Wade's military roads, and there are a number of good district roads. Railway communication is obtained by the Forbes and Inverness section of the Highland Railway system which passes through the centre of the parish from NE to SW with stations at Dalross (6½ miles from Inverness) and at Fort George (9½ miles from Inverness and 3 from the Fort itself).

The parish contains a village of the same name near the church, and two small hamlets. Petty is in the presbytery of Inverness and synod of Moray, and is formed of the old parishes of Petyn and Bracholy, which

were united after the Reformation, and the original church was dedicated to St Columba, and is said to have occupied the site of a Culdee cell. The present church, built in 1839, includes a portion of a previous church. The living is worth £384. The Free church is on the side of the road from Inverness to Forbes, 1½ mile E by N of the parish church. Two new public schools, East and West, with respective accommodation for 140 and 150 children, had (1884) an average attendance of 86 and 63, and grants of £61, 2s, and £30, 12s. 4d. The Earl of Moray is the largest proprietor, and three others hold each an annual value of £500 and upwards, one holds between £500 and £100, and one between £50 and £20. Valuation (1884) for the Inverness-shire section, £8164, 4s. 6d., and for the Nairnshire section £202, 12s. The reach of the Highland railway in the former is valued at £2026, and in the latter at £89. Pop. (1755) 1643, (1801) 1585, (1831) 1826, (1861) 1602, (1871) 1496, (1881) 1531, of whom 794 were females, and 807 Gaelic-speaking; while 1488 were in Inverness-shire, and 43 in Nairnshire.—*Ord. Sur.*, sh. 84, 1876.

Pettycur. See KINGHOEN.

Phantassie, an estate, with a mansion, in Prestonkirk parish, Haddingtonshire, ½ mile E by N of East Linton. It was the birthplace of George Rennie (1749-1828), the eminent agriculturist, and also of his brother John (1761-1821), the celebrated engineer. Its present owner, Thomas Shairp Mitchell-Innes, Esq. (b. 1813), holds 749 acres in the shire, valued at £2483 per annum.—*Ord. Sur.*, sh. 32, 1863.

Pharay, North, an island of Stronsay and Eday parish, Orkney, 7 furlongs W of Eday island, from which it is separated by the Sound of Pharay. It has an utmost length, from N by W to S by E, of 1½ mile; and an utmost breadth of ½ mile. A pastoral islet, the Holm of Pharay (6½ × 2 furl.), ¼ mile to the N, is separated from it by Lavey Sound. Pop. (1841) 67, (1861) 82, (1871) 83, (1881) 72.

Pharay, South, an island of Walls and Flotta parish, Orkney, 4½ furlongs E of lloy, 3¼ NW of Flotta, and 8½ S of Cava. It has an utmost length from NNW to SSE of 1½ mile, an utmost width of 7½ furlongs, and a maximum altitude of 139 feet above sea-level. Pop. (1841) 55, (1861) 45, (1871) 53, (1881) 68.

Philipaugh, a mansion in Selkirk parish, Selkirkshire, near the left bank of Yarrow Water, a little above its influx to the Ettrick, 3 miles WSW of Selkirk town. In 1528 Patrick Murray of Falahill, the grandson of the 'Outlaw Murray,' obtained a charter of the lands of Philipaugh; and his descendant, Sir John Forbes Pringle Murray, seventh Bart. since 1704 (b. 1842; suc. 1882), holds 2799 acres, valued at £2335 per annum. The flat diluvial plain between the house and the town is celebrated as the scene of Montrose's defeat by Leslie, on the morning of 13 Sept. 1645. Ettrick Water, just after the Yarrow's confluence, makes a gentle curve to the right, and, stealing along the base of a lofty bank on whose summit, at one point, stands the town of Selkirk, leaves on its left bank a beautiful haugh, 400 to 500 feet above sea-level, which extends north-eastward from a cope-clad eminence called Harehead Hill (1046 feet), to some high ground on the margin of the stream, a little below Selkirk. This plain is Philipaugh; it is about 1½ mile in length, and ¼ mile in mean breadth; and being defended, on the one side, by the river with its bulwark-fashioned bank, and overhung, on the other, by a stretch of bold uplands, which intervene between the Yarrow and the Tweed, it possesses, naturally, and on a grand scale, many of the securities and conveniences which were desiderated by the Romans in their camps. Montrose, after he had won six splendid victories over the Covenanters, was on his march southward to pour his conquering troops upon England, when Philipaugh invited him to repose, and wooed him to destruction. Observing the advantageousness of the ground, he strengthened it with some trenches, and posted upon it his infantry, amounting to 1000 men; and, seeing how

near it stood to the town of Selkirk, he there quartered his 500 horse, and courted a night's freedom from a soldier's care. General Leslie, with his sturdy and high-spirited Covenanters, arrived at Melrose on the evening of Montrose's bivouac; and, favoured next morning by a thick mist, he reached Philiphaugh, and was in position for the onslaught, before being descried by a single scout. Montrose was apprised of danger only by the yell which followed the tiger's leaping upon his prey; he knew nothing of Leslie's vicinity till the rattle of musketry announced his activity in the encampment; and when he reached the scene of conflict, he beheld his army dispersed and fleeing in irretrievable panic and confusion. After making a bold stand, a desperate but unavailing attempt to recover his lost fortunes of the hour, he cut his way through a body of Leslie's troops, fled up Yarrow and over the wild and lofty mountain-path of Minchmoor, and stopped not till he arrived at Traquair, 16 miles from the scene of action. His defeat produced at once conclusive advantages to the Covenanters, and ruin to the hapless cause of Charles I. in Scotland. Upwards of a mile SW of the present farm-stead of Philiphaugh, and overhanging the Yarrow immediately above its confluence with the Ettrick, there are still traces of an entrenchment thrown up by Montrose. Two miles farther up the Yarrow, close to the ruin of Newark Castle, is a field called Slain-man's-lee, in which tradition says the Covenanters, a day or two after the fight, put many of their prisoners to death. In Selkirk the house is still standing which was occupied by Montrose on the night of his ill-judged security. And in the centre of the battlefield is a small obelisk, inscribed, 'To the memory of the Covenanters who fought and fell on the field of Philiphaugh, and won the battle there, 1645.'—*Ord. Sur.*, sh. 25, 1865.

Philipstoun, a village in the W of Abercorn parish, Linlithgowshire, 3 miles E by N of Linlithgow. To the NE of it is Philipstoun House, the residence of Lieut.-Col. James Hare of CALDER HALL (b. 1836; suc. 1878), the Earl of Hopetoun's factor, who holds 2373 acres in Midlothian, valued at £4181 per annum.—*Ord. Sur.*, sh. 32, 1857.

Philorth, a mansion in Fraserburgh parish, NE Aberdeenshire, 2 miles S by E of the town. What looks to be the oldest part of it bears date 1666; but additions and alterations have been made from time to time, the latest in 1874. There are some fine old hardwood trees around the house, and extensive plantations have been formed in the course of the last hundred years. The estate has belonged to the Frasers since the latter half of the 14th century; and a prophecy, falsely ascribed to Thomas the Rhymer, predicts that—

'As lang as there's a Cock o' the North,
There'll be a Fraser in Philorth.'

In 1669 Sir Alexander Fraser of Philorth succeeded his cousin, Alexander Abernethy, as tenth Lord Saltoun; and his descendant, Alexander Fraser, present and seventeenth Baron Saltoun since 1445 (b. 1820; suc. 1853), holds 10,082 acres in the shire, valued at £10,967 per annum. See FRASERBURGH and SALTOUN.—*Ord. Sur.*, sh. 97, 1876.

Phladda. See FLADDA.

Phyggill, a good old mansion, with fine plantations and some grand old trees, in GLASSERTON parish, SE Wigtownshire, 2 miles SSW of Whithorn.

Picts' Work Ditch. See CATRAIL.

Piehills, a village in Ruthwell parish, Dumfriesshire, 9½ miles WNW of Annan.

Piercetoun. See PERCETON.

Piershill Barracks. See JOCK'S LODGE.

Pike Fell. See EWES.

Piltanton Burn. See LESWALT.

Pinkie, an estate, with a mansion, in Inveresk parish, Edinburghshire, at the E end of the town of Musselburgh. Forming two sides of a quadrangle, Pinkie House is a chateau-like building of various dates. Its older part, a massive square tower, with picturesque corner turrets, was originally a country seat of the Abbots

of DUNFERMLINE; and, so passing to Alexander Seton, first Earl of Dunfermline, by him was enlarged, repaired, and decorated in 1613. One may notice its noble 'Painted Gallery,' 96 feet long, whose roof is adorned with heraldic and mythological emblems in blue and red and gold; the so-called 'King's Room;' and a lofty chamber, its roof decorated with pendants, which is said to have been occupied by Prince Charles Edward on the night after Prestonpans. Among numerous portraits is one by Jameson of Sir Thomas Hope of Craighall. In front of the house is a lofty stone fountain of fine and elaborate architecture; and around it are beautiful old-fashioned gardens. The Princes Henry and Charles are said to have spent three years of their boyhood at Pinkie House. On the death of the fourth and last Earl of Dunfermline (1694), the estate passed to the first Marquess of Tweeddale, and by the sixth Marquess was sold in 1778 to Sir Archibald Hope of Craighall, Bart., whose descendant, Sir John David Hope, thirteenth Bart. since 1628 (b. 1809; suc. 1838), holds 961 acres in the shire, valued at £3437 per annum. See vol. iv. of Billings' *Darornial Antiquities of Scotland* (1852), and vol. ii. of Small's *Castles and Mansions of the Lothians* (1833).

The battle of Pinkie arose out of an invasion of Scotland, in 1547, during the infancy of Queen Mary, by the Protector Somerset. News having arrived that an English army of 12,000 foot and 2000 horse was at Newcastle on its march to Scotland, a Scottish army of 30,000 men was hastily mustered to take post on Edmonston Edge, 2½ miles SW of Musselburgh, to stop the invaders and protect the capital. Somerset, on coming up, was supported by a fleet of 30 ships of war, and 30 transports laden with ammunition and provisions, lying in the firth opposite the mouth of the Esk; and, drawing up his army on Falside Brae, 1½ mile E of Musselburgh, he extended his right over the grounds of Walliford and Drummore towards the sea. The Scottish position being too strong to admit of his assailing it, he firmly maintained his post, and awaited an attack. A body of the Scotch horse, 1500 strong, rushed down upon him on the 9th of September, at Edgebucklin Brae, at the E end of Musselburgh links, and threw away a great part of their strength in a useless skirmish; and all the rest of the Scottish army, under delusive notions on the part of their leaders, left their strong position next day, and defiled along the old bridge of Musselburgh, to close with the English on the E bank of the Esk. As they passed the bridge, and marched up the hill of Inveresk on the W side of the church, they were galled by cannon-shot from the English galleys in the bay, and lost the Master of Graham, eldest son of the first Earl of Montrose, and many of his followers. Descending eastward down a slope, they began to be sheltered from the shot, and, passing through the How Mire, which lies at the foot of the slope, and was then a morass, though now drained and cultivated, they saw the English army and the battlefield immediately before them, on a gently banking plain which recedes from the How to the base of Carberry Hill and Falside Brae. The conflict which followed was tremendous, but had too many details, and is too well-known, to admit of or need minute narration. After four hours' sternly debated and general conflict, during which the Scots won achievements, but could not profit by them for want of sufficient horse, and the English could make no impression with their cavalry on the hedges of pointed spears which enclosed the antagonist foot battalions, the van of the Scots was somewhat driven in by a concentrated attack, and a body of Highlanders, who had forgotten their duty to plunder the bodies of the slain, mistook the retrograde movement for flight, flung down their arms, took to their heels, infected the Lowlanders with their panic, and drew the whole army after them in an indiscriminate race. The Scots ran towards the coast, towards Dalkeith, and towards Edinburgh; and in each direction they were hotly pursued by the English, and hewn down in vast numbers. 'With blode and slaughter of

ye enemy,' says Patten, 'this chase was continued v miles in length westward from the place of their standing, which was in ye fallow feldes of Undreske, untill Edinborowe parke, and well nigh to the gates of the toune itself, and unto Lyeth; and in breadth nie 1111 mile from the fryth sandes up unto Daketh southwarde: in all whiche space the dead bodies lay as thik as a man may meette cattell grasing in a full plenisshed pasture. They ryvere ran al red with blode; soo that in the same chase wear counted, as well by sum of our men that sumwhat diligently did maike it, as by suna of them takē prisoners that very much did lament it, to have been slayne above 1111 thousande. In all thys cumpos of grounde, what with weapons, armes, handes, legges, heddes, blode, and dead bodyes, their fight mought have easly been tracted to every of their 1111 refuges.' Another account—quite sufficiently exaggerated—states the loss of the Scots in killed at 10,000, and that of the English at not 200.—*Ord. Sur.*, sh. 32, 1857.

Pinmore, a mansion in Colmonell parish, Ayrshire, 6 miles NE of Colmonell village, and near Pinmore station on the Girvan and Portpatrick railway (1876), this being 5 miles S by E of Girvan. Seated on a rising-ground, at one of the loveliest bends of the river Stinchar, and surrounded by beautifully wooded hills, it was a Scottish Baronial edifice of the 16th and 17th centuries; and, destroyed by fire in 1876, it was next year restored in a similar style of architecture. Its owner, Hugh Hamilton, Esq. (b. 1828; suc. 1836), holds 8441 acres in the shire, valued at £3833 per annum.—*Ord. Sur.*, sh. 7, 1863. See A. H. Millar's *Castles and Mansions of Ayrshire* (Edinb. 1885).

Pinwherry. See COLMONELL.

Piper's Grave. See DEWAR.

Piper's Hough. See STEVENSTON.

Pirn, an estate, with a mansion, in Stow parish, Edinburghshire, on the right bank of Gala Water, 3 miles NNW of Stow village. Remains of a Roman camp are at Pirntaiton, 2 miles further NNW, near Fountainhall station.—*Ord. Sur.*, sh. 25, 1865.

Pitbladdo, an estate, with a mansion, in Cupar parish, Fife, 2 miles NNW of the town.

Pitcairnie, an estate, with a mansion, in Newburgh parish, Fife, 2½ miles N of Auchtermuchty. Its owner, Robert Cathcart, Esq. (b. 1833; suc. 1857), holds 1050 acres in the shire, valued at £1643 per annum.—*Ord. Sur.*, sh. 48, 1868.

Pitcairn (Gael. *pith-a-chairn*, 'hollow of the cairn') or **Pitcairngreen**, a village in Redgorton parish, Perthshire, near the left bank of the Almond, 1½ mile N of Almondbank station, and 4½ miles by road NW of Perth. Founded towards the close of last century on the estate of Lord Lynedoch, and advantageously situated for water power, it was predicted, in a poem by Mrs Cowley, to become a rival to Manchester, but has long ceased, except for being associated with places near it in the works of a factory and two bleaching greens, to give promise of reaching any high destiny. Pitcairnfield, Bridgeton of Pitcairn, Cromwell Park, and Woodend are villages near it; and Pitcairnfield has bleaching works, Cromwell Park has bleaching works and a factory, Bridgeton of Pitcairn has a U.P. church, and Pitcairngreen itself has a Free church and a public school. The U.P. church was built in 1797, and contains 450 sittings. Pop. (1861) 345, (1871) 339, (1881) 301.—*Ord. Sur.*, sh. 48, 1868.

Pitcairns, an estate, with a modern mansion, in Dunning parish, Perthshire, 5 furlongs ESE of Dunning village.

Pitcaithly, a place, with mineral wells, in Dumbarry parish, Perthshire, amid pleasant scenery, 1 mile SW of Bridge of Earn, and 4½ miles S of Perth. The wells have been known for their medicinal properties from time immemorial, but were not scientifically noticed till 1772. Five in number, they bear the name of the East, the West, the Spout, the Dumbarry, and the Southpark, and have all the same properties, differing from one another only in the quantity or proportions of their saline

ingredients. They are esteemed useful in scrofulous, herpetic, and scorbutic complaints, and in cases of dyspepsia and general debility. A gallon of the water of one of them, according to analysis by Professor Thomson of Glasgow, contains 155·28 grains of chloride of calcium, 90·12 grains of common salt, 3·44 grains of chloride of magnesium, and 12·13 grains of sulphate of lime; while a gallon of another contains 168·58 grains of chloride of calcium, 117·84 grains of common salt, 4·16 grains of chloride of magnesium, and 25·92 grains of sulphate of lime. A large lodging-house, for the accommodation of visitors, stands beside the wells; but Bridge of Earn is the favourite lodging place of visitors, and is daily supplied with water from the wells for their use.—*Ord. Sur.*, sh. 48, 1868.

Pitcaple, a village and a mansion in Chapel-of-Garioch parish, Aberdeenshire. The village standing near the right bank of the Ury, has a station on the Great North of Scotland railway, ¾ mile WNW of Inveramsay Junction, 5 miles NW of Inverurie, and 2¼ NW of Aberdeen, under which it has a post office, with money order, savings' bank, and telegraph departments. The mansion, Pitcaple Castle, stands in the vicinity of the village between the railway and the Ury, and is partly an ancient edifice, which was in ruins a hundred years ago, but was restored from designs by W. Burn about 1830, and again underwent extensive repairs in 1873. It is notable for the detention in it of the Marquis of Montrose on his way as a prisoner to Edinburgh, and for visits to it by James IV., Queen Mary, and Charles II. Its owner, Henry Lumsden, Esq. (b. 1825; suc. 1859), holds 1410 acres in the shire, valued at £1681 per annum.—*Ord. Sur.*, sh. 76, 1874.

Pitcastle, a modern mansion in Logierait parish, Perthshire, near the left bank of the Tay, 5½ miles W by N of Ballinlign Junction.

Pitcorthie, a mansion in Carnbee parish, E Fife, 1½ mile ENE of Coliusburgh.

Pitcurvie. See BALCRUVIE.

Pitcullo, an estate, with a mansion, in Leuchars parish, Fife, 4½ miles NNE of Cupar.

Pitcur, an estate, with a village and a ruined castle, in Kettins parish, Forfarshire. The village stands at the foot of the Sidlaw Hills, near the boundary with Perthshire, 3 miles SE of Coupar-Angus, and is sometimes called Ford of Pitcur. The ruined castle was the ancient baronial seat of the Hallyburtons, who acquired the barony of Pitcur in 1432; and the estate was sold in 1880 for £235,000 to the late Graham Menzies, Esq., of the Caledonian Distillery, Edinburgh. See HALLYBURTON HOUSE.—*Ord. Sur.*, sh. 48, 1868.

Piteadie Castle. See KINGHORN.

Pitrompton, a village in Mains and Strathmartine parish, Forfarshire, 3 miles NNW of Dundee.

Pitferrane. See PITFERRANE.

Pitfichie Castle, a roofless ruin in Monymusk parish, Aberdeenshire, 1½ mile NNW of Monymusk station. It belonged, with a small estate around it, to the family of General Hurry, who figured in the times of the Covenanters; and it passed to the Forbes family, proprietors of the Monymusk estate.

Pitfirrane, a mansion in Dunfermline parish, Fife, amid a fine park, 2½ miles WSW of Dunfermline town. The estate belonged to the Halketts from 1399 to 1877, when Sir Peter Arthur Halkett, eighth Bart. since 1697, sold it, with Keavil, for £132,500 to Lawrence Dalgleish, Esq.—*Ord. Sur.*, sh. 40, 1867.

Pitfour, an estate, with a mansion, in Old DEER parish, Aberdeenshire, 2 miles W by N of Mintlaw. The mansion is a large square building, and the park and policies are of great beauty, £80,000 having been spent on improvements by the late Admiral Ferguson, whose son, George Arthur Ferguson, Esq. (b. 1835; suc. 1867), holds 12,305 acres in the shire, valued at £10,492 per annum.—*Ord. Sur.*, sh. 87, 1876.

Pitfour Castle, a mansion in St Madoes parish, Perthshire, 7 furlongs S by E of Glencarse station, this being 6 miles E by S of Perth. Built by the present proprietor's great-grandfather, and enlarged by his father,

it is a spacious quadrangular structure, standing on an artificial terrace, and surrounded by beautiful grounds. Its owner, Sir Jas. Thos. Stewart-Richardson, fourteenth Bart. since 1630 (b. 1840; suc. 1881), holds 1147 acres in the shire, valued at £4817 per annum.—*Ord. Sur.*, sh. 48, 1868.

Pitheavlis. See PITTHEAVLIS.

Pitlochrie, a prosperous village in Moulin parish, Perthshire, is situated on the left bank of the river Tummel, and has a station on the Highland railway, 6½ miles SE of Blair Athole and 12½ NNW of Dunkeld. Partly from its position, in the midst of and near most romantic and picturesque spots in Highland scenery, and partly from its healthy situation and salubrious climate, the village annually attracts a large number of tourists, visitors, and invalids. Its development, which, as the census returns show, has been considerable, is entirely due to its two qualifications of picturesque situation and healthy climate. In the immediate vicinity are BEN VRACKIE (2757 feet), the pretty little waterfall, known as the BLACK FOOT, the village and castle of MOULIN, the Falls of TUMMEL, the junction of the Tummel and the Garry, the Bridge of Cluny, and the Pass of KILLIECRANKIE; while only a few miles off are BLAIR ATHOLE, Falls of BRUAH, Loch Tummel, KIRKMICHAEL, ABERFELDY, and DUNKELD, and other celebrated spots. A considerable number of houses for letting purposes have been built of late years, and Pitlochrie has long ranked as a favourite summer resort. The most important provision for visitors was the erection of the hydropathic establishment.

The village consists mainly of one street, built along either side of General Wade's highroad between Dunkeld and Blair Athole, but at the little bridge which spans a small burn tributary to the Tummel near the centre of the village, another road leads uphill to one or two newer and shorter rows of houses. Till lately, Pitlochrie had no Established church nearer than Moulin, though services were conducted in the public school. But in September 1883, there was laid the foundation-stone of a new Norman Gothic church, which is estimated to cost £2000, and will accommodate 468 persons. A special feature in its interior arrangement is the position, in the tower, and immediately behind the pulpit, of a class-room, which, by the removal of a screen, will afford in summer, additional accommodation for 40 persons. The neat Free church, on the slope overlooking the main street, was built to supersede the older structure, raised at the Disruption in 1843, about a mile to the N, and afterwards used as a school. At the SW end of the village is the Gothic Episcopal church of the Holy Trinity (1858; 125 sittings), surrounded with a neatly laid-out garden. A Baptist church, with 300 sittings, was erected in 1884. The Athole hydropathic establishment is a very large and striking building, and occupies an elevated site to the S of the town, commanding a lovely and extensive view. It was built in 1875 at a cost of £50,000 or £60,000, and it is surrounded with tastefully laid-out grounds, extending to between 30 and 40 acres, and access is obtained to it by an avenue which gradually ascends from the lodge on the level of the public road. The public school occupies a building formerly belonging to the Established church.

Pitlochrie has a post office, with money order, savings' bank, and telegraph departments, branches of the Commercial and Union banks, the Bank of Scotland, and the National Security Savings' Bank, 17 insurance agencies, two hotels, besides a temperance lodging house. The railway station is both handsome and commodious; lawn tennis courts were opened in 1883; and a pretty fountain has been erected in the town to the memory of Colonel Butter, yr. of Faskally, who died in 1880.

Though at one time spoken of as a centre of trade for Perthshire, N of Strathguy, Pitlochrie has but little commerce; though the almanacs still record that there are fairs for cattle and horses on the Saturday before the first Wednesday of May, and on the third Wednes-

day (a.s.) of October; and for sheep on the third Tuesday of August. There are two small factories,—one of tweeds and one of chemicals; and there is some distillation of whisky, while the ordinary shops are numerous enough and fairly good. The village enjoys a supply of water through pipes, and is lighted by gas. Pop. (1841) 291, (1861) 334, (1871) 510, (1881) 777, of whom 410 were females and 255 Gaelic-speaking. Houses (1881) inhabited 151, vacant 15, building 6.

Though now possessing comfortable and elegant houses, Pitlochrie at no distant period was a mere rude Highland village, with only some two or three slated houses. Prince Charlie, on his way to Culloden, is said to have occupied what was at the time the mansion-house of the Pitlochrie property. The parochial registers, whose first entry is dated 1707, mention that owing to the presence of the rebel army in 1745-46, public worship was suspended for several Sundays. The modern prosperity of the place dates from about 1845, when the Queen visited Blair Castle. Sir James Clarke, the royal physician, was struck by the character of the air and climate of the place, and began to prescribe to his patients a residence at Pitlochrie. It is related that on one occasion one of the neighbouring landowners went to London to consult Sir James Clarke, and was assured of a cure if he spent some time at Pitlochrie or its neighbourhood! Sir James Simpson, of Edinburgh, was also convinced of the wholesomeness of the air of Pitlochrie.—*Ord. Sur.*, sh. 55, 1869.

Pitlour House, a mansion in Strathmiglo parish, Fife, 1½ mile N by W of the village. Its owner, William Baillie Skene, Esq. (b. 1838; suc. 1866), holds 2878 acres in the shire, valued at £4219 per annum.—*Ord. Sur.*, sh. 40, 1867.

Pitmedden House, a modern mansion, with a square corner tower, in Dyce parish, Aberdeenshire, 2 miles NNW of Dyce Junction. Its owner, George Thompson, Esq. (b. 1804), Provost of Aberdeen 1847-50, and Liberal M.P. for that city 1852-57, holds 1308 acres in the shire, valued at £1671 per annum.—*Ord. Sur.*, sh. 77, 1873.

Pitmedden House, a commodious mansion of recent erection in Udney parish, Aberdeenshire, 3 miles NNW of Udney station. Its owner, Sir William Samuel Seton, ninth Bart. since 1684 (b. 1837; suc. 1884), holds 662 acres in the shire, valued at £997 per annum.—*Ord. Sur.*, sh. 77, 1873.

Pitmiddle, a village in Kinnaird parish, SE Perthshire, 3 miles WNW of Inchture.

Pitmilly, an estate, with a mansion, in Kingsbarns parish, Fife, 4½ miles NNW of Crail. Its owner, Lieut.-Col. Jas. Rt. Blackwell Monypenny (b. 1835; suc. 1881), holds 2034 acres in the shire, valued at £5699 per annum.—*Ord. Sur.*, sh. 49, 1865.

Pitmuies, a mansion in Kirkeend parish, Forfarshire, ¾ mile S of Guthrie station. Its owner, Leonard Lyell, Esq. of KINROBY, succeeded to the estate in 1876.—*Ord. Sur.*, sh. 57, 1868.

Pitnacree, an estate, with a mansion, in Logierait parish, Perthshire, near the left bank of the Tay, 4 miles W by N of Ballinluig Junction.

Pitreavie, an estate, with a mansion, in Dunfermline parish, Fife, 2½ miles SE of Dunfermline town. It was acquired about 1615 by Sir Henry Wardlaw, chamberlain to Queen Anne of Denmark, whose son was created a Baronet in 1631. His grandson, Sir Henry Wardlaw, in 1696 married Lady Elizabeth Halkett (1677-1727), author of the pseudo-archaic ballad of *Hardyknute*, and, according to Dr Robert Chambers, of most of the historical Scottish ballads. The battle of Pitreavie or Inverkeithing was fought on the level ground to the S of Pitreavie House, Sunday, 20 July 1651. In it 6000 Cromwellians, under Overton and Lambert, defeated 4000 adherents of Charles II., under Brown and Holburn, the loss on the royalist side being 1600 killed and 1200 taken prisoners.—*Ord. Sur.*, sh. 32, 1857.

Pitrichie. See PITRICHIE

Pitrodie. See KILSPINDIE and ERROL.

Pitscandy, an estate, with an old mansion, in Rescobie parish, Forfarshire, 2 miles NE of Forfar.

Pitscottie, a hamlet in Ceres parish, Fife, on the right bank of Ceres Burn, $1\frac{1}{2}$ mile NE of Ceres village and 3 miles ESE of Cupar. It takes its name, signifying the 'little hollow,' from its position between two confronting rising-grounds at the entrance to Dura Den; and two flax spinning-mills were erected at it in 1827. A 'countrie hous covered with strae and rich,' which stood on a small adjoining plateau, now occupied by the modern farmstead of Pitscottie, was the residence of Robert Lindsay, author of the quaint *Chronicles of Scotland* from 1436 to 1565. Pitscottie Moor, in the immediate neighbourhood, was a frequent meeting-place of the Covenanters for field preachings; and is named in a decree of 1671 against certain ousted ministers.—*Ord. Sur.*, sh. 41, 1857.

Pitsligo, a coast parish of Buchan, N Aberdeenshire, containing the fishing villages of ROSEHEARTY and PITULLIE, or Sandhaven, $4\frac{1}{2}$ and $2\frac{1}{2}$ miles W by N of Fraserburgh. It is bounded N by the Moray Firth, E by Fraserburgh, S by Tyrie, and SW and W by Aberdour. Its utmost length, from E to W, is $3\frac{1}{2}$ miles; its utmost breadth, from N to S, is likewise $3\frac{1}{2}$ miles; and its area is $4891\frac{7}{8}$ acres, of which $247\frac{1}{2}$ are foreshore, and $3\frac{1}{2}$ water. The coast, $4\frac{1}{2}$ miles in extent, to the E of Roseheartly is partly sandy, partly low shelving rocks; but westward rises boldly from the firth to a height at Braeo Park of 151 feet above sea-level. Inland the surface attains 130 feet at Hillhead, 215 near the parish church, and 259 near the Mains of Ardlaw at the SW boundary. The principal rocks are sandstone, clay-slate, and limestone; and the soil, for the most part light, is very diversified, and ranges on almost every farm from clay or loam to light mould or reclaimed moss. Less than 20 acres are under wood; and the rest of the parish, with small exception, is all in tillage. The fine old ruin of Pitsligo Castle stands $\frac{1}{2}$ mile SSE of Roseheartly village. Its oldest portion, the S tower or keep, was built in 1424, and measuring 80 by 36 feet, with walls 9 feet in thickness, was 114 feet high. Later parts of the building, which formed a hollow quadrangle, bear the dates 1577, 1663, and 1666. The extensive gardens still yield very fine apples. In 1633 Alexander Forbes was created Baron Forbes of Pitsligo—a title forfeited by his great-grandson, Alexander (1678-1762), for his share in the '45, and now claimed by the eldest son of Lord Clinton (see FETTERCAIRN) and two others. Pitullie Castle, $\frac{1}{2}$ mile to the E, is also a ruin, bearing the dates 1651, 1674, and 1727. It was probably built by the Saltouns, and enlarged by the Cumines. A number of cairns have all but disappeared. Disjoined from Aberdour in 1633, Pitsligo had for its first minister the celebrated Covenanter, Andrew Cant (1584-1663), who soon, however, was transferred to Newbattle. It is in the presbytery of Deer and the synod of Aberdeen; the living is worth £252. The parish church, 1 mile S by E of Roseheartly, from its conspicuous position is sometimes called the 'Visible Kirk.' It was built by the first Lord Pitsligo in 1630-34, and, as repaired in 1836, contains 504 sittings. The belfry and the carved woodwork of the Forbes aisle, both of Dutch workmanship according to tradition, are much admired. There are also Sandhaven Established mission church (1882), Pitsligo Free church (1844) at Roseheartly, Sandhaven Free mission church (1881), and Roseheartly U.P. church (1799). Three public schools—Pitsligo, Pitullie, and Roseheartly—with respective accommodation for 186, 85, and 257 children, had (1884) an average attendance of 148, 74, and 227, and grants of £122, 2s., £53, 19s., and £198, 12s. 6d. Three proprietors hold each an annual value of more, and three of less, than £500. Valuation (1860) £5664, (1885) £8674, 3s. 1d. Pop. (1801) 1256, (1831) 1439, (1861) 1890, (1871) 2218, (1881) 2582.—*Ord. Sur.*, sh. 97, 1876.

Pitsligo, New, a town and a *quoad sacra* parish in Buchan district, N Aberdeenshire. The town, in the SW of Tyrie parish, stands, 459 feet above sea-level, on the

eastern slope of Turludie Hill (651 feet), $4\frac{1}{2}$ miles W by N of Strichen station, $4\frac{1}{2}$ NW of Brucklay station, and 11 SW of Fraserburgh. Founded in 1787 by Sir William Forbes, Bart. of Pitsligo, on the site of the rural hamlet of Caik or Cavoeh, it was inhabited about the beginning of the present century almost entirely by illicit distillers, and then presented a mean and most miserable appearance. It has, however, undergone such improvement and renovation, as now to consist almost wholly of substantial and comfortable houses, with neatly kept gardens, and to comprise two parallel streets, nearly a mile in length. Its outskirts and environs are flanked with wood, and of pleasant aspect; and near it are extensive granite quarries. It for some time carried on a considerable linen trade, but the hand manufacture of hobbin-lace is now the staple industry; and it has a post office, with money order, savings' bank, and telegraph departments, a branch of the Union Bank, a National Security Savings' Bank (1841), 9 insurance agencies, 2 hotels, a public library, a horticultural society (1837), gas-works, and fairs on the Wednesday after 26 February, the Wednesday after 25 May, the Thursday after 13 August, and the Wednesday after 5 October. The parish church, standing near the top of the hill, and forming the most conspicuous object in the town, was built in 1798 and renovated in 1853. It has triplet lancet windows, ornate surmounting crosses, a beautiful belfry, and about 1000 sittings. Other places of worship are a plain Free church, a Congregational chapel, and the Episcopal church of St John the Evangelist (1871; 468 sittings), an Early English structure, erected at a cost of £3000. The *quoad sacra* parish, comprising portions of Tyrie, Aberdour, New Deer, and Strichen parishes, measures 6 miles in length and 5 in extreme breadth; was originally constituted for only its Tyrie section by the General Assembly in 1799; and was reconstituted for its present extent, first by the General Assembly in 1835, and next by the Court of Teinds in 1853. It is in the presbytery of Deer and the synod of Aberdeen; the minister's stipend is £120. Glasslaw public, New Pitsligo public, and St John's Episcopalian schools, with respective accommodation for 70, 380, and 316 children, had (1884) an average attendance of 37, 345, and 134, and grants of £42, 7s. 6d., £301, 17s. 6d., and £104, 19s. Pop. of *g. s.* parish (1871) 3090, (1881) 2964, of whom 193 were in Aberdour, 209 in New Deer, 42 in Strichen, and 2520 in Tyrie. Pop. of town (1841) 1262, (1861) 1773, (1871) 2094, (1881) 2056, of whom 1150 were females. Houses (1881) 471 inhabited, 34 vacant, 2 building.—*Ord. Sur.*, sh. 87, 1876.

Pittarrow. See FORDOUN.

Pittiehead Castle. See KINGHORN.

Pittenane. See PETTINAIN.

Pittencrieff, a mansion in Dunfermline parish, Fife, in the south-western vicinity of the town. Built about 1610, and enlarged in 1740, with stones from the Palace ruins, it is the seat of James Hunt, Esq., who owns 945 acres in the shire, valued at £2588 per annum, the Pittencrieff estate having been sold in 1762 for £11,000, in 1787 for £17,600, and lastly in 1800 for £31,500. See DUNFERMLINE.—*Ord. Sur.*, sh. 40, 1867.

Pittendriech, the seat of Sir George Deas, the judge Lord Deas, in the vicinity of Lasswade village, Edinburghshire.

Pittenweem (Celt., ? *Pet-on-veem*, 'the town of the cave'), a small parish containing a town of the same name in the SE of the county of Fife, on the shore of the Firth of Forth. The parish is bounded N by the parish of Anstruther-Wester (landward), E by Anstruther-Wester (burghal), S by the Firth of Forth, W by the parish of St Monans or Abercrombie, and at the NW corner by the parish of Carnbee. The boundary line on the E and W is artificial, but on the N it is formed by the Drevl Burn. The greatest length from E to W is $1\frac{1}{2}$ mile, the average breadth about $\frac{3}{4}$ mile, and the area

772·488 acres, including 109·738 foreshore and 2·294 detached. The coast is rocky, and the surface rises steeply from the shore to a height of from 50 to 60 feet, but does not rise much thereafter, the extreme height being 82 feet. The whole surface is cultivated, the soil being mostly a very fertile black loam. The underlying rocks are carboniferous, with limestone and some small seams of coal. The parish is traversed throughout its entire length by the coast road from Elie to Crail, and also by a stretch of the Thornton and Anstruther section of the North British railway system; is in the presbytery of St Andrews and the synod of Fife; and the living is worth £276. It was after the Reformation united with St Monans, Anstruther, and Kilrenny under the charge of one minister; but James Melvil (nephew of the famous Andrew), who succeeded the first minister, Mr William Clark, in 1586, 'finding the four congregations a burding intolerable and importable, with a guid conscience, . . . sett himself cairfullie for the separating and severall planting of the said congregations, resolving to tak himself to Kilrynnie alean; and delt with Pittenweim, and cansit thame prepare ane auditorie and kirk within thair awin town, in the quihle he teachit to thame, bathe on the Sabothe and week dayes, nocht intermitting his ordinarie doctrines in the uther kirks, untill Pittenweim was provydit and plantit with a minister of thair awin, and that without hurt or impearing of the stipend of the kirk of Anstruther Waster;' and the parish became independent about 1588. The churches are noticed in connection with the burgh. The proprietors, inclusive of those in the town, are 2 holding each an annual value of £500 or upwards, 4 holding each between £500 and £100, 7 holding each between £100 and £50, and 45 holding each between £50 and £20. Landward valuation (1856) £647, 11s., (1875) £904, 19s. 8d., (1885) £658, with £150 for the railway. Pop. (1801) 1072, (1831) 1317, (1861) 1710, (1871) 1803, (1881) 2119, of whom 1019 were males and 1100 were females; while 2116 were within the boundaries of the royal burgh.

The TOWN OF PITTENWEEM, near the E end of the parish just described, is a seaport and a royal burgh, and has a station on the Thornton and Anstruther section of the North British railway. By rail it is 9 miles E of Largo, 17½ E of Thornton Junction, and 1½ mile W of Anstruther. By road it is 5½ miles SE of Crail, and 11 S by W of St Andrews. Like so many of the Fife fishing towns, it is a place of considerable antiquity, and probably dates back to the 13th century. It belonged originally to the priory afterwards mentioned, and was by James III. created a burgh of barony. In 1542 James V. granted a further charter constituting the town a royal burgh, and in 1547 the prior and convent executed two charters granting to the 'provost, bailies, council, community, burgesses, and inhabitants, the burgh as the same was builded or to be builded, and the harbour thereof, and all moors, mosses, and waste ground, common ways, and other commonities, liberties, customs, anchorages, etc., belonging thereto.' In 1593 James VI. further increased the property of the town by granting to it the 'great house or lodging of the monastery of Pittenweim,' and all these charters were confirmed by Act of Parliament in 1633. Nor were the inhabitants unmindful of their royal benefactor, for when James passed through the burgh on his way to Anstruther House, where he spent a night, he was received by the magistrates, councillors, and minister 'in their best apparel,' and accompanied by a guard of twenty-four of the stoutest men of the place also in their 'best apparel' and armed with partisans; and besides these there were 'other twenty-four with muskets.' Substantial provision was also made for the royal appetite at a table spread at 'Robert Smith's yeet,' where, for the entertainment of the King and his train, there were provided 'sundrie great bunnis of fine flour and other wheat bread of the best order, baken with sugar, cannell, and other spices fitting, as also ten gallons of ale, with canary, sack, Rhenish wine, Tent, white and claret wines;' and when his Majesty departed

there was a salute of 'thirty-six cannon, all shot at once.' It was at Pittenweim that the customs collector of Fife was, in 1736, robbed by Wilson and Robertson—an incident which, though of little local importance, resulted in the Porteous riots in Edinburgh, and thus aided in the invention of the plot of Scott's *Heart of Midlothian*. The house in which the robbery took place was on the N side of the street to the N of the church. In 1799 the squadron of Paul Jones lay for some time off the harbour, but otherwise the 18th and 19th century history of the place has been of a most uneventful nature.

The town has three main streets with cross intersecting lanes. Of these one follows the line of the coast along the low ground at the harbour; a second, High Street, runs parallel to this on the top of the slope; and a third, still farther N, is along the Elie and Crail road; the second is the principal thoroughfare. Near its E end is the parish church, originally a structure of the first half of the 17th century, but extensively remodelled and altered in 1882. The old tower at the W end still remains with the old clock and bells. It has a balustraded top and a spire, and in the base is a small chamber, with door and grated window looking to the street, which has evidently been used as the tolbooth. Fixed to the W wall of the steeple is the town cross, a simple pillar with the town arms in the middle and the date 1754 on the top. Down the slope to the S is the Cove Wynd, in which the plain town-hall (1821-22) occupies the site of the refectory of the priory. Farther down the lane on the E side is the entrance to the cave or veem from which the name of the town is said to be derived. It is a long cave with two branches, in one of which is a small hollow supplied with good water from crevices in the rock, and both well and cave are associated with the name of St Fillan. From one corner a staircase, now destroyed, has led to the grounds of the priory above, where it is said to have been connected with a secret underground passage. The priory buildings and grounds covered a space of from 2 to 3 acres to the E of Cove Wynd and the church. The northern gateway was removed in 1805 to make room for the Episcopal church. The chief entrance was on the E side, and not far off is the Great House of the priory, and to the S what is termed the Prior's Hall. The priory dates from about 1114, but the buildings that remain are of much later date. One of the later priors was John Rowle, who was a lord of Session in 1544, and accompanied the Regent Moray to France in 1550. In 1533 William Stewart, a captain in the King's guard, descended from Alan Stewart of Darnley, obtained a charter of the priory and lands of Pittenweim, and in 1606 his son, Frederick Stewart, got them erected into a temporal lordship with the title of Baron Pittenweim; but he disposed the superiority to the Earl of Kellie, and dying without issue, the title became extinct. The superiority was afterwards surrendered by the Earl of Kellie to the Crown. The Great House is intimately associated with David Low (1768-1855), the well-known Episcopalian Bishop of Ross and Argyll. Behind the eastern entrance is the 'witch corner,' where the Pittenweim witches were buried. The town seems to have been very much troubled with witches at various times, and the last of them caused a great commotion in 1705, when several poor women were, at the instigation of a hysterical boy, imprisoned and placed at the mercy of a guard of 'drunken fellows, who, by pinching and pricking some of them with pins and elisions, kept them from sleep for several days and nights together.' Under this gentle treatment some of them became 'so wise as acknowledge every question that was ask'd them.' One of them, Janet Corphat, was put in the prison under the steeple—probably the cell that still remains—but escaped by the low window, and got away to Leuchars. Sent back by the minister of that parish, she was set on by a rabble, 'who fell upon the poor creature and beat her unmercifully, tying her so hard with a rope that she was almost strangl'd; they dragg'd her through the streets and amongst the shoar by the heels' till they were disturbed by one of the magistrates. Gathering again, however,

they 'streach'd a rope betwixt a ship and the shoar to a great height, to which they ty'd her fast; after which they swing'd her to and fro from one side to another, in the meantime throwing stones at her from all corners until they were weary. Then they loos'd her, and with a mighty swing threw her upon the hard sands, all about being ready in the meantime to receive her with stones and staves, with which they beat her most cruelly. . . . They laid a heavy door upon her, with which they prest her so sore that she cried out to let her up for *Christ's sake* and she would tell the truth. But when they did let her up, what she said could not satisfy them, and therefore they again laid on her the door, and with a heavy weight of stones on it prest her to death; and to be sure it was so they called a man with a horse and a sledge, and made him drive over her corps backward and forward several times.' These and other particulars of similar brutal behaviour may be read in the pamphlets published at the time in connection with the case, which excited a great deal of attention, and led to legal proceedings against the magistrates, which must have led some of them at least to wish for no more witches in the neighbourhood.

No fewer than thirty breweries are said to have been once in operation about the town, but they have long since vanished, and the present industries are connected with the harbour, which is a creek under Kirkcaldy. Greatly improved in 1855, it has an outer and inner basin, and is safe and commodious, but suffers from its small depth of water. The imports are of the usual description for such a place, and the exports are principally grain and potatoes. A large number of the inhabitants are fishermen, and in 1882 the port, which is for fishery purposes included in the Anstruther district, had 67 first-class fishing boats, 18 second-class boats, and 6 third-class boats; in connection with which 290 resident fishermen and boys found employment. Few of the boats prosecute the fishing from the port itself. Besides the Established church already noticed, there is on the N side of the town a U.P. church erected in 1846, and an Episcopal church erected in 1805-7 on the NE. Two public schools, the East and the South, with respective accommodation for 326 and 219 pupils, had (1884) an average attendance of 229 and 153, and grants of £215, 16s. 11d. and £123, 12s. A distinguished native was John Douglas (1721-1807), Bishop of Salisbury, eminent for his literary abilities as well as for his ecclesiastical position.

A burgh of barony under the priors, and after 1542 a royal burgh, Pittenweem is now, under the General Police and Improvement Act of 1862, governed by a

Seal of Pittenweem.

provost, two bailies, a treasurer, and 8 councillors, and unites with Kilrenny, Craik, Anstruther-Easter, Anstruther-Wester, Cupar, and ST ANDREWS in sending a member to parliament. Parliamentary constituency (1884) 302, municipal constituency 358, including 56 females. The corporation revenue is, on an average,

about £700 per annum. There is a post office, with money order, savings' bank, and telegraph departments, branch offices of the Clydesdale and National banks, a National Security Savings' bank, and a gaswork. Valuation (1856) £3890, 9s. 1d., (1885) £6216, 19s. 11d. Pop. (1831) 1309, (1861) 1617, (1871) 1760, (1881) 2116, of whom 1016 were males and 1110 females. The parliamentary burgh, which is slightly smaller than the royal burgh, had at the same time 2090 inhabitants, of whom 1003 were males and 1087 females. In the royal burgh there were 451 houses, and in the parliamentary burgh 443; while 22 were uninhabited, and 1 was being built.—*Ord. Sur.*, sh. 41, 1857.

Pitheavlis, an estate, with a mansion, in East Perth parish, Perthshire, 1 mile SW of the city. It is the property of Lord Elhbank, who holds 994 acres in Perthshire, valued at £1871 per annum. See DARNHALL.—*Ord. Sur.*, sh. 48, 1868.

Pittodrie, an old mansion in Chapel of Garioch parish, Aberdeenshire, on the north-eastern slope of Bennaehie, 1 mile SW of Pitcairle station. Its owner, Hy. Wm. Knight Erskine, Esq. (b. 1858; suc. 1870), holds 3270 acres in the shire, valued at £4250 per annum.—*Ord. Sur.*, sh. 76, 1874.

Pittrichie, a plain commodious mansion of 1819 in Udny parish, Aberdeenshire, 3 miles W by N of Udny station.

Pitullie or Sandhaven, a fishing village in PITSLIGO parish, N Aberdeenshire, on the Moray Firth, 2½ miles W by N of Fraserburgh, under which there is a post office of Sandhaven. The harbour, formed in 1840, possesses 46 fishing boats. Pop. (1871) 399, (1881) 585.—*Ord. Sur.*, sh. 97, 1876.

Pladda, an island of Kilmorie parish, Sutherland, in the Firth of Clyde, 5½ furlongs S of the south-eastern extremity of Arran. Measuring 3½ by 1½ furlongs, it is low and green; and has a lighthouse, erected partly in 1790, partly in 1826, and showing two fixed lights, the one above the other, at elevations of 77 and 130 feet above high-water level, and visible at the distance of 14 and 17 nautical miles. The Sound of Pladda, between the island and Arran, has a chain of rock nearly right across, with depths of from only 2 to 4 feet of water, so that it is un navigable by any sea-borne vessels.—*Ord. Sur.*, sh. 13, 1870.

Pladda. See FLADDA.

Plaidy. See TURRIF.

Plean, a village and a *quoad sacra* parish in St Ninians parish, Stirlingshire. The village, lying 3 miles SSE of Bannockburn, has a post office under Stirling, a public school, and an asylum or hospital for 30 old men, founded by Col. Francis Simpson, who died in 1831. Plean House is in the western vicinity of the village. The *quoad sacra* parish, constituted in 1878, is in the presbytery of Stirling and the synod of Perth and Stirling; the living is worth £289. Pop. (1881) of village, 369; of *q. s.* parish, 1037.—*Ord. Sur.*, sh. 39, 1869.

Pleasance, a village in Auchtermuchty parish, Fife, 1½ mile NNW of the town.

Pleasance, a village near the centre of Dumfriesshire, 8½ miles NNE of Dumfries.

Plotkton, a village in Lochalsh parish, Ross-shire, on the S side of the lower part of Loch Carron, 4 miles W by S of the Strome Ferry terminus of the Dingwall and Skye railway, and 6½ NNW of Balmacara. It ranks as a burgh of regality, engages extensively in fishing, and has a post office, a Government church, a Free church, and a public school. The Government church has the status of a *quoad sacra* parochial church, but has not assigned to it any definite territory. Pop. (1861) 539, (1871) 516, (1881) 440.

Plotcock, a collier village in Hamilton parish, Lanarkshire, 5 miles SSE of the town of Hamilton.

Pluscarden (old forms Ploscardin and Pluscardyn, locally often Pluscarty), a district measuring about 4 miles by 2, and forming the south-western portion of the parish of Elgin. It is a long valley of no great width, with the drainage along the whole length carried

off by the Black Burn, a tributary of the river Lossie. The low ground is from 170 to 200 feet above sea-level, and on the NW side the Eildon or Heldun Hill rises very steeply to a height of 767 feet, and on the SE side the Hill of the Wangie rises with a less rapid slope to a height of 1020 feet. At the extreme SW end the valley is contracted into a narrow glen. There is a post office under Elgin, a Free church, and a public school. Though the glen is pretty in itself, the chief interest lies in the well-preserved ruins of a Cistercian priory on a beautiful haugh near its centre, and 6 miles SW of Elgin. This, one of the three monasteries of the Cistercian order in Scotland, the others being BEAULY and ARDCHATTAN, was founded by Alexander II. in 1230. Before the foundation of the priory there seems to have been an older church on a different site, and the valley was known as the Vale of St Andrew, a name which was retained in the new foundation, the dedication of Pluscarden—or Pluscardine, as the name of the priory is often given—being to the Virgin Mary, John the Baptist, and St Andrew. Although the monks, who were of the Valliscaulian branch of the order, found but few friends after Alexander's death, the community was a very wealthy one, and in Bajimont's Roll in 1274 the monastery is taxed at £533, while Beaulay and Ardochattan are entered at £200. Under the protection of the Bishops of Moray, whose authority was fully recognised in 1345, the Cistercians held possession till 1454, when Benedictines were introduced from URQUHART, though there seems to be no truth in the assertion that this was rendered necessary by the corrupt life of the older monks. The last of the Benedictine priors was Alexander Dunbar, who died in 1560; and the first of the lay priors was Lord Alexander Seton—a son of the Lord George who was so faithful a servant to Queen Mary—who in 1577 was succeeded by James Douglas, an illegitimate son of Regent Morton; but on Morton's fall and death in 1581 Seton again resumed possession, parliament expressly declaring 'the pretended gift to James Douglas, son natural to late James Earl of Morton, of name avail in all times coming.' The monks do not seem to have been disturbed in their possession of the priory itself, and they gradually died out, only one remaining in 1586. In 1595, Seton, then Lord Urquhart, sold Pluscarden to Kenneth Mackenzie of Kintail, from whose descendants it passed in 1649 (probably in connection with the rebellion raised in that year by Thomas Mackenzie of Pluscarden) to Sir George Mackenzie of Tarbat. In 1662 the then Sir George sold the priory and lands to the Earl of Caithness, Major George Beatman and Joan Fraser, his wife; and in 1664 the Earl resigned his share to the other owners, from whom, in 1687, the property was purchased by Brodie of Lethen for his grandson, James Grant of Grant, who, in 1710, sold it to Duff of Dipple, and through him it has descended to the present possessor, the Earl of Fife. A considerable portion of the ruins of the priory still remains, and the grey ivy-clad walls, the soft deep green turf, the old trees that must date from the early times of the monastery, and the heights in the background covered with thriving wood, all combine to form a very pleasant picture. The buildings have been partly in the First and partly in the Second Pointed styles. The church lay to the N, and the nave seems never to have been built. To the S of the south transept was a narrow chapel dedicated to St Mary, and farther S still the chapter-house and calefactory. Over the last three buildings were the dormitories. West of the calefactory was the refectory, to the N of which was the cloister court. To the SSE of these buildings are traces of walls where the prior's house is said to have stood. The precinct is still marked out by the high and massive wall with the principal gateway on the E, and in the N wall are recesses where the fathers had kept their bee-hives. The church has consisted of a choir and two transepts, the latter with aisles on their E sides; at the intersection is a square tower. From the S transept a stone stair leads to the dormitories. In the outside angle,

between the choir and the north transept, is what is called the Dunbar Vestry, with a good groined ceiling, on the central boss of which are the Dunbar arms. It was probably erected by the last Benedictine prior. The lintel of the window into the choir is formed by a slab of stone, with a finely incised cross, dating probably from the 13th century. St Mary's aisle, to the S of the south transept, used probably as the sacristy, has a curious portion cut off in one of the corners, with a peculiar slit in the wall near the door. It has possibly been used as a confessional. The chapter-house is square, and has a vaulted roof, with groins passing from the side walls to a central pillar. The walls of the choir, the transepts with their side aisles, the pretty little vestry, St Mary's aisle, the square chapter-house, the calefactory, the dormitories, and the central tower, are still almost entire. On the arch over the entrance from the crossing to the choir, and also on an arch in St Mary's aisle, there are traces of fresco painting. The former is described by Cordner, in 1788, as having been very perfect in his time. 'There,' he says, 'St John, about to write in an attitude expressive of attention to the objects before him, is seated under a canopy, and, accompanied by his well-known eagle, lifts his eyes to the concave of the arch above, where the glowing colours of that splendid bow which is seen in the cloud in the day of rain attracts our notice.' The sitting figure and the rainbow are still visible, but they are sadly weathered and destroyed. According to the same author, there were still more wonderful frescoes in St Mary's aisle, but no trace of these, except the ornament on the arch mentioned, now remains. The buildings that now exist are of various dates from the middle of the 13th to the middle of the 16th century. The first structure had become ruinous by 1398, but how far this was due to slenderness of proportion, and how far to injury by fire, is uncertain. Both the causes mentioned may indeed have operated, for the first is quite apparent from the numerous alterations made for the purpose of giving additional strength—*e.g.*, windows lessened in size, archways partly built up, etc.—and the walls in many places show traces of fire. Probably to injury from the latter cause may be ascribed the curious casing of later masonry by which the pillars supporting the central tower have been strengthened. The calefactory has a vaulted roof supported by two pillars, and is now used as a church for the district, a purpose for which it was fitted up in 1821 by the then Earl of Fife.* At the same time the dormitories were re-roofed, and that part of the building is now used as a ball-room for the district! The church was at first a chapel of ease under Elgin, but at the Disruption, the minister and most of the people joining the Free Church, the Earl of Fife made over the use of the room to the majority. The pulpit is the one procured in 1680 for Old St Giles' Church in Elgin, and sold to the Earl of Fife's factor for £5 when that church was pulled down in 1826 [see ELGIN]. It has a rim for the baptismal font, and a stand for an hour-glass, both made of characteristic twisted iron work. The old monastery grounds are now used as nursery grounds for young trees to be used in plantations on the Fife estates in the neighbourhood; but a number of old trees, dating from monastic times, still remain, particularly a fine pear tree which yields large crops of excellent fruit. The *Book of Pluscarden* is an early history of Scotland based on Bower, and supposed to have been written in the priory, about 1461, by a monk named Maurice Buchanan. It was published in the *Historians of Scotland* series in 1877. See also the works referred to under ELGIN; E. Chisholm Batten's *Charters of the Priory of Beaulay* (Grampian Club, Lond. 1877); and S. R. Macphail's *History of the Religious House of Pluscarden*, (Edinb. 1881).

Polkemmet, a two-story Scottish Baronial mansion in Whitburn parish, Linlithgowshire, 1½ mile W of Whitburn town. A large addition was made in 1822; but

* This occupation was at first intended to be only temporary till the choir should be fitted up for use in public worship, but various delays and changes led to things being left as they were.

the older part is known to be of earlier date than 1620, when the estate was sold by the Shaws to the Baillics. Its present proprietor, Sir William Baillie, second Bart. since 1823 (b. 1816; suc. 1854), was Protectionist M.P. for the county 1845-47, and holds in it 4320 acres, valued at £6382 per annum.—*Ord. Sur.*, sh. 31, 1867. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Polla. See DURNES.

Pollewe. See POOLEWE.

Pollok Castle, a mansion in Mearns parish, Renfrewshire, 2½ miles SE of Barrhead. Crowning a rising ground, among fine old trees, and commanding an extensive view, it was a château-like four-storied edifice, erected in the latter half of the 17th century, and twice enlarged, on the last occasion in 1856; but on the night of 31 July 1882 it was wholly destroyed by fire, the damage being estimated at £30,000. Its owner, Sir Hew Crawford-Pollok, ninth Bart. since 1638 (b. 1843; suc. 1867), represents the ancient families of Pollok of Pollok and Crawford of KILBIRNIE and Jordanhill, both dating from the 12th century, his great grandmother, Robina Pollok, having married Sir Hew Crawford of Jordanhill soon after the middle of last century. He holds 2855 acres in the shire, valued at £3399 per annum.—*Ord. Sur.*, sh. 22, 1865.

Pollok House, a mansion in Eastwood parish, Renfrewshire, near the right bank of the White Cart, 1½ mile WNW of Pollokshaws. Erected in 1747-52, it is a plain quadrangular four-storied building, with beautiful grounds, and on 15 Aug. 1859 was honoured by a visit from the Prince of Wales. Pollok formed part of the broad estates that were granted by David I. to Walter the High Steward about the year 1124. The superiority was acquired by Roland de Mearns, and afterwards by the Maxwells of CAERLAVEROCK; and about 1270 the lower division of Pollok, commonly called Nether Pollok, was given by Sir Aymer Maxwell of Maxwell, Caerlaverock, and Mearns, to his younger son, Sir John Maxwell, the first of the Maxwells of Pollok. Among his descendants, who by marriage were allied to royalty, were the brave young Sir John, who earned his spurs well at Otterburn (1388); Sir John, who fell at the Battle of Dryfe Sands (1593); Sir George, for bewitching whom, in 1677, five persons were strangled and burnt; Sir John, created a baronet in 1682; and Sir John, the eighth Bart. (1791-1865), at whose death the estate and the baronetcy devolved on his nephew, William Stirling, Esq. of Keir. From him, the late Sir William Stirling-Maxwell, the estate of Pollok passed in 1878 to his younger son, Archibald (b. 1867).—*Ord. Sur.*, sh. 30, 1866. See EASTWOOD, KEIR, CROOKSTON, DARNLEY, HAGGS CASTLE; Dr Wm. Fraser's *Memoirs of the Maxwells of Keir* (2 vols., Edinb., 1865); and his *Cartulary of Pollok-Maxwell* (Edinb. 1875).

Pollokshaws, a town and a *quoad sacra* parish in the civil parish of Eastwood, Renfrewshire. The town, popularly known as the Shaws, is on the White Cart, where it is joined by Auldhouse Burn, and has a station on the Glasgow, Barrhead, and Kilmarnock railway, 3 miles SSW of Glasgow. With a pleasant situation in the midst of an undulating and fertile tract of country, it is a seat of manufacturing industry. A printfield, one of the earliest in Scotland, was established in 1742, and bleaching and handloom weaving, which were introduced soon after, were long extensively carried on. A tannery for the manufacture of chamois leather, which was begun in 1782, and was the earliest in Scotland, did not prosper. A cotton mill, erected about the end of last century, was the first in Scotland lighted with gas. Calico printing, which was long carried on, having declined, turkey-red dyeing took its place, and was vigorously carried on till 1837, when it was given up, and since then the staple industries have been cotton-spinning, power-loom weaving, bleachfields, print-works, paper-mills, and iron-foundries. The bridge over the Cart dates from 1654, but it has since been widened and repaired. The town-house, with its spire,

and the trades' hall, do not call for particular notice. The *quoad sacra* parish church, originally Auldfield chapel of ease, in King Street, was built in 1840. Eastwood parish church, on the SW, built in 1862-63 at a cost of £3500, is a good Early English structure with 1050 sittings, nave and transepts, and a tower and spire 130 feet high at the W end. It superseded an older church of 1781, and was reopened in March 1877, after improvements, including a three-light stained window, new choir seats, etc. There are also two Free churches in King Street and Rosendale Road, a U.P. church, an Original Secession church, and the Roman Catholic church of St Mary Immaculate (1865; 800 sittings; redecorated 1884), but none of them call for particular notice. Four schools—the Academy, public, infant, and Roman Catholic—with respective accommodation for 700, 471, 150, and 327 pupils, had (1884) an average attendance of 352, 362, 123, and 269, and grants of £355, 19s., £299, 3s., £87, 8s., and £233, 17s. 6d. The town was erected into a burgh of barony by Crown charter in 1814, the council consisting of a provost, a baillie, and six councillors, being elected by all inhabitants paying £4 of rent and upwards; but the municipal government is now carried on by the commissioners appointed under the General Police and Improvement Act. Water is supplied from the Glasgow waterworks; and gas is provided from works carried on by a joint-stock company. There is a post office, with money order, savings' bank, and telegraph departments, under Glasgow, branch offices of the Clydesdale and Commercial Banks, agencies of 8 insurance companies, a public library, established in 1844, an abstainers' hall, a young men's literary and mutual improvement association, a trades' friendly society, a district Sabbath School Union, a tract society, a destitute sick society, and some other institutions. A sheriff small debt court is held on the second Friday of every month, and a justice of peace court on the first Tuesday of every month. Pop. of town (1831) 4627, (1861) 7648, (1871) 8921, (1881) 9363, of whom 5056 were females, and 6402 were in Pollokshaws *quoad sacra* parish. Houses (1881) 2058 inhabited, 170 vacant, 9 building.—*Ord. Sur.*, sh. 30, 1866.

Pollokshields. See GOVAN.

Polmaisy House, a mansion in Urquhart parish, Inverness-shire, near the left bank of the Enrick, 2 miles W by N of Drumnadrochit.

Polmaise Castle, a mansion in St Ninians parish, Stirlingshire, near the right bank of the meandering Forth, 3 miles ESE of Stirling. About 1568, William Murray of Touchadam married a daughter and co-heiress of James Cuninghame of Polmaise; and their descendant, Lieut.-Col. John Murray (b. 1831; suc. 1862), holds 6813 acres in the shire, valued at £9894 per annum.—*Ord. Sur.*, sh. 39, 1869.

Polmont (Gael. *poll-monaidh*, 'pool of the hill'), a village and a parish of E Stirlingshire. The village stands ¾ mile NNE of Polmont Junction on the North British railway, this being 4½ miles W by N of Linlithgow, 2½ W by N of Edinburgh, 3 E by S of Falkirk, and 25 ENE of Glasgow. It has a post office, with money order, savings' bank, and telegraph departments. Pop. (1861) 429, (1871) 455, (1881) 519.

The parish, containing also a small portion of GRANGEMOUTH, and the villages of Craigs, Redding, East Shieldhill, and Wallacestone, was disjoined from Falkirk in 1724. It is bounded NE by the Firth of Forth and Borrowstounness in Linlithgowshire, SE by Muiravonside, and SW and NW by Falkirk. Its utmost length, from NE to SW, is 6½ miles; its breadth varies between 2½ furlongs and 3½ miles; and its area is 7289½ acres, of which 1697¼ are foreshore and 79¾ water. The Firth of Forth, which washes the parish for a distance of 2 miles, from the mouth of the Carron to that of the Avon, is fringed at low water by an expanse of foreshore, 7 furlongs to 2 miles broad. The Avon winds 5½ miles west-north-westward and north-eastward along all the Linlithgowshire border; GRANGE or West-quarter Burn flows 3½ miles north-north-westward, mainly along the Falkirk boundary, to the mouth of the

Carron; and the UNION CANAL traverses the parish for 2½ miles, from E to W, immediately S of the railway. The coast is low and flat; a broad tract inward thence is carse land, rising only 14 feet above sea-level, protected on the coast side by a strong embankment, and all too valuable to bear anything but grain; a tract southward thence, forming the middle district, has an undulating surface, and rises to altitudes of 253 and 263 feet; and the south-western extremity is partly undulating, partly moorish, and rises gradually to an eventual altitude of 552 feet. Much of the landscape is embellished and beautiful; and many standpoints command extensive and brilliant views. The rocks belong chiefly to the Carboniferous formation, and include valuable strata of sandstone, coal, and ironstone, all of which have been largely worked. Excellent clay, too, abounds, and is used in two tile and brick works. Mineral springs, strongly impregnated with iron, are in several places. The soil of the carse lands is deep fine clay, quite free from stones, but abounding in marine shells; that of the other districts is partly clayey, partly mossy, but chiefly gravelly or sandy. About 120 acres are under wood; 650 are pastoral or waste; and all the rest of the land is in tillage. The principal mansions are Westquarter, Polmont Park, Polmont House, Polmont Bank, Parkhill, Clarkston, and Millfield; and the chief antiquity is part of the line of ANTONINUS' WALL, now destitute of every vestige of masonry or mound. The Duke of Hamilton takes from this parish the title of Baron Polmont (cre. 1643). Eight proprietors hold each an annual value of £500 and upwards, 17 of between £100 and £500. Giving off a portion to Grangemouth *quoad sacra* parish, Polmont is in the presbytery of Linlithgow and the synod of Lothian and Tweeddale; the living is worth £427. The old kirk, built in 1731, stands, an ivy-clad ruin, in the midst of the churchyard, its interior planted with roses, yews, and rhododendrons. The new parish church is a handsome Gothic edifice of 1844, and was adorned in 1876 with two stained memorial windows. Robert Henry, D.D. (1718-90), the historian of England, is buried in the churchyard. There is also a Free church at Polmont village. Six schools, with total accommodation for 861 children, had (1884) an average attendance of 666, and grants amounting to £552, 11s. Valuation (1860) £14,501, (1884) £27,781, 11s. 6d. Pop. (1801) 2197, (1831) 3210, (1861) 4111, (1871) 3910, (1881) 3955, of whom 3861 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 31, 1867.

Polmood Burn. See TWEEDSMUR.

Polnoon Castle, an ancient castle in Eaglesham parish, Renfrewshire, near a head-stream of White Cart Water, 5 miles S by E of Busby. It was built with the ransom of Harry Hotspur, whom Sir John Montgomerie had taken prisoner at Oterburn (1388); and it long was a chief seat of the EGLINTON family; but it is now represented by only a few smooth mounds of rubbish.—*Ord. Sur.*, sh. 22, 1865.

Poltalloch, the ancient seat of the Malcolm family, in Kilmartin parish, Argyllshire, on the eastern shore of Loch Craignish, 10 miles NNW of Lochgilphead. Its present proprietor, John Malcolm, Esq. (b. 1805; suc. 1857), holds 82,579 acres in the shire, valued at £18,200 per annum.

Poltanton Burn. See LESWALT.

Polton, a group of places in Lasswade parish, Edinburghshire, adjacent to the North Esk river, and within 1½ mile SSW of Lasswade village. It contains the terminus of the Eskbank, Lasswade, and Polton line, 10½ miles by rail SSE of Edinburgh; the papermills of Messrs Annandale & Son; Polton Colliery; Polton House (Rt. Dundas, Esq. of Arniston), etc.—*Ord. Sur.*, sh. 32, 1857.

Poltonhall, a village in Cockpen parish, Edinburghshire, ¾ mile SSW of Bonnyrigg, and 1½ mile S by W of Lasswade. Pop. with Dalhousie Colliery (1871) 312, (1881) 595.

Polwarth, a village and a parish of central Berwickshire. The village, an ancient place, stands near the

northern border of the parish, on ground originally swampy, but now drained, 3 miles NNE of Greenlaw, and 4 SW of the post-town Duns. Two old thorn trees formerly stood in the centre of the village green; and a custom prevailed for upwards of 300 years down to the commencement of the present century, of dancing at every marriage round these trees—a custom celebrated in several songs, particularly one by Allan Ramsay, set to the tune of 'Polwarth on the Green.'

The parish, containing also MARCHMONT station at the south-eastern border, is bounded NW by Longformacus, N by Langton, SE by Fogo, and SW and W by Greenlaw. Its utmost length, from E by N to W by S, is 4½ miles; its utmost breadth is 2½ miles; and its area is 3013 acres, of which 13½ are water. A small lake (1½ × 1 furl.) lies near the western border; and the drainage is carried eastward towards Blackadder Water by the Kirk Burn and other rivulets. The surface, on the mutual border of the Merse and the Lammernuir district, declines in the extreme E to 370 feet above sea-level, and rises westward till it attains a maximum altitude of 933 feet at Kyles Hill. The predominant rocks are various kinds of sandstone; but Kyles Hill consists of a hard reddish porphyry. The soil of the uplands is moorish, and elsewhere is mainly argillaceous, but here and there is sand or gravel. Nearly 400 acres are under wood; rather less than half of the entire area is in tillage; and nearly all the remainder is pasture, moor, or moss. MARCHMONT HOUSE, noticed separately, is the only mansion; and Sir Hugh Hume-Campbell, Bart., is sole proprietor. Polwarth is in the presbytery of Duns and the synod of Merse and Teviotdale; the living is worth £332. The parish church, ¾ mile SSE of the village, crowns the edge of a beautiful glade in the grounds of Marchmont, and was rebuilt by Patrick Home, first Earl of Marchmont, in 1703. According to a Latin inscription of that date, its predecessor was consecrated prior to 900, and restored in 1378. In 1684 the patriot, Patrick Home, concealed himself in the family burial vault beneath the church, where he remained for several weeks, supplied every night with food by his celebrated daughter Grizel, afterwards Lady Grizel Baillie, then only twelve years of age. The public school, with accommodation for 55 children, had (1884) an average attendance of 35, and a grant of £34, 2s. 6d. Valuation (1865) £2624, 2s., (1884) £2563, 3s., plus £1212 for 2½ miles of railway. Pop. (1801) 291, (1831) 288, (1861) 251, (1871) 249, (1881) 227.—*Ord. Sur.*, shs. 25, 26, 1865-64.

Pomathorn, a station in the S of Lasswade parish, Edinburghshire, on the Peebles railway, near Howgate village, 2½ miles NE of Leadburn, and 15 S of Edinburgh.

Pomona or Mainland, the chief and much the largest of the Orkney islands. It lies southward of the centre of the Orkney archipelago; is washed, on the W and the N, by the Atlantic Ocean; is separated, on the NE, by narrow sounds from Rousay, Gairsay, Shapinsay, and some smaller adjacent islands, and by Westray Firth and Stronsay Firth from the entire group of the North Isles; is washed, on the E, with exception of two or three intervening islets, by the German Ocean; and is separated, on the S, by Holm Sound, Seapa Flow, and Hoy Sound from Burray, South Ronaldshay, Flotta, Hoy, and some smaller islands. Its utmost length, from E to W, is 24½ miles; its utmost breadth, from N to S, is 16½ miles; and its area, in consequence of great and numerous indentations on its outline, is probably not more than 150 square miles. Its western district, to the extent of about 16 miles by 11, is fairly compact, and has a somewhat ellipsoidal outline; but its eastern district is mostly cut by intersections of the sea into a series of peninsulas and isthmuses, and ranges in breadth from a maximum of 8½ miles to a minimum of 2 or 3 furlongs. Safe harbourage and places of anchorage occur at brief intervals on all the north-eastern, the eastern, and the southern coasts; and are particularly good at Kirkwall Bay, Deer Sound, Holm Sound, and Stromness.

Several fresh-water lakes—Stennes, Kirbister, Skail, Boardhouse, Hundland, Swannay, and others—lie in the interior; abundant in various kinds of trout; and emit considerable water power; but there are no streams larger or longer than mere burns; and salmon waters of any kind are entirely wanting. No spot is further than $4\frac{1}{2}$ miles from the sea; and by far the larger part of the area is not more than 2 miles. The western coasts, in general, are bold and precipitous, and often rise in mural cliffs, pierced with caves and natural arches, or torn and shattered into detached masses and isolated pinnacles; the western district, though nowhere mountainous or wildly upland, comprises a considerable extent of hill and moor; and the other districts, though all comparatively low, likewise include many breadths and patches of moorish land; but some large fertile valleys, possessing the double advantage of a sheltered position and a loamy soil, lie among the hills; and an extensive aggregate of good arable land lies round the moors or along the shores. The parishes into which Pomona is divided are Birsay, Sandwick, Stromness, Evie, Rendall, Harray, Firth, Stennes, Orphir, Kirkwall, St Andrews, Deerness, and Holm; but Birsay and Harray, Evie and Rendall, Firth and Stennes, and St Andrews and Deerness, are each pair mutually united. Pop. (1801) 13,929, (1831) 15,787, (1861) 17,240, (1871) 16,541, (1881) 17,165. See ORKNEY.

Ponfeigh, a collier village in Carmichael parish, Lanarkshire, with a station on the Lanark and Douglas branch of the Caledonian railway, near the right bank of Douglas Water, $4\frac{1}{2}$ miles S of Lanark.

Poniel Water. See DOUGLAS.

Pool. See MUCKHART.

Poolewe, a village and a *quoad sacra* parish in Gairloch parish, Ross-shire. The village stands at the head of Loch Ewe, and at one of the western terminations of the military road from Dingwall through the centre of Ross-shire, 2 miles NNW of the foot of Loch Maree, 6 NNW of Gairloch village, 7 S by W of Aulthea, $27\frac{1}{2}$ WNW of Auchnasheen station, and $5\frac{1}{2}$ W by N of Dingwall. A chief point of communication across the Minch with the Outer Hebrides, it serves as a conjoint centre with Gairloch village and Kinlochewe for visiting the superb scenery of Loch Maree; and has a post office, with money order, savings' bank, and telegraph departments, an inn, an Established church, a Free church, and a public school. The Established church was built in 1823, and contains 350 sittings. The *quoad sacra* parish, constituted by ecclesiastical authority in 1838, and reconstituted by civil authority in 1851, is in the presbytery of Lochcarron and synod of Glenelg. The minister's stipend is £138. Pop. of *g. s.* parish (1871) 2623, (1881) 2317, of whom 2198 were Gaelic-speaking.—*Ord. Sur.*, sh. 91, 1882.

Port. See MONTEITH, PORT OF.

Port-Appin, a village in Lismore and Appin parish, Argyllshire, on the E shore of Loch Linnhe, opposite the NE end of Lismore island, and 3 miles SSW of Appin village. It has a temperance hotel, and is a ferry station.

Port-Askaig. See ASKAIG, PORT.

Port-Bannatyne. See KAMESBURGH.

Portcarren, a village on the SE shore of Lismore island, Argyllshire, $5\frac{1}{2}$ miles NNW of Oban.

Port-Charlotte, a village in Kilchoman parish, Islay island, Argyllshire, on the W coast of Loch Indal, opposite Laggan Point, $7\frac{1}{2}$ miles SW of Bridgend, and 16 SW of Port-Askaig. It has a post office under Greenock, an inn, a distillery, and a public school. Pop. (1861) 562, (1871) 484, (1881) 502.

Port-Crinan. See CRINAN.

Porteasie. See PORTESSIE.

Port-Edgar. See QUEENSFERRY.

Port-Ellen, a seaport village in Kildalton parish, Islay island, Argyllshire, at the head of a small bay, 6 miles NNE of the Mull of Oa, $11\frac{1}{2}$ SSE of Bowmore, and 17 W by S of Gigha. Founded in 1824, and named in compliment to Lady Ellinor Campbell of Islay,

it rose rapidly into importance as a place of local commerce; and on a rocky promontory near the middle of its bay is a commodious quay, constructed in 1826 and improved in 1832. It has also safe anchorage ground, and a lighthouse; is visited by the steamers which ply between Islay and Glasgow; carries on a considerable amount of fishing; and has a post office under Greenock, with money order, savings' bank, and telegraph departments, a branch of the Royal Bank, two inns, and a public school. Pop. (1841) 904, (1861) 1007, (1871) 979, (1881) 989.

Port-Elphinstone, a southern suburb of INVERURIE, in Kintore parish, Aberdeenshire, on the right bank of the river Don. It took its name, and during 1807-54 derived its importance, from being situated at the NW end of the quondam Aberdeen Canal; it now contains an extensive goods station of the Great North of Scotland railway, and is still a convenient centre of trade; and it has a post office under Inverurie, extensive grain mills, paper-mills, two saw-mills, a brewery, a nursery, a public school, and a public library. Pop. (1861) 421, (1871) 435, (1881) 473, of whom 356 were within Inverurie burgh.—*Ord. Sur.*, sh. 76, 1874.

Port-Erral or Ward-of-Cruden, a coast village in Cruden parish, Aberdeenshire, at the mouth of the Water of Cruden, $11\frac{1}{2}$ miles NE of Ellon, under which it has a post and telegraph office. A promising station of the herring fishing, it has a lifeboat and rocket apparatus, an hotel, 68 boats, and a recent harbour, whose inner basin is 300 feet long and 150 to 175 feet wide. The Aberdeen Lime Co. here ships corn, and imports coal, manures, etc., doing a large business. Pop. (1881) 493.—*Ord. Sur.*, sh. 87, 1876.

Portessie, a fishing village in Rativen parish, Banffshire, $1\frac{1}{2}$ mile ENE of Buckie. In 1727 it consisted of only five houses, but it has made such progress as now to possess 145 fishing boats, employing 290 men and boys; and it has a Wesleyan Methodist chapel. Pop. (1793) 178, (1841) 411, (1861) 575, (1871) 877, (1881) 1061.—*Ord. Sur.*, shs. 95, 96, 1876.

Port-Float. See FLOAT BAY.

Port-Gill. See GILL.

Port-Glasgow, a parish, with a parliamentary burgh of the same name, on the N coast of the Lower Ward of Renfrewshire. It is bounded N by the Clyde, E and S by Kilmacolm, and W by Greenock. The boundary on the E and S is artificial, but on the N it is formed by the Clyde, and on the W by Devoil Burn to a point about $\frac{1}{2}$ mile above Wallace's Loup. The greatest length of the parish, from the corner of the West Harbour on the N to the extreme southern point, is fully $1\frac{1}{2}$ mile; the greatest width, from Laigh Auchinleck on the E to Wallace's Loup on the W, is barely $1\frac{1}{2}$ mile; and the area is 1031-772 acres, of which 39-381 are foreshore and 48-524 water. There is a flat strip along the Clyde on the N side from 13 to 20 feet above sea-level, and from this the ground slopes rapidly up to the 200-foot line which lies immediately to the S of the burgh, and still more rapidly to the 500-foot line farther to the S. From this the rise to 600 feet is more gradual, and the highest points are 700 feet on the SW and 656 near the extreme S. The soil of the flat tract along the Clyde is a very fertile loam, but that along the higher ground is cold and poor. The underlying rocks are mostly volcanic. The drainage of the parish is effected by Devoil Burn on the W—along the course of which there are several small waterfalls—and some smaller burns all flowing to the Clyde. In the SW is Dugglehill Dam or Reservoir (2×1 furl.). The only object of interest beyond the town is Newark Castle in the NE, which is separately noticed. A line across the Clyde from Newark Castle to Cardross is the lower limit of the jurisdiction of the Clyde Trustees; while below this the care of the channel and estuary is under the Clyde Lighthouse Trust. The parish is traversed from E to W by the main line of road from Glasgow along the edge of the river and Firth, and by the Glasgow, Paisley, and Greenock branches of both the Caledonian and Glasgow and South-Western railways. From the

former the Wemyss Bay branch strikes off close to the western boundary of the parish.

Civilly, the parish was, prior to 1695, in the parish of Kilmalcolm, and ecclesiastically, it is divided into the parishes of Port-Glasgow and Newark, the latter originally established in 1774 as a chapel of ease, but constituted as a *quoad sacra* charge in 1855. Both are in the presbytery of Greenock in the synod of Glasgow and Ayr, and the living of Port-Glasgow is worth £250. The churches are noticed in the following article, and the landward school board is united with that of East Greenock. The industries are noticed under the town. The principal landowner is Sir Michael Shaw-Stewart, Bart. of Greenock and Blackhall, and 12 others hold each an annual value of £500 or upwards, 54 hold each between £500 and £100, 45 hold each between £100 and £50, and there are a number of smaller amount. Valuation, exclusive of burgh, (1884) £771, 13s. Pop. of entire parish (1801) 3865, (1831) 5192, (1861) 7204, (1871) 9912, (1881) 10,913, of whom 5568 were males and 5345 females. Of the whole population 10,802 were at that time within the parliamentary boundary, and 7626 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 30, 1866.

Port-Glasgow, a seaport and parliamentary burgh on the Firth of Clyde, occupying the whole of the northern portion of the parish just described. It has a station on the Glasgow, Greenock, and Wemyss Bay section of the Caledonian railway, 19½ miles WNW of Glasgow. The site is a belt of flat alluvial ground 13 to 20 feet above sea-level, lying along the shore of the Clyde, and as the ground to the S rises by two successive stretches of hill rising to over 500 feet, the appearance from the river is picturesque. The town itself is well built; the principal streets following the line of the bay occupied by the docks, and the minor ones running parallel to these or striking off at right angles. The districts to the W and S are occupied by villas. Founded in the middle of the 17th century, it has none of the ancient historical associations belonging to many of the other burghs along the Clyde. The earlier seaports connected with the trade of Glasgow were situated on the Ayrshire coast, but between 1650 and 1660 the commerce of the great city of the west had so much increased that the distant harbours were found expensive and inconvenient, and the community resolved to have a harbour of their own. The deepening of the bed of the Clyde was as yet unthought of, and after unsuccessful efforts to acquire ground at Troon and at Dumbarton, a deputation of the council reported on 4 Jan. 1668 that they had had 'ane meeting yeasternight with the lairds, elder and younger, of Newark, and that they had spoke with them anent the taking of ane piece of land of theirs in feu, for loading and livering of their ships there, anchoring and building ane harbor there, and that the said lairds had subscriv'd a contract of feu this morning: quhilt was all allowed and approvine be said magistrats and counsell, and after this the twa feu contracts made between the saidis lairds of Newark, elder and yor., and the towne were red and subscriv'd, being that the saids Newark, elder and yor., had set ane merk land, as a pairt of their lands of Newark to the towne, in feu for payment yeirlie of four merks feu dewtie, and relieving them of the king's taxatioune effeirand to a merk land.' On the 13 acres thus acquired the town soon began to grow, as the erection of a pier and docks was set about at once, and the place under the name of Newport Glasgow was by Crown charter constituted a free port and a burgh of barony. From this time until its trade received a very severe check from the deepening of the Clyde and the consequent transference of the greater portion of the commerce to Glasgow, the port prospered steadily. In 1710 it was constituted the principal custom-house port of the Clyde, and soon afterwards the town extended its original limits so greatly that it came in contact with, and practically absorbed the village of Newark—a burgh of barony belonging to Hamilton of Wishaw. Port-Glasgow thus became two burghs of barony subject to two different

superiors, a state of matters that was found so inconvenient that an act of parliament was obtained in 1775 erecting them into a separate municipality under councillors called trustees. Besides other provisions, power was given to bring in water; to pave, clean, and watch the streets; to erect public markets; and to repair the quays. Harbour matters have all along been diligently attended to, and the original graving dock, built in 1762, and subsequently improved at great expense, was the first graving dock in Scotland. It was in 1873-74 superseded by a new one of improved construction. The length of its floor is 310 feet, the width at the entrance 45 feet, the depth of water on the sill at low water is 6 feet, at high water of neap tides 14 feet, and at high water of spring tides 16 feet. The original harbour occupied the position now covered by the West and East Harbours, the wet dock to the E, which is capable of floating very large vessels, having been formed, in 1834 and subsequent years, in a bay called Newark Bay. It covers an area of 12 acres, and cost about £40,000. Farther E still are ponds and enclosures for the storage of timber. All the basins are well sheltered, easy of access, and lie in a convenient position with regard to the fairway of the Clyde, which is at this point somewhat narrowed by shoals, but is clearly and carefully marked out by buoys and beacons. Harbour affairs are managed by a body of trustees, comprising the provost, magistrates, and town councillors of the place, the lord provost and senior baillie of Glasgow, and four members elected by the shipowners and ratepayers. Port-Glasgow is an independent port, having jurisdiction on the S side of the Clyde from the Greenock wharf-fishery buildings eastward to Blantyre near Bishopston House, and on the N side of the Clyde from the point of Ardmore eastward to the W end of Dumbuck Hill. It includes the navigation of the Leven to Dumbarton. The number of vessels registered in the port with their tonnage has been, at various dates, as follows:—

| Year. | No. of Vessels. | Tonnage. |
|---------|-----------------|----------|
| 1818 | 133 | 19,133 |
| 1843 | 74 | 12,952 |
| 1845-49 | .. | 12,860 |
| 1854 | 67 | 8,464 |
| 1868 | 39 | 9,671 |
| 1875 | 35 | 15,133 |
| 1884 | 34 | 11,321 |

The great falling off owing to almost the whole of the coasting trade being removed to Glasgow, in consequence of the deepening of the Clyde, and the subsequent improvement due to the natural growth of the port itself, is clearly shown. In 1868, 29 ships, with a tonnage of 8851 tons, were sailing vessels, while 10 with 820 tons were steamers. In 1884, 18 ships of 8570 tons were sailing vessels, while 16 with 2751 tons were steamers. The following table shows the tonnage of vessels that entered and cleared from and to foreign and colonial ports and coastwise, with cargoes and ballast, at various dates:—

| Year. | ENTERED. | | | CLEARED. | | |
|-------|----------|----------|--------|----------|----------|--------|
| | British. | Foreign. | Total. | British. | Foreign. | Total. |
| 1804 | .. | .. | 25,948 | .. | .. | 32,339 |
| 1817 | .. | .. | 25,045 | .. | .. | 35,778 |
| 1853 | .. | .. | 44,281 | .. | .. | 33,384 |
| 1860 | .. | .. | 29,169 | .. | .. | 19,745 |
| 1874 | 51,344 | 4429 | 56,773 | 62,980 | 9614 | 72,594 |
| 1883 | .. | .. | .. | .. | .. | .. |

The amount of customs in 1864 was £106,925; 1871, £18,330; 1873, £8008; 1874, £1183; 1883, not given. Part of the enormous falling off is due to the reduction in the duties on sugar. The principal trade is with British North America, and the next with the West Indies, these two branches of commerce employing about

three-quarters of the tonnage entering the port. Trade is also carried on with the United States, the Mediterranean, and the East Indies. The North American import trade is chiefly in timber. The principal exports are iron, steel, soft goods, machinery, and coal, the last to the extent of about 20,000 tons annually.

The industries connected with the town are ship-building, saw mills, iron and brass foundries, sail-cloth factories, and establishments for the manufacture of oils, blocks, and rivets.

Public Buildings, Municipality, &c.—The railway line runs nearly parallel to the shore through the middle of the town, and the station is near the centre. The principal streets are Fore Street, fronting the East and West Harbours; Bay Street, fronting the Wet Dock; and King Street and Princes Street parallel to Fore Street. The townhouse is a good Doric building, with tetrastyle portico, erected in 1815 at a cost of £12,000, and containing council chambers, town offices, court house, and police station. The clock-spire is 150 feet high. The Public Hall, in Princes Street, was erected in 1873. The parish church, erected in 1823 at a cost of £3000, is a plain quadrangular building with 1200 sittings. Newark church, to the SW, is a plain building of 1774, with 1500 sittings. The first Free church dates from the Disruption, and contains 950 sittings; the second, formerly a church connected with the Reformed Presbyterians, has 300 sittings; and the third, erected in the west end, was opened in 1876, and contains 500 sittings. The two U.P. churches call for no particular notice. St Mary's Episcopal church, at the E end of the town, was built in 1856-57, by Miss Stewart, at a cost of £4000, and endowed by her with a fund of £10,000. It contains 340 sittings. St John's Roman Catholic church, with 600 sittings, was erected in 1854, and superseded a previous building. The following are the schools, with their accommodation, average attendance, and grants in 1883-84:—Academy Place (337, 234, £180, 7s.), Bouvrie Terrace (176, 185, £99, 18s. 8d.), Chapelton (450, 293, £258, 2s.), King Street (217, 230, £127, 7s.), Princes Street (" , 12, £4, 6s.), Beaton's Free (181, 153, £113, 6s.), Episcopal (106, 97, £82, 2s. 6d.), and Roman Catholic (378, 403, £277, 5s.).

As has been already noticed, the burgh acquired municipal government in 1775, and the powers of the then corporation were enlarged by a subsequent act in 1803, when provision was made for the erection of a new court house, a jail, and other public buildings. It was constituted a parliamentary burgh in 1832, and by the burgh reform act of 1833 the number of the councillors was reduced from 13 to 9. Since that time,

part of the general police act has been adopted, and there are now a provost, 3 bailies, and 5 councillors. The corporation revenue, in 1833, was £1889; in 1865, £4150; in 1883, inclusive of gas-work, £13,999. The police force consists of 9 men (1 to every 1473 of the population), and the yearly pay of the superintendent is £143. The town has a head post

Seal of Port-Glasgow.

office, with money order, savings' bank, insurance, and telegraph departments; branch offices of the Bank of Scotland, Clydesdale, Royal, and Union Banks; agencies of 31 insurance companies; and several good hotels. There is a Liberal newspaper, *The Port-Glasgow Observer* (1875), published every Saturday. Among the miscellaneous institutions may be noticed a Volunteer Drill Hall, an Oddfellows Hall, a Public Library and Reading Room, and the usual benevolent societies. There is a

weekly market on Friday, and a three days' fair on the Monday, Tuesday, and Wednesday before the first Thursday of July. There is a burgh court every Thursday; ordinary justice of peace courts are held on alternate Mondays; and justice of peace small debt courts on the first Monday of every month.

Port-Glasgow unites with Dumbarton, Renfrew, Rutherglen, and KILMARNOCK in sending a member to serve in parliament. Parliamentary constituency (1885) 1387; municipal 1847. Valuation (1876) £36,983, (1885) £54,040. Pop. (1841) 6938, (1861) 7214, (1871) 9851, (1881) 10,802, of whom 5482 were males and 5320 females. Houses (1881) 2166 inhabited, 188 uninhabited, and 1 building. The population of the police burgh, of which the boundary extends farther W and includes part of the parish of Easter Greenock, was, in 1881, 13,224.

Port Gordon, a fishing village in Rathven parish, Banffshire, 2½ miles SW of Buckie, 3¾ E by S of the mouth of the Spey, and 5½ NE of Fochabers. Founded in 1797 by the fourth Duke of Gordon, it ranks as a creek of the port of Banff, and does some trade in exporting grain and importing salt and coals. Its 99 fishing-boats employ 200 men and boys; and its artificial harbour, having fallen into decay in spite of repeated renewals and enlargements, has been superseded by a new harbour, which, formed in 1870-74 at a cost of £15,000 by the Duke of Richmond, comprises two breakwaters, two piers, a quay berthing of 1400 feet, and a basin 3 acres in area. A good water supply was introduced in 1884. Pop. (1841) 457, (1861) 630, (1871) 970, (1881) 737.—*Ord. Sur.*, sh. 95, 1876.

Portgower. See **LOTH.**

Portincross Castle. See **KILBRIDE, WEST.**

Port-Kingston. See **KINGSTON.**

Portknochie, a fishing village in Rathven *quoad civilia* parish, but in Cullen *quoad sacra* parish, Banffshire, on the coast, adjacent to Scar Nose, 1¼ mile NW of Cullen town, and 4½ miles NE of Buckie. Founded in 1677, it carries on fishing in 99 large boats and 42 smaller ones; and has a police station, a chapel of ease, a Free church, and a public school. Seafield chapel of ease, which was built by subscription about the year 1840, and which contains 450 sittings, in 1884 had a district assigned to it as a *quoad sacra* parochial church. Pop. (1793) 243, (1837) 750, (1861) 1159, (1871) 1235, (1881) 1102.—*Ord. Sur.*, sh. 96, 1876.

Portlethen, a fishing village and a *quoad sacra* parish in Banchory-Devenick parish, Kincardineshire. The village stands on the coast, 7 furlongs E by S of Portlethen station on the North-Eastern section of the Caledonian railway, this being 8 miles S by W of Aberdeen. The *quoad sacra* parish, constituted by the court of teinds in 1856, is in the presbytery and synod of Aberdeen. The church contains 460 sittings. Pop. of parish (1861) 265, (1871) 315, (1881) 315; of *q. s.* parish (1871) 1789, (1881) 1610.—*Ord. Sur.*, sh. 67, 1871.

Port-Logan, a seaport village on the W coast of Kirkmaiden parish, Wigtownshire, at the head of Portnessock Bay, 14 miles S by E of Stranraer. It has a post and telegraph office, a public school, and a jetty. A circular tidal fish-pond, 10 yards in diameter, has been excavated in the cliffs to the N of the bay, and contains many tame cod and a few 'blockans' or coal fish.—*Ord. Sur.*, sh. 1, 1856.

Portmahomack, a fishing village in Tarbat parish, NE Ross and Cromarty, on the SE side of the entrance to Dornoch Firth, 3 miles SSW of Tarbat Ness, and 9¼ ENE of Tain. It has a post office, with money order, savings' bank, and telegraph departments, 25 fishing boats, and a pier 420 feet long, erected at a cost of £3168. Pop. (1861) 489, (1871) 458, (1881) 301.—*Ord. Sur.*, sh. 94, 1878.

Portmary, an estate, with a mansion, on the coast of Rerrick parish, Kirkcudbrightshire, 7½ miles SE of Kirkcudbright, and 1¼ mile S by E of Dundrennan Abbey. The name is said to be modern; but the rock is shown

from which Queen Mary embarked on her flight to England. See DUNDRENNAN and TERREGLES.

Portmoak, a parish of E Kinross-shire, containing Scotlandwell village, 5 miles W of Leslie, and 6½ (only 4½ as the crow flies) E by S of Kinross, under which it has a post office. It is bounded SW by Cleish, W by Kinross, Loch Leven, and Orwell, and on all other sides by Fife, viz., N by Strathniglo, NE by Falkland, E by Leslie and Kinglassie, and S by Auchterarder and Ballygry. Its utmost length, from N to S, is 5 miles; its breadth, from E to W, varies between 7 furlongs and 4½ miles; and its area is 9957 acres, of which 124 belong to a detached farm near Strathendry, surrounded by Kinglassie and Leslie. Loch Leven, to the extent of 5 miles along its eastern and its southern shore, margins the parish; the river Leven, flowing in an artificial cut from Loch Leven, goes 1½ mile east-north-eastward across the interior; and GAIKNEY WATER, running north-north-eastward into Loch Leven, forms for 1 mile the southern part of the boundary with Kinross. From the shore of Loch Leven (353 feet above sea-level) the surface rises southward to flat-topped Benarty Hill (1167 feet) on the Ballygry border, and eastward to Bishop Hill, which culminates near Kinnesswood village in White Craigs (1492 feet), 1½ mile ENE of the nearest point of the loch. (See LOMOND HILLS.) All the parts of the parish not occupied by the two hill ridges and their skirts are narrow hanging plains; and the whole is a rich landscape of fine meadows, fertile fields, thriving plantations, beautiful braes, romantic crags, and picturesque sky-lines, exquisitely mirrored in Loch Leven. Copious springs of pure water are numerous in the north; and three within 400 yards of one another, in the neighbourhood of Scotlandwell, emit as much water as, with a suitable fall, would drive a mill. Eruptive rocks are in the hills, and have been worked; sandstone abounds, but is not quarried; limestone is plentiful, and has been calcined to the amount of 4000 tons of carbonate in the year; and ironstone and coal, the former of excellent quality, were mined a number of years ago. The soil of most of the arable grounds is light, early, and exceedingly fertile. About 350 acres are under wood; three-fourths of the entire area are in tillage; and the rest of the land is nearly all pasture. KIRKNESS, noticed separately, is the principal residence; and the ruin of an old chapel at Scotlandwell is the only antiquity. Andrew Wyntoun (*No.* 1400), the chronicler; John Douglas (d. 1574), the first 'tulchan' Archbishop of St Andrews; and Michael Bruce (1746-67), the poet, were natives of Portmoak; whilst the Rev. Ebenezer Erskine (1680-1754) was its minister from 1703 till in 1733 he founded the Secession at GAIKNEY Bridge, where a monument was erected to celebrate the event in 1884. Five proprietors hold each an annual value of £500 and upwards, 19 of between £100 and £500. Portmoak is in the presbytery of Kinross and the synod of Fife; the living is worth £350. The parish church, at Scotlandwell, was built in 1839, and contains 730 sittings. Other places of worship are Portmoak Free church and Balgedie U.P. church. The public school, with accommodation for 162 children, had (1884) an average attendance of 134, and a grant of £113, 6s. Valuation (1860) £10,357, (1882) £11,189. Pop. (1801) 1151, (1831) 1554, (1861) 1450, (1871) 1193, (1881) 1042.—*Ord. Sur.*, sh. 40, 1867.

Port-Monteith. See MONTEITH, PORT OF.

Port-Montgomery. See PORTPATRICK.

Portmore, an estate, with a mansion, in EDDLESTON parish, Peeblesshire, 1½ mile NNE of Eddleston station. Originally part of the Blackbarony estate, it was acquired in the early part of the 18th century by the Earl of Portmore (a title extinct since 1835), and in 1798 was sold to Alex. Mackenzie, W.S., whose grandson, William Forbes Mackenzie (1801-62), represented Peeblesshire for sixteen years, and carried through Parliament the Public House Act of 1852 that bears his name. His son, Colin James Mackenzie, Esq. (b. 1835; suc. 1862), holds 9403 acres in the shire, valued at £4282 per annum. The mansion, a Scottish

Baronial edifice, erected in 1850 from designs by the late David Bryce, R.S.A., was destroyed by fire in April 1883, but has since been restored.—*Ord. Sur.*, sh. 24, 1864.

Portnacraig, a village in Logierait parish, Perthshire, on the right bank of the Tummel, opposite Pitlochry.

Portnacroish, a village in Appin district, Argyllshire, on the E side of Loch Linnhe, 14 miles NNE of Oban. Its plain Episcopalian church, St Cross, containing 230 sittings, was built about 1809, and repaired in 1878.

Portnabaven, a village and a *quoad sacra* parish in Kilchoman parish, Islay island, Argyllshire. The village stands at the south-western extremity of Islay, adjacent to the islet and lighthouse of Oversay, at Rhynns Point, 10½ miles NW by W of the Mull of Oa, 15½ SW of Bridgend, and 24 SW of Port-Askaig. It occupies a picturesque, sheltered, rocky nook, on a shore often lashed with tempestuous billows; and has a post office under Greenock, an Established church built at the expense of Government, a Free church, and a new public school. The *quoad sacra* parish was constituted first by the ecclesiastical courts, next in 1849 by the court of teinds, and is in the presbytery of Islay and Jura and synod of Argyll. The minister's stipend is £150. Pop. of village (1871) 411, (1881) 361; of *q. s.* parish (1871) 979, (1881) 860.

Portnessock Bay, a bay on the W side of Kirkmaiden parish, Wigtownshire, measuring 10½ furlongs across the entrance, and 6½ thence to its inmost recess. See PORT-LOGAN.

Portnockie. See PORTKNOCKIE.

Portobello, a town and a *quoad sacra* parish in Duddingston and South Leith parishes, Edinburghshire. A favourite watering-place and a parliamentary burgh, the town stands on the southern shore of the Firth of Forth, 3 miles E of Edinburgh, 3 SE of Leith, and 2½ WNW of Musselburgh. With Leith it is connected with a branch of the North British; and with Edinburgh by the main line (1846) of that railway, by the Edinburgh Suburban railway (1884), and by a tramway 3¼ miles long, opened in 1875, and doubled in 1881. Prior to 1762 its site and the lands around it were a moorish furzy waste, called the FIGGATE WHINS, of no value whatever for agricultural purposes, and differing from a desert only in the presence of one human dwelling. But in that year they were let to a tenant at a rent equal to £11, 2s. 2½d. sterling, and a few months afterwards sold to Baron Muir for £1500. Parts of them now began to be fenced out at £3 per acre; and so early as 1804 some portions were sub-fenced at a perpetual rent of £40 per acre. Even the solitary hut, which was destined to give its name to the town, was built no earlier than 1742. A humble thatched cottage, it stood till 1862 on the SW side of the High Street, on the site now occupied by the old town-hall, an object of interest to the townspeople and of curiosity to strangers. It was long used as a hostelry for travellers on a road which led out from the Fishwives' Canseway, across the whins, towards Musselburgh; and, according to tradition, it was built by a sailor, or marine, who had served under Admiral Vernon in the expedition of 1739, and was called by him Porto-Bello, in memory of his having acted a part in the capture of the town of that name on the Isthmus of Panama. The Figgate Whins bore an evil reputation as a haunt of smugglers and robbers. Scott makes Effie Deans embark here on the smuggling lugger (1736); and in 1753 we find one 'George Hamilton in Portobello' advertising in the *Edinburgh Courant* that he would pay a reward of £3 to any one who should discover the author of a scandalous report representing him as having harboured robbers in his house. In 1765 Mr William Jamieson, the feuar under Baron Muir, discovered near the Figgate Burn a valuable bed of clay; and he erected on the banks of the stream, first a brick and tile work, and afterwards an earthenware manufactory. These public works gave rise to a small village, and co-operated with other and subsequent works to swell the village

into a small town. About the beginning of the century the beauty of the beach, the fineness of its sands, and its general eligibility as a bathing-place, began to draw the attention of the citizens of Edinburgh; and thenceforth many neat dwelling-houses and numerous villas arose for the accommodation of summer visitors, converting the town into a fashionable watering-place. Great as has been the growth of Portobello, that growth is by no means complete, the wide projected extensions of 1876 to the E of Joppa and the S of the railway being still only partly finished, going on, or not even yet begun. In its existing or compact condition the town forms a belt along the first 7 furlongs in length by from 250 yards to $\frac{1}{2}$ mile in breadth. The principal street extends from NW to SE along the Edinburgh and Berwick highroad, and bears over its NW half the name of High Street. The Figgate Burn intersects the town near its north-western end; the only parts of the burgh on the Leith side of the stream being mainly occupied by brick and bottle works. The High Street sends off at brief intervals, and generally at right angles, 12 or 13 alleys and streets to the beach. Those to the NW are narrow, and belong to the early periods of the town's existence; but those in the middle district, and towards the SE, increase in elegance as the distance recedes from the burn. The principal—mentioning them in regular order—bear the names of Tower, Bath, Regent, Wellington, Melville, Pitt, John, James, and Hamilton Streets. The centre of the town, or what in old times would have been called the Cross, is a point at which Bath Street goes 330 yards north-eastward to the sea, and a spacious beautiful street, called Brighton Place, 400 yards south-westward to the station—Brighton Place being flanked by Brighton and Lee Crescents. So formidable an array of street lines, disposed over so great a space, would seem to indicate no small magnitude of town, and a very considerable amount of population. But much of its area is open ground, much is occupied by garden-plots or villa enclosures, and much is rather a sprinkling of houses separately produced by individual taste or caprice, than a collection of edifices upon any preconceived plan. Yet most of the newer parts are comparatively regular both in their street lines and in their houses, and promise to combine with future extensions to render Portobello one of the neatest, or even one of the most elegant of second-rate provincial towns in Great Britain. The extensive brick-work which figured so prominently in the origination of the town has contributed much to disfigure it by tempting the construction of many of the houses with brick. But, over by much the greater part of the area, the building material is the same beautiful light-coloured sandstone which gives so pervading a charm to the architecture of the metropolis; and, as the brick edifices decay, it will probably be used for the houses which succeed them, and be allowed the universal adoption it deserves.

The curious Tower which overlooks the beach at the foot of Tower Street is a fantastic pile, built by the eccentric Mr Cunningham, who was one of the earliest subseuars under Mr Jamieson. Antique carved stones appear in the cornices and the windows, and are alleged to have belonged partly to the Cross of Edinburgh, and partly to the dilapidated ecclesiastical piles of St Andrews. An excellent suite of hot and cold salt-water baths was erected in 1806 at a cost of £4000, between the foot of Bath Street and that of Regent Street. An edifice at the head of Bath Street was once an assembly-room, but is now an inn. A neat town-hall, in a mixed style of French and Flemish, was built in 1862-63 by a limited liability company at a cost of £3000, on the S side of the High Street, to the E of Brighton Place. To the W, on the opposite side of the High Street, are the new Municipal Buildings, Scottish Baronial in style, erected in 1878 at a cost of £7000, from designs by Messrs R. Paterson & Son. A principal feature is a three-dialled clock tower, surmounted by a flagstaff; and the town-hall also has its public clock. The fine level sands, 230 yards broad at low-water, on a Saturday afternoon of summer present an animated scene, with

the ponies and donkeys, the pleasure boats and bathing-coaches, the throng of holiday-makers, and what not else besides. They are skirted by a smooth esplanade (1860), 1420 yards long, or a little over $\frac{3}{4}$ mile, midway on which, at the foot of Wellington Street, is the Prince of Wales's Drinking Fountain. In 1870-71 a promenade pier was constructed by a joint-stock company near the foot of Bath Street, at a cost of £7000. It extends 1250 feet into the sea, and is 22 feet broad, or 60 at the head, which is surmounted by a restaurant and an observatory. The pier is a calling place for excursion steamers, and serves not only for promenade concerts, but also for boating and (up to 9 a.m.) for swimming.

The view from the pier-head is one of singular beauty and interest—Inchkeith to the N, and the winding shores of Fife; to the NE, North Berwick Law and a peep of the Bass; to the E, Aberlady Bay, Prestonpans, Musselburgh, and the spire of Inveresk; to the S, the woods of Niddrie, Craigmillar Castle, and the Pentland Hills; and to the W, Arthur's Seat and a glimpse of Edinburgh. See these embellished by setting sun, or silvered by summer moon, and think of their many memories—the Pentlands, or 'lands of the Picts,' and Kullion Green; Inveresk, with its Roman remains; Arthur's Seat, named after the 'Blameless King,' and Edinburgh, after Eadwine of Northumbria; Kinghorn yonder, where King Alexander met his doom; Wilkie's 'ain blue Lomonds'; the battlefields of Pinkie and Prestonpans; Craigmillar, where Queen Mary wept; and Carberry Hill, where she resigned her crown. Nay, on these very sands Prince Charlie arrayed his forces on the eve of the march to Derby; George IV. held a grand review; and Scott composed the *Flodden* canto of *Marmion*, walking his black horse within the beating of the surge, or going off as if at the charge, with the spray dashing about him.* At Shrub Mount, Portobello, Hugh Miller (1802-56) died by his own hand; and Portobello has been the birthplace or residence of two or three other men of mark—David Laing, LL.D. (1790-1878), antiquary; Prof. Robert Jameson (1774-1854), mineralogist; and Samuel Brown, M.D. (1817-57), chemist and author.

The *quoad sacra* parish church, in Melville Street, is a plain edifice, with a clock spire, erected in 1810 as a chapel of ease at a cost of £2650, enlarged in 1815 and 1878, and containing 966 sittings. The parish was constituted by the General Assembly in 1834. The Free church, in Hamilton Terrace, Joppa, was built in 1875-77, at a cost of £9000, from designs by Mr John Honeyman, and is a really striking edifice in the Early Decorated style of the close of the 13th century, its only defect being a certain thinness. It consists of an aisled nave, with 660 sittings and traceried stained-glass windows, and of a tower and spire 170 feet high, with a deep-toned bell of 36 cwt. The Windsor Place U.P. church, built in 1879-80, at a cost of £8500, from designs by Messrs Stewart & Menzies, is a less successful Gothic structure, consisting of nave and transepts, with 760 sittings and a NW tower and spire 130 feet high. The Regent Street U.P. church is a very plain but commodious building, reconstructed in 1880 from a previous church. St Mark's Episcopal Church, consecrated in 1828, is an ugly neoclassical building, with a heavy Grecian portico, a stained-glass window, and 400 sittings. St John's Roman Catholic church (1835; enlarged 1878; 400 sittings), in Brighton Place, is plain but neat; and the same may be said of the Congregational church in Wellington Street. An Established congregation also worships in the old Town-hall. A beautiful cemetery, nearly $\frac{1}{4}$ mile SE of the centre of the town, and 4 acres in extent, was laid out in 1876-77. The new Board School, on the Niddrie road, a little beyond the station,

* On one occasion Sir Archibald Allison, while a member of the Yeomanry Cavalry, after a six hours drill on Portobello sands, dined, drove 21 miles to a ball, danced all night, drove back, bathed in the sea, and went to another six hours' drill, 'without either being in bed or experiencing the least fatigue.' His right-hand man in the front rank during this mimic war was Lockhart, Sir Walter's son-in-law.

was built in 1875-76 at a cost of £7000, and is a good one-story edifice, semi-collegiate in style, with four classrooms and a central mixed school hall, 54 feet square and 27 high.

The town besides has a post office, with money order, savings' bank, insurance, and telegraph departments, branches of the Clydesdale, National, and Royal Banks, 2 hotels, a gas-light company, a drainage system which cost £11,000, a good water supply from the Edinburgh waterworks, a second railway station at Joppa, a literary institute (1881), a young men's literary society (1859), Liberal and Conservative associations, a choral society, boating, curling, and swimming clubs, masonic and other lodges, etc. It is governed by a provost, 2 bailies, and 6 councillors, who also act as police commissioners under the Act of 1862. By the Reform Act of 1833 Portobello returns one member to parliament, conjointly with Leith and Musselburgh. Its parliamentary and its municipal constituency number 998 and 1368 in 1885. Valuation (1856) £16,843, (1866) £25,196, (1876) £37,861, (1885) £46,075. Pop. (1841) 3587, (1851) 3527, (1861) 4366, (1871) 5551, (1881) 6926, of whom 3863 were females, 6794 were in the parliamentary burgh, 111 were in South Leith parish, and 4504 were in Portobello *quoad sacra* parish.—*Ord. Sur.*, sh. 32, 1857.

Seal of Portobello.

jointly with Leith and Musselburgh. Its parliamentary and its municipal constituency number 998 and 1368 in 1885. Valuation (1856) £16,843, (1866) £25,196, (1876) £37,861, (1885) £46,075. Pop. (1841) 3587, (1851) 3527, (1861) 4366, (1871) 5551, (1881) 6926, of whom 3863 were females, 6794 were in the parliamentary burgh, 111 were in South Leith parish, and 4504 were in Portobello *quoad sacra* parish.—*Ord. Sur.*, sh. 32, 1857.

Port of Monteith. See MONTEITH, PORT OF.

Portpatrick, a Wigtownshire village and parish, on the W coast of the Rhinns of Galloway. The village by sea is 2½ miles NE of Donaghadee in Ireland, whilst, as terminus of the Portpatrick section (1861) of the Caledonian railway, it is 7¾ miles SW of Stranraer, 61 W by S of Castle-Douglas, 80½ WSW of Dumfries, 170½ SW of Edinburgh, and 66½ SSW of Ayr. It lies snugly sheltered in a small triangular opening in the rock-bound coast, the base of the triangle being formed by the sea, and the other two sides by towering cliffs, which in places rise sheer to 130 feet, and behind recede into hills 300 to 400 feet high. The declivities of the amphitheatre at the sides of the little bay are steep and impracticable; and, even behind the town, except where a streamlet has cleft them into a cleugh and ploughed down a path for the highroad and railway, they are sufficiently rapid to give the whole enclosed space the appearance of a vast quarry, or the half of a huge bowl. Neither by land, nor northward or southward by sea, is the town seen until it is almost entered; and from either position, especially from the sea, it wears an aspect of remarkable seclusion. Yet, though the nest in which it sits is almost as bare of embellishment as the bald head of a hill of the hardest primitive rock, Portpatrick basks in a south-westerly exposure, and during high winds from most points of the compass is enviably snug, so that of late years many patients have been recommended by the faculty to seek a shelter here from the keen east winds of spring and early summer. Most of the houses are of recent date; and all are built of native greywacke. The newest and principal street, about 350 yards long, commences near the centre of the basin at the harbour, and, running up towards the gorge or incision in the hill-screen, carries out the road to Stranraer. The street next in importance is bisected by the former nearly in the middle, has a slight curvature in its direction, and overlooks the harbour. Behind are some smaller streets.

The harbour of Portpatrick lies open to winds which blow about eight months in the year, and is exposed to a swell, which sometimes rolls into it with great violence. It was long a mere natural inlet, without any projecting elbow or sheltered recess; and the vessels which frequented it required to be flat-bottomed, and were drawn aground and re-launched at every voyage. But a pier of a kind then thought to be one of the finest in Britain, was built at it in 1774; and a reflecting lighthouse was erected to correspond with one

on the opposite coast at Donaghadee. In 1821 an artificial harbour on a grand scale was commenced from designs by Rennie. Its form is nearly that of a horse-shoe; the sides running out into piers, which at the entrance approach within 250 feet of each other. On the S side of the enclosed basin the old pier of 1774 projects inward on a line nearer the land than the centre of the basin; and on the other side is a large rock or skerry rising above the surface of the water, and partially protecting the space within from the wind and swell at the entrance. The harbour is thus divided into an outer and an inner harbour; and the passage from the former to the latter, between the old pier and the skerry, has a width of 105 feet. The dimensions of the entire harbour, outer and inner, are 710 by 495 feet. The depth of the outer harbour is from 4 to 20 feet at low water spring tides; and that of the inner harbour is on the average 6½ feet; but that over a bank in the passage between them is only 2½ feet at low water spring tides. The parapets of the new piers are formed of large blocks of grey limestone from Wales; and that of the southern one terminates in a semicircular sweep, within which rose a handsome lighthouse of the same material, and 46 feet high. Portpatrick, both as a seaport and as a town, owed nearly all its former importance to its commanding the shortest communication from Britain to Ireland. A weekly mail across the channel was established at it in 1662; and a considerable trade with Ireland resulted from the formation of the pier in 1774; so that the importation of cattle and horses rose from 17,275 in 1790 to 20,000 in 1812, to sink again to 1080 in 1837. Four good-sized vessels were also built here, the last in 1790. A great increase of business was expected to arise from the construction of the new harbour and the employment of two steam mail-packets, which transmitted from 8000 to 10,000 letters per diem in 1838, and which in the twelve preceding years conveyed an annual average of 12,000 passengers, besides linens and lime from Ireland, coals from Ayrshire, and cotton goods from Glasgow and Manchester. There was a large custom-house; and troops were often shipped here for Ireland. But the establishment of communication between Glasgow and Belfast, between Holyhead and Dublin, and later, between Stranraer and Belfast, did Portpatrick severe damage, reducing it suddenly to insignificance. The mail ceased to run in 1849; the lighthouse was removed in 1869; and the massive harbour-works, which cost the country £500,000, are lapsing fast to a state of utter ruin. A submarine telegraph cable, from Portpatrick to Donaghadee, was laid on 23 May 1853.

Portpatrick derives its name from the great Apostle of Ireland, who once, according to legend, here crossed the channel at a single stride, and left a deep footprint on a rock that was removed in the formation of the harbour. On another occasion, the savages of Glenap had cut off his head; but, picking it up, the Saint quietly walked to Portpatrick, plunged into the sea, and, *holding his head in his teeth*, swam safely to the opposite shore. A chalybeate spring bears the name of St Patrick's Well; whilst a pre-Reformation chapel, called Chapel Patrick, stood on or near the site of the old parish church. The babe, St Cuthbert, too, with Sabina, his mother, is said to have crossed from Ireland on a stone curragh, and landed 'in Galwicia, in that region called Renni, in the harbour of Rintsnoe,' which Skene identifies with Portpatrick. The barony of Portree, within which were the village and haven of Portpatrick, belonged anciently to the family of Adair of Kilhill, from whom, about 1608, it passed to Sir Hew Montgomery (afterwards Viscount Airds, in the county of Down). It remained in his family for three generations, and he speedily obtained the erection of the village into a burgh-of-barony, and imposed on it the name of Port Montgomery—a name, however, that never came much into vogue. Hitherto all the lands which constitute the present parish had belonged to the parish of Inch, and were called the Black Quarter of Inch. But in 1628 a charter, granted by Charles I.,

detached them—Portree, Kilhilt, and Sorbies— from Inch, erected then into a separate parish, ordained that a church which was then building should be the parish church, and constituted it a rectory under the patronage of the lord of the manor. Another charter, which was dated two years later, and which suppressed the abbey of Saulseat, granted as endowment for the new parish the unappropriated revenues of the parish churches of Saulseat and Kirkmaiden, which had belonged to the abbey. The ruinous old parish church, built in 1628-29, was a cruciform structure, with a circular central tower, suggestive of defensive purposes. In the churchyard lie 60 of the persons lost in the wreck of the *Orion*, a Glasgow and Liverpool steamer, which occurred in fine weather, $\frac{1}{4}$ mile N of the 'Port,' 18 June 1850. Portpatrick was long the Greta Green for Ireland; and the marriages of 198 gentlemen, 15 officers, and 13 noblemen are registered in the kirk-session records for the 50 years prior to 1826, in which year the church courts interfered with the practice. The lowest fee then was £10 to the minister and £1 to the session clerk. The present parish church, built in 1842, is a handsome edifice, with 800 sittings, and a square embattled tower. The plain Free church was built soon after the Disruption. Portpatrick has a post office, with money order, savings' bank, and telegraph departments, a comfortable hotel, and good sea-bathing. Pop. of village (1831) 1205, (1841) 996, (1861) 1206, (1871) 685, (1881) 591, of whom 358 were females. Houses (1881) 125 inhabited, 14 vacant.

The parish is bounded NW and N by Leswalt, NE by Inch, E and SE by Stoneykirk, and SW by the Irish Channel. Its utmost length, from NE to SW, is $4\frac{1}{2}$ miles; its utmost breadth is 4 miles; and its area is 9145 $\frac{1}{2}$ acres, of which 43 are foreshore and 8 water. The coast, $\frac{1}{2}$ miles in extent, has a general south-south-easterly trend. Over its whole extent it is bold, rocky, and dangerous to navigation, presenting a line of natural rampart, interrupted only by four or five little bays, and comprising a series of cliffs and shelving rocks pierced with caves, torn with fissures, or notched with protuberances, and rising, in many instances, to an altitude of from 100 to 200 feet. The little bays have the capacity of mere creeks, yet possess pleasant features, and, in a certain degree, or in given winds, afford safe entrance and shelter to vessels. Killantringan Bay touches, or partly forms, the northern boundary; Port Kale and Port Mora, the next bay and a twin one, are $\frac{1}{2}$ mile to the SSE; and Portpatrick and Castle Bays are respectively $\frac{1}{2}$ and 1 mile from the southern boundary. Port Mora, though separated from Port Kale by only a slender promontory, has a beach entirely different, its composition being of the fine soft sand of freestone, while that of the other's beach is the grit and small boulders of primitive rock. A glen which comes down to the head of Port Mora, and brings to the sea the silvery waters of a brook, is pronounced by the writer of the *New Statistical Account* 'the most picturesque in Galloway'; its stream making 'a very pretty wild waterfall,' and its sides being traversed by walks which are 'very tastefully cut, and connect the two bays with the present mansion-house of Dunskey, situated about a mile distant on the height.' The interior of the parish is all elevated, and attains its greatest altitude about $3\frac{1}{2}$ miles from the coast. The surface is either hilly or irregularly undulated, exhibiting scarcely any level ground except in a few small tracts of peat moss. Most of the slopes are gradual, but a few are too steep to permit the traction of the plough, and many, especially the loftier ones, are flecked or jagged with bare rock. Most of the hills are tabular, but a few are conical or conical. The loftier ones are called the fells of the farms to which they severally belong; and the loftiest of all, CAIRN PAT (593 feet), is the highest ground in the Rhinds of Galloway, and commands a very extensive and diversified prospect. The prevailing rocks are greywacke, greywacke slate, and alum slate, the first of which is quarried as building material. The soil is almost everywhere moorish or

mossy; and where cultivated, it has become a brown mould or a blackish moss, streaked or interworked with a marly clay, taken up by the plough from the subsoil. Mosses abound, and, even on the hill tops, are frequently 6 or 7 feet deep. Nearly three-fourths of the entire area are regularly or occasionally arable; rather less than one-third is waste or pastoral; and about 310 acres are under plantation. The chief antiquity and the chief mansion are noticed under DUNSKY. Three proprietors hold each an annual value of more than £500. Portpatrick is in the presbytery of Stranraer and the synod of Galloway; the living is worth £188. The public school, with accommodation for 277 children, had (1884) an average attendance of 129, and a grant of £106, 9s. 6d. Valuation (1860) £4745, (1885) £6587, 5s. 1d. Pop. (1801) 1090, (1831) 2239, (1861) 2159, (1871) 1492, (1881) 1285.—*Ord. Sur.*, sh. 3, 1856.

Portract, an estate, with a mansion, in Holywood parish, Dumfriesshire, near the right bank of the Nith, $3\frac{1}{2}$ miles SSE of Auldgrith.

Portramsay, a village and a harbour on the NW side of Lismore island, Argyllshire, near its NE end, 10 miles N by E of Oban. The harbour, large and commodious, and affording one of the best anchorages on the Argyllshire coast, is protected by several islets in the offing, and may be entered by any of three different straits between the islets. Strangers, however, must be careful of some neighbouring rocks, scarcely visible at low water, and entirely covered when the tide is up.—*Ord. Sur.*, sh. 45, 1876.

Portree (anciently Kiltaragleann, from Celt. *Kil*, 'a chapel'; *tar*, 'the bottom'; and *gleann*, 'a glen,' meaning the chapel at the bottom of the glen), a parish with a town of the same name in the Skye district of Inverness-shire, and comprehending the central part of the E coast of the island of Skye, as well as the adjacent islands of Raasay and South Rona, which are separately noticed. The portion in the island of Skye is bounded N by the parish of Snizort, E by the Sound of Raasay, S by the parish of Strath, and W by the parishes of Bracadale and Snizort. The total length, from the mouth of Bearraigh river on the N to the source of a small stream rising between Marsco and Beinn Dearg and flowing to the river Sligachan, is 16 $\frac{3}{4}$ miles, and from the extremity of Rona south-south-westward to the same point on the S is 23 miles; the greatest width of the mainland portion, from the river Snizort on the W due eastward along the head of Portree Loch, is $6\frac{1}{2}$ miles, and to the E side of Raasay in the same line 10 $\frac{1}{2}$ miles; while the total area is 55,974-628 acres, including 336-734 acres of water, 1663-997 of foreshore, and 34-928 of tidal water. Of the total area 15,704-384 acres are in Raasay and 2564-905 in Rona. The coast is mostly rocky, and rises pretty steeply from the sea, while at various points there are lines of cliff. Near the N end is the small Holm Island, and there are several skerries between Portree Harbour and the Narrows of Raasay. The coast-line is indented by several bays, rendering the outline along the E highly irregular. Five miles from the N end is Portree Bay and Loch, $\frac{1}{2}$ mile wide at the mouth, and extending 2 miles inland; $2\frac{1}{2}$ miles farther S is the small Tianavaig Bay; and at the narrows of Raasay a promontory juts out with Camas a' Mhor-bheoil on the N and Balmeach Bay on the S. Opposite Kyle More between the S end of Raasay and Scalpay, is Loch Sligachan, 3 furlongs wide at the mouth and 3 miles deep; while opposite the middle of Scalpay is Loch Ainort, $\frac{1}{2}$ mile wide at the mouth and 1 $\frac{1}{2}$ mile deep. Only the NW side of Loch Ainort is in Portree parish, and from the head of the loch the parish boundary line strikes up the burn at Kinloch Ainort, twists southward to the source of a burn that rises between Marsco and Beinn Dearg, and follows that stream to the river Sligachan, down which it passes to the top of Loch Sligachan. From the top of Loch Sligachan it strikes up the Allt Dubh across the road to Portree, and follows the course of the stream to the bend before it again crosses the road, and passes irregularly to the NW, till it reaches the river Snizort at

Achaleathan. It follows the course of the Snizort to Hornisco Burn, and thence turns eastward to the small Loch nam Learg, and then irregularly N and NNE to the middle of Lake Leathan, and thence down Bearraig river to the sea, the southern two-thirds of Loch Leathan being within the parish. The surface is irregular. In the portion to the N of Portree Harbour it rises from the sea by a steep slope terminating in a bold line of cliff, rising at Sithean Bhealich Clumhaig to a height of 1286 feet, and again sloping from this inland to a hollow from 250 to 450 feet above sea-level. To the NW of this there is another line of cliff, which, on the border of the parish, reaches a height of 1087 feet at Bealach Mor. In the portion between Portree Loch and Tianavaig Bay it again rises steeply from the shore, and then by a line of cliff to the ridge of Ben Tianavaig (1352 feet) whence it slopes north-westward to Portree Bay and Loch. Round the W and SW sides of Portree Loch it slopes from the loch up to heights of 1367 feet at Beinn na Greine, 1288 at Skriag, and 1300 at Stròc-bheimn, and from these again falls away to the basin of the river Snizort. Between these heights and the lower slopes of Ben Tianavaig is the basin of the Varragill river, and between Glen Varragill and the Narrows of Raasay the ground reaches a height of over 700 feet, and between Glen Varragill and Loch Sligachan heights of 1456 at Ben Lee and 1099 at Meall Odhar Beag. In the W of the peninsula, between Loch Sligachan and Loch Ainort, is Ben Glamaig (2537 feet) and Beinn Dearg Mheadhonach (2094). From these the ground slopes eastward to Glennn Torra-michaig, the upper end of which is 429 feet above sea-level, and then rises again to 922 feet above Moll. Speaking generally, there may be said to be a chain of hills along the coast broken by the sea lochs and another chain inland, the two lines being separated from N to S by the hollows occupied by Lochs Leathan and Fada, Glen Varragill and Glennn Torra-michaig. In the extreme N the drainage finds its way by small streams to Loch Fada and Loch Leathan, and thence by Bearraig river to the sea. On this river there is a pretty waterfall, as there are indeed on several of the other streams. Between Loch Fada and Portree Harbour the drainage is carried off by the Chraçaig and the Leasgeary, which flow into the harbour E and W of the town respectively. In the portion between Portree Harbour and Loch Sligachan the drainage of the portion farthest to the W passes by Glenmore river to the Snizort, that of the centre by the Varragill and its tributaries, to the sea at Portree Loch, or by smaller streams directly into the loch and harbour; that of the district along the coast by a number of small streams direct to the sea, and that of the peninsula between Loch Sligachan and Loch Ainort by small streams to the river Sligachan or direct to the sea. There are a number of small lochs and lochans, but the only ones that need be mentioned are Loch Fada (454 feet; 6 × 2 furl.) and Loch Leathan (438; 6 × 4 furl.) in the N; and Loch Conardan (4 × ½ furl.), ¾ mile SW of Tianavaig Bay. Both lochs and streams afford excellent trout fishing. South of Loch Sligachan, about Ben Glamaig, is a deer forest of about 10,000 acres belonging to Lord Macdonald. Particulars about Raasay and Rona are given in separate notices, and what follows applies to the mainland part of the parish. The soil includes patches of sand, gravel, and clay, but is principally very wet gravel or moss, almost everywhere cold, unkindly, and barren, so that the arable part bears but a very pitiful proportion to the pasture and waste moorland. Ground under coppice or plantation is hardly to be seen except about the town of Portree, as trees will not thrive. The little that is under cultivation is in the hands of crofters, who have a hard struggle for life, and have generally to eke out their scanty means of subsistence by taking part as 'hired-men' in the east coast herring fishing. The townships between Loch Sligachan and Tianavaig Bay are known as The Braes, and the inhabitants of them have, during the last three years (1831-84), earned a somewhat unenviable notoriety for their lawless proceedings in connection with

alleged land grievances. The other principal crofter districts are at Sconser, on the S side of Loch Sligachan; at Glenmore, near the centre of the parish on the W side; and Drumuie, 2½ miles NW of Portree. The greater part of the parish is under sheep. The underlying rocks are mostly volcanic, the tract of country between Loch Sligachan and Loch Ainort being occupied by syenite, and that N of Loch Sligachan by greenstone. On the S shore of Loch Sligachan near the centre is a patch of rock of oolitic age, and similar deposits exist on both sides of Portree Bay, and extend in a belt northward from the head of Loch Sligachan, and also northward from Portree Bay. They consist of beds of limestone, shale, and sandstone, and are in many places richly fossiliferous. In the early part of the present century Lord Macdonald tried, but unsuccessfully, to work some veins of lignite. A cave, 3 miles N of the entrance to Portree Bay, and about 5 miles from the town of Portree, bears the name of Prince Charles' Cave, and here, according to the guide books, the prince spent some time in concealment after Culloden; but it is more than doubtful whether he was ever at the place at all, for, according to Flora Macdonald's account, he passed straight from Kingsburgh to Portree, and, after visiting the inn, embarked almost at once for Raasay. On a stream a little to the S of this cave are two small waterfalls. There are some other caves along the coast, but none of importance. The SKYE Union Poorhouse is in this parish about ¼ mile W of the town of Portree. The principal residences are Portree House and Viewfield House at the town, Lord Macdonald's shooting-box at Loch Sligachan, and Raasay House. The only industry is a small woollen manufactory, started during the destitution in the district about 1850, and the only result as yet of the many proposals to bring the manufacture into the district where the raw material is produced. The fabrics woven are excellent tweeds, plaids, and winceys. The antiquities are confined to a few tumuli, and in 1884 a valuable find of silver coins of the latter part of the 16th and the early part of the 17th centuries took place at Hillside of Woodend. The coins belonged mostly to the reign of James VI., with a few of Elizabeth, and one of Henry of Navarre.

The parish, which was anciently included in Snizort and Kilmuir, was disjoined in 1726. It is in the presbytery of Skye and the synod of Glenelg, and the living is worth £273 a year. The churches are noticed in connection with the town. Under the school board the schools of Braes, Glens, Portree, Raasay, Rona, Sconser, and Torran, with respective accommodation for 90, 27, 180, 30, 30, 50, and 60 pupils, had (1884) an average attendance of 32, 20, 123, 36, 26, 25, and 23, and grants of £14, 17s., £23, 1s. 3d., £110, 6s. 6d., £36, 16s., £25, 10s. 10d., £2, and £27, 16s. In the Braes district there is a school built and endowed with part of a fund of £2050, given by Mr Donald Macdiarmid, of South Carolina, in 1831, for the purpose of erecting and endowing schools at Borve, in Snizort, and Braes, in Portree. The fund belonging to the Braes school is £800, and it is proposed under the Endowed Schools Act to hand the management over to the school board. In the same district there is a mission church, built partly by public subscription and partly by a grant from the funds of the Baird Trust. Lord Macdonald holds almost the whole of the mainland part of the parish, 1 other holds between £500 and £100, 2 hold between £100 and £50, and there are a few of smaller amount. Valuation (1860) £4607, (1884) £8406. Pop. of whole parish (1801) 2246, (1831) 3441, (1861) 3159, (1871) 2928, (1881) 3191, of whom 1485 were males and 1706 females. Of these 2448 (1103 males and 1345 females) were in the mainland portion, including the town of Portree.

PORTREE BAY opens off the Sound of Raasay almost opposite the middle of the island of Raasay, and is 1½ mile wide at the mouth. From this it extends westward about 2 miles to the town of Portree, and then turns off at right angles southward for over a mile in the portion known as Portree Loch. The shape resembles a stumpy

PORTREE

leg and foot, the foot being formed by the loch. From the N side of the bay a point projects, terminating at Sgeir Mhòr, and from the S side Vriskaig Point stands out a little farther to the W. The portion of the bay to the W of a line drawn between these two points is Portree Harbour, a fine land-locked piece of water, spacious enough to accommodate a large number of vessels, with a depth of from 5 to 6 fathoms, and the bottom, being strong clay, affords excellent holding ground for ships at anchor. At the corner where the bay turns southward there is another point, on which the Established church and part of the town of Portree stands. The upper part—the Loch—is nearly dry at low water. On both sides of the portion running E and W there are picturesque cliffs of volcanic rocks. One reach on the N side somewhat resembles Salisbury Crags on Arthur's Seat at Edinburgh, and those on the S side are pierced at several points of their base by caverns, and at other places recede so as to leave a steep grassy talus between them and the shore. Suidh Fhinn or Fingal's Seat, to the W of Portree Loch, commands from its summit a magnificent view of almost the whole of the western coast of Ross-shire, and of nearly the whole of the Skye and Long Island portions of the Hebrides. The TOWN OF PORTREE, a post-town and seaport, stands at the point where Portree Bay bends round to the southward, and, though of no great size, gains importance from being the largest seat of population and the chief business centre for Skye and the neighbouring islands, as well as the headquarters of the ever-increasing number of tourists who visit the district every year. *Vid* Dingwall and Strome, the town is 103½ miles W of Inverness, and 32 miles WSW of Strome Ferry; by steamer it is 120 miles NNW of Oban, and 60 miles S by E of Stornoway; and by road 24½ NW of Broadford, 14 SE of Uig, and 23½ E of Dunvegan. The name is a corruption of *Port-an-righ*, the king's harbour, a title which was given when the royal fleet, commanded by King James V. in person, anchored in the harbour on the occasion of the great expedition to the Western Isles in 1540. Other authorities, however, refer the origin of the name, not to the visit of King James, but to that of Haco, King of Norway, when on his LAROS expedition. There seems to have been a Columban church in the neighbourhood, for the bay NW of the town was formerly called Loch Columkille; and an islet, with traces of graves and of a small building standing E and W, is called Eilean Columkille. This is possibly the church from which the old name of the district was taken. The site is along a steep acclivity at the north-western corner of the bay, and the description given by Alexander Smith in his *Summer in Skye* (1865) is as applicable then as now:—Portree folds two irregular ranges of white houses, the one range rising steeply above the other, around a noble bay, the entrance to which is guarded by rocky precipices. At a little distance the houses are white as shells, and as in summer they are all set in the greenness of foliage, the effect is strikingly pretty; and if the sense of prettiness departs to a considerable extent on a closer acquaintance, there is yet enough left to gratify you as long as you remain there, and to make it a pleasant place to think about when you are gone. The lower range of houses consists mainly of warehouses and fish stores; the upper, of the main hotel, the two banks, the courthouse, and the shops. A pier runs out into the bay, and here, when the state of the tide permits, comes the steamer on its way to or from Stornoway, and unloads. Should the tide be low the steamer lies in the bay, and her cargo and passengers come to shore by means of boats. She usually arrives at night; and at low tide the burning of coloured lights at the mast-heads, the fitting hither and thither of busy lanterns, the pier boats coming and going with illuminated wakes and ghostly fires on the oar blades, the clatter of chains and the shock of the crank hoisting the cargo out of the hold, the general hubbub and storm of Gaelic shouts and imprecations, make the arrival at once picturesque and impressive. In the bay the yacht of the tourist is continually lying; and at the

PORT-SONACHAN

hotel door his dogcart is continually departing or arriving. In the hotel parties arrange to visit Quirang or the Storr, and on the evenings of market-days, in the large public rooms, farmers and cattle-dealers sit over tumblers of smoking punch and discuss noisily the prices and the qualities of stock. Besides the hotel and the pier, the banks and the courthouse already mentioned, there are other objects of interest in the little island town—three churches, a post office, a poorhouse, and a cloth manufactory. And it has more than meets the eye—one of the Jameses landed here on a visitation of the isles; Prince Charles was here on his way to Raasay; Dr Johnson and Boswell were here; and somewhere on the green hill on which the pretty church stands, a murderer is buried—the precise spot of burial is unknown, and so the entire hill gets the credit that of right belongs only to a single yard of it. In Portree the tourist seldom abides long; he passes through it as, a fortnight before, he passed through Oban. It does not seem to the visitor a specially remarkable place, but everything is relative in this world. It is an event for the Islesman at Dunvegan or the Point of Sleat to go to Portree, just as it is an event for a Yorkshireman to go to London.' Whatever may have been the case when King James was here, however, it is certain that in Prince Charles' time, and even later, when Dr Johnson and Boswell were here, there was no village, but only an inn, and perhaps a clachan or kirkton, for Boswell says, in 1773, 'Sir James Macdonald intended to have built a village here, which would have done great good;' but though Sir James did not carry out the plan, the village made its appearance in due time under Sir James' successor. To the S of the town a craggy wooded promontory projects into the harbour, and is crowned by an octagonal tower erected by Dr Alexander Macleod in 1834, and commanding a good view. Portree House, belonging to Lord Macdonald, is to the W of the town; and farther W still is the woollen manufactory already alluded to. The quay was erected in 1819, but there is no great depth of water at low tide. The Established church on the promontory already noticed was built in 1825, and contains 800 sittings. There are also Free, U.P., and Episcopal churches, of which the last, St Columba's, is a good Gothic edifice, after designs by Mr Ross of Inverness, erected in 1884 as a memorial to the late Bishop Mackarness. None of the others call for special notice. Skye being one of the judicial divisions of Inverness-shire there is a courthouse, erected in 1867, where the resident sheriff-substitute holds his courts. The district prison, legalised in 1848, was formerly used for prisoners whose sentences did not exceed 60 days, but since the passing of the Prisons Act it has been licensed only for prisoners whose sentence does not exceed 14 days. Instead of the one hotel mentioned by Alexander Smith there are now three, and there are also a post office, with money order, savings' bank, insurance, and telegraph departments, under Dingwall, branches of the Caledonian, National, and North of Scotland Banks, a National Security Savings' Bank, and agencies of 11 insurance companies. Portree is one of the polling stations for Inverness-shire. The sheriff court is held for both ordinary and small debt cases every Thursday during session. There are cattle fairs on the last Tuesday of May and the third Tuesday of August. Communication is maintained with the mainland by the Highland Railway Company's steamer between Portree and Strome Ferry every day during the summer months, and in winter three times a week, while the Glasgow and Stornoway steamers call thrice a week both summer and winter. The principal imports are miscellaneous goods; and the principal exports are sheep, cattle, wool, salt herring, salmon, and cod and ling salted and dried. Pop. of town (1861) 679, (1871) 731, (1881) 893, of whom 396 were males and 497 females. Houses, 111 inhabited, 5 uninhabited, and 1 building.

Port-Sonachan. See KILCHRENAN.

Portsoy, a seaport and burgh of barony in Fordeyce parish, Banffshire. It was formerly the terminus of the Grange and Portsoy branch of the Great North of Scotland railway system, but is now one of the chief stations on the loop line of the same system, which was constructed in 1883-85, and which passes from Keith by Portsoy, Cullen, and Buckie to Elgin. By rail it is $8\frac{1}{2}$ miles W of Banff, $13\frac{1}{2}$ NE of Grange, $17\frac{3}{4}$ NE of Keith, and when the new line is finished it will be about $5\frac{1}{2}$ miles E of Cullen, 11 E of Buckie, and $24\frac{1}{2}$ E by N of Elgin. By road it is 18 miles ENE of Fochabers. It stands on a point of land on the W side of the little estuary of the Soy Burn, which carries off the surplus water from the Loch of Soy—now sadly encroached on by the railway—and from which the place takes its name. On the SE side the Burn of Durn enters the sea at the Back Green. The town is of some antiquity, and was in 1550 constituted by Queen Mary a burgh of barony holding of Sir Walter Ogilvie of Boyne, and with all the usual privileges, and the charter was ratified by Act of Parliament in 1581. The present superior is the Earl of Seafield. As might be expected from its age the town is very irregularly built, and many parts of it have a very quaint appearance. There seems to have been a castle at one time, but there is no record of it, and its existence is only inferred from the place once known as the 'Castle Brae.' Of an ancient church dedicated to St Columba, which stood at the Aird, 'hard by the toune where now [1724] is a large meeting-house lately buildit,' no trace now remains, though the Aird still exists; and even where the meeting-house was is not exactly known, though it is supposed to have been the Episcopal church which was destroyed by Cumberland's soldiers in 1746, and seems to have stood between the house and mill of Durn. There is a well still known as St Colme's or St Comb's Well. The district was constituted a preaching station in connection with the Established Church in 1741; and a chapel of ease was constituted in 1836, and became a *quoad sacra* charge in 1871. The church, which was built in 1815, was greatly improved in 1881, a clock tower having been previously erected by public subscription in 1876. The clock and bells in this were the gift of Mr F. P. Wilson, a native of the town, who had made a considerable fortune by his commercial enterprise abroad. The original church bell, now at the school, bears the inscription, 'For the use of the Presbyterian Church, Portsoy. John Spielt, Rotterdam, 1746.' The bell which succeeded it is lying unused in the present clock tower. The Free church, built soon after the Disruption, and rebuilt with a handsome spire in 1869, has 456 sittings. The U.P. church, built in 1866, has 400 sittings. The Episcopal church (St John the Baptist), built in 1841, has 150 sittings. The sacramental plate belonged to the old church already mentioned as burnt in 1746. The Roman Catholic church of the Annunciation, erected in 1829, has 150 sittings. None of them call for more particular notice. Under the school board of Fordeyce, the public, female public, and female industrial schools, with respective accommodation for 360, 157, and 90 pupils, had (1884) an average attendance of 295, 84, and 57, and grants of £281, 16s. 6d., £74, 13s., and £41, 13s. The cemetery on the sloping ground SE of the town was originally opened about 1728, and was extended in 1874. It contains a monument to Miss Bond, a native of Fortrose, who in 1814 published a book called *Letters of a Village Governess*, giving some curious pictures of life in a country village at the beginning of the present century. She died at Portsoy in 1839. The serpentine and associated minerals for which the place was long famous have been noticed under FORDYCE. An excellent harbour was formed by the Earl of Seafield in 1825-28, but was destroyed by storms in January 1839. During the present year (1884) the old channel has been cleared out, and the works then constructed restored at a cost of about £12,000, concrete being used instead of stone. There is now accommodation for 12 vessels of 100 tons, and a depth of 11 feet at high water of stream tides and of 9 feet at neap tides,

the basin being tidal. Portsoy ranks as a creek under Banff, and the few ships belonging to the port have an average tonnage of under 100 tons. The chief imports are coals coastwise and bones from the Baltic, and the principal exports grain, herring, and potatoes. There were belonging to the port in 1882, 32 first-class herring fishing boats, 4 second-class boats, and 20 third-class boats, employing 108 resident fisher men and boys. On an average from 40 to 50 boats prosecute the fishing from Portsoy harbour, and 52 thus engaged in 1883 had a total catch of 5720 crans. The other industries in the town are a small ropework and a bone mill, and in the neighbourhood there are a wool mill, and Glenglassaugh distillery, where there are extensive buildings, erected in 1873-75 at a cost, including fittings, of about £10,000. Trade has considerably increased since the railway was originally opened, and will probably be developed still more by the new line and the improved harbour accommodation. There is a coastguard station, a post office, with money order, savings' bank, and telegraph departments, under Banff, branch offices of the North of Scotland and Union Banks, agencies of 10 insurance companies, two hotels, a Young Men's Christian Association with a library, a reading and news room, and a newspaper, the Independent *Banffshire Reporter* (1856), published on Saturday. In the neighbourhood is Durn House, associated with the early days of Ferguson the astronomer. The only distinguished native is the Rev. Peter Thomson, Free Church minister of St Fergus, who died in 1880 at the beginning of what promised to be a very brilliant career. The story of his life has been told in *A Scotch Student* (Edinh. 1881). Pop. of town (1841) 1720, (1861) 1903, (1871) 1822, (1881) 2090, of whom 916 were males and 1174 were females. Houses 504 inhabited, 13 uninhabited, and 4 building. The *quoad sacra* parish is in the presbytery of Fordeyce and synod of Aberdeen. Pop. (1881) 2313.—*Ord. Sur.*, sh. 96, 1876.

Port-Wemyss, a village on the coast of Kilchoman parish, Islay island, Argyllshire, $14\frac{3}{4}$ miles SW of Bridgend.

Port-William, a small seaport in Mochrum parish, SE Wigtonshire, on the E side of Luce Bay, 7 miles WNW of Whithorn, $6\frac{1}{2}$ SW of Whauphill station, 11 SW of Wigton, and 24 SE of Stranraer. Founded about 1770, by Sir William Maxwell of Monreith, in honour of whom it is named, it chiefly consists of a terrace-line of cottages, well built, slated, and fronting the sea, and has a neat appearance. In 1788 a small barrack-house was erected for the accommodation of military, and of custom-house officers occasionally sent for the suppression of smuggling. The harbour, though small, is safe, and sufficiently commodious. On all sides but the S, it is well-sheltered by the land; on the S, it is defended by a artificial rampart or strong wall; and it easily admits vessels of 200 tons burden. The principal trade consists in the exportation of agricultural produce to England. The village has a post office, with money order, savings' bank, and telegraph departments, a branch bank of the British Linen Co., 4 hotels, excellent sea-bathing, a good bowling-green, a masonic lodge, a Free church, a U.P. church, and a public school of recent erection. Pop. (1792) 210, (1841) 634, (1861) 884, (1871) 829, (1881) 755.—*Ord. Sur.*, sh. 4, 1857.

Possil House, a quadam mansion in Maryhill parish, Lanarkshire, 2 miles N of the centre of Glasgow. It was a large but plain edifice, whose finely wooded grounds had a quiet secluded aspect, but about 1872 they were laid out as the site of a new Glasgow suburb called Possil Park. Possil was for many years the home of the historian, Sir Archibald Alison (1792-1867). Here he died, and here in 1848 he received a two days' visit from Charles Dickens. See his *Autobiography* (1882).—*Ord. Sur.*, sh. 30, 1866.

Posso. See MANOR.

Potarch. See BIRSE and KINCARDINE O' NEIL.

Pot of Gartness. See GARTNESS.

Poundland, a village in Colmonell parish, Ayrshire, on the right bank of the Stinchar, 8 miles S of Girvan.

Pow, any one of numerous sluggish rivulets or stagnant burns in marshy or alluvial districts of Scotland. The name is an Anglicised or softened form of the Gaelic *Poll*, and the Cymric *Pwl*, signifying 'a pool, a ditch, a stagnating stream, or a marshy place;' and it correctly describes nearly all the streams to which it is applied.—A **pow**, called the **Pow of Cummertrees**, traverses the western side of the Howe of Annandale, from near the northern extremity of Dalton, through that parish and the parishes of Ruthwell and Cummertrees to the Solway Firth, 2½ miles W of the mouth of the river Annan; is joined, on its left bank, 4½ miles from its source, by an overflow or feeder from the river Annan; seems, from the junction of that overflow onward to its mouth, to run in the ancient channel of the Annan; and has a total course, chiefly in a south-south-easterly direction, of 8 miles.—A **pow** in Forfarshire is formed by numerous head-streams in Monreath Moor, principally within Guthrie parish; drains the parishes of Guthrie, Kinnell, and Farnell, 7½ miles north-eastward to the South Esk, 1½ mile above Montrose Basin; aspires to be called **Pow Water**; and imposes names, such as **Pow-side**, **Pow-mill**, and **Pow-bridge**, on various objects on its banks.—A **pow** in Perthshire rises in some mosses below Methven; runs mainly along a ditch or artificial canal, formed to drain off its stagnant and marsh-making waters; pursues a sluggish course of 11 miles to the Earn, near Innerpefferay; and is noted in some doggerel song well known in the country around it.—A **pow** in Kirkcudbrightshire rises, under the name of **Glaisters Burn**, in Kirkgunzeon parish; circles round the N end of the Criffel range of hills; traverses one lake, and receives the superfluous waters of another; goes eastward through Newabby parish, assuming there the name of **Newabby Pow**; has a total course of 15 miles; glides into the estuary of the Nith 8 miles S of Dumfriess; and is navigable for a short way by small vessels.—A **pow** in the Carse of Stirling rises near **Banockburn House** in St Ninians parish; goes 8 miles eastward to the Forth, at a point 1½ mile E of Airth village; and, like the Forfarshire **Pow**, gives name to various seats and other objects on its banks.—A **pow** in the Upper Carse of the Forth drains part of Kippen parish, and is distinctively called the **Pow of Glimms**.—A **pow** in the low grounds of Kyle, in Ayrshire, is formed by three or four head-streams, and goes to the Firth of Clyde at a point 3½ miles N of the mouth of the river Ayr.—An eighth **pow**, in Edinburghshire, has been noticed as the **JORDAN**; and there are several others too unimportant to require special mention.

Powfoot or **Queensberry**, a small watering-place in Cummertrees parish, Dumfriesshire, on the Solway Firth, at the mouth of **Pow Water**, 4 miles WSW of Annan.

Powfowls House, a modern mansion in Airth parish, Stirlingshire, near the shore of the Firth of Forth, 5½ miles NNE of Falkirk.

Powmillon Burn, a rivulet of East Kilbride, Glasgow, and Avondale parishes, Lanarkshire. It rises near Greenside, and runs 7 miles north-eastward and south-eastward, till, after passing through Strathaven, it falls into **Avon Water**, 1 mile E by S of that town.—*Ord. Sur.*, sh. 23, 1865.

Powrie, an estate, with an old castle, in Murroes parish, Forfarshire, 3 miles NNE of Dundee. The castle was long the residence of the ancient family of **FOTHERINGHAM**, who acquired the lands of **Westor Powrie** in the reign of Robert III. (1390-1406).

Powsail Burn. See **DRUMMEIZIER**.

Powtrail Water, a head-stream of the river Clyde in Crawford parish, Lanarkshire. It rises on the northern side of **Scaw Law** (2166 feet) at an altitude of 1900 feet, close to the Dumfriesshire boundary; runs 7 miles north-north-eastward to a confluence (970 feet) with **Daer Water**, at a point 2½ miles S of **Elvanfoot station**; and brings down the Roman or 'Wellpath' road from Nithsdale to Clydesdale.—*Ord. Sur.*, sh. 15, 1864.

Poyntzfield House, a mansion in Resolis parish, Cromartyshire, 3½ miles S of Invergordon, under which

there is a post office of **Poyntzfield**. Its owner, **George Mackenzie Gun Munro, Esq.** (b. 1862; suc. 1869), holds 1776 acres in the shire, valued at £1371 per annum.—*Ord. Sur.*, sh. 94, 1878.

Premnay, a parish in Garioch district, Aberdeenshire, containing, close to the northern boundary, **Insch station** on the Great North of Scotland railway, 13½ miles SE of Huntly and 27½ NW of Aberdeen. Containing also **Rotheuey** and **Auchleven** villages, it is bounded NW and N by **Insch**, NE and E by **Oyne**, S by **Keig**, and W by **Leslie**. Its utmost length, from N to S, is 3½ miles; its utmost width, from E to W, is 3¼ miles; and its area is 5432½ acres, of which 1½ are water. The drainage is carried eastward towards the **Ury** by **GADIE Burn**, traversing the interior, and the **Shevock**, tracing the northern boundary. Along **Gadie Burn** the surface declines to 400 feet above sea-level; and thence it rises westward and southward to 754 feet at **Westfield**, 747 at **Waukmill Hill**, 834 at **Tillymuick**, 999 near **Hillhead**, 927 at **Brackla Hill**, 1412 at **Black Hill**, 1564 at **Hermit Seat**, and 1619 at the **Watch Craig** at the SE corner of the parish. The three last heights all culminate right on the southern boundary, and the last is a summit of broad-based **BENNOCHIE**. Red or pink granite, of a kind easily worked and well suited for all sorts of building purposes, abounds to the S of **Gadie Burn**, and clay-slate to the N; whilst serpentine forms a bed 200 yards W of the parish church. The soil on the banks of **Gadie Burn** is various, but on the left bank is generally sharp and good; whilst along the foot of **Bennochie** is wet and cold. A few acres are under small plantations; rather more than 3000 acres are arable; and nearly all the rest of the land is pastoral or waste. There are **Druidical** remains at **Druidstone**, and a circular camp at **Tillymuick**. **Lickleyhead Castle** (1629) was restored about 1876, and is let to a shooting tenant; but the former mansion of **Overhall** is still a farmhouse. **Auchleven** has a small woollen factory. The property is divided among four. **Premnay** is in the presbytery of **Garioch** and the synod of **Aberdeen**; the living is worth £180. The parish church, 2 miles SSE of **Insch station**, was built in 1792, and, as enlarged in 1828, contains 360 sittings. **Leslie** and **Premnay Free church** stands 2½ miles to the W, close to the **Leslie** boundary. The public school, with accommodation for 120 children, had (1884) an average attendance of 69, and a grant of £48, 11s. Valuation (1865) £3572, (1885) £4438, 8s. 4d., plus £588 for railway. Pop. (1801) 486, (1831) 625, (1861) 916, (1871) 997, (1881) 930.—*Ord. Sur.*, sh. 76, 1874.

Preshome. See **RATHVEN**.

Pressmennan, Loch. See **STENTON**.

Preston, a village in **Prestonpans** parish, **Haddingtonshire**, ½ mile S by E of the town of **Prestonpans**, and near **Prestonpans station** on the North British railway. It got its name from being a *priests' town* of the monks of **HOLYROOD** and of **NEWBATTLE**, both of which fraternities had lands adjoining it; and, with **Prestonpans**, it figures prominently in traditional tales respecting their character and mercantile achievements. Both its relation to the monks, and its position on the great road of a former period, occasioned it to be frequently visited by the Scottish princes. It was formerly noted also for a fair, held on the second Thursday of October, and called **St Jerome's Fair**. The chapmen or travelling merchants of the **Lothians** had, at a period when their craft was one of no small importance to the country, formed themselves into a regular guild; and they annually attended this fair to elect their office-bearers for the following year. In a garden at the side of the road, near the E end of the village, stands, in the centre of what till last century formed a large open square, an elegant cross (1617), to the privilege of holding their annual meetings at which they laid claim—a stone pillar about 15 feet high, surmounting a small octagonal erection 9 feet in height. Till a comparatively recent date a social fraternity, styled the **Chapmen of the Lothians**, and chiefly composed of **Edinburgh** citizens, has been in the way of annually giving an

imaginary report of their extensive transactions; and more than once has the present minister of Prestonpans, since his election as their honorary chaplain forty years ago, heard this report with facetious accompaniments given from the cross by one of the magistrates or other civic dignitary of the metropolis.

N of the village stands, in a ruinous condition, a venerable tower which Sir Walter Scott supposed to have been originally a fortalice of the Earls of Home, when they bore an almost princely sway over the SE of Scotland, and which, for a long time after the close of the 14th century, when the circumjacent barony came by marriage into the possession of the Hamiltons of Fingalton and Ross, was the seat of that family, the principal one of their name, and afterwards called the Hamiltons of Preston. The seat or castle, of which the ruined tower is but a vestige, was burned by the Earl of Hertford in 1544, by Cromwell in 1650, and by accident in 1663, and was then abandoned. The Hamiltons are represented by Sir William Hamilton, Bart., whose father, Sir William (1791-1856), the learned Professor of Logic, reacquired the ruined tower and the garden around it in the early part of the present century. Figuring in history as staunch partisans of the cause of civil and religious liberty, they afforded marked protection to Mr John Davidson, the eminent confessor and 'Scottish worthy;' and, in the stirring times of the ecclesiastico-civil war, Robert Hamilton, the brother of Sir William of Preston, led the Presbyterians in the actions of Drumclog and Bothwell Bridge.

To the E of the cross, and within the enclosure surrounding what was, till lately, Dr Schaw's (now Miss Murray's) Hospital, are the remains of the ancient manorial residence of Lord Grange, whose wife, by his connivance, was carried off and clandestinely confined for years in the island of St Kilda. This, 'Preston House,' was built after the Hamiltons had abandoned the 'venerable tower,' and was never occupied by any of them. What remained of the estate of Preston after the Revolution was, owing to the representative of the Hamilton family declining to take the oaths to the Revolution sovereigns, transferred to a nephew of Hamilton, under a private arrangement for redemption should a covenanted sovereign come to the throne. It was for this nephew, Sir James Oswald, Lord Provost of Edinburgh, or his son who shortly thereafter succeeded him as laird, that Preston House was erected. The estate, however, being heavily burdened, the whole was, shortly after the beginning of the 18th century, disposed of, and coming before 1715 into Lord Grange's hand he made up titles to it on purchasing the various bonds, and he occupied the house in that year, when his elder brother, the Earl of Mar, was leading the rebellion. After Lord Grange's time it had a succession of owners, till acquired by Dr James Schaw before 1780, and occupied by him till his death, when by his will it was destined for the accommodation, maintenance, and education of poor boys. It was thus used till 1832, when a new and commodious house, in the old English style, was built, at a cost of nearly £3000, within the park near by. And this again, the Schaw funds being otherwise appropriated in 1881 under the Endowed Hospitals Act, has been recently rented by Miss Murray's trustees for the charitable upbringing and training of girls for domestic service, of whom there are already 40 in the institution.—*Ord. Sur.*, sh. 33, 1863.

Preston or Prestonmill, a village in Kirkbean parish, SE Kirkcudbrightshire, 14 miles S of Dumfries, under which it has a post office. See KIRKDEAN.

Preston. See BUNKLE.

Prestonfield, a mansion in Duddingston parish, Edinburghshire, at the southern base of Arthur's Seat, $\frac{1}{2}$ mile SW of Duddingston Loch, and 2 miles SE of Edinburgh Post Office. It was built in 1687, from designs by the celebrated Sir William Bruce of Kinross, on the site of the former mansion of 'Priestfield,' which had been burnt by the Edinburgh students in the No Popery riot of 11 Jan. 1681, its owner, Sir James Dick,

Bart., being then Lord Provost. A grandson of Sir William Dick of Braid (see CRAIG HOUSE), he had purchased the estate from Sir Thomas Hamilton, and at his death, in 1728, was succeeded by his daughter Janet, the wife of Sir William Cunyngham, Bart. of CAPRINGTON. Her son, Sir Alexander Dick, third Bart. (1703-85), was an eminent physician, and an intimate friend of Dr Samuel Johnson, who visited Prestonfield in 1773; and his son, Sir William (1762-96), is mentioned in Lord Cockburn's *Memorials* as 'a great sportsman, handsome, good-natured, and a first-rate skater. We were the only boys at liberty to play in his grounds, and to use his nice boat. . . . All between Duddingston Loch and the house was a sort of Dutch garden, admirably kept. . . . A very curious place.' Sir Robert Keith Dick, seventh Bart., in 1829 succeeded his cousin-german, Sir William Cunyngham, in the Caprington baronetcy; and his grandson, Sir Robert Keith Alexander Dick-Cunyngham (b. 1836; suc. 1871), is thus ninth and seventh Bart. since 1707 and 1669. He holds 228 acres in Midlothian, valued at £1759 per annum.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Prestongrange, a Scottish Baronial mansion in Prestonpans parish, Haddingtonshire, near the coast, and $\frac{1}{2}$ mile SW of the town. Part of it dates from the 16th century; but large additions, including a massive tower, were made in 1830 and subsequently. Robert de Quincey, Earl of Winchester, in 1184 bequeathed the estate to NEWBATTLE Abbey; and, after the death of the first Earl of Lothian in 1609, it was disposed of to John Morison, whose son, Sir Alexander Morison, Knt., as a Lord of Session assumed the title of Lord Prestongrange (1626-31). So did the Lord Advocate, William Grant, who purchased the property in 1746, and whose second daughter married Sir George Suttie of BALGONE. Her great-great-grandson, Sir George Grant-Suttie, seventh Bart. since 1702 (b. 1870; suc. 1878), holds 8788 acres in the shire, valued at £10,958 per annum.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Preston Hall, a mansion in Cranston parish, E Edinburghshire, near the right bank of Tyne Water, $\frac{1}{2}$ mile N by E of Ford, and $\frac{1}{2}$ miles E by S of Dalkeith. A splendid classical structure, it consists of a centre and two wings, connected by lower buildings, and was erected towards the close of last century by W. Adam for General Lord Adam Gordon, whose mother, the Dowager Duchess of Gordon, had purchased the estate in 1738 for £8877. The present proprietor, Henry Callander, Esq. (b. 1862; suc. 1865), holds 4869 acres in the shire, valued at £6865 per annum.—*Ord. Sur.*, sh. 33, 1863. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1883).

Prestonhall, a mansion in Cupar parish, Fife, near the left bank of the Eden, 1 mile ENE of the town.

Prestonhaugh. See PRESTONKIRK.

Prestonholm, a village in Cockpen parish, Edinburghshire, on the South Esk river, $\frac{3}{4}$ miles SSE of Lasswade.

Preston House, a mansion in Lintlithgow parish, Lintlithgowshire, $\frac{1}{2}$ mile S of the town.

Prestonkirk, a parish of Haddingtonshire, containing the town and station of East LINTON, $5\frac{1}{2}$ miles WSW of Dunbar, and $2\frac{1}{2}$ E by N of Edinburgh. Called the Halch, Hauch, or Haugh in the time of Gawin Douglas, since the Reformation it received the name, first of Prestonhaugh, then of Prestonkirk, and in legal documents is still designated 'Prestonhaugh, otherwise called Prestonkirk;' whilst its popular name is often briefly Linton. It is bounded N by North Berwick, NE by Whitekirk, E by Whitekirk and Dunbar, SE by Stenton, S by Whittingham, SW by Morham and Haddington, and W by Athelstaneford. With a somewhat irregular outline, it has an utmost length from NNW to SSE of $4\frac{1}{2}$ miles, a varying breadth of 3 furlongs and $\frac{1}{4}$ miles, and an area of 7088 $\frac{1}{2}$ acres, of which 13 $\frac{1}{2}$ are water. The TYNE has here an east-north-easterly course of $4\frac{1}{2}$ miles, for the first 7 furlongs along the Haddington boundary;

and the East PEPPER Burn flows east-north-eastward across the northern interior and along the Athelstaneford and Whitekirk borders. In the E where the Tyne passes off from the parish, the surface declines to 75 feet above sea-level; and N of the river it nowhere exceeds 281 feet; but in the S is conical TRAFRAIN LAW (700 feet), which figures conspicuously over a wide extent of landscape. The predominant rocks are claystone, clinkstone, and limestone, and the first is often porphyritic, abounds in crystals of feldspar, and contains in places veins of yellow jasper, and of heavy spar. The soil near the Tyne is mostly sandy and gravelly; in the N is argillaceous, partly very stiff; and in the S is calcareous. But a small proportion of land is under wood; about 200 acres are pasture; and nearly all the rest of the parish is in tillage. The chief antiquities are noticed under HAILES CASTLE and TRAFRAIN LAW. Sever stone coffins have been turned up by the plough; a standing stone is said to mark the grave of a Saxon commander; the site is pointed out of the ancient parish church, dedicated to St Baldred, and mentioned in record of the 9th century; and ruins exist of an ancient monastery on Markle farm. St Balthere or Baldred, who died in 756, and who was the patron saint of the parish, is said to have dwelt here, and to have founded the earliest church. He is commemorated in the name of an excellent spring, St Baldred's Well, and in the name of an eddy in the Tyne, St Baldred's Whirl. Gavin Douglas (1474-1522), the translator of Virgil, was 'parson of Hauch' (not Hawick), previous to becoming Bishop of Dunkeld in 1516. Mansions noticed separately are SMEATON HOUSE and PHANTASSIE; and 8 proprietors hold each an annual value of £500 and upwards, 2 of between £100 and £500. Prestonkirk is in the presbytery of Dunbar and synod of Lothian and Tweeddale; the living is worth £395. The churches and the public school have been described under East LINTON. That school, with accommodation for 404 children, had (1884) an average attendance of 231, and a grant of £212, 13s. 6d. Valuation (1860) £15,550, (1885) £16,850, 0s. Pop. (1801) 1741, (1831) 1765, (1861) 1960, (1871) 1931, (1881) 1929.—*Ord. Sur.*, sh. 33, 1863.

Prestonmill. See PRESTON, Kirkecubrightshire.

Prestonpans, a coast town and parish of W Haddingtonshire. The town, extending $\frac{3}{4}$ mile south-westward along the shore of the Firth of Forth, is 2 $\frac{1}{2}$ miles ENE of Musselburgh, 8 E of Edinburgh, 1 $\frac{1}{2}$ NW of Tranent, 9 $\frac{1}{2}$ W of Haddington, and $\frac{3}{4}$ NNW of Prestonpans and Tranent station on the North British railway. It is supposed to have become a seat of population for the manufacture of salt so early as the 12th century. The monks of NEWBATTLE, who pushed their trading enterprises in all directions from their property of PRESTONGRANGE, appear to have adopted and cherished Prestonpans as the scene of their salt-making operations; and they probably secured for its rude but abundant prosperity so long as it was under their influence. Even for generations after the Reformation it continued to thrive, and to be a flourishing seat of various sorts of the harder orders of industry. But chiefly in consequence of the repeal of the salt duty in 1825, the town lost its ancient sources of support, and fell into decay. Its deserted salt-works, some of them contiguous to it, others along the coast, form a rueful feature in the landscape. The masonry in these buildings looks as if it had withstood the buffings of ages; the wood-work is comparatively fresh and uninjured; and yet the whole aspect is ruinous and forlorn. Numbers of the doors still show brass excise padlocks, bearing the now almost forgotten initials 'G. R.' The town itself, too, has a somewhat decayed appearance. It consists principally of a single street following the line of the beach. A rill runs across the roadway, cutting off from the W end of the street an ugly suburb called Cuittle or Cuthill. The houses have a blackened, time-worn appearance; scarcely any two of them stand in a line; and the whole town, which was so built for defensive purposes, has been described as 'zig-zag at both ends and crooked in the middle.' The parish church stands

on a rising-ground above the town, and, dating from 1595, was partially rebuilt and reseated, with double galleries, in 1774. Within the churchyard there are several interesting memorial stones or tablets over the remains of Lords Cullen, Prestongrange, and Drummore; Captain Stewart of Physgill, who fell in the battle of Prestonpans; a brother of General Roy's; and others. A new Free church was built in 1873; and a new public school in 1881, at a cost of £3000. A monument to Dr Thomas Alexander, C.B., the director-general of the medical department of the British army, was erected in 1862, and consists of a stone statue 8 $\frac{1}{2}$ feet high, on a square pedestal 6 $\frac{1}{2}$ feet high, within an enclosure immediately N of the church.

Prestonpans and the neighbouring villages used to supply all the east of Scotland with salt. This part of the coast, owing to the absence of large rivers, is favourably situated for the production of salt; and being in the immediate vicinity of very extensive coal-fields, it possessed great facilities for carrying on a large and lucrative salt-trade. Ten salt-pans belonged to the town, and were capable of producing between 800 and 900 bushels of salt per week; and there were others in the neighbourhood of similar extent. In the five years preceding 1792, the annual average amount of salt delivered in the Prestonpans collection was 83,471 bushels, about half of which was produced by the town's own pans, while the rest was produced by pans in the vicinity. A race of females known as salt-wives, and second in notoriety only to the fishwives of Fisherrow and Newhaven, used to carry the salt in creels for sale in Edinburgh and other towns. A manufactory of sulphate of soda, and of sulphuric, nitric, and muriatic acids, once employed upwards of 50 men, but has long since been abandoned. Extensive potteries, commenced about the middle of last century, employed about 40 men and upwards of 50 boys; but after the close of the first quarter of the present century, they degenerated into a small manufactory of brown and white ware. Two brick and tile works long sent forth a steady produce of roofing-tiles over the country; but they have been, to a considerable extent, superseded by the works of the Prestongrange Coal and Iron Co., for bricks, tiles, and every description of fireclay goods. The large brewery of Messrs John Fowler & Co. has been long at work, and has enjoyed extensive fame for the good quality of its ales. A soap-work is among the most recent of the town's considerable manufactories; but for years a chief employment and traffic of the town has been the fishing and exportation of oysters. The largest and fattest of the oysters were formerly taken nearest the shore, and have long been in high esteem as Pan-door or Pandore oysters—a name whimsically given them from the oyster-bed lying off the doors of the salt-pans. The oyster-beds of Prestonpans, or 'scalps' as they are called, extend about 6 miles into the firth, and rather more than 3 miles from E to W; and in the latter part of last century, they yielded a daily produce to dredgers of from 400 to 600 oysters in the day, which were sent not only to Scottish markets, but to Newcastle, Hull, and London. Now, however, they appear to be much less prolific than then. As the oysters spawn in May, and are in a sickly state till August, the proper dredging season begins on the first day of September and ends on the last day of April, continuing, as it is said, 'during the months in which there is an R.' The fishermen, while employed in dredging them, sing a peculiar air, which is said to be of Scandinavian origin, and has a very peculiar and striking effect when borne over the waters by fitful gusts of wind. At the E end of the town, close to the beach, is situated the colliery of Preston Links; which, after half a century's successful working by the Messrs Grieve, was discontinued towards the close of 1884, as being no longer profitable. The commerce of the town, through its port of MORISON'S HAVEN, a little way W of Cuthill, was great in the days of its manufacturing prosperity. The harbour, formed under a charter from the monks of Newbattle in 1526, and styled Acheson's

Haven, from the name of its original owner, Alexander Acheson, ancestor of the Earl of Gosford in the Irish peerage, was once a custom-house port, whose range included all creeks and landing-places between the mouth of the Figgate Burn at Portobello and the mouth of the Tyne near Dunbar; and it had the right of levying customs and the various sorts of dues to the same extent as those exigible at Leith. All the western portions of Preston and Prestonpans towns and the adjacent hamlets are included within the barony of Prestongrange; and all the eastern portions of these towns and the adjacent villas and ancient mansions are within the barony of Preston, whose ancient cross, bearing date 1617, is still a conspicuous central object of interest. The town of Prestonpans is now a police burgh under the General Police and Improvement Act (Scotland) of 1862. It has a post office, with money order, savings' bank, and railway telegraph departments, a branch of the Royal Bank, an hotel, and a gas company. Pop. of town (1841) 1659, (1851) 1640, (1861), 1577, (1871) 1790, (1881) 2265, of whom 1069 were females, and 1610 were in the police burgh. Houses (1881) 486 inhabited, 75 vacant.

In 1591 John Fian or Cunningham, schoolmaster at Prestonpans, was tried as one of the North BERWICK warlocks, and after suffering the cruellest tortures, was condemned and burnt; in 1661, another schoolmaster here, Andrew Rutherford, was appointed commissioner for trying certain persons accused of witchcraft.

As a boy, Sir Walter Scott resided for some time, in 1777, at Prestonpans, and must have acquired then his minute knowledge of the localities which he afterwards turned to so good account in *Waverley*.

The battle which was fought on 21 Sept. 1745, between the Jacobite forces under Prince Charles Edward and the Hanoverian forces under Sir John Cope, occurred principally within the parish of Tranent, and is sometimes called the battle of Preston, sometimes the battle of GLADSMUIR, but oftener the battle of Prestonpans. Sir John Cope landed his troops and stores at Dunbar on the 16th, 17th, and 18th of September; and, desirous of making all speed to engage the rebels, who were then in possession of Edinburgh, he marched from Dunbar on the 19th, and took post in battle order on the 20th in the eastern vicinity of Preston, his right extending towards the sea at Port-Seaton, and his left towards a morass SE of Preston. Scarcely had he made his dispositions when the whole of the Highland army appeared descending the heights in the direction of Tranent. On approaching Tranent, the Highlanders were received by the King's troops with a vehement shout of defiance, which the Highlanders answered in a similar strain. About two o'clock in the afternoon the Highland army halted on an eminence called Birsley-Brae, about $\frac{1}{2}$ mile to the W of Tranent, and formed in order of battle about 1 mile from the royal forces. In the expectation that the Highlanders were advancing by the usual route through Musselburgh and Preston, Cope had taken up the position we have described, with his front to the W; but as soon as he observed the Highlanders on the heights upon his left, he changed his front to the S. This change of position, while it secured Cope better from attack, in the case of defeat was not so well calculated for safety as the first position. On his right was the E wall of a park belonging to Erskine of Grange, which extended a considerable way from N to S, and still farther to the right was the village of Preston. The village of Seaton was on his left, and the village of Cockenzie and the sea in his rear. Almost immediately in front was a deep ditch filled with water, and a strong thick hedge. Farther removed from the front, and between the two armies, was a morass, the ends of which had been drained, and were intersected by numerous cuts; and on the more firm ground at the ends were several small enclosures, with hedges, dry stone-walls, and willow trees. As the Highlanders were in excellent spirits, and eager to close immediately with the enemy, Charles felt very desirous to comply with their wishes; but he soon ascertained that the

passage across the morass would be extremely dangerous, if not altogether impracticable.

While his lieutenant-general was, in consequence of this information, planning a different mode of attack, the Prince himself was moving with a great part of his army further off towards Dolphington on Cope's right. Halting and turning towards Preston Tower, he seemed to threaten that flank of the English general, who, thereupon, returned to his original position with his front to Preston, and his right towards the sea. Lord George Murray, considering that the only practicable mode of attacking Cope was by advancing from the E, now led off part of the army through the village of Tranent, and sent notice to the Prince to follow him with the remainder as quickly as possible. After the Highland army had halted on the fields to the E of Tranent, a council of war was held, at which it was resolved to attack the enemy at break of day. A few piquets were placed around the bivouac, and the Highlanders, having wrapped themselves up in their plaids, lay down on the ground to repose for the night. When Cope observed Charles returning towards Tranent, he resumed his former position with his front to the S; and thus, in a few hours, he was obliged, by the unrestrained evolutions of the Highlanders, to shift his ground no fewer than four times. He now began to perceive that his situation was not so favourable as he had imagined, and that while the insurgents could move about at discretion, select their ground, and choose their time and mode of attack, he was cramped in his own movements and could act only on the defensive. To secure his army from surprise during the night, he placed advanced piquets of horse and foot along the side of the morass, extending nearly as far E as the village of Seaton. He, at the same time, sent his baggage and military chest down to Cockenzie; and as the night—that of Friday the 20th of September—was very cold, he ordered fires to be kindled along the front of his line, to keep his men warm.

In point of numbers, the army of Cope was rather inferior to that of Charles; but many of the Highlanders were badly armed, and some had no arms at all. The royal forces amounted altogether to about 2300 men; but the number in the field was diminished to 2100 by the despatch of the baggage-guard to Cockenzie. The order of battle finally formed by Cope along the N side of the morass was as follows: He drew up his foot in one line, in the centre of which were eight companies of Lascelles' regiment, and two of Guise's. On the right were five companies of Lee's regiment, and on the left the regiment of Murray, with a number of recruits for different regiments at home and abroad. Two squadrons of Gardiner's dragoons formed the right wing, and a similar number of Hamilton's composed the left. The remaining squadron of each regiment was placed in the rear of its companions as a reserve. On the left of the army, near the waggon-road from Tranent to Cockenzie, were placed the artillery, consisting of six or seven pieces of cannon and four colbors under the orders of Lieut.-Colonel Whiteford, and guarded by a company of Lee's regiment, commanded by Captain Cochrane. Besides the regular troops there were some volunteers, consisting principally of small parties of the neighbouring tenantry, headed by their respective landlords.

The Highland army commenced its movement in the morning of the 21st, early enough to allow the whole of it to pass the eastern outlet from the morass before the dawn. It was divided into two successive columns, with an interval between. The Duke of Perth led the first column; and two persons intimately acquainted with the morass went before him to show the way. A little in advance of the van, too, was a select party of 60 men doubly armed, under the command of Macdonald of Glenalladale, major of the regiment of Clanranald, whose appointed duty it was to seize the enemy's baggage. The army proceeded in an easterly direction till near the farm of Ringan-head; and then, turning to the left, they

marched in a northerly direction through a small valley which intersects the farm. During the march the strictest silence was kept, not even a whisper was heard; and lest the trampling of horses might discover their advance, the few that were in the army were left behind. The ford or path across the morass was so narrow that the column—which marched three men abreast—had scarcely sufficient standing room; and the ground along it was so soft that many of the men at almost every step were up to the knees in mud. The path in question—which was about 200 paces to the W of the stone bridge afterwards built across Seaton mill-dam—led to a small wooden bridge thrown over the large ditch which ran through the morass from W to E. This bridge, and the continuation of the path on the N of it, were a little to the E of Cope's left. From ignorance of the existence of this bridge—from oversight, or from a supposition that the marsh was not passable in that quarter—Cope had placed no guards in that direction; so that the Highland army, whose march across could here have been effectually stopped by a handful of men, passed the bridge and cleared the marsh without interruption.

Hitherto the darkness had concealed the march of the Highlanders; but the morning was now about to dawn, and at the time the order to halt was given, some of Cope's pickets, stationed on his left, for the first time heard the tramp of the Highlanders. The Highlanders plainly heard these advanced guards challenge them, 'Who is there?' No answer having been returned, the pickets gave the alarm, and the cry of 'Cannons, cannons!' Get ready the cannons, cannoniers!' resounded through Cope's left wing. Charles instantly gave directions for attacking Cope before he should have time to change his position by opposing his front to that of the Highland army. As arranged at the council of war on the preceding evening, the army was drawn up in two lines. The first comprised a right wing, commanded by the Duke of Perth, and consisting of the regiments of Clanranald, Keppoch, Glengarry, and Glencoe, under their respective chiefs, and a left wing commanded by Lord George Murray, and consisting of the Camerons of Lochiel under their own chief, and the Stewarts of Appin under Stewart of Ardschiel. The second line, which was to serve as a reserve, consisted of the Athole men, the Robertsons of Strowan, and the MacLauchlans. This body was under the command of Lord Nairne. As soon as Cope received intelligence of the advance of the Highlanders, he gave orders to change his front to the E. Some confusion took place in carrying these orders into execution, from the advanced guards not being able to find out their regiments, and so stationing themselves on the right of Lee's five companies, as to prevent the two squadrons of Gardiner's dragoons, which had been posted on the right of the line, from forming properly. For want of room, the squadron under Colonel Gardiner drew up behind that commanded by Lieut. Colonel Whitney. In all other respects the disposition of each regiment was the same; but the artillery, which before the change had been on the left, and close to that wing, was now on the right somewhat farther from the line, and in front of Whitney's squadron.

There was now nothing to prevent the armies from coming into collision; and if Cope had had the choice, he could not have selected ground more favourable for the operations of cavalry than that which lay between the two armies. It was a level cultivated field of considerable extent, without bush or tree, and had just been cleared of its crop of grain. But the celerity with which the Highlanders commenced the attack prevented Cope from availing himself of this local advantage. The beams of the rising sun were just beginning to illuminate the horizon; but the mist which still hovered over the cornfields prevented the two armies from seeing each other. As the Highlanders had advanced considerably beyond the main ditch, Lord George Murray was apprehensive that Cope might turn the left flank; and to guard against such a contingency,

he desired Lochiel, who was on the extreme left, to order his men in advancing to incline to the left. Lord George then ordered the left wing to advance, and sent an aide-de-camp to the Duke of Perth to request him to put the right in motion. The Highlanders moved with such rapidity that their ranks broke; to recover which, they halted once or twice before closing with the enemy.

When Cope, at day-break, observed the first line of the Highland army formed in order of battle, at the distance of 200 paces from his position, he mistook it for bushes; but before it had advanced half-way, the rays of the rising sun bursting through the retiring mist showed the armies to each other.

As the right wing of the Highlanders marched straight forward without attending to the oblique movement of the Camerons to the left, a gap took place in the centre of the line. An attempt was made to fill it up with a second line, which was about fifty paces behind the first; but before this could be accomplished, the left wing, being the first to move, had advanced beyond the right of the line, and was now engaged with the enemy. By inclining to the left, the Camerons gained half the ground originally between them and the main ditch; but this movement brought them up directly opposite to Cope's cannon. On approaching the cannon the Highlanders fired a few shots at the artillery guard, which alarmed the gunners to such a degree that they fled, carrying the powder flasks along with them. To check the advance of the Highlanders, Colonel Whiteford fired off five of the field-pieces with his own hand; but though their left seemed to recoil, they instantly resumed the rapid pace they had set out with. The artillery guard next fired a volley with as little effect. Observing the squadron of dragoons under Whitney advancing to the charge, the Camerons set up a loud shout, rushed past the cannon, and, after firing a few shots at the dragoons, which killed several men, and wounded the lieutenant-colonel, flew on them sword in hand. When assailed, the squadron was reeling to and fro from the fire; and the Highlanders following an order they had received, to strike at the noses of the horses without minding the riders, completed the disorder. In a moment the dragoons wheeled about, rode over the artillery guard, and fled followed by the guard. The Highlanders continuing to push forward without stopping to take prisoners, Colonel Gardiner was ordered to advance with his squadron, and charge the enemy. He accordingly went forward, encouraging his men to stand firm; but this squadron, before it had advanced many paces, experienced a similar reception, and followed the example which the other had just set. After the flight of the dragoons, the Highlanders advanced upon the infantry, who opened a fire from right to left, which went down the line as far as Murray's regiment. They received this volley with a loud huzza, and throwing away their muskets, drew their claymores and rushed upon the foot before they had time to reload their pieces. Confounded by the flight of the dragoons, and the furious onset of the Highlanders, the astonished infantry threw down their arms and took to their heels. Hamilton's dragoons, who were stationed on Cope's left, displayed even greater pusillanimity than their companions; for no sooner did they observe the squadrons on the right give way, than they turned their backs and fled without firing a single shot or drawing a sword. Murray's regiment being thus left alone on the field, fired upon the Macdonalds who were advancing, and also fled. Thus, within a very few minutes after the action had commenced, the whole army of Cope was put to flight. With the exception of their fire, not the slightest resistance was made by horse or foot, and not a single bayonet was stained with blood. Such were the impetuosity and rapidity with which the first line of the Highlanders broke through Cope's ranks, that they left numbers of his men in their rear, who attempted to rally behind them, but, seeing the second line coming up, endeavoured to make their escape. Though the second line was not more than 50 paces behind the first, and was always running as fast as it

could to overtake the first line, and near enough never to lose sight of it, yet such was the rapidity with which the battle was gained, that, according to the Chevalier Johnstone, who stood by the side of the Prince in the second line, he could see no other enemy on the field of battle than those who were lying on the ground killed and wounded.

Unfortunately for the royal infantry, the walls of Lord Grange's park enclosures about the village of Preston, which, from the position taken up on the preceding evening, formed their great security on their right, now that these park walls were in their rear, operated as a barrier to their flight. Having disencumbered themselves of their arms to facilitate their escape, they had deprived themselves of their only means of defence; and, driven as they were upon the walls of the enclosures, they would have all perished under the swords of the Highlanders, had not Charles and his officers strenuously exerted themselves to preserve the lives of their discomfited foes. The impetuosity of the attack, however, and the sudden flight of the royal army, allowed little leisure for the exercise of humanity; and before the carnage ceased several hundreds had fallen under the claymores of the Highlanders, and the ruthless scythes of the Macgregors. Armed with these deadly weapons, which were sharpened and fixed to poles from 7 to 8 feet long, to supply the place of other arms, this party mowed down the affrighted enemy, cut off the legs of the horses, and severed, it is said, the bodies of their riders in twain. Of the infantry of the royal army, only about 170 escaped. From a report made by their own sergeants and corporals, by order of Lord George Murray, between 1600 and 1700 prisoners, foot and cavalry, fell into the hands of the Highlanders, including about 70 officers. In this number were comprehended the baggage guard stationed at Cockenzie, amounting to 300 men, who, on learning the fate of the main body and the loss of their cannon, surrendered to the Camerons. The cannon and all the baggage of the royal army, together with the military chest, containing £4000, fell into the hands of the victors. The greater part of the dragoons escaped by the two roads at the extremities of the park wall, one of which passed by Colonel Gardiner's house in the rear of their right, and the other on their left, to the N of Preston House. In retiring towards these outlets, the dragoons, at the entreaties of their officers, halted once or twice, and faced about to meet the enemy; but as soon as the Highlanders came up and fired at them, they wheeled about and fled. Cope, who was by no means deficient in personal courage, assisted by the Earls of Home and Loudon, collected about 450 of the panic-struck dragoons on the W side of the village of Preston, and attempted to lead them back to the charge; but no entreaties could induce these cowards to advance, and the whistling of a few bullets, discharged by some Highlanders near the village, so alarmed them that they instantly scampered off in a southerly direction, screening their heads behind their horses' necks to avoid the bullets of the Highlanders. The general had no alternative but to gallop off with his men. He that night reached Coldstream, a town about 40 miles from the field of battle, and entered Berwick next day.

Among six of Cope's officers who were killed was Colonel James Gardiner (1688-1745), a veteran soldier who served under the Duke of Marlborough, and whose character combined a strong religious feeling with the most undaunted courage. He had been decidedly opposed to the defensive system of Cope on the preceding evening, and had counselled the general not to lose a moment in attacking the Highlanders; but his advice was disregarded. Anticipating the fate which awaited him, he spent the greater part of the night in devotion, and resolved at all hazards to perform his duty. He was wounded at the first onset at the head of his dragoons; but disdaining to follow them in their retreat, he joined a small body of foot, which attempted to rally not far from the wall of his own garden, and while fighting at their head was cut down by the murderous Lochaber axe of a Macgregor. He was carried to the

manse of Tranent in almost a lifeless state, where he expired within a few hours, and was interred in the NW corner of the church of Tranent. Captain Brymer, of Lee's regiment, who appears to have participated in Gardiner's opinion as to attacking the Highlanders, met a similar fate, as did also Captain Stewart of Physgill, over whose grave in Prestonpans kirkyard there is still visible, though partially weather-worn, an interesting memorial tablet. The loss on the side of the Highlanders was trifling. Four officers, and between 30 and 40 privates, were killed; and 5 or 6 officers, and between 70 and 80 privates, wounded. After the termination of the fight, the field of battle presented an appalling spectacle, rarely exhibited in the most bloody conflicts. As almost all the slain were cut down by the broadsword and the scythe, the ground was strewn with legs, arms, hands, noses, and mutilated bodies, while, from the deep gashes inflicted by these dreadful weapons, the ground was literally soaked with gore. See, besides works cited under CULLODEN, Mr P. McNeill's *Tranent and its Surroundings* (2d ed., Edinb. 1884) and the *Antobiography* of Alexander Carlyle, D.D. (1722-1805), who was a son of the minister of Prestonpans, beheld the Jacobite victory from the top of the church steeple, and himself for 57 years was minister of INVERESK.

The small but populous parish of Prestonpans, containing also the villages of PRESTON and DOLPHINGSTON, is bounded E and SE by Tranent, SW by Tranent and by Inveresk in Edinburghshire, NW by the Firth of Forth. Its utmost length, from NE to SW, is 2½ miles; its breadth varies between 3 furlongs and 1½ mile; and its area is 1429½ acres, of which 135½ are foreshore. The surface rises gently from the shore, attaining 100 feet above sea-level at the railway station, and 200 at the Tranent border. The beach is low and sandy, with a bulwark of low reefs, much shattered and water-worn along its margin; and it commands a picturesque prospect of the Firth of Forth and the southern parts of Fife. Ravenshaugh Burn runs along the boundary with Edinburghshire. The rocks belong mainly to the Carboniferous Limestone series; and coal was wrought in this parish as early perhaps as in any district in Scotland, and continues still to be largely worked, the recent growth of the population being due to an increase in mining activity. Ironstone and fireclay also occur, and are turned to profitable account in connection with the mining operations. The prevailing soil is loam, partly heavy on a clay bottom, partly light on a sandy or gravelly bottom. Upwards of 1000 acres are under cultivation. The chief mansions, both noticed separately, are PRESTONGRANGE and DRUMORE; and 4 proprietors hold each an annual value of more than £500, 4 of between £100 and £500. Prestonpans is in the presbytery of Haddington and the synod of Lothian and Tweeddale; the living was, in 1873, estimated to be worth £543. The original name of a hamlet near by was Aldhammer; but this early gave way to Priestistoun or Prieststown, which was gradually abbreviated into Preston; and that (which was the name under which the district was erected into a parish by act of parliament in 1606) was, in its turn, superseded by successively Salt-Preston and Prestonpans. An ancient chapel, which was situated at Preston, and which was a vicarage of the monks of Holyrood, in 1544 was burned, in common with the town and castle of Preston, by the Earl of Hertford, and never afterwards repaired. Another ancient chapel, situated within what is now the West Kirkyard, towards the W end of the town of Prestonpans, was in pre-Reformation times supplied by the monks of Newbattle, who were then the owners of most of the property in that quarter, but, excepting old stones built into the walls, no trace of it remains. The inhabitants of the two baronies, the eastern and western, or Preston and Prestongrange, into which the parish was distributed, seem, for a time after the monastic services were discontinued, to have tacitly attached themselves to Tranent; but were quite unduly provided for, and could obtain but limited access to the interior of the church. Mr John Davidson (1550-1604),

who was minister for the last eight years of his life, at length built, largely at his own expense, a church and a manse in the village of Prestonpans, to which a glebe, garden, and stipend were attached by George Hamilton of Preston; and he also founded here a school for the teaching of the Latin, Greek, and Hebrew languages, and endowed it with all his property, free, movable, and heritable. The grammarian, Alexander Hume, was its first master from 1606 till 1616. In 1595 the General Assembly declared Prestonpans to be a parish *quoad sacra*, and in 1606 the parliament of Perth 'erected the said newly-built kirk into a parish kirk, which was to be called the parish kirk of Preston.' The public school, erected under the Education Act of 1873, with accommodation for 400 children, had (1884) an average attendance of 341, and a grant of £298, 7s. 6d. Valuation (1860) £8194, (1885) £11,798, 14s. Pop. (1801) 1964, (1831) 2322, (1861) 2080, (1871) 2069, (1881) 2573.—*Ord. Sur.*, shs. 33, 32, 1863-57.

Preston Tower. See PRESTON, Prestonpans.

Prestwick, a small town in Monkton and Prestwick parish, Kyle district, Ayrshire, within 3 furlongs of the sea-shore, and 2½ miles N by E of Ayr. Its age, and especially its constitution as a burgh of barony, are remarkable, and strongly resemble those of the curious neighbouring burgh of Newton-upon-Ayr. A charter, confirming and renewing its privileges, was granted by James VI. as administrator-in-law for his eldest son, then a minor, Henry, Duke of Rothesay, Earl of Kyle, Carrick, and Cunningham, Lord of the Isles, and Prince Stewart of Scotland. The charter is dated 19 June 1600, and expressly says that Prestwick was known to have been a free burgh of barony beyond the memory of man, for the space of 617 years before the date of renewal. The burgh has power to elect every two years a provost, 2 bailies, and councillors, to grant franchises for several trades, and to hold a market weekly, and a fair on the feast of St Nicholas, 6 December. The freemen, or barons as they are called, are 36 in number. The burgh lands belonging to them as an incorporation extend in a broad strip along the Pow Burn to a line 1½ mile nearer Ayr, and comprehend about 800 acres. The lands used to be distributed in lots among the freemen, and did not remain in perpetuity, but were drawn for every 19 years. Part of them long existed as a common, on which each of the freemen had a right of pasturing a certain number of sheep and cattle; but this, many years ago, was divided and appropriated in the same way as the rest of the barony. Freemen could not sell their lots or shares, or the baronial rights which belong to them, without the consent of the corporation; and females succeeded equally with males to the inheritance of the freeholds. A freeman might, for an offence, be sent to prison, but not locked up; and, if he came out without being liberated by the judicial sentence of the magistrates, he forfeited all his corporation privileges and property. In 1850, however, all restrictions were abolished, and the land is now held in the same way as other heritable land in Scotland. Within the last few years Prestwick has become the headquarters of golfing in the West of Scotland, and at

the same time a favourite watering-place, so that in summer it is crowded with visitors. It has a post office under Ayr, with money order, savings' bank, and telegraph departments, a station on the Ayr branch (1838-40) of the Glasgow and South-Western railway, an ancient market cross, a town-hall, a cemetery, Free and U.P. churches, and a public school. The town-hall, built about 1837, is a handsome edifice, with a Gothic spire. The Free church, built in 1874 at a cost of £1600, contains 450 sittings. The U.P. church was opened in 1884; and the public school, accommodating 320 children, in 1882. Pop. (1793) 260, (1837) 758, (1861) 851, (1871) 750, (1881) 1064, of whom 596 were females. Houses (1881) 231 inhabited, 99 vacant, 13 building.—*Ord. Sur.*, sh. 14, 1863. See MONKTON, and John Fullarton's *Records of the Burgh of Prestwick from 1470 to 1782* (Glasg., Maitland Club, 1834).

Prestwick Toll or New Prestwick, a village in Monkton and Newton-upon-Ayr parishes, Ayrshire, 1 mile S by W of Prestwick. Pop. (1871) 468, (1881) 734, of whom 337 were in Newton-upon-Ayr parish.

Priesthill. See MURKIRK.

Primsdale Mill, a village in Morebattle parish, Roxburghshire, 1 mile SSW of Yetholm.

Prinlains. See LESLIE.

Prior Bank, a seat in Melrose parish, Roxburghshire, in the immediate vicinity of Melrose town. For the last eighteen years of his life it was the favourite residence of the Edinburgh publisher, William Tait (1792-1864), who welcomed Kosztyn here in 1851; and at his death it passed to his brother-in-law, Adam Black (1784-1874), lord provost of Edinburgh 1843-48, and Liberal M.P. for that city 1856-65.—*Ord. Sur.*, sh. 25, 1865.

Priorhill, a village in Canonbie parish, Dumfriesshire, close to Canonbie station.

Prosen Water, a troutful stream of NW Forfarshire, rising at an altitude of 2750 feet on the western slope of Mayar (3043 feet), and running 18 miles south-eastward through the northern section of Kirriemuir parish, and along the borders of Cortachy, Kingoldrum, and Kirriemuir proper, till, after a total descent of nearly 2400 feet, it falls into the South Esk at a point 1¼ miles SE of Cortachy Castle. It receives, in its progress, Farchal, Cramie, Glenlegie, Inchmill, Glennig, Glenally, and Corogie Burns; traverses, till near its mouth, a deep mountain glen, called from it GLENPROSEN; and on the Shawfield estate threads a narrow wooded gorge, the 'Loup,' where a fugitive of the '45 is said to have leapt the channel from rock to rock.—*Ord. Sur.*, shs. 65, 56, 1870.

Protstownhill, a village in Gamrie parish, Banffshire, 1½ mile E of Gardenstown.

Provanhall, a village in Shettleton parish, Lanarkshire, 2 miles NNW of Baillieston station.

Pultneytown. See WICK.

Purves Hall, a mansion in Eccles parish, Berwickshire, 3½ miles E by S of Greenlaw. Its owner, Charles Hyde Home-Purves, Esq. (b. 1850; suc. 1867), is heir to the MARCHMONT estate, and himself holds 750 acres in the shire, valued at £1236 per annum.—*Ord. Sur.*, sh. 25, 1865.

QUAICH. See QUOICH and GLENQUAICH.

Quair Water, a troutful stream of Traquair parish, Peebleshire, rising on the E side of Dun Rig at an altitude of 2100 feet, close to the Selkirkshire boundary, and running 6½ miles north-eastward, till, after a descent of 1650 feet, it falls into the Tweed at a point 5 furlongs S of Innerleithen. It is fed by Newhall, Curly, and FINGLAND Burns, each nearly equal to itself in length and volume; and it has been celebrated in several lyrics, of which that by Nicol begins, 'Where Quair rins sweet among the flowers.'—*Ord. Sur.*, sh. 24, 1864.

Quanterness. See KIRKWALL.

Quarff, an ancient *quoad civilia* parish and a modern *quoad sacra* parish in the S of Shetland. The ancient *quoad civilia* parish, forming a narrow part of the mainland, 6 miles SSW of Lerwick, extends 1½ mile from sea to sea, between the East and West Voes of Quarff. It chiefly consists of an inhabited valley 1½ mile long and ½ mile broad, with pastoral hill flanks; and, together with the ancient *quoad civilia* parish of Burra, is united to Bressay. The modern *quoad sacra* parish comprises the ancient parishes of Quarff and Burra; was constituted by the General Assembly in

1833, and reconstituted by the Court of Teinds prior to 1856; and is in the presbytery of Lerwick and synod of Shetland. Its church is a Government one, and contains 360 sittings. Pop. of *q. s.* parish (1871) 952, (1881) 918.

Quarrelton, a collier village in the SW of Abbey parish, Renfrewshire, $\frac{1}{2}$ mile S of Johnstone.

Quarrelwood, a hamlet in Kirkmahoe parish, Dumfriesshire, $3\frac{1}{2}$ miles N by W of Dumfries.

Quarter, a mansion in Largs parish, Ayrshire, near the shore of the Firth of Clyde, $2\frac{1}{2}$ miles NNW of Largs town.

Quarter, an estate, with a mansion, in Dunipace parish, Stirlingshire, $1\frac{1}{2}$ mile N by W of Denny.

Quarter, an estate in Broughton parish, Peebleshire, on Holms Water, $2\frac{1}{2}$ miles SSW of Broughton station. It was sold in 1741 to Thomas Tweedie, a cadet of the Tweedies of OLIVER. See RACHAN HOUSE.

Quarter Ironworks and Darnager, a conjoint village in Hamilton parish, Lanarkshire, 3 miles S of Hamilton town and $\frac{1}{2}$ mile ENE of Quarter Road station on the Strathaven branch of the Caledonian railway. It has a post office (Quarter) under Hamilton, an Established chapel of ease, a public school, and iron-works with five blast furnaces. The chapel of ease is an Early Decorated edifice of 1884, containing 430 sittings. Pop. (1871) 544, (1881) 886.—*Ord. Sur.*, sh. 23, 1865.

Quarter, West. See WESTQUARTER.

Queensberry, a mountain (2285 feet) in Closeburn parish, N Dumfriesshire, $1\frac{1}{2}$ mile SE of the nearest point of Lanarkshire, $1\frac{1}{2}$ N by E of Wee Queensberry (1675 feet), 7 miles WSW of Moffat, and $7\frac{1}{2}$ —but 12 to walk—ENE of Thornhill. Sending down its eastern base into the parish of Kirkpatrick-Juxta, and lifting its summit but a brief way from the extreme angle of the deep indentation made by Lanarkshire into Dumfriesshire, it forms, with its fine, bold, sombre mass, a striking feature in many rich scenic landscapes. Its suffix is the Anglo-Saxon *berg*, 'a hill,' softened into *berry*; and, situated amid a congeries of noble heights, but queening it over them all like a sovereign among her courtiers, it is truly the 'queen hill' of a rich and superb district. About 1802 Hogg, the Etrick Shepherd, was tending his master's ewes on the slopes of Queensberry, when he received a visit from James and Allan Cunningham. See DRUMLANRIG.—*Ord. Sur.*, shs. 16, 10, 1864.

Queen's Cairn. See STITCHELL.

Queensferry or South Queensferry, a small town and yet smaller parish of Linlithgowshire. The town is a royal and parliamentary burgh, the royal comprising all the parish of Queensferry, and the parliamentary extending into Dalmeny. It stands on the southern shore of the Firth of Forth, here only $1\frac{1}{4}$ mile broad, and has a station on a branch line of the North British, $5\frac{3}{8}$ miles N by W of Ratho Junction and $13\frac{3}{8}$ WNW of Edinburgh, from which by road it is 9 miles distant. Its site is a belt of low ground at a point opposite the peninsula of North Queensferry, and the intermediate island of Inchgarvie, where the firth is suddenly and briefly, but very greatly, contracted in breadth. The ground behind the town rises abruptly; and immediately at the summit, or even on the slope of the steep bank, becomes open agricultural country. The town comes first into notice as the station at which St Margaret, the queen of Malcolm Canmor, passed the Forth in her numerous excursions between Edinburgh and Dunfermline during 1068 and 1093; and it received in honour of her, both its present name, and some early Latin designations of similar import, e.g., *Portus Regine* (1164) and *Passagium Regine* (1182). Malcolm IV., the great-grandson of Margaret, made the monks of Dunfermline a grant of the right of ferry at the place, and of a small piece of ground within the limits of the present royalty,—a grant which probably led almost immediately to the erection of the town; and, in 1164, he granted also to the monks of Seone a free passage here for the abbot, the monks, and their men. In 1294 Pope Gregory confirmed to the abbey of Dunfermline

'dimidium Passagii Sanctæ Margaritæ Regine;' and in a charter (1363) of general confirmation of regality jurisdictions by David II. to the monks of Dunfermline, 'Passagium' figures as a burgh of regality along with 'Dunfermlyne, Kirkcaldy, and Muskilburgh.' The place, as a burgh of regality, was again granted to the monks by Robert I., regranted by Robert III., and confirmed in 1450 by James IV. A new charter was granted, in 1636, by Charles I., confirming the preceding royal grants, but at the same time confirming a charter by Robert, commendator of Dunfermline. As this is the latest extant charter, and the record of the Great Seal for the period is defective, no evidence exists as to the precise year when the town was erected into a royal burgh. Yet proof is decisive that the erection took place before 1641, as the Scots Act of 1641 ratifies and approves of the charter of erection into 'ane free Burgh Royall and in ane free Port, Haven, and Harbour, with the hail liberties, privileges, and immunities pertaining to ane free Burgh Royall.' In 1639 a commissioner from it appears for the first time to have sat in parliament; and in the parliament of the following year he recorded a protest that he had produced his commission for Queensferry as a royal burgh, and that 'he had ridden, sitten, and voyced in this parliament as the rest of commissioners of burghs.' He was confronted by a counter-protest on the part of the burgh of Linlithgow, that he 'had neither ridden, sittin, nor voyced in parliament for the Queensferry;' but in 1641, the same Act of Parliament which erected the place into a separate parish, freed it from the galling opposition of Linlithgow, and definitely recognised it as a royal burgh.

Queensferry, in spite of its antiquity and historical importance, has always been small; nor has it ever been enriched by much commerce, or dignified by great events. Its principal street varies in width, but is generally narrow, and wends irregularly to a total length of 650 yards, partly along the shore and partly into the interior. A street of 200 yards goes off from this at right angles, with a terrace along the road leading to Kirkliston. Three short alleys lead down to the harbour, and a fourth leads to the parish school-house. These streets and lanes compose the whole town. Only a square tower, with E and S wings, remains of a Carmelite friary, dedicated to the Virgin Mary, and built and endowed by Sir George Dundas of Dundas as early as 1332. In 1884 the present Mr Dundas of Inchgarvie announced his intention of converting this fragment into a public reading-room. The plain parish church, built in 1633 and refitted in 1821, contains 400 sittings, and has an excellent bell, bearing date 1635. Queensferry besides has a U.P. church, a post office, with money order, savings' bank, and telegraph departments, a branch of the Clydesdale Bank, a water supply (1819), gasworks, a town-hall, a pleasure fair on the second Friday of August, and four hotels, of which that at Newhalls is the 'Hawes Inn' of Scott's *Antiquary*. The harbour and ferry works of North and South Queensferry, Newhalls, and Port-Edgar were greatly improved in 1809-18, from designs by Rennie, at a cost of £33,825; and in 1877-78 the North British Railway Co. expended a further sum of £30,000 on the construction of a timber landing jetty, 900 feet long, a whinstone breakwater, 1300 feet long, a new railway station, etc. A ferry steamboat, the 'Queen Margaret,' was placed on the passage in 1821; but the opening of the Granton and Burntisland ferry has greatly diminished the number of passengers, who in 1811 numbered 228 to 447 a day. It remains to be seen what will be the effects of the completion, about 1888, of the great Forth Bridge (see FORTH and NORTH BRITISH RAILWAY), whose construction in the summer of 1884 was employing 1200 men, of whom 1000 were resident either in South or in North Queensferry; but there can be little or no doubt that its completion will be highly beneficial to the place. In the 17th century, about 20 vessels, most of them large brigs, belonged to Queensferry, and some trade in ship-building was carried on. But now no vessel be-

longs to the port, nor are any built at it; and the commerce of the place consists principally of a coasting trade in coals, manures, and barley inward, and in stones and potatoes outward. Herring fishing is a chief employment during the winter months; and there are connected with it a dozen boats belonging to the town. George IV. embarked at Port-Edgar, 15 Aug. 1822, on his return to England; on 5 Sept. 1842, the Queen and Prince Albert drove from Dalkeith to South Queensferry, embarked on the 'William Adam,' and, after a short cruise up the Forth, landed at North Queensferry, whence they drove on to Scone; on 23 Aug. 1884 the Prince and Princess of Wales, after visiting the Forth Bridge Works, drove through the town on their way from Dalmeny to Hopetoun; and shortly afterwards the Forth Bridge Works were visited by Mr Gladstone and Sir Stafford Northcote. The parish, formed out of Dalmeny in 1636, is in the presbytery of Linlithgow and the synod of Lothian and Tweeddale; the living is worth £355. The town is governed

Seal of Queensferry.

by a provost (which office has been held by the Earls of Hope-toun and Rosebery), 2 bailies, and 6 councillors, and they, in 1882, adopted in part the General Police Act. The magistrates have jurisdiction not only within the royalty but also in the parliamentary bounds, which include the Forth Bridge; and in olden times they were in the habit of exercising jurisdiction much beyond this. Queensferry unites with STRICKLING, Inverkeithing, Dunfermline, and Culross in sending a member to parliament. The burgh became bankrupt in 1881, but obtained its discharge on a composition of 12s. 6d. per £ in 1882, and in 1883 and 1884 it had a corporation revenue of £120, exclusive of assessments. The municipal and the parliamentary constituency numbered 243 and 204 in 1885, when the annual value of real property within the parliamentary burgh amounted to £6978, 5s. (£3127 in 1875). Pop. (1841) 1233, (1851) 1195, (1861) 1230, (1871) 1521, (1881) 1966, of whom 1136 were males, 290 belonged to the 'Royal Warden' training ship, and 1676 were in the parliamentary burgh, 1064 in the royal burgh or parish of Queensferry.—*Ord. Sur.*, sh. 32, 1857. See W. W. Fyfe's *Summer Life on Land and Water at South Queensferry* (Edinb. 1851).

Queensferry, North, a village of Fife in the detached section of the civil parish of Dunfermline, but (since 1855) in the ecclesiastical parish of Inverkeithing, at the extremity of Ferryhill peninsula, on the N coast of the Firth of Forth, directly opposite Queensferry, and 1½ mile S of Inverkeithing. William, Bishop of St Andrews, in 1323 gave its chapel of St James to the abbey of Dunfermline; in 1781, after the visit of Paul Jones to the firth, it acquired a battery, long ago dismantled. A favourite summer resort for sea-bathing, it has a post office, with money order, savings' bank, and telegraph departments, a railway station, a coast-guard station, a Free church, and a public school. Pop. (1831) 434, (1861) 369, (1871) 382, (1881) 360.—*Ord. Sur.*, sh. 32, 1857.

Queensferry, South. See QUEENSFERRY.

Queenshill, a mansion in TONGLAND parish, Kirkcudbrightshire, 2 miles N of Tariff station. It was the residence and death-place of James Beaumont Neilson, C.B. (1792-1863), inventor of the famous hot-blast, to whose memory a pyramid, 35 feet high, was erected in 1883. His son, Walter Montgomerie Neilson, Esq. (b. 1819), holds 1822 acres in the shire, valued at £1559 per annum.—*Ord. Sur.*, sh. 5, 1857.

Queich. See GLENQUAICH.

Queich, North, a rivulet of Kinross-shire, rising among the Ochil Hills, adjacent to the boundary with Perthshire, and running 6½ miles east-by-southward, chiefly within Orwell parish, but for 2 miles along or close to the boundary with Kinross, till it falls into the NW corner of Loch Leven, 1 mile SE of Milnathort.—*Ord. Sur.*, sh. 40, 1867.

Queich, South, a rivulet, party of Perthshire, but chiefly of Kinross-shire. It rises among the Ochils, within the Perthshire border, 1½ mile WNW of the source of the North Queich; begins, a little below its source, to trace for nearly 4 miles the boundary between the two counties; then runs 4½ miles east-by-southward through Kinross parish; and falls into Loch Leven at the S end of Kinross town.—*Ord. Sur.*, sh. 40, 1867.

Queudale Bay, a bay towards the southern extremity of Dunrossness parish, Shetland. Opening from the SW, it is flanked by Fittul Head and Scatness (the latter 1½ mile W by N of Sumburgh Head); and it measures 3¾ miles across the entrance, and 2½ miles thence to its inmost recess. It is esteemed a good natural harbour. Queudale House, at its head, 23 miles SSW of Lerwick, is the seat of Andrew John Grierson, Esq. (b. 1832; snc. 1863), who holds 22,006 acres, valued at £1132 per annum.

Quinag. See ASSYNT.

Quiraing, a mountain (1779 feet) in Kilmuir parish, Isle of Skye, Inverness-shire, 2 miles WNW of Stenscholl, 6 NE of Uig, and 20 N by W of Portree. Consisting of amygdaloidal trap, and apparently formed by volcanic eruption, it ascends very steeply, almost murally on the NE side; and is capped with a kind of crater, from which it takes its name (Gael. *cuith-fhir-Fhinn*, 'pit of the men of Fingal'). The rim around the summit resembles a strong, rough, lofty rampart, with only three or four gaps or fissures affording access to the interior. The principal gap is a steep narrow passage, obstructed by *débris*, and overhung by a tall, tapering, isolated pinnacle, the 'Needle;' and the rampart all round, except at the gaps, shows distinct basaltic formation in columnar, pyramidal, and other forms. Through the gaps one gains picturesque glimpses of sea and land; and the hollow itself could shield 4000 head of black cattle, and indeed was probably used in olden times as a place of retreat and concealment from invasion. From the bottom of it rises an oblong tabular mass or truncated rocky hill, the flat and turf-covered 'Table,' which measures 300 feet long and 180 broad. Such is this 'nightmare of nature,' this huge 'basaltic cathedral,' which in 1872 was ascended on foot by the Empress Eugenie and the Prince Imperial. See chaps. vii. and xi. of Alex. Smith's *Summer in Skye* (1865).

Quivoz, St. See SR QUIVOX.

Quiox Water, a stream of Crathie and Braemar parish, Aberdeenshire, formed by two head-streams on the eastern side of Benabound at an altitude of 2273 feet, and winding 8½ miles south-by-eastward, till it falls into the Dee at a point 1½ mile WSW of Castleton. It forms, 1 mile above its mouth, a beautiful waterfall, the Linn of Quiox, its steep ravine being fringed with birch and pine.—*Ord. Sur.*, sh. 65, 1870.

Quothquan. See LIEBERTON.

R

RAASAY (Scand. *Raa*, 'a roe deer,' and *ey*, 'an island'), an island in Portree parish, Inverness-shire, and lying between the centre of the E coast of Skye and the Applecross district of Ross-shire. From the former it is separated by the Sound of Raasay, $5\frac{1}{2}$ miles wide at the N end of the island, $2\frac{1}{2}$ at the centre, and 1 mile opposite Raasay House, at the Narrows of Raasay. From Applecross it is separated by the Inner Sound, $5\frac{1}{4}$ miles wide at the N end, $8\frac{3}{4}$ opposite Applecross Bay, and $6\frac{3}{4}$ at the S end. At the N end is the small Eilean Tigh, which is practically part of Raasay, and this is separated from South Rona by Kyle Rona, $\frac{1}{2}$ mile wide. One and one-eighth mile SSW of Eilean Tigh is Eilean Fladday, from which Raasay is separated by Kyle Fladda, which is dry from half-tide to half-tide. On the S the island is separated from the peninsula of Skye which stands out between Loch Sligachan and Loch Ainort, by a strait 1 mile wide, and from Scalpay on the SE by Kyle More, $\frac{3}{4}$ mile wide. Raasay Sound has a depth varying from 78 to 87 fathoms, and the Inner Sound is 77 fathoms at the S end, 130 off Brochel Bay, and 138 (the greatest depth) opposite the S end of Rona. The deepest parts are in the centre, where they form depressions considerably below the bottom of the sea in the neighbourhood of Skye. These depressions unite at the N end of Rona, and form a basin running northward into the Minch to nearly a line drawn from the mouth of Loch Ewe to Stornoway, but gradually widening and becoming more shallow as it passes N. The whole basin may be taken as bounded by the 50-fathom line, and Professor James Geikie attributes its formation to the action of ice. The tidal current in the Sound, particularly in the narrow part S of Portree Bay, is very strong. At the SE end of Kyle Rona is the island of Garbh Eilean and the smaller Eilean-an-Fhraoich. Between Eilean Tigh and Eilean Fladday is Loch a Sguir, $1\frac{1}{2}$ mile wide between the islands, and a mile deep. To the S of Eilean Fladday is the long point of Ardan-Torran, immediately to the S of which is Loch Arnish, 1 mile wide across the mouth, and 1 mile deep. The point to the S of this is Manish Point, and close to it is Manish Island. Five miles farther S is Holoman Island, with Holoman Bay beyond and Oskaig Point at the S side. Half-a-mile NNW of this point are the rocks known as Sgeir Chnapach, and 1 mile SW in the middle of the channel is M'Millan's Rock. On the NE side of the Narrows of Raasay is Churchton Bay, which is the last indentation on the W side of the island. The E side is but little indented, but near the centre is the sweep sometimes known as Brochel Bay. The total length of the island, inclusive of Eilean Tigh, is 13 miles, and the width $1\frac{1}{2}$ mile opposite the middle of Kyle Fladda, $2\frac{1}{2}$ miles in centre, and $3\frac{1}{2}$ miles at the widest part at Raasay House. The total area, inclusive of the foreshore, is 15,704'384 acres. From the N end down to opposite Loch Arnish, the rocks are Laurentian, and from that to the centre of the island, they are Cambrian. To the S of this the deposits are estuarine beds of colitic age, overlaid unconformably by a thick series of volcanic rocks belonging to the Tertiary period. The colitic beds are exposed all across the island near the centre, and also down the eastern coast from this to the extreme S end of the island. The surface is irregular, but may be described generally as one long ridge broken by transverse hollows with a long slope towards the low shores on the W, and a steep slope bounded by a long range of cliffs on the E. Speaking of the latter, Dr Macculloch says that 'On this side, scenes of considerable grandeur occur, generally marked by great breadth and simplicity of manner, and by powerful effect; at times, however, verging to an artificial character, in the architectural regularity of the flat sandstone cliffs, which are frequently split into columnar and conical forms, rising like towers above the deep, dark sea that washes

their bases. The houses perched on these summits seem more like the retreats of the birds that hover round them than the habitations of human beings; the eye from below scarcely distinguishing them, far less their inhabitants. The grandeur of these long-extended walls of rocks is often varied by the enormous fractures and dislocations which have at different times taken place; masses of immense bulk having been occasionally separated so as to form a second ridge below them; while, in other places, huge piles of ruin cover their slopes with fragments advancing far into the sea, and strewn the shore with rocks.' More than a third of the whole island is over 500 feet above sea-level, the highest points being Beinn na h-Iolaire (826) in the part N of Loch Arnish, Beinn a Chapuill (1211) S of Brochel Castle, and the flat-topped Dun Caan (1456)—on the summit of which Boswell danced merrily—the highest point of the island. From the last there is a very fine and extensive view of the Hebrides, the western coast of Ross, and the north-western portions of Inverness-shire. The greater part of the surface of Raasay is barren and heathy, but on the strip of secondary rocks on the E side along the top of the cliffs the soil can be tilled to advantage, as well as in the flat portion about the mansion-house at the extreme SW of the island. There is but little wood, a considerable amount of natural wood and coppice that once existed having been almost entirely cut down for fuel in the wet seasons of 1836 and 1837, when the peats were too wet to burn. Except the cliffs on the E, the wooded part about the mansion-house and the shores of Loch Arnish, with their birch coppice and bold cliffs, there is but little of what may be called scenery in the island. The drainage is effected by a large number of small streams flowing mostly to the Sound of Raasay. Of these the largest from N to S are Manishmore Burn, Glam Burn, Storab Burn, and Inverarish Burn, the latter entering the sea near the mansion-house. In a hut in the glen of the Glam, Prince Charles Edward found a brief refuge after leaving Flora Macdonald. Storab Burn rises from Loch-na-Meibich high up Dun Caan, and the Inverarish from Loch-na-Ma a little to the SSE. Of the latter Boswell tells a curious legend. Raasay and the adjacent islands belonged for about 500 years to the Macleods of Raasay, cadets of the Macleods of Lewis, often known as M'Gilliecallum of Raasay, and it was by one of this family that Dr Johnson and Boswell were so hospitably entertained in 1773. Raasay was, however, among the many proprietors ruined in the destitution crisis of 1846, and the estate passed into the hands of Mr Rainy, who cleared a considerable portion of the crofter population in order to lay out sheep farms. His son, who succeeded, made an early and interesting experiment on the crofter question. He established himself as a resident proprietor, interested himself in the welfare of the people—who then included 104 crofters, with an average rent of less than £5, and 65 cottars—and provided work for them in fencing, draining, trenching, etc., and at the end of four years found he had been spending over £400 a year more than his rental, while the condition of the people was in no way improved. On his death the estate was sold in 1872 to Mr G. G. M'Kay. The mania for highland sport having sprung up, it was resold, in 1874, to a Mr Armitage for about £60,000, to be partially converted into a deer forest; and again, in 1876, to the present proprietor, Mr E. H. Wood, who keeps more than half the island in his own hands for sporting purposes, the rest being in the hands of crofters, lotters, and cottars. The present proprietor has made a large number of improvements since the property passed into his possession, and the only complaints his tenants had to make before the recent Crofters' Commission was about damage done by game, and bad land—the latter a grievance which, unfortunately, no Act of Parliament can remedy. The mansion-house is pleasantly situated near the shore

of Church Bay on the SW; and here is also the Free church of the island, the clachan, and the post office, which is under Portree. The railway steamer calls here on the voyage between Stromeferry and Portree, both going and coming. The distance from the former place is, in a straight line, $19\frac{1}{2}$ miles, and by the steamer route about 25. The interesting ruin of Brochel Castle on the E coast is separately noticed. Pop. (1841) 647, (1861) 388, (1871) 389, (1881) 478, of whom 241 were males and 237 females.—*Ord. Sur.*, shs. 81, 71, 1882-85.

Rabbit Islands, three islets of Tongue parish, Sutherland, in the mouth of Tongue Bay. The two largest rise to a height of 100 feet, and all three have a sandy soil covered with verdure. They take their name from being occupied by swarms of rabbits, but they were anciently designated Eilean-na-Gaël, signifying the island of strangers; and they are said to have got that name from having been a landing place of the Danes. They enclose good anchorage for ships of any burden.—*Ord. Sur.*, sh. 114, 1880.

Rachan House, a mansion in BROUGHTON parish, Peebleshire, near the left bank of Holms Water, 9 furlongs SSE of Broughton station, and $6\frac{1}{2}$ miles ESE of Biggar, under which there is a post office of Rachan Mill. A modern two-story building in the style of an Italian villa, it has beautiful well-wooded grounds. Its owner, James Tweedie, Esq. of QUARTER and Rachan (b. 1831; suc. 1855), holds 11,151 acres in the shire, valued at £4059 per annum. During 1838-60 he and his father spent £80,000 on the purchase of Rachan and other properties; and Rachan, from at least 1406 till 1752, belonged to the Geddeses, of whom James Geddes (1710-48) was author of *An Essay on the Composition of the Ancients*.—*Ord. Sur.*, sh. 24, 1864.

Racks, a village in Torthorwald parish, Dumfriesshire, near the left bank of Lochar Water, with a station on the Glasgow and South-Western railway, $3\frac{1}{2}$ miles ESE of Dumfries.

Rackwick, Bow of. See NOOP.

Raddery House, a mansion in Rosemarkie parish, Ross-shire, 4 miles NNW of Fortrose.

Radernie. See CAMERON.

Raeberry, a stronghold of the Maclellans on the coast of Kirkcudbright parish, Kirkcudbrightshire, $6\frac{1}{2}$ miles SSE of the town. It stood on the crest of a terrific precipice overhanging the Solway Firth; was defended, on the landward side, by a strong wall and a deep fosse, the latter spanned by a huge drawbridge; suffered demolition of its main buildings about the middle of the 16th, of its defensive wall and drawbridge about the middle of the 18th, century; and is now represented by only the site and the fosse. It was hence that Sir Patrick Maclellan was carried prisoner to THREAVE.—*Ord. Sur.*, sh. 5, 1857.

Raehills, a mansion in Johnstone parish, Dumfriesshire, near the right bank of Kinnell Water, 10 miles NNW of Lockerbie. A noble castellated edifice in the Tudor style, with very beautiful grounds, it was built in 1786 by James, third Earl of Hopetoun, and received a large edition in 1834. The Earl of Hopetoun in 1792 inherited the estates of his grand-uncle, George, third Marquess of Annandale; and Anne, his daughter, and the heiress to those estates, married her kinsman, Admiral Sir William Johnstone-Hope, G.C.B. Their great-grandson, John James Hope-Johnstone, Esq. of Annandale (b. 1842; suc. 1876), lays claim to the Annandale marquessate, was Conservative member for Dumfriesshire from 1874 to 1880, and holds 64,079 acres in the shire, valued at £27,884 per annum. See ANNANDALE, LOCHWOOD, and LOCHMAEBEN.—*Ord. Sur.*, sh. 10, 1864.

Raemoir, a mansion in Banchory-Ternan parish, Kincardineshire, 3 miles N of Banchory. Its owner, Alexander Innes, Esq. (b. 1846; suc. 1883), holds 4750 acres in the shire, valued at £2847 per annum.—*Ord. Sur.*, shs. 76, 66, 1874-71.

Rafford, a parish, containing a village of the same name, in the NW of Elginshire. It is bounded N by

Kinloss parish, ESE by the parishes of Alves and Elgin, SE by the parish of Dallas, S and SW by the parish of Edinkillie, and W by the parish of Forres. The boundary on the SE and part of the S is formed by the Lochty or Black Burn and the Loch of Romach for a distance of over $5\frac{1}{2}$ miles to the source of the burn. The Burn of Altyre also forms the boundary on the S border for about $\frac{1}{2}$ mile, and the Findhorn for about $\frac{3}{4}$ mile at the extreme W corner above the point where the parishes of Rafford, Edinkillie, and Forres meet in the centre of the river. Elsewhere the line is artificial. The shape of the parish is highly irregular, a long horn-like projection of the parish of Forres indenting the western side to a depth of $3\frac{1}{2}$ miles, and almost separating a northern triangular portion from the rest. This triangular portion, comprising about a third of the whole area, is united to the more compact southern portion by a neck, $\frac{3}{4}$ mile wide, to the N of Bognie. The northern part is 3 miles from NNW to SSE, and 3 miles wide along the northern border; the southern part measures $3\frac{1}{2}$ miles from N to S through the village of Rafford, and fully $6\frac{1}{2}$ miles from the point where the parishes of Rafford, Edinkillie, and Forres meet on the Findhorn E by N to the point where the parishes of Elgin, Dallas, and Rafford meet on the Lochty. The total area is 12,504·106 acres, of which 47·971 acres are water. The northern border is low, flat, and fertile, the centre undulating, and the S a rough upland reaching a height of 533 feet on the E side at the northern end of the road running NNW of Bognie, 731 at the middle of the same road, 833 at the top of Burgie Hill, and over 900, on the shoulder of Romach Hill on the southern border, at the source of the Lochty. The upper districts have fine views of the 'laich of Moray,' the Moray Firth, and the hills to the N of it. About 4000 acres in the centre and SW are under wood, and about as many under tillage, while the rest is mostly hill pasture or moorland. The soil along the N and centre is good strong clay or black mould; elsewhere it is clay, shallow black mould, sand, rough gravel on an almost impenetrable subsoil, or reclaimed moss. The underlying rocks are Silurian (S) and Old Red Sandstone (centre and N). A coarse grey slate in the former was once quarried, and a gritty sandstone in the latter is occasionally worked. The drainage in the N goes to a small stream that flows through Alves parish to Burghead Bay; in the SE it is carried off by the Lochty, and in the W by the streams flowing into the Altyre Burn, and that burn itself, which flows past Forres and into Findhorn Bay. On the southern border the whole of Romach Loch ($\frac{3}{4}$ mile long by 100 yards wide) is in the parish, as is also part of Loch of Blairs (3×2 furl.), the rest being in Forres. Both contain good trout, especially Loch of Blairs, where the fish weigh from $\frac{1}{2}$ to $\frac{3}{4}$ lb., and are red-fleshed, but they are preserved. The parish is an old one, the church having been the prebend of the sub-chancellor of the diocese of Moray; but the boundaries were altered in 1657, when a small portion was given off for the new parish of Kinloss, and again in 1659, when the pre-Reformation parish of Altyre was disjoined from Dallas and added to Rafford. Near the northern border the parish is traversed for $2\frac{1}{2}$ miles by the main road from Aberdeen to Inverness, and near the W side for 3 miles by the Forres and Perth section of the Highland Railway system, and by the road from Forres to Grantown. There are also a large number of good district roads. The principal residences are Altyre House and Burgie House, both of which are separately noticed. The whole district about Altyre House is beautifully wooded. The antiquities are Sueno's Stone in the extreme NW of the parish, which has been noticed under Forres, and Burgie and Blervie Towers, which are separately noticed. Blervie is identified with the Ulern or Vlern, where, according to some of the chroniclers, Malcolm I. was slain in 954. The old name was Blare. Near the castle are the remains of a stone circle. The site of Altyre church is on the banks of Altyre Burn, $\frac{1}{2}$ mile N of Altyre House. The only distinguished native

was Dr Alexander Adam (1741-1809), a famous classical scholar and long rector of the High School of Edinburgh. The village is by road 2½ miles SE of Forres, which is the nearest railway station. There is a post office under Forres, and a cattle market is held on the second Wednesday of November.

The parish is in the presbytery of Forres and the synod of Moray, and the living is worth £315 a year. The parish church, at the village, was built in 1826 after designs by Gillespie Graham, and is a good Gothic building containing 600 sittings. There is also a Free church. Under the school board are Rafford, Burgie, and Rafford female schools, which, with accommodation for 81, 50, and 61 pupils respectively, had in 1883 attendances of 38, 42, and 57, and grants of £32, 6s., £31, 15s., and £47, 15s. 6d. There are four landed proprietors—the lairds of Alytre, Blerwie, and Burgie, and the Earl of Moray. Valuation (1860) £5543, (1884) £6786. Pop. (1801) 1030, (1831) 992, (1861) 1005, (1881) 1052.—*Ord. Sur.*, shs. 85, 84, 1876.

Raigmore, an estate, with a mansion, in Inverness parish, Inverness-shire, 1 mile distant from the town. Its owner, Æneas William Mackintosh, Esq. (b. 1819), Liberal M.P. for Inverness 1868-74, holds 6556 acres in the shire, valued at £4368 per annum.

Rain. See RAYNE.

Rait. See KILSPINDIE.

Rait Castle. See NAIRN.

Raith, a mansion in Abbotshall parish, Fife, 2½ miles W of Kirkcaldy. Standing on the eastern face of a hill, and originally built in 1694, it has received the addition of two wings and a fine Ionic portico; and is surrounded by extensive and beautifully-wooded grounds, containing a picturesque artificial lake (1812) of 21 acres. Near the summit of the hill, behind the mansion, 400 feet above sea-level, stands square Raith Tower, 54 feet high, whose top commands a magnificent view of fourteen or sixteen counties. Sir John de Melville of Raith swore fealty to Edward I. in 1296; and among his descendants were Sir John Melville, beheaded for treason in 1549; Sir Robert Melville of Murdocairnie (1527-1621), created Baron Melville of Monimail in 1616; his younger brother, Sir James Melville of Hall-hill (1530-1607), well known by his curious *Memoirs*; and George, fourth Lord Melville, created Earl of Melville in 1690. (See MELVILLE HOUSE.) After his death in 1707, the estate was purchased by Robert Ferguson (1690-1781); and Raith House was the birth-place of the Peninsular hero, Gen. Sir Ronald Craufurd Ferguson, M.P. (1773-1841), whose grandson, Ronald Craufurd Munro-Ferguson, Esq. (b. 1860; suc. 1868), holds 7135 acres in Fife, 3350 in Elginshire, and 14,582 in Ross-shire, valued at £13,919, £2529, and £3603 per annum, his father having succeeded to the estates of Muirton and Novar in 1864. His grand-uncle and father represented the Kirkcaldy burghs from 1831 to 1861; and he himself was elected Liberal M.P. for Ross-shire in 1884. A *quoad sacra* parish of Raith, formed out of Abbotshall in 1883, is in the presbytery of Kirkcaldy and the synod of Fife. Its church is the former Free church of Abbotshall, acquired by the Establishment in 1875, and reopened after reconstruction at a cost of over £5000 on 9 Sept. 1883.—*Ord. Sur.*, sh. 40, 1867.

Ralston, an estate in Abbey parish, Renfrewshire, 1½ mile E of Paisley. From an early period down to the beginning of the 18th century it belonged to a family of its own name, originally called Ralphston from their ancestor Ralph; and in 1800, with some exception, it was acquired by William Orr, Esq., who had previously purchased from the Earl of Glasgow a part of the adjacent estate of Iugliston, and who erected there a handsome mansion called Ralston House.—*Ord. Sur.*, sh. 30, 1866.

Rammerscales, a modern mansion in Dalton parish, Dumfriesshire, 3½ miles S of Lochmaben. Standing on a high eastward slope of the Thorthorwald Hills, and surrounded with a fine expanse of hanging wood, it commands a view of the greater part of Annandale.

Its owner, William Bell Macdonald, Esq. (b. 1845; suc. 1862), holds 1050 acres in the shire, valued at £1188 per annum.—*Ord. Sur.*, sh. 10, 1864.

Ramornie, a mansion in Kettle parish, Fife, 7 furlongs E of Ladybank Junction. Its owner, Andrew Agnew Maitland-Heriot, Esq. (b. 1851; suc. 1881), holds 1050 acres in the shire, valued at £2115 per annum.—*Ord. Sur.*, sh. 40, 1867.

Ramoth, a village in Kilmadock parish, Perthshire, 3 miles ESE of Thornhill.

Ramsaycleugh, a hamlet in Ettrick parish, Selkirkshire, on the left bank of Ettrick Water, 18 miles SW of Selkirk, under which it has a post office.

Ranfurlu Castle. See KILBARCHAN.

Rangag, Loch. See LATHERON.

Range Castle. See ALMAGILL.

Rankeillour, Nether, an estate, with a mansion, in Colleslie parish, Fife, 2 miles NE of Ladybank. It was sold to Mr B. Nairn, of Kirkcaldy, in 1876 for £43,550.

Rankeillour, Over or Upper, a fine mansion in MONTMAYL parish, Fife, 3 miles W by S of Cupar. It was built by General John Hope, afterwards fourth Earl of Hopetoun; and has splendidly wooded grounds. The estate, which belonged originally to a family of the name of Rankeillour, at an early period went to a branch of the Sibbalds of Balgonie; and, passing in the time of Charles II. to Sir Archibald Hope, grandson of the celebrated Sir Thomas Hope of Craighall, is now the property of H. W. Hope, Esq. of LUFFNESS.—*Ord. Sur.*, sh. 40, 1867.

Rankle Burn, a stream of Ettrick parish, Selkirkshire, rising at an altitude of 1350 feet, within ¼ mile of Moodlaw Loch, at the meeting-point of Selkirk, Dumfries, and Roxburgh shires, and winding 9½ miles northward—for 2½ miles along the Robertson, and for ¾ mile along the Kirkhope, boundary—till, after a total descent of 635 feet, it falls into Ettrick Water opposite Tushielaw Tower. It traverses first a wildly moorish tract, afterwards a deeply sequestered pastoral glen; is sung in the ballad of the *Maids of the Rankle Burn*; and abounds in small trout.—*Ord. Sur.*, sh. 16, 1864.

Rannoch, Loch, a lake of Fortingall parish, NW Perthshire. Extending 9½ miles eastward to within 300 yards of Kinloch-Rannoch (21 miles W by N of Pitlochry), and lying at an altitude of 668 feet above sea-level, it has a width near its head of only ¼ mile, but lower down broadens to from 5½ to 9 furlongs. Throughout its greater part, especially towards the foot, its depth is from 60 to 85 fathoms; and it freezes so well in hard frost at the W end that persons can cross there on the ice, though the whole surface is not frozen over oftener, on an average, than once in 30 or 40 years. It abounds in small trout and large salmon-ferox; receives at its head the GAUR coming from Loch Lydoch, at a point 7 furlongs from its head on the N side the ERICHT coming from Loch Ericht, at other parts of its sides Killichouan, Aulich, Slocna-Creadha, Dall, and Bogair Burns; discharges all its superfluence at the foot in the river TUMMEL; and contains near its head an artificial cranage, on which is a modernised keep. Flanked along both its sides by ranges of upland receding from brae and hill to lofty mountain, it is sky-lined in the distant W by the peaks of Buachaille-Étive and Glencoe, and nearly overhung in the near SE by the vast isolated mass of Schiehallion. Cornfields and birch woods adorn the skirts and lower braes of its northern flank; and a great pine forest, the Black Wood of Rannoch, runs far up all its southern acclivities, so that, viewed in connection with the basins of its contributory waters, and with the diversities and the distances of the horizon lines, it makes a vast and imposing display of magnificent scenery. At its head, 12 miles by road W by S of Kinloch-Rannoch, is Rannoch Lodge (Sir Robert Menzies, Bart. of Castle-Menzies); and ¾ mile to the SW is Rannoch Barracks (Stran-Robertson).—*Ord. Sur.*, shs. 54, 55, 1873-69.

The district of Rannoch is bounded NW by Lochaber, N by Badenoch, E by Blair Athole, S by the Fortingall and Glenlyon sections of Breadalbane, and W by

Glenoreby and Appin. Its greatest length, from E to W, is 28 miles; its greatest breadth is 15 miles; and its area is about 290 square miles. The central part, from the eastern boundary to the extent of 22 miles westward, exhibits the picturesqueness of the glen and screens of Loch Rannoch; the northern part, excepting a small section on its northern border occupied by a portion of wild Loch Ericht, consists entirely of bare, lofty, indomitable masses of the Central Grampians, variously peaked with soaring summits, expanded into plateaux of moor and loch, and cloven in their lower declivities with narrow gleens; the southern part, all comparatively of small breadth, consists of the northern declivities and spurs of the hills and mountains flanking the N side of Fortingall and Glenlyon; and the western part is Rannoch Muir, the largest and dreariest moor in Scotland, lying at a mean elevation of 1000 feet above sea-level, all an open, monotonous, silent, black expanse of desert, a vast and dismal mixture of bog, morass, heath, and rock, streaked in the centre with long dreary Loch Lydloch; diversified elsewhere with only a few marshy pools, and some ditchy naked lines of dark water-course; and environed in the distance by rough, bleak, dark mountains, in rneful keeping of aspect with its own sable sea of moss.

'Amid this vast tremendous solitude,
Where nought is heard except the wild wind's sigh,
Or savage raven's deep and hollow cry,
With awful thought the spirit is imbued!
Around, around, for many a weary mile,
The alpine masses stretch; the heavy cloud
Cleaves round their brows, concealing with its shroud
Bleak, barren rocks, unthawed by summer's smile.
Nought but the desert mountains and lone sky
Are here; birds sing not, and the wandering bee
Searches for flowers in vain; nor shrub, nor tree,
Nor human habitation greets the eye
Of heart-struck pilgrim; while around him lie
Silence and desolation, what is he!'

Ranza. See LOCHRANZA and GLENRANZA.

Raploch, a village in Stirling parish, Stirlingshire, adjacent to the Forth and Clyde railway, immediately under the NW side of Stirling Castle, $\frac{3}{4}$ mile W of Stirling Bridge, and within the parliamentary burgh. It was the birthplace of Dugald Graham (1724-79), the author of a rhyming *History of the Rebellion*. See GLASGOW, p. 144.

Rasay. See RAASAY and BLACKWATER.

Ratagan. See MAAM-RATAGAIN.

Rathen (? Gael. *Rath-ann*, 'the fort on the river'), a parish containing a hamlet of the same name on the NE coast of the Buchan district of Aberdeenshire. It is bounded N by Fraserburgh parish, NE by the German Ocean, SE by the parish of Lonmay, SW by the parish of Strichen, W by a detached portion of the parish of Fraserburgh, and NW by the parish of Tyrie. The boundary with Fraserburgh is formed for 2½ miles by the Rathen or Philorth Burn to its mouth, 2 miles SE of the town of Fraserburgh, and then extends along the sea-shore for 2½ miles. Elsewhere the line is artificial. On the coast is Cairnbulg Point, flanking the E side of Fraserburgh Bay. The greatest length of the parish, from NE to SW, is 6½ miles; the greatest breadth, 3¾ miles; and the area, 9789·758 acres, of which 177·581 are foreshore and 24·971 water. The coast is partly flat and sandy, and partly formed by low rocks; and the surface adjoining both coast and burn is flat and well cultivated. In the SW the ground sweeps up to the ridge culminating in Mormond Hill (769 feet), on the borders of the parishes of Rathen, Strichen, and Fraserburgh, and here the appearance is bleak and barren. Of the land area of 9587 acres, about 200 are planted, about 1800 are rough pasture, and the remainder is under cultivation. The soil varies from a strong alluvium to a poor moorish earth. The underlying rocks are Silurian, and the beds of limestone are worked. The drainage is mostly carried off by the Rathen Burn, which has a course of 3 miles through the parish, and 2½ along the border, and the smaller streams that flow into it. As might be expected from

its vicinity to DEER, Rathen has associated with it the names of two of the early Culdee missionaries—St Ethernan, who is said to have had his hermitage in St Ethernan's Den, on the E side of Mormond Hill; while a hillock and well, about ¼ mile from the church, are associated with the name of St Oyne or Eyen. The old church is one of the most ancient in Aberdeenshire, and consisted of a nave with an aisle to the S, the latter erected by the Frasers of Memisie* in 1646. The heltry bears date 1782, and L. A. S., for Lord Abernethy and Saltoun; and the bell has the inscription, 'Peter Jansen, 1643.' The year after the manufacture of the bell, the church was the scene of one of the many 'omens that were seen in diverse parts of the kingdom,' during the great struggle between Argyll and Montrose. 'At Rethine in Buchan,' says Patrick Gordon, the author of *A Shorte Abridgement of Britain's Distemper*, 'there was about the tyme of morneing prayer for diverse dayes togethir, hard in the church a queire of musicke, both of woces, organs, and other instrumentes, and with such a ravishing sweets that they were transported which, in numbers, resorted to heire it with unspeakable pleasure and never wiried delight. The preacher on day being much takin with the harmonie, went with diverse of his parisheners in to the church, to try if there eyes could beare wittes to what there eares had hard, but they were no sooner entered when, lo, the musicke ceased with a long not, or stroke of a *violl de ganbo*; and the sound came from ane upper lofte where the people used to heare service, but they could sie nothing.' It underwent repair in 1767, but was finally replaced in 1870 by a new church, a Gothic building with a spire, erected to the E of the old site. The ancient parish comprehended also part of Fraserburgh and the greater part of Strichen. The church was given by Marjory, Countess of Buchan, to the Abbey of Arbroath; and in 1328, Robert Bruce granted the benefice to the college and canons of Old Machar. The chief residence is Mormond House; Memisie House being now used as a farm-house. Both are separately noticed, as are also the Memisie Cairns and Cairnbulg and Inverallochy Castles. Trefor Hill, SE of the church, had, until some years ago, trenches and walls of earth and stone on it, so that it seems to have been a place of strength, and possibly the *rath* from which the parish takes its name. According to Peter Buchan, in his *Gleanings of Scarce Old Ballads*, the Jacobite songs of *Whirry, Whigs awa' Man*, and *Logie o' Buchan*, were written by George Hacket, schoolmaster of Rathen, 'in the years 1736 and 7;' and it is added that he also wrote a Dialogue between George II. and the Devil, which was so obnoxious that the Duke of Cumberland offered a reward of £100 for the discovery of the author. Hacket was schoolmaster, not in 1736-37, but from 1714 to 1725, when he was deposed from office as having 'come to that height of impudence as to deny all the faults he stands guilty of, and will not be convinced or made sensible of his miscarriages, and he having relapsed again and again, and no reformation of heart or of ways to be found in him.' He seems subsequently to have taught adventure schools at Cairnbulg, Memisie, and Tyrie. There is no evidence for or against the reputed authorship, which rests entirely on Buchan's assertion. The parish is traversed by the main roads from Ellon and Peterhead to Fraserburgh and also by the Formartine and Luchan section of the Great North of Scotland railway, on the Fraserburgh branch of which there is a station of Rathen, 4¼ miles N of Aberdeen, and 2½ S of Fraserburgh. Besides the hamlet, which is ¾ mile W of the station, the parish contains also the villages of Inverallochy, Cairnbulg, and Charleston, all of which are separately noticed.

The parish is in the presbytery of Deer and synod of Aberdeen, and the living is worth £223 a year. It gives off the *quoad sacra* parish of INVERALLOCHY. The parish church has been already noticed. There is

* The Frasers of Memisie were cadets of Fraser of Philorth, from which family they branched off in 1432.

also a Free church, 2½ miles SSW of Inverallochy. Under the school board, Rathen and Inverallochy public schools, with accommodation for 230 and 300 pupils respectively, had (1884) an average attendance of 93 and 223, and grants of £86, 3s. 6d. and £166, 5s. Six proprietors hold each an annual value of £500 and upwards, 4 hold each between £500 and £100, and there are 2 of smaller amount. Valuation (1860) £8071, (1885) £11,033, 2s. 7d., including £909 for railway. Pop. (1801) 1588, (1831) 2100, (1861) 2554, (1871) 2850, (1881) 2825, of whom 1372 were males and 1453 females, while 1248 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 97, 1876.

Rathillet, a small village, with a U.P. church, in Kilmany parish, Fife, 4½ miles N by W of Cupar. The estate of Rathillet belonged for ages, till about 1772, to the family of Halkerstone or Hackston, of whom David Hackston was one of the murderers of Archbishop Sharp on MAGUS MUIR.—*Ord. Sur.*, sh. 48, 1868.

Rathmuriel. See CHRIST'S KIRK.

Ratho, a village and a parish of Edinburghshire. The village stands 1250 to 320 feet above sea-level, near the S bank of the Union Canal, 1½ mile S by E of Ratho station on the North British railway, this being 8½ miles WSW of Edinburgh, and 9½ ESE of Linlithgow. Its sight is the slope or eastern declivity of gentle uplands; and it consists of a single street, coming down the declivity from W to E, and bending northward, near the end, to terminate on the canal. Most of its houses are neat whinstone cottages, lintelled with sandstone, and roofed with either tiles or slate. Anciently a place of considerable note, Ratho fell into great decay, but has in modern times been revived, extended, and much improved. In a poem by Joseph Mitchell, who published two large octavo volumes of miscellaneous poetry in 1724, and who is known as 'the poet of Ratho,' it figures as having at one time risen to splendour, and then at another time sunk to desolation, till 'Ratho looked like Troy a field of corn.' It has now a post office, with money order, savings' bank, and telegraph departments, a police station, and gas works. Pop. (1838) 539, (1861) 658, (1871) 717, (1881) 713.

The parish is bounded W and NW by Kirkliston, N by Kirkliston and Corstorphine, SE by Currie, and SW by Kirknewton. Sending off a long, narrow, south-south-westward projection, it has an utmost length from NNE to SSW of 5½ miles, a varying width of 5 furlongs and 5 miles, and an area of 6168¾ acres, of which 21½ are water. Almost the only stream, and that a tiny one, is Gogar Burn; but the UNION CANAL (1822) goes 3½ miles north-westward and westward across the interior.

With a gentle southerly rise from 132 to 350 feet above sea-level, the surface of the main body in its eastern half is a slightly variegated level; in its western is a congeries of broad-based hillocks or low table-land, with gentle swells. As the position is midway between the Pentland Hills and the Firth of Forth, and about 8 or 9 miles W of Edinburgh, magnificent views are obtained from the little heights of the scenery of the Lothians, the Forth, Fifeshire, the Ochils, and the frontier Grampians. The surface of the southern or projecting district rises slowly from a low line of connection with the main body to near the southern boundary; and it there shoots abruptly up in the two bold isolated heights of Dalmahoy and Kaimies Hills, each 800 feet above sea-level. These form a conspicuous and picturesque feature of the general Lothian landscape; and, like Salisbury Craigs, the rocks of Edinburgh and Stirling Castles, and various eminences at the NE end of the Lennox Hills, they break down in cliffs, or stoop precipitously to the W. The general aspect of the parish, from the diversity of its contour and the richness of its embellishments, possesses much beauty, and presents many fine close scenes. Nearly six-sevenths of the entire area are either in tillage or in an arable condition; and the remaining seventh is distributed, in not very unequal parts, into plantations and pasture. The soil is, in general, a light loam, with a preponderance of sand; but, towards the eastern border,

it passes, in a great degree, into clay. Except for intrusions of diorite in the W, and of basalt in the southern hills, the rocks belong to the Calciferous Sandstone series. The basalt and sandstone have both been quarried; whilst claystone, or 'calmstone,' was formerly worked upon the property of Ratho Hall. Coal is said to have been mined long ago at Bonnington, but cannot now be found. The only noticeable antiquities are vestiges of two camps, both probably Danish, the one on Kaimies Hill, the other on South Platt Hill, a commanding little summit on the W. In 1315 the barony and patronage of Ratho were, along with much other property, granted by Robert I. to the Steward of Scotland, as the dowry of the Princess Marjory; and on the accession of Robert II. to the throne in 1371, they became part of the property of the king's eldest son as prince of Scotland, for whom, in 1404, they and the other estates were erected into a principality with regal jurisdiction. Among eminent persons connected with the parish were William Wilkie, D.D. (1721-72), 'the Scottish Homer,' who was for six years minister; Sir Robert Liston, G.C.B. (1742-1836), British ambassador at seven courts, who spent his last years at Millburn; and Sir William Fettes (1750-1836), another resident and heritor, whose vast property was bequeathed for the founding at Edinburgh of the great Fettes College. Ratho Park, 3½ mile E by N of the village, is a good modern Grecian building, with beautiful grounds. Other mansions, noticed separately, are ASHLEY, DALMAHOY, HATTON, MILLBURN TOWER, and NORTON; and 12 proprietors hold each an annual value of £500 and upwards, 5 of between £100 and £500. Ratho is in the presbytery of Edinburgh and the synod of Lothian and Tweeddale; the living is worth £422. Standing near the village, on the opposite side of the canal, and embowered by ancient trees, the church is a somewhat cruciform structure, part old, part modern, its Dalmahoy aisle bearing date 1633. It contains 750 sittings. There is a Free church designated of Ratho and Kirknewton; a pretty little Roman Catholic church, St Mary's, with 100 sittings, was opened in 1833; and 1 mile SSE of the village is St Mary's Episcopal church of Dalmahoy. Three schools—Ratho public, Ratho female, and Dalmahoy Episcopalian—with respective accommodation for 167, 82, and 119 children, had (1884) an average attendance of 93, 58, and 104, and grants of £84, 3s., £49, 16s., and £96, 18s. Valuation (1860) £12,764, (1885) £16,486, plus £4978 for railway. Pop. (1801) 987, (1831) 1313, (1861) 1659, (1871) 1744, (1881) 1815.—*Ord. Sur.*, sh. 32, 1857.

Rathven, a coast parish of NW Banffshire, containing the town of BUCKIE, part of the royal burgh of CULLEN, and the four fishing villages of PORTKNOCKIE, FINDOCHTY, PORTESSIE, and PORT GORDON, all of which are noticed separately. A fifth, the pretty little village of Ianston, between Buckie and Portessie, has risen up since 1879, and, owing to its situation, will become an important place. The parish is bounded NW by the Moray Firth, NE by Cullen Bay, E by Cullen, SE by Deskford and Keith, and W by Bellie. Its utmost length, from ENE to WSW, is 8½ miles; its breadth diminishes eastward from 5¾ to 3 miles; and its area is 36½ square miles or 23,551 acres, of which 40½ are water and 345 foreshore. The coast-line, 9½ miles in extent, is little indented by bay or headland, but rises steeply from the sea to 87 feet near Port Gordon, 75 at Buckie Newtown, 116 at the Law Hillock, and 177 near Portknockie. Three caverns of unknown extent bear the name of Farskane's, Janet Corstair's, and Cross Caves. The Burn of TYNET runs 5½ miles north-by-westward along most of the western, and the Burn of DESKFORD, 2½ miles north-north-westward along all the eastern, boundary; whilst several rapid rivulets drain the interior to the Moray Firth. That part of the parish between the shore and the road from Cullen to Fochabers attains a maximum altitude of only 271 feet at a point 7 furlongs SSE of Findochty; but the rest of the surface is very hilly, from E to W attaining 802 feet at the Little Bin, 1050 at the wooded, cairn-

crowned **BIN HILL** of **CULLEN**, 900 at the Hill of Mand, 893 at Addie Hill, 948 at the hill of Stonyslacks, and 987 at Millstone Hill. A very pure quartz rock is found in the Bin; metamorphic rocks, including gneiss, mica slate, clay slate, and other schists, prevail along the coast; greywacke alternates in some parts with the mica slate and the clay slate; Old Red sandstone occurs in the NE, and goes into conjunction with greywacke; limestone has been worked at Nether Buckie; and a beautiful whitish sand, said to be almost equal to the finest found in Holland, is plentiful near Litchieston. Medicinal springs, formerly held in high repute, are in three places; and springs of pure water are numerous, copious, and perennial. The soil, in one corner a light and extremely rich loam incumbent on clay, in another corner a thin yet fertile loam on a soft red subsoil, elsewhere alternates between a light sand and a stiffish clay; and almost everywhere, except in the sandy places, is profusely strewn and intermixed with small boulders. Less than one-third of the entire area is in tillage; rather more than 4000 acres are under wood; about 400 are meadow and grass land; and the rest of the parish is either pastoral or waste. Antiquities are a number of cairns on the heights of Corriedown; many tumuli on the field of the Battle of the Bauds; * a portion of Findochty Castle on Mains of Findochty farm; the ruins of Green and Tronach Castles near Portknockie; and remains of a pre-Reformation chapel near Farskane. Two wings still standing of the old mansion of Rannas are occupied by a farmer. The Rev. Alexander Geddes, LL.D. (1737-1802), an eccentric Roman Catholic divine, was born of crofter parents at Pathhead, which was also the birthplace of Alexander Paterson (1766-1831), Roman Catholic Bishop of Edinburgh. The parish is traversed by a branch of the Highland railway from Keith to Buckie, and by one of the Great North of Scotland railway from Elgin to Portsoy—both commenced in 1883. At Inchgower, 1½ mile from Buckie, is the large distillery of J. Wilson & Co. Mansions, noticed separately, are **LETTREFOURIE**, **CAIRNFIELD**, and **TANNACHY**; and 5 proprietors hold each an annual value of £500 and upwards. Including all Buckie and Seafield *quoad sacra* parishes and most of Enzie, this parish is in the presbytery of Forlyce and the synod of Aberdeen; the victual stipend is 22 chalders, with a glebe worth £14. The parish church, ¾ mile SSE of Portessie, was built in 1794, and contains 1000 sittings. At Preshome, 3 miles SSE of Port-Gordon, is St Gregory's Roman Catholic church (1789; 450 sittings); and other places of worship are noticed under **BUCKIE**, **ENZIE**, and **PORTKNOCKIE**. Besides the three schools at **BUCKIE**, five public schools—Arradoul female, Findochty infant, Portknockie, Rathven, and Shielburn—with respective accommodation for 71, 100, 250, 300, and 60 children, had (1884) an average attendance of 48, 68, 187, 284, and 43, and grants of £46, 17s., £56, 18s., £157, 13s. 6d., £274, 8s. 10d., and £52, 12s. 6d. Valuation (1860) £13,159, (1884) £28,646. Pop. (1801) 3901, (1831) 6484, (1861) 8240, (1871) 10,199, (1881) 11,180, of whom 3229 were in the ecclesiastical parish of Rathven.—*Ord. Sur.*, shs. 95, 96, 85, 86, 1876. See the Rev. Dr J. F. S. Gordon's *Book of the Chronicles of Keith, Rathven*, etc. (Glasg. 1880).

Ratter, a hamlet in Dunnet parish, Caithness, near the coast, 7 miles NE of Castletown.

Rattray, a town and a parish in Strathmore district, E Perthshire. The town stands on the left side of the river Erich, opposite **BLAIRGOWRIE**, of which it is virtually a suburb, and with which it is connected by a four-arch bridge, repaired and widened in 1871. It comprises the villages of Old Rattray and New Rattray, the latter (not yet a century old) lying close to the river, the former ½ mile to the NE; and it is a burgh under the General Police and Improvement (Scotland) Act of 1862. Flax and jute spinning is the staple industry; and there are

* The 'Battle of the Bauds' is said to have been fought in 962 between the Norwegians and Indulph, King of Alban, who, after gaining a complete victory, himself was slain at 'Inverculen'; but Dr Skene is inclined to believe that Indulph retired to the monastery of Kilmont or St Andrews.

two post offices under Blairgowrie (Old and New Rattray), two inns, a curling club, a fair on the Tuesday after 11 Feb., the parish church (1820; 620 sittings), a Free church, and a U.P. church. Pop. (1871) 2161, (1881) 2533, of whom 1501 were females. Houses (1881) 402 inhabited, 19 vacant, 3 building.

The parish is bounded N by the Drimmie section of Bendochy and by Alyth, E by the Creuchies section of Blairgowrie and by Bendochy proper, and S, SW, and W by Blairgowrie proper. Its utmost length, from N by W to S by E, is 5½ miles; its breadth increases southward from 1¾ furlong to 2¾ miles; and its area is 5457 acres, of which 75½ are water, and 848 belong to its Bleaton or detached portion (1¾ × 1½ mile), which, lying 3¼ miles NNW of the nearest point of the main body, and 1½ N by W of Blairgowrie, is bounded NE, SE, and S by Alyth, W by Caputh (detached), and NW by Kirkmichael. The Black Water for 2¼ miles traces all the north-western and western boundary of this detached portion; whilst the ERICHT, which is formed 3¼ miles lower down by the confluence of the Black Water and the Ardlie, winds 7¼ miles south-by-eastward and eastward along all the western, south-western, and southern boundary of the main body. Over most of this course the Erich is a romantic stream, overhung with copsewood, chiefly small oaks; and above Craighall its banks are sheer precipices of rock, upwards of 200 feet high, crowned with plantation, and parapeted with wall, to keep cattle and strangers from falling over. In the extreme S the surface declines to 190 feet above sea-level, and thence it rises gradually northward until, at the boundary with the Creuchies section of Blairgowrie, it attains a maximum altitude of 909 feet above sea-level. Thus the main body, for 1¼ mile from the southern boundary, is flat, or very gently ascending; and, over the rest of the area, consists of the lowest and slowly graduated heights which, several miles beyond the northern boundary, attain a Grampian elevation. The fine southern exposure, combined with the field afforded by the vast mountain-rampart in the comparatively near distance, renders the situation pleasant and the climate very healthy. The lands in the S have a dry and pretty fertile soil, and are all arable; those in the N are disposed chiefly in pasture. The Bleaton or detached portion, which rises eastward from 795 to 1247 feet, forms part of the ascending ranges of the frontier Grampians. The rocks are variously igneous, Devonian, and Silurian. On an oblong mound called the Castle Hill, 1½ mile E by S of Old Rattray, are vestiges of the ancient castle of Rattray, a very large building, the original residence of the Rattray or De Rattrieff family. On the farm of Standingstones, which hence received its name, are remains of a stone circle. Mansions, noticed separately, are **CRAIGHALL** and **GLENERICHT**. A third, Parkhill, ¾ mile N of Old Rattray, is the seat of Charles Hill-Whitson, Esq. (b. 1840; suc. 1881), who owns 998 acres in the shire, valued at £1389 per annum. In all, 4 proprietors hold each an annual value of £500 and upwards, 13 of between £100 and £500. Giving off its detached portion to Persie *quoad sacra* parish, Rattray is in the presbytery of Dunkeld and the synod of Perth and Stirling; the living is worth £257. Two public schools—Craig Mill and Rattray—with respective accommodation for 95 and 243 children, had (1884) an average attendance of 62 and 262, and grants of £42, 10s. and £220, 3s. Valuation (1866) £9104, 16s. 9d., (1884) £13,182, 0s. 2d. Pop. (1801) 880, (1831) 1362, (1861) 2161, (1871) 2610, (1881) 3051, of whom 3018 were in the ecclesiastical parish.—*Ord. Sur.*, sh. 56, 1870.

Rattray, a commodious mansion in Crimond parish, NE Aberdeenshire, 7¼ miles NNW of Peterhead, and 4 ESE of Lomnay station. Its owner, James Cumine, Esq. (b. 1810; suc. 1841), holds 1696 acres in the shire, valued at £1293 per annum.—*Ord. Sur.*, sh. 87, 1876.

Ravelrig, an estate, with a mansion, in CURRIE parish, Edinburghshire, near the left bank of the Water of Leith, 1½ mile SW of Currie village.

Ravelston, a mansion in Corstorphine parish, Edin-

burghshire, near the E skirt of Corstorphine Hill, $1\frac{1}{2}$ mile WNW of Murrayfield station, and $2\frac{1}{2}$ miles W of the centre of Edinburgh. The estate belonged about 1600 to George Foulis, whose son was created a baronet in 1661. Sir Archibald, second Bart., executed at Carlisle for his share in the '45, took the name of Primrose about 1700 on succeeding to the estate of Dunipace, and sold Ravelston in 1726 to Alexander Keith, W.S., a *soi-disant* descendant of the third Earl Marischal. His son, Alexander (1705-92), built the present mansion, and here was often visited by his kinsman, Sir Walter Scott, who took from the formal old-fashioned gardens some of the features of 'Tully-veolan' in *Waverley*. His son received a baronetcy in 1822, when he acted as Knight Marischal to George IV.; and after his death in 1832 Ravelston went to his son-in-law, Sir William Keith Murray, Bart. of OCHTERTYRE, whose son, Sir Patrick, sold it in 1872 to his uncle, John Murray-Gartshore, Esq. (b. 1804). The latter has made a handsome addition to the house, and holds 294 acres in Midlothian, valued at £1388 per annum.—*Ord. Sur.*, sh. 32, 1857. See *Jn. Small's Castles and Mansions of the Lothians* (Edinb. 1833).

Ravensraig or Ravensheugh Castle, a ruin in Dysart parish, Fife, on a sea-cliff $1\frac{1}{2}$ mile SW of Dysart town. It was given, with circumjacent lands, by James III., to William Sinclair, third Earl of Orkney, in 1470; was long the seat of the Lords Sinclair; continued to be inhabited in the time of Oliver Cromwell; and now is interesting mainly for its associations.—*Ord. Sur.*, sh. 40, 1867.

Ravensraig, a station in Innerkip parish, Renfrewshire, on the Wemyss Bay railway, 2 miles SW of Upper Greenock station.

Ravensraig Castle. See PETERHEAD.

Ravenshall, a hamlet on the N border of Falkland parish, Fife, $1\frac{1}{2}$ mile N by W of Falkland town.

Ravenshall Point, a small headland in KIRKMAURECK parish, Kirkcudbrightshire, on the E side of the estuary of Cree Water or upper part of Wigton Bay, $6\frac{1}{2}$ miles SW of Gatehouse-of-Fleet. The coast around it is pierced with curious caves, and contests, with the shores of the Nith's estuary, the claim of being the scene of Sir Walter Scott's *Guy Mannering*.—*Ord. Sur.*, sh. 4, 1857.

Ravensheugh. See RAVENS CRAIG, Fife.

Ravensnook Castle, an old baronial fortalice in Penicuik parish, Edinburghshire, on the right bank of the North Esk, opposite Penicuik House. It belonged to Oliver Sinclair, commander-in-chief of the forces in the time of James V., and it is now reduced to fragmentary ruins.

Ravensstone, a fine old mansion, with well-wooded policies, in Glasserton parish, SE Wigtonshire, on rising ground, 5 miles NW of Whithorn. It is the Scotch seat of Lord BORTHWICK.—*Ord. Sur.*, sh. 4, 1857.

Ravenstruther, a village in Carstairs parish, Lanarkshire, $2\frac{1}{2}$ miles ENE of Lanark, under which it has a post office.

Ravenswood, a mansion in Melrose parish, Roxburghshire, on the right bank of the Tweed, opposite the influx of Leader Water, 2 miles E of Melrose town. It was built in 1827, and enlarged in 1860 and 1866.—*Ord. Sur.*, sh. 25, 1865.

Raywards. See AIRDIE.

Rayne (formerly *Rane, Raine, Rain, and Rayn*; Gaelic *raon*, 'a field of good ground'), a parish of central Aberdeenshire, containing at its SW border the village of Old Rayne, $1\frac{1}{2}$ mile NNE of Oyne station, and $3\frac{1}{2}$ miles E by N of Insh, under which it has a post office. Here is a granite market-cross, nearly 12 feet high, erected probably towards the close of the 17th century, when John Horn of Westhall, superior of Old Rayne, was empowered to constitute it a burgh of barony; and Lawrence Fair, a large horse market, is still held here on the Wednesday after the first Tuesday of August, *o. s.* Containing also MEIKLE-WARTHILL village, the parish is bounded N by Auchterless, NE by Fyvie, E by Daviot, SE by Chapel of Garioch, S and SW by

Oyne, and W by Culsalmond. Its utmost length, from N to S, is 5 miles; its breadth varies between $\frac{1}{2}$ mile and $4\frac{1}{2}$ miles; and its area is 7890 $\frac{1}{2}$ acres, of which $5\frac{1}{2}$ are water. The drainage goes mostly to the river URY, which flows $2\frac{1}{2}$ miles south-eastward along the south-western border; but the Black Burn, an affluent of the Ythan, traces the Auchterless boundary. In the extreme S, on the Ury, the surface declines to 270 feet above sea-level; and thence it steadily rises to 486 feet on the highest ground to the S of Drum's Cairn, to 491 at the parish church, and to 854 on the top of Rothmaise Hill. This last, near the northern border, is now all cultivated, except a piece around the summit, which has been planted. To the S there used to be a stretch of moss, extending from E to W; but it has now been nearly all brought under tillage. The NE corner of the parish, along the Fyvie border, is occupied by a considerable tract known as the Warthill Moss, but the peat is being gradually exhausted, and at no distant time the ground will doubtless become ploughed land. The prevailing rocks are greenstone or whinstone in the southern and central parts of the parish; and in the northern, claystone, with a schistose tendency on exposure. These are used for building purposes. There is no granite, though it abounds in the parishes to the S of the Ury. The soil of the arable lands is either a rich loam incumbent on clay, or a shallower and more gravelly loam incumbent on till or rock; and it is generally of good fair quality, but wants lime. About four-fifths of the area are in tillage, and upwards of 350 acres are under wood. Agriculture is in an advanced state, and is carried on by an intelligent, industrious, and well-behaved people. The farms are all of moderate size, with a considerable number of crofts. The farm-houses and steadings on the larger holdings are generally good, but the crofters' and cottars' houses are in some districts very indifferent, and sorely need improvement. There are or were a number of cairns in the parish, near all of which sepulchral remains have been found. Drum's Cairn, now almost vanished, on the moors of Rayne, owes its name to a tradition that Irvine, the laird of Drum, was slain there while in pursuit of Donald of the Isles after the battle of Harlaw; and Tullidaff's Cairn, in the NE corner of the Stobcoors Wood, is so called from its being the reputed scene of the slaughter of the last of the Tullidaffs of that ilk, in revenge of the supposed murder of the first Leslie of Warthill in Lowran Fair. About $\frac{1}{2}$ mile SE of Old Rayne, on the Candle Hill, is a Druidical or stone circle, and on the E side of Rothmaise there are traces of another; where, also, are to be seen the Crichton and Federate Stones, said to point out the spot where certain members of these families had a fatal encounter. The Bowman Stone, a little to the W of the church, points to the place where the parishioners used to meet to practise archery. The great Roman road from the Dee at Peterculter to the camp at Glenmailen on the Ythan, crossing the Ury a little above Pitcape Castle, would pass right through Rayne; and at Freefield there is a grassy mound, 60 yards in circumference, and formerly of considerable height, called the Spy Hill, and conjectured with much probability to have been originally one of its signal stations. It is on the probable line, and traces of the road are found in the vicinity. The whole parish from very early times belonged to the Bishops of Aberdeen, and at Old Rayne they had a residence situated on a small moated eminence where the new public school now is, in digging the foundations of which traces of former buildings and certain remains were found. John Barbour, the father of Scottish poetry and author of *The Bruis*, was parson of Rayne in the latter half of the 14th century; and he seems to have been almost immediately succeeded in the same office by the famous priest Lundy, chaplain to Douglas, and one of the heroes of Otterburn. Mr John Middleton, minister of Rayne during the supremacy of the Covenant, and one of the chaplains to General Middleton's forces in the north, died in 1653, and his memory is perpetuated in the following curious epitaph on a slab of

Foudland slate close to the S wall, but outside the church—

'Whereas I stood in pulpit round,
And now I ly alow the ground;
When as you corm my corps so cold,
Remember the word that I you told.'

William Leslie (1657-1727), a son of a laird of Warthill, rose, from being schoolmaster of Chapel of Garcho, to be Bishop of Laibach and metropolitan of Carniola and a prince of the Holy Roman empire. Mansions, noticed separately, are FREEFIELD and WARTHILL; and the landed property is divided among eight. Rayne is in the presbytery of Garicho and the synod of Aberdeen; the living is worth £275. The parish church stands 2½ miles NE of Old Rayne, and 1 mile W of Warthill station, this being 3¾ miles NNW of Inveramsay Junction. It was built in 1789, and contains 544 sittings. The belfry belonged to the previous church, and has on it the initials M. W. A. (Mr Walter Abercrombie, then minister of Rayne), and the date 1619. The church occupies a prominent position on the tableland, and has long been known as 'the white kirk of Rayne.' The old part of the manse has the date 1627 on one of the skewstones, but it has been from time to time repaired, enlarged, and altered. It is a fair house of its kind. The old parish school was in the Kirktown, but it was discontinued and sold, and the North public school and residences (cost over £2000), situated 1 mile N of the church at the cross roads at Cockmuir, were opened in 1877. A new public school and residence (cost over £700) was erected at Old Rayne, and opened in 1880. The former school has accommodation for 150 and the latter for 76 children, and they had (1883) respectively an average attendance of 91 and 77, and grants of £89, 2s. 6d. and £73, 14s. There has long been a side school at Meikle-Warthill, not under public management. Valuation (1860) £7122, (1885) £8711, 13s. 6d., plus £470 for railway. Pop. (1801) 1228, (1831) 1484, (1851) 1550, (1871) 1409, (1881) 1284.—*Ord. Sur.*, shs. 86, 76, 1876-74.

Reasort, Loch. See RESART.

Reawick, an estate, with a mansion and a Congregational chapel, in Sandsting parish, Shetland, on the W side of Scaloway Bay, 6 miles WNW of Scaloway.

Reay, a village of NW Caithness and a parish also of NE Sutherland. The village stands near the head of Sandside Bay, 10½ miles WSW of Thurso, under which it has a post office, with money order, savings' bank, and telegraph departments. It consists of an inn, a school, the parish church, and a few houses. An older town, whose ruins were uncovered by a waterspout in 1751, is said to have been a burgh of regality, with two free fairs and a free port, granted by James VI. when he knighted Donald Mackay in 1616. This Donald Mackay was the first of the Lords Reay, an account of whom is given under TONGUE. A market cross at the present village claims to have belonged to the traditional burgh. Sandside Bay, measuring 6 furlongs across the entrance, and 5 thence to its inmost recess, is fringed with fine sandy links. A harbour was formed here nearly 50 years ago by Major Innes at a cost of over £3000.

The parish contains also the adjoining villages of MELVICH and Portskerra, 6¼ miles W of Reay; and, in the S, the station of FORSINARD, 28½ miles SW of Thurso. It is bounded N by the North Sea, E by Thurso and Halkirk, SE by Thurso (detached) and Halkirk, SW by Kildonan, and W by Farr. Its utmost length, from N to S, is 19½ miles; its utmost breadth, from E to W, is 14½ miles; and its area is 184½ square miles or 118,169½ acres, of which 46,326½ belong to Caithness and 171,842½ to Sutherland, whilst 2391½ are water, 442½ foreshore, and 34 tidal water. The bold and rocky sea-coast, which measures 15½ miles along all its ins and outs, is indented by the Bay of Bighouse (6×5 furl.) near Portskerra, by Sandside Bay, and by triangular Crosskirk Bay (2½×3 furl.) at the eastern boundary. It rises rapidly from the sea to 91 feet near Portskerra, 314 at Cnoc Geodh Stoir, 152 at Fresgoe or

Sandside Head, and 172 at the Hill of Lybster. Caverns are not infrequent; and near Borrowston a turf-clad natural arch spans a tide-washed chasm, nearly 50 feet deep. The river HALLADALE, rising close to the southern boundary at an altitude of 1200 feet above sea-level, runs 2¼ miles north-north-westward and northward to the Bay of Bighouse, and is fed by Dyke Water (running 8½ miles north-north-eastward) and a number of lesser streams. Sandside, Reay, and Achvarmsdal Burns flow northward to Sandside Bay; and FORSS Water, issuing from Loch Shurrery (1¼ mile×2½ furl.; 321 feet), winds 12½ miles northward, mainly along the eastern boundary, to Crosskirk Bay. Of sixty-eight other lakes and lakelets, the largest are Loch CALDER (2½ miles×7½ furl.; 205 feet), on the eastern border; Loch CAILAM or Chalium (5×4 furl.; 435 feet), on the south-eastern border; and Loch na Seilge (5×4 furl.; 398 feet), 5 miles SSW of Reay. The surface is hilly but hardly mountainous, chief elevations being BEN RATHA (795 feet) and Ben nam Bad Mhor (952) in the Caithness portion, BEN RUADH (837) on the western border, BEN GRAM BHEAG (1903) on the southern border, and the Knockfin Heights (1442) at the meeting-point of Reay, Kildonan, and Halkirk parishes. The rocks on the seaboard are Devonian sandstone, paving flag, and limestone; whilst those of the hills include granite, syenite, gneiss, hornblende, and quartzite. The sandstone and limestone have been largely quarried; shell-marl has been dug in large quantities at Douneay and Brawlin; iron ore is found in various places; and a vein of lead ore occurs near Reay village, but not under conditions to encourage mining. A mineral spring at Helshetter claims to be little inferior to the Strathpeffer wells. The soil on the seaboard about Borrowston and Douneay is clayey and very tenacious of moisture, around Sandside Bay is sandy, and in the low parts of Strath-Halladale is a dark earth mixed with silicious sand. Little more than 3000 acres is in tillage; and a very trivial aggregate is under wood. The fine sheep-farm of Bighouse, comprising most of the Sutherland division of the parish, belongs to the Duke of Sutherland; the Sandside estate to the Duke of Portland; and the estate of Douneay, 16,464 acres in extent, to Sir R. C. Sinclair of Stevenston, Bart. The great improvements carried out on the last-named property since 1859, in the way of building, draining, fencing, road-making, etc., are fully described in *Trans. Highl. and Ag. Soc.* for 1866 and 1875. Antiquities are a rule but extensive fortification on Ben Freiceadain near Loch Shurrery; remains of several circular towers in Strath-Halladale; numerous Picts' houses; and a ruined pre-Reformation chapel, St Mary's, at Lybster—'one of the most remarkable and ancient churches in the north of Scotland.' Its nave measures 17 feet by 12, and its chancel is 10 feet square; whilst a door at the W end and another in the chancel have inclined jambs, and are less than 4 feet high (T. S. Muir's *Old Church Architecture*, 1861). Reay is in the presbytery of Caithness and the synod of Sutherland and Caithness; the living is worth £300. The parish church was built in 1739, and contains 432 sittings. Other places of worship are Shurrery mission chapel, Reay Free church, and Strath-Halladale Free Church mission chapel; and five public schools—Brubster, Dalhalvaig, Douneay, Melvich, and Reay—with respective accommodation for 64, 72, 100, 150, and 143 children, had (1884) an average attendance of 22, 30, 38, 40, and 66, and grants of £42, 16s. 3d., £30, 10s., £37, 16s. 3d., £17, 6s. 8d., and £52, 16s. 11d. Valuation (1881) £10,421, (1855) £11,662, of which £8752, 8s. was for the Caithness division. Pop. (1801) 2406, (1831) 2881, (1861) 2476, (1871) 2331, (1881) 2191, of whom 1197 were in Caithness, and 1301 were Gaelic-speaking.—*Ord. Sur.*, shs. 115, 109, 1878.

Reay's Country, Lord. See TONGUE.

Redcastle, an ancient but modernised mansion in Killearnan parish, Ross-shire, on the N shore of Beanyl Firth, 3½ miles E by S of Muir of Ord station, and 6½ (via Kessock Ferry) WNW of Inverness. It claims to be the oldest inhabited castle in Scotland, having been

built in 1179 by David, brother to William the Lyon; was visited by Queen Mary in 1562; and is now the seat of the Right Hon. Henry James Baillie (b. 1804; suc. 1866), Conservative M.P. for Inverness-shire 1840-68, who holds 6512 acres in Ross and Inverness shires, valued at £6276 per annum.—*Ord. Sur.*, sh. 83, 1881.

Redcastle, an ancient castellated structure on the coast of Inverkeilor parish, Forfarshire, at the S side of the influx of Lunan Water to Lunan Bay, $4\frac{1}{2}$ miles SSW of Montrose. Said to have been built by William the Lyon, perhaps to prevent invasion by the Danes, and to have been a royal hunting-seat, it seems to have been a place of considerable strength; and is now a ruin, with thick compact walls and a strong surrounding rampart.—*Ord. Sur.*, sh. 57, 1868.

Redden, a farmhouse in Sprouston parish, Roxburghshire, near the right bank of the Tweed, within 1 mile of the English Border, and 4 miles NE of Kelso. Redden made some figure in feuds and negotiations connected with the old Border strife; and a neighbouring alluvial tract bears the name of Redden Haughs, and is notable for fertility.—*Ord. Sur.*, sh. 26, 1864.

Redding, a collier village, with a post office, in Polmont parish, Stirlingshire, $1\frac{1}{2}$ mile W by N of Polmont Junction, and $2\frac{1}{2}$ miles ESE of Falkirk. An extensive tract, called Redding Moor, to the SW, remained till 1830 in a state of commonage; and began then, under permission of its proprietor, the Duke of Hamilton, to be enclosed and cultivated by the colliers at their spare hours. Pop. (1861) 642, (1871) 599, (1881) 520.—*Ord. Sur.*, sh. 31, 1867.

Redford, a village in Carmyllie parish, Forfarshire, 7 miles WNW of Arbroath.

Redford, a village, with flax works, at the NW border of Dysart parish, Fife, on the left bank of the Ore, $2\frac{1}{2}$ miles W by S of Thornton Junction, and $3\frac{1}{2}$ N by W of Kirkcaldy.

Redford, a quaint old mansion in Colinton parish, Edinburghshire, in a pretty wooded dell on the left bank of Braid or Redford Burn, 5 furlongs E by S of Colinton village. The judge, Sir James Foulis, assumed by it the title of Lord Redford (1674); and it was the birthplace of John Allen (1771-1843), the political and historical writer. Redford now belongs to R. A. Macfie, Esq. of DREGHORN CASTLE.—*Ord. Sur.*, sh. 32, 1857. See John Small's *Castles and Mansions of the Lothians* (Edinb. 1833).

Redford House, a mansion in Muiravonside parish, Stirlingshire, near the left bank of the Avon, 4 miles SW of Linlithgow.

Redgorton, a parish of Perthshire, containing the village and station of LUNCARTY, 4 miles NNW of Perth, under which there is a post office of Redgorton. Containing also the villages of BRIDGETON, CROMWELL-PARK, and PITCAIRNGREEN, with part of STANLEY, it comprises the three ancient parishes of Redgorton, Luncarty, and St Serfs, united some time prior to 1619, and consists of a main body and a detached north-western portion, the barony of Mullion. The main body is bounded NW and N by Auchtergaven, E by St Martins and Scoon, S by Tibbermore, SW by Methven, and W by Methven and Moneydie. Its utmost length, from N to S, is $5\frac{1}{2}$ miles; its breadth, increasing southward, varies between $4\frac{1}{2}$ furlongs and $3\frac{1}{2}$ miles; and the area of the whole parish is 6168 acres, of which 1604 are water, and 1261 belong to the detached portion. This, bounded NE by Auchtergaven, and on all other sides by the Logiealmond section of Monzie, lies 12 miles NW of Perth, and $1\frac{1}{2}$ mile NW of the nearest point of the main body. With a rudely triangular outline, it has an utmost length from WNW to ESE of $3\frac{1}{2}$ miles and an utmost width of $7\frac{1}{2}$ furlongs. The TAY, here a splendid salmon river, curves $4\frac{1}{2}$ miles south-by-westward along all the eastern border of the main division; and the ALMOND, its affluent, winds $5\frac{1}{2}$ miles south-eastward and east-north-eastward along most of the Methven and all the Tibbermore boundary. SHOCHIE BURN runs $1\frac{1}{2}$ mile north-eastward, ORDIE BURN 9 fur-

longs south-south-eastward—both mainly along the Moneydie boundary; and their united stream continues $\frac{1}{2}$ mile south-eastward across the interior, and falls into the Tay near Luncarty. The gently undulating surface declines at the mouth of the Almond to less than 50 feet above sea-level, and thence rises westward to 335 feet near Cotterton, northward to 245 near Burnside. Around these higher grounds spreads one of those panoramas for which the county is famous—on the E, the palace and park and pleasant lands of Scoon; on the SE, the fertile strath of the Tay, its majestic stream now seen amid openings of wood, and now hid by its bodyguard of forest; in the same direction, the bridge and city of Perth, and a semicircular sweep of the Sidlaw and Ochil Hills, cloven down at Kinnoull and Moncreiffe, and overlooked by the distant Lomonds of Fife. From a point not far below its source, Shochie Burn runs $3\frac{1}{2}$ miles east-south-eastward along all the Auchtergaven boundary of the detached section, whose surface—part of the frontier Grampians—rises west-by-northward, from 580 to 1540 feet above sea-level. Loch Mullion was greatly reduced by draining in 1836, but is still of considerable depth. The rocks are variously metamorphic, Silurian, and Devonian, and include clay-slate, chlorite slate, greywacke, coarse conglomerate, grey sandstone, argillaceous red sandstone, rock marl, and thin veins of satin spar. The soil, in most parts light and fertile, is here and there a mixture of clay and black earth. About three-fourths of the entire area is in tillage; rather more than one-ninth is under wood; and the rest of the parish is pasture, roads, waste, &c. Vestiges of an ancient Caledonian camp at PITCAIRN, the site of Bertha or old PERTH, adjacent to the confluence of the Tay and the Almond, and the legendary battle of LUNCARTY, are all treated in separate articles. Robert Fraser, F.R.S. (1760-1831), an eminent statistical writer, was born in the old manse. Mr Maxtone-Graham of CULTOQUEY and Redgorton is chief proprietor, 5 others holding each an annual value of £500 and upwards, and 3 of between £100 and £500. Giving off its northern portion to Stanley *q. s.* parish, and its detached section to Logiealmond *q. s.* parish, Redgorton is in the presbytery of Perth and the synod of Perth and Stirling; the living is worth £243. The parish church, 7 furlongs SSW of Luncarty station, was probably built about 1690, and was repaired in 1766. An addition was made to it in 1841; and the whole was most tastefully repaired and cleaned in 1871. The number of sittings is 450. The manse, one of the finest in the Church of Scotland, was built in 1866-67. There is a Free church of Pitcairngreen and a U.P. church of Pitcairn; and two public schools, Pitcairngreen and Redgorton, with respective accommodation for 84 and 111 children, had (1884) an average attendance of 51 and 77, and grants of £40, 10s. and £72, 9s. Valuation (1860) £8615, 11s., (1884) £9309, 5s. 11d. Pop. (1801) 2009, (1811) 2216, (1821) 1589, (1841) 1926, (1861) 1671, (1871) 1461, (1881) 1452, of whom 1100 were in the ecclesiastical parish.—*Ord. Sur.*, shs. 48, 47, 1868-69.

Redhall, a mansion in Colinton parish, Edinburghshire, on the right bank of the Water of Leith, in the southern vicinity of Slateford, and $3\frac{1}{2}$ miles SW of the centre of Edinburgh. In 1650 the neighbouring castle of Redhall was besieged and all but demolished by Cromwell, who took prisoners the garrison, 60 in number, and stripped them naked. The estate, held successively by Cunninghams, Otterburns, Hamiltons, etc., was purchased in 1755 by George Inglis; and its present proprietor, John Inglis, Esq. (b. 1830; suc. 1847), holds 712 acres in the shire, valued at £1938 per annum.—*Ord. Sur.*, sh. 32, 1857.

Redhall Tower, a quadrangular baronial fortalice in Kirkpatrick-Fleming parish, Dumfriesshire, on the left bank of Kirtle Water, $3\frac{1}{2}$ miles ESE of Ecclefechan. A seat of the family of Fleming, it sustained a close three days' siege by an English force towards the end of Balioi's reign, and was eventually set on fire, when the thirty men who formed its garrison chose rather to perish in

the flames than to surrender. It was entirely demolished about the beginning of last century.

Redhead. See INVERKEILOR.

Redhouse, a village in Kincardine parish, Perthshire, 2½ miles S of Doune.

Redhouse Castle. See ABERLADY.

Redkirk. See GRETNA.

Rednock, a modern mansion, with finely wooded policies, in Port of Monteith parish, Perthshire, 7 furlongs E by N of the Lake of Monteith, and 4½ miles N of Port of Monteith station.

Redpath, a hamlet in Earlstoun parish, Berwickshire, on the left bank of Leader Water, 2 miles S of Earlstoun town.

Redrow, a village in Newton parish, Edinburghshire, ½ mile WNW of Millerhill station.

Redswire. See SOUTHDEAN.

Reekie Linn, a cataract of the river Isla, on the mutual border of Glenisla and Lintrathen parishes, W Forfarshire, 3½ miles N of Alyth. The Isla, here traversing a gorge between cliffs 120 feet high, makes two falls of 60 and 20 feet; occasions a reverberation which echoes loudly up the flanking cliffs; and sends up from the abyss such clouds of spray as hang over it in almost perpetual smoke-like vapour. Fine masses of wood crown the cliffs; and a rustic tower, on the right side, commands a full view of the cataract. — *Ord. Sur.*, sh. 56, 1870.

Regland, Loch. See DALRY, Kirkcudbrightshire.

Reichip House, a mansion on the Duke of Athol's property, at the mutual border of Caputh and Clunie parishes, Perthshire, 6 miles NE of Dunkeld. The picturesque dell of Reichip abounds in some rare plants, and contains a well formerly held in superstitious veneration, with the site of a pre-Reformation chapel. — *Ord. Sur.*, sh. 56, 1870.

Reidswire. See SOUTHDEAN.

Reiss, a village in Wick parish, Caithness, near Sinclair Bay, 4 miles NNW of Wick town, under which it has a post office.

Relugas, a mansion in Edinkillie parish, Elginshire, on an eminence between the confluent Divie and Findhorn, 3½ miles NNW of Dunphail station, this being 8½ miles S by W of Forres, under which there is a post office of Relugas. Occupying a romantic site, and surrounded by pleasure-grounds of singular beauty, it is a picturesque, irregular edifice, in the cottage ornée style. Its oldest part bears date 1785, and a large addition was made about 1828. The estate belonged for two centuries to the Cumins, whose heiress, Miss Charles Anne Cumins, in 1808 married her third cousin, Sir Thomas Dick-Lauder, Bart. (1784-1848), author of the *Moray Floods*, etc. It was sold in 1847 to W. M. Killigin, Esq., and again in 1852 to G. R. Smith, Esq., whose daughter-in-law, Mrs Smith, holds 1034 acres in the shire, valued at £486 per annum. — *Ord. Sur.*, sh. 84, 1876.

Remilton, a village in Abdie parish, NW Fife, 7 furlongs ESE of Newburgh.

Rendall. See EVIE.

Renfield. See BLYTHSWOOD.

Renfrew (Br. *Rhyn*, 'a point of land,' and *frew*, 'the flowing of water'), a parish containing a town of the same name lying along and intersected by the Clyde in the NE of Renfrewshire and in the Upper Ward of that county. It is bounded N by Dumbartonshire, E by Lanarkshire, S by Abbey parish, Paisley, W by Kilbarchan, and SW by Inchinnan. On the N and E the parish and county boundaries coincide. Starting from the centre of the Clyde at the mouth of the Black Cart, the line passes up the centre of the former river till at Yoker Burn it strikes to the N, and follows the course of the burn for about 1 mile. It then strikes across to Yokermain Burn, and follows it up to beyond Scaterig, whence it turns southward and south-westward to the Clyde, which it reaches at the old position of Marline Ford. Crossing the Clyde the line continues near the E and S of the grounds of Elderslie House to Pudzeoch Burn, which it follows to Millburn Bridge,

whence it follows the Mill Burn to the N end of the reservoir, and then proceeds irregularly to the corner of Hillington Wood. There it quits the county boundary and takes first a south-westerly direction to a point a little E of the 5-mile post on the Glasgow and Paisley joint railway, and afterwards a north-westerly direction to a point on the road midway between Newmains and Bogside. From this the course is up a small burn to Arkleston Print-Works, and then westward to a point on the White Cart, opposite the mouth of Abbotsburn, up which it proceeds by Wester Walkinshaw to the Black Cart, the centre of which it follows back to the Clyde. The greatest length, from the WNW at the junction of the Gryfe and the Black Cart to the ESE at Hillington Wood, is 4 miles; the greatest width, from the N at the mouth of the Black Cart to the S at Arkleston, is 2½ miles; and the area is 4488-488 acres, of which 18-557 are foreshore and 159-017 are water. The Clyde divides the parish into two unequal portions, about one-third of the whole area lying to the N of the river. In the northern section, which is the only part of Renfrewshire lying N of the Clyde, the ground is flat along the edge of the river, but thereafter rises rapidly to 50 and then to 100 feet, and reaches, towards the NE, in the grounds of Jordanhill House, an extreme height of 149 feet. On the S side of the Clyde the ground is flat, rising in the SW to only from 17 to 20 feet above sea-level; in the SE to from 28 to 30 feet; and in the extreme S, at Cockle and Knock Hills, to over 50, the latter (85 feet) being the highest point of the southern section. On the extreme S the parish includes a portion of the municipal and parliamentary burgh of Paisley. Both sections are well-wooded and highly cultivated, the soil being a rich and fertile alluvium, with a subsoil of sand or strong clay. The underlying rocks are carboniferous, and both coal and ironstone are worked. Some of the clays in the NE and elsewhere are extensively used in the manufacture of bricks, and several of them contain arctic and recent shells. The drainage is effected by the streams and rivers mentioned in describing the boundaries. The ground between the policies of Elderslie House on the SW and the river Clyde is known as the King's Inch, and was, down to the middle of the 17th century or later, an island—a narrow branch of the Clyde having struck off from the main river at Marline Ford and passed between it and the burgh. Somerled, Lord of the Isles, who had risen in rebellion against King Malcolm IV., was defeated and slain at Renfrew in 1164; and a mound with a stone on the top is noticed by Pennant as, traditionally, the memorial of the place of his defeat, but no trace of it now remains.

The parish of Renfrew is distinguished for its connection with the ancient house of Stewart, the lands of Renfrew being the first mentioned of the estates specified in the charter granted by King Malcolm IV. in 1157 in favour of Walter, 'son of Alan,' and confirming a grant previously made by King David I. The office of King's High Steward being also conferred on Walter and his descendants, they took thence the surname of Stewart, and so this corner of the land became the cradle of the illustrious race destined to ascend in succession the thrones of Scotland and England. Knock Hill on the S is still shown as the traditional spot where Marjory Bruce, wife of a succeeding Walter, High Steward of Scotland, was thrown from her horse and killed while hunting in 1316. She was far advanced in pregnancy at the time, and the Cæsarean operation was resorted to in order to save the life of the child, who afterwards became Robert II. The tradition adds that an injury caused to his eyes during the operation was the occasion of the affection that procured him his popular name of 'Bleary.' The spot was marked till somewhere between 1779 and 1782 by an octagonal pillar placed on an eight-sided base, and known, by some confusion of names, as Queen Bleary's Cross. The monument was then destroyed by a rustic vandal, who occupied the neighbouring farm, and who used the pillar as a door lintel, and the stones of the supporting steps to repair

a fence. Its site was to the ESE of Knock Farm, and a little farther to the ESE there was formerly a mound called Kempe Knowe. It was a circular mound of earth about 20 yards across, and surrounded by a moat about 5 yards wide, but no trace of it now remains. According to tradition it was constructed to be the place of contest between the last Sir John Ross of Hawkhead and a noted English wrestler, whose match the English king of the period had challenged the Scotch king to produce. Ross disabled his adversary in a way that procured him the name of 'Palm-mine-arms,' and was rewarded by the king with the lands and royal castle at 'the Inch,' and the older inhabitants always referred to his monument, which is placed in a burial vault constructed for it by the Earl of Glasgow on the SE of the new church, as 'Palm-mine-arms.' Semple, in his continuation of Crawford's *History*, mentions that an urn had been dug up at the Knock Hill in 1746, and another in 1782, so that in all probability the mound had been a barrow much older than Sir John Ross's time. The lower part of the hill is called the 'Butts,' and was probably the place where the burghers of Renfrew practised archery. At the side of the road from Renfrew to Inchinnan, near the bridge across the White and Black Carts, and within the policies of Blythswood House, is a large block of sandstone known as the Argyll Stone, and marking the spot where the Earl of Argyll was wounded and captured after the failure of his ill-conducted enterprise in 1685. After the dispersion of his forces in Dumbartonshire he crossed the river Clyde, and was attempting to make his escape in disguise when he was stopped by a party of militia who were guarding the ford where the bridge now stands. Some reddish veins in the stone, long pointed out as the stains made by his blood as he leant wounded against the rock, are no longer visible. Besides the burgh of Renfrew the parish also includes, on the N, the town of Yoker, and on the extreme NE the small mining village of Scatterg. The portion to the N of the Clyde is traversed by the road from Glasgow along the N bank of the river; while the high road from Glasgow to Greenock passes through the southern portion. A road from N to S passes from Paisley through the burgh of Renfrew to the Clyde, where a ferry, with large ferry boats for horses and carts, provides communication with the opposite side at Yoker. To the W of this road is a branch railway line from Paisley to Renfrew. The mansions are Blythswood, Elderslie, Jordanhill, Scotstoun, and Walkingshaw. Besides agriculture and the industries connected with the burgh, there are pits, brick and tile works, and a distillery at Yoker. Eleven landowners hold each an annual value of £500 and upwards, 19 hold each between £500 and £100, 41 hold each between £100 and £50, and there are a considerable number of smaller amount.
